Preface

Each day, through the efforts of workers in the scientific community, including the many specialties and subspecialties of medicine and related fields, new concepts are formed and old theories are discarded, answers to hitherto seemingly unanswerable questions are found, and new techniques evolve. The results of these efforts must be made known to all who are concerned with or interested in what is current in the language of science. This places strenuous demands on those who have the obligation of recording and defining these developments in a manner that may be comprehended readily not only by specialists in a particular field but also by those who, for various reasons, seek to learn more about an unfamiliar subject.

As in all previous twenty-five editions of Dorland's Illustrated Medical Dictionary, the compilers of this, the twenty-sixth, edition have endeavored to meet the challenges presented by the ever-expanding terminology of all the sciences.

The use of computer technology for composition of the twenty-fifth edition of the Dictionary served us well in preparing the present edition. The coded master file on which the entire contents of the Dictionary had been transcribed and stored enabled us to sort and retrieve all entries relating to a particular discipline, thereby allowing us and our consultants to review the entire lexicon of each discipline. Also, the system of computer coding enabled us to integrate new terms and to revise others without disturbing already existing material — that is, only new portions of the vocabulary or those that needed emendation were phototypeset. The time saved in typography and the flexibility of this method made it possible for us to continue updating our material even after the phototypesetting process had begun and to utilize the latest data gathered from our reference sources during the final stages of manuscript preparation. Such methods helped to ensure that the vocabulary recorded here is as current as the increasingly rapid expansion of the terminology of science allows at any given time.

While making full use of such new tools and procedures, however, we have adhered to the fundamental concepts that have guided our efforts throughout the history of the Dictionary. These concepts have been stated in previous editions:

All learning in science is based on education in vocabulary, for the imagery of words and symbols is the only means to expression of scientific data and concepts. For the continuing successful interchange of ideas, the words and ideographs of science must have precise and specific meanings and these must be recorded in a carefully arranged repository of such information. Accuracy, comprehensiveness, ease of understanding, and typographic legibility are obvious standards of usefulness in such a work. The occasional assembly of related data in tables and illustrations serves the additional purpose of grouping information under broad headings of reference or educative value.

Codification of knowledge is made increasingly difficult by the steadily broadening scope and mounting complexity of contemporary medical science. In this situation we believe that writers and editors constitute the first line of defense, particularly against erosion and adulteration of the language. We believe that editors should not be unmindful of the advisability of safeguarding the faithful transmission of ideas, by insuring the integrity of the words in which they are expressed. In furtherance of this purpose, we believe that the exercise of judgment is a legitimate activity of the compiler of a dictionary of scientific terms: to lend support to words properly compounded and to favor such terms over words which may bear the taint of ambiguity.

The function of a dictionary must then be something more than that of a record of usage. It is our belief that maintenance of certain standards of etymological propriety and of selection is also a responsibility of the lexicographer — no less in the language of science than in that of imaginative or creative writing. Validity of formation of a word supplies its best assurance of intact passage across language barriers that are fast disappearing in medicine, as in other sciences. And the extensive usage of this Dictionary outside the United States makes us all the more aware of this responsibility.

In exercising this belief, it is not our intention to assume an unyielding attitude toward words that, although imprecisely coined, enjoy a ready, almost universal acceptance within the biomedical sciences. Rather, we attempt to lend our influence to the preference of etymologically sound and unambiguous terms to communicate new concepts. In most instances, this preference is indicated within the Dictionary by assigning the definition to the "term of choice" and cross-referring synonyms to that term.

Certain questions that arise in writing or editing, as those regarding the use of diphthongs or the hyphenation of compound words, may be entirely a matter of style, and their answers are not primarily to be established by recourse to a dictionary. It would be impossible, except in unabridged volumes, to present every variation on such themes that might be completely acceptable and proper.

ACKNOWLEDGMENTS

As in the preceding edition, the definitions of the various anatomical structures are placed on the NA terms, that is, on the terms as they appear in the *Nomina Anatomica* as approved by the Sixth International Congress of Anatomists held in Paris in 1955, and revised by the Seventh and Eighth Congresses held respectively in New York in 1960 and in Wiesbaden in 1965.

In enzyme nomenclature, we have relied heavily on the Recommendations of the International Union of Pure and Applied Chemistry and the International Union of Biochemistry on the Nomenclature and Classification of Enzymes.

For psychiatric terms, we have been guided in many instances by *A Psychiatric Glossary*, edited by the Subcommittee on Public Information and published by the American Psychiatric Association.

In pharmacology, as noted on the copyright page, we have made use of portions of the text of the *United States Pharmacopeia*, the *National Formulary*, and *USAN and the USP Dictionary of Drug Names*, all publications of the United States Pharmacopeial Convention, Inc.

In acknowledging our indebtedness to the compilers, editors, and publishers of the aforementioned publications, we emphasize that any inaccuracies that may have arisen from our transcription or interpretation of this material are our sole responsibility.

In addition to the contributions from these publications, hundreds of persons have made valuable suggestions for this book of words. To them, we gratefully acknowledge our great debt for help beyond measure, help that can be repaid only insofar as we have succeeded in combining these separate threads into a fabric useful and authoritative to all.

The more than 50 new illustrations were drawn by Susan Shapiro Brenman. Her fine drawings with their precise attention to detail and structure not only enhance the pages of the Dictionary but also provide at a glance information that is sometimes difficult to convey in words.

We would also like especially to thank Dr. I. Eban of London, England, for all the useful advice and suggestions that he has given us over so many years.

Lastly and most importantly, we must express our overwhelming debt and enduring gratitude to our Consultants, whom we take great pleasure in listing on the following page. Without their dedication, forbearance, and expert knowledge, the massive and intricate task of compiling this twenty-sixth edition of the Dictionary could never have been completed.

Notes on Use of This Dictionary

The new user of this Dictionary, we believe, will profit from an understanding of the policies that have been followed in its actual construction. This section is therefore presented to explain some of the mechanics which were involved in the compilation of the material.

It is our hope that a corollary of the conventional use of this Dictionary, to discover the spelling, meaning, and derivation of specific terms, will be assistance in the reverse direction—to aid in the creation of words desired to express new concepts. To this end individual elements—prefixes, suffixes, and stems—may be found both in the vocabulary portion and in the section entitled Fundamentals of Medical Etymology. An understanding of the elements of a term encountered for the first time, if the term is too new to be in any dictionary, will aid one in arriving at an approximation if not an exact distillation of its meaning. Similarly, knowledge of these elements and of the conventions governing their combination will be of help to a person seeking to construct a new word. We believe the serious user of the Dictionary will find familiarity with these features highly rewarding.

ARRANGEMENT OF ENTRIES

Quick simple usefulness continues to be one of the principal objectives of this work. Words appearing as main entries are recognizable at a glance, not being distorted by accents or other indication of syllabication. Accents and syllables are shown in the phonetic respelling immediately following the bold face entry. Subentries—terms consisting of two words which are ordinarily defined under the second (or principal) word, the *noun*—are immediately apparent as subentries, run on in the same paragraph, and set in the same bold face type as the word constituting the main entry. For example, acetic acid, acetrizoic acid, iopanoic acid, neuraminic acid, shikimic acid, and the like, are included as subentries under acid, regardless of the pH of the specific compounds. Absorption bands, Büngner's bands, Lane's band, Parham band are defined under band; Heinz-Ehrlich bodies, Howell-Jolly bodies, Leishman-Donovan bodies are defined under body.

The space-imposed practice of defining a term only once accounts for the cross references necessitated on eponymic terms where biographical information is given. Thus you will find such entries as "Apgar score . . . See under *score*" and "Budin's joint, rule . . . See under *joint* and *rule*." An exception to this policy of arrangement occurs in the case of specific chemical terms embodying the name of the element: aluminum acetate, aluminum hydroxide, aluminum sulfate, and the like are defined under aluminum; calcium carbonate, calcium oxide, calcium sulfate under calcium.

If biographical information is not given for an individual named in an eponymic term, such as Kortzeborn's operation, the definition should be sought directly under the noun, in this case under operation. For certain phrases, because of prevalent multiplicity of terminology, it may be necessary to look in more than one place. For example, what one person may speak of as a disease may originally have been called a syndrome; if the desired term does

not appear under one, it should be sought under the alternative term. Similarly for phenomenon and sign, and numerous other entities.

SEQUENCE OF ENTRIES

Entries will be found alphabetized on the sequence of the letters, regardless of space or hyphens which may occur between them. Thus sequences such as

bloodless,	or	formboard,
blood plasma,		form-class,
blood pressure,		forme,
bloodroot		form-family

appear in that order. An exception to this occurs in the case of compound eponymic terms: Bard-Pic's syndrome precedes Bardach's test. In eponymic terms, the apostrophe s ('s) is ignored in determining the alphabetical sequence, thus *Addison's planes* precedes *addisonian*, *Sabouraud's agar* precedes *Sabouraudia*, and *Förster's operation* precedes *Förster-Penfield operation*, both as a main entry and under operation. Similarly umlauts (ö, ü) are ignored in alphabetizing the entries, and *Löwenthal's tract*, *Lower's rings*, *Löwitt's bodies*, *Lowman balance board*, and *Lowry's test* appear in that sequence. Proper names beginning with "Mc" or "Mac" are alphabetized as though spelled "mac" in every instance, the sequence being determined by the letters immediately following the *c*.

Proper names (or capitalized entries) commonly appear before a common noun (or lower case entry) with the identical spelling. Thus *Diplococcus* precedes *diplococcus*, *Micrococcus* precedes *micrococcus*.

INDICATION OF PRONUNCIATION

As in the twenty-five preceding editions, phonetic respelling of a term appears in parentheses immediately following the main bold face entry. As a rule only the most commonly heard pronunciation is given, with no effort to represent any variants. Such phonetic respelling is presented in the simplest possible manner, with a minimum of diacritical markings. The basic rule is this: An unmarked vowel ending a syllable is long; an unmarked vowel in a syllable ending with a consonant is short. By this same token, a long vowel in a syllable which must end with a consonant is indicated by a macron (ā, ē, ī, ō, ū, and ōō): for example *ah-bāt'*, *lēd*, *la'bīl*, *mi'o-fōn*, *mol'e-kūl*, *tooth*. A short vowel ending or alone constituting a syllable is usually indicated by use of the breve (ĕ, ĭ, ȝ, ŭ, ȝȝ): for example *ĕ-fish'ent*, *ĭ-mu'nĭ-te*, *ȝ-kloo'zhun*.

The use of the syllable *ah* for the sound of *a* in open, unaccented syllables (*ah-bāt'*, *ah-lu'mĭ-num*, *ah-pof'ĭ-sis*, *ah-tak'se-ah*) has been continued; *ah* is also used in syllables ending with a consonant, to indicate a broader *a* sound (*fah'mah-se*, in contrast to *am-ne'se-ah*). No effort has been made to complicate the system by introduction of additional diacritical marks showing the finer gradations of sound, such as the circumflex (â, ô), diaeresis (ä, ü), tilde (ẽ). The primary (') and secondary (") accents are indicated in polysyllabic words (as *pol'e-sĭ-lab'ik*); an unstressed syllable is followed by a hyphen.

To recapitulate, unmarked vowels not followed by a consonant have the long sound:

- ba, da, ka, la, ma, na, etc., are all pronounced to rhyme with *fay*
(*bāt*, *kām*, *mān*, etc., have the same vowel sound).
- be, de, le, re, te, we, etc., are all pronounced to rhyme with *fee*
(*bēm*, *dēp*, *rēt*, etc., have the same vowel sound).
- bi, di, ni, pi, ti, zi, etc., are all pronounced to rhyme with *sigh*
(*bīd*, *pīnt*, *tīm*, etc., have the same vowel sound).
- bo, do, lo, mo, to, wo, etc., are all pronounced to rhyme with *go*
(*bōd*, *lōm*, *tōt*, etc., have the same vowel sound).
- bu, du, hu, mu, nu, su, etc., are all pronounced to rhyme with *few*
(*kūt*, *mūt*, etc., have the same vowel sound).

Short vowels terminating syllables are affected by the value or the consonantal sounds of the adjoining syllables. For example, as usually pronounced, the sound of *i* in the second syllable more closely approaches that of long *e* in multiarticular than it does in multigravida,

although in either word it may show any gradation between the long *e* and an indeterminate vowel sound. Combinations of vowels are also indicated: *oi* as in oil; *ou* as in out; *aw* as in paw.

It has been impossible, within the framework of this simplified system, to represent the exact pronunciation of many foreign words and proper names which have entered the medical vocabulary. They have been represented as well as possible by an English approximation.

The important key to remember in interpreting the phonetic respelling is that an unmarked vowel not followed by a consonant has the long value; one followed by a consonant has the short. A long vowel which must perforce be followed by a consonant is indicated by use of the macron; a short vowel ending its respective syllable is indicated by use of the breve.

PRESENTATION OF PLURAL FORMS

The plural of a word which is irregularly formed or of a foreign word is given following the phonetic respelling and often, but not invariably, is given a separate bold face listing in proper alphabetical order. Alternate plurals (e.g., exanthemas, exanthemata) are frequently shown. Subentries appear in proper alphabetical order, determined by the subsequent, modifying word or phrases, regardless of whether they are singular or plural. For example, under *ligamentum*, the entries

l. annulare baseos stapedis
ligamenta annularia digitorum manus
ligamenta annularia digitorum pedis
l. annulare radii
ligamenta annularia (trachealia)

appear in that order.

ETYMOLOGY

Information on the derivation of a word appears in square brackets following the phonetic respelling, or following the plural form of the word, when that is given. Greek characters are no longer used in presentation of the etymological information in the vocabulary portion of this book,* being transliterated into the English alphabet as shown in the following tabulation:

	α = a	λ = l	
initial	ά = a	μ = m	
"	α̂ = ha	ν = n	
diphthong	αι = ai	ξ = x	
initial	αι̂ = ai	ο = o	
"	αι̂ = hai	ô = o	
diphthong	αυ = au	ô = ho	
initial	αυ̂ = au	diphthong	οι = oi
"	αυ̂ = hau	initial	οι̂ = oi
"	β = b	"	οι̂ = hoi
"	γ = g	diphthong	ου = ou
"	γγ = ng [as in "angeion"]	initial	ου̂ = ou
"	γκ = nk [as in "ankyle"]	"	ου̂ = hou
"	γξ = nx [as in "salpinx"]	"	π = p
"	γχ = nch [as in "anchousa"]	"	ρ = r
"	δ = d	initial	ρ = rh
"	ε = e	"	ρρ = rrh [used in compounds,
initial	έ = e	"	although the root has
"	έ̂ = he	"	only initial rh, e.g.
diphthong	ει = ei	"	diarrhoia—(English)
initial	ει̂ = ei	"	diarrhea]
"	ει̂ = hei	σ, s = s	
diphthong	ευ = eu	τ = t	
initial	ευ̂ = eu	υ = y	
"	ευ̂ = heu	[initial	υ̂ does not occur]
"	ζ = z	"	υ̂ = hy
"	η = ē	diphthong	υι = ui
initial	η̂ = ē	initial	υι̂ = hui
"	η̂ = hē	"	φ = ph
"	θ = th	"	χ = ch
"	ι = i	"	ψ = ps
initial	ι̂ = i	"	ω = ō
"	ι̂ = hi	initial	ô = ō
"	κ = k	"	ô̂ = hō

*The Greek characters do appear, however, in the section entitled Fundamentals of Medical Etymology (pp. xvii–xxix).

The original words from which the terms presented in this Dictionary are derived are reproduced in *italic*, the language of their origin being indicated by the appropriate abbreviation (see Abbreviations Used in This Dictionary).

As a guide to related vocabulary, especially on anatomical terms, the main entry may be followed in brackets by its Latin and/or Greek equivalent, such as "liver [L. *jecur*; Gr. *hepar*]" and "kidney [L. *ren*; Gr. *nephros*]."

SYNONYMS AND THE PLACEMENT OF DEFINITIONS

With few exceptions in this Dictionary, a definition (as opposed to a cross-reference) is given at only one place for two or more synonymous terms. Thus, for example, definitions of most anatomical terms appear on the terms official in the *Nomina Anatomica*, and the common names are cross-referred to the official names. The reader, then, will find on the anglicized common names of anatomical structures, as those under artery, ligament, muscle, nerve, and vein, a cross-reference to the official name of the specific structure. The complete descriptions, in these particular instances, are given in the tables of *arteriae*, *ligamenta*, *musculi*, *nervi*, and *venae*.

Such cross-references are also given for synonyms of terms listed in other official publications, including the *United States Pharmacopeia* and the *National Formulary*, the full descriptions again being given on the official names.

This practice of cross-referring is also followed for earlier terms that have been supplanted in the vocabulary as well as for terms which are currently used with the same meaning as the term on which a full description is given. In most such instances, the term on which the definition appears is the currently preferred term for the entity. In others, the shade of preference may be slight, or even denied by some persons. In the latter cases, the practice has been adhered to as a means of keeping down the size of the Dictionary by avoiding duplication of definitions.

Fundamentals of Medical Etymology

BY LLOYD W. DALY, A.M., PH.D., LITT.D.

Allen Memorial Professor of Greek, University of Pennsylvania

The very size of current medical dictionaries is evidence of the massive proportions which the medical, scientific, and technical vocabulary has attained within the English language. As this vocabulary grows, its mastery by each succeeding generation becomes increasingly difficult. It is popularly believed that the study of Latin at least, if not also of Greek, is prerequisite for the study of medicine. Although this is no longer literally true, the composition of the medical vocabulary makes it evident why such study was formerly considered necessary. At least fifty per cent of the general English vocabulary is of Greek and Latin derivation, and it is a conservative estimate that as much as seventy-five per cent of the scientific element is of such origin.

Some familiarity with these two languages which contribute so largely to the terminology must obviously simplify the task of learning a basic vocabulary and of comprehending new words as they are encountered. Experience shows that it does. However, since it no longer seems economical to learn to read the two languages for this purpose, some short cut to the necessary information is needed, and again experience has shown that certain fundamentals of vocabulary and linguistic principle can easily be mastered and are of great assistance. The purpose of the present introduction is to present those fundamentals in as practical and concise a form as possible; any statements in the following pages which are contrary to historical linguistic fact are made deliberately, in keeping with this purpose.

GREEK

Alphabet and transcription

The Latin alphabet as we use it is derived, with slight modifications, from the Greek alphabet, which is almost completely phonetic. The table (p. xviii) shows as nearly as possible the sound equivalent of each letter in terms of our own alphabet, the names of the letters, and their transcribed equivalents in English. The first syllable of the name of each letter, properly pronounced, also gives its sound equivalent.

Greek words are written with an accent (*θέσις, φῶλον*); for present purposes, the two kinds of accent mark may be regarded simply as indicating the syllable on which the stress of accent is placed. Words beginning with a vowel, diphthong, or *rho* (*ρ*) are written with a breathing mark over the initial vowel or *rho*, or over the second vowel of the diphthong (*ἄλλος, ῥυθμός, αὐτός*). The so-called rough breathing mark (') indicates that the syllable over which it is placed should be initiated in pronunciation with an *h* sound, and words beginning with such a sound are usually transcribed into English with an initial *h*. Rarely they may appear with or without the *h*.^{*} The smooth breathing mark (ˊ) has no effect on pronunciation.

^{*}For example, in the Analytical Word List, following, compare -em- and hem(at)-, -aph- and hapt-, -elc- and helc-; such forms without the *h* rarely appear as the initial element of a compound.

CAPITAL	SMALL LETTER	SOUND	NAME	TRANSCRIPTION
A	α	aha	alpha	a
B	β	bet	beta	b
Γ	γ	get	gamma	g
Δ	δ	do	delta	d
E	ϵ	egg	epsilon	e
Z	ζ	adze	zeta	z
H	η	fête	eta	$\bar{e}$
Θ	θ	thin	theta	th
I	ι	{ it machine	iota	i
K	κ	key	kappa	k
Λ	λ	let	lambda	l
M	μ	met	mu	m
N	ν	net	nu	n
Ξ	ξ	hex	xi	x
O	$\omicron$	oho	omicron	o
Π	π	pet	pi	p
P	ρ	r (trilled)	rho	r
Σ	σ, s^*	set	sigma	s
T	τ	tell	tau	t
Υ	υ	ü (German)	upsilon	y
Φ	φ	photo	phi	ph
X	χ	ach (German)	chi	ch
Ψ	ψ	tips	psi	ps
Ω	ω	oho	omega	$\bar{o}$

* Sigma is written σ at the beginning or in the middle of a word and s at the end of a word. E.g., *σύνδεσις*.

The vowels are α , ϵ , η , ι , $\omicron$, υ , and ω , which may be combined to give the diphthongs shown in the listing below. The letter *iota* (ι) may also be written as a subscript (α , η , φ), but as such it has no effect on pronunciation.

DIPHTHONG	SOUND	TRANSCRIPTION
$\alpha\iota$	aisle	ae, e, or ai
$\alpha\upsilon$	out	au
$\epsilon\iota$	eight	i, e, or ei
$\epsilon\upsilon$	eh-oo	eu
$\omicron\iota$	oil	oe or e
$\omicron\upsilon$	ghoul	ou or u
$\upsilon\iota$	quit	ui

Words are transcribed from Greek into our own alphabet as indicated in the foregoing tables, with the following exceptions: *Gamma* (γ) before *gamma* (γ), *kappa* (κ), *chi* (χ), or *xi* (ξ) is nasal and so is transcribed as *n*. Initial *rho* (ρ) is transcribed as *rh*, and double *rho* ($\rho\rho$) as *rrh*. *Upsilon* (υ) is transcribed as *y* except in diphthongs, where it is reproduced by *u*, as indicated in the table.

Many Greek words have come into English through Latin, in which they have undergone some change (Greek *στέονον*, Latin *sternum*), or through a second intermediary language, such as French, with still further change (Greek *χειρουργία*, Latin *chirurgia*, French *cirurgerie*, English *surgery*). Such evolution explains many of the apparent peculiarities of Greek words in English. Other changes are accounted for by our tendency to drop inflectional terminations which indicate grammatical function in Greek but have no function in English (*σπέρμα*, sperm), or to simplify the termination (*γονοφόρος*, gonophore).

The most constant change, however, in the transition of Greek words to English, is the loss of termination which produces what we may call the *combining form*. This combining form, which is used when the word enters into a compound with another word, may differ markedly from the *lexical form*, under which the word would be located in a dictionary of the Greek language.

For most nouns (those ending in $-\eta$, $-\alpha$, $-\omicron\varsigma$, $-\omicron\upsilon$), the combining form may be derived by dropping the termination from the lexical form. For another large class the combining form must be derived from a secondary form of the word (indicated in parentheses in the following table) by dropping the ending $-\omicron\varsigma$. For most words ending in $-\iota\varsigma$ only ς need be dropped. In some instances, as in terms derived from the words for blood (*hemat-*) and body (*somat-*), different

combining forms are used, derived from either the lexical or the secondary form. Adjectives are similar in formation to nouns. For those ending in *-vs* only the *ς* need be dropped.

LEXICAL FORM	COMBINING FORM	ENGLISH
ἀρχή	ἀρχ-	archenteron
ἰδέα	ἰδε-	ideology
τόπος	τοπ-	topesthesia
ὀστέον	ὀστε-	osteotome
βάσις	βασι-	basicranial
μῦς (μυός)	μυ-	myectomy
αἷμα (αἷματος)	αἰμ-, αἱματ-	hemangioma, hematophyte
παῖς (παιδός)	παιδ-	pediatrics

For verbs the combining form may be derived from several of the six principal parts, which may show a variable vowel just as English verbs do (sing, sang, sung). Thus the verb meaning to *stretch* has the forms *τείνω* and *τέτακα*, and English words may be derived from either, e.g., *teinoscope*, *ectasis*. In most cases, however, the combining form may be derived from the lexical form ending in *-ω*, *-μαι*, or *-μι*, or from the infinitive form ending in *-ειν*, *-αν*, *-ουν*, *-σθαι*, or *-ναι*, the latter being the form often cited in the etymology given in dictionaries. The commonest vowel variation is from *ε* to *ο*, as in the verb *τρέφω*, which frequently shows the combining form *τροφ-*, as in *atrophy*.

Compounds Most derivatives are composed not of single Greek words but of a combination of two or more words or word elements. Thus the word *osteotome* is composed of the noun *ὀστέον* (oste) plus *τέμνω* (tom). When the second member of the compound begins with a consonant, as in this instance, a connective *ο* is usually inserted between the two members to facilitate pronunciation.

Prefixes Many compounds consist of a word preceded by a prefix, commonly a preposition. As shown in the table, most of these prepositions have a final vowel, which is dropped when the word to which it is affixed begins with a vowel, the prefix *περί* (peri-) being an exception. A final consonant may also be changed as indicated, to accommodate it to a succeeding initial consonant. The negative prefix *ἀν-* before a vowel (*anomaly*) must not be confused with the preposition *ἀνά* with the final vowel dropped (*anode*).

PREPOSITION	COMBINING FORMS	ENGLISH
ἀμφί	ἀμφι-	amphicrania
ἀνά	ἀμφ-	amphiclexis
	ἀνα-	anabolism
	ἀν-	anode
ἀντί	ἀντι-	antigen
	ἀντ-	anthelminthic
ἀπό	ἀπο-	apophysis
	ἀπ-	apandria
διά	δια-	diathermy
	δι-	diuretic
ἐκ	ἐκ-	ectopia
ἐξ	ἐξ-	exosmosis
ἐν	ἐν-	enostosis
	ἐμ-	embolus
ἐπί	ἐπι-	epinephrin
	ἐπ-	eparterial
κατά	κατα-	catalepsy
	κατ-	cation
μετά	μετα-	metamorphosis
	μετ-	metencephalon
παρα	παρα-	paramastoid
	παρ-	parotid
περί	περι-	peritoneum
πρό	προ-	prognosis
σύν	συν-	synthesis
	συν-	symphysis
	συν-	syllipsis
	συν-	systole
ὑπέρ	ὑπερ-	hypertrophy
ὑπό	ὑπο-	hypodermic
	ὑπ-	hypaxial

Suffixes Suffixes, which constitute a third element in the formation of compounds, are added directly to the combining forms of words without insertion of a connective *o*, but when the result would be a combination of consonants difficult to pronounce, certain euphonic changes are made in the final consonant of the combining form. The combinations shown

CONSONANT CHANGES	ENGLISH
β or φ + τ = $\pi\tau$	epileptic
γ or χ + τ = $\kappa\tau$	tactic
δ or θ + τ = $\sigma\tau$	schist
π , β or φ + μ = $\mu\mu$	lemma
κ , γ or χ + μ = $\gamma\mu$	paradigm
τ , δ or θ + μ = $\sigma\mu$	plasma
π , β or φ + σ = ψ	autopsy
κ , γ or χ + σ = ξ	cachexia
τ , δ or θ + σ = σ	dose

in the table represent the results of the addition of those suffixes which are the commonest in the vocabulary. The suffixes *-της* (*-t*), *-τηρ* (*-ter*), *-σις* (*-sis*), *-σια* (*-sia* or *-sy*), *-μος* (*-m*), *-μα* (*-ma* or *-m*) are usually added to verbal combining forms to produce nouns; *-τος* (*-t*, *-te*) and *-τικός* (*-tic*) are added to verbal combining forms to produce adjectives or nouns; *-ίζω* (*-ize*) is added to noun or adjective combining forms to produce verbs; *-ια* (*-ia* or *-y*) is added to noun or verb combining forms to produce nouns; *-ιτις* (*-itis*) and *-κος* or *-ικος* (*-c* or *-ic*) are added to noun combining forms to produce nouns or adjectives. The following examples illustrate such compounding and indicate some of the possibilities of adding one suffix to another. It should be noted that nouns ending with the suffix *-μα* have a combining form ending in *-ματ-* and that verbs ending with the suffix *-ίζω* have a combining form ending in *-ιδ-*.

GREEK COMPONENTS	ENGLISH
ὀστέον + κλάω + -της	osteoclast
σφίγγω + -τηρ	sphincter
ἐμέω + -σις	emesis
κινέω + -σια	cinesia
ἐπί + λαμβάνω + -σια	epilepsy
σπάω + -μος	spasm
καρκινώ + -μα	carcinoma
ὀράω + -τος + μέτρον	optometer
ζυγώω + -τος	zygote
ἴστημι + -τικός	static
κρύσταλλος + -ίζω	crystallize
μαίνω + -ια	mania
νεύρον + γράφω + -ια	neurography
οὖς + -ιτις	otitis
κόλον + -ικος	colic
φύσις + -κος	physic
ἄρθρον + -ιτις + -κος	arthritic
συμπίπτω + -μα + -ικος	symptomatic
κρέας + φαγεῖν + -ίζω + -μος	creophagism
φύω + -σις + -κος + -ίζω + -της	physicist

In the formation of compounds English follows natural tendencies of the Greek language but often goes far beyond the actual Greek vocabulary. For example, there is no such Greek verb as *φυσικίζω* nor even such an English verb as *physicize*, yet the word *physicist* is formed as though there were, on the analogy of such verbs as *stigmatize*, which actually have Greek counterparts. In a similar manner, the need for new terms is met by coining new words composed of prefixes, combining forms, and suffixes, on the basis of analogy.

LATIN

A high percentage of medical terms is of Latin origin, but a good proportion of this element, being in the form of anatomical nomenclature, is original Latin and not derivative. The purpose of this introduction is to explain derivatives, words which have undergone some change in the transfer to English. For original Latin words the reader may refer to the body of the Dictionary.

Alphabet The Latin alphabet is a modification of the Greek which has been adopted for English with the addition of the characters *J*, *U*, and *W*, which were developed

during the Middle Ages. The ease with which the Romans adapted the Greek alphabet is evidence of the close relationship of the two languages.

The inflectional terminations of Latin words, as of Greek, tend to be modified or to be dropped in English. Thus *nervus* becomes nerve, *spina* becomes spine, *penicillum* becomes pencil, and *oleum* appears usually as -ol. However, Latin terminations are more frequently tolerated than those of Greek, and are adopted into English, as occurred with the terms *fetus*, *rectum*, *pelvis*, and *vagina*.

Combining forms Combining forms of Latin words, as of Greek, are derived by dropping an inflectional termination. Thus for most nouns ending in *-a*, *-us*, or *-um*, this ending must be dropped from the lexical form, whereas for others *-is* must be dropped from a secondary form (indicated in parentheses in the table).

LEXICAL FORM	COMBINING FORM	ENGLISH
<i>retina</i>	<i>retin-</i>	<i>retinopapillitis</i>
<i>bulbus</i>	<i>bulb-</i>	<i>bulbiform</i>
<i>ovum</i>	<i>ov-</i>	<i>oviduct</i>
<i>frons (frontis)</i>	<i>front-</i>	<i>frontoparietal</i>
<i>cortex (corticis)</i>	<i>cortic-</i>	<i>corticipetal</i>

Adjectives follow these same patterns. The comparative form, ending in *-ior*, frequently appears in English without change, as in *inferior*.

The lexical forms of all regular Latin verbs end in either *-o* or *-or*, but the forms most commonly used in English derivatives are the participles, or verbal adjectives, present and past. Whereas the English present participle ends in *-ing*, the combining form of the Latin ends in *-nt* preceded by a vowel, either *a* or *e*. Whereas the English past participle usually ends in *-ed* or *-en*, the combining form of the Latin regularly ends in *-t* or *-s*, which may be preceded by a vowel, either *a* or *i*. The *-us* termination of these past participles is regularly modified to an *e*, thus producing the common English ending *-ate*.

LEXICAL FORM	ENGLISH	
	(From Pres. Part.)	(From Past Part.)
<i>consulto</i>	<i>consultant</i>	<i>consultation</i>
<i>aperio</i>	<i>aperient</i>	<i>aperture</i>
<i>nutrio</i>	<i>nutrient</i>	<i>nutritive</i>
<i>sentio</i>	<i>sentient</i>	<i>sensory</i>

Use of the past participial form ending in *-atus* is greatly extended in English by the formation of numerous derivatives, including not only such verbs as rotate, from the Latin verb *roto* but also, by analogy, such verbs as aerate, although there is no such Latin verb as *aero*.

Compounds In the formation of compound derivatives from Latin words a combining form is linked to the following element by what may be called, regardless of its origin, a connective vowel. This vowel is most commonly either *o* (lumbocostal, genitourinary) or *i* (nervimotor, bilirubin), or less frequently *u* (granulation).

Prefixes As in Greek, most of the prefixes in Latin are prepositions. Most of these may be added to other words without change, but some of those which end in a consonant assimilate this consonant to the initial sound of the word to which it is affixed.

CONSONANT CHANGES		ENGLISH
<i>ad-</i>	before <i>c</i> becomes <i>ac-</i>	<i>accelerate</i>
<i>ad-</i>	before <i>f</i> becomes <i>af-</i>	<i>affinity</i>
<i>ad-</i>	before <i>g</i> becomes <i>ag-</i>	<i>agglutinant</i>
<i>ad-</i>	before <i>p</i> becomes <i>ap-</i>	<i>appendix</i>
<i>ad-</i>	before <i>s</i> becomes <i>as-</i>	<i>assimilate</i>
<i>ad-</i>	before <i>t</i> becomes <i>at-</i>	<i>attrition</i>
<i>ex-</i>	before <i>f</i> becomes <i>ef-</i>	<i>effusion</i>
<i>in-</i>	before <i>l</i> becomes <i>il-</i>	<i>illinition</i>
<i>in-</i>	before <i>m</i> becomes <i>im-</i>	<i>immersion</i>
<i>in-</i>	before <i>r</i> becomes <i>ir-</i>	<i>irradiation</i>
<i>ob-</i>	before <i>c</i> becomes <i>oc-</i>	<i>occlusion</i>
<i>sub-</i>	before <i>f</i> becomes <i>suf-</i>	<i>suffocate</i>
<i>sub-</i>	before <i>p</i> becomes <i>sup-</i>	<i>suppository</i>
<i>trans-</i>	before <i>s</i> becomes <i>tran-</i>	<i>transpiration</i>

The addition of a prefix may also affect the following word by changing its characteristic vowel; thus *ob* + *caput* becomes *occiput*, and *in* + *iactus* becomes *inject*.

The commonest Latin suffixes used in forming nouns are: *-arium*, *-orium* (-ary, -ory), *-io* (-ion added to past participles), *-or* (-or added to past participles), and *-tas* (-ty). Those used in forming adjectives are: *-abilis*, *-ibilis* (-able, -ible), *-alis*, *-ilis* (-al, -ile), *-aris* (-ar), *-arius*, *-orius* (-ary, -ory), *-atus* (-ate), *-idus* (-id), *-ivus* (-ive), and *-osus* (-ous or -ose).

LATIN COMPONENTS	ENGLISH
<i>avis</i> + <i>-arium</i>	aviary
<i>dormio</i> (<i>dormitus</i>) + <i>-orium</i>	dormitory
<i>nutrio</i> (<i>nutritus</i>) + <i>-io</i>	nutrition
<i>moveo</i> (<i>motus</i>) + <i>-or</i>	motor
<i>porosus</i> + <i>-tas</i>	porosity
<i>frio</i> + <i>-abilis</i>	friable
<i>edo</i> + <i>-ibilis</i>	edible
<i>corpus</i> (<i>corporis</i>) + <i>-alis</i>	corporal
<i>febris</i> + <i>-ilis</i>	febrile
<i>oculus</i> + <i>-aris</i>	ocular
<i>cilium</i> + <i>-arius</i>	ciliary
<i>sensus</i> + <i>-orius</i>	sensory
<i>reticulum</i> + <i>-atus</i>	reticulate
<i>morbis</i> + <i>-idus</i>	morbid
<i>aborior</i> (<i>abortus</i>) + <i>-ivus</i>	abortive
<i>squama</i> + <i>-osus</i>	squamous
<i>adeps</i> (<i>adipis</i>) + <i>-osus</i>	adipose
<i>prae</i> + <i>caveo</i> (<i>cautus</i>) + <i>-io</i> + <i>-arius</i>	precautionary

HYBRID TERMS

The examples hitherto cited have been purely Greek or purely Latin, but elements from the two languages are often combined in one compound word, which is called a hybrid. A prefix from one language may be added to a word from the other (*de* + *ὑδωρ* + *-atus* = *dehydrate*), or a Greek and a Latin word may be combined (*δολιχος* + *facialis* = *dolichofacial*). However, the most productive source of such hybrids is the addition of a Latin suffix to a Greek word (*κρανιον* + *-alis* = *cranial*) or vice versa (*cerebellum* + *-itis* = *cerebellitis*).

ANALYTICAL WORD LIST

The following list includes those Greek and Latin words which an actual count* shows occur most frequently in the vocabulary of this dictionary, arranged alphabetically under their English combining forms as rubrics. The dash appended to a combining form indicates that it is not a complete word and, if the dash precedes the combining form, that it commonly appears as the terminal element of a compound. Infrequently a combining form is both preceded and followed by a dash, showing that it usually appears between two other elements. Closely related forms are shown in one entry by the use of parentheses: thus *carbo(n)-*, showing it may be either *carbo-*, as in *carbohydrate*, or *carbon-*, as in *carbonuria*.

Following each combining form the first item of information is the Greek or Latin word from which it is derived. Those words which are not printed in Greek characters are Latin. Occasionally both a Greek and a Latin word are given. Presence of a dash before or after such an element indicates that it does not occur as an independent word in the original language. Information necessary to the understanding of the form appears next in parentheses. Then the meaning or meanings of the word are given, followed where appropriate by reference to a synonymous combining form in the other language, that is, on a combining form of Latin derivation, to the synonymous form of Greek derivation, and vice versa. Finally, an example is given to illustrate use of the combining form in a compound English derivative.

If this list is used in close conjunction with the etymological information given in the body of the Dictionary, no confusion should be caused by the similarity of elements in such words as *melalgia*, *melancholia*, and *melicera*, where the similarity is only apparent and the derivation of each word is different.

*For the count upon which the selection was based, thanks are due to my wife, Bernadine A. Daly, whose expert work will, I am sure, greatly increase the practical usefulness of the list.

a-	a- (<i>n</i> is added before words beginning with a vowel) negative prefix. Cf. in- ³ . ametria	arter(i)-	ἀρτηρία elevator (?), artery. arteriosclerosis, periarteritis
ab-	ab away from. Cf. apo-. abducent	arthr-	ἄρθρον joint. Cf. articul-synarthrosis

		-cele	κήλη tumor, hernia. gastrocele
		cell-	cella room, cell. Cf. cyt-. celliferous
		cen-	κοινός common. cenesthesia

cent-	<i>centum</i> hundred. Cf. hect-. Indicates fraction in metric system. [This exemplifies the custom in the metric system of identifying fractions of units by stems from the Latin, as centimeter, decimeter, millimeter, and multiples of units by the similar stems from the Greek, as hectometer, decameter, and kilometer.] <i>centimeter</i> , <i>centipede</i>	cor- ²	See con-. <i>corrugator</i>
cente-	<i>κεντώ</i> puncture. Cf. punct-. <i>enterocentesis</i>	corpor-	<i>corpus</i> , <i>corporis</i> body. Cf. somat-. <i>intracorporal</i>
centr-	<i>κέντρον</i> or <i>cenrum</i> point, center. <i>neurocentral</i>	cortic-	<i>cortex</i> , <i>corticis</i> bark, rind. <i>corticosterone</i>
cephal-	<i>κεφαλή</i> head. Cf. capit-. <i>encephalitis</i>	cost-	<i>costa</i> rib. Cf. pleur-. <i>intercostal</i>
cept-	<i>capio</i> , - <i>cipientis</i> , - <i>ceptus</i> take, receive. <i>receptor</i>	crani-	<i>κράνιον</i> or <i>cranium</i> skull. <i>pericranium</i>
cer-	<i>κηρός</i> or <i>cera</i> wax. <i>ceroplasty</i> , <i>ceromel</i>	creat-	<i>κρέας</i> , <i>κρεατ-</i> meat, flesh. <i>creatorrhea</i>
cerat-	See kerat-. <i>aceratosis</i>	-crescent	<i>cresco</i> , <i>crescentis</i> , <i>cretus</i> grow. <i>excrescent</i>
cerebr-	<i>cerebrum</i> . <i>cerebrospinal</i>	cret- ¹	<i>cerno</i> , <i>cretus</i> distinguish, separate off. Cf. crin-. <i>discrete</i>
cervic-	<i>cervix</i> , <i>cervicis</i> neck. Cf. trachel-. <i>cervicitis</i>	cret- ²	See -crescent. <i>accretion</i>
chancr-	See cancr-. <i>chancriform</i>	crin-	<i>κρίνω</i> distinguish, separate off. Cf. cret- ¹ . <i>endocrinology</i>
cheil-	<i>χείλος</i> lip. Cf. labi-. <i>cheiloschisis</i>	crur-	<i>crus</i> , <i>cruris</i> shin, leg. <i>brachio-crural</i>
cheir-	<i>χείρ</i> hand. Cf. man-. <i>macrocheiria</i> . (Also spelled chir-)	cry-	<i>κρύος</i> cold. <i>cryesthesia</i>
chir-	See cheir-. <i>chiromegaly</i>	crypt-	<i>κρύπτω</i> hide, conceal. <i>cryptorchism</i>
chlor-	<i>χλωρός</i> green. <i>achloropsia</i>	cult-	<i>colo</i> , <i>cultus</i> tend, cultivate. <i>culture</i>
chol-	<i>χολή</i> bile. Cf. bil-. <i>hepatocholangitis</i>	cune-	<i>cuneus</i> wedge. Cf. sphen-. <i>cuneiform</i>
chondr-	<i>χόνδρος</i> cartilage. <i>chondromalacia</i>	cut-	<i>cutis</i> skin. Cf. derm(at)-. <i>subcutaneous</i>
chord-	<i>χορδή</i> string, cord. <i>perichordal</i>	cyan-	<i>κύανος</i> blue. <i>anthocyanin</i>
chori-	<i>χόριον</i> protective fetal membrane. <i>endochorion</i>	cycl-	<i>κύκλος</i> circle, cycle. <i>cyclophoria</i>
chro-	<i>χρῶς</i> color. <i>polychromatic</i>	cyst-	<i>κύστις</i> bladder. Cf. vesic-. <i>nephrocystitis</i>
chron-	<i>χρόνος</i> time. <i>synchronous</i>	cyt-	<i>κύτος</i> cell. Cf. cell-. <i>plasmocytoma</i>
chy-	<i>χέω</i> , <i>χυ-</i> pour. <i>ecchymosis</i>	dacry-	<i>δάκρυ</i> tear. <i>dacryocyst</i>
-cid(e)	<i>caedo</i> , - <i>cisus</i> cut, kill. <i>infanticide</i> , <i>germicide</i>	dactyl-	<i>δάκτυλος</i> finger, toe. Cf. digit-. <i>hexadactylism</i>
cili-	<i>cilium</i> eyelid. Cf. blephar-. <i>superciliary</i>	de-	<i>de</i> down from. <i>decomposition</i>
cine-	See kine-. <i>autocinesis</i>	dec- ¹	<i>δέκα</i> ten. Indicates multiple in metric system. Cf. dec- ² . <i>decagram</i>
-cipient	See cept-. <i>incipient</i>	dec- ²	<i>decem</i> ten. Indicates fraction in metric system. Cf. dec- ¹ . <i>decipara</i> , <i>decimeter</i>
circum-	<i>circum</i> around. Cf. peri-. <i>circumferential</i>	dendr-	<i>δένδρον</i> tree. <i>neurodendrite</i>
-cis-	<i>caedo</i> , - <i>cisus</i> cut, kill. <i>excision</i>	dent-	<i>dens</i> , <i>dentis</i> tooth. Cf. odont-. <i>interdental</i>
clas-	<i>κλάω</i> , <i>κλασ-</i> break. <i>cranioclast</i>	derm(at)-	<i>δέρμα</i> , <i>δέρματος</i> skin. Cf. cut-. <i>endoderm</i> , <i>dermatitis</i>
clin-	<i>κλίνω</i> bend, incline, make lie down. <i>clinometer</i>	desm-	<i>δεσμός</i> band, ligament. <i>syn-desmopexy</i>
clus-	<i>claudo</i> , - <i>clusus</i> shut. <i>Malocclusion</i>	dextr-	<i>dexter</i> , <i>dextr-</i> right-hand. <i>ambidextrous</i>
co-	See con-. <i>cohesion</i>	di- ¹	<i>δι-</i> two. <i>dimorphic</i> . (See also bi- ²)
cocc-	<i>κόκκος</i> seed, pill. <i>gonococcus</i>	di- ²	See dia-. <i>diuresis</i> .
coel-	<i>κοῖλος</i> hollow. Cf. cav-. <i>coelenteron</i> . (Also spelled cel-)	di- ³	See dis-. <i>divergent</i> .
col- ¹	See colon-. <i>colic</i>	dia-	<i>διά</i> (a is dropped before words beginning with a vowel) through, apart. Cf. per-. <i>diagnosis</i>
col- ²	See con-. <i>collapse</i>	didym-	<i>δίδυμος</i> twin. Cf. gemin-. <i>epididymal</i>
colon-	<i>κόλον</i> lower intestine. <i>colonic</i>	digit-	<i>digitus</i> finger, toe. Cf. dactyl-. <i>digitigrade</i>
colp-	<i>κόλπος</i> hollow, vagina. Cf. sin-. <i>endocolpitis</i>	diplo-	<i>διπλός</i> double. <i>diplomelia</i>
com-	See con-. <i>commasculation</i>	dis-	<i>dis-</i> (s may be dropped before a word beginning with a consonant) apart, away from. <i>dislocation</i>
con-	<i>con-</i> (becomes co- before vowels or h; col- before l; com- before b, m, or p; cor- before r) with, together. Cf. syn-. <i>contraction</i>	disc-	<i>δίσκος</i> or <i>discus</i> disk. <i>disco-placenta</i>
contra-	<i>contra</i> against, counter. Cf. anti-. <i>contraindication</i>	dors-	<i>dorsum</i> back. <i>ventrodorsal</i>
copr-	<i>κόπρος</i> dung. Cf. sterco-. <i>coproma</i>	drom-	<i>δρόμος</i> course. <i>hemodromometer</i>
cor- ¹	<i>κόρη</i> doll, little image, pupil. <i>isocoria</i>	-ducent	See duct-. <i>adducent</i>
		duct-	<i>duco</i> , <i>ducentis</i> , <i>ductus</i> lead, conduct. <i>oviduct</i>

dur-	<i>durus</i> hard. Cf. scler-. induration	funct-	<i>fungor, functus</i> perform, serve, function. malfunction
dynam(i)-	<i>δύναμις</i> power. <i>dynamoneure, neurodynamic</i>	fund-	<i>fundo, fusus</i> pour. <i>infundibulum</i>
dys-	<i>δυσ-</i> bad, improper. Cf. mal-. <i>dystrophic</i> . (See also cac-)	fus-	See fund-. <i>diffusible</i>
e-	<i>e</i> out from. Cf. ec- and ex-. emission	galact-	<i>γάλα, γάλακτος</i> milk. Cf. lact-. <i>dysgalactia</i>
ec-	<i>ἐκ</i> out of. Cf. e- <i>eccentric</i>	gam-	<i>γάμος</i> marriage, reproductive union. <i>agamont</i>
-ech-	<i>ἔχω</i> have, hold, be. <i>syn-echotomy</i>	gangli-	<i>γάγγλιον</i> swelling, plexus. <i>neurorogangliitis</i>
ect-	<i>ἐκτός</i> outside. Cf. extra-. <i>ectoplasm</i>	gastr-	<i>γαστήρ, γαστρός</i> stomach. <i>cho-langiogastrostomy</i>
ede-	<i>οἰδέω</i> swell. <i>edematous</i>	gelat-	<i>gelo, gelatus</i> freeze, congeal. <i>gela'in</i>
ef-	See ex-. <i>efflorescent</i>	gemin-	<i>geminus</i> twin, double. Cf. <i>didym-</i> . <i>quadrigeminal</i>
-elc-	<i>ἔλκος</i> sore, ulcer. <i>enterelcosis</i> . (See also <i>helc-</i>)	gen-	<i>γίγνομαι, γεν-, γον-</i> become, be produced, originate, or <i>γεννάω</i> produce, originate. <i>cytogenic</i>
electr-	<i>ἤλεκτρον</i> amber. <i>electrotherapy</i>	germ-	<i>germen, germinis</i> bud, a growing thing in its early stages. Cf. blast-. <i>germinal, ovigerm</i>
em-	See en-. <i>embolism, empathy, emphysis</i>	gest-	<i>gero, gerentis, gestus</i> bear, carry. <i>congestion</i>
-em-	<i>αἷμα</i> blood. <i>anemia</i> . (See also <i>hem(at)-</i>)	gland-	<i>glans, glandis</i> acorn. Cf. aden-. <i>intraglandular</i>
en-	<i>ἐν</i> (<i>n</i> changes to <i>m</i> before <i>b, p</i> , or <i>ph</i>) in, on. Cf. in- ² . <i>encelitis</i>	-glia	<i>γλία</i> glue. <i>neuroglia</i>
end-	<i>ἔνδον</i> inside. Cf. intra-. <i>endangium</i> .	gloss-	<i>γλῶσσα</i> tongue. Cf. lingu-. <i>trichoglossia</i>
enter-	<i>ἔντερον</i> intestine. <i>dysentery</i>	glott-	<i>γλῶττα</i> tongue, language. <i>glottic</i>
ep-	See epi-. <i>epaxial</i>	gluc-	See glyc(y)-. <i>glucophenetidin</i>
epi-	<i>ἐπὶ</i> (<i>i</i> is dropped before words beginning with a vowel) upon, after, in addition. <i>epiglottis</i>	glutin-	<i>gluten, glutinis</i> glue. <i>agglutination</i>
erg-	<i>ἔργον</i> work, deed. <i>energy</i>	glyc(y)-	<i>γλυκύς</i> sweet. <i>glycemia, glycyrrhizin</i> . (Also spelled gluc-)
erythr-	<i>ἐρυθρός</i> red. Cf. rub(r)-. <i>erythrochromia</i>	gnath-	<i>γνάθος</i> jaw. <i>orthognathous</i>
eso-	<i>ἔσω</i> inside. Cf. intra-. <i>esophylactic</i>	gno-	<i>γινώσκω, γνω-</i> know, discern. <i>diagnosis</i>
esthe-	<i>αἰσθάνομαι, αἰσθη-</i> perceive, feel. Cf. sens-. <i>anesthesia</i>	gon-	See gen-. <i>amphigony</i>
eu-	<i>εὖ</i> good, normal. <i>eupepsia</i>	grad-	<i>gradior</i> walk, take steps. <i>retrograde</i>
ex-	<i>ἐξ</i> or <i>ex</i> out of. Cf. e-. <i>excretion</i>	-gram	<i>γράφω, γραφ-</i> + <i>-μα</i> scratch, write, record. <i>cardiogram</i>
exo-	<i>ἔξω</i> outside. Cf. extra-. <i>exopathic</i>	gran-	<i>granum</i> grain, particle. <i>lipogranuloma</i>
extra-	<i>extra</i> outside of, beyond. Cf. ect- and exo-. <i>extracellular</i>	graph-	<i>γράφω</i> scratch, write, record. <i>histography</i>
faci-	<i>facies</i> face. Cf. prosop-. <i>brachio-faciolingual</i>	grav-	<i>gravis</i> heavy. <i>multigravida</i>
-facient	<i>facio, facientis, factus, -fectus</i> make. Cf. poie-. <i>calefacient</i>	gyn(ec)-	<i>γυνή, γυναικός</i> woman, wife. <i>androgyny, gynecologic</i>
-fact-	See facient-. <i>artefact</i>	gyr-	<i>γῦρος</i> ring, circle. <i>gyrospasm</i>
fasci-	<i>fascia</i> band. <i>fasciorrhaphy</i>	haem(at)-	See hem(at)-. <i>haemorrhagia, haematoxylon</i>
febr-	<i>febris</i> fever. Cf. pyr-. <i>febricide</i>	hapt-	<i>ἅπτω</i> touch. <i>haptometer</i>
-fect-	See -facient. <i>defective</i>	hect-	<i>ἑκτ-</i> hundred. Cf. cent-. Indicates multiple in metric system. <i>hectometer</i>
-ferent	<i>fero, ferentis, latus</i> bear, carry. Cf. phor-. <i>efferent</i>	helc-	<i>ἔλκος</i> sore, ulcer. <i>helcosis</i>
ferr-	<i>ferrum</i> iron. <i>ferroprotein</i>	hem(at)-	<i>αἷμα, αἱματος</i> blood. Cf. sanguin-. <i>hemangioma, hematuria</i> . (See also -em-)
fibr-	<i>fibra</i> fibre. Cf. in- ¹ . <i>chondrofibroma</i>	hemi-	<i>ἡμι-</i> half. Cf. semi-. <i>hemiageusia</i>
fil-	<i>filum</i> thread. <i>filiform</i>	hen-	<i>εἷς, ἐνός</i> one. Cf. un-. <i>henogenesis</i>
fiss-	<i>findo, fissus</i> split. Cf. schis-. <i>fission</i>	hepat-	<i>ἥπαρ, ἥπατος</i> liver. <i>gastrohepatic</i>
flagell-	<i>flagellum</i> whip. <i>flagellation</i>	hept(a)-	<i>ἑπτὰ</i> seven. Cf. sept- ² . <i>heptatomic, heptavalent</i>
flav-	<i>flavus</i> yellow. Cf. xanth-. <i>riboflavin</i>	hered-	<i>heres, heredis</i> heir. <i>heredoimmunity</i>
-flect-	<i>flecto, flexus</i> bend, divert. <i>deflection</i>	hex- ¹	<i>ἕξ</i> six. Cf. sex-. <i>hexyl-</i> . An <i>a</i> is added in some combinations.
-flex-	See -flect-. <i>reflexometer</i>	hex- ²	<i>ἔχω, ἔχ-</i> (added to <i>σ</i> becomes <i>ἐξ-</i>) have, hold, be. <i>cachexy</i>
flu-	<i>fluo, fluxus</i> flow. Cf. rhe-. <i>fluid</i>	hexa-	See hex- ¹ . <i>hexachromic</i>
flux-	See flu-. <i>affluxion</i>	hidr-	<i>ἰδρώς</i> sweat. <i>hyperhidrosis</i>
for-	<i>foris</i> door, opening. <i>perforated</i>	hist-	<i>ἱστός</i> web, tissue. <i>histodialysis</i>
-form	<i>forma</i> shape. Cf. -oid. <i>ossiform</i>		
fract-	<i>frango, fractus</i> break. <i>refractive</i>		
front-	<i>frons, frontis</i> forehead, front. <i>nasofrontal</i>		
-fug(e)	<i>fugio</i> flee, avoid. <i>vermifuge, centrifugal</i>		

hod-	ὁδός road, path. <i>hodoneuromere</i> . (See also od- and -ode ¹)	lapar-	λαπάρα flank. <i>laparotomy</i>
hom-	ὁμός common, same. <i>homomorphic</i>	laryng-	λάρυγξ, λάρυγγος windpipe. <i>laryngendoscope</i>
horm-	ὁρμή impetus, impulse. <i>hormone</i>	lat-	<i>fero, latus</i> bear, carry. See -ferent. translation
hydat-	ὑδωρ, ὑδατος water. <i>hydatism</i>	later-	<i>latus, lateris</i> side. ventrolateral
hydr-	ὑδωρ, ὑδρ- water. Cf. lymph- <i>achlorhydria</i>	lent-	<i>lens, lentis</i> lentil. Cf. phac- <i>lenticonus</i>
hyp-	See hypo-. <i>hypaxial</i>	lep-	λαμβάνω, ληπ- take, seize. <i>cataleptic</i>
hyper-	ὑπέρ above, beyond, extreme. Cf. super-. <i>hypertrophy</i>	leuc-	See leuk-. <i>leucinuria</i>
hypn-	ὑπνος sleep. <i>hypnotic</i>	leuk-	λευκός white. Cf. alb-. <i>leukor-</i> <i>rhea</i> . (Also spelled leuc-)
hypo-	ὑπό (o is dropped before words beginning with a vowel) under, below. Cf. sub-. <i>hypo-</i> <i>metabolism</i>	lien-	<i>lien</i> spleen. Cf. splen-. <i>lieno-</i> <i>cele</i>
hyster-	ὑστέρα womb. <i>colpohysteropexy</i>	lig-	<i>ligo</i> tie, bind. <i>ligate</i>
iatr-	ιατρός physician. <i>pediatrics</i>	lingu-	<i>lingua</i> tongue. Cf. gloss-. sub- <i>lingual</i>
idi-	ἴδιος peculiar, separate, distinct. <i>idiosyncrasy</i>	lip-	λίπος fat. Cf. adip-. <i>glycolipin</i>
il-	See in- ^{2, 3} . <i>illinitio</i> (in, on), <i>illegible</i> (negative prefix)	lith-	λίθος stone. Cf. calc- ¹ . <i>nephro-</i> <i>lithotomy</i>
ile-	See ili- [ile- is commonly used to refer to the portion of the intestines known as the ileum]. <i>ileostomy</i>	loc-	<i>locus</i> place. Cf. top-. <i>locomotion</i>
ili-	<i>ilium (ileum)</i> lower abdomen, intestines [ili- is commonly used to refer to the flaring part of the hip bone known as the ilium]. <i>iliosacral</i>	log-	λέγω, λογ- speak, give an ac- count. <i>logorrhea, embry-</i> <i>ology</i>
im-	See in- ^{2, 3} . <i>immersion</i> (in, on), <i>imperforation</i> (negative pre- fix)	lumb-	<i>lumbus</i> loin. <i>dorsolumbar</i>
in- ¹	ἴς, ἴνός fiber. Cf. fibr-. <i>inoste-</i> <i>atoma</i>	lute-	<i>luteus</i> yellow. Cf. xanth-. <i>luteoma</i>
in- ²	<i>in</i> (n changes to l, m, or r be- fore words beginning with those consonants) in, on. Cf. en-. <i>insertion</i>	ly-	λύω loose, dissolve. Cf. solut-. <i>keratolysis</i>
in- ³	<i>in-</i> (n changes to l, m, or r be- fore words beginning with those consonants) negative prefix. Cf. a-. <i>invalid</i>	lymph-	<i>lymph</i> water. Cf. hydr-. <i>lymphadenosis</i>
infra-	<i>infra</i> beneath. <i>infraorbital</i>	macr-	μακρός long, large. <i>macromye-</i> <i>loblast</i>
insul-	<i>insula</i> island. <i>insulin</i>	mal-	<i>malus</i> bad, abnormal. Cf. cac- and dys-. <i>malfunction</i>
inter-	<i>inter</i> among, between. <i>inter-</i> <i>carpal</i>	malac-	μαλακός soft. <i>osteomalacia</i>
intra-	<i>intra</i> inside. Cf. end- and eso-. <i>intravenous</i>	mamm-	<i>mamma</i> breast. Cf. mast-. <i>submammary</i>
ir-	See in- ^{2, 3} . <i>irradiation</i> (in, on), <i>irreducible</i> (negative prefix)	man-	<i>manus</i> hand. Cf. cheir-. <i>man-</i> <i>iphalanx</i>
irid-	ἵρις, ἱριδός rainbow, colored circle. <i>keratoiridocyclitis</i>	mani-	μανία mental aberration. <i>ma-</i> <i>nigraphy, kleptomania</i>
is-	ἴσος equal. <i>isotope</i>	mast-	μαστός breast. Cf. mamm-. <i>hypermastia</i>
ischi-	ἴσχιον hip, haunch. <i>ischiopubic</i>	medi-	<i>medius</i> middle. Cf. mes-. <i>medi-</i> <i>frontal</i>
jact-	<i>iacio, iactus</i> throw. <i>jactitation</i>	mega-	μέγας great, large. Also in- dicates multiple (1,000,000) in metric system. <i>mega-</i> <i>colon, megadyne</i> . (See also <i>megal-</i>)
ject-	<i>iacio, -iectus</i> throw. <i>injection</i>	megal-	μέγας, μεγάλου great, large. <i>acromegaly</i>
jejun-	<i>ieiunus</i> hungry, not partaking of food. <i>gastrojejunostomy</i>	mel-	μέλος limb, member. <i>symmelia</i>
jug-	<i>iugum</i> yoke. <i>conjugation</i>	melan-	μέλας, μέλανος black. <i>hippo-</i> <i>melanin</i>
junct-	<i>iungo, iunctus</i> yoke, join. <i>con-</i> <i>junctiva</i>	men-	μήν month. <i>dysmenorrhea</i>
kary-	κάρνον nut, kernel, nucleus. Cf. nucle-. <i>megakaryocyte</i> . (Also spelled cary-)	mening-	μήνιγξ, μήνιγγος membrane. <i>encephalomeningitis</i>
kerat-	κέρας, κέρατος horn. <i>keratolysis</i> . (Also spelled cerat-)	ment-	<i>mens, mentis</i> mind. Cf. phren-, psych- and thym-. <i>dementia</i>
kil-	χίλιοι one thousand. Cf. mill-. Indicates multiple in metric system. <i>kilogram</i>	mer-	μέρος part. <i>polymeric</i>
kine-	κινέω move. <i>kinematograph</i> . (Also spelled cine-)	mes-	μέσος middle. Cf. medi-. <i>meso-</i> <i>derm</i>
labi-	<i>labium</i> lip. Cf. cheil-. <i>gingivo-</i> <i>labial</i>	met-	See meta-. <i>metallergy</i>
lact-	lac, lactis milk. Cf. galact-. <i>glucolactone</i>	meta-	μετά (a is dropped before words beginning with a vowel) after, beyond, accompany- ing. <i>metacarpal</i>
lal-	λαλέω talk, babble. <i>glossolalia</i>	metr- ¹	μέτρον measure. <i>stereometry</i>
		metr- ²	μήτρα womb. <i>endometritis</i>
		micr-	μικρός small. <i>photomicrograph</i>
		mill-	<i>mille</i> one thousand. Cf. kil-. Indicates fraction in metric system. <i>milligram, millipede</i>
		miss-	See -mittent. <i>intromission</i>

-mittent	<i>mitto, mittentis, missus</i> send.	par ⁻¹	<i>pario</i> bear, give birth to.
	<i>intermittent</i>		primiparous
mne-	<i>μυμνήσκω, μνη-</i> remember.	par ⁻²	See para-. <i>parepigastic</i>
	<i>pseudomnesia</i>	para-	<i>παρά</i> (final <i>a</i> is dropped before words beginning with a vowel) beside, beyond. <i>paramastoid</i>
mon-	<i>μόνος</i> only, sole. <i>monoplegia</i>		
morph-	<i>μορφή</i> form, shape. <i>polymorphonuclear</i>	part-	<i>pario, partus</i> bear, give birth to. <i>parturition</i>
mot-	<i>moveo, motus</i> move. <i>vasomotor</i>	path-	<i>πάθος</i> that which one undergoes, sickness. <i>psychopathic</i>
my-	<i>μῦς, μῦός</i> muscle. <i>inoleiomyoma</i>	pec-	<i>πήγνυμι, πηγ-</i> (πηκ- before τ) fix, make fast. <i>sympsecthiene</i> . (See also pex-)
-myces	<i>μύκης, μύκητος</i> fungus. <i>myelomyces</i>		
myc(et)-	See -myces. <i>ascomycetes, streptomycin</i>	ped-	<i>παῖς, παιδός</i> child. <i>orthopedic</i>
myel-	<i>μυελός</i> marrow. <i>poliomyelitis</i>	pell-	<i>pellis</i> skin, hide. <i>pellagra</i>
myx-	<i>μύξα</i> mucus. <i>myxedema</i>	-pellent	<i>pello, pellentis, pulsus</i> drive. <i>repellent</i>
narc-	<i>νάρκη</i> numbness. <i>toponarcosis</i>	pen-	<i>πένομαι</i> need, lack. <i>erythrocytopenia</i>
nas-	<i>nasus</i> nose. Cf. <i>rhin-</i> . <i>palatonasal</i>	pend-	<i>pendeo</i> hang down. <i>appendix</i>
ne-	<i>νέος</i> new, young. <i>neocyte</i>	pent(a)-	<i>πέντε</i> five. Cf. <i>quinque-</i> . <i>pen-tose, pentaploid</i>
necr-	<i>νεκρός</i> corpse. <i>necrocytosis</i>		
neph-	<i>νεφρός</i> kidney. Cf. <i>ren-</i> . <i>paranephric</i>	peps-	<i>πέπτω, πεψ-</i> (before σ) digest <i>bradypepsia</i>
neur-	<i>νέυρον</i> nerve. <i>esthesioneure</i>	pept-	<i>πέπτω</i> digest. <i>dyspeptic</i>
nod-	<i>nodus</i> knot. <i>nodosity</i>	per-	<i>per</i> through. Cf. <i>dia-</i> . <i>pernasal</i>
nom-	<i>νόμος</i> (from <i>νέμω</i> deal out, distribute) law, custom. <i>taxonomy</i>	peri-	<i>περί</i> around. Cf. <i>circum-</i> . <i>periphery</i>
non-	<i>nona</i> nine. <i>nonacosane</i>	pet-	<i>peto</i> seek, tend toward. <i>centripetal</i>
nos-	<i>nóσος</i> disease. <i>nosology</i>	pex-	<i>πήγνυμι, πηγ-</i> (added to σ becomes <i>πηξ-</i>) fix, make fast. <i>hepatopexy</i>
nucle-	<i>nucleus</i> (from <i>nux, nucis</i> nut) kernel. Cf. <i>kary-</i> . <i>nucleide</i>	pha-	<i>φημί, φα-</i> say, speak. <i>dysphasia</i>
nutri-	<i>nutrio</i> nourish. <i>malnutrition</i>	phac-	<i>φακός</i> lentil, lens. Cf. <i>lent-</i> . <i>phacosclerosis</i> . (Also spelled <i>phak-</i>)
ob-	<i>ob</i> (<i>b</i> changes to <i>c</i> before words beginning with that consonant) against, toward, etc. <i>obtuse</i>	phag-	<i>φαγείν</i> eat. <i>lipophagic</i>
oc-	See <i>ob-</i> . <i>occlude</i> .	phak-	See <i>phac-</i> . <i>phakitis</i>
ocul-	<i>oculus</i> eye. Cf. <i>ophthalm- oculomotor</i>	phan-	See <i>phen-</i> . <i>diaphanoscopy</i>
-od-	See -ode ¹ . <i>periodic</i>	pharmac-	<i>φάρμακον</i> drug. <i>pharmacognosy</i>
-ode ¹	<i>ὁδός</i> road, path. <i>cathode</i> . (See also <i>hod-</i>)	pharyng-	<i>φάρυγξ, φαρυγγ-</i> throat. <i>glossopharyngeal</i>
-ode ²	See -oid. <i>nematode</i>	phen-	<i>φαίνω, φαν-</i> show, be seen. <i>phosphene</i>
odont-	<i>ὀδούς, ὀδόντος</i> tooth. Cf. <i>dent- orthodontia</i>	pher-	<i>φέρω, φορ-</i> bear, support. <i>periphery</i>
-odyn-	<i>ὀδύνη</i> pain, distress. <i>gastrodynia</i>	phil-	<i>φιλέω</i> like, have affinity for. <i>eosinophilia</i>
-oid	<i>είδος</i> form. Cf. -form. <i>hyoid</i>	phleb-	<i>φλέψ, φλεβός</i> vein. <i>periphlebitis</i>
-ol	See <i>ole-</i> . <i>cholesterol</i>	phleg-	<i>φλέγω, φλογ-</i> burn, inflame. <i>adenophlegmon</i>
ole-	<i>oleum</i> oil. <i>oleoresin</i>	phlog-	See <i>phleg-</i> . <i>antiphlogistic</i>
olig-	<i>ὀλίγος</i> few, small. <i>oligospermia</i>	phob-	<i>φόβος</i> fear, dread. <i>claustrophobia</i>
omphal-	<i>ὀμφαλός</i> navel. <i>periomphalic</i>	phon-	<i>φωνή</i> sound. <i>echophony</i>
onc-	<i>ὄγκος</i> bulk, mass. <i>hematometry</i>	phor-	See <i>pher-</i> . Cf. -ferent. <i>exophoria</i>
onych-	<i>ὄνυξ, ὄνυχος</i> claw, nail. <i>anonychia</i>	phos-	See <i>phot-</i> . <i>phosphorus</i>
oo-	<i>ὠόν</i> egg. Cf. <i>ov-</i> . <i>perioothecitis</i>	phot-	<i>φῶς, φωτός</i> light. <i>photerythrous</i>
op-	<i>ὀράω, ὀπ-</i> see. <i>erythrospia</i>	phrag-	<i>φράσσω, φραγ-</i> fence, wall off, stop up. Cf. <i>sept-</i> . <i>diaphragm</i>
ophthalm-	<i>ὀφθαλμός</i> eye. Cf. <i>ocul-</i> . <i>exophthalmic</i>	phrax-	<i>φράσσω, φραγ-</i> (added to σ becomes <i>φραξ-</i>) fence, wall off, stop up. <i>emphraxis</i>
or-	<i>os, oris</i> mouth. Cf. <i>stom(at)- intraoral</i>	phren-	<i>φρήν</i> mind, midriff. Cf. <i>ment-</i> . <i>metaphrenia, metaphrenon</i>
orb-	<i>orbis</i> circle. <i>suborbital</i>	phthi-	<i>φθίνω</i> decay, waste away. <i>ophthalmophthisis</i>
orchi-	<i>ὄρχις</i> testicle. Cf. <i>test-</i> . <i>orchidopathy</i>	phy-	<i>φύω</i> beget, bring forth, produce, be by nature. <i>nosophyte</i>
organ-	<i>ὄργανον</i> implement, instrument. <i>organoleptic</i>	phyl-	<i>φύλον</i> tribe, kind. <i>phylogeny</i>
orth-	<i>ὀρθός</i> straight, right, normal. <i>orthopedics</i>	-phyll	<i>φύλλον</i> leaf. <i>xanthophyll</i>
oss-	<i>os, ossis</i> bone. Cf. <i>ost(e)- ossiphone</i>	phylac-	<i>φύλαξ</i> guard. <i>prophylactic</i>
ost(e)-	<i>ὀστέον</i> bone. Cf. <i>oss-</i> . <i>enostosis, osteanaphysis</i>		
ot-	<i>ὠτός, ὠτός</i> ear. Cf. <i>aur-</i> . <i>parotid</i>		
ov-	<i>ovum</i> egg. Cf. <i>oo-</i> . <i>synovia</i>		
oxy-	<i>ὀξύς</i> sharp. <i>oxycephalic</i>		
pachy(n)-	<i>παχύνω</i> thicken. <i>pachyderma, myopachynsis</i>		
pag-	<i>πήγνυμι, παγ-</i> fix, make fast. <i>thoracopagus</i>		

phys(a)-	φυσάω blow, inflate. <i>physocoele</i> , <i>physalis</i>	re-	re- back, again. <i>retraction</i>
physe-	φυσάω, φυση- blow, inflate. <i>emphysema</i>	ren-	<i>renes</i> kidneys. Cf. <i>nephro-</i> . <i>ad-</i> <i>renal</i>
pil-	<i>pilus</i> hair. <i>epilation</i>	ret-	<i>rete</i> net. <i>retothelium</i>
pituit-	<i>pituita</i> phlegm, rheum. <i>pitui-</i> <i>tous</i>	retro-	<i>retro</i> backwards. <i>retrodeviation</i>
placent-	<i>placenta</i> (from <i>πλακοῦς</i>) cake. <i>extraplacental</i>	rhag-	<i>ρήγνυμι</i> , <i>ράγ-</i> break, burst. <i>hemorrhagic</i>
plas-	<i>πλάσσω</i> mold, shape. <i>cineplasty</i>	rhaph-	<i>ράφή</i> suture. <i>gastrorrhaphy</i>
platy-	<i>πλατύς</i> broad, flat. <i>platyrrhine</i>	rhe-	<i>ρέω</i> flow. Cf. <i>flu-</i> . <i>diarrheal</i>
pleg-	<i>πλήσσω</i> , <i>πληγ-</i> strike. <i>diplegia</i>	rhex-	<i>ρήγνυμι</i> , <i>ρήγ-</i> (added to <i>σ</i> be- comes <i>ρήξ-</i>) break, burst.
plet-	<i>pleo</i> , <i>-pletus</i> fill. <i>depletion</i>		<i>metrorrhexis</i>
pleur-	<i>πλευρά</i> rib, side. Cf. <i>cost-</i> . <i>peripleural</i>	rhin-	<i>ῥίς</i> , <i>ῥινός</i> nose. Cf. <i>nas-</i> . <i>basi-</i> <i>rhinal</i>
plex-	<i>πλήσσω</i> , <i>πληγ-</i> (added to <i>σ</i> be- comes <i>πληξ-</i>) strike. <i>apoplexy</i>	rot-	<i>rota</i> wheel. <i>rotator</i>
plic-	<i>plico</i> fold. <i>complication</i>	rub(r)-	<i>ruber</i> , <i>rubri</i> red. Cf. <i>erythr-</i> . <i>bilirubin</i> , <i>rubrospinal</i>
pne-	<i>πνοιά</i> breathing. <i>traumatopnea</i>	salping-	<i>σάλπιγξ</i> , <i>σάλπιγγος</i> tube, <i>trumpet</i> . <i>salpingitis</i>
pneum(at)-	<i>πνεῦμα</i> , <i>πνεύματος</i> breath, air. <i>pneumodynamics</i> , <i>pneumato-</i> <i>thorax</i>	sanguin-	<i>sanguis</i> , <i>sanguinis</i> blood. Cf. <i>hem(at)-</i> . <i>sanguineous</i>
pneumo(n)-	<i>πνεύμων</i> lung. Cf. <i>pulmo(n)-</i> . <i>pneumocentesis</i> , <i>pneumonot-</i> <i>omy</i>	sarc-	<i>σάρξ</i> , <i>σαρκός</i> flesh. <i>sarcoma</i>
pod-	<i>πούς</i> , <i>ποδός</i> foot. <i>podiatry</i>	schis-	<i>σχίζω</i> , <i>σχιδ-</i> (before <i>τ</i> or added to <i>σ</i> becomes <i>σχισ-</i>) split. Cf. <i>fiss-</i> . <i>schistorachis</i> , <i>rachischisis</i>
poie-	<i>ποιέω</i> make, produce. Cf. <i>-facient</i> . <i>sarcopoietic</i>	scler-	<i>σκληρός</i> hard. Cf. <i>dur-</i> . <i>sclero-</i> <i>sis</i>
pol-	<i>πόλος</i> axis of a sphere. <i>peri-</i> <i>polar</i>	scop-	<i>σκοπέω</i> look at, observe. <i>endo-</i> <i>scope</i>
poly-	<i>πολύς</i> much, many. <i>polyspermia</i>	sect-	<i>seco</i> , <i>sectus</i> cut. Cf. <i>tom-</i> . <i>sectile</i>
pont-	<i>pons</i> , <i>pontis</i> bridge. <i>ponto-</i> <i>cerebellar</i>	semi-	<i>semi-</i> half. Cf. <i>hemi-</i> . <i>semi-</i> <i>flexion</i>
por ¹	<i>πόρος</i> passage. <i>myelopore</i>	sens-	<i>sentio</i> , <i>sensus</i> perceive, feel. Cf. <i>esthe-</i> . <i>sensory</i>
por ²	<i>πῶρος</i> callus. <i>porocoele</i>	sep-	<i>σήπω</i> rot, decay. <i>sepsis</i>
posit-	<i>pono</i> , <i>positus</i> put, place. <i>re-</i> <i>positor</i>	sept ¹	<i>saepio</i> , <i>saeptus</i> fence, wall off, stop up. Cf. <i>phrag-</i> . <i>naso-</i> <i>septal</i>
post-	<i>post</i> after, behind in time or place. <i>postnatal</i> , <i>postoral</i>	sept ²	<i>septem</i> seven. Cf. <i>hept(a)-</i> . <i>septan</i>
pre-	<i>prae</i> before in time or place. <i>prenatal</i> , <i>prevesical</i>	ser-	<i>serum</i> whey, watery substance. <i>serosynovitis</i>
press-	<i>premo</i> , <i>pressus</i> press. <i>pressore-</i> <i>ceptive</i>	sex-	<i>sex</i> six. Cf. <i>hex¹</i> . <i>sexdigitate</i>
pro-	<i>πρό</i> or <i>pro</i> before in time or place. <i>progamous</i> , <i>procheilon</i> , <i>prolapse</i>	sial-	<i>σάλων</i> saliva. <i>polysialia</i>
proct-	<i>πρωκτός</i> anus. <i>enteroproctia</i>	sin-	<i>sinus</i> hollow, fold. Cf. <i>colp-</i> . <i>sinobronchitis</i>
prosop-	<i>πρόσωπον</i> face. Cf. <i>faci-</i> . <i>di-</i> <i>prosopus</i>	sit-	<i>σίτος</i> food. <i>parasitic</i>
pseud-	<i>ψευδής</i> false. <i>pseudoparaplegia</i>	solut-	<i>solvo</i> , <i>solventis</i> , <i>solutus</i> loose, dissolve, set free. Cf. <i>ly-</i> . <i>dissolution</i>
psych-	<i>ψυχή</i> soul, mind. Cf. <i>ment-</i> . <i>psychosomatic</i>	-solvent	See <i>solut-</i> . <i>dissolvent</i>
pto-	<i>πίπτω</i> , <i>πτω-</i> fall. <i>nephroptosis</i>	somat-	<i>σῶμα</i> , <i>σώματος</i> body. Cf. <i>corpor-</i> . <i>psychosomatic</i>
pub-	<i>pubes</i> & <i>puber</i> , <i>puberis</i> adult. <i>ischioptic</i> . (See also <i>puber-</i>)	-some	See <i>somat-</i> . <i>dictyosome</i>
puber-	<i>puber</i> adult. <i>puberty</i>	spas-	<i>σπάω</i> , <i>σπασ-</i> draw, pull. <i>spasm</i> , <i>spastic</i>
pulmo(n)-	<i>pulmo</i> , <i>pulmonis</i> lung. Cf. <i>pneumo(n)-</i> . <i>pulmolith</i> , <i>cardi-</i> <i>opulmonary</i>	spectr-	<i>spectrum</i> appearance, what is seen. <i>microspectroscope</i>
puls-	<i>pello</i> , <i>pellentis</i> , <i>pulsus</i> drive. <i>propulsion</i>	sperm(at)-	<i>σπέρμα</i> , <i>σπέρματος</i> seed. <i>sper-</i> <i>macrasia</i> , <i>spermatozoon</i>
punct-	<i>pungo</i> , <i>punctus</i> prick, pierce. Cf. <i>cente-</i> . <i>punctiform</i>	spers-	<i>spargo</i> , <i>-spersus</i> scatter. <i>dis-</i> <i>persion</i>
pur-	<i>pus</i> , <i>puris</i> pus. Cf. <i>py-</i> . <i>sup-</i> <i>uration</i>	sphen-	<i>σφήν</i> wedge. Cf. <i>cune-</i> . <i>sphenoid</i>
py-	<i>πύον</i> pus. Cf. <i>pur-</i> . <i>nephropyosis</i>	spher-	<i>σφαῖρα</i> ball. <i>hemisphere</i>
pyel-	<i>πέλος</i> trough, basin, pelvis. <i>nephropylitis</i>	sphygm-	<i>σφνγμός</i> pulsation. <i>sphygmo-</i> <i>manometer</i>
pyl-	<i>πύλη</i> door, orifice. <i>pylephlebitis</i>	spin-	<i>spina</i> spine. Cf. <i>rachi-</i> . <i>cere-</i> <i>brospinal</i>
pyr-	<i>πῦρ</i> fire. Cf. <i>febr-</i> . <i>galactopyra</i>	spirat-	<i>spiro</i> , <i>spiratus</i> breathe. <i>in-</i> <i>spiratory</i>
quadr-	<i>quadr-</i> four. Cf. <i>tetra-</i> . <i>quadri-</i> <i>geminal</i>	splanchn-	<i>σπλάγχνα</i> entrails, viscera. <i>neurosplanchnic</i>
quinque-	<i>quinque</i> five. Cf. <i>pent(a)-</i> . <i>quinquecupid</i>	splen-	<i>σπλήν</i> spleen. Cf. <i>lien-</i> . <i>splen-</i> <i>omegaly</i>
rachi-	<i>ράχis</i> spine. Cf. <i>spin-</i> . <i>enceph-</i> <i>alorachidian</i>	spor-	<i>σπόρος</i> seed. <i>sporophyte</i> , <i>zygo-</i> <i>spore</i>
radi-	<i>radius</i> ray. Cf. <i>actin-</i> . <i>irradia-</i> <i>tion</i>		

squam-	<i>squama</i> scale. <i>desquamation</i>	tetra-	<i>τετρα-</i> four. Cf. <i>quadr-</i> . <i>tetrage-</i> <i>enous</i>
sta-	<i>ἵστημι, στα-</i> make stand, stop. <i>genesisistasis</i>	the-	<i>τίθημι, θη-</i> put, place. <i>synthesis</i>
stal-	<i>στέλλω, σταλ-</i> send. <i>peristalsis</i> . (See also <i>stol-</i>)	thec-	<i>θήκη</i> repository, case. <i>theco-</i> <i>stegnosis</i>
staphyl-	<i>σταφυλή</i> bunch of grapes, <i>uvula</i> . <i>staphylococcus</i> , <i>staphylec-</i> <i>tomy</i>	thel-	<i>θηλή</i> teat, nipple. <i>thelerethism</i>
stear-	<i>στέαρ, στέατος</i> fat. Cf. <i>adip-</i> . <i>stearodermia</i>	therap-	<i>θεραπεία</i> treatment. <i>hydro-</i> <i>therapy</i>
steat-	See <i>stear-</i> . <i>steatopygous</i>	therm-	<i>θέρμη</i> heat. Cf. <i>calor-</i> . <i>dia-</i> <i>thermy</i>
sten-	<i>στενός</i> narrow, compressed. <i>stenocardia</i>	thi-	<i>θείον</i> sulfur. <i>thiogenic</i>
ster-	<i>στερεός</i> solid. <i>cholesterol</i>	thorac-	<i>θώραξ, θώρακος</i> chest. <i>thoraco-</i> <i>plasty</i>
sterc-	<i>stercus</i> dung. Cf. <i>copr-</i> . <i>sterc-</i> <i>porphyrin</i>	thromb-	<i>θρόμβος</i> lump, clot. <i>thrombo-</i> <i>penia</i>
sthen-	<i>σθένος</i> strength. <i>asthenia</i>	thym-	<i>θυμός</i> spirit. Cf. <i>ment-</i> . <i>dys-</i> <i>thymia</i>
stol-	<i>στέλλω, στολ-</i> send. <i>diastole</i>	thyr-	<i>θυρεός</i> shield (shaped like a door <i>θύρα</i>). <i>thyroid</i>
stom(at)-	<i>στόμα, στόματος</i> mouth, orifice. Cf. <i>or-</i> . <i>anastomosis</i> , <i>stomato-</i> <i>gastric</i>	tme-	<i>τέμνω, τμη-</i> cut. <i>axonotmesis</i>
strep(h)-	<i>στρέφω, στρεπ-</i> (before <i>τ</i>) twist. Cf. <i>tors-</i> . <i>strephosymbolia</i> , <i>streptomycin</i> . (See also <i>stroph-</i>)	toc-	<i>τόκος</i> childbirth. <i>dystocia</i>
strict-	<i>stringo, stringentis, strictus</i> draw tight, compress, cause pain. <i>constriction</i>	tom-	<i>τέμνω, τομ-</i> cut. Cf. <i>sect-</i> . <i>ap-</i> <i>pendectomy</i>
-stringent	See <i>strict-</i> . <i>astrigent</i>	ton-	<i>τείνω, τον-</i> stretch, put under tension. Cf. <i>tens-</i> . <i>peritone-</i> <i>um</i>
stroph-	<i>στρέφω, στροφ-</i> twist. <i>an-</i> <i>astrophic</i> . (See also <i>strep(h)-</i>)	top-	<i>τόπος</i> place. Cf. <i>loc-</i> . <i>top-</i> <i>esthesia</i>
struct-	<i>struo, structus</i> pile up (against). <i>obstruction</i>	tors-	<i>torqueo, torsus</i> twist. Cf. <i>strep-</i> . <i>extorsion</i>
sub-	<i>sub</i> (<i>b</i> changes to <i>f</i> or <i>p</i> before words beginning with those consonants) under, below. Cf. <i>hypo-</i> . <i>sublumbar</i>	tox-	<i>τοξικόν</i> (from <i>τόξον</i> bow) arrow poison, poison. <i>toxemia</i>
suf-	See <i>sub-</i> . <i>suffusion</i>	trache-	<i>τραχεία</i> windpipe. <i>tracheotomy</i>
sup-	See <i>sub-</i> . <i>suppository</i>	trachel-	<i>τράχηλος</i> neck. Cf. <i>cervic-</i> . <i>trachelopexy</i>
super-	<i>super</i> above, beyond, extreme. Cf. <i>hyper-</i> . <i>supermotility</i>	tract-	<i>traho, tractus</i> draw, drag. <i>pro-</i> <i>traction</i>
sy-	See <i>syn-</i> . <i>systole</i>	traumat-	<i>τραῦμα, τραύματος</i> wound. <i>traumatic</i>
syl-	See <i>syn-</i> . <i>syllapsiology</i>	tri-	<i>τρεῖς, τρία</i> or <i>tri-</i> three. <i>tri-</i> <i>gonid</i>
sym-	See <i>syn-</i> . <i>symbiosis</i> , <i>symmetry</i> , <i>sympathetic</i> , <i>symphysis</i>	trich-	<i>θρίξ, τριχός</i> hair. <i>trichoid</i>
syn-	<i>σύν</i> (<i>n</i> disappears before <i>s</i> , changes to <i>l</i> before <i>l</i> , and changes to <i>m</i> before <i>b</i> , <i>m</i> , <i>p</i> , and <i>ph</i>) with, together. Cf. <i>con-</i> . <i>mysynizesis</i>	trip-	<i>τρίβω</i> rub. <i>entripsis</i>
ta-	See <i>ton-</i> . <i>ectasis</i>	trop-	<i>τρέπω, τροπ-</i> turn, react. <i>sitot-</i> <i>ropism</i>
tac-	<i>τάσσω, ταγ-</i> (<i>tak-</i> before <i>τ</i>) order, arrange. <i>atactic</i>	troph-	<i>τρέφω, τροφ-</i> nurture. <i>atrophy</i>
tact-	<i>tango, tactus</i> touch. <i>contact</i>	tuber-	<i>tuber</i> swelling, node. <i>tubercle</i>
tax-	<i>τάσσω, ταγ-</i> (added to <i>σ</i> be- comes <i>ταξ-</i>) order, arrange. <i>ataxia</i>	typ-	<i>τύπος</i> (from <i>τύπτω</i> strike) type. <i>atypical</i>
tect-	See <i>teg-</i> . <i>protective</i>	typh-	<i>τύφος</i> fog, stupor. <i>adenotyphus</i>
teg-	<i>tego, tectus</i> cover. <i>integument</i>	typhl-	<i>τυφλός</i> blind. Cf. <i>cec-</i> . <i>typh-</i> <i>lectasis</i>
tel-	<i>τέλος</i> end. <i>telosynapsis</i>	un-	<i>unus</i> one. Cf. <i>hen-</i> . <i>unioval</i>
tele-	<i>τήλε</i> at a distance. <i>teleceptor</i>	ur-	<i>οὔρον</i> urine. <i>polyuria</i>
tempor-	<i>tempus, temporis</i> time, timely or fatal spot, temple. <i>tempo-</i> <i>romalar</i>	vacc-	<i>vacca</i> cow. <i>vaccine</i>
ten(ont)-	<i>τένων, τένοντος</i> (from <i>τείνω</i> stretch) tight stretched band. <i>tenodynia</i> , <i>tenonitis</i> , <i>tenon-</i> <i>tagra</i>	vagin-	<i>vagina</i> sheath. <i>invaginated</i>
tens-	<i>tendo, tensus</i> stretch. Cf. <i>ton-</i> . <i>extensor</i>	vas-	<i>vas</i> vessel. Cf. <i>angi-</i> . <i>vascular</i>
test-	<i>testis</i> testicle. Cf. <i>orchi-</i> . <i>tes-</i> <i>titis</i>	vers-	See <i>vert-</i> . <i>inversion</i>
		vert-	<i>verto, versus</i> turn. <i>diverticulum</i>
		vesic-	<i>vesica</i> bladder. Cf. <i>cyst-</i> . <i>vesico-</i> <i>vaginal</i>
		vit-	<i>vita</i> life. Cf. <i>bi-</i> . <i>devitalize</i>
		vuls-	<i>vello, vulsus</i> pull, twitch. <i>con-</i> <i>vulsion</i>
		xanth-	<i>ξανθός</i> yellow, blond. Cf. <i>flav-</i> and <i>lute-</i> . <i>xanthophyll</i>
		-yl-	<i>ύλη</i> substance. <i>cacodyl</i>
		zo-	<i>ζωή</i> life, <i>ζῶον</i> animal. <i>micro-</i> <i>zoaria</i>
		zyg-	<i>ζυγόν</i> yoke, union. <i>zygodactyl</i>
		zym-	<i>ζύμη</i> ferment. <i>enzyme</i>

DORLAND'S ILLUSTRATED Medical Dictionary

Å or **Å** symbol for *Angström unit* or *angstrom*.
A symbol for *mass number*.
A. absorbance, accommodation, acetum, anode, anterior, arteria, atomic weight, and axial. See also *point A*, under *point*.
A₂ aortic second sound.
a symbol for *thermodynamic activity*.
a. accommodation, ampere, anode, anterior, aqua, and arteria.
a- 1. [Gr.] an inseparable prefix signifying want or absence; appears as *an* before stems beginning with a vowel or with *h*. 2. [L.] a prefix signifying separation, or away from.
α the first letter of the Greek alphabet; see *alpha*.
A.A. achievement age; Alcoholics Anonymous.
aa. abbreviation for L. *arteriae*.
AA, aa [Gr. *ana* of each] an abbreviation used in prescription writing, following the names of two or more ingredients and signifying "of each"; also written *ana*.
AAA acute anxiety attack.
aaa. amalgama, an obsolete variant of *amalgam*.
A.A.A. American Academy of Allergy; American Association of Anatomists.
AA-AMP amino acid adenylate.
A.A.A.S. American Association for the Advancement of Science.
A.A.B.B. American Association of Blood Banks.
A.A.C.P. American Academy of Cerebral Palsy.
A.A.D.P. American Academy of Denture Prosthetics.
A.A.D.R. American Academy of Dental Radiology.

A.A.P.A. American Academy of Physician Assistants.
A.A.P.B. American Association of Pathologists and Bacteriologists.
A.A.P.M.R. American Academy of Physical Medicine and Rehabilitation.
A.A.P.S. American Association of Plastic Surgeons.
Aarane (ār'ān) trademark for a preparation of cromolyn sodium.
Aaron (ār'on) of Alexandria (7th century A.D.) a physician who wrote medical works in the Syriac language, all of which are lost except fragments (e.g., on smallpox) preserved by Rhazes.
Aaron's sign (ār'onz) [Charles Dettie Aaron, American physician, 1866-1951] see under *sign*.
aasmus (a-as'mus) [Gr. *aasmos* breathing] (obs.) asthma.
AAV adeno-associated virus.
Ab. abbreviation for L. *Artium Baccalaureus*, Bachelor of Arts.
Ab abbreviation for antibody.
ab Latin preposition meaning from.

ab- [L. *ab* of, off] prefix signifying from, off, away from.
abacterial (a'bak-te're-al) free from bacteria.
abactio (ah-bak'she-o) [L.] (obs.) induced abortion.
abactus venter (ah-bak'tus ven'ter) [L.] (obs.) induced abortion.
Abadie's sign (ah-bah-dēz') [1. Charles Abadie, ophthalmologist in Paris, 1842-1932. 2. Jean Abadie, Bordeaux neurologist, 1873-1946] see under *sign*.
abaissement (ah-bās-maw') [Fr.] 1. a lowering or a depressing. 2. couching.
abalienated (ab-āl'yen-āt'ed) (obs.) mentally deranged.
abalienatio (ab-āl'yen-a'she-o) [L. "made alien," "deprived"] abalienation. **a. men'tis**, former term for mental derangement.
abalienation (ab-āl'yen-a'shun) [L. *abalienatio*] former term for mental derangement.
Abano (ah-ba'no), **Pietro d'** see *Peter of Abano*.
abaptiston (ah'bap-tis'ton), pl. *abaptis'ta* [a neg. + Gr. *baptein* to dip] a trephine so shaped that it will not penetrate the brain.
abarognosis (a'bar-og-no'sis) [a neg. + Gr. *baros* weight + *gnōsis* knowledge] loss of weight sense; barognosis.
abarthrosis (ab'ar-thro'sis) [*ab-* + L. *arthrosis*] diarthrosis.
abarticular (ab'ar-tik'u-lar) 1. not affecting a joint. 2. remote from a joint.
abarticulation (ab'ar-tik'u-la'shun) [*ab-* + L. *articulatio* joint] 1. a dislocation of a joint. 2. junctura synovialis.
abasia (ah-ba'zhe-ah) [a neg. + Gr. *basis* step + *-ia*] inability to walk. **a. asta'sia**, astasia-abasia. **a. atac'tica**, abasia characterized by uncertainty of movement, due to a defect of coordination. **choreic a.**, a form due to chorea of the legs. **paralytic a.**, a form due to paralysis of the leg muscles. **paroxysmal trepidant a.**, astasia-abasia caused by spastic stiffening of the legs on attempting to stand; called also *spastic a.* **spastic a.**, paroxysmal trepidant a. **trembling a.**, **a. trep'idans**, abasia due to trembling of the legs.
abasic (ah-ba'sik) pertaining to abasia.
abatardissement (ah-bah'tar-dēs-maw') [Fr.] deterioration of a race or breed.
abate (ah-bāt') to lessen or decrease.
abatement (ah-bāt'ment) a decrease in the severity of a pain or a symptom.
abatic (ah-bat'ik) abasic.
abbau (ab'ow) [Ger.] catabolic products.
Abbé's condenser (ah-bāz') [Ernst Karl Abbé, German physicist, 1840-1905] see under *condenser*.
Abbe's operation, string method (ab'ēz) [Robert Abbe, New York surgeon, 1851-1928] see under *operation*, *ring*, and *treatment*.
Abbé-Zeiss counting cell, counting chamber [E. K. Abbé; Carl Zeiss, German optician, 1816-1888] see *Thoma-Zeiss counting chamber*, under *chamber*.
Abbecillin-DC (ab'bo-sil'lin) trademark for preparations of penicillin G procaine.
Abbott's method (ab'ots) [Edville Gerhardt Abbott, surgeon in Portland, Maine, 1870-1938] see under *method*.
Abbott-Miller tube (ab'ot-mil'er) [William Osler Abbott, American physician, 1902-1943; T. Grier Miller, Philadelphia physician, born 1886] see *Miller-Abbott tube*, under *tube*.
Abbott-Rawson tube (ab'ot-raw'son) [William Osler Abbott; Arthur J. Rawson, American medical physicist] see under *tube*.
ABC aspiration biopsy cytology.
Abderhalden's reaction (dialysis, test) (ahb'der-hal'denz) [Emil Abderhalden, Swiss physiologist, 1877-1950] see under *reaction*.

Abdollatif (ab'dol-lat'if) (1162–1231) an Arabian physician and traveler who criticized Galen's anatomical observations.

abdomen (ab-do'men) [L., possibly from *abdere* to hide] that portion of the body which lies between the thorax and the pelvis; called also *venter*. It contains a cavity (*abdominal cavity*) separated by the diaphragm from the thoracic cavity, and lined with a serous membrane, the peritoneum. This cavity contains the viscera (see Plate accompanying *viscera*) and is enclosed by a wall (*abdominal wall* or *parietes*) formed by the abdominal muscles, vertebral column, and the ilia. It is divided into nine regions by four

Regions of abdomen bounded according to (A) the standard and (B) a variant system: 1, epigastric; 2, right hypochondriac; 3, left hypochondriac; 4, right lateral (or lumbar); 5, umbilical; 6, left lateral (or lumbar); 7, right inguinal (or iliac); 8, pubic (hypogastric); 9, left inguinal (or iliac).

imaginary lines, of which two pass horizontally around the body (the upper at the level of the cartilages of the ninth ribs, the lower at the tops of the crests of the ilia), and two extend vertically on each side of the body from the cartilage of the eighth rib to the center of the inguinal ligament, as in A above. The regions are: three upper—right hypochondriac, epigastric, left hypochondriac; three middle—right lateral, umbilical, left lateral; and three lower—right inguinal, pubic, left inguinal. Called also *belly*. **acute a.**, an abdominal condition of abrupt onset usually associated with abdominal pain due to inflammation, perforation, obstruction, infarction, or rupture of intra-abdominal organs. Emergency surgical intervention is usually required. Examples are acute cholecystitis or appendicitis, perforated peptic ulcer, strangulated hernia, superior mesenteric artery thrombosis, and splenic rupture. Called also *surgical a.* **boat-shaped a.**, scaphoid a. **carinate a.**, scaphoid a. **navicular a.**, scaphoid a. **a. obstipum**, congenital shortness of the rectus abdominis muscle. **pendulous a.**, a relaxed condition of the abdominal wall, so that the anterior abdominal wall hangs over the pubis; called also *venter propendens*. **scaphoid a.**, an abdomen whose anterior wall is hollowed out; seen in children with cerebral disease. Called also *boat-shaped a.*, *carinate a.*, and *navicular a.* **surgical a.**, acute a.

abdominal (ab-dom'i-nal) [L. *abdominalis*] pertaining to the abdomen.

abdomino- [L. *abdomen* the belly] a combining form denoting relationship to the abdomen.

abdominoanterior (ab-dom'i-no-an-te're-or) (*obs.*) with the abdomen forward (denoting a position of the fetus in utero).

abdominocentesis (ab-dom'i-no-sen-te'sis) [*abdomino-* + Gr. *kentēsis* puncture] surgical puncture (paracentesis) of the abdominal cavity.

abdominocystic (ab-dom'i-no-sis'tik) pertaining to the abdomen and gallbladder.

abdominogenital (ab-dom'i-no-jen'i-tal) pertaining to the abdomen and the reproductive organs.

abdominohysterectomy (ab-dom'i-no-his'ter-ek'to-me) hysterectomy performed through an abdominal incision.

abdominohysterotomy (ab-dom'i-no-his'ter-ot'o-me) hysterotomy performed through an abdominal incision; called also *abdominouterotomy*.

abdominoposterior (ab-dom'i-no-pos-te're-or) (*obs.*) having the abdomen turned backward (denoting a position of the fetus in utero).

abdominoscopy (ab-dom'i-nos'ko-pe) [*abdomino-* + Gr. *skopein* to inspect] inspection or examination of the abdominal cavity, particularly direct examination of the abdominal organs by endoscopy; peritoneoscopy.

abdominoscrotal (ab-dom'i-no-skro'tal) pertaining to the abdomen and scrotum.

abdominothoracic (ab-dom'i-no-tho-ras'ik) pertaining to the abdomen and thorax.

abdominouterotomy (ab-dom'i-no-u'ter-ot'o-me) abdominohysterotomy.

abdominovaginal (ab-dom'i-no-vaj'i-nal) pertaining to the abdomen and the vagina.

abdominovesical (ab-dom'i-no-ves'i-k'l) pertaining to the abdomen and urinary bladder.

abducens (ab-du'senz) [L. "drawing away"] Latin adjective

used in names of structures (e.g., *nervus abducens*) which serve to abduct a part.

abducent (ab-du'sent) [L. *abducens*] abducting, or effecting a separation, as an abducent nerve.

abduct (ab-dukt') [*ab-* + L. *ducere* to draw] to draw away from the median plane or (in the digits) from the axial line of a limb.

abduction (ab-dukt'shun) the act of abducting or state of being abducted.

abductor (ab-dukt'or) [L.] that which abducts; see *Table of Musculi*.

Abegg's rule (ab'egz) [Richard Abegg, Danish chemist, 1869–1910] see under *rule*.

Abelin's reaction (test) (ab'e-linz) [Isaak Abelin, Swiss physiologist, born 1883] see under *reaction*.

abembryonic (ab'em-bre-on'ik) [*ab-* + Gr. *embryon* embryo] away from the embryo.

abepithymia (ab'ep-i-thi'me-ah) [*ab-* + Gr. *epithymia* desire] paralysis of the solar plexus.

A.B.E.P.P. American Board of Examiners in Professional Psychology.

abequose (ab'ē-kwōs) an unusual sugar found to be a polysaccharide somatic antigen of *Salmonella* species.

Abercrombie's degeneration (syndrome) (ab'er-krom'bēz) [John Abercrombie, Scottish physician, 1780–1844] see *amyloid degeneration*, under *degeneration*.

Abernethy's fascia, sarcoma (ab'er-ne'thēz) [John Abernethy, British surgeon and anatomist, 1764–1831] see *fascia iliaca*, under *fascia*, and see under *sarcoma*.

aberrant (ab'er'ant) [L. *aberrans*, *ab* from + *errare* to wander] wandering or deviating from the usual or normal course.

aberratio (ab'er-a'she-o) [L.] aberration. **a. tes'tis**, situation of the testis in a part distant from the path which it takes in normal descent.

aberration (ab'er-a'shun) [*ab-* + L. *errare* to wander] 1. deviation from the usual course or condition. 2. unequal refraction or focalization of light rays by a lens, resulting in degradation of the image they produce. **chromatic a.**, unequal deviation of light rays of different wavelengths passing through a refractive medium, resulting in fringes of color around the image produced; called also *newtonian a.* **chromatic a., lateral**, difference in magnification due to differences in position of the principal points for light of different wavelength; also a difference of focal length. **chromatic a., longitudinal**, difference in position along the axis for the focal points of light, produced by unequal deviation of light rays of different wavelengths by a lens. **chromosome a.**, an irregularity in the number or constitution of chromosomes that may alter the course of development of the embryo, usually in the form of a gain (duplication), loss (deletion), exchange (translocation), or alteration in sequence (inversion) of genetic material. **dioptric a.**, spherical a. **distastial a.**, a blurring of vision for distant objects. **heterosomal a.**, one affecting more than one chromosome; a translocation. **homosomal a.**, one affecting a single chromosome. **mental a.**, unsoundness of mind of mild degree, not including disorders of intelligence; usually limited to a circumscribed deviation in an otherwise adapted individual. **meridional a.**, unequal refraction of light rays as a result of variation of refractive power in different portions of the same meridian of a lens. **newtonian a.**, chromatic a. **penta-X chromosomal a.**, one in which there are five X chromosomes in a female. **spherical a.**, zonal aberration in relation to an axial point; see *spherical a.*, *negative*, and *spherical a.*, *positive*. Called also *dioptric a.* **spherical a., negative**, unequal refraction of light rays by a lens, those passing through the outer zones of the lens being focused farther from the lens than those passing through the central zones. **spherical a., positive**, unequal refraction of light rays by a lens, those passing through the outer zones of the lens being focused closer to the lens than those passing through the central zones. **tetra-X chromosomal a.**, one in which there are four X chromosomes in a female. **triple-X chromosomal a.**, one in which there are three X chromosomes in a female. **zonal a.**, unequal refraction of light rays by a lens, the rays passing through different zones being focused at different distances from the lens.

aberrrometer (ab'er-om'ē-ter) [*aberration* + Gr. *metron* measure] an instrument for measuring errors in delicate experiments or observations.

abesterase (ab-es'ter-ās) a simple esterase that hydrolyzes short-chain aliphatic esters.

abetalipoproteinemia (a-ba'tah-lip'o-pro-te'in-e'me-ah) a hereditary syndrome, transmitted as an autosomal recessive trait, characterized by a lack of β -lipoproteins in the blood, acanthocytosis, hypocholesterolemia, progressive ataxic neuropathy, atypical retinitis pigmentosa with involvement of the macula, and malabsorption. Called also *Bassen-Kornzweig syndrome*.

abeyance (ah-ba'ans) a suspension of function or of action; a state of suspended activity.

abi-trophy (ah-'bi-at/'ro-fe) premature and endogenous loss of vitality or tissue substance. See also *abiotrophy*.

abient (ab'e-ent) avoiding the source of stimulation; said of a response to a stimulus. Cf. *adient*.

abietate (ab'e-ě-tāt) a salt of abietic acid.

abiogenesis (ab'e-o-jen/'ě-sis) [a neg. + Gr. *bios* life + Gr. *genesis* generation] the spontaneous generation of life; the origin of living things from things inanimate. Cf. *biogenesis*.

abiogenetic (ab'e-o-jě-net/'ik) pertaining to or marked by spontaneous generation.

abiogenous (ab'e-oj/'ě-nus) abiogenetic.

abiologic, abiological (ab/'bi-o-loj/'ik, a/'bi-o-loj'e-k'l) (*obs.*) pertaining to abiology.

abiology (a/'bi-o-l'o-je) [a neg. + Gr. *bios* life + *-logy*] (*obs.*) the study of nonliving things; anorganology.

abionergy (ab'e-on/'er-je) [a neg. + Gr. *bios* life + *ergon* work] abi-trophy.

abiophysiology (ab'e-o-fiz/'e-o-l'o-je) [a neg. + Gr. *bios* life + *physiology*] the study of inorganic processes in living organisms.

abiosis (ab'e-o/'sis) [a neg. + Gr. *bios* life + *-osis*] 1. absence or deficiency of life. 2. abi-trophy.

abiotic (ab'e-o-t/'ik) pertaining to or characterized by absence of life; incapable of living; antagonistic to life.

abi-trophia (ab'e-o-tro/'fe-ah) abi-trophy.

abi-trophic (ab'e-o-trof/'ik) pertaining to or characterized by abi-trophy.

abi-trophy (ab'e-o-t/'ro-fe) [a neg. + Gr. *bios* life + *trophē* nutrition] progressive loss of vitality of certain tissues or organs leading to disorders or loss of function; applied especially to degenerative hereditary diseases of late onset, e.g., Huntington's chorea. **retinal a.**, a general term for a group of degenerative diseases of the retina, such as retinitis pigmentosa and amaurotic familial idiocy.

abirritant (ab-ir/'rī-tant) [ab- + L. *irritans* irritating] 1. diminishing or relieving irritation; soothing. 2. an agent that relieves irritation.

abirritation (ab/'ir-rī-ta/'shun) 1. diminished responsiveness to stimulation. 2. atony.

abirritative (ab-ir/'rī-ta/'tiv) reducing irritability; soothing.

abiuret (ah-bi/'u-ret) [a neg. + *biuret*] not giving a positive reaction to the biuret test.

abiuretic (ah-bi/'u-ret/'ik) not responsive to the biuret test.

ablactation (ab/'lak-ta/'shun) [L. *ablactatio*, from *ab* from + *lac-tare* to give milk] the weaning of a child or the cessation of milk secretion.

ablastemic (a-blas-tem/'ik) [a neg. + Gr. *blastēma* a shoot] not concerned with germination.

ablastin (ah-blas/'tin) an antibody that prevents the multiplication of invading microorganisms.

ablate (ab-lāt/') [L. *ablatus* removed] to remove, especially by cutting; to extirpate.

ablatio (ab-la/'she-o) [L.] ablation. **a. placen'tae**, premature detachment of a placenta. **a. ret'inae** (*obs.*), detachment of the retina.

ablation (ab-la/'shun) [L. *ablatio*] 1. separation or detachment; extirpation; eradication. 2. removal of a part, especially by cutting.

ablepharia (ah/'blef-a're-ah) [a neg. + Gr. *blepharon* eyelid + *-ia*] congenital reduction or absence of the eyelids.

ablepharon (ah-blef/'ah-ron) ablepharia.

ablepharous (ah-blef/'ah-rus) 1. lacking eyelids. 2. pertaining to ablepharia.

ablephary (ah-blef/'ah-re) ablepharia.

ablepsia (ah-blep/'se-ah) [a neg. + Gr. *blepsis* sight + *-ia*] lack or loss of sight; blindness.

ablepsy (ah-blep/'se) ablepsia.

abluent (ab/'lu-ent) [ab- + L. *luens* washing] 1. detergent. 2. a cleansing agent.

ablution (ab-lu/'shun) [L. *ablutio* a washing] the act of washing or cleansing; the application of water by the hand, which may be covered with a bath mitt or towel.

ablutomania (ab-lu/'to-ma/'ne-ah) [L. *ablutio* a washing + *mania*] abnormal interest in washing or bathing.

abmortal (ab-mor/'tal) situated or directed away from a dead or injured part; applied especially to electric currents set up in injured tissue.

abneural (ab-nu/'ral) [L. *ab-* + Gr. *neuron* nerve] (*obs.*) 1. distant from the central nervous system. 2. abnerval.

abnormal (ab-nor/'mal) [ab- + L. *norma* rule] not normal; contrary to the usual structure, position, condition, behavior, or rule.

abnormality (ab/'nor-mal/'i-te) 1. the quality or fact of being abnormal. 2. a malformation or deformity; see also *abnormity* and *anomaly*.

abnormity (ab-nor/'mī-te) 1. abnormality; deformity. 2. monstrosity.

abocclusion (ab/'o-kloo/'zhun) (*obs.*) open bite.

abomasitis (ab/'o-mah-si/'tis) inflammation of the abomasum.

abomasum (ab/'o-ma/'sum) [ab- + L. *omasum* paunch] the fourth stomach of a ruminant animal.

aborad (ab-o/'rad) directed away from the mouth.

aboral (ab-o/'ral) opposite to, away from, or remote from the mouth.

aboriginal (ab-ō-rīj/'i-nal) native to the place inhabited.

abort (ah-bort/') [L. *aboriri* to miscarry] 1. to check the usual course of a disease. 2. to miscarry before the fetus is viable. 3. an abortion. 4. to become checked in development.

aborticide (ah-bor/'ti-sid) [L. *aboriri* to miscarry + *caedere* to kill] abortifacient.

abortient (ah-bor/'shent) abortifacient.

abortifacient (ah-bor/'ti-fa/'shent) [L. *abortio* abortion + *facere* to make] 1. causing abortion. 2. an agent which causes abortion; called also *abortient* and *aborticide*.

abortin (ah-bor/'tin) a glycerin extract of the *Brucella abortus*, prepared and used as is tuberculin, but in the diagnosis of brucellosis in man.

abortion (ah-bor/'shun) [L. *abortio*] 1. the premature expulsion from the uterus of the products of conception—of the embryo, or of a nonviable fetus. The four classic symptoms, usually present in each type of abortion, are uterine contractions, uterine hemorrhage, softening and dilatation of the cervix, and presentation or expulsion of all or part of the products of conception. 2. premature stoppage of a natural or a morbid process. **accidental a.**, an abortion which is due to an accident. **afebrile a.**, abortion in which the temperature is not elevated above 100.4° F. **ampullar a.**, a variety of tubal abortion occurring from the ampulla of the oviduct. **artificial a.**, induced abortion; an abortion which is brought on purposely. **cervical a.**, abortion in which the ovum is retained in the cervix uteri because the external os fails to dilate. **complete a.**, abortion in which all of the products of conception have been expelled from the uterus and identified. **contagious a.**, in cattle, infectious a., def. 1. **contagious equine a.**, infectious a., def. 2. **criminal a.**, an abortion that is produced illegally. **enzootic of cattle**, an infectious abortion caused by organisms of the genus *Chlamydia*; also known as *foothill abortion* in western United States. **enzootic a. of ewes**, abortion in ewes, usually late in the gestation period, caused by *Chlamydia psittaci*. **equine epizootic a.**, an infectious abortion of horses, caused by the virus of equine rhinopneumonitis. **equine virus a.**, see under *rhinopneumonitis*. **foothill a.**, enzootic a. of cattle. **habitual a.**, the spontaneous expulsion of a dead or nonviable fetus in three or more consecutive pregnancies, at about the same period of development. **idiopathic a.**, abortion for which no recognized organic cause can be found. **imminent a.**, impending abortion in which the bleeding is profuse, the cervix softened and dilated, and the uterine contractions approach the character of labor pains. **incomplete a.**, abortion in which the uterus is not entirely rid of its contents. **induced a.**, abortion brought on intentionally; called also *artificial* or *therapeutic a.* **inevitable a.**, a condition in which vaginal bleeding has been profuse or prolonged and the cervix has become effaced or dilated, and abortion will proceed naturally. **infected a.**, abortion associated with infection of the genital tract. **infectious a.**, 1. an infectious disease of cattle caused by *Brucella abortus*, marked by inflammatory changes in the uterine mucosa and fetal membranes, resulting in premature expulsion of the fetus. 2. an infectious disease of horses due to *Salmonella abortusequi* and of sheep due to *S. abortusovis*. Called also (in horses) *contagious equine a.* **justifiable a.**, therapeutic a. **missed a.**, retention in the uterus of an abortus that has been dead for at least four weeks, indicated either by cessation of growth and hardening of the uterus or by actual diminution of its size; absence of fetal heart tones after they have been heard is also definitive; more accurate information of fetal death is obtainable by fetal electrocardiography and sonar. **a. in progress**, a condition marked by profuse hemorrhage from the uterus and pains resembling those of labor, with softening and dilatation of the cervix, going on to expulsion of the products of conception. **recurrent a.**, habitual a. **septic a.**, abortion associated with serious infection of the uterus, leading to generalized infection; more common after criminal abortion. **spontaneous a.**, abortion occurring naturally. **therapeutic a.**, abortion induced to save the life or health (physical or mental) of a pregnant woman; sometimes performed after rape or incest. Called also *justifiable a.* **threatened a.**, a condition in which there is bloody discharge from the uterus but the loss of blood is less than in inevitable abortion and there is no dilatation of the cervix; it may proceed to actual abortion or the symptoms may subside and the pregnancy go to full term. **tubal a.**, extrusion of the conceptus through the open end of the uterine tube into the abdominal cavity, occurring in tubal (ectopic) pregnancy. **vibrio a.**, an infectious abortion of cattle, sheep, and goats, caused by *Campylobacter (Vibrio) fetus*.

abortionist (ah-bor'shun-ist) one who makes a business of inducing criminal abortions.

abortive (ah-bor'tiv) [L. *abortivus*] 1. incompletely developed. 2. effecting an abortion; abortifacient. 3. cutting short the course of a disease.

abortus (ah-bor'tus) [L.] a fetus weighing less than 500 gm. (17 oz.) at time of expulsion from the uterus, having no chance of survival.

abouchement (ah-bōōsh-maw') [Fr.] the termination of a vessel in a larger one.

ab-oukine the native name in Gabun for yaws (q.v.).

aboulia (ah-boo'le-ah) abulia.

aboulomania (ah-boo'lo-ma'ne-ah) abulomania.

ABP arterial blood pressure.

abrachia (ah-bra'ke-ah) [a neg. + Gr. *brachion* arm + -ia] congenital absence of the arms.

abrachiatism (ah-bra'ke-ah-tizm') abrachia.

abrachiocephalia (ah-bra'ke-o-sē-fa'le-ah) [a neg. + Gr. *brachion* arm + *kephalē* head + -ia] congenital absence of the arms and head.

abrachiocephalus (ah-bra'ke-o-seff'ah-lus) a monster exhibiting abrachiocephalia.

abrachius (ah-bra'ke-us) an individual exhibiting abrachia.

abradant (ah-bra'dant) abrasive.

abrade (ah-brād') to rub away the external covering or layer of a part; see also *planing*.

Abrahams' sign (a'brah-hamz) [Robert Abrahams, New York physician, 1861-1935] see under *sign*.

Abrami's disease (ah-brahm'ēz) [Pierre Abrami, French physician, 1879-1943] hemolytic anemia.

Abrams' (heart) reflex (a'bramz) [Albert Abrams, physician in San Francisco, 1863-1924] see under *reflex*.

abrasio (ah-bra'se-o) [L.] abrasion. **a. cor'neae**, a rubbing off of the superficial layers of the cornea.

abrasion (ah-bra'zhun) [L. *abrasio*] 1. the wearing away of a substance or structure (such as the skin or the teeth) through some unusual or abnormal mechanical process; see also *planing*. 2. an area of body surface denuded of skin or mucous membrane by some unusual or abnormal mechanical process. **dental a.**, abrasion of the teeth.

abrasive (ah-bra'siv) 1. causing abrasion. 2. a substance used for abrading, grinding, or polishing.

abrasor (ah-bra'zor) an instrument used for abrasion.

abreaction (ab're-ak'shun) [ab- + *reaction*] the relieving of an experience in such a way that previously repressed emotions associated with it are released. **motor a.**, an abreaction achieved through motor or muscular expression.

abreugraphy (ab'roo-og'rah-fe) [Manoel de Abreu, Brazilian physician, 1892-1962] (*obs.*) photofluorography.

Abrikosov's (Abrikosoff's) tumor (ab'rī-kos'ofs) [Aleksie Ivanovich Abrikosov, Moscow pathologist, 1875-1955] myoblastoma.

abrin (a'brin) a powerful phytotoxin or toxalbumin present in the seeds of *Abrus precatorius* L., Leguminosae; once used topically in certain chronic eye disorders. The plant is also known as jequirity or precatory bean, and rosary pea.

abrim (a'brizm) poisoning by jequirity; see *abrin*.

abrosia (ah-bro'ze-ah) [Gr. *abrosia* fasting] lack of food.

abruptio (ab-rup'she-o) [L.] a rending asunder. **a. placent'ae**, premature detachment of a placenta, often attended by maternal systemic reactions in the form of shock, oliguria, and fibrinogenopenia.

Abrus precatorius L. (Leguminosae) (a'brus pre-kah-to're-us) a species of tree native to tropical Asia, also found in Central America and Florida. Its seeds, called rosary beads, crab eyes, or jequirity beans, contain a toxalbumin (abrin) that is extremely irritant to mucous membranes. Used for jewelry and rosary beads.

abs- a prefix signifying away, from.

abscess (ab'ses) [L. *abscessus*, from *ab* away + *cedere* to go] a localized collection of pus in a cavity formed by the disintegration of tissues. **acute a.**, one which runs a relatively short course, producing some fever and a painful local inflammation. **acute dentoalveolar a.**, alveolar a. **alveolar a.**, a collection of pus at the alveolar border, resulting from infection of the periodontal ligament and the bony tissues surrounding the root of a tooth; called also *acute dentoalveolar a.* **amebic a.**, amoebic a., an abscess cavity of the liver resulting from liquefaction necrosis due to entrance of *Entamoeba histolytica* into the portal circulation in amebiasis; amebic abscesses may also effect the lungs, brain, and spleen. **anorectal a.**, one in the celluloadipose tissue near the anus. **apical a.**, one situated at the apex of an organ. **apical periodontal a.**, acute, a localized infection of short duration, arising at or near the apex of a tooth root, resulting in pain, swelling, and a collection of pus; called also *periapical a.* and *dentoalveolar a.* **apical periodontal a.**, chronic, a localized collection of inflammatory

Diagram of cross-section of abscess.

tissue and occasionally a little pus in the alveolar bone at or near the apex of a tooth root, usually resulting from infection or the presence of pulpal degradation products within the root canal; the process may result in dental granuloma. **appendiceal a.**, **appendicular a.**, abscess resulting from perforation of an acutely inflamed appendix. **arthrifluent a.**, a wandering abscess which has its point of origin in a diseased joint. **axillary a.**, an abscess, usually multiple, in the axilla. **bartholinian a.**, abscess of the excretory duct of Bartholin's gland. **Bezold's a.**, an abscess deep in the neck resulting from a complication of acute mastoiditis in which pus tracts deep to the superior portion of the sternocleidomastoid muscle. **bicameral a.**, one which has two chambers or pockets; see *shirt-stud a.* **bile duct a.**, cholangitic a. **bilharziasis a.**, one in the wall of the intestine caused by *Schistosoma (Bilharzia) mansoni*. **biliary a.**, abscess of the gallbladder or some part of the biliary tract. **bone a.**, osteomyelitis; suppurative periostitis. **brain a.**, one affecting the brain as a result of extension of an infection (e.g., otitis media) from an adjacent area or through bloodborne infection. **broad ligament a.**, an abscess between the folds of the broad ligament of the uterus; called also *parametric* or *parametrial a.* **Brodie's a.**, a roughly spherical region of bone destruction, filled with pus or connective tissue, usually found in the metaphyseal region of long bones and caused by *Staphylococcus aureus* or *albus*. **bursal a.**, one occurring in a bursa. **canalicular a.**, a mammary abscess communicating with a milk duct. **carniform a. (obs.)**, a hard sarcoma of a joint. **caseous a.**, one that contains cheesy matter; called also *cheesy a.* **cerebral a.**, one in the brain substance. **cheesy a.**, caseous a. **cholangitic a.**, intrahepatic abscess complicating bacterial cholangitis; called also *bile duct a.* **chronic a.**, cold a. **circumscribed a.**, an abscess limited by a layer of fibroblasts. **circumtonsillar a.**, peritonsillar a. **cold a.**, an abscess of comparatively slow development with little evidence of inflammation; it is usually tuberculous. Called also *chronic a.* and *scrofulous a.* **collar-button a.**, shirt-stud a. **deep a.**, one occurring below the deep fascia. **Delpech's a.**, a rapidly developing abscess accompanied by great prostration but little fever. **dental a. (obs.)**, an abscess in or about a tooth. **dentoalveolar a.**, apical periodontal a., acute. **diffuse a.**, an abscess the pus of which, or a part of it, is widely diffused in the surrounding tissues. **Douglas' a.**, an abscess in the rectouterine pouch. **dry a.**, one that disappears without pointing or breaking. **Dubois' a.**, abscess of the thymus in congenital syphilis; called also *thymus a.* **emphysematous a.**, gas a. **encysted a.**, one in which pus is circumscribed in a serous cavity. **endamebic a.**, entamebic a., amebic a. **epidural a.**, extradural a. **epiploic a.**, an abscess in the omentum. **extradural a.**, an abscess of the brain situated between the dura and the cranial bone; called also *epidural a.* **fecal a.**, an abscess, usually pericolic or perirectal, resulting from lower bowel perforation and containing pus and fecal matter; extension to the skin or mucosa leads to a fecal fistula. **filarial a.**, an abscess caused by filaria. **fixation a.**, **Fochier's a. (obs.)**, an abscess produced artificially (as by injection of turpentine) for the purpose of attracting and fixing at the site of the abscess the bacteria of an acute infection. **follicular a.**, one developing in a follicle. **frontal a.**, one in the frontal lobe of the brain. **fungal a.**, one caused by a fungus, such as *Nocardia*. **gangrenous a.**, one attended with gangrene of the surrounding parts. **gas a.**, a localized collection of seropurulent material containing gas, caused by gas-forming bacteria such as *Clostridium perfringens*. Called also *tympanitic a.* and *Welch's a.* **gastric a.**, phlegmonous gastritis. **gingival a.**, one situated in the oral gingival tissues arising from the periodontal pocket. **glandular a.**, one formed around a lymph gland. **gravitation a.**, gravity a., one in which the pus migrates or gravitates to a lower or deeper portion of the body. **helminthic a.**, one caused by a worm, such as filaria. **hemorrhagic a.**, one which contains blood. **hepatic a.**, an abscess of the liver. **hot a.**, an acute abscess with symptoms of local inflammation. **hypostatic a.**, wandering a. **idiopathic a.**, one due to unknown causes. **iliac a.**, one in the iliac region. **intradural a.**, one within the layers of the dura mater. **intramammary a.**, one in the substance of the mammary gland. **intramastoid a.**, an abscess of the mastoid process of the temporal bone. **intratonsillar**

a., tonsillar **a.** **ischioirectal a.**, one located in the ischioirectal fossa. **kidney a.**, renal **a.** **lacrimal a.**, one in or around the lacrimal sac. **lacunar a.**, one in the lacunae of the urethra. **lateral a.**, **lateral alveolar a.**, periodontal **a.** **lumbar a.**, one in the lumbar region. **lymphatic a.**, an abscess of a lymph node. **mammary a.**, abscess of the mam-

Abscesses of breast.

mary gland. **marginal a.**, one near the orifice of the anus. **mastoid a.**, suppurative within the cells of the mastoid portion of the temporal bone. **mediastinal a.**, suppurative in the mediastinum. **metastatic a.**, a secondary abscess, usually of embolic origin, in which organisms are carried by the circulation to a point distant from the primary lesion. **migrating a.**, wandering **a.** **miliary a.**, one of a set of small multiple abscesses. **milk a.**, an abscess of the mammary gland during lactation. **Monro's a's**, minute intraepidermal accumulations of cellular debris in the upper part of the epidermis; seen in psoriasis. **mother a.**, a primary abscess from which other abscesses arise. **multiple a.**, one of a set of many abscesses usually accompanying pyemia. **mural a.**, one in the abdominal wall. **nocardial a.**, one caused by a species of *Nocardia*. **orbital a.**, suppurative in the orbit. **ossifluent a.**, an abscess dependent on a breaking down of bone tissue. **Paget's a.**, one recurring about the residue of a former abscess. **palatal a.**, a periapical or periodontal abscess of a maxillary tooth which erupts or extends toward the palate. **palmar a.**, a purulent effusion into the tissues of the palm of the hand. **pancreatic a.**, an abscess formed following secondary bacterial contamination of necrotic pancreatic debris and hemorrhagic exudate; it is a serious complication of severe acute pancreatitis and of postoperative pancreatitis. **parafrenal a.**, abscess of the preputial gland. **parametrial a.**, **parametric a.**, broad ligament **a.** **paranephric a.**, one in the tissues around the kidney. **parapancreatic a.**, one in the tissues around the pancreas. **parietal a.**, periodontal **a.** **parotid a.**, an abscess of the parotid gland. **Pautrier's a.**, focal collections of reticular cells in the epidermis. **pelvic a.**, abscess of the pelvic peritoneum, usually of the rectouterine pouch. **pelvirectal a.**, one lying immediately above the levator ani muscle, in close relation to the wall of the rectum. **perianal a.**, one located immediately beneath the skin adjacent to the anal canal. **periapical a.**, acute apical periodontal **a.** **pericemental a.** (obs.), periodontal **a.** **pericoronal a.**, an abscess around the crown of a partially erupted tooth. **peridental a.**, periodontal **a.** **perinephric a.**, one in the tissues immediately around the kidney. **periodontal a.**, a localized purulent inflammation situated in the periodontal tissues; called also **lateral a.**, **lateral alveolar a.**, **parietal a.**, and **peridental a.** **peripleuritic a.**, an abscess between the parietal pleura and the chest wall. **perirectal a.**, one in the areolar tissue around the rectum. **perisinus a.**, **perisinuous a.**, an abscess around a venous sinus, usually the lateral sinus. **peritoneal a.**, a confined collection of inflammatory exudate in peritonitis. **peritonsillar a.**, an abscess in the peritonsillar tissue extending into the tonsil capsule, resulting from suppurative of the tonsil; called also **quinsy**. **periureteral a.**, one around the ureter. **periurethral a.**, one formed around the urethra. **perivesical a.**, one in the tissues around the bladder. **phlegmonous a.**, one associated with acute inflammation of the subcutaneous connective tissues. **postanal a.**, one located posterior to the anal canal, between the coccygeal attachments of the superficial part of the external sphincter and the levator ani muscle. **postcecal a.**, one occurring posterior to the cecum, usually of appendiceal origin; called also **retrocecal a.** **Pott's a.**, one associated with tuberculosis of the spine. **premammary a.**, a small cutaneous abscess of the mammary gland. **primary a.**, one formed at the seat of the infection. **protozoan a.**, one caused by a protozoan. **psoas a.**, one which arises from disease of the lumbar or lower dorsal vertebrae, the pus descending in the sheath of the psoas muscle. **pulmonary a.**, an abscess of the lungs. **pulp a.**, 1. a cavity that discharges pus formed in the pulp tissue of a tooth. 2. an abscess of the tissues of the pulp of a finger; see also **felon**. **pyemic a.**, a constitutional abscess due to pyemia. **renal a.**, a localized renal parenchy-

mal suppurative consequent to bacterial infection. **residual a.**, one seated near the residue of a former inflammation. **retrocecal a.**, postcecal **a.** **retromammary a.**, one situated between the mammary gland and the chest wall. **retroperitoneal a.**, subperitoneal **a.** **retropharyngeal a.**, a suppurative inflammation of the lymph nodes in the posterior and lateral walls of the pharynx; called also **hippocratic angina**. **retrotonsillar a.**, an abscess behind a tonsil caused by any of the common pyogenic bacteria, usually occurring with or closely following acute tonsillitis or pharyngitis. **ring a.**, a ring-shaped purulent infiltration at the periphery of the cornea. **root a.**, a chronic or acute pustular condition affecting the supporting tissues of the root of a tooth; when it is of endodontic origin, it is called **periapical abscess** (q.v.); when it is periodontal in origin, it is called **periodontal abscess** (q.v.). **sacrococcygeal a.**, one over the sacrum and coccyx. **satellite a.**, a secondary abscess arising from a primary one and situated near the latter. **scrofulous a.**, tuberculous **a.** **secondary a.**, one occurring as the result of another process. **septal a.** (obs.), one at the proximal surface of the root of a tooth. **septicemic a.**, one resulting from septicemia. **serous a.**, periostitis aluminosa. **shirt-stud a.**, a superficial abscess connected with a deeper one by a passage; called also **collar-button a.** **spermatic a.**, one in the seminiferous tubules. **spirillar a.**, one containing spirilla. **splenic a.**, an abscess of the spleen. **stercoraceous a.**, **stercoral a.**, fecal **a.** **sterile a.**, one which contains no microorganisms. **stitch a.**, one which develops adjacent to a stitch or suture. **streptococcal a.**, one caused by streptococci. **strumous a.**, tuberculous **a.** **subaponeurotic a.**, one beneath an aponeurosis or fascia. **subareolar a.**, a subcutaneous abscess of the areola of the nipple. **subdiaphragmatic a.**, one beneath the diaphragm. **subdural a.**, a brain abscess situated just under the dura mater. **subfascial a.**, one beneath a fascia. **subgaleal a.**, one under the galea aponeurotica. **subhepatic a.**, one situated beneath the liver. **submammary a.**, one beneath the mammary gland. **subpectoral a.**, one beneath the pectoral muscles. **subperiosteal a.**, a bone abscess situated just below the periosteum. **subperitoneal a.**, one between the parietal peritoneum and the abdominal wall. **subphrenic a.**, one beneath the diaphragm. **subscapular a.**, one between the serratus anterior and the posterior thoracic wall. **sudoriparous a.**, an abscess arising in a sweat gland. **superficial a.**, one occurring near the surface. **suprahepatic a.**, one situated in the suspensory ligament between the liver and the diaphragm. **sympathetic a.**, one arising some distance from the exciting cause. **syphilitic a.**, one occurring in the bones during tertiary syphilis. **thecal a.**, one arising in an enveloping sheath, such as a tendon sheath. **Thornwaldt (Tornwaldt) a.**, an abscess of the adenoids, usually associated with adenoid hyperplasia. **thymus a.**, Dubois' **a.** **tonsillar a.**, acute suppurative tonsillitis. **tooth a.** (obs.), dental **a.** **traumatic a.**, one provoked by injury. **tropical a.**, amebic **a.** **tuberculous a.**, one due to infection with tubercle bacilli (*Mycobacterium tuberculosis*); called also **cold a.**, **scrofulous a.**, and **strumous a.** **tubo-ovarian a.**, abscess of the uterine tube and ovary resulting from extension of infection along the tube. **tympatric a.**, gas **a.** **tympatric a.**, one arising in the tympanum and extending to the neck. **tympatric a.**, a combined abscess of the tympanum and the mastoid. **urethral a.**, an abscess of the urethra. **urinary a.**, one caused by extravasation of infected urine. **urinous a.** (obs.), one which contains pus mixed with urine. **verminous a.**, one which contains insect larvae or other animal parasites. **vitreous a.**, abscess of the vitreous humor of the eye due to infection, trauma, or foreign body. **von Bezold's a.**, Bezold's **a.** **wandering a.**, one that burrows in the tissues and finally points at a distance from the site of origin; called also **hypostatic a.** and **migrating a.** **web-space a.**, one in the loose connective tissue and fat between the bases of the fingers. **Welch's a.**, gas **a.** **worm a.**, one caused by or containing worms.

abscessus (ab-ses'us) [L.] abscess. **a. sic'cus cor'neae**, keratitis disciformis.

abscise (ab-siz) to cut off or remove.

abscissa (ab-sis'ah) [L. *ab* from + *scindere* to cut] one of two coordinates, the other of which is called ordinate, used as a frame of reference. The abscissa is usually horizontal and the ordinate vertical and, when suitable values have been assigned to them, corresponding data can be plotted.

abscission (ab-sish'un) [L. *ab* from + *scindere* to cut] removal by cutting. **corneal a.**, excision of the prominence of the cornea in staphyloma.

absconsio (ab-skön'se-o), pl. **absconsio'nes** [L.] the cavity of a bone receiving and concealing the head of another bone.

abscopal (ab-sko'p'l) pertaining to the effect on nonirradiated tissue resulting from irradiation of other tissue of the organism.

absence (ab'sens) temporary loss of consciousness, as may occur in some forms of epilepsy.

absentia (ab-sen'she-ah) [L.] absence. **a. epilep'tica**, temporary loss of consciousness in mild epilepsy.

abs. feb. abbreviation for *L. absen'te feb're*, while fever is absent. Cf. *adst. feb.*

Absidia (ab-sid'e-ah) a genus of fungi of the family Mucoraceae, order Mucorales. *A. corymbifera* (*Mucor rhizopodiformis*) and several other species are pathogenic for laboratory animals and may cause localized or generalized mycosis in man. *A. ramosa* (*Mucor ramosa*) is a pathogenic species that grows on bread and decaying vegetation, and causes otomycosis and sometimes mucormycosis. Formerly called *Leptomitus* and *Lichthemimia*. See also *mucormycosis*.

absinthe (ab'sinth) an extract of absinthium and other bitter herbs, containing 60 per cent alcohol; prolonged ingestion causes nervousness, convulsions, trismus, amblyopia, optic neuritis, and mental deterioration.

absinthin (ab-sin'thin) a crystalline compound, $C_{30}H_{40}O_6$, the chief bitter principle of wormwood (*Artemisia absinthium* L.), used as a flavoring in alcoholic beverages; formerly used as an anthelmintic and bitter tonic.

absinthium (ab-sinth'e-um) wormwood; the dead leaves and flowering tops of *Artemisia absinthium* L. (Compositae).

absolute (ab'so-lüt) [*L. absolutus*, from *absolvere* to set loose] free from limitations; unlimited; uncombined.

absorb (ab-sorb') [*L. absorbere*] to take in or assimilate, as to take up substances into or across tissues, e.g., the skin, intestine, or kidney tubules, or to react with radiation energy so as to attenuate it.

absorbance (ab-sor'bans) in radiology, a measure of the ability of a medium to absorb radiation, expressed as the logarithm of the quotient of the intensity of the radiation entering the medium divided by that leaving it.

absorbefacient (ab-sor'be-fa'shent) [*L. absorbere* to absorb + *facere* to make] 1. causing or promoting absorption. 2. a medicine or an agent that promotes absorption.

absorben (ab-sor'ben) an antigen used to adsorb homologous antibodies from antiserum.

absorbency (ab-sor'ben-se) absorbance.

absorbent (ab-sor'bent) [*L. absorbens*, from *ab* away + *sorbere* to suck] 1. able to take in, or suck up and incorporate. 2. a tissue structure involved in absorption. 3. a substance that absorbs or acts as an absorbefacient.

absorptiometer (ab-sorp'she-om'ter) [*absorption* + *Gr. metron* measure] 1. an instrument for measuring the solubility of gas in a liquid. 2. a device for measuring the layer of liquid absorbed between two glass plates; used as a hematoscope.

absorption (ab-sorp'shun) [*L. absorptio*] 1. the uptake of substances into or across tissues, e.g., skin, intestine, and kidney tubules. 2. in psychology, devotion of thought to one object or activity, with inattention to others. 3. in radiology, the taking up of energy by matter with which the radiation interacts. Cf. *attenuation*, def. 3. **agglutinin a.**, the removal of antibody from an immune serum by treatment with particulate antigen (usually bacteria) homologous to that antibody, followed by centrifugation and separation of the antigen-antibody complex.

cutaneous a., absorption through the skin. **disjunctive a.** (*obs.*), the process by which a slough separates from healthy tissue by the absorption of the thin layer of the latter which is in direct contact with the necrosed portion. **enteral a.**, internal a. **excrementitial a.**, pathologic a. **external a.**, the absorption of foods, poisons, or other agents through the skin or mucous membrane. **internal a.**, the normal absorption of foods, water, etc., in digestion. **interstitial a.**, removal of waste matter by the absorbent system. **intestinal a.**, the uptake from the intestinal lumen of fluids, solutes, proteins, fats, and other nutrients into the intestinal epithelial cells, blood, lymph, or interstitial fluids of the intestine. **net a.**, the difference between uptake and efflux from a tissue or cell. **parenteral a.**, absorption other than through the digestive tract. **pathologic a.**, **pathological a.**, the absorption into the blood of any bodily excretion or morbid product, such as bile or pus.

absorptive (ab-sorp'tiv) capable of absorbing; absorbent; pertaining to absorption.

abst., abstr. abstract.

abstergent (ab-ster'jent) [*L. abstergere* to cleanse] 1. cleansing or purifying. 2. a cleansing application or medicine.

abstinence (ab'sti-nens) a refraining from the use of or indulgence in food, stimulants, or sexual intercourse. **alimentary a.**, fasting, hunger, or starvation.

abstr. abstract.

abstract (ab'strakt) [*L. abstractum*, from *abstrahere* to draw off] 1. a summary or epitome of a book, paper, or case history. 2. (*obs.*) a powder made from a drug or its fluidextract with lactose, and brought to twice the strength of the original drug or extract.

abstraction (ab-strak'shun) [*L. abstractio*] 1. the withdrawal of any ingredient from a compound. 2. (*obs.*) the letting of blood. 3. in dentistry and anthropology, malocclusion in which the occlusal plane is further than normal from the eye-ear plane; it causes lengthening of the face. Cf. *attraction*, def. 2.

abterminal (ab-ter'mi-nal) [*ab-* + *L. terminus* end] moving

from the terminus toward the center; said of electric currents in muscular substance.

abtorsion (ab-tor'shun) disclination.

abtropfung (abh-trop-foong) [Ger. "a trickling or dropping down"] the proliferative transition of collections of nevus cells (theques) from the epidermis down into the dermis.

Abulcasis (ah'bool-kas'is) Albucasis.

abulia (ah-bu'le-ah) [*a neg.* + *Gr. boule* will + *-ia*] loss or deficiency of will power, initiative, or drive. **cyclic a.**, abulia occurring periodically. **social a.**, social inactivity resulting from inability to select a course of action, although a wish to participate may be present.

abulic (ah-bu'lik) affected with or pertaining to abulia.

Abulkasim (ah'bool-kas'im) Albucasis.

abulomania (ah-bu'lo-ma'ne-ah) [*abulia* + *Gr. mania* madness] mental disorder characterized by weakness of the will or indecision of character.

abuse (ah-büs') misuse or wrong use, particularly excessive use of anything. **child a.**, see *battered-child syndrome*, under *syndrome*. **drug a.**, see *dependence*.

abut (ah-but') to touch, adjoin, or border upon.

abutment (ah-but'ment) a supporting structure to sustain lateral or horizontal pressure; applied in dentistry to any tooth to which either a fixed or a removable partial denture is attached.

auxiliary a., secondary a. **intermediate a.**, a natural tooth, without other natural teeth in proximal contact, used for the support or anchorage of a fixed or removable partial denture. Sometimes called *pier* or *isolated a.* **isolated a.**, an intermediate abutment, particularly one used to support a removable partial denture. **multiple a.**, one resulting from the fixed splinting of two or more adjacent natural teeth to serve as a unit in the support and retention of a fixed or removable partial denture. **primary a.**, a natural tooth providing both retention and support for a removable partial denture; sometimes used in reference to a terminal abutment for a fixed partial denture. **secondary a.**, a natural tooth used in addition to the primary abutments to provide support or indirect retention for a removable partial denture; called also *auxiliary a.* **terminal a.**, a natural tooth located at an extremity of a fixed partial denture and used for the support and retention of the prosthesis.

abwehrfermente (ahb-vair'fer-men'te) [Ger.] protective ferments.

A.C. air conduction; alternating current; aortic closure; anodal closure; axiocervical; acromioclavicular.

Ac chemical symbol for *actinium*.

a.c. abbreviation for *L. an'te ci'bum*, before meals.

A.C.A. American College of Angiology; American College of Apothecaries.

Acacia (ah-ka'she-ah) [*L.*; *Gr. akakia*] a genus of leguminous shrubs or trees containing several economically and medically important species; e.g., *A. senegal* yields acacia (gum arabic). **A. cat'echu** Willd. (Leguminosae), a small tree native to India and Burma, which is a source of catechu. **A. georgi'nae** F. M. Bail. (Leguminosae), a tree in northern Australia; the fluoracetate content of its leaves is fatal to sheep and cattle.

acacia (ah-ka'shah) [NF] the dried, gummy exudate from the stems and branches of *Acacia senegal* and other African species of *Acacia*, prepared as a mucilage or syrup; formerly used intravenously in the treatment of shock and now employed as a suspending agent, emollient, and demulcent for pharmaceutical preparations. Called also *gum arabic* and *gum senegal*.

acalcerosis (ah-kal'ser-o'sis) a deficiency of calcium in the system.

acalcicosis (ah-kal'si-ko'sis) a condition caused by a deficiency of calcium in the diet.

acalculia (ah'kal-ku'le-ah) [*a neg.* + *L. calculare* to reckon + *-ia*] inability to do simple arithmetical calculations.

acampsia (ah-kamp'se-ah) [*a neg.* + *Gr. kamptein* to bend + *-ia*] rigidity or inflexibility of a part or of a joint.

acantha (ah-kan'thah) [*Gr. akantha* thorn] 1. the spine. 2. the spinous process of a vertebra.

acanthaceous (ak'an-tha'shus) bearing prickles or spines.

acanthamebiasis (ah-kan'thah-me-bi'ah-sis) infection with *Acanthamoeba castellani*.

Acanthamoeba (ah-kan'thah-me'bah) a genus of amebas of the order Amoebida. **A. castella'ni**, a free-living ameba which ordinarily inhabits moist soil or water, but has been found as an opportunistic parasite of man, causing a fatal meningoencephalitis. The infection seems to be acquired by bathing in fresh-water lakes inhabited by the ameba.

acanthesthesia (ah-kan'thes-the'ze-ah) [*acantho-* + *Gr. aisthēsis* sensation + *-ia*] perverted sensibility with a feeling as of pressure of a sharp point.

Acanthia lectularia (ah-kan'the-ah lek'tu-la're-ah) *Cimex lectularius*.

acanthion (ah-kan'the-on) [*Gr. akanthion* little thorn] a point at the base of the anterior nasal spine.

acantho- [Gr. *akantha* a thorn or prickly] a combining form meaning thorny or spiny, or denoting a relationship to a sharp spine or thorn.

Acanthobdellidea (ah-kan'tho-del-lid'e-ah) an order of leeches of the class Hirudinea, characterized by the presence of spines on the surface of the body.

Acanthocephala (ah-kan'tho-sef'ah-lah) [*acantho-* + Gr. *kephalē* head] a phylum of animal parasites, the thorny-headed or spiny-head worms, so called because of the proboscis which projects anteriorly, and is covered with thornlike recurved spines for attachment to the digestive tract of the host. In some systems of classification, they are considered to be a class of the phylum Nemathelminthes.

acanthocephalan (ah-kan'tho-sef'ah-lan) any individual of the phylum Acanthocephala.

acanthocephaliasis (ah-kan'tho-sef'ah-li'ah-sis) infestation with any species of the phylum Acanthocephala.

acanthocephalous (ah-kan'tho-sef'ah-lus) pertaining to or caused by worms of the phylum Acanthocephala.

Acanthocephalus (ah-kan'tho-sef'ah-lus) a genus of parasitic worms of the phylum Acanthocephala.

Acanthocheilonema (ah-kan'tho-ki'lo-ne'mah) a genus of filarial nematodes. **A. per'stans**, *Dipetalonema perstans*. **A. streptocer'ca**, *Dipetalonema streptocerca*.

acanthocheilonemiasis (ah-kan'tho-ki'lo-ne-mi'ah-sis) dipetalonemiasis.

acanthocyte (ah-kan'tho-sit) [*acantho-* + Gr. *kytos* cell] a distorted erythrocyte characterized by protoplasmic projections of varying sizes and shapes, irregularly spaced, which give the cell a "thorny" appearance; seen in abetalipoproteinemia.

acanthocytosis (ah-kan'tho-si-to'sis) the presence in the blood of acanthocytes, characteristically occurring in abetalipoproteinemia.

acanthoid (ah-kan'thoid) [*acantho-* + Gr. *eidos* form] resembling a spine; spinous.

acanthokeratoderma (ah-kan'tho-ker'ah-to-der'me-ah) [*acantho-* + Gr. *keras* horn + *derma* skin + *-ia*] (obs.) hyperkeratosis.

acantholysis (ak'an-thol'i-sis) [*acantho-* + Gr. *lysis* a loosening] dissolution of the intercellular bridges in the prickle-cell layer of the epidermis; it is the mechanism of formation of the intraepidermal vesicles in pemphigus vulgaris. Cf. *acanthorrhhexis* and *epidermolysis*. **a. bullo'sa** (obs.), epidermolysis bullosa.

acantholytic (ah-kan'tho-lit'ik) pertaining or relating to acantholysis.

acanthoma (ak'an-tho'mah, a'kan-tho'mah), pl. *acantho'mas* or *acantho'mata* [*acantho-* + *-oma*] a tumor composed of epidermal or squamous cells. **a. adeno'i'des cys'ticum**, trichoeptelioma. **basal cell a.**, seborrheic keratosis. **a. verruco'sa seborrhe'ica**, seborrheic keratosis.

acanthopelvis (ah-kan'tho-pel'vis) [*acantho-* + Gr. *pelyx* bowl] a pelvis with a very sharp and prominent pubic crest; called also *acanthopelyx*.

acanthopelyx (ah-kan'tho-pel'iks) acanthopelvis.

Acanthopracetus (ah-kan'tho-fah-se'tus) a genus of small fish. **A. reticulatus**, *Lebistes reticulatus*.

Acanthophis (ah-kan'tho-fis) a genus of elapid snakes; see table accompanying snake. **A. antarc'tica**, a widespread, live-bearing elapid snake of Australia and New Guinea, remarkable for its viper-like form; next to the tiger snake it is the most feared snake in Australia. Called also *death adder*.

Acanthopterygii (ah-kan'tho-tē-rij'e-i) a superorder of spiny-finned teleosts.

acanthorrhexis (ah-kan'tho-rek'sis) rupture (as opposed to dissolution, or acantholysis) of the intercellular bridges of the prickle-cell layer of the epidermis, as in blisters caused by severe edema of the skin.

acanthosis (ak'an-tho'sis) [*acantho-* + *-osis*] diffuse hyperplasia and thickening of the prickle-cell layer of the epidermis, as in psoriasis. Also used in the clinical sense to denote diffuse "thorniness" without such hyperplasia. Cf. *acanthosis nigricans*. **a. ni'gricans**, diffuse velvety acanthosis with gray, brown, or black pigmentation, chiefly in axillae and other body folds, occurring in an adult form, often associated with an internal carcinoma (called *malignant acanthosis nigricans*), and in a benign, nevroid form, more or less generalized. A benign juvenile form associated with obesity, which is sometimes due to endocrine disturbance, is called *pseudoacanthosis nigricans*. **a. seborrhe'ica**, **a. verruco'sa**, seborrheic keratosis.

acanthotic (ak'an-thot'ik) marked by acanthosis.

acanthocyte (ah-kan'tho-sit) acanthocyte.

acanthocytosis (ah-kan'tho-si-to'sis) acanthocytosis.

a cap'ite ad cal'cem (ah kap'i-te ad kal'sēm) [L.] from head to heel, the classic order for describing symptoms.

acapnia (ah-kap'ne-ah) [a neg. + Gr. *karnos* smoke + *-ia*] a condition of diminished carbon dioxide in blood; hypocapnia.

acapnial (ah-kap'ne-al) acapnic.

acapnic (ah-kap'nik) pertaining to or characterized by acapnia.

Acarapis (a-kar'ah-pis) a genus of mites, including *A. woodi*, the tracheal mite of the honeybee, which causes Isle of Wight disease.

acarbia (ah-kar'be-ah) a condition in which the blood bicarbonate is lowered.

acardia (a-kar'de-ah) [a neg. + Gr. *kardia* heart] congenital absence of the heart.

acardiac (a-kar'de-ak) having no heart.

acardiacus (ah'kar-di'ah-kus) acardius.

acardiophagia (ah-kan'de-o-tro'fe-ah) [a neg. + Gr. *kardia* heart + *trophē* nutrition + *-ia*] (obs.) atrophy of the heart.

acardius (ah-kar'de-us) [a neg. + Gr. *kardia* heart] an imperfectly formed free twin fetus, lacking a heart and invariably lacking other body parts as well; called also *fetus a.* **a. aceph'alus**, holoacardius acephalus. **a. acor'mus**, holoacardius acormus. **a. amor'phus**, holoacardius amorphus. **a. an'ceps**, hemiacardius.

acari (ak'ah-ri) [L.] plural of *acarus*, a mite.

acarian (ah-ka're-an) pertaining to the acarids or mites.

acariasis (ak'ah-ri'ah-sis) [Gr. *akari* mite + *-iasis*] an infestation with mites; called also *acarinosis*. **chorioptic a.**, see *Chorioptes*. **demodectic a.**, infestation of the hair follicles with the mite *Demodex folliculorum*; it affects man, dogs, horses, cattle, and sheep. In animals it is called *demodectic* or *follicular mange*. **psoroptic a.**, infestation with mites which deposit their eggs on the skin of the host and produce scabs, e.g., *Psoroptes*. **pulmonary a.**, a disease of monkeys produced by mites which live in the lungs of the host. **sarcoptic a.**, an infestation with mites of species which burrow into the skin, producing channels in which their eggs are deposited, e.g., *Sarcoptes*. See also *scabies*.

acaricide (ah-kar'i-sid) [L. *acarus* mite + *caedere* to slay] 1. destructive to mites. 2. an agent that destroys mites.

acarid (ak'ah-rid) a mite or tick of the order Acarina, or a mite of the family Acaridae.

Acaridae (ah-kar'i-de) a family of small mites of the order Acarina; several species cause skin rashes, such as grocers' itch, copra itch, and vanillism.

acaridan (ah-kar'i-dan) acarid.

acaridiasis (ah-kar'i-di'ah-sis) acariasis.

Acarina (ak'ah-ri'nah) an order of the class Arachnida, including the ticks and mites.

acarine (ak'ah-rin) any member of the order Acarina.

acarinosis (ah-kar'i-no'sis) any disease caused by mites; acariasis.

acariosis (ah-kar'e-o'sis) acariasis.

acarology [Gr. *akari*; L. *acarus*, a mite] a combining form denoting relationship to mites.

acarodermatitis (ak'ah-ro-der'mah-ti'tis) any skin inflammation caused by mites. **a. urticarioi'des**, grain itch.

acaroid (ak'ah-roid) [Gr. *akari* a mite + *eidos* form] resembling a mite.

acarologist (ak'ah-rol'o-jist) a specialist in acarology.

acarology (ak'ah-rol'o-je) [*acarology* + *-logy*] the scientific study of mites and ticks.

acarophobia (ak'ah-ro-fo'be-ah) [*acarology* + *phobia*] morbid dread of mites (*acarus*), or of small objects.

acarotoxic (ak'ah-ro-tok'sik) destructive to mites.

Acartomyia (ah-kar'to-mi'yah) a genus of culicine mosquitoes.

Acarus (ak'ah-rus) [L.; Gr. *akari* a mite] a genus of small mites, often ectoparasitic; they cause itch, mange, and other skin diseases. **A. folliculo'rum**, *Demodex folliculorum*. **A. galli'nae**, *Dermanyssus gallinae*. **A. hor'dei**, the barley bug, a mite which burrows under the skin of man. **A. rhyzo-glyp'ticus hyacin'thi**, the onion mite which occurs on decaying onions and produces a dermatitis (onion-mite dermatitis) on persons who handle them. **A. scabie'i**, *Sarcoptes scabiei*. **A. si'ro**, a mite that causes vanillism in vanilla pod handlers; called also *Tyrophagus siro* and *Tyroglyphus siro*. **A. trit'ici**, former name for *Pyemotes ventricosus*.

acarus (ak'ah-rus), pl. *ac'ari* [L.] a mite.

acaryote (ah-kār'e-ōt) [a neg. + Gr. *karyon* kernel] akaryote.

acatalasemia (a'kat-ah-la-se'me-ah) [a neg. + *catalase* + Gr. *haima* blood] deficiency of catalase in the blood; now called *acatalasia* (q.v.).

acatalasia (a'kat-ah-la'ze-ah) a rare disease characterized by congenital absence of the enzyme catalase, due to homozygosity for a mendelian gene and occurring mostly in Japanese persons. Only about half the patients have symptoms, which consist of recurrent infections of the gingiva and associated oral structures. Originally called *acatalasemia* because the absence of catalase was first detected in the red blood cells. Called also *anenzymia catalasea*.

acatalepsia (ah-kat'ah-lep'se-ah) [a neg. + Gr. *katalepsis* comprehension] (obs.) 1. lack of understanding. 2. uncertainty of diagnosis.

acatalepsy (ah-kat'ah-lep'se) acatalepsia.

acataleptic (ah-kat'ah-lep'tik) 1. mentally deficient. 2. doubtful or uncertain.

acatamathesia (a-kat'ah-mah-the'ze-ah) [a neg. + Gr. *kata-mathēsis* understanding + *-ia*] 1. loss or impairment of the power to understand speech. 2. impairment of any one of the perceptive faculties, due to a central lesion.

acataphasia (a-kat'ah-fa'ze-ah) [a neg. + Gr. *kataphasis* orderly utterance + *-ia*] inability to express one's thoughts in a connected manner, due to a central lesion.

acataposis (a-kat'ah-po'sis) [a neg. + Gr. *kata* down + *posis* drinking] (obs.) dysphagia.

acatastasia (ak'ah-tas-ta'ze-ah) [a neg. + Gr. *katastasis* stability + *-ia*] irregularity; variation from the normal.

acatastatic (ak'ah-tas-tat'ik) irregular; varying from the normal.

acathetic (ak'ah-thek'tik) [a neg. + Gr. *kathexis* a retention] pertaining to or characterized by acathexia.

acathexia (ak'ah-thek'se-ah) inability to retain bodily secretions.

acathexis (ah'kah-thek'sis) a mental disturbance in which certain things, such as objects, ideas, and memories, that ordinarily have great significance to an individual arouse no emotional response.

acathisia (ak'ah-the'ze-ah) akathisia.

acaudal (a-kaw'dal) acaudate.

acaudate (a-kaw'dāt) [a neg. + L. *cauda* tail] lacking a tail.

acauline (a-kaw'lin) [a neg. + L. *caulis* stem] (obs.) having no stem, as certain fungi.

acaulinosis (a-kaw'li-no'sis) infection with a fungus of the genus *Acaulium* (*Scopulariopsis*); scopulariopsosis.

Acaulium (ah-kaw'le-um) former name for *Scopulariopsis*.

ACC anodal closure contraction.

Acc. accommodation.

accelerans (ak-sel'er-anz) [L. "hastening"] (obs.) an autonomic nerve, stimulation of which hastens the heart's action.

accelerant (ak-sel'er-ant) a catalyst.

acceleration (ak-sel'er-a'shun) [L. *acceleratio*, from *ad* intensification + *celerare* to quicken] a quickening, as of the pulse rate or respiration. **negative a.**, a slowing.

accelerator (ak-sel'er-a'tor) [L. "hastener"] 1. an agent or apparatus that is used to increase the rate at which an object proceeds or a substance acts, or at which some reaction occurs. 2. any nerve or muscle which hastens the performance of a function. 3. any of a group of chemicals used in the vulcanization of rubber or other polymerizations; they frequently cause dermatitis in workers. **linear a.**, an apparatus for the acceleration of subatomic particles, using alternating hollow electrodes in a straight vacuum tube, so arranged that when their high frequency potentials are properly varied the particles traveling through them receive successive increases in energy. **serum prothrombin conversion a. (SPCA)**, Factor VII; see *coagulation factors*, under *factor*. **serum thrombotic a.**, a factor in serum which possesses procoagulant properties and the ability, when infused experimentally into locally arrested flow systems, to induce blood coagulation; its precise nature and role in normal blood coagulation has not been delineated and hence it has not been assigned a number in the conventional scheme of blood coagulation factors. **a. uri'nae**, musculus bulbospongiosus; see *Table of Musculi*.

accelerin (ak-sel'er-in) Factor VI; see *coagulation factors*, under *factor*.

accelerometer (ak-sel'er-om'ē-ter) an instrument for measuring the acceleration (rate of change of velocity) of an object.

accentuation (ak-sen'chu-a'shun) [L. *accentus* accent] increased loudness or distinctness; intensification.

acceptor (ak-sep'tor) a substance which unites with another substance; specifically a substance which unites with hydrogen or oxygen in an oxidoreduction reaction and so enables the reaction to proceed. Cf. *donor*. **hydrogen a.**, the substance that is reduced in the oxidation and reduction occurring anaerobically in the body tissues. **oxygen a.**, a substance that is oxidized.

accès pernicleux (ak-sa' pār-nis-yuh') [Fr. "pernicious attack"] a sudden and severe paroxysm in falciparum malaria.

accessiflexor (ak-ses'ē-flek'sor) any accessory flexor muscle.

accessorius (ak'ses-o're-us) [L. "supplementary"] accessory; used in naming certain structures thought to serve a supplementary function.

accessory (ak-ses'o-re) [L. *accessorius*] supplementary or affording aid to another similar and generally more important thing; complementary; concomitant.

accident (ak'si-dent) an unforeseen occurrence, especially one of an injurious character; an unexpected complicating occurrence in the regular course of a disease. **cerebrovascular a.**, stroke syndrome.

accidentalism (ak'si-den'tal-izm) the theory of medicine that

attends only the symptoms of disease, ignoring the etiology and pathology.

accident prone (ak'si-dent prōn) specially susceptible to accidents owing to psychological factors.

accipiter (ak-sip'i-ter) [L. "hawk"] a facial bandage with tails like the talons of a hawk.

ACCI anodal closure clonus.

acclimation (ah-kli'mah-ta'shun) acclimation.

acclimation (ak'li-ma'shun) the process of becoming accustomed to a new environment.

acclimatization (ah-kli'mah-ti-ta'shun) acclimation.

accolé see *appliqué form*, under *form*.

accommodation (ah-kom'o-da'shun) [L. *accommodare* to fit to] adjustment, especially that of the eye for various distances (see illustration). **absolute a.**, the accommodation of either eye

Changes during accommodation: Contraction of ciliary muscle; approximation of ciliary muscle to lens; relaxation of suspensory ligament; increased curvature of anterior surface of lens. (Helmholtz.)

separately. **binocular a.**, accommodation in both eyes in coordination with convergence. **excessive a.**, accommodation of the eye which is persistently above the normal. **histologic a.**, a group of changes in the morphology and function of cells following changed conditions. **negative a.**, adjustment of the eye for long distances by relaxation of the ciliary muscle. **nerve a.**, the rise in the threshold during the passage of a constant, direct electric current because of which only the make and break of the current stimulates the nerve. **positive a.**, adjustment of the eye for short distances by contraction of the ciliary muscle. **relative a.**, the change in accommodation that is possible with a fixed amount of convergence. **subnormal a.**, insufficient power of accommodation of the eye.

accommodative (ah-kom'o-da'tiv) pertaining to, of the nature of, or affecting accommodation.

accommodometer (ah-kom'o-dom'ē-ter) a device for measuring the accommodative capacity of the eye.

accomplice (ak-om-plēs') [Fr.] a bacterium which accompanies the chief infecting agent in a mixed infection and which influences the virulence of the chief organism.

accouchement (ah-kōōsh-maw') [Fr.] labor. **a. forcé** (ah-kōōsh-maw' for-sa'), rapid forcible delivery from below by any one of several methods; originally applied to rapid dilatation of the cervix with the hands, followed immediately by version and extraction of the fetus.

accoucheur (ah-kōōsh-er') [Fr.] one skilled in obstetrics; an obstetrician.

accoucheuse (ah-kōōsh-ez') [Fr.] a midwife.

accrementation (ak're-men-tish'un) [L. *ad* to + *crementum* increase] growth or increase by the addition of similar tissue.

accretio (ah-kre'she-o) [L.] abnormal adhesion of parts normally separate. **a. cor'dis**, **a. pericar'dii**, a form of adhesive pericarditis in which adhesions extend from the pericardium to the pleurae, diaphragm, and chest wall.

accretion (ah-kre'shun) [L. *ad* to + *crescere* to grow] 1. growth by addition of material. 2. accumulation. 3. adherence of parts normally separated.

A.C.D. acid citrate dextrose (see under *solution*).

ACE adrenocortical extract.

acebutolol (ah'se-bu'to-lōl) chemical name: (+)-N[3-acetyl-4-[2-hydroxy-3-[(1-methylethyl)amino]propoxy]phenyl]butanamide; a beta-adrenergic blocking agent, C₁₈H₂₈N₂O₄.

acecainide hydrochloride (as'ē-ka'nīd) chemical name: 4-(acetylaminio)-N[2-(diethylaminio)ethyl]benzamide monohydrochloride; an antiarrhythmic cardiac depressant, C₁₅H₂₃N₃O₂·HCl.

aceclidine (as-sek'li-dēn) chemical name: 3-quinuclidinol acetate ester; a cholinergic, C₉H₁₅NO₂.

acedapsone (as-ē-dap'sōn) chemical name: 4',4''-sulfonylbis[acetanilide]. The diacetyl derivative of dapsone, C₁₈H₁₆N₂O₄S, having actions similar to those of the parent compound; used as a leprostatic and antimalarial. Called also *diacetyl diaminodiphenylsulfone* (DADDS).

acedia (ah-se'de-ah) [a neg. + Gr. *kēdos* care + *-ia*] a mental disorder characterized by apathy and melancholy.

acellular (a-sel'u-lar) not made up of or containing cells.

acelomate (a-se'lo-māt) not having a coelom or body cavity.

acelous (a-se'lus) [a neg. + Gr. *kōilos* hollow] not concave on

either surface; said of the vertebrae of certain animals. Cf. *opisthocelous* and *procelous*.

acenesthesia (ah-sen/'es-the/'ze-ah) [a neg. + *cenesthesia*] abolition of the sense of well being, seen in melancholia and hypochondriasis.

acenocoumarin (ah-se/'no-koo/'mah-rin) acenoumarol.

acenocoumarol (ah-se/'no-koo/'mah-rol) chemical name: 2*H*-1-benzopyran-2-one-4-hydroxy-3-[1-4-(4-nitrophenyl)-3-oxobutyl]-3- α -acetonyl-*p*-nitrobenzyl]-4-hydroxycoumarin. One of the synthetic coumarin anticoagulants, C₁₉H₁₅NO₆, occurring as an off-white to light tan powder, having a rapid onset, intermediate duration of action, and little cumulative effect; administered orally.

acentric (ah-sen/'trik) [Gr. *akentrikos* not centric] 1. not central; not located in the center. 2. lacking a centromere, so that the chromosome will not survive subsequent cell divisions.

ACEP American College of Emergency Physicians.

acephalia (ah/'sē-fa/'le-ah) [a neg. + Gr. *kephalē* head] congenital absence of the head.

acephalism (ah-sef/'ah-lizm) acephalia.

acephalobranchia (ah-sef/'ah-lo-bra/'ke-ah) [a neg. + Gr. *kephalē* head + *brachion* arm + *-ia*] congenital absence of the head and arms.

acephalobranchius (ah-sef/'ah-lo-bra/'ke-us) a monster exhibiting acephalobranchia.

acephalocardia (ah-sef/'ah-lo-kar/'de-ah) [a neg. + Gr. *kephalē* head + *kardia* heart + *-ia*] congenital absence of the head and heart.

acephalocardius (ah-sef/'ah-lo-kar/'de-us) a monster exhibiting acephalocardia.

acephalochiria (ah-sef/'ah-lo-ki/'re-ah) [a neg. + Gr. *kephalē* head + *cheir* hand + *-ia*] congenital absence of the head and hands.

acephalochirus (ah-sef/'ah-lo-ki/'rus) a monster exhibiting acephalochiria.

acephalocyst (ah-sef/'ah-lo/'sist) [a neg. + Gr. *kephalē* head + *kystis* bladder] sterile cyst.

acephalocystis racemosa (ah-sef/'ah-lo-sis/'tis ra-se-mo/'sah) (*obs.*) a hydatid mole of the uterus.

acephalogaster (ah-sef/'ah-lo-gas/'ter) [a neg. + Gr. *kephalē* head + *gaster* belly] a monster exhibiting acephalogastria.

acephalogastria (ah-sef/'ah-lo-gas/'tre-ah) congenital absence of the head, chest, and upper part of the abdomen.

acephalopodia (ah-sef/'ah-lo-po/'de-ah) [a neg. + Gr. *kephalē* head + *pous* foot + *-ia*] congenital absence of the head and feet.

acephalopodius (ah-sef/'ah-lo-po/'de-us) a monster exhibiting acephalopodia.

acephalorhachia (ah-sef/'ah-lo-ra/'ke-ah) [a neg. + Gr. *kephalē* head + *rhachis* spine + *-ia*] congenital absence of the head and vertebral column.

acephalostomia (ah-sef/'ah-lo-sto/'me-ah) [a neg. + Gr. *kephalē* head + *stoma* mouth + *-ia*] congenital absence of the head, yet with a kind of mouth on the superior aspect.

acephalostomus (ah-sef/'ah-lo-s/'to-mus) a monster exhibiting acephalostomia.

acephalothoracia (ah-sef/'ah-lo-tho-ra/'se-ah) [a neg. + Gr. *kephalē* head + *thōrax* chest *-ia*] congenital absence of the head and chest.

acephalothorus (ah-sef/'ah-lo-tho/'rus) a monster exhibiting acephalothoracia.

acephalous (ah-sef/'ah-lus) headless.

acephalus (ah-sef/'ah-lus), pl. *aceph'ali* [a neg. + Gr. *kephalē* head] a headless monster. **a. dibra'chius**, an acephalus with both upper limbs more or less undeveloped. **a. di'pus**, an acephalus with both lower limbs more or less undeveloped. **a. mono-bra'chius**, an acephalus with only one upper limb. **a. mon'opus**, an acephalus with only one foot or lower limb. **a. paraceph'alus**, a monster with a partially formed skull but no brain. **a. sym'pus**, an acephalus with the two lower limbs fused into one.

acephaly (ah-sef/'ah-le) acephalia.

acepromazine maleate (ah/'se-pro/'mah-zēn) 1-[10-[3-(dimethylamino)propyl]-10*H*-phenothiazin-2-yl]ethanone (*Z*)-2-butenedioate (1:1). A tranquilizer, C₁₈H₂₂N₂OS·C₄H₄O₄; used in veterinary medicine to immobilize large animals.

Aceraria (as/'ē-ra/'re-ah) a genus of nematode parasites. **A. spira'lis**, a nematode parasite occurring in growths in the esophagus of fowls.

acerin (ah/'ser-in) an extract from the dried fruit of the Norway maple, *Acer plantanoides* L. (Aceraceae); effective against *Escherichia coli* and the vaccinia virus.

acerola (ah-sē-ro/'lah) the West Indian cherry fruit (*Malpighia punicifolia* L., Malpighiaceae), thought to be the richest natural source of vitamin C (about 1690 mg. per 100 grams of pitted fruit). It is given in the diet of individuals allergic to citrus fruits.

acervuli (ah-ser/'vu-li) [L.] plural of *acervulus*.

acervuline (ah-ser/'vu-lin) [L. *acervulus* little heap] aggregated; said of certain glands.

acervuloma (ah-ser/'vu-lo/'mah) [L. *acervulus* little heap + *-oma*] (*obs.*) a meningioma containing psammoma bodies.

acervulus (ah-ser/'vu-lus), pl. *acer'vuli* [L., dim. of *acervus* a heap] the mass of gritty matter which lies in or near the pineal body, the choroid plexus, and other parts of the brain; called also *acervulus cerebri*, *brain sand*, and *sand bodies*.

acescence (ah-ses/'ens) [L. *acescere* to become sour] 1. sourness. 2. the process of becoming sour.

acescent (ah-ses/'ent) somewhat or slightly acid.

acesodyne (ah-ses/'o-din) [Gr. *akesis* cure + *odynē* pain] anodyne; allaying pain.

acestoma (ah/'ses-to/'mah) [Gr. *akesis* cure + *-oma*] (*obs.*) a mass of granulations.

acetabular (as/'ē-tab/'u-lar) pertaining to the acetabulum.

Acetabularia (as/'ē-tab/'u-la/'re-ah) a genus of large single-celled green algae having a foot, a stalk, and a cap. *A. mediterranea* and *A. crenula'ta* have been used in genetic experiments.

acetabulectomy (as/'ē-tab/'u-lek/'to-me) [*acetabulum* + Gr. *ektomē* excision] excision of the acetabulum.

acetabuloplasty (as/'ē-tab/'u-lo-plas/'te) [*acetabulum* + Gr. *plasein* to form] plastic reconstruction of the acetabulum.

acetabulum (as/'ē-tab/'u-lum), pl. *acetab'ula* [L. "vinegar-cruet," from *acetum* vinegar] [NA] the large cup-shaped cavity on the lateral surface of the os coxae in which the head of the femur articulates; called also *acetabular bone*, *cotyloid cavity*, and *os acetabulum*. **sunken a.**, Otto pelvis.

acetal (as/'ē-tal) an organic compound formed by a combination of an aldehyde with an alcohol.

acetaldehyde (as/'et-al/'dē-hi/'dās) an enzyme that catalyzes the oxidation of acetic aldehyde to acetic acid.

acetaldehyde (as/'et-al/'dē-hid') a colorless flammable liquid, CH₃CHO, with a pungent odor, used in the manufacture of acetic acid, perfumes, and flavors. It is also an intermediate in the metabolism of alcohol. Acetaldehyde may cause irritation of mucous membranes, lacrimation, photophobia, conjunctivitis, corneal injury, rhinitis, anosmia, bronchitis, pneumonia, pleurisy, headache, and unconsciousness. Called also *acetic aldehyde*, *ethanal*, and *ethylaldehyde*.

acetamide (as/'et-am/'id) a white crystalline substance, CH₃-CONH₂, used in organic synthesis and as a general solvent when melted.

acetamidine (as/'et-am/'i-din) chemical name: α -amino- α -iminoethane. The imine, CH₃CH(NH)NH₂, of acetamide, used in the synthesis of imidazoles and pyrimidines.

p-acetamidobenzene sulfonamide (as/'et-am/'i-do-ben/'zēn sul-fon/'ah-mid) one of the conjugated forms in which benzene sulfonamide is excreted in the urine.

acetaminophen (as/'et-am/'i-no-fen) [USP] chemical name: *N*-(4-hydroxyphenyl)acetamide. An analgesic and antipyretic, C₉H₉NO₂, occurring as a white, crystalline powder; administered orally.

acetanilid (as/'ē-tan/'i-lid) [*acetic* + *aniline*] chemical name: *N*-phenylacetamide; it is a white, crystalline, sublimable solid, C₉H₉NH·OC·CH₃, produced by combining glacial acetic acid with aniline. It is analgesic and antipyretic and is used in neuralgia and rheumatism. Called also *acetylaminobenzene*, *acetylaniline*, and *antifebrin*.

acetannin (as/'ē-tan/'in) acetyltannic acid.

acetarsol (as/'et-ar/'sol) acetarsone.

acetarsone (as/'et-ar/'sōn) chemical name: 3-acetamido-hydroxyphenyl arsonic acid. A pentavalent arsenical, C₈H₁₀AsNO₅, occurring as a white, crystalline powder. It is used orally in the treatment of intestinal amebiasis, orally and topically in necrotizing ulcerative gingivitis, and topically in trichomonas vaginitis. Called also *acetphenarsine*.

acetate (ah-se/'tas) [L.] acetate.

acetate (as/'ē-tāt) any salt of acetic acid.

acetazolamide (as/'et-ah-zol/'ah-mid) [USP] chemical name: *N*-[5-(aminosulfonyl)-1,3,4-thiadiazol-2-yl]acetamide. A white to faintly yellowish white crystalline powder, C₄H₆N₄O₅S₂, it is a diuretic of the carbonic anhydrase inhibitor type, useful in treatment of carbon dioxide retention in chronic lung disease, to reduce intraocular pressure in glaucoma, and formerly in management of edema associated with heart disease. **sodium a., sterile** [USP], a preparation suitable for parenteral use, prepared from acetazolamide with the aid of sodium hydroxide, C₄H₅N₄NaO₅S₂, and containing between 95 and 110 per cent of the labeled amount of acetazolamide.

acetenyl (ah-se/'tē-nil) ethynyl.

Acetest (ah/'sē-test) trademark for reagent tablets containing sodium nitroprusside, aminoacetic acid, disodium phosphate, and lactose. A drop of urine is placed on a tablet on a sheet of white paper; if significant quantities of acetone are present the tablet

changes from a purple tint (1+), to lavender (2+), to moderate purple (3+), or deep purple (4+).

aceteugenol (as'et-u-jē-nol) an essential oil from oil of cloves: 1-ethyl, 3-methoxy, 4-acetoxy benzene.

acetic (ah-se'tik, ah-set'ik) pertaining to vinegar or its acid; sour.

aceticceptor (ah-se'te-ko-sep'tor) a ceptor or side chain having specific affinity for the acetic acid radical.

acetify (ah-set'i-fi) to turn into acetic acid or vinegar.

acetimeter (as'ē-tim'ē-ter) [L. *acetum* vinegar + Gr. *metron* measure] an apparatus for determining the amount of acetic acid present in a solution.

aceticin (as'ē-tin) a glyceryl acetate; it may contain one, two, or three acetyl groups.

Acetobacter (ah-se'to-bak'ter) [L. *acetum* vinegar + *bactrum* (Gr. *baktērion*) little rod] a genus of schizomycetes of the family Pseudomonadaceae, order Pseudomonadales, occurring as ellipsoidal to rod-shaped cells, singly, or in pairs or short or long chains, important for their role in completion of the carbon cycle and in production of vinegar. It includes seven species, *A. aceti*, *A. melano'genus*, *A. oxydans*, *A. rancens*, *A. ro'seus*, *A. suboxydans*, and *A. xylinum*; *A. kuetzingia'nus* and *A. pasteuria'nus* are considered varieties of *A. rancens*.

acetoform (ah-se'to-form) methenamine.

acetoformamide (as'ē-to-heks'ah-mid) [USP] chemical name: 4-acetyl-N[[cyclohexylamino]carbonyl]benzenesulfonamide. An oral hypoglycemic agent, $C_{15}H_{20}O_4S$, occurring as a white, crystalline powder.

acetoin (ah-set'o-in) 3-hydroxy-2-butanone: a liquid ketone product of carbohydrate fermentation.

acetokinase (as'ē-to-ki'nās) acetate kinase.

acetolase (ah-set'o-lās) an enzyme that catalyzes the conversion of alcohol into acetic acid.

acetolysis (as'ē-to'l'i-sis) combined hydrolysis and acetylation.

acetomerocetol (as'ē-to-mer-ok'tol) chemical name: 2-acetoxymethyl-4(1,1,3,3-tetramethylbutyl) phenol; a crystalline substance, $C_{16}H_{24}HgO_3$, formerly used as a topical antiseptic.

acetometer (as'ē-tom'ē-ter) acetimeter.

acetomorphine (as'ē-to-mor'fēn) diacetylmorphine.

acetonaphthone (as'ē-to-naf'thōn) an acetyl derivative of naphthalene, $C_{10}H_7COCH_3$, occurring in two isomeric forms. The 2-acetonaphthone isomer is a mosquito repellent; derivatives are used as bactericides and as an antitubercular agent.

acetoneasthma (as'ē-tōn-az'mah) (obs.) air hunger due to acidosis.

acetoneation (as'ē-to-na'shun) combination with acetone.

acetone (as'ē-tōn) [acetic + ketone] 1. dimethyl ketone, $CH_3-CO-CH_3$, a colorless liquid with a pleasant ethereal odor, found in small quantities in normal urine and in larger amounts in diabetic urine. It is acrid and inflammable, and is used as a solvent for fats, resins, rubber, and plastic and to cleanse the skin before injections and vaccinations. The USP preparation contains not less than 99 percent of acetone on the anhydrous basis. 2. any member of the series to which the normal or typical acetone belongs. See also *ketone bodies*, under *body*. **a. diethyl-sulfone**, sulfonmethane.

acetoneemia (as'ē-to-ne'me-ah) [acetone + Gr. *haima* blood + *-ia*] an excess of acetone bodies in the blood; now called *ketonemia*.

acetoneic (as'ē-to-ne'mik) pertaining to or marked by acetoneemia.

acetonglycosuria (as'ē-tōn'gli-ko-su're-ah) glycosuria due to acetone poisoning.

acetoneitrile (as'ē-to-ni'tril) a poisonous colorless liquid, CH_3-CN , with an ether-like odor; see also *Hunt's reaction*, under *reaction*.

acetoneum (as'ē-to'num) [L.] acetone.

acetoneurometer (as'ē-to-nu'mer-a'tor) an instrument for estimating the amount of acetone in the urine.

acetoneuria (as'ē-to-nu're-ah) an excess of acetone bodies in the urine; it occurs in diabetes, fever, starvation, carcinoma, and digestive disorders. Now called *ketonuria*.

aceto-orcin (as'ē-to-or'se-in) orcin dissolved in acetic acid, used in making squash preparations of polytene chromosomes.

acetophenazine maleate (as'ē-to-fen'ah-zēn) [USP] chemical name: 10-[3-[4-(2-hydroxyethyl)-1-piperazinyl]propyl]phenothiazin-2-yl methyl ketone maleate. A fine, yellow powder, $C_{23}H_{29}N_3O_2S \cdot 2C_4H_4O_4$, used as a major tranquilizer.

acetophenetidin (as'ē-to-fē-net'i-din) phenacetin.

acetosal (ah-se'to-sal) acetylsalicylic acid.

acetosoluble (as'ē-to-sol'u-b'l) soluble in acetic acid.

acetosulfone sodium (as'ē-to-sul'fōn) chemical name: N[[5-amino-2-[4-(4-aminophenyl)sulfonyl]phenyl]sulfonyl]acetamide monosodium salt. An antibacterial derivative of dapsone, $C_{14}N_4Na_2O_6S_2$, having actions similar to those of the parent compound, occurring as a white to pinkish-white crystalline powder; used as

a leprostatic in lepromatous and tuberculoid leprosy and as a dermatitis herpetiformis suppressant, administered orally.

acetous (as'ē-tus) [L. *acetosus*] pertaining to, producing, or resembling acetic acid.

acetphenarsine (as'et-fen-ar'sēn) acetarsone.

acetphenetidin (as'et-fē-net'i-din) phenacetin.

acetylpyrogall (as'et-pi'ro-gal) chemical name: pyrogall triacetate. A white crystalline compound, $C_6H_3(CH_3COO)_3$, used as a topical caustic and keratolytic.

acettract (as'ē-trakt) (obs.) an extract of a drug made with a menstruum containing acetic acid.

acetum (ah-se'tum), pl. *ace'ta* [L.] 1. vinegar. 2. a medicinal solution of a drug in dilute acetic acid. **a. plum'bi**, **a. satur'ni**, lead subacetate solution.

aceturate (ah-set'u-rāt) USAN contraction for *N*-acetylglycinate.

acetyl (as'ē-til) [L. *acetum* vinegar + Gr. *hylē* matter] the monovalent radical, CH_3CO . **a. chloride**, a colorless liquid, $CH_3 \cdot CO \cdot Cl$, used as a reagent for forming acetate esters of alcohols. **a. peroxide**, diacetyl peroxide. **a. sulfoxazole**, chemical name: *N*-acetyl-*N*'-(3,4-dimethyl-5-isoxazolyl)-sulfanilamide. Tasteless crystals, $C_{13}H_{15}N_3O_4S$, used as an antimicrobial.

acetylaminobenzene sulfonate (as'ē-til-am'i-no-ben'zēn) a compound, $CH_3 \cdot CO \cdot NH \cdot C_6H_4 \cdot SO_2 \cdot NH_2$, the form in which sulfanilamide is excreted.

acetylaminobenzine (as'ē-til-am'i-no-ben'zēn) acetanilid.

acetylaminofluorene (as'ē-til-am'i-no-floo'o-rēn) a compound, $C_{16}H_{14}CH_2C_6H_5NH \cdot CO \cdot CH_3$, which is carcinogenic when ingested.

acetylaniline (as'ē-til-an'i-lin) acetanilid.

acetylation (ah-set'i-la'shun) the introduction of an acetyl group into the molecule of an organic compound.

acetylator (ah-set'i-la'tor) an organism capable of metabolic acetylation; in man, acetylator status (fast or slow) is determined by the rate of acetylation of sulfamethazine.

acetyl-beta-methylcholine chloride (as'ē-til-ba'tah-meth'il-ko'lin) methacholine chloride.

acetylcholine (as'ē-til-ko'lin) a reversible acetic acid ester of choline, $CH_3 \cdot CO \cdot O \cdot CH_2 \cdot CH_2 \cdot N(CH_3)_3 \cdot OH$, normally present in many parts of the body and having important physiological functions, such as serving as a neurotransmitter at the myoneural junction, in sympathetic and parasympathetic ganglia, and at parasympathetic nerve endings; used also in medicine as a parasympathomimetic agent. Abbreviated ACh. **a. chloride**, a mitotic administered by instillation into the anterior chamber of the eye.

acetylcholinesterase (as'ē-til-ko'lin-es'ter-ās) an enzyme present in nervous tissue, muscle, and red cells that catalyzes the hydrolysis of acetylcholine to choline and acetic acid; called also *true cholinesterase*. Abbreviated AChE.

acetyl-CoA acetylcoenzyme A.

acetylcoenzyme A (as'ē-til-ko-en'zim) acetyl-CoA, an important intermediate in the citric acid (Krebs') cycle and the chief precursor of lipids; it is formed by the attachment to coenzyme A of an acetyl group during the oxidation of pyruvate, fatty acids, or amino acids.

acetylcysteine (as'ē-til-sis'te-in) [USP] chemical name: *N*-acetyl-L-cysteine. A white, crystalline powder, $C_3H_7NO_3S$, used as a mucolytic agent for adjunct therapy in bronchopulmonary disorders to reduce the viscosity of mucus and facilitate its removal. Administered by instillation or nebulization.

acetyldigitoxin (as'ē-til-dij'i-tok'sin) chemical name: (3,β,5,β)-3-[(O-2,6-dideoxy-β-D-ribo-hexopyranosyl-(1 → 4)-O-2,6-dideoxy-β-D-ribo-hexopyranosyl)-1(1 → 4)-2,6-dideoxy-β-D-ribo-hexopyranosyl]oxy]-14-hydroxy-card-20(22)-enolide monoacetate. A derivative of digitalis, $C_{43}H_{66}O_{14}$, obtained from lantoside A, composed of the aglycone digitoxigenin and three molecules of digitoxose, to one of which an acetyl group is attached; used as a cardiotonic.

acetylene (ah-set'i-lēn) a colorless, volatile, explosive gas, C_2H_2 ; it is the simplest of a class of unsaturated (triple-bonded) hydrocarbons, the alkynes.

acetylation (ah-set'i-la'shun) acetylation.

acetylmethadol (as'ē-til-meth'ah-dol) methadyl acetate.

acetylphenylhydrazine (as'ē-til-fen'il-hi-dra'zēn) chemical name: β-acetylphenylhydrazine. A compound, $C_9H_{10}N_2O$, that has been used as an oral erythrocyte depressant in the treatment of polycythemia vera and was once used as an antipyretic. Called also *hydracetin*.

acetylphosphatase (as'ē-til-fos'fah-tās) an enzyme in muscle which catalyzes the splitting of acetylphosphate.

acetylstrophanthidin (as'ē-til-stro-fan'thi-din) a synthetic fast-acting digitalis-like preparation.

acetylsulfadiazine (as'ē-til-sul'fah-di'ah-zēn) the form in which sulfadiazine is excreted in the urine, often occurring in dark green crystalline spheres.

acetylsulfaguanidine (as/'ē-til-sul/'fah-gwan/'i-dēn) the form in which sulfaguanidine is excreted in the urine, often occurring in thin oblong crystalline plates.

acetylsulfanilamide (as/'ē-til-sul/'fah-nil/'ah-mīd) 1. *N*¹-acetylsulfanilamide (see *sulfacetamide*). 2. *N*⁴-acetylsulfanilamide, C₈H₁₀O₃S, the acetylated (unconjugated) sulfanilamide as it appears in the body after administration.

acetylsulfathiazole (as/'ē-til-sul/'fah-thi/'ah-zōl) the form in which sulfathiazole is excreted in the urine, often occurring in the form of sheaves-of-wheat crystals.

acetyltannin (as/'ē-til-tan/'in) acetyltannic acid.

acetyltransferase (as/'ē-til-trans/'fer-ās) any of a group of enzymes that catalyze the transfer of an acetyl group from one substance to another; called also *transacetylase*. **acetyl-CoA a.**, acetyl-CoA:acetyl-CoA *C*-acetyltransferase: an enzyme occurring in the liver and heart that catalyzes the transfer of the acetyl group from one molecule of acetylcoenzyme A to another, releasing free coenzyme A; called also *acetoacetyl thiolase*. **phosphate a.**, an enzyme that catalyzes the transfer of an acetyl group between acetylphosphate and acetylcoenzyme A; called also *phosphotransacetylase*.

A.C.G. American College of Gastroenterology; angiocardigraphy.

AcG accelerator globulin (coagulation Factor V; see under *factor*).

ACH (*obs.*) adrenocortical hormone.

ACh acetylcholine.

A.C.H.A. American College of Hospital Administrators.

achalasia (ak/'ah-lā/'ze-ah) [*a neg.* + *Gr. chhalasis* relaxation + *-ia*] failure to relax of the smooth muscle fibers of the gastrointestinal tract at any point of junction of one part with another. Especially the failure of the esophagogastric sphincter to relax with swallowing, due to degeneration of ganglion cells in the wall of the organ. The thoracic esophagus also loses its normal peristaltic activity and becomes dilated (megaeosophagus). Called also *cardiospasm*. **pelvirectal a.**, congenital absence of ganglion cells in a distal segment of the large bowel; the resultant loss of normal motor function in this segment causes hypertrophic dilatation of the normal proximal colon. Called also *Hirschsprung's disease*. **sphincter a.**, failure of any sphincter of a tubular organ to relax in response to a normal physiological stimulus.

Achard-Castaigne method, test (ash-ar' kas-tān') [Émile Charles Achard, Paris physician, 1860-1941; Joseph Castaigne, French physician, 1871-1951] see *methylene blue test* (def. 1), under *test*.

Achard-Thiers syndrome (ash-ar' tēr-z') [Émile Charles Achard; Joseph Thiers] see under *syndrome*.

Achatina (ak/'ah-ti/'nah) a genus of very large land snails. **A. fuli/'ca**, a giant land snail that serves as an intermediate host of the rat lungworm, *Angiostrongylus cantonensis*, the causative agent of eosinophilic meningitis.

AcHe acetylcholinesterase.

ache (āk) 1. to suffer a continuous pain. 2. a continuous, fixed pain, as distinguished from twinges.

acheilia (ah-ki/'le-ah) [*a neg.* + *Gr. cheilos* lip + *-ia*] congenital absence of one or both lips.

acheilous (ah-ki/'lus) lacking lips; exhibiting acheilia.

acheiria (ah-ki/'re-ah) [*a neg.* + *Gr. cheir* hand + *-ia*] congenital absence of one or both hands.

acheiropodia (ah-ki/'ro-po/'de-ah) [*a neg.* + *Gr. cheir* hand + *pous* foot + *-ia*] congenital absence of hands and feet.

acheirus (ah-ki/'rus) [*L.*] an individual exhibiting acheiria.

Achillea (ak/'i-le/'ah) [*L.*; *Gr. achilleia*] a genus of composite-flowered plants. *A. millefolium*, milfoil, has been used as a bitter and stimulant tonic; it contains an essential oil and a bitter alkaloid, achilleine.

Achilles bursa, jerk (reflex), tendon (ah-kil/'ēz) [*Gr. Achilleus* Greek hero, whose mother held him by the ankle to dip him in the Styx] see *bursa tendinis calcanei* [*Achillis*, *triceps surae jerk*, under *jerk*, and *tendo calcaneus*].

Achillini (ak/'i-le/'ne) Alessandro (1463-1512) a celebrated Bolognese physician and philosopher who left several works on anatomy.

achillobursitis (ah-kil/'o-bur-si/'tis) [*Achilles* + *Gr. byrsa* bursa + *-itis*] inflammation and thickening of the bursae about the Achilles tendon, especially of the bursa in front of it; called also *achillodynia*.

achillodynia (ak/'i-lo-din/'e-ah) [*Achilles* (tendon) + *Gr. odyne* pain + *-ia*] pain in the Achilles tendon or in its bursa; achillobursitis.

achillorrhaphy (ak/'i-lor/'ah-fe) [*Achilles* (tendon) + *Gr. raphē* suture] the operation of suturing the Achilles tendon.

achillotenotomy (ah-kil/'o-ten-ot/'o-me) [*Achilles* + *Gr. tenōn* tendon + *tomē* cut] surgical division of the Achilles tendon. **plastic a.**, elongation of the Achilles tendon by plastic operation.

achillotomy (ak/'i-lot/'o-me) achillotenotomy.

achiria (ah-ki/'re-ah) acheiria.

achirus (ah-ki/'rus) acheirus.

achlorhydria (ah/'klor-hi/'dre-ah) [*a neg.* + *chlorhydria*] absence of hydrochloric acid from maximally stimulated gastric secretions; a result of gastric mucosal atrophy. Called also *gastric anacidity*. **a. apep'sia** (*obs.*), absence of pepsinogens in secretions of the stomach.

achlorhydic (ah/'klor-hi/'drik) characterized by achlorhydria.

achloroblesia (ah-klo/'ro-blep/'se-ah) achloropsia.

achloropsia (ah/'klo-rop/'se-ah) [*a neg.* + *Gr. chlōros* green + *opsis* vision + *-ia*] inability to distinguish green tints, as in deuteranopia.

Achlya (ak/'le-ah) a genus of phycomycetous fungi of the order Saprolegniales, subclass Oomycetes, which form molds on certain fish and insects.

achlys (ak/'lis) [*Gr. achlys* darkness] (*obs.*) a mild corneal opacity (Himly).

acholia (ah-ko/'le-ah) [*a neg.* + *Gr. cholē* bile + *-ia*] lack or absence of the secretion of bile.

acholic (ah-kol/'ik) free from bile.

acholuria (ah-ko-lu/'re-ah) [*a neg.* + *Gr. cholē* bile + *ouron* urine + *-ia*] lack of bile pigment in the urine.

acholuric (ah-ko-lu/'rik) pertaining to or characterized by acholuria, as acholuric jaundice.

achondrogenesis (ah-kon/'dro-jen/'ē-sis) a hereditary disorder characterized by hypoplasia of bone, resulting in markedly shortened limbs; the head and trunk are normal.

achondroplasia (ah-kon/'dro-pla/'ze-ah) [*a neg.* + *Gr. chondros* cartilage + *plassein* to form + *-ia*] a hereditary, congenital disturbance of epiphyseal chondroblastic growth and maturation, causing inadequate enchondral bone formation and resulting in a peculiar form of dwarfism with short limbs, normal trunk, small face, normal vault, lordosis, and trident hand. It may be accompanied by other anomalies. Called also *chondrodystrophia fetalis*. See also *achondroplastic dwarf*, under *dwarf*.

achondroplastic (ah-kon/'dro-plas/'tik) pertaining to, or affected with, achondroplasia.

achondroplasty (ah-kon/'dro-plas/'te) achondroplasia.

achor (a/'kor) [*Gr. achōr* dandruff] (*obs.*) 1. an eruption of small papules on the hairy parts. 2. a scaly or scabby eruption on the face and scalp in infants. 3. an acuminate pustule.

achordal (a-kor/'dal) achordate.

achordate (a-kor/'dāt) without a notochord; used with reference to animals which are not chordates.

achoresis (ak/'o-re/'sis) [*a neg.* + *Gr. chōrein* to hold] (*obs.*) diminution of the capacity of a hollow organ.

Achorion (ah-ko/'re-on) *Trichophyton*.

achrestic (ah-kres/'tik) [*Gr. achrēstia* the nonusage of a thing] pertaining to the lack of use of a principle which is present in the body, as in achrestic anemia, a condition in which the body is unable to use the antianemic principle.

achrocytosis (ah-kro/'ah-si-to/'sis) [*a neg.* + *Gr. chroa* color + *kytos* hollow vessel + *-osis*] a term once used to designate pathologically excessive numbers of lymphocytes in organs, as in Mikulicz's disease.

achroma (ah-kro/'mah) [*a neg.* + *Gr. chrōma* color] (*obs.*) absence of color or of normal pigmentation.

achromachia (ah/'kro-mak/'e-ah) (*obs.*) grayness or whiteness of the hair; now called *canities*.

achromasia (ak/'ro-ma/'se-ah) [*a neg.* + *Gr. chrōma* color + *-ia*] 1. lack of normal pigmentation of the skin. 2. absence of the usual staining reaction in a tissue or cell.

achromat (ak/'ro-mat) [*a neg.* + *chromatic*] 1. an achromatic objective. 2. monochromat.

achromate (ah-kro/'māt) monochromat.

Achromatiaceae (ak/'ro-ma/'she-a/'se-e) a family of schizomycetes (order Beggiatoales), made up of cells which are spherical to ovoid, or short cylinders with hemispherical ends, not possessing photosynthetic pigments. It includes a single genus, *Achromatium*.

achromatic (ak/'ro-mat/'ik) [*a neg.* + *Gr. chrōmatikos* pertaining to color] 1. producing no discoloration. 2. staining with difficulty. 3. containing achromatin. 4. refracting light without decomposing it into its component colors. 5. monochromatic, def. 2.

achromatin (ah-kro/'mah-tin) [*a neg.* + *Gr. chrōma* color] the faintly staining substance forming the karyolymph, linin, and nuclear membrane of the nucleus of a cell.

achromatinic (ah-kro/'mah-tin/'ik) pertaining to or containing achromatin.

achromatism (ah-kro/'mah-tizm/'") 1. the quality or condition of being achromatic. 2. monochromatism.

Achromatium (ak/'ro-ma/'she-um) a genus of schizomycetes of the family Achromatiaceae.

achromatize (ah-kro/'mah-tīz) to render achromatic.

achromatolysis (ah-kro'mah-tol'i-sis) [*achromatin* + Gr. *lysis* dissolution] disorganization of the achromatin of a cell.

achromatophil (ah-'kro-mat'o-fil) [a neg. + Gr. *chrōma* color + *philein* to love] 1. having no affinity for stains. 2. an organism or tissue element that does not stain easily.

achromatophilia (ah-kro'mah-to-fil'e-ah) the property of resisting the coloring action of stains.

achromatopia (ah-'kro-mah-to'pe-ah) [a neg. + Gr. *chrōma* color + *ōpē* vision + *-ia*] monochromatism.

achromatopic (ah-'kro-mah-top'ik) monochromatic, def. 2.

achromatopsia (ah-kro'mah-top'se-ah) monochromatism.

achromatosis (ah-kro'mah-to'sis) [a neg. + Gr. *chrōma* color + *-osis*] 1. deficiency of pigmentation in the tissues, as in the skin and the iris. 2. lack of staining power in a cell or tissue.

achromatous (ah-kro'mah-tus) having no color; colorless.

achromaturia (ah-kro'mah-tu're-ah) [a neg. + Gr. *chrōma* color + *ouron* urine + *-ia*] the excretion of colorless urine.

achromia (ah-kro'me-ah) [a neg. + Gr. *chrōma* color + *-ia*] the lack or absence of normal color or pigmentation, as of the skin.

congenital a., albinism. **cortical a.**, a condition in which an area of the cerebral cortex shows disappearance of ganglion cells. **a. parasit'ica**, a name applied to the nonpigmented or whitish variety of macular patches occurring in tinea versicolor. **a. un'guum** (*obs.*), leukonychia.

achromic (ah-kro'mik) pertaining to or characterized by achromia.

achromin (ah-kro'min) achromatin.

Achromobacter (ah-kro'mo-bak'ter) [a neg. + Gr. *chrōma* color + *baktērion* little rod] a genus of schizomycetes of the family Achromobacteraceae, order Eubacteriales, made up of nonpigment-forming gram-negative rod-shaped bacteria occurring in soil or in fresh or salt water. Fifteen species have been described.

Achromobacteraceae (ah-kro'mo-bak'tē-ra'se-e) a family of schizomycetes (order Eubacteriales), made up of motile or nonmotile small to medium-sized rods, generally in soil or in fresh or salt water. Some are parasitic or pathogenic. It includes five genera, *Achromobacter*, *Agarobacterium*, *Alcaligenes*, *Berneckea*, and *Flavobacterium*.

achromocyte (ah-kro'mo-sit) a red cell artifact in the shape of a quarter moon which stains more faintly than intact red cells; called also *selenoid* or *crescent body*.

achromoderma (ah-kro'mo-der'mah) [a neg. + Gr. *chrōma* color + *derma* skin] (*obs.*) leukoderma.

achromophil (ah-kro'mo-fil) [a neg. + Gr. *chrōma* color + *philein* to love] achromatophil.

achromophilous (ah-'kro-mof'i-lus) having no affinity for stains.

Achromycin (ak'ro-mi'sin) trademark for preparations of tetracycline.

achrooamylloid (a-kro'o-am'i-loid) [Gr. *achroos* uncolored + *amylloid*] amyloid in its early nonstainable stage.

achroocytosis (ah-kro'o-si-to'sis) achroacytosis.

achroodextrin (ah-kro'o-dek'strin) [Gr. *achroos* uncolored + *dextrin*] a kind of lower-molecular-weight dextrin not colored by iodine.

Achucárro's stain (ach'oo-kah'rōz) [Nicolás Achucárro, Spanish histologist, 1881-1918] see *Table of Stains*.

achylia (ah-ki'le-ah) [Gr. *achylos* juiceless + *-ia*] absence of hydrochloric acid and pepsinogens (pepsin) in the gastric juice (*a. gas'trica*). **a. gas'trica hemorrhag'ica** (*obs.*), absence of hydrochloric acid from, and presence of occult blood in, the stomach. **a. pancreat'ica** (*obs.*), absence of exocrine pancreatic secretion, occurring in pancreatic ductal obstruction, pancreatic atrophy, or chronic pancreatitis with pancreatic insufficiency.

achylous (ah-ki'lus) [Gr. *achylos* juiceless] (*obs.*) deficient in chyle.

achymia (ah-ki'me-ah) imperfect, insufficient, or absence of formation of chyme.

achymosis (ak'i-mo'sis) achymia.

acicular (ah-sik'u-lar) [L. *acicularis*] shaped like a needle or needle point.

aciculum (ah-sik'u-lum) a bent, finger-like spine or bristle found in certain flagellates.

acid (as'id) 1. [L. *acidus*, from *acere* to be sour] sour; having properties opposed to those of the alkalis. 2. [L. *acidum*] any compound of an electronegative element with one or more hydrogen atoms that are readily replaceable by electropositive atoms; a compound which, in aqueous solution, undergoes dissociation with the formation of hydrogen ions (protons) a substance whose molecule or ion can give up a proton (to a base); a substance capable of accepting a pair of electrons to form a coordinate covalent bond. Acids have a sour taste, turn blue litmus red, and unite with bases to form salts. Acids are distinguished as *binary* or *hydracids*, and *ternary* or *oxacids*: the former contain no oxygen; in the latter the hydrogen is united to the electronegative element by oxygen. The hydracids are distinguished by the prefix *hydro-*. The names of acids end in "ic," except in the case in which there are two degrees of oxygenation. The acid containing the

greater amount of oxygen has the termination *-ic*, the one having the lesser amount, the termination *-ous*. Acids ending in *-ic* form the salts with the termination *-ate*; those ending in *-ous* form the salts ending in *-ite*. The salts of hydracids end in *-ide*. Acids are called *monobasic*, *dibasic*, *tribasic*, and *tetrabasic*, respectively, when they contain one, two, three, or four replaceable hydrogen atoms. **abietic a.**, **abietinic a.**, an acid resin, $C_{20}H_{30}O_2$, forming about 83 per cent of American rosin; its esters are used in lacquers and varnishes. **abscissic a.**, a growth-inhibiting plant hormone, which promotes abscission of plant parts, such as leaves and petals, and is associated with the onset and maintenance of dormancy. **acetic a.** [NF], a saturated fatty acid, CH_3COOH , the characteristic component of vinegar. It may be obtained by destructive distillation of wood, by oxidative bacterial fermentation of ethyl alcohol, and by oxidation of acetaldehyde via interaction of acetylene and water; in the form of acetyl-CoA, acetic acid is the precursor of fatty acids, cholesterol, steroids, prostaglandins, and other compounds. It is used in solutions of various strengths, as *dilute acetic a.* (6 per cent) and *glacial acetic a.* (99.4 per cent). Called also *ethanoic a.* **acetic a., diluted** [NF], a clear, colorless liquid containing, in each 100 ml., between 5.7 and 6.3 g. of the pure acid; used as a solvent. **acetic a., glacial** [USP], a clear, colorless liquid with a pungent characteristic odor, containing not less than 99.4 per cent by weight of acetic acid; used as an acidifying agent in pharmaceutical preparations and in solution to irrigate the bladder. **acetoacetic a.**, a colorless syrupy compound, $CH_3 \cdot CO \cdot CH_2 \cdot COOH$, one of the ketone bodies, occurring in trace amounts in normal urine and in elevated amounts in the urine of diabetes mellitus (especially in ketoacidosis) and in starvation due to incomplete fatty acid oxidation; called also *beta-ketobutyric a.* and *diacetic a.* **acetizoid a.**, chemical name: 3-acetamido-2,4,6-triiodobenzoic acid. An odorless white powder, $C_9H_6I_3NO_3$, soluble in alcohol and slightly soluble in water, ether, and chloroform; its sodium salt is used as an x-ray contrast medium. **acetylaminobenzoic a.**, $CH_3 \cdot CO \cdot NH \cdot C_6H_4 \cdot COOH$, the form in which aminobenzoic acid is detoxicated by acetylation and eliminated. **acetylenic a.**, an unsaturated fatty acid having the general formula $C_nH_{2n-2}COOH$, commonly found in microorganisms. **acetylpropionic a.**, levulinic a. **acetylsalicylic a.**, aspirin. **acetyltannic a.**, a diacetic ester of tannic acid, a grayish or white powder, insoluble in water, soluble in alcohol, and having astringent properties; formerly used as an antiperistaltic in the treatment of diarrhea. Called also *diacetyltannic a.* **acrylic a.**, an olefinic acid, $CH_2 \cdot CH \cdot COOH$, found in animal and vegetable tissues. **adenosine triphosphoric a.**, a normal constituent of most cells, $C_5H_4N_8 \cdot C_5H_8O_4 \cdot PO_3H_2 \cdot P_2O_3(OH)_4$, which participates in metabolic energy transformations; abbreviated ATP. **adenylic a.**, a mononucleotide, $NH_2 \cdot C_5H_8N_4 \cdot C_5H_8O(OH)_2 \cdot CH_2OH \cdot PO_2(OH)_2$, made up of adenine, ribose, and phosphoric acid. It is one of the decomposition products of ribonucleic acid and occurs in muscle, blood corpuscles, yeast, and other nuclear material. **Yeast adenylic a.** is adenosine 3'-phosphate; **muscle adenylic a.** is adenosine 5'-phosphate. Called also *adenine nucleotide* and *adenosine monophosphate (AMP)*. **adipic a.**, a crystalline acid, $COOH(CH_2)_4COOH$, obtained by oxidizing certain fats with nitric acid; made commercially by oxidation of cyclohexanol and used in the manufacture of resins and nylon. **agaric a.**, **agaric a.**, a resinous acid, $C_{19}H_{36} \cdot (OH)(COOH)_3 \cdot \frac{1}{2}H_2O$, from the fungus *Polyporus officinalis*, or white agaric; formerly used as an anhydrotic. **ailantic a.**, a bitter acid from *Ailantus excelsa*. **aldobionic a.**, $C_{11}H_{19}O_{10} \cdot COOH$, a disaccharide containing a uronic acid as one of its component sugars and occurring in various plant gums and certain pathogenic organisms; it can be formed by the hydrolysis of the specific polysaccharide of Type III pneumococcus. **alep'ric a.**, a homologue of chaulmoogric acid. **alep'rylic a.**, a homologue of chaulmoogric acid. **alginic a.**, an organic acid from various species of algae; called also *algin*. **aliphatic a.**, an organic acid with an open carbon chain. **allanic a.**, **allanturic a.**, an acid, glyoxalyl urea, $NH_2CO \cdot N \cdot CH \cdot COOH$, formed along with urea by the action of nitric acid on allantoin. **allonic a.**, one of the isomeric forms of pentahydroxycaproic acid, $CH_2OH(CHOH)_4COOH$, formed by the gentle oxidation of allucose. **allophanic a.**, an acid, urea carbonic acid, $NH_2CO \cdot NH \cdot COOH$, not known in the free state. Its amide is biuret. Formerly combined with various substances to make them less disagreeable to take. **alloxanic a.**, a crystalline acid, $NH_2 \cdot CO \cdot NH \cdot CO \cdot COOH$, obtainable from alloxan. **alloxyp'roteic a.**, a sulfur compound sometimes found in the urine. **allu'ranic a.**, an acid, $C_5H_7N_4O_4$, derived from alloxan and urea. **alpha-aminobeta-hydroxypropionic a.**, serine. **alpha-aminodeltaguanidovaleric a.**, arginine. **alpha-aminoisocaproic a.**, leucine. **alpha-hydroxypropionic a.**, lactic a. **alpha-oxynaphthoic a.**, a crystalline acid, $OH \cdot C_{10}H_6COOH$, formerly used as an antiseptic and deodorant. **alphanaric a.**, an arsenic acid containing an aliphatic radical. **alphanol'ic a.**, phenylacetic a. **altronic a.**, one of the isomeric forms of penta-hydroxycaproic acid, $CH_2OH(CHOH)_4 \cdot COOH$, formed by the gentle oxidation of altrose. **amalic a.**, a crystalline acid, $C_6(CH_3)_4N_4O_7$, formed by the reduction of dimethyl alloxan with hydrogen disulfide. **ambrettolic a.**, an unsaturated hydroxy acid, 16-hydroxy-7-hexadecenoic acid, $CH_2 \cdot$

NATURALLY OCCURRING AMINO ACIDS

The substances listed below have been found either free as components of plant or animal tissues or as products of the hydrolysis of proteins. The year refers to the earliest occasion upon which the substance was characterized. As found in nature, all belong to the L family, being configurationally related to L-glyceraldehyde. However, in recent years, the D-enantiomorphs of a few of these substances have been detected in complex polypeptides produced by bacterial metabolism.

YEAR	COMMON NAME	SYSTEMATIC NAME	DISCOVERER
1806	Asparagine	2-amino-4-succinamic acid	Vauquelin and Robiquet
1810	Cystine	3,3'-dithiobis-(2-aminopropionic acid)	Wollaston
1819	Leucine	2-aminoisocaproic acid	Proust
1820	Glycine	aminoacetic acid	Braconnot
1846	Tyrosine	2-amino-3-(4-hydroxyphenyl)-propionic acid	Liebig
1856	Valine	2-aminoisovaleric acid	von Gorup-Besanez
1865	Serine	2-amino-3-hydroxypropionic acid	Cramer
1866	Glutamic acid	2-aminoglutaric acid	Ritthausen
1869	Aspartic acid ¹	2-aminosuccinic acid	Ritthausen
1879	Phenylalanine	2-amino-3-phenylpropionic acid	Schulze
1883	Glutamine	2-amino-5-glutaramic acid	Schulze and Bosshard
1884	Cysteine	2-amino-3-mercaptopropionic acid	Baumann
1886	Arginine	2-amino-5-guanidinovaleric acid	Schulze
1888	Alanine ²	2-aminopropionic acid	Weyl
1889	Lysine	2,6-diaminohexanoic acid	Drechsel
1896	3,5-Diiodotyrosine (Iodogorgic acid)	2-amino-3-(3,5-diiodo-4-hydroxyphenyl)-propionic acid	Drechsel
1896	Histidine	2-amino-3-(5-imidazolyl)-propionic acid	Hedin; Kossel
1898	Ornithine ³	2,5-diaminovaleric acid	Schulze and Winterstein
1901	Proline ⁴	2-pyrrolidinecarboxylic acid	Fischer
1901	Tryptophan	2-amino-3-(3-indolyl)-propionic acid	Hopkins and Cole
1902	Hydroxyproline	4-hydroxy-2-pyrrolidinecarboxylic acid	Fischer
1903	Isoleucine	2-amino-3-methylvaleric acid	Ehrlich
1913	3,5-Dibromotyrosine ⁵	2-amino-3-(3,5-dibromo-4-hydroxyphenyl)-propionic acid	Morner
1913	3,4-Dihydroxyphenylalanine	2-amino-3-3,4-(dihydroxyphenyl)-propionic acid	Guggenheim
1915	Thyroxine	2-amino-3-(3,5-diiodo-4-hydroxyphenoxy)-3,5-diiodo-phenyl)-propionic acid	Kendall
1922	Methionine ⁶	2-amino-4-methylmercaptobutyric acid	Mueller
1929	Canavanine	2-amino-4-guanidinooxy-butyric acid	Kitagawa and Tomita
1930	Citrulline ⁶	2-amino-5-ureidovaleric acid	Wada
1935	Djenkolic acid	3,3'-methylenedithiobis-(2-aminopropionic acid)	van Veen and Hyman
1936	Threonine	2-amino-3-hydroxybutyric acid	Meyer and Rose
1938	Hydroxylysine ⁷	2,6-diamino-5-hydroxyhexanoic acid	Van Slyke, Hiller, Dillon, and MacFadyen
1948	α,γ -Diaminobutyric acid	2,4-diaminobutyric acid	Catch, Jones, and Wilkenson
1950	α,ϵ -Diaminopimelic acid	2,6-diaminopimelic acid	Work

¹ Aspartic acid was prepared from asparagine by Plisson in 1827.

² Synthesized by Strecker, 1850.

³ Ornithine acid, the dibenzoyl derivative of ornithine, was discovered by Jaffé in 1877. The base was first characterized as a decomposition product of arginine by Schulze and Winterstein in 1898 and in 1943 was shown to be a product of the hydrolysis of tyrocidine by Gordon, Martin, and Synge.

⁴ Synthesized by Willstätter, 1900.

⁵ 3,5-Dibromotyrosine was synthesized from tyrosine by von Gorup-Besanez in 1863.

⁶ Isolated but not characterized by Koga and Otake in 1914.

⁷ Van Slyke and Hiller announced the probable presence of a new basic amino acid in gelatin in 1921. It was identified as an hydroxylysine in 1938.

OH(CH₂)₂CH:CH(CH₂)₂COOH, that occurs as a lactone in ambrette-seed oil. **amfonelic a.**, chemical name: 1-ethyl-1,4-dihydro-4-oxo-7-(phenylmethyl)-1,8-naphthyridine-3-carboxylic acid; a central nervous system stimulant, C₁₈H₁₆N₂O₃. **amino a.**, any of a class of organic compounds containing the amino (NH₂) group and the carboxyl (COOH) group. The amino acids form the chief structure of proteins, and several are essential in human nutrition. (See table listing names of amino acids occurring in nature, referred to as *natural amino a.'s*.) **amino a., essential**, one that is essential for optimal growth in a young animal or for nitrogen equilibrium in an adult. Those essential for nitrogen equilibrium in man are isoleucine, leucine, lysine, methionine, phenylalanine, threonine, tryptophan, and valine; histidine, in addition to these eight, is required by infants. **aminoacetic a.**, a nonessential amino acid, NH₂CH₂COOH, occurring as a constituent of many proteins. It has been synthesized, and is used as a gastric antacid, dietary supplement, and in the treatment of various myopathies and peripheral vascular insufficiencies. A solution [USP] is used as an irrigating fluid. Its hydrochloride salt is used as a source of hydrochloric acid in the treatment of achlorhydria gastrica. Called also *aminoethanoic a.* **aminobenzoic a.**, an acid, C₇H₇NO₂, widely distributed in plant and animal tissues, and considered to be associated with, or a member of, the group of B vitamins. It is a growth factor for rats, chicks, and yeast, and an essential constituent of bacterial culture media. It nullifies the bacteriostatic effects of the sulfonamide drugs. A solution [USP] is used as a topical sunscreening agent. It was formerly used in the treatment of rickettsial infections. Called also *para-aminobenzoic a.* (PAB or PABA). **aminobutyric a.**, an alpha amino acid found in small amounts in some proteins. **α -aminobutyric a.**, butyric acid with an amine group on the number 2 carbon. **γ -aminobutyric a.**, **4-aminobutyric a.**, see *gamma-aminobutyric a.* **aminocaproic a.** [USP], chemical name: 6-aminohexanoic acid. A nonessential amino acid, NH₂CH₂(CH₂)₃CH₂COOH, occurring as a fine, white powder, extracted from the leucine fraction of the decomposition of protein of nervous tissue. It inhibits the clot-lysing properties of plasmin, and synthetic preparations [USP] are used for this purpose (as a hemostatic). **ϵ -aminocaproic a.**, chemical name: 6-amino-hexanoic acid. A synthetic amino acid that is an inhibitor of

plasminogen activator and plasmin, and indirectly of fibrinolysis. **aminoethanoic a.**, aminoacetic a. **aminoglutaric a.**, glutamic a. **2-amino-5-guanidinovaleric a.**, arginine. **aminohippuric a.** [USP], chemical name: *N*-(4-aminobenzoyl)glycine. The *N*-acetic acid of aminobenzoic acid, C₉H₁₀N₂O₃. Its sodium salt (aminohippurate sodium) is used to measure the effective renal plasma flow and to determine the functional capacity of the tubular excretory mechanism. Called also *para-aminohippuric a.*, and *PAH* or *PAHA*. **aminohydroxybenzoic a.**, a group of chemotherapeutic agents used in the treatment of infections with acid-fast bacilli. **2-amino-3-*p*-hydroxyphenylpropionic a.**, tyrosine. **2-amino-3-indole propionic a.**, tryptophan. **aminoisocaproic a.**, leucine. **2-aminoisovaleric a.**, valine. **δ -aminolevulinic a.**, **5-aminolevulinic a.**, an acid, NH₂CH₂COCH₂CH₂COOH, biosynthesized from succinyl coenzyme A and glycine; two molecules of it then condense to form porphobilinogen. **2-amino-propionic a.**, alanine. **aminopteroylglutamic a.**, aminopterin. **aminosalicylic a.** [USP], chemical name: 4-amino-2-hydroxybenzoic acid. An antibacterial, C₇H₇NO₃, occurring as a white, or nearly white, bulky powder; used orally as a tuberculostatic. Called also *para-aminosalicylic acid* (PAS or PASA). **aminosuccinic a.**, aspartic a. **2-amino-3-thiopropionic a.**, cysteine. **2-aminovaleric a.**, an amino acid, CH₃·CH₂·CH₂·CH(NH₂)·COOH, reported to occur rarely in protein. **amygdalic a.**, mandelic a. **anacardic a.**, a crystalline principle, normal pentadecylene salicylic acid, C₁₅H₂₇·C₆H₃(OH)·COOH, from *Anacardium occidentale*; formerly used as an anthelmintic. **angelic a.**, an unsaturated fatty acid, CH₃·CH:CH(CH₂)₂·COOH, from the roots of *Angelica archangelica*, formerly used as a sedative. **anilinparasulfonic a.**, sulfanilic acid. **anisic a.**, a crystalline acid, CH₃O·C₆H₄·CO₂H, from anise and fennel, forming anisates; it was once used as a local antiseptic and antirheumatic. Called also *draconic a.* **anisuric a.**, an acid, C₁₀H₁₁NO₂, in leafy crystals, obtainable from urine after the ingestion of anisic acid. **anthranilic a.**, a crystalline acid, *O*-aminobenzoic acid, NH₂C₆H₄·COOH; its cadmium salt is used as an ascaricide in swine. **anthropodeoxycholic a.**, chenodeoxycholic a. **anticyclic a.**, a fragrant powdery acid that was used as an antipyretic. **anti-**

monic a., antimony pentoxide. **antoxypoteic a.**, an organic acid obtained from urine. **aporsorbic a.**, a crystalline acid, $C_5H_8O_7$, obtained by oxidizing sorbose with HNO_3 . **arabic a.**, arabin. **arabonic a.**, one of the forms of tetrahydroxy-normal valeric acid, $CH_2OH(CHOH)_3COOH$, formed by the action of bromine water on arabinose. **arachic a.**, **arachidic a.**, a fatty acid, $CH_3(CH_2)_{18}COOH$, from the oil of the peanut, *Arachis hypogaea*. **arachidonic a.**, a polyunsaturated essential fatty acid, $CH_3(CH_2)_4(CH:CH:CH_2)_4(CH_2)_2COOH$, a constituent of lecithin and a biosynthetic source of some prostaglandins. **argininosuccinic a.**, an amino acid, one of the key intermediates in the ornithine cycle; large amounts are excreted in the urine in an inborn error of metabolism manifested by mental retardation. **aristolochic a.**, an acid, 8-methoxy-6-nitrophenanthro[3,4-d]-1,3-dioxole-5-carboxylic acid, $C_{17}H_{11}NO_7$, the major aromatic bitter principle of herbs of the genus *Aristolochia* and related species; called also *aristolochine*. **aromatic a.**, any of a group of acids containing a carboxylic acid function attached to the benzene or other aromatic ring. **arsanilic a.**, chemical name: *p*-aminobenzenearisonic acid. An acid, $NH_2 \cdot C_6H_4 \cdot A_sO(OH)_2$, used in the manufacture of medicinal arsenicals and to control dysentery in swine. **arsenic a.**, the acid, H_3AsO_4 , some of whose salts, called arsenates, are used as medicines. **arsenous a.**, 1. a monobasic acid, $HAsO_2$, forming arsenites. 2. arsenic trioxide, As_2O_3 , or arsenous anhydride. **arsinic a.**, an organic compound containing the group $-As(OH)_2$. **arsinosalicylic a.**, a colorless crystalline substance formerly used in African sleeping sickness. **arsonic a.**, an organic compound containing the group $-AsO_2OH$. **arylarsonic a.**, arsonic acid combined with an aryl radical. **ascorbic a.**, a water-soluble vitamin, $C_6H_8O_6$, present in citrus fruits, and in tomatoes, strawberries, and many other fruits and vegetables; it is also made synthetically. Deficiency of this substance produces scurvy and poor wound repair. Pharmaceutical preparations [USP] are used parenterally and orally as antiscorbutic vitamins in vitamin C deficiency. Called also *vitamin C*, *antiscorbutic vitamin*, *cevitamic a.*, and *hexuronic a.* **aseptic a.**, mixture of boric acid, water, hydrogen dioxide, and salicylic acid, formerly used as an antiseptic. **aspartic a.**, a nonessential, natural dibasic amino acid, $COOH \cdot CH(NH_2) \cdot CH_2 \cdot COOH$, widely distributed in proteins; called also *aminoisuccinic a.* **aspergillic a.**, chemical name: 1-hydroxy-6-(1-methylpropyl)-3-(2-methylpropyl)-2(1*H*)pyrazinone. An antibiotic substance, $C_{12}H_{20}N_2O_2$, isolated from cultures of *Aspergillus flavus*. **atractylic a.**, a poisonous glycoside, $C_{30}H_{50}O_{18}S_2$, from *Atractylis gummifer*. **auric a.**, 1. the acid, H_3AuO_3 , forming salts called aurates. 2. auric anhydride. **azelaic a.**, an acid of widespread occurrence, $COOH \cdot (CH_2)_7 \cdot COOH$, formed by oxidation of oleic acid. **barbituric a.**, chemical name: 2,4,6-trioxohexahydropyrimidine. A crystalline substance, $CONHCO_2CH_2$, known in medicine chiefly because of its derivatives, such as barbital and phenobarbital, and from which the term applied to the class of drugs, barbiturates, is derived. Called also *malonyl urea*. **basic amino a's**, amino acids (e.g., lysine and arginine) having, in addition to the alpha amino group, another amino, a guanido, or an imidazole group; as a result they bear a net positive charge at neutral pH. **behenic a.**, a fatty acid, $CH_3(CH_2)_{20}COOH$, present in oil of black mustard and other plant-seed oils. **benzoic a.** [USP], an acid, $C_6H_5 \cdot COOH$, in the form of white crystals, scales, or needles from benzoin and other resins and from coal tar, used as an antifungal agent in pharmacologic preparations and in combination with salicylic acid as a topical antifungal agent. Called also *flores benzoini* and *flowers of benzoin*. **benzoyl-aminoacetic a.**, hippuric a. **benzoylglucuronic a.**, a conjugate of benzoic acid and glucuronic acid, by which the former is detoxicated and eliminated. **beta-acetylpropionic a.**, levulinic a. **beta-aminobutyric a.**, an acid, $CH_3CH(NH_2) \cdot CH_2COOH$, which causes profound narcotism and symptoms resembling coma. **beta-hydroxybutyric a.**, **beta-oxybutyric a.**, **beta-ketobutyric a.**, acetoacetic a. **beta-ketopalmitic a.**, an oxidized form of palmitic acid, $CH_3(CH_2)_{12}CO \cdot CH_2 \cdot COOH$. **beta-naphtholsulfonic a.**, white pearly scales tinged with red, $OH \cdot C_{10}H_6SO_2 \cdot OH$, used as a test for albumin in the urine; a toxic drug which causes profound narcotism and symptoms resembling diabetic coma, not used as a medication. **beta-oxybutyric a.**, an acid, $CH_3CHOH \cdot CH_2 \cdot COOH$, one of the ketone bodies, occurring in the urine in diabetic ketoacidosis and in starvation due to incomplete fatty acid oxidation; called also *beta-hydroxybutyric a.* **beta-phenylpropionic a.**, hydrocinnamic a. **bichloroacetic a.**, dichloroacetic a. **bile a.**, a steroid acid of the bile, usually occurring in conjugate form, e.g., glycocholic acid, metabolically derived from cholesterol. **bilianic a.**, an acid, $C_{24}H_{34}O_8$, formed by oxidizing dehydrocholic acid. **bilic a.**, a crystalline acid, $C_{18}H_{22}O_6$, formed by oxidizing cholic acid with chromic acid. **bilirubin a.**, bilirubin. **biliverdin a.**, biliverdine. **binary a.**, an acid which contains only two elements, e.g., HCl; called also *hydracid*. **bionic a.**, **biotic a.**, a compound composed of a mixture of substances that stimulates growth of yeast cells; its active ingredient is probably biotin. **bismuthic a.**, the monobasic acid, $HBiO_3$. **blattic a.**, a substance derived from cockroaches that has diuretic properties. See *Blatta*. **boracic a.**,

boric a. **boric a.** [NF], colorless odorless scales, crystals, or crystalline powder, H_3BO_3 , used as a buffer. It was formerly used as a local anti-infective and in solution as an ophthalmic irrigant; rarely used now because of the occurrence of fatal poisoning due to absorption from damaged skin. Called also *boracic a.* and *orthoboric a.* **borocitric a.**, a white crystalline combination of boric and citric acids, employed as a solvent for urates and phosphates. **borophenyllic a.**, a white aromatic powder, $C_6H_5 \cdot OB(OH)_2$, formerly used as an antiseptic agent. **borosalicylic a.**, a white powder, $BOH(OC_6H_4COOH)_2$, prepared by evaporating a mixture of aqueous solution of boric acid and alcoholic solution of salicylic acid; formerly used as an antiseptic. **botulinic a.**, an acid found in putrid sausages, believed to consist of allantotoxin mixed with other substances. **brassic a.**, **brassicidic a.**, $CH_3 \cdot (CH_2)_7 \cdot CH:CH \cdot (CH_2)_{11} \cdot COOH$, the trans isomer of erucic acid produced by treating erucic acid with nitric acid; called also *isoerucic a.* **brassilic a.**, a dibasic acid, $COOH(CH_2)_{11}COOH$, obtained by the oxidation of erucic acid. **brenz-catechin sulfuric a.**, pyrocatechin sulfuric acid, $OH \cdot C_6H_4 \cdot O \cdot SO_3OH$, found in the urine after the administration of salicin, hydroquinone, etc. **bromauric a.**, a brownish crystalline acid, $HAuBr_4 + 5H_2O$, used as a readily soluble form of gold and as a source of colloidal gold (by reduction). **bromphenylmercapturic a.**, a compound, bromphenylacetylcysteine, $C_8H_4Br \cdot S \cdot CH_2 \cdot CH(NH \cdot CO \cdot CH_2)COOH$, found conjugated with glucuronic acid in the urine of dogs fed bromobenzene; called also *bromphenylacetylcysteine* and *phenylmercapturic a.* See also *mercapturic a.* **burinic a.**, **ursinic a.**, a pale yellow substance derived from *Capsella bursa-pastoris*, a species of weeds; once used as an astringent. **butylcarboxylic a.**, valeric a. **butylethylbarbituric a.**, butethal. **butyric a.**, a rancid sticky acid, $CH_3CH_2CH_2COOH$, found in butter, sweat, feces, and urine, and in traces in the spleen and in blood. **cacodylic a.**, a crystalline deliquescent solid, dimethylarsinic acid, $(CH_3)_2 \cdot AsO \cdot OH$, used as a herbicide; formerly used in treatment of various skin conditions. **caffaic a.**, a crystalline solid, dihydroxycinnamic acid, $(OH)_2C_6H_3CH:CH \cdot COOH$, obtained from coffee. **caffetannic a.**, a glucoside, $C_{15}H_{18}O_8$, found in coffee; it is resolvable into dextrose and caffeic acid. **caffuric a.**, a crystalline acid, $C_8H_8N_2O_4$, formed by the oxidation of caffeine. **camphoglycuronic a.**, $C_{18}H_{24}O_8$, a combination of glucuronic acid and camphor, found in the urine after the ingestion or injection of camphor. **campholic a.**, a compound, $C_{10}H_{16}O_2$, formed by distilling camphor with alcoholic potash. **camphoric a.**, a colorless crystalline substance, $C_8H_{14}(COOH)_2$, from the oxidation of camphor; it may stimulate the respiratory center. **cantharic a.**, a crystalline acid, $C_{10}H_{12}O_4$, derivable from its isomer cantharidin. **cantharidic a.**, a dibasic acid, $C_{10}H_{14}O_5$, formed by the combination of cantharidin with water. **capobenic a.**, chemical name: 6-(3,4,5-trimethoxybenzamido)hexanoic acid; a cardiac depressant, $C_{18}H_{23}NO_6$. **capric a.**, a crystalline, rancid-smelling fatty acid, $CH_3(CH_2)_8COOH$, from butter; called also *decanoic a.* **caproic a.**, a fatty acid, $CH_3(CH_2)_6COOH$, occurring in milk fat and some plant oils, used in the manufacture of artificial flavors; called also *hexanoic a.* **caprolic a.**, see *decanoic a.* **capyrylic a.**, a fatty acid, $CH_3(CH_2)_6COOH$, from goat and cow milk fat and some seed oils, used in manufacture of perfumes; called also *octanoic a.* **capsic a.**, an irritating principle existing in *Pimenta*. **carbamic a.**, a monobasic acid, the monoamide of carbonic acid (aminoformic acid), $NH_2CO \cdot OH$; it is not known in the free state. Its ethyl ester is urethan. **carbaminocarboxylic a.**, an acid, $COOH \cdot NH \cdot CH_2 \cdot COOH$, formed by CO_2 in the presence of the amino acid glycine and alkali. **carbolic a.**, phenol. **carbonaphthoic a.**, hydroxynaphthoic a. **carbonic a.**, 1. an acidulous unstable liquid, H_2CO_3 , made by dissolving carbon dioxide in water; it forms carbonates. 2. carbon dioxide. **gamma-carboxyglutamic a.**, an amino acid occurring in biologically active prothrombin and formed in the liver in the presence of vitamin K by carboxylation of glutamic acid residues in prothrombin precursor molecules. **carboxylic a's**, a group of organic acids containing the carboxyl group, $-COOH$, in the molecule, and widely distributed in nature, especially in foodstuffs. **carminic a.**, a red anthraquinonoid dye, $C_{22}H_{20}O_{13}$, the essential component of carmine and cochineal. **carnaubic a.**, an acid, $CH_3(CH_2)_{22}COOH$, from carnauba wax or from wool fat. **carolic a.**, a C_6 acid that is a metabolic product of *Penicillium charlesii*. **carthamic a.**, a red dye, $C_{21}H_{22}O_{10}$, obtained by alkaline extraction of safflower petals. **caryophyllic a.**, eugenol. **catechuic a.**, catechin. **catechutannic a.**, the tannin of catechu, a powerfully astringent extract of *Acacia catechu*. **cathartic a.**, **cathartine a.**, a laxative principle from senna. **cellulosic a.**, oxidized cellulose. **cerberonic a.**, a fatty acid, $C_{24}H_{48}O_8$, derived from sphingomyelin; the principal hydroxy saturated fatty acid from the brain. **cerotic a.**, **cerotinic a.**, a fatty acid, $CH_3(CH_2)_{24} \cdot COOH$, from beeswax and other insect and plant waxes; called also *hexacosanoic a.* **cevitamic a.**, ascorbic a. **chaulmoogric a.**, chemical name: (S)-2-cyclopentene-1-tridecanoic acid. An unsaturated fatty acid, $C_{15}H_{32}O_2$, from chaulmoogra oil. See also *ethyl chaulmoograte*. **chenic a.**, chenodeoxycholic a. **chenodeoxycholic a.**, an acid, 3,7-dihydroxycholic acid, the third most abundant acid of human bile; it was first found in the bile of

geese [Gr. *chēn* goose]. It has gallstone-dissolving properties, probably because it suppresses synthesis of cholesterol by the liver, and is administered for this purpose. Called also *anthropodeoxycholic a.* and *chenic a.* **chenotaurocholic a.**, a crystalline compound, $C_{29}H_{49}NSO_6$, a bile acid formed by the conjugation of chenodeoxycholic acid and taurine, and occurring in the bile of geese. **chinovic a.**, quinovic a. **chitonic a.**, an acid, trihydroxymethyl-tetrahydrofurfuran-carboxylic acid, $CH_2OH \cdot CHO \cdot (CHOH)_2 \cdot CH \cdot COOH$, formed by the oxidation of chitose. **chloracetic a.**, an acid in which the three hydrogen atoms of acetic acid are wholly or partly replaced by chlorine; it occurs, therefore, in three forms, called respectively monochloroacetic, dichloroacetic, and trichloroacetic acid, all being strongly acidic: the more chlorine, the more acidic the acid. **chloranilic a.**, chemical name: 2,5-dichloro-3,6-dihydroxy-*p*-benzoquinone. Red crystals, $C_6H_2Cl_2O_4$, used in spectrophotometry for several chemical measurements that yield a colored product. **chloauric a.**, yellow hygroscopic crystals of gold chloride, $AuCl_3 \cdot HCl \cdot 4H_2O$ (or $HAuCl_4 \cdot 4H_2O$), which contain 48 per cent of gold. **chlorhydric a.**, hydrochloric a. **chlorogenic a.**, a simple phenolic compound of low molecular weight isolated from raw coffee bean, castor bean, and oranges. **chloroplatinic a.**, $H_2PtCl_6 \cdot 6H_2O$, made by dissolving metallic platinum in nitrohydrochloric acid (aqua regia). Soluble source of platinum for reduction (mirrors, photography) and for preparation of other compounds of platinum. **chlorosulfonic a.**, an irritant war gas and lacrimator, HSO_3Cl , used widely as an intermediate in chemical synthesis. **chlorous a.**, a feebly acid compound, $HClO_2$, forming salts called chlorites. **cholanic a.**, the product, $C_{24}H_{40}O_2$, of the reduction of cholic acid or other bile acids. **choleic a's**, complexes of fatty acids with deoxycholic acid. **cholic a.**, an acid, 3,7,12-trihydroxycholic acid, $C_{24}H_{40}O_6$, from bile. **cholidanic a.**, an acid, $C_{24}H_{36}O_{10}$, formed by oxidative splitting of deoxycholic acid. **chondroitin a.**, **chondroitin-sulfuric a.**, a mucopolysaccharide occurring in cartilage. **chondrosaminic a.**, an oxidation product of chondrosamine. **chromic a.**, 1. a dibasic acid, H_2CrO_4 ; its salts are called chromates. 2. brilliant red crystals, flakes, or granular powder, CrO_3 , formerly used in solutions as an astringent, topical antiseptic, and corrosive; called also *chromic anhydride* and *chromium trioxide*. **chromonucleic a.**, deoxyribonucleic a. **chrysanic a.**, a crystalline compound, $C_{17}H_{12}O_2$. **chrysophanic a.**, chemical name: 1,8-dihydroxy-3-methylanthraquinone. A yellow crystalline acid, dioxymethyl-anthraquinone, $CH_3(OH) \cdot C_6H_2(CO)_2C_6H_3OH$, from a glycoside in senna, certain lichens, and various species of rhubarb, and from chrysarobin, whose therapeutic properties it shares. Called also *rheic a.* **cinchoneric a.**, pyridine-dicarboxylic acid, $C_8H_5N(COOH)_2$, formed from cinchonine by oxidation. **cinchonic a.**, quinolin-carboxylic acid, $C_9H_6N(COOH)$, formed from cinchonine by oxidation. **cinchoninic a.**, an acid, $C_{10}H_7O_2N$, produced in the oxidation of cinchonine. **cinnamic a.**, a white crystalline acid, phenyl acrylic acid, $C_6H_5(CHO)COOH$, from cinnamon, storax, the balsams, and other aromatic resins. **citraconic a.**, a crystalline compound, $COOH \cdot C \cdot (CH_2) \cdot CH \cdot COOH$, formed by distilling citric acid; called also *methylmaleic a.* and *pyrocitric a.* **citric a.**, chemical name: 2-hydroxy-1,2,3-propanetricarboxylic acid. A tribasic acid in the form of crystals or crystalline powder, $CH_2(COOH)C(OH)(COOH) \cdot CH_2COOH$, from lemons, limes, etc., that forms citrates and is antiscorbutic, refrigerant, and diuretic; it is used as an ingredient of anticoagulant citrate dextrose solution, anticoagulant citrate phosphate dextrose solution, and citric acid syrup. Citric acid is an intermediate in the tricarboxylic acid (Krebs') cycle, formed by acetylation of oxaloacetic acid and itself converted to isocitric acid. **clodronic a.**, chemical name: (dichloromethylene)bisphosphoric acid; a bone calcium regulator, $CH_4Cl_2O_4P_2$. **clufenamic a.**, chemical name: *N*-(2,3-dichlorophenyl)anthranilic acid; an anti-inflammatory agent, $C_{13}H_9ClNO_2$. **clorazepic a.**, chemical name: 7-chloro-2,3-dihydro-2-oxo-5-phenyl-1*H*-1,4-benzodiazepine-3-carboxylic acid. A derivative of benzodiazepine, $C_{18}H_{13}ClN_2O$, whose dipotassium and monopotassium salts are used as minor tranquilizers. **clupanodonic a.**, an unsaturated fatty acid, $C_{22}H_{34}O_2$, derived from sardine oil and oils of other fish; called also *docosapentaenoic a.* **cocatlannic a.**, a compound found in the leaves of *Erythroxylon coca*. **cojic a.**, kojic a. **colchicinic a.**, an acid, $C_{16}H_{15}O_6$, formed from colchicine by heating it with hydrochloric acid. **comanic a.**, an acid, $C_6H_4O_4$, derived from succinic acid. **comenic a.**, a crystalline acid, oxypropone-carboxylic acid, $OH \cdot C_6H_3O_2 \cdot COOH$, from opium. **copaibic a.**, an acid nearly identical with the resin of copaiba. **coumaric a.**, an acid, $OH \cdot C_6H_4 \cdot (CH_2) \cdot COOH$, from coumarin, readily convertible into salicylic acid. **coumarilic a.**, a crystalline acid, $C_9H_6O_3$, from coumarin. **cresolsulfuric a.**, a substance, $CH_3C_6H_4SO_3 \cdot OH$, found in small quantities in the urine. **cresotic a.**, **cresotinic a.**, an acid, $CH_3C_6H_3(OH) \cdot COOH$, occurring in three modified forms, ortho-, meta-, and para-; its sodium salt is antipyretic but is not used in medicine. Called also *oxytoluic a.* **cresylic a.**, cresol. **croconic a.**, chemical name: 4,5-dihydroxy-4-cyclopentene-1,2,3-trione. A yellow crystalline acid, $C_5H_2O_5$, used as a diuretic and to enhance the deodorizing action of chlorophyll. **cromoglycic a.**, chemical name: 5,5'-(2-hydroxy-1,3-propanediyl)bis(oxy)bis[4-oxo-4*H*-ben-

zopyran-2-carboxylic acid]. An acid, $C_{23}H_{16}O_{11}$, the disodium salt of which (*cromolyn sodium*) is used in the prophylaxis of allergic asthma and allergic rhinitis. Called also *cromolyn*. **crotonic a.**, an unsaturated fatty acid, $CH_3 \cdot CH \cdot CH \cdot COOH$, found in croton oil. **cryptophanic a.**, an amorphous acid, $C_{10}H_{18}O_{10}N_2$, said to be found in the urine. **cubebic a.**, a principle, $C_{13}H_{14}O_7$, from cubeb (q.v.); it has diuretic actions but is not used in medicine. **cumic a.**, **cuminic a.**, chemical name: *p*-isopropylbenzoic acid. An acid, $C_6H_4(C_3H_7)COOH$, formed by the oxidation of cumic aldehyde. **cuminuric a.**, the excretion product of cumic acid and aminoacetic acid, $(CH_3)_2 \cdot CH \cdot C_6H_4 \cdot CO \cdot NH \cdot CH_2 \cdot COOH$. **cyanhydric a.**, hydrocyanic a. **cyanic a.**, an acid, $H \cdot CNO$, with vesicant actions; not used in medicine. **cyanuric a.**, a white crystalline compound, formed by heating urea. **cyclamalic a.**, chemical name: cyclohexanesulfamic acid. An acid, $C_6H_{13}NO_3S$, whose calcium and sodium salts were once used widely as non-nutritive sweeteners, but were banned as food additives in 1969 in the United States because of an association with bladder tumors in animals. **cyclohexanesulfamic a.**, **cyclamic a.** **cysteic a.**, $SO_3H \cdot CH_2CH \cdot (NH_2)COOH$, an intermediate product in the metabolism of cysteine. **cytidylic a.**, a pyrimidine nucleotide constituent of ribonucleic acid. **damalic a.**, C_7H_8O , said to occur in urine. **damaluric a.**, $C_7H_{12}O_2$, found in human urine and in that of cows. **decanoic a.**, an unsaturated fatty acid, $C_{10}H_{20}O_2$; 4-decanoic acid (common name *obtusilic a.*) is found in a spice bush, and 9-decanoic acid (common name *caprolic a.*) is found in butter fat. **decoic a.**, capric a. **dehydroascorbic a.**, an acid resulting from the oxidation of ascorbic acid. **dehydrocholic a.**, dehydrocholic a. **dehydrocholic a.** [USP], a white bitter powder, $C_{24}H_{34}O_5$, formed by the oxidation of cholic acid and derived from natural bile acids; used as a cholagogue. **deoxyadenylic a.**, a purine nucleotide constituent of deoxyribonucleic acid. **deoxycholeic a.**, one of the bile acids; see also *choleic a's*. **deoxycholic a.**, one of the bile acids, capable of forming soluble, diffusible complexes with fatty acids. **deoxycytidylic a.**, a pyrimidine nucleotide constituent of deoxyribonucleic acid. **deoxyguanylic a.**, a purine nucleotide constituent of deoxyribonucleic acid. **deoxypentosenucleic a.**, deoxyribonucleic a. **deoxyribonucleic a.**, a nucleic acid originally isolated from fish sperm and thymus gland, but later found in all living cells; on hydrolysis it yields adenine, guanine, cytosine, thymine, deoxyribose, and phosphoric acid. It is the carrier of genetic information for all organisms except the RNA viruses. See also *Watson-Crick helix* (and illustration), under *helix*. Abbreviated DNA. **desoxyribonucleic a.**, **desoxyribose nucleic a.**, deoxyribonucleic a. **dextrorotartaric a.**, ordinary tartaric acid, which turns the plane of polarization to the right. **diacetic a.**, acetoacetic a. **diacetylannic a.**, acetylannic a. **diallylbarbituric a.**, former name for allobarbitol. **dialuric a.**, a crystalline acid, $CO(NH \cdot CO)_2CH \cdot OH$, obtainable from alloxan. **diamino a.**, one containing two amino, or NH_2 , groups. **diaminoacetic a.**, an acid, $CH(NH_2)_2COOH$, formed by heating casein in sealed tubes with concentrated hydrochloric acid. **α,γ -diaminobutyric a.**, a naturally occurring amino acid discovered in 1948. **α,ϵ -diaminocaproic a.**, lysine. **α,ϵ -diaminopimelic a.**, a naturally occurring amino acid discovered in 1950. **α,δ -diaminovaleric a.**, ornithine. **diatrizoic a.** [USP], chemical name: 3,5-bis(acetylamino)-2,4,6-triodobenzoic acid. A white powder, $C_{11}H_9I_3N_2O_4$, used in the preparation of certain radiopaque media (see *diazotriazate meglumine* and *diazotriazate sodium*). **diazobenzenesulfonic a.**, chemical name: *p*-sulfobenzenediazonium hydroxide inner salt. White or slightly red crystals, $C_6H_4N_2O_3S$, prepared by the diazotization of sulfanilic acid and used in Ehrlich's diazo reaction. **dichloroacetic a.**, $CHCl_2 \cdot COOH$, a caustic acid formed from acetic acid by substitution and used as a topical keratolytic, topical astringent, and escharotic. **2,4-dichlorophenoxyacetic a.**, a phytohormone with herbicidal properties. **diethylbarbituric a.**, barbitol. **digallic a.**, an incorrect term for tannic a. **3,6-dihydroxycholanic a.**, hyodeoxycholic a. **2,5-dihydroxyphenylacetic a.**, homogentisic a. **4,8-dihydroxyquinaldic a.**, xanthurenic a. **dihydroxystearic a.**, an acid, $CH_3(CH_2)_7(CHOH)_2(CH_2)_7COOH$, obtained by oxidizing oleic acid and found in castor oil. **diiodosalicylic a.**, chemical name: 3,5-diiodosalicylic acid. A yellowish white crystalline powder, $OH \cdot C_6H_3I_2 \cdot COOH$, used as an iodine source in feeds for cattle, hogs, and poultry. **dimethylarsinic a.**, cacodylic a. **dimethylcolchicinic a.**, an acid, $C_{18}H_{19}O_5N$, formed from colchicine by heating it with hydrochloric acid. **dithiochloral-salicylic a.**, a reddish yellow powder, $S_2C_6H \cdot Cl \cdot OH \cdot COOH$, formerly used as an antiseptic. **djenkolic a.**, an alpha-diamino acid, $CH_2(S \cdot CH_2 \cdot CH(NH_2)COOH)_2$, obtained by hydrolyzing djenkol nuts. **docosapentaenoic a.**, clupanodonic a. **draconic a.**, anisic a. **durylic a.**, a crystalline compound, trimethylbenzoic acid, $(CH_3)_3C_6H_2 \cdot COOH$. **edetic a.** [NF], chemical name: *N,N'*-1,2-ethanedithybis(*N*-(carboxymethyl)glycin). An acid, $C_{10}H_{16}N_2O_8$, occurring as a white, crystalline powder, which is an organic chelating agent and is used as a pharmaceutical aid. A number of its salts are available as chelating agents (see *edetate*). Called also *ethylenediamine-tetraacetic acid* (*EDTA*). **elaidic a.**, an unsaturated fatty acid, $CH_3(CH_2)_7 \cdot \cdot$

CH:CH(CH₂)₇·COOH, isomeric with oleic acid and formed by treating the latter with nitrous acid. **enanthic a.**, **enanthic a.**, a saturated fatty acid, C₇H₁₄O₂, not known definitely to occur naturally, but may be produced by certain oxidations of fats; called also *heptanoic a.* and *heptylic a.* **epicladosporic a.**, a mycotoxin produced by *Cladosporium epiphyllum*. **ergo-
tanic a.**, an acid from ergot that is toxic if injected. **erucic a.**, an unsaturated fatty acid, cis-13-docosenoic acid, CH₃(CH₂)₇-CH:CH(CH₂)₁₁COOH, the cis-isomer of brassidic acid; it exists as a glyceride in oil of rape seed and of mustard. **ethacrynic a.** [USP], chemical name: [2,3-dichloro-4-(2-methylene-1-oxobutyl)-phenoxy]acetic acid. A powerful, rapid-acting diuretic of short duration, C₁₃H₁₂Cl₂O₄, occurring as a white or almost white, crystalline powder, used orally or, in the form of the sodium salt, intravenously. **ethanal a.**, glyoxylic a. **ethanoic a.**, acetic a. **ethylamine sulfonic a.**, taurine (def. 1). **ethylenedi-
amine tetra-acetic a.** (EDTA), edetic a. **ethylene lac-
tic a.**, **ethylidene lactic a.**, see under *lactic a.* **5-ethyl-
5-isomylbarbituric a.**, amobarbital. **ethylsulfonic a.**, an acid, CH₃·CH₂·SO₃·OH, found in the urine after administra-
tion of sulfonmethane. **etidronic a.**, chemical name: (1-hy-
droxyethylidene)diphosphoric acid; a bone calcium regulator, C₂H₅O₇P₂. **etodolic a.**, chemical name: 1,8-diethyl-1,3,4,9-tet-
rahydropyrano[3,4-b]indole-1-acetic acid; an anti-inflammatory, C₁₇H₂₁NO₃. **eugenic a.**, eugenol. **excretolic a.**, **ex-
cretolic a.**, a fatty acid derived from feces. **flagi-
cladosporic a.**, a mycotoxin produced by *Cladosporium epiphyllum*. **fatty a.**, any monobasic aliphatic acid containing only carbon,
hydrogen, and oxygen and made up of an alkyl radical attached to the carboxyl group. The saturated fatty acids have the general
formula C_nH_{2n}O₂. There are also several series of unsaturated
fatty acids having one or more double bonds, and a few instances
of cyclic acids. **fatty a.**, **essential**, an unsaturated fatty acid
that cannot be formed in the body and therefore must be provided
by the diet; the most important are linoleic acid, linolenic acid, and
arachidonic acid. **filicic a.**, a tasteless white amorphous powder,
(CH₃)₂C₆HO(OH)₂, from filix mas (male fern); in veterinary
medicine, it has limited use in the treatment of helminthiasis of
cattle, sheep, and goats. **filixic a.**, a principle from filix mas
(male fern). **flavaspicid a.**, a compound from the root of aspi-
dium. **flufenamic a.**, chemical name: 2-[3-(trifluorometh-
yl)phenyl]amino]benzoic acid; an anti-inflammatory and analge-
sic agent, C₁₄H₁₀F₃NO₂. **fluohydric a.**, hydrofluoric a. **flu-
oroacetic a.**, a metabolic poison from *Chaetelia cymosa*, a tree
of South Africa, that blocks the tricarboxylic acid cycle, causing
convulsions and ventricular fibrillation. **fluorosilicic a.**, fluo-
silicic a. **fluosilicic a.**, an acid, H₂SiF₆, whose salts are fluo-
rosilicates; its sodium salt, Na₂SiF₆, is used as an insecticide.
Fluorosilicates are toxic because they release fluoride ion in
solution, disturbing the calcium balance in the blood. Called also
fluorosilicic or *hydrofluosilicic a.* **folic a.**, chemical name: N-
[p-[(2-amino-4-hydroxy-6-pteridyl)methyl]-amino]benzoyl] glu-
tamic acid. A widely distributed water-soluble vitamin, C₁₉H₁₉-
N₇O₆, existing in a number of natural products in free form or in
various conjugates, which have been designated by various names,
including *pteroylglutamic acid*, *fermentation Lactobacillus casei*
factor, *liver L. casei factor*, *Norit eluate factor*, *factor R*, *Streptococ-
cus lactis R* (or *SLR*) *factor*, *factor U*, *yeast L. casei factor*, *vit-
amin B_c*, *vitamin B_c conjugate*, and *vitamin M*. It is an essential
growth factor for many animals and microorganisms. Folic acid
serves as a coenzyme in the transfer of one-carbon units, and its
deficiency in man inhibits the synthesis of DNA, which first
becomes obvious clinically in hematopoietic cells, resulting in
certain types of macrocytic anemias. Synthetic folic acid is
pteroylglutamic acid, COOH·(CH₂)₂·CH·(COOH)·NH·CO·C₆-
HN₄·(NH₃)·OH. **folinic a.**, chemical name: 5-formyl-5,6,7,8-
tetrahydropteroyl-L-glutamic acid. A derivative of folic acid,
C₂₀H₂₃N₇O₇, necessary for the growth of *Leuconostoc citrovorum*;
the calcium salt (*leucovorin calcium* [USP]) is used as an antidote
for folic acid antagonists when there is need to reverse the toxic
effects of the latter and in the treatment of megaloblastic anemias
due to folic acid deficiency. Called also *citrovorum factor* and
leucovorin. **formic a.**, a colorless pungent liquid, HCOOH,
from nettles and ants and other insects; derivable from oxalic acid
and from glycerin and from the oxidation of formaldehyde, it is a
vesicant, but is not now used in medicine. **formiminoglu-
tamic a.**, an intermediate product in the metabolism of histidine
which accumulates in the urine of humans and rats deficient in
folic acid. An increased urinary excretion, although not com-
pletely specific, may be employed clinically as a test for folic acid
deficiency. Abbreviated *FIGLU*. **fulminic a.**, an unstable
acid, carbyloxime, C·N·OH, isomeric with cyanic acid; it has the
odor of hydrocyanic acid and is equally poisonous. **fumaric a.**,
an unsaturated dibasic acid, HO₂C·CH:CH·CO₂H, the
trans-isomer of maleic acid; it is an intermediate in the tricarbox-
ylic acid (Krebs') cycle, formed from succinic acid and itself
converted to malic acid. An NF preparation is used as an acidifier.
fusidic a., chemical name: 3α,11α,16β-trihydroxy-29-nor-8α-,
9β,13α,14β-dammara-17(20),24-dien-21-oic acid 16-acetate. A fer-
mentation product of *Fusidium coccineum*, C₃₁H₄₈O₆, used as an
antibiotic. **gadelaideic a.**, the *trans*-isomer of gadoleic acid.
gadoleic a., an unsaturated fatty acid, C₂₀H₃₈O₂, from cod liver

oil. **gaidic a.**, a fatty acid crystalline compound, hexadecenoic
acid, C₁₆H₃₀O₂, from hypogeic acid. **galactonic a.**, lactic a. **galacturonic a.**, an acid isomeric with glucuronic acid, being an
oxidized form of galactose, COH·(CHOH)₄COOH; it is the principal
constituent of pectin. **galic a.**, chemical name: 3,4,5-trihy-
droxybenzoic acid. A white crystalline acid, (OH)₃C₆H₂·COOH·
H₂O, obtained by hydrolysis of the tannins from nutgalls or by
hydrolysis of broths from *Penicillium glaucum* or *Aspergillus*
niger; formerly used internally as an astringent. In veterinary
medicine, it is sometimes used in the treatment of diarrhea. Called
also *trihydroxybenzoic a.* **gallotannic a.**, tannic a. **gam-
bogenic a.**, a resin, C₂₈H₂₃O₄, obtainable in large quantities from
cambogia. **gamma-aminobutyric a.** (GABA), an amino
acid occurring in the brain, bacteria, green plants, and yeast. It
functions as a neurotransmitter in the brain, inhibiting neural
excitation. Called also *γ-aminobutyric* and *4-aminobutyric a.*
gentiotannic a., a variety of tannic acid, C₁₄H₁₀O₆, from gen-
tiana; once used as astringent on skin, especially in burns, but now
discarded because of danger of liver damage. **gentisic a.**,
dihydroxybenzoic acid, (OH)₂C₆H₃·COOH, obtained by melting
gentianin with potassium hydroxide. **gigantic a.**, an antibi-
otic substance, C₁₄H₂₂O₆N₂S, isolated from *Aspergillus giganteus*.
glucic a., a colorless soluble acid formed from cane sugar by the
action of potassium hydroxide. **glucoascorbic a.**, an ana-
logue of ascorbic acid, which competitively inhibits the activity of
the latter. **α-glucosheptonic a.**, a heptahydroxy acid, CH₂-
OH(CHOH)₅COOH. **gluconic a.**, one of the isomeric forms of
pentahydroxycaproic acid, CH₂OH(CHOH)₄COOH; it is made by
the gentle oxidation of dextrose, cane sugar, etc. **glucothi-
onic a.**, a sulfuric acid ester of an unknown carbohydrate isolated
from the mammary gland. **glucuronic a.**, a uronic acid
formed by oxidation in animal metabolism. It is a tetrahy-
droxy-aldehyde acid, CHO(CHOH)₄COOH, with the configuration
of glucose and is found in the urine combined with camphor,
chloroform, chloral, and other aromatic bodies in the form of
glucuronides. D-Glucuronic acid is a precursor of L-gulonic acid in
the biosynthesis of ascorbic acid. **glutamic a.**, chemical
name: 2-aminoglutaric acid. A crystalline dibasic amino acid,
COOH·(CH₂)₂·CH(NH₂)·COOH, widely distributed in proteins; it
is thought to be a neurotransmitter, inhibiting neural excitation
in the central nervous system. Called also *aminoglutaric a.*
glutamic a. hydrochloride, a white crystalline powder, C₅-
H₉NO₂HCl, used as a gastric acidifier; formerly used in the
treatment of achlorhydria and hypochlorhydria, and as an antiepi-
leptic. **glutaric a.**, an acid, COOH(CH₂)₃COOH obtained
from cyclopentanone. **glyceric a.**, a dihydroxymonobasic acid
formed by the oxidation of glycerol; it is 2,3-dihydroxypropanoic
acid, CH₂OH·CHOH·COOH. **glycerophosphoric a.**, a
clear syrupy liquid, CH₂OH·CHOH·CH₂·O·PO(OH)₂, used in the
manufacture of certain glycerophosphates. **glycocholic a.**, a
conjugated form of one of the bile acids that yields glycine and
cholic acid on hydrolysis. **glycolic a.**, an acid, CH₂OH·
COOH, formed by electrolytic reduction of oxalic acid or by the
action of sodium hydroxide on monochloroacetic acid and used in
pH control; also produced in the body as an intermediate product
in the conversion of serine to glycine. Called also *hydroxyacetic a.*,
hydroxyethanoic a., and *oxyacetic a.* **glycoluric a.**, a crystal-
line acid, a ureid of glycolic acid, NH₂CO·NH·CH₂·COOH, formed
by heating urea with aminoacetic acid. Called also *hydantoic a.*
and *uraminoacetic a.* **glycosuric a.**, an acid found in the
urine in certain conditions; it causes the urine to turn black on
exposure to the air. **glucuronic a.**, glucuronic a. **glycyrr-
hizic a.**, glycyrrhizin. **glyoxylic a.**, a crystalline acid,
dihydroxyacetic acid, (O·HC·COOH)₂, used in Hopkins-Cole test
for protein; called also *ethanal a.* **gorlic a.**, a dehydrochaul-
moogric acid, C₅H₇(CH₂)₆CH:CH(CH₂)₄·COOH, from *Corpotroche*
brasiliensis and *Oncoba echinata* (gorli seed). **granatotannic a.**,
the tannic acid, C₂₀H₁₆O₁₃, of pomegranate bark, a greenish
yellow, amorphous powder. **guanidinoacetic a.**, a nitroge-

nous compound, H₂N—C(=NH)—N—CH₂·COOH, formed enzy-
matically in human liver, pancreas, and kidney by a transami-
nation reaction between arginine and glycine, and N-methylated
in the liver by Sadenosylmethionine to form creatine. **guani-
dinosuccinic a.**, a metabolite first found in the urine of uremic
patients, which at high levels inhibits platelet aggregation.
guanylic a., a mononucleotide made up of guanine, phosphoric
acid, and a pentose. **gulonic a.**, one of the isomeric forms of
pentahydroxycaproic acid, CH₂OH(CHOH)₄COOH, formed by the
gentle oxidation of gulose or the reduction of D-glucuronic acid;
L-gulonic acid is a precursor of gulonolactone in the biosynthesis
of ascorbic acid. **gymnemic a.**, a yellow to brown, bitter
powder, C₃₂H₅₆O₁₂, from leaves of *Gymnema sylvestre*, a southern
Asiatic shrub; placed in the mouth, it temporarily abolishes the
sense of taste for sweet and bitter, but not for pungent, sour, or
astringent substances; not used in medicine. **gynocardic a.**,
an oily acid, C₁₈H₃₄O₂, from the seeds of *Gynocardia odorata*.
haloid a., an acid which contains no oxygen in the molecule, but
is composed of hydrogen and a halogen element; called also
hydracid and *hydrohalogen a.* **helvellic a.**, a cytotoxic ther-
molabile hemolysin that is an active constituent of the fungus
Helvella infula (*Gyromitra esculenta*). **helvolic a.**, an antibi-

otic acid, $C_{32}H_{42}O_8$, from cultures of *Aspergillus fumigatus* and *A. fumigatus* var. *helvola*; used as an antimicrobial. Called also *fumigacin*. **hemipinic a.**, an acid, $(CH_3O)_2C_6H_2(COOH)$, obtained by oxidizing noscapine. **heptaoidic a.**, a periodic acid, made by dissolving iodine in aqueous hydriodic acid. **heptanoic a.**, enanthic a. **heptylic a.**, enanthic a. **heterocyclic amino a's**, the amino acids proline, hydroxyproline, tryptophan, histidine, and pyrrolutamic acid (or 5-oxoproline), all of which contain a ring which includes a noncarbon atom. **hexanoic a.**, caproic a. **hexonic a.**, any of several isomeric forms of gluconic acid. **hexosediphosphoric a.**, a normal intermediate of the glycolytic pathway that may accumulate in the products of fermentation of sugars by yeasts in the presence of phosphates. **hexuronic a.**, ascorbic a. **hidrolic a.**, **hidrotic a.**, sudoric a. **hippuric a.**, a crystallizable acid, $C_6H_5 \cdot CO \cdot NH \cdot CH_2 \cdot COOH$, from the urine of domestic animals; more rarely found in human urine. Called also *benzoylaminoacetic a.*, *benzoylglycine*, and *urobenzoic a.* **hircic a.**, an acid with a peculiar odor, found in goat's milk. **hirsutic a.**, a group of acid materials, $C_{15}H_{20}O_4$, obtained from *Stereum hirsutum*, which show antibiotic activity. **homogentisic a.**, an intermediate product of the catabolism of tyrosine and phenylalanine, which is ultimately metabolized to acetone; called also *2,5-dihydroxyphenylacetic a.* and *hydroquinone-acetic a.* See also *alkapton bodies*, under *body*. **homophthalic a.**, a crystalline acid, $COOH \cdot C_6H_4 \cdot CH_2 \cdot COOH$, formed by fusing cambogia with potassium hydroxide. **homopiperidinic a.**, an amino acid, $NH_2 \cdot (CH_2)_4 \cdot COOH$, found in decomposing meat. **homovanillic a.**, a major terminal urinary metabolite, converted from dopa, dopamine, and norepinephrine. **humic a.**, polymeric materials from peat, soil, certain waters, etc.; called also *humins*. **hyaluronic a.**, a mucopolysaccharide which is a polymer of acetylglucosamine and glucuronic acid; it is highly viscous in aqueous solution and occurs in the intercellular substance of various tissues, especially the skin, and has also been isolated from the vitreous humor, the umbilical cord, and the fluids of the synovial, pleural, pericardial, and peritoneal spaces. **hydantoic a.**, glycoluric a. **hydnocarpic a.**, chemical name: 11-(2-cyclopenten-1-yl)undecanoic acid. An unsaturated fatty acid, $C_{18}H_{34}O_2$, obtained from chaulmoogra (hydnocarpus) oil. See also *ethyl chaulmoograte*. **hydracrylic a.**, an isomer of lactic acid, $HOCH_2CH_2COOH$, that decomposes to acrylic acid when heated. **hydrazoic a.**, triazoic a. **hydriodic a.**, a gaseous haloid acid, HI; its aqueous solution and its syrup have been used as alternatives, but have no material advantage over the alkali iodides. **hydrobromic a.**, a gaseous haloid acid, HBr; its 10 per cent aqueous solution was once used like the bromides. **hydrocafeic a.**, chemical name: β -(3,4-dihydroxyphenyl) propionic acid. An acid, $(OH)_2 \cdot C_6H_3 \cdot CH_2 \cdot CH_2 \cdot COOH$, formed by treating caffeic acid with sodium amalgam. **hydrochloric a.**, 1. a normal constituent of the gastric juice in man and other mammals. HCl. 2. a colorless, fuming liquid with a pungent odor that ceases to fume on the addition of water, containing 35–38 per cent, by weight, of HCl. It is used medicinally only in the dilute form (*diluted hydrochloric a.* [NF]), which contains 9.5–10.5 gm. of HCl in 100 ml.; used as an acidifying agent. Called also *chlorhydric a.* **hydrochloroplatinic a.**, chloroplatinic a. **hydrocinnamic a.**, chemical name: β -phenylpropionic acid. A white crystalline powder, $C_9H_8 \cdot CH_2 \cdot CH_2 \cdot COOH$, prepared by reduction of cinnamic acid. Called also *phenylpropionic a.* **hydrocumaric a.**, an acid, β -p-hydroxyphenylpropionic acid, $OH \cdot C_6H_4 \cdot (CH_2)_2 \cdot COOH$, sometimes found in the urine and derived from the putrefaction of protein; called also *parahydroxyhydratropic a.* and *phloretic a.* **hydrocyanic a.**, hydrogen cyanide. **hydrofluoric a.**, a gaseous haloid acid, HF, extremely poisonous and corrosive; called also *fluoric a.*, *fluohydric a.*, and *hydrogen fluoride*. **hydrofluosilicic a.**, fluosilicic a. **hydrohalogen a.**, haloid a. **hydroparacumaric a.**, an isomer of hydrocumaric acid, sometimes found in the urine of dogs. **hydroquinone-acetic a.**, homogentisic a. **hydrosulfuric a.**, hydrogen sulfide. **hydrosulfurous a.**, an unstable acid, $H_2S_2O_4$, known only in the form of its organic esters. **hydroxyacetic a.**, glycolic a. **p-hydroxybenzoic a.**, an acid isomeric with salicylic acid and used as an intermediate in dye manufacture and fungicides. **hydroxybutyric a.**, a poisonous acid, $CH_3CHOHCH_2COOH$, sometimes occurring in the urine in diabetes (ketoacidosis) and sometimes in the blood; it frequently occurs in several isomeric forms. Called also *oxybutyric a.* See also *beta-oxybutyric a.* **hydroxy-n-decanoic a.**, a saturated, monohydroxy fatty acid, $CH_3(CH_2)_7(CHOH)COOH$, found in brain phospholipids. **hydroxyethanoic a.**, glycolic a. **hydroxyformbenzoic a.**, a crystalline compound, parahydroxyphenylglycolic acid, $OH \cdot C_6H_4 \cdot CHOH \cdot COOH$, sometimes occurring in the urine in acute yellow atrophy of the liver; called also *oxamygdalic a.*, *oxyformbenzoic a.*, and *oxymandelic a.* **hydroxyglutamic a.**, a non-natural amino acid, $COOH \cdot CH_2 \cdot CHOH \cdot CH(NH_2) \cdot COOH$. **5-hydroxyindoleacetic a.**, a product of serotonin metabolism present in cerebrospinal fluid and in increased amount in the urine in carcinoid. **hydroxy-mandelic a.**, parahydroxyphenylglycolic a. **hydroxynaphthoic a.**, chemical name: 1-naphthol-2-carboxylic acid. An acid, $OH \cdot C_{10}H_6 \cdot COOH$, a naphthalene homologue of salicylic acid;

called also *carbonaphthoic a.* and *oxynaphthoic a.* **hydroxyphenylaminopropionic a.**, tyrosine. **2-hydroxypropionic a.**, lactic a. **hydroxystearic a.**, one of several monohydroxylated stearic acids, $C_{18}H_{36}O_3$, present in wool fat, rose wax, and castor oil. **hydroxytetraacosanic a.**, cerebronc a. **hydrurilic a.**, an acid, $C_8H_7N_3O_6 \cdot 2H_2O$, obtained as the ammonium salt on boiling alloxantin (uroxin) with dilute sulfuric acid. **hydoexocholic a.**, a major bile acid, $C_{24}H_{40}O_4$, of the hog; called also *3,6-dihydroxycholic a.* **hyoglycolic a.**, an acid, $C_{26}H_{45}NO_5$, from the conjugation of glycine with hyocholic acid, found in hog bile. **hyotaurocholic a.**, an acid, $C_{26}H_{45}NSO_6$, from the conjugation of taurine with hyocholic acid, occurring in hog bile. **hypobromous a.**, the acid, HBrO, forming hypobromites, which are used in testing for urea. **hypochlorous a.**, an unstable compound, HClO, a disinfectant and bleaching agent; its salts (hypochlorites) are used as medicinal agents, particularly as surgical solution of chlorinated soda. See *sodium hypochlorite solution (diluted)*, under *solution*. **hypogeic a.**, an unsaturated fatty acid, 2-hexadecenoic acid, $CH_3(CH_2)_7 \cdot CH \cdot CH(CH_2)_5COOH$, found in the oil of the peanut, *Arachis hypogaea*. **hyponitrous a.**, an unstable acid of the composition $HO-N=N-OH$, formed by the action of nitrous acid on hydroxylamine. The pure acid and its salts explode on heating; its organic esters release N_2 at room temperature. **hypophosphoric a.**, an acid, $H_4P_2O_6$, of phosphorus, forming salts called hypophosphates; it is formed on sticks of white phosphorus when they are exposed to air. **hypophosphorous a.**, the acid, H_3PO_2 , forming hypophosphites; it is a toxic, monobasic acid with strong reducing properties, used in 30 to 32 per cent and 50 per cent solutions. **hypoxanthylic a.**, inosinic a. **ichthyolsulfonic a.**, an ichthammol derivative; called also *sulfichthyolic a.* **idonic a.**, an acid, $CH_2OH \cdot (CHOH)_4COOH$, produced by the catalytic reduction of ascorbic acid. **indoleacetic a.**, **5-OH-indoleacetic a.**, a major end-product of tryptophan metabolism, occurring in minute amounts in normal urine and in elevated amounts when carcinoid tumors are present. **indopropionic a.**, a decomposition product of tryptophan. **indoxyllic a.**, an acid, $C_8H_7NO_3$, formed by fusing its ethyl ester with sodium hydroxide. **indoxylsulfonic a.**, one of the ethereal sulfates found in the urine. **infectious nucleic a.**, viral nucleic acid capable of infecting a cell and inducing the production of viruses. **inorganic a.**, one containing no carbon atoms. **inosinic a.**, a mononucleotide made up of hypoxanthine, ribose, and phosphoric acid; it is a precursor of purine nucleotides (AMP and GMP), components of nucleic acids, and is also found in muscle tissue. Called also *hypoxanthylic a.* and *inosine monophosphate*. **inositol hexaphosphoric a.**, phytic a. **iobenzamic a.**, chemical name: *N*-(3-amino-2,4,6-triiodobenzoyl)-*N*-phenyl- β -alanine; a diagnostic radiopaque medium (cholecystography), $C_{16}H_{13}I_3N_2O_3$. **iocarmic a.**, chemical name: 3,3'-[(1,6-dioxo-1,6-hexanedyl)diimino]bis[2,4,6-triiodo-5-[(methylamino)carbonyl]benzoic acid; a radiopaque medium, $C_{24}H_{20}N_4O_8$. See *iocarmate meglumine*. **iocetamic a.** [USP], chemical name: 3-[acetyl-(3-amino-2,4,6-triiodophenyl)amino]-2-methylpropanoic acid; a radiopaque medium, $C_{12}H_{13}I_3N_2O_3$. **iodic a.**, a monobasic acid, HIO_3 , formed by the oxidation of iodine with nitric acid or chlorates. The sodium salt occurs in Chile saltpeter, and is the chief source of iodine. It is a strong acid and a strong oxidizing agent. **iopidamic a.**, iopidamide. **iodoacetic a.**, $CH_2 \cdot ICOOH$, whose sodium salt is used in physiological study of muscle contraction. **iodoaliphonic a.**, chemical name: 4-hydroxy-3,5-diiodo- α -phenylbenzenepropanoic acid; a radiopaque medium used in cholecystography, $C_{15}H_{12}I_2O_3$. **iodogorgoric a.**, 3,5-diiodotyrosine. **iodopanoic a.**, iopanoic a. **p-iodophenylarsenic a.**, a colorless crystalline compound, $C_6H_4I \cdot AsO(OH)_2$. **iodosalicylic a.**, an antipyretic, analgesic, and antiseptic compound, $OH \cdot C_6H_3I \cdot COOH$, not now used in medicine. **iodosobenzoic a.**, a compound, $C_6H_4(IO)COOH$, formerly used as an antiseptic. **iodoxamic a.**, chemical name: 3,3'-[(1,16-dioxo-4,7,10,13-tetraoxohexadecane-1,16-diyl)diimino]bis[2,4,6-triiodobenzoic acid]; a radiopaque medium, $C_{26}H_{26}I_6N_2O_{10}$, used in cholecystography. **iodoxybenzoic a.**, a compound, $C_6H_4(IO_2)COOH$; the salts of ortho-iodoxybenzoic acid, once used in arthritis. **ioglicic a.**, chemical name: 3-(acetyl-amino)-2,4,6-triiodo-5-[[[2-(methylamino)-2-oxoethyl]amino]carbonyl]benzoic acid; a radiopaque medium, $C_{15}H_{13}I_3N_3O_5$. **ioglycamic a.**, chemical name: 3,3'-[oxobis(1-oxo-2,1-ethanedyl)]bis[2,4,6-triiodobenzoic acid]. An acid, $C_{18}H_{10}I_6N_2O_7$, the meglumine and sodium salts of which are used as diagnostic radiopaque media in cholecystography. **iopanoic a.** [USP], chemical name: 3-amino- α -ethyl-2,4,6-triiodobenzenepropanoic acid. A tasteless cream-colored powder, $C_{11}H_{12}I_3NO_2$, with a characteristic odor; used as a radiopaque medium in cholecystography. **iophe-noxic a.**, chemical name: α -ethyl-3-hydroxy-2,4,6-triiodobenzenepropanoic acid. A compound, $C_{11}H_{11}I_3O_3$, used as a radiopaque medium in cholecystography. Called also *triiodoethionic a.* **iopronic a.**, chemical name: $(\pm)$ -2-[2-[3-(acetyl-amino)-2,4,6-triiodophenoxy]ethoxy]methyl]butanoic acid; a radiopaque medium for use in cholecystography, $C_{18}H_{18}I_3NO_5$. **iوسفamic a.**, chemical name: 3,3'-[(1,10-dioxo-1,10-decanediyl)diimino]bis[2,4,6-triiodo-5-[(methylamino)carbonyl]benzoic acid; a radiopaque

medium, $C_{28}H_{48}I_2N_4O_8$. **ioseric a.**, chemical name: 3-[[[1-(hydroxymethyl)-2-(methylamino)-2-oxoethyl]amino]carbonyl]-2,4,6-triiodo-5-[(methoxyacetyl) amino]benzoic acid; a radiopaque medium, $C_{13}H_{15}I_3N_3O_7$. **iosumetic a.**, chemical name: 4-[ethyl-2,4,6-triiodo-3-(methylamino)-phenyl]amino-4-oxobutanoic acid; a radiopaque medium, $C_{13}H_{15}I_3N_3O_8$. **iotetric a.**, chemical name: benzoic acid, 3,3'-[(1,4-dioxo-3,6,9,12-tetraoxatetradecane-1,14-diyl)diimino]bis[2,4,6-triiodobenzoic acid]; a radiopaque medium, $C_{24}H_{22}I_6N_2O_{10}$. **iothalamic a.** [USP], chemical name: 3-(acetylamino)-2,4,6-triiodo-5-[(methylamino)carbonyl]-benzoic acid. A white powder, $C_{11}H_9I_3N_2O_4$, used in the preparation of certain radiopaque media (see *iodothalamate meglumine* and *iodothalamate sodium*). **iotroxic a.**, chemical name: 3,3'-[oxybis[2,1-ethanediyloxy-(1-oxo-2,1-ethanediylo)imino]]bis[2,4,6-triiodobenzoic acid]; a radiopaque medium, $C_{22}H_{18}I_6N_2O_9$. **iridic a.**, an acid, $C_{10}H_{12}O_6$, from orris. **isanic a.**, a crystalline acid, $C_{14}H_{20}O_2$, from isano oil, a violent purgative; it is not now used in medicine. **isethionic a.**, a thick liquid, hydroxyethylsulfonic acid, $CH_2(OH) \cdot CH_2 \cdot SO_2 \cdot OH$, isomeric with ethylsulfuric acid; formed by the action of nitrous acid on taurine. **iso-amylethylbarbituric a.**, amobarbital. **isobilianic a.**, an acid, $C_{24}H_{34}O_8$, derived along with bilianic acid by the oxidation of dehydrocholic acid. **isobutylallylbarbituric a.**, former name for butalbital. **isobutylaminoacetic a.**, leucine. **isobutyric a.**, an acid, $(CH_3)_2CH \cdot COOH$, a product of putrefaction of protein, found in the urine. **isocitric a.**, an intermediate in the tricarboxylic acid cycle, formed from oxaloacetic acid and itself converted to ketoglutaric acid. **isoerucic a.**, brassidic a. **isolysergic a.**, $C_{15}H_{18}N_2O_2$, one of the main cleavage products of the alkaline hydrolysis of the alkaloids characteristic of ergot, and the parent compound of the ergotinine group of alkaloids. **isopentoic a.**, isovalerianic a. **isopropylacetic a.**, isovalerianic a. **isopropylaminoacetic a.**, valine. **isosaccharic a.**, an acid, $COOH \cdot CH(O) \cdot (CHOH)_2 \cdot CH \cdot COOH$, resulting from the oxidation of glucosamine with nitric acid. **isosulfocyanic a.**, **isothiocyancic a.**, an acid, HNCS, whose salts are isosulfocyanates or isothiocyancates. **isouric a.**, an acid, $NC \cdot NH \cdot CH \cdot (CO \cdot NH)_2CO$, formed by the combination of cyanamide and alloxantin and which yields uric acid when boiled with hydrochloric acid. **isovalerianic a.**, **isovaleric a.**, an acid, $(CH_3)_2CHCH_2COOH$, of unpleasant odor, found in cheese, in the sweat of the feet, in the urine in smallpox, in typhus, and in acute yellow atrophy of the liver. Called also *isopentoic a.* and *isopropylacetic a.* **jervic a.**, an acid, $C_{14}H_{10}O_{12} \cdot 2H_2O$, from *Veratrum album*. **juglandic a.**, an acid from the bark of *Juglans cinerea*; one of the constituents of juglone. Called also *nucin*. **kermisic a.**, a red dye similar to carminic acid, from kermes insects. **keto a.**, a chemical compound containing the group CO and COOH. **ketocholanic a.**, an oxidized form of cholanic acid. **α -ketoglutaric a.**, 2-oxopentanedioic acid, an intermediate in the tricarboxylic acid (Krebs') cycle, formed by oxidation of isocitric acid and itself oxidized to form succinyl-CoA; it is also formed in transamination involving the α -amino group of amino acids. **ketostearic a.**, an oxidized form of stearic acid, $CH_3(CH_2)_{11}CO(CH_2)_4COOH$, found in mushrooms; called also *lactaric a.* **kinic a.**, quinic acid. **kinotannic a.**, the tannic acid of kino. **kojic a.**, a pyrone, formed from sugars by certain molds and aerobic bacteria; it has a toxic action on animals. **krameric a.**, the tannic acid derived from *Krameria*; called also *ratanhia-tannic a.* **kynurenin a.**, a crystalline acid, $C_8H_5N(OH)COOH$ (4-hydroxyquinolonic acid), a metabolite of tryptophan found in microorganisms and in the urine of normal mammals. **lactaric a.**, ketostearic a. **lactic a.**, 1. a monobasic acid, hydroxypropionic acid, $C_3H_5O_3$, α -hydroxypropionic acid known in three stereoisomeric forms: (a) a dextrorotatory form, L-lactic acid (paralactic acid) is produced by anaerobic glycolysis in muscle during heavy muscular exertion, and can be converted into glucose by the liver; called also *sarcocollactic acid* because it occurs in flesh; it can be obtained conveniently from beef extract; (b) a levorotatory form, D-lactic acid, is produced by the fermentation of dextrose by *Micrococcus acidilactici*; (c) DL-lactic acid, the inactive, ethyldene, racemic, or fermentation lactic acid, the ordinary kind found in sour milk, in the stomach, and in certain fermented foods, such as sauerkraut and in silage. Beta-hydroxypropionic acid, $CHOH \cdot CH_2 \cdot COOH$, called also *ethylene lactic acid*, is not found in the body. 2. [USP] a colorless or yellowish syrupy liquid consisting of a mixture of lactic acid and lactic acid lactate, obtained by lactic fermentation of sugars or produced synthetically; use in the preparation of sodium lactate (def. 2). **lactonic a.**, a crystallizable monobasic acid, $CH_2OH \cdot (CHOH)_4 \cdot COOH$, produced by the oxidation of milk sugar, gum arabic, or galactose. **lanoceric a.**, a saturated dihydroxy fatty acid present in wool fat, $CH_3(CH_2)_{26}(CHOH)_2COOH$. **lanopalmic a.**, a saturated monohydroxy fatty acid present in wool fat, $CH_3(CH_2)_{13}(CHOH)COOH$. **laricic a.**, agaricic a. **laricinolic a.**, an acid resin, $C_{20}H_{30}O_2$, found in Venice turpentine. **lauric a.**, **laurostearic a.**, a saturated fatty acid, dodecanoic acid, $C_{12}H_{24}O_2$, from laurel seed oil, coconut oil, and milk fat. **leuconic a.**, a crystalline acid, pentaketocyclopentane, obtained by oxidizing croconic acid. **levo-tartaric a.**, a form of tartaric acid which turns the plane of polarized light to the left. **levulinic a.**, an acid $CH_3COCH_2CH_2COOH$, formed by action of

heat and acid on carbohydrates; it occurs in the form of hygroscopic scales. Called also *acetylpropionic a.* and *beta-acetylpropionic a.* **lignoceric a.**, a saturated fatty acid, $CH_3(CH_2)_{22}COOH$, obtained from kerosin and sphingomyelin by hydrolysis. **linoleic a.**, a doubly unsaturated essential fatty acid, $C_{18}H_{32}O_2$, the most abundant such acid in various vegetable oils. **linoleic a.**, a triply unsaturated essential fatty acid, $C_{18}H_{30}O_2$, from linseed and other vegetable oils. **linolic a.**, linoleic a. **lipic a.**, 6,8-dithio-octanoic acid; a bacterial growth factor present in the water-soluble fraction of liver and yeast. It is necessary for the oxidative decarboxylation of pyruvic acid by *Streptococcus fecalis* and for the growth of *Tetrahymena gelii*, and replaces acetate for the growth of *Lactobacillus casei*. It has been variously known as *acetate replacing factor*, *proton*, *lipo*, and *pyruvate oxidation factor*. **lithic a.**, uric a. **lithocholic a.**, an acid, 3-d-hydroxycholic acid, from ox, human, and rabbit bile. **lutecic a.**, a highly mucilaginous polysaccharide acid produced by the growth of *Penicillium luteum* on liquid media that contain sugar; it seems to be a malonyl ester of luteose, and on acid hydrolysis yields glucose. **lysergic a.**, a constituent of the ergot alkaloids, $C_8H_4 \cdot NH \cdot C_6H_2N(CH_3)(CH \cdot CH \cdot CH_3) \cdot COOH$, obtained by hydrolysis. **lysergic a.**, **diethylamide**, lysergide. **lysauric a.**, a crystalline dibenzoyl lysine, $C_6H_5 \cdot CO \cdot NH(CH_2)_4 \cdot CH(COOH) \cdot NH \cdot CO \cdot C_6H_5$, obtained from lysine. **lyxoncic a.**, one of the isomeric forms of tetrahydroxy valeric acid, $CH_2OH \cdot (CHOH)_3COOH$, formed by the gentle oxidation of lyxose. **maleic a.**, an unsaturated dibasic acid, $(CH \cdot COOH)_2$; fumaric acid is the trans form of its cis configuration. **malic a.**, hydroxysuccinic acid, $COOH \cdot CH_2CH(OH) \cdot COOH$, an intermediate in the tricarboxylic acid (Krebs') cycle, formed from fumaric acid and itself oxidized to form oxaloacetic acid; found in unripe and sour apples and in many other fruits. It has been prescribed for scurvy, and its iron salt, ferric malate, was once employed in medicine. **malonic a.**, a crystalline dibasic acid, $COOH \cdot CH_2COOH$, formed by oxidizing malic acid with chromium trioxide and used in the manufacture of barbiturates. **mandelic a.**, chemical name: α -hydroxybenzeneacetic acid. A crystalline acid, $C_8H_8O_3$, with active bacteriostatic properties, used in urinary tract infections, usually in the form of one of its salts. Called also *amygdalic a.* and *phenylglycolic a.* **manganic a.**, a green acid, H_2MnO_4 , formed by fusing manganese dioxide with potassium or sodium hydroxide (in air) and then acidifying; it is readily oxidized to deep red permanganic acid, $HMnO_4$. **mannitic a.**, a compound, $CH_2OH(CHOH)_4 \cdot COOH$, derived from mannitol by the action of platinum black. **mannonic a.**, a compound, $CH_2OH(CHOH)_4 \cdot COOH$, formed by oxidizing mannose. **mannosaccharic a.**, a dicarboxylic acid, $COOH(CHOH)_4COOH$. **margaric a.**, 1. an artificial fatty acid, $CH_3(CH_2)_{15} \cdot COOH$. 2. the incorrect name of a mixture of stearic and palmitic acids. **meclonamic a.**, chemical name: 2-[(2,6-dichloro-3-methylphenyl)amino]benzoic acid; an anti-inflammatory, $C_{14}H_{11}Cl_2NO_2$. **meconic a.**, chemical name: 3-hydroxy-4-oxo-4H-pyran-2,6-dicarboxylic acid. A white crystalline acid, $C_7H_4O_7$, derived from opium. **mefenamic a.**, chemical name: 2-[(2,3-dimethylphenyl)amino]benzoic acid. A white to off-white, crystalline powder, $C_{15}H_{15}NO_2$, having analgesic, anti-inflammatory, and antipyretic properties; used orally chiefly in the relief of mild to moderate pain. **melassic a.**, a dark colored insoluble acid formed from cane sugar by the action of potassium hydroxide. **melilotic a.**, phenolpropionic acid, $OH \cdot C_6H_4(CH_2)_2 \cdot COOH$, derived from coumarin. **melissic a.**, a crystalline fatty acid, $CH_3(CH_2)_{29}COOH$, from beeswax. **mellitic a.**, benzenehexacarboxylic acid, $C_6(COOH)_6$, prepared by oxidation of carbonaceous material. **mercaptopuric a.**, one of a series of acids formed in the body on the introduction of a halogen derivative of benzol; they are formed by combination with cysteine. See also *bromophenylmercaptopuric a.* **mesitylenic a.**, $C_6H_3(CH_3)_3COOH$, an oxidized form of mesitylene. **mesityluric a.**, the form in which mesitylene is excreted in the urine combined with acetoacetic acid, $C_6H_3(CH_3)_3CO \cdot NH \cdot CH_2 \cdot COOH$. **meso-tartaric a.**, an optically inactive form of tartaric acid by internal compensation, $COOH(CHOH)_2COOH$. **mesoxalic a.**, $(OH)_2C(COOH)_2$, an oxidation product of glycerin. **metaphosphoric a.**, a glassy solid substance, HPO_3 , soluble in water; used as a reagent for chemical analysis and as a test for albumin in the urine. Called also *glacial phosphoric a.* **metarsenic a.**, the acid, $HASO_3$, which forms metarsenates; a dehydrated form of arsenic acid, H_3AsO_4 . **metasaccharic a.**, a dibasic tetrahydroxy acid formed by the oxidation of mannitol; it is $COOH(CHOH)_4COOH$, and in the free state passes into a double lactone. **metastannic a's.**, two acids from the oxidation of tin: the alpha-acid is $H_2SnO_4[Sn(OH)_4]$; the beta-acid is $H_2SnO_3[Sn(OH)_3]$. **metavanadic a.**, vanadic a. **methioncic a.**, an acid, $CH_3(SO_2 \cdot OH)_2$, used in the preparation of ether. **3-methoxy-4-hydroxymandelic a.**, vanillylmandelic a. **methylarsinic a.**, a white crystalline compound, $CH_3 \cdot AsO(OH)_2$, an organic derivative of arsenic. **methylguanidinacetic a.**, creatine. **methylhydantonic a.**, an acid, glycoluric acid, $NH_2CO \cdot N(CH_3) \cdot CH_2 \cdot COOH$, obtained by boiling creatine with barium hydroxide. **methylmaleic a.**, citraconic acid. **methylmalonic a.**, a structural isomer of succinic acid. **methylprotocatechuic a.**, vanillic a. **methylsuccinic a.**, pyrotartaric

a. **N⁵-methyltetrahydrofolic a.**, a derivative of folic acid which seems to be the most important type of folic acid found in human blood serum. **mevalonic a.**, a dihydroxy acid; see *mevalonate*. **molybdenic a.**, **molybdic a.**, the acid, H_2MoO_4 ; used in homeopathic medicine. **monamino a.**, an organic acid which contains an NH_2 group. **monoaminodicarboxylic a.**, an acid containing one amino group and two carboxyl groups in the molecule, e.g., glutamic acid. **monoaminomonocarboxylic a.**, an acid having one amino group and one carboxyl group in the molecule, e.g., alanine. **monobasic a.**, an acid having but one replaceable hydrogen atom and therefore yielding only one series of salts, e.g., HCl . **monochloroacetic a.**, $\text{CH}_2\text{Cl}\cdot\text{COOH}$; see *chloroacetic a.* **moritannic a.**, the tannic acid, $\text{C}_{13}\text{H}_{10}\text{O}_6$, of fustic, the wood of *Morus tinctoria*, $\text{C}_{13}\text{H}_{10}\text{O}_6$. **morphoxylacetic a.**, a narcotic, $\text{C}_{17}\text{H}_{16}\text{NO}_3\cdot\text{CH}_2\cdot\text{COOH}$, not used in medicine. **mucic a.**, a tetrahydroxy dibasic acid, $\text{COOH}(\text{CHOH})_4\text{COOH}$, produced by oxidizing galactose or any carbohydrate containing galactose, such as milk sugar, agar, galactitol, or the galactans. **mucoitin-sulfuric a.**, a mucopolysaccharide occurring in gastric mucus and in the cornea of the eye; it is isomeric with chondroitin sulfuric acid but contains glucosamine in place of galactosamine. **muconic a.**, a dibasic acid, $\text{COOH}\cdot(\text{CH})_4\cdot\text{COOH}$, found in the urine of dogs that have been given benzene. **muramic a.**, a condensation product of glucosamine and lactic acid; it is found in the cell wall of certain bacteria. **muric a.**, hydrochloric a. **muscle adenosine phosphoric a.**, a substance obtained from striated muscle, adenosine-5'-monophosphate. **mycolic a's.**, acid-fast hydroxy acids of high molecular weight, which are specific components of mycobacteria. **mycophenolic a.**, a crystalline antibiotic substance, $\text{C}_{17}\text{H}_{20}\text{O}_6$, from cultures of *Penicillium brevicompactum* and related species, which is both bacteriostatic and fungistatic. **myristic a.**, a widely occurring saturated fatty acid, $\text{CH}_3\cdot(\text{CH}_2)_{12}\cdot\text{COOH}$, found in spermaceti, nutmeg butter, and other fats under the form of myristin. **myronic a.**, a glycoside, $\text{C}_{10}\text{H}_{19}\text{NS}_2\text{O}_{10}$, found in black mustard; this acid, by the myrosin present, is changed into allyl mustard oil, glucose, and potassium sulfate on the addition of water. **nalidixic a.** [USP]. chemical name: 1-ethyl-1,4-dihydro-7-methyl-4-oxo-1,8-naphthyridine-3-carboxylic acid. A synthetic antibacterial agent, $\text{C}_{12}\text{H}_{12}\text{N}_2\text{O}_3$, occurring as a white to slightly yellow crystalline powder; used orally in the treatment of urinary infections caused by gram-negative organisms, especially those caused by *Proteus* species. **naphtholcarboxylic a.**, a white crystalline substance, $\text{C}_{10}\text{H}_8(\text{CHCO}_2\text{H})_2$, not now used in medicine. **naphtholdisulfonic a.**, any of several isomeric substances derived from naphthol and used in the preparation of azo dyes. **naphtholsulfonic a.**, any of the isomeric sulfonic acids, $\text{C}_{10}\text{H}_7(\text{OH})\text{SO}_3\text{H}$, derived from naphthol. **naphthylmercapturic a.**, a compound found in the urine of rabbits to which naphthalene has been administered. **nastinic a.**, a fatty acid of high molecular weight found in nastin. **nervonic a.**, an unsaturated fatty acid, $\text{CH}_3(\text{CH}_2)_7\cdot\text{CH}(\text{CH}_2)_{13}\cdot\text{COOH}$, occurring in sphingomyelin. **neuraminic a.**, a widely distributed 9-carbon aminosugar acid, one of the sialic acids. **nicotinic a.**, nicacin. **nicotinuric a.**, a urinary metabolite of nicotine, $(\text{C}_6\text{H}_4\cdot\text{N})\text{CONHCH}_2\text{COOH}$. **nitric a.**, a colorless liquid, HNO_3 , with a characteristic choking odor; it is extremely caustic and escharotic, decomposing most organic substances, and combining with bases to form nitrates. Nitric acid is occasionally used as a cauterizing agent for warts, etc. *Fuming nitric acid* is a yellow to brownish red corrosive liquid giving off a suffocating vapor and containing some dissolved nitrogen peroxide; called also *nitrosnitric a.* **nitroferrocyanic a.**, a complex cyano-acid, $\text{H}_2[\text{Fe}(\text{NO})\text{Cy}]_2$, formed by the action of nitric acid on potassium ferrocyanide; it is used as a salt in several tests. Called also *nitroprussic a.* **nitrohydrochloric a.**, a yellowish mixture of concentrated nitric acid and hydrochloric acid; it gives off chlorine continuously, and dissolves gold and platinum. Called also *nitromuriatic a.* and *aqua regia*. **nitromuriatic a.**, nitrohydrochloric a. **nitroprussic a.**, nitroferrocyanic a. **nitrosonitric a.**, fuming nitric acid. **nitrous a.**, an unstable weak acid, HNO_2 , with which free amino groups react to form hydroxyl groups and liberate gaseous nitrogen; it is used in the determination of urea, the liberated N_2 being collected and measured. **nitroxanthic a.**, trinitrophenol. **noncarbonic a's.**, all acids other than carbonic acid; called also *fixed (nonvolatile) acids*. **nonesterified fatty a.**, a fatty acid fraction of blood plasma; usually abbreviated NEFA. **normal fatty a.**, a fatty acid that has a straight carbon chain, or at least one that is not branched. **norpinic a.**, a dicarboxylic acid, $\text{C}_6\text{H}_{12}\text{O}_4$, that results from the oxidation of pinene. **nucleic a's.**, high-molecular-weight polymeric substances composed of nucleotides, which constitute the acidic groups of the nucleoproteins and contain phosphoric acid, sugars, and purine and pyrimidine bases. Two types, ribonucleic a. and deoxyribonucleic a., are distinguished on the basis of the contained sugar and a difference in the pyrimidine bases. **nucleinic a.**, nucleic a. **nucleothymimic a.**, a patented yellowish white powder prepared from the pancreas of the calf or from nucleic acid; no longer used in medicine. **obtusilic a.**, 4-decenoic a. **octanoic a.**, caprylic a. **oenanthylic a.**, absolute forms of heptanoic acid. **olefinic a.**, an

unsaturated fatty acid having the general formula $\text{C}_n\text{H}_{2n-1}\text{COOH}$. **oleic a.** [NF], chemical name: (Z)-9-octadenoic acid. A colorless to pale yellow, unsaturated oily liquid that darkens on exposure to air, $\text{CH}_3(\text{CH}_2)_7\cdot\text{CH}(\text{CH}_2)_7\cdot\text{COOH}$, obtained from tallow and other fats; used as an emulsion adjunct in pharmaceutical preparations. **opianic a.**, a compound, $\text{CHO}\cdot\text{C}_6\text{H}_5(\text{CH}_3\text{O})_2\cdot\text{COOH}$, obtained from noscapine. **organic a.**, any acid the radical of which is a carbon derivative; a compound in which a hydrocarbon radical is united to COOH (a carboxylic acid) or to SO_3H (a sulfonic acid). **ornithuric a.**, an acid, $\text{C}_8\text{H}_5\cdot\text{CO}\cdot\text{NH}(\text{CH}_2)_3\cdot\text{CH}\cdot\text{NH}\cdot\text{CO}\cdot\text{C}_6\text{H}_5$, or dibenzoylornithin, occurring in the urine of birds fed on benzoic acid. **orotic a.**, chemical name: 1,2,3,6-tetrahydro-2,6-dioxo-4-pyrimidinecarboxylic acid. An intermediate in the biosynthesis of pyrimidine nucleotides, $\text{C}_4\text{H}_4\text{N}_2\text{O}_4$. It is also found in milk. **orsellinic a.**, a crystalline acid, $\text{C}_8\text{H}_5\text{O}_4$, from certain lichens. **orthoarsenic a.**, arsenic a. **orthoboric a.**, boric a. **orthohydroxybenzoic a.**, salicylic a. **ortho-oxylbenzoic a.**, salicylic a. **orthophosphoric a.**, phosphoric a. **oshaic a.**, a principle resembling angelic acid and found in osha. **osmic a.**, 1. a dibasic acid, H_2OsO_4 , forming salts called osmates. 2. osmium tetroxide. **oxalic a.**, a white crystalline dibasic acid, $(\text{COOH})_2 + 2\text{H}_2\text{O}$, occurring in certain foods and formed in the body by enzymatic cleavage of glyoxalate. Its calcium salt (calcium oxalate), when formed in high concentrations in the urine, may lead to formation of urinary calculi. It is used as a disinfectant for the skin and as a chemical reagent. **oxaloacetic a.**, oxobutanedioic acid, $\text{HOOC}\cdot\text{COCH}_2\cdot\text{COOH}$, an intermediate in the tricarboxylic acid (Krebs') cycle, formed by oxidation of malic acid and itself acetylated to form citric acid; it is also formed in transamination reactions of aspartic acid. **oxaluric a.**, an acid, $\text{NH}_2\cdot\text{CO}\cdot\text{NH}\cdot\text{CO}\cdot\text{COOH}$, found in healthy urine. **oxamic a.**, the monoamide of oxalic acid; a monobasic crystalline acid, $\text{NH}_2\cdot\text{CO}\cdot\text{COOH}$. **oxolinic a.**, chemical name: 5-ethyl-5,8-dihydro-8-oxo-1,3-dioxolo[4,5-g]quinoline-7-carboxylic acid. A synthetic antibacterial, $\text{C}_{13}\text{H}_{11}\text{NO}_5$, used orally in urinary tract infections caused by susceptible gram-negative organisms. **oxyacetic a.**, glycolic a. **oxamygdalic a.**, hydroxyformbenzoic a. **oxybenzoic a.**, salicylic a. **oxybutyric a.**, hydroxybutyric a. **oxyformbenzoic a.**, hydroxyformbenzoic a. **oxygen a.**, an acid that contains oxygen; an oxyacid. **oxymandelic a.**, hydroxyformbenzoic a. **oxynaphthoic a.**, any of the isomeric hydroxynaphthoic acids. **oxynervonic a.**, an unsaturated hydroxy lignoceric acid, $\text{C}_{24}\text{H}_{46}\text{O}_3$; it is one of the components of the cerebroside, oxynervone. **oxyphenylacetic a.**, parahydroxyphenylacetic a. **oxypropionic a.**, see under *lactic a.* **oxyproteic a.**, a nitrogenous substance of unknown constitution, perhaps a peptide, sometimes found in urine. **oxyproteinic a.**, a compound occurring in normal urine. **oxytoluic a.**, cresotic a. **palmitic a.**, a saturated fatty acid, $\text{CH}_3(\text{CH}_2)_{14}\text{COOH}$, found in most of the common fats and oils. **palmitoleic a.**, an unsaturated fatty acid, hexadecenoic acid, $\text{CH}_3(\text{CH}_2)_5\cdot\text{CH}(\text{CH}_2)_7\cdot\text{COOH}$, found in marine animal, reptilian, avian, amphibian, and, to a lesser extent, mammalian fats; called also *physetoleic a.* **pangamic a.**, a substance originally defined as an ester of gluconic acid and dimethylglycine hydrochloride, said to be isolated from apricot kernels, but the term has been applied to several different substances and mixtures. **pantothenic a.**, an amide, $\text{C}_9\text{H}_{17}\text{NO}_5$, of α,γ -dihydroxy- β,β -dimethyl butyric acid (pantoic acid) and β -alanine, the antidermatitis factor of chicks essential for the normal development of rats and chicks. It is widely distributed in foods and tissues, and stimulates the growth of yeast. It is a vitamin of the B complex and occurs in bound form in coenzyme A. **para-aminobenzoic a.**, aminobenzoic a. **para-aminohippuric a.**, aminohippuric a. **para-aminosalicylic a.**, aminosalicylic a. Often abbreviated PAS or PASA. **parabanic a.**, a solid acid, $\text{CONH}\cdot\text{CO}_2$, derivable from uric acid by oxidation. **parahydroxyhydratropic a.**, hydrocumaric a. **parahydroxyphenylacetic a.**, an acid, $\text{OH}\cdot\text{C}_6\text{H}_4\cdot\text{CH}_2\cdot\text{COOH}$, derived from tyrosine by putrefactive changes in the intestines and sometimes found in the urine. **parahydroxyphenylglycolic a.**, an acid, $\text{OH}\cdot\text{C}_6\text{H}_4\cdot\text{CHOH}\cdot\text{COOH}$, derived from tyrosine by deamination and oxidation; it is found in the urine at times especially in cases of acute yellow atrophy of the liver. Called also *hydroxymandelic a.* **parahydroxyphenylpropionic a.**, an acid, $\text{OH}\cdot\text{C}_6\text{H}_4(\text{CH}_2)_2\text{COOH}$, sometimes found in the urine. **paralactic a.**, see under *lactic a.* **pararosanolic a.**, aurin. **paratartaric a.**, see under *tartaric a.* **pectic a.**, a complex polysaccharide present in pectin, composed of four mols of galacturonic acid, one of arabinose, one of galactose, two of acetic acid, and two of methyl alcohol. **pelargonic a.**, a normal fatty acid, nonoic acid, $\text{CH}_3(\text{CH}_2)_8\cdot\text{COOH}$, found in oil of the garden geranium (pelargonium) and other plants. **penicillic a.**, chemical name: 3-methoxy-5-methyl-4-oxo-2,5-hexadecenoic acid. An antibiotic substance, $\text{C}_{26}\text{H}_{40}\text{O}_4$, isolated from cultures of various species of *Penicillium* and *Aspergillus*. **pentacosanic a.**, an acid, $\text{C}_{25}\text{H}_{50}\text{O}_2$, from phrenosin. **pentanoic a.**, normal valeric a. **pentetic a.**, chemical name: *N,N*-bis[2-[bis(carboxymethyl)amino]ethyl]glycine; a chelating agent, $\text{C}_{14}\text{H}_{23}\text{N}_5\text{O}_{10}$. See also *pentetate calcium trisodium*. **pentosenucleic a.**, ribonucleic a. **peptohydrochloric a.**, an

the acid supposed to be formed by the combination of pepsin and dilute hydrochloric acid. **peracetic a.**, an acid, $C_2H_4O_3$, which explodes on heating to $110^\circ C$; called also **peroxyacetic a.** **perchloric a.**, a volatile colorless fuming liquid, $HClO_4$, strongly resembling sulfuric acid in its properties. The pure acid alone is quite stable, but in the presence of organic matter or anything reducible, powerful explosions can result. **periodic a.**, a series of acids formed by the union of different amounts of water with periodic anhydride (I_2O_7) varying from HIO_4 to H_7IO_{17} . Sodium periodate occurs in small amounts in Chile salt-peter. **permanganic a.**, a monobasic acid, $HMnO_4$, with a persistent deep red color. Its salts are permanganates: see *potassium permanganate*. **perosmic a.**, a yellow crystalline acid anhydride, OsO_4 , with suffocating odor, used as a stain in pathology; it is toxic and can cause blindness because its vapors are readily reduced to a film of osmium directly on the eyeball. **peroxyacetic a.**, peracetic a. **peroxydisulfuric a.**, persulfuric a. **peroxymonosulfuric a.**, persulfuric a. **persulfuric a.**, an oxidized form of sulfuric acid which can be either peroxymonosulfuric acid, H_2SO_5 , or peroxydisulfuric acid, $H_2S_2O_8$. **petroselinic a.**, an unsaturated acid, $CH_3(CH_2)_{10}CH=CH(CH_2)_4COOH$, the principal constituent of the fatty oil from seeds of the *Umbelliferae*, e.g., fennel, carrot, parsley, and coriander. **phenaceturic a.**, an alpha amino acid, $C_8H_9CH_2 \cdot CO \cdot NH \cdot CH_2 \cdot COOH$, found in horse and dog urine. **phenic a.**, phenol. **phenylacetic a.**, a decarboxylation product, $C_6H_5 \cdot CH \cdot COOH$, of phenylpyruvic acid, formed in the metabolism of phenylalanine in the body; it is conjugated with glutamine and excreted in the urine. Called also *alphetolucic a.* **β -phenyl- α -aminopropionic a.**, phenylalanine. **phenylcinchoninic a.**, cinchophen. **phenylethylbarbituric a.**, phenobarbital. **phenylglycolic a.**, mandelic a. **phenylglycuronic a.**, a compound of phenol and glucuronic acid, $C_6H_5 \cdot O \cdot CO \cdot (CHOH)_4 \cdot CHO$, found in the urine after the ingestion of phenol. **phenylic a.**, phenol. **phenyllactic a.**, an acid excreted in the urine in phenylketonuria. **phenylmercaptopuric a.**, bromphenylmercapturic a. **phenylloboric a.**, a white powder, $C_6H_5 \cdot BOH_2$, used as a germicide. **phenylpropionic a.**, hydrocinnamic a. **phenylpyruvic a.**, an intermediary product, $C_6H_5CH_2 \cdot COCOOH$, in the metabolism of phenylalanine. **phenylsalicylic a.**, a white powder, $C_6H_5(OH)(C_6H_5)COOH$, used as an antiseptic dusting powder. **phloretic a.**, hydrocumaric a. **phocenic a.**, isovaleric a.; see under *valeric a.* **phosphatidic a.**, a compound formed by the esterification of the three hydroxyl groups of glycerol with two fatty acid groups and one phosphoric acid group; characteristic group of the phosphatides, occurring widely in animals and plants. **phosphocarnic a.**, an acid consisting of carnitine acid united with phosphorus, found in muscle, blood, and milk. **2-phosphoglyceric a.**, $CH_2OH \cdot CH(OPO(OH)_2) \cdot COOH$, an intermediate in the metabolic formation of pyruvate. **phosphomolybdic a.**, an acid, $H_3PO_4 \cdot 12MoO_3 + H_2O$, important as a precipitant for all the alkaloids. **phosphoric a.**, 1. a crystalline acid, H_3PO_4 , formed by the oxidation of phosphorus. 2. [NF] a colorless liquid of syrupy consistency, containing in each ml., between 85 and 88 per cent phosphoric acid; used as a solvent having many laboratory and industrial uses. Called also *orthophosphoric a.* **phosphoric a., diluted** [NF], a preparation of phosphoric acid in purified water, containing in each milliliter between 9.5 and 10.5 gm. of phosphoric acid; used as a solvent in pharmaceutical preparations. It is also used orally as a gastric acidifier. **phosphoric a., glacial**, metaphosphoric a. **phosphorous a.**, a dibasic reducing acid, H_3PO_3 , whose salts are called phosphites. **phosphotungstic a.**, a white crystalline powder, approximately $24WO_3 \cdot P_2O_5 \cdot 51H_2O$, used in preparing histologic stains, in testing for ptomaines, and as a reagent. **phrenosinic a.**, cerebronic a. **phthalic a.**, a crystalline dibasic acid, benzene dicarboxylic acid, $C_6H_4(COOH)_2$, formed by oxidizing naphthalene. **phthioic a.**, an optically active fraction of the phosphatide portion of the tubercle bacillus. **physetoleic a.**, palmitoleic a. **phytic a.**, an acid, $6CHOPO(OH)_2$, occurring in the leaves of plants; called also *inositol hexaphosphoric a.* **picramic a.**, dinitroaminophenol. **picric a.**, trinitrophenol. **piconitric a.**, trinitrophenol. **picrosulfuric a.**, a mixture used as a fixing agent in histologic work. **pimarinic a.**, an acid resin, $C_{20}H_{30}O_2$, soluble in sodium hydroxide solution and forming 8 to 10 per cent of European turpentine. **pinelic a.**, a dibasic acid, $COOH \cdot (CH_2)_2 \cdot COOH$, homologous with adipic acid. **pipecolic a.**, a heterocyclic intermediate in the catabolism of lysine. **piperic a.**, **piperidic a.**, chemical name: 5-(3,4-methylenedioxyphenyl)-2,4-pentadienoic acid. A crystalline unsaturated acid, $CH_2O_2 \cdot C_6H_3 \cdot (CH)_4 \cdot COOH$, formed when piperine is boiled with alcoholic potassium hydroxide. **pivalic a.**, see under *valeric a.* **plasminic a.**, an acid obtained by splitting up nucleic acids; it may be decomposed into phosphoric acid and nucleic bases. **plasmonucleic a.**, ribonucleic a. **platinochloric a.**, chloroplatinic a. **plumbodithio-pyridine carboxylic a.**, a yellow powder, soluble in water, containing 42.4 per cent of lead; once used in the treatment of cancer. **podophyllinic a.** **2-ethylhydrazide**, an acid, $C_{24}H_{30}N_2O_8$, obtained from podophyllin, which has antineoplastic properties. **polybasic a.**, an acid which contains two or more hydrogen atoms which may be

neutralized by alkalies and replaced by organic radicals. **polygalic a.**, a saponin found, along with senegenin, in senega. **polyglycolic a.**, chemical name: poly(oxy-carbonylmethylene); a surgical suture material, $(C_2H_4O_2)_n$. **polyunsaturated fatty a's**, acids with abundant unsaturated bonds; in large amounts in diets, they tend to lower plasma cholesterol levels. **prodolic a.**, chemical name: 1,3,4,9-tetrahydro-1-propylpyrano[3,4-b]indole-1-acetic acid; an anti-inflammatory, $C_{16}H_{19}NO_3$. **propargylic a.**, propiolic a. **propionic a.**, an acetylenic unsaturated fatty acid, $CH_3C \cdot COOH$; called also *propargylic a.* **propionic a.**, an acid, $CH_3CH_2 \cdot COOH$, found in chyme and in sweat, and one of the products of bacterial fermentation of wood pulp waste; its salts (calcium and sodium propionate) are used as antifungal agents. **propionylsalicylic a.**, the salicylic ester of propionic acid, $CH_3 \cdot CH_2 \cdot CO \cdot O \cdot C_6H_4 \cdot COOH$. **protocatechuic a.**, dioxibenzoic acid, $(OH)_2C_6H_3 \cdot COOH$, sometimes found in the urine. **prussic a.**, hydrocyanic a. **pteroic a.**, folic acid with glutamic acid removed. **pteroylidylglutamic a.**, chemical name: pteroyl- α -glutamylglutamic acid. A compound that has been tried and discarded as an antineoplastic agent. **pteroylglutamic a.**, folic acid (q.v.) found in nature and produced synthetically; abbreviated P.G.A. **pteroylmonoglutamic a.**, folic a. **pteroyltriglutamic a.**, chemical name: $N-[N-(N\text{-pteroyl-}\gamma\text{-glutamyl-})\gamma\text{-glutamyl}]glutamic\ acid$. A compound $C_{29}H_{33}N_9O_{12} \cdot H_2O$, formerly used in the treatment of neoplastic disease. **puberulic a.**, chemical name: 3,4,6-trihydroxy-5-oxo-1,3,6-cycloheptatriene-1-carboxylic acid. An antibiotic substance, $C_8H_6O_6$, isolated from cultures of *Penicillium*, bacteriostatic for gram-positive bacteria. **puberulonic a.**, chemical name: 5,6,7-trihydroxy-1-H-cyclohepta[c]furan-1,3,4-trione. An antibiotic substance, $C_8H_6O_7$, isolated from cultures of *Penicillium*, bacteriostatic for gram-positive bacteria. **punicotannic a.**, the tannic acid of pomegranate root. **purpuric a.**, an imino-condensation product of alloxan, $CO(NH \cdot CO)_2C \cdot NH \cdot CNH \cdot CO_2CO$, found in Weidel's test for uric acid. See also *urexide*, and see *Weidel's test* (1), under *tests*. **pyolipic a.**, an antibiotic substance isolated from *Pseudomonas aeruginosa*. **pyridoxic a.**, a pyridine compound sometimes occurring in the urine, the chief metabolic product of pyridoxine, pyridoxal, and pyridoxamine. **pyroarsenic a.**, the condensed acid, $H_4As_2O_7$, forming pyroarsenates. **pyroboric a.**, a condensed dibasic acid, $H_2B_2O_7$, obtained by heating boric acid; borax, $Na_2B_4O_7$, is the most common salt. Called also *tetraboric a.* **pyrocecha-tuic a.**, an acid formerly thought to be concerned in the reaction of alkalton urine. **pyrocinchonic a.**, an acid, dimethylmaleic acid, $(CH_3 \cdot C \cdot COOH)_2$, known as an anhydride, which is formed when cinchonic acid is heated. **pyrocitric a.**, citraconic acid. **pyroglutamic a.**, 5-oxoproline. **pyroligneous a.**, the dark brown volatile fraction obtained when wood is heated without access of air; its acid constituent is mainly acetic acid. **pyrophosphoric a.**, a condensed crystalline acid, $H_4P_2O_7$; its salts are pyrophosphates; see also *phosphoric acid*. **pyroracemic a.**, pyruvic acid. **pyrosulfuric a.**, see *sulfuric a., fuming*. **pyrotartaric a.**, an acid, $COOH \cdot CH_2CH \cdot (CH_3)COOH$, produced in the dry distillation of tartaric acid; called also *methylsuccinic a.* **pyrrolidinedicarboxylic a.**, proline. **pyruvic a.**, an acid, $CH_3CO \cdot CO_2H$, that is an intermediate in carbohydrate metabolism (see *pyruvate*); it may be prepared by dry distillation of racemic or tartaric acid. Called also *pyroracemic a.* **quercitannic a.**, the tannic acid of oak bark, $C_{17}H_{16}O_6$, differing in its properties slightly from ordinary tannic acid. **quillallic a.**, an acid, $C_{30}H_{46}O_5$, from a saponin in quillaia, the bark of the roseacae tree *Quillaja saponaria* Molina. **quinaldinic a.**, a crystalline acid, $C_{16}H_{16}(CO_2H)_2$. **quinic a.**, an acid, $CH_2 \cdot (CHOH)_3CH_2 \cdot C(OH) \cdot COOH$, found in cinchona bark, coffee, cranberries, and in many other plants; in man, largely transformed into benzoic acid and excreted as hippuric acid; called also *kinic a.* **quininic a.**, a crystalline acid, $CH_3O \cdot C_9H_5N \cdot COOH$, formed by oxidizing quinine and quinidine. **quinotannic a.**, a variety of tannic acid from cinchona bark. **quinovic a.**, an acid, $C_{30}H_{46}O_5$, from a cinchona glucoside. **ratanhiatannic a.**, krameric a. **Reinecke's a.**, tetrathiocyanodiaminochromic acid, $(SCN)_4Cr(NH_2)_2 \cdot NH_3$, used as a reagent for the isolation of proline and other basic substances. **retinoic a.**, an acid, $C_{20}H_{28}O_2$, obtained by oxidizing the alcohol group of vitamin A (retinol) to an aldehyde and then to carboxyl. The term is used to designate the all-*trans* stereoisomer (*tretinoin* [q.v.]), which is used as a topical keratolytic. A synthetic isomer, 13-*cis*-retinoic acid (isotretinoin), given orally, has been reported effective in clearing cystic and conglobate acne. Called also *vitamin A a.* **rheic a.**, chrysophanic a. **rhodanic a.**, rhodanine. **ribonic a.**, an acid, $CH_2OH(CHOH)_5COOH$, which results from oxidation of ribose. **ribonucleic a.**, a nucleic acid originally isolated from yeast, but later found in all living cells; on hydrolysis it yields adenine, guanine, cytosine, uracil, ribose, and phosphoric acid. Abbreviated RNA. *Messenger RNA* is an RNA fraction of intermediate molecular weight, with a base ratio corresponding to the DNA of the same organism, which transmits information from DNA to the protein-forming system of the cell. In bacteria it turns over rapidly. *Ribosomal RNA* comprises about half of the substance of ribosomes, which presumably perform a nonspecific function in polypeptide synthesis. *Soluble RNA*. See

transfer RNA. *Transfer RNA* is an RNA fraction of low molecular weight ($S = 4$), existing in 20 species, each of which combines with one amino acid species, transferring it from activating enzyme to ribosome. **ribose nucleic a.**, ribonucleic a. **ricinoleic a.**, **ricinolic a.**, an unsaturated hydroxyacid, $\text{CH}_3(\text{CH}_2)_5\cdot\text{CHOH}\cdot\text{CH}_2\cdot\text{CH}\cdot\text{CH}(\text{CH}_2)_7\cdot\text{COOH}$, found as a glyceride in castor oil. **rosolic a.**, purpurin (def. 2). **rosolic a.**, aurin. **ruberhythric a.**, a glycoside found in madder root which on hydrolysis yields alizarin. **rufigallic a.**, a brownish crystalline acid, $\text{C}_{14}\text{H}_8\text{O}_8$, derived from anthracene, used to analytically detect Zr and Hf. **saccharic a.**, 1. a dibasic acid, $\text{COOH}\cdot(\text{CHOH})_4\text{CO}\cdot\text{OH}$, formed by the action of nitric acid on dextrose or carbohydrates containing dextrose. 2. a monobasic acid, $\text{C}_6\text{H}_{12}\text{O}_8$, or tetraoxycaproic acid, not existing in the free state. **saccharonic a.**, an acid, methyltrihydroxyglutaric acid, $\text{CH}_3\cdot\text{C}(\text{OH})(\text{COOH})(\text{CHOH})_2\text{COOH}$, formed by the oxidation of saccharin (2) with nitric acid. **salicylacetic a.**, salicyloacetic acid. **salicylic a.** [USP], chemical name: 2-hydroxybenzoic acid. A white crystalline powder or white crystals, $\text{OH}\cdot\text{C}_6\text{H}_4\cdot\text{COOH}$, obtained from several sources, notably wintergreen leaves and bark of white birch but usually prepared synthetically; it is used as a topical keratolytic. Its salts are the salicylates. **salicyloacetic a.**, a compound, $\text{C}_8\text{H}_8\text{O}_5$, formerly used as an antiseptic. **salicylsalicylic a.**, salsalate. **salicylsulfonic a.**, sulfosalicylic a. **salicyluric a.**, an acid, $\text{CH}_2\cdot\text{NH}_2\cdot\text{CO}\cdot\text{O}\cdot\text{C}_6\text{H}_4\cdot\text{COOH}$, found in urine after the exhibition of salicylic acid. **santonin a.**, chemical name: 1,2-dimethyl-1,3-cyclopentane dicarboxylic acid. A crystalline compound from santene in oil of sandalwood, $\text{C}_9\text{H}_{12}\text{O}_4$, produced by oxidation with solution of potassium permanganate. **santonin a.**, the acid, $\text{C}_{15}\text{H}_{20}\text{O}_4$, from santonica. **santoninic a.**, santonin. **sarcolactic a.**, see *lactic a.* **Scheele's a.**, hydrocyanic acid 4 per cent. **sclerotic a.**, **sclerotinic a.**, an acid found in ergot, of which it is one of the active principles. **sebatic a.**, a crystalline dibasic acid, decanedioic acid, $\text{COOH}\cdot(\text{CH}_2)_8\cdot\text{COOH}$, derivable from olein and various fixed oils. **seleonic a.**, a clear liquid, H_2SeO_4 , resembling sulfuric acid but less stable and much more easily reduced. **selenous a.**, 1. an acid, H_2SeO_3 , forming selenites. 2. less correctly, selenium oxide, SeO_2 . **shikimic a.**, chemical name: 3,4,5-trihydroxycyclohexene-1-carboxylic acid. It is found in the fruit of the Japanese star anise, *Illicium verum*, and is a precursor in the biosynthesis of several aromatic compounds, including phenylalanine and tyrosine. **sialic a's**, a group of acetylated derivatives of neuraminic acid which occur in a number of mucopolysaccharides and glycolipids. **silicic a.**, 1. an acid of which silicon is the base, forming silicates. It is of several kinds, as orthosilicic acid, H_4SiO_4 ; metasilicic acid, H_2SiO_3 ; and parasilicic acid, H_6SiO_6 . 2. less correctly, silica, SiO_2 , or silicic anhydride. **silicotungstic a.**, an acid, $12\text{WO}_3\text{SiO}_2 + 2\text{H}_2\text{O}$, in white or yellow crystals, used as a reagent for alkaloids. **sinapinic a.**, an aromatic acid, $(\text{CH}_3\text{O})_2\text{C}_6\text{H}_2\cdot\text{OH}\cdot\text{CH}\cdot\text{CH}\cdot\text{CO}_2\text{H}$, from the seeds of black mustard. **skatol carboxylic a.**, a compound, $\text{C}_8\text{H}_7(\text{CH}_3)\text{N}\cdot\text{COOH}$, formed during the putrefaction of proteins. **skatoxylglycuronic a.**, a detoxicated form of skatoxyl produced by conjugation with glucuronic acid. **skatoxylsulfuric a.**, one of the etheral sulfates, $\text{C}_8\text{H}_7\text{N}\cdot\text{O}\cdot\text{SO}_3\text{OH}$, found in the urine in the form of its potassium salt. **sorbic a.**, 1. chemical name: 2,4-hexadienoic acid. An acid $\text{CH}_3(\text{CH})_4\text{COOH}$, found in berries of mountain ash, *Sorbus aucuparia*. 2. [NF] a preparation occurring as a free-flowing, white, crystalline powder, containing 99 to 101 per cent of the labeled amount of sorbic acid; used as an antimicrobial preservative. **spermanucleic a.**, nucleic acid from the spermatozoa of various animals. **sphacelinic a.**, a poisonous substance from ergot. **stannic a.**, a colloidal or gelatinous compound, $\text{Sn}(\text{OH})_4$, formed by the addition of alkalis to tin salts. It is amphoteric, forming tin salts with strong acids and alkali stannates with strong bases. **stearic a.**, 1. chemical name: octadecanoic acid. A saturated fatty acid, $\text{CH}_3(\text{CH}_2)_{16}\cdot\text{COOH}$, widely distributed in plant and animal fats. 2. [NF] a mixture of solid acids, mainly stearic acid and palmitic acid, obtained from edible tallow, containing not less than 40 per cent each of stearic and palmitic acids, the sum of the two not less than 90 per cent; used as an emulsion adjunct and tablet lubricant. Also available as *purified stearic a.*, in which the amount of stearic acid and palmitic acid together constitute not less than 98 per cent of the total content; the content of stearic acid being not less than 90 per cent of the total. **stearolic a.**, an acetylenic fatty acid, $\text{CH}_3(\text{CH}_2)_7\cdot\text{C}\cdot\text{C}(\text{CH}_2)_7\cdot\text{COOH}$, from oleic or elaidic acids. **stibanic a.**, a white powder, $\text{NH}_4\text{C}_6\text{H}_5\text{SbO}(\text{OH})_2$, formerly used in leishmaniasis. **suberic a.**, a dibasic acid, $\text{COOH}(\text{CH}_2)_6\text{COOH}$, obtained from castor oil by heating it with nitric acid. **succinic a.**, 1,4-butanedioic acid, $\text{COOH}(\text{CH}_2)_2\text{COOH}$, an intermediate in the tricarboxylic acid (Krebs') cycle; it is formed from succinyl-CoA and is itself oxidized to form fumaric acid. It was once used in the treatment of diabetic ketosis and, combined with salicylates, in the treatment of rheumatic fever and arthritis. **sudoric a.**, an acid, $\text{C}_8\text{H}_8\text{O}_7\text{N}$, said to exist in sweat; called also *hidrolic a.* and *hidrotic a.* **sulfacetic a.**, acetylsalicylic acid. **sulfaminic a.**, an aminosulfonic acid, $\text{NH}_2\cdot\text{SO}_2\text{OH}$, once used in the treatment of cholera. **sulfanilic a.**, chemical name: *p*-aminobenzenesulfonic acid. A white crystalline compound, $\text{NH}_2\cdot\text{C}_6\text{H}_4\cdot\text{SO}_2\cdot\text{OH}\cdot 2\text{H}_2\text{O}$; the diazotized form (diazobenzenesulfonic

acid) is used in Ehrlich's diazo reaction. Called also *anilinoparasulfonic a.* **sulphydic a.**, hydrogen sulfide. **sulfichthyolic a.**, ichthyolsulfonic a. **sulfinic a.**, an organic compound containing the group $\text{—SO}\cdot\text{OH}$. **sulfo-a.**, an acid in which oxygen or carbon is replaced by sulfur. **sulfoconjugate a.**, the arylsulfuric acid formed as a metabolite of phenolic compounds. **sulfocyanic a.**, thiocyanic acid. **sulfoichthyolic a.**, ichthyolsulfonic acid. **sulfonic a.**, a compound of SO_2OH with another radical, especially a hydrocarbon. **sulfuricinic a.**, an acid derived from castor oil by the action of sulfuric acid. **sulfuricinoleic a.**, an acid formed by treating castor oil with sulfuric acid. **sulfosalicylic a.**, chemical name: 3-carboxy-4-hydroxybenzenesulfonic acid. A compound, $\text{C}_6\text{H}_3\text{COOH}(\text{OH})(\text{SO}_3\text{H})\cdot 1,2,5\cdot 2\text{H}_2\text{O}$, occurring as white or slightly pinkish needle-like crystals, or crystalline powder, soluble in water and alcohol; used as a reagent for protein and as a colorimetric reagent for ferric ion. Called also *salicylsulfonic a.* **α -sulfostearic a.**, an acid, $\text{CH}_3(\text{CH}_2)_{15}\cdot\text{CH}(\text{SO}_3\text{H})\cdot\text{COOH}$, formed by the action of liquid sulfur trioxide on stearic acid. **sulfovinic a.**, ethylsulfuric acid, $\text{C}_2\text{H}_5\cdot\text{HSO}_4$, formed by the action of sulfuric acid in alcohol. **sulfuric a.**, an oily, highly caustic, and poisonous acid, H_2SO_4 , used widely in chemistry, industry, and the arts, and formerly used as a topical caustic and in serous diarrhea and gastric hypoaclidity. The concentrated acid, formerly called oil of vitriol, causes severe skin burns by dehydration; explosive spattering occurs when water is added. **sulfuric a., fuming a.**, a heavy, colorless, oily liquid compounded of sulfuric acid, H_2SO_4 , and sulfur trioxide, SO_3 , which gives off suffocating fumes; it is widely used in industry for sulfonations and nitrations. Called also *pyrosulfuric a.* **sulfurous a.**, 1. a dibasic acid, H_2SO_3 , produced by combining sulfur dioxide, a gas, SO_2 , with water to form a clear colorless solution used as a reagent; its salts are called sulfites. 2. sulfur dioxide. **talonic a.**, one of the isomeric forms of pentahydroxycaproic acid $\text{CH}_2\text{OH}(\text{CHOH})_4\cdot\text{CO}_2\text{H}$, formed by the gentle oxidation of talose. **tannic a.**, a yellowish white to light brown powder, $(\text{OH})_3\text{C}_6\text{H}_2\cdot\text{CO}\cdot\text{O}\cdot\text{C}_6\text{H}_2(\text{OH})_2\cdot\text{COOH}$, usually obtained from nutgalls and used as an astringent; it is no longer used in the treatment of burns because of the possibility of severe liver damage. Called also *gallotannic a.*, *tannin*, and, erroneously, *digallic a.* **tariric a.**, a complex organic acid, $\text{C}_{17}\text{H}_{31}\text{COOH}$, found in the seeds of *Picramnia*, a species of tropical American shrubs. **tartaric a.**, a white powder from the lees of wine and from various plants, 2,3-dihydroxysuccinic acid, $\text{COOH}(\text{CHOH})_2\text{COOH}$. It is known in four forms: (a) ordinary or dextrotartaric acid; (b) levotartaric acid (these two are so called because their solutions rotate the plane of polarized light to the right and the left respectively); (c) paratartaric acid, a mixture of (a) and (b) hence optically inactive; and (d) mesotartaric acid, optically inactive from internal compensation. It is used in baking and tanning, and as a chemical reagent. **tartronic a.**, a dibasic acid, hydroxymalonic acid, $\text{COOH}\cdot\text{CHOH}\cdot\text{COOH}$, produced by the oxidation of glycerin or the ozonization of malonic acid. **taurocarbamic a.**, the form in which taurine when fed is excreted in the urine; it is taurine paired with carbamic acid, $\text{NH}_2\cdot\text{CO}\cdot\text{NH}(\text{CH}_2)_2\cdot\text{SO}_3\text{OH}$. **taurocholic a.**, one of the bile acids, $\text{C}_{26}\text{H}_{45}\text{NSO}_7$, formed by the conjugation of taurine and cholic acid. **taurylic a.**, a compound, $\text{C}_7\text{H}_{14}\text{O}$, found in urine. **teichoic a's**, antigenic polymers of glycerol or ribitol phosphates found attached to the cell walls or in intracellular association with membranes of gram-positive bacteria; they determine group specificity of some species, e.g., the staphylococci. **telluric a.**, an unstable dibasic and toxic acid, H_2TeO_4 , readily reduced to tellurium; it is liberated in some smelting operations and may poison surrounding plant and animal life. **terebic a.**, a monobasic acid, $\text{C}_7\text{H}_{10}\text{O}_4$, from oxidizing turpentine. **ternary a.**, an acid which contains three distinct radicals; called also *oxacid*. **terrestric a.**, a tetrionic acid, $\text{C}_{11}\text{H}_{14}\text{O}_4$, which is a metabolic product of *Penicillium terrestre*. **testicular nucleic a.**, an acid derivable from testicular nuclein. **tetraboric a.**, pyroboric a. **tetracosanic a.**, an acid, $\text{C}_{24}\text{H}_{48}\text{O}_2$, from phrenosin. **tetradeconic a.**, an acid occurring in small amounts in milk. **tetrahydrofolic a.**, the coenzyme of folic acid, being a reduced folic acid with four hydrogen atoms attached; in dissociated form, called *tetrahydrofolate*. **tetramethyluric a.**, a methylated purine found in tea, $\text{C}_8\text{H}_{12}\text{N}_4\text{O}_3$. **tetrodonic a.**, a poisonous acid from various fishes of the genus *Tetraodon*. **thapsic a.**, an acid said to occur in *Thapsia garganica*. **thebolactic a.**, the lactic acid found in opium. **thioacetic a.**, a colorless or yellowish liquid, CH_3COSH ; called also *thiuretic a.* **β -thio- α -aminopropionic a.**, cysteine. **thiobarbituric a.**, a condensation of malonic acid and thiourea, $\text{C}_6\text{H}_4\text{N}_2\text{O}_2\text{S}$, differing from barbituric acid only by the presence of a sulfur atom instead of an oxygen atom at the number 2 carbon; it is the parent compound of a class of drugs, thiobarbiturates. Thiobarbiturates and barbiturates are analogous in their effects. **thioctic a.**, a naturally occurring acid used in growing bacterial cultures, and reported to be an antidote to mushroom (*Amanita*) poisoning; also prepared synthetically. **thiocyanic a.**, an unstable acid, HCNS ; it forms salts called thiocyanates or sulfocyanides, which give a blood-red color with ferric salts. Called also *sulfocyanic a.* **thiolactic a.**, an acid, $\text{CH}_3\text{CH}(\text{SH})\text{COOH}$, derived from keratin. **thionic a.**, any of a series of acids composed of hydrogen, sulfur,

and oxygen. **thiopanic a.**, a compound, (dihydroxy dimethyl butyryl) taurine, $\text{CH}_2\text{OH}\cdot\text{C}(\text{CH}_3)_2\cdot\text{CHOH}\cdot\text{CO}\cdot\text{NH}\cdot\text{CH}_2\cdot\text{CH}_2\cdot\text{SO}_3\text{H}$, which inhibits bacterial growth in competition with pantothenic acid. **thiopyruvic a.**, one of the intermediary products in the metabolism of cysteines. **thiosalicylic a.**, chemical name: 2-mercaptobenzoic acid. A compound, $\text{C}_7\text{H}_6\text{O}_2\text{S}$, used in the manufacture of dyes and as a reagent for the determination of iron. **thiosulfuric a.**, a very unstable acid, $\text{H}_2\text{S}_2\text{O}_3$, not known in the free state, but which forms salts called thiosulfates; the sodium salt is the photographer's "hypo," which forms soluble complexes with silver halides and is a standard reducing agent in chemical analysis. **thiuretic a.**, thioacetic a. **thymic a.**, the residue left after partial acid hydrolysis of nucleic acid; it is a combination of phosphoric acid, carbohydrate, and pyrimidine bases. **thymidylc a.**, a mononucleotide with a thymine base, occurring in deoxyribonucleic acid, but not in ribonucleic acid. **thyminic a.**, an acid formed by the splitting up of deoxyribonucleic acid. **thymonucleic a.**, **thymus nucleic a.**, deoxyribonucleic a. **tibric a.**, chemical name: 2-chloro-5-[(3,5-dimethyl-1-piperidinyl)sulfonyl]benzoic acid; an antihyperlipidemic, $\text{C}_{14}\text{H}_{18}\text{ClNO}_5\text{S}$. **tienilic a.**, ticrynafen. **tiglic a.**, an unsaturated acid, methyl crotonic acid, $\text{CH}_3\cdot\text{CH}\cdot\text{C}(\text{CH}_3)=\text{COOH}$, the cis-isomer of angelic acid, found in croton oil. **toluic a.**, $\text{CH}_3\cdot\text{C}_6\text{H}_4\cdot\text{COOH}$, produced by the oxidation of xylene. **toluric a.**, the form in which toluic acid, paired with glycine, is excreted in the urine. **toxicodendric a.**, a volatile acid from *Rhus toxicodendron*, supposed to be poisonous. **tranexamic a.**, chemical name: *trans*-4-(aminomethyl)cyclohexanecarboxylic acid. An acid, $\text{C}_6\text{H}_{11}\text{NO}_2$, which acts as an antifibrinolytic agent by competitively inhibiting plasminogen; used as a hemostatic in the treatment of severe hemorrhage associated with excessive fibrinolysis. **traumatic a.**, chemical name: 2-dodecenedioic acid. An acid, $\text{HOOC}(\text{CH}_2)_8\text{CH}=\text{CHCOOH}$, which functions as a plant-wound hormone, stimulating the production of wound periderm. **triazotic a.**, a strong monobasic acid, HN_3 , a colorless liquid with an unpleasant odor; it is explosive and forms salts called hydrazoates, azides, or trinitrides; its heavy-metal salts are used in detonators. Called also *hydrazotic a.* **tribasic a.**, an acid that has three replaceable hydrogen atoms. **trichlorethylglucuronic a.**, $\text{CHCl}_2\cdot\text{CHCl}\cdot\text{C}_6\text{H}_4\text{O}_7$, the conjugated form of chloral hydrate, the form in which it is excreted in the urine. **trichloroacetic a.** [USP], a poisonous, extremely caustic acid, $\text{C}_2\text{HCl}_3\text{O}_2$, occurring as colorless, deliquescent crystals; used as a topical caustic for local destruction of lesions and for treatment of dermatological diseases. **tricyanic a.**, a crystalline acid, $\text{C}_3\text{N}_3(\text{OH})_3$, formed when urea is heated dry. **trihydroxybenzoic a.**, gallic a. **triiodoethionic a.**, iophenoxic a. **trime-thylaminoacetic a.**, methylated aminoacetic acid, $\text{OH}(\text{CH}_3)_3\text{N}\cdot\text{CH}_2\cdot\text{COOH}$; its anhydride is betaine. **triticonucleic a.**, the nucleic acid of the wheat embryo. **tropic a.**, a crystalline acid, α -phenyl β -hydroxy propionic acid, $\text{C}_9\text{H}_8\cdot\text{CH}(\text{CH}_2\text{OH})\cdot\text{COOH}$, obtained from atropine by digesting it with baryta water. **tuberculoostearic a.**, an acid, $\text{CH}_3(\text{CH}_2)_7\cdot\text{CH}(\text{CH}_3)\cdot(\text{CH}_2)_8\cdot\text{COOH}$, isolated from the acetone-soluble lipid of tubercle bacilli. **tungstic a.**, a yellow crystalline compound, H_2WO_4 , used as a source of metallic tungsten and as precipitant for many nitrogenous organic substances. **undecenoic a.**, undecylenic a. **undecylenic a.**, 1. chemical name: 10-undecenoic acid. A normal constituent of sweat, $\text{C}_{11}\text{H}_{20}\text{O}_2$, which may be prepared by heating castor oil. 2. [USP] a pharmaceutical preparation, occurring as a clear, colorless to pale yellow liquid, used in combination with zinc undecylenate or alone as a topical antifungal. **uramilic a.**, an acid, $\text{C}_8\text{H}_6\text{N}_4\text{O}_5$, obtained by treating uramil with sulfuric acid. **uraminic a.**, glycoluric a. **uraminobenzoic a.**, an acid found in the urine after the ingestion of aminobenzoic acid; the latter is paired with carbanic acid, giving $\text{NH}_2\cdot\text{CO}\cdot\text{NH}\cdot\text{C}_6\text{H}_4\cdot\text{COOH}$. **uraminotauric a.**, a compound occurring in the urine after the administration of taurine. **uric a.**, a crystallizable acid, 2,6,8-trioxypurine, $\text{C}_5\text{H}_4\text{N}_4\text{O}_3$, from the urine of man and animals, being one of the products of nucleic metabolism and the end-product of purine metabolism in man. It is nearly insoluble in water, alcohol, and ether, but soluble in solutions of alkaline salts. In the form of its sodium salt (monosodium urate), it forms a large portion of certain calculi, and in the blood it causes morbid symptoms, among which are those of gout. Called also *lithic a.* **uridylic a.**, a pyrimidine nucleotide constituent of ribonucleic acid. **urobenzoic a.**, hippuric a. **urocanic a.**, an intermediate metabolite, $\text{C}_8\text{H}_6\text{N}_2\text{O}_3$, of histamine, convertible normally to glutamic acid. **urochloral a.**, **urochloric a.**, an acid, $\text{C}_{14}\text{H}_{12}\text{Cl}_2\text{O}_{12}\cdot[\text{C}_7\text{H}_{12}\text{Cl}_2\text{O}_6]_2$, found in the urine after the exhibition of chloral. **uroferric a.**, a substance found in urine. **uroleucic a.**, **uroleucinic a.**, a crystalline acid, $\text{C}_9\text{H}_{10}\text{O}_6$, found in the urine in alkaptonuria. **uronic a.**, any of certain aldehyde acids derived from simple sugars by oxidation of the alcohol end of the chain; see *glucuronic a.* and *galacturonic a.* **ursodeoxycholic a.**, a bile acid (an isomer of chenodeoxycholic acid) normally present only in small amounts in man; first isolated from the bile of bears [L. *ursus* bear], it is administered to dissolve cholesterol gallstones. **ursolic a.**, ursone. **usnic a.**, a complex organic acid occurring in the lichen, *Usnea barbata*. **uvitic a.**, a crystalline acid, methylisophthalic acid, $\text{CH}_3\cdot\text{C}_6\text{H}_3\cdot$

$(\text{COOH})_2$, obtained by oxidizing mesitylene. **vaccenic a.**, an unsaturated fatty acid, $\text{CH}_3(\text{CH}_2)_7\text{CH}=\text{CH}(\text{CH}_2)_9\cdot\text{COOH}$, isomeric with oleic acid; found in butterfat. **valerianic a.**, normal valeric a.; see under *valeric a.* **valeric a.**, an organic acid found in the roots of *Valeriana officinalis* and *Angelica archangelica*, and which may be synthesized in various ways. Called also *butyrcarboxylic a.* and *phocenic a.* There are four valeric acids: (a) normal valeric acid (valeric acid, pentanoic acid), $\text{CH}_3(\text{CH}_2)_4\cdot\text{COOH}$, (b) isovaleric acid, $(\text{CH}_3)_2\text{CH}\cdot\text{CH}_2\cdot\text{COOH}$, (c) β -methylbutyric acid, $\text{CH}_3(\text{C}_2\text{H}_5)\cdot\text{CH}\cdot\text{COOH}$, and (d) trimethylacetic acid (pivalic acid), $(\text{CH}_3)_3\text{C}\cdot\text{COOH}$. The salts were once considered medicinal. **valproic a.**, 2-propylpentanoic acid, $\text{C}_8\text{H}_{16}\text{O}_2$. A simple eight-carbon branched-chain fatty acid, it is used as an antiepileptic, especially for control of absence seizures. Its salt, valproate sodium, is used for the same purpose. **vanadic a.**, an acid, HVO_3 , formed by the oxidation of vanadium; it may cause chronic poisoning. Called also *metavanadic a.* **vanillic a.**, an acid, $\text{CH}_3\cdot\text{O}\cdot\text{C}_6\text{H}_3(\text{OH})\text{COOH}$, obtained by the oxidation of vanillin; called also *methylprotocatechuic a.* **vanillic a. diethylamide**, ethamivan. **vanillylmandelic a.**, chemical name: 3-methoxy-4-hydroxymandelic acid; an excretory product of the catecholamines, used as a test for epinephrine metabolism. Abbreviated VMA. **veratric a.**, a white crystalline acid, 3,4-dimethoxybenzoic acid, $(\text{CH}_3\cdot\text{O})_2\text{C}_6\text{H}_3\cdot\text{COOH}$, found in sabbadilla seeds. **viburnic a.**, acid from the bark of *Viburnum prunifolium*, identical with valeric a. **violuric a.**, a barbituric acid compound, 5-isonitrosobarbituric acid, $\text{OHN}\cdot\text{C}(\text{CO}\cdot\text{NH})_2\text{CO}$. **vitamin A a.**, 1. retinoic a. 2. tretinoin. **vulpic a.**, **vulpinic a.**, a yellow crystalline acid, $\text{C}_{19}\text{H}_{34}\text{O}_8$, from the lichen, *Cetraria vulpina*; called also *pulvinic a.* **methyl ester**. **xanthic a.**, an oily liquid, $\text{C}_2\text{H}_5\text{O}\cdot\text{CS}\cdot\text{SH}$, with a penetrating odor; called also *xanthogenic a.* **xanthogenic a.**, xanthic a. **xanthoproteic a.**, a yellow compound obtained by treating protein with nitric acid. **xanthurenic a.**, chemical name: 4,8-dihydroxyquinolallic acid. A metabolite, $\text{C}_9\text{H}_8\text{N}(\text{OH})_2\text{COOH}_2$, of L-tryptophan, present in normal urine and found in increased amounts in vitamin B₆ deficiency; L-kynurenine is a precursor. **xanthylic a.**, one of the nucleic acids. **xanthylicnucleic a.**, a nucleic acid which may be made to afford xanthine. **xylic a.**, a crystalline acid, dimethylbenzoic acid, $(\text{CH}_3)_2\text{C}_6\text{H}_3\cdot\text{COOH}$. **xyldic a.**, a dibasic acid, methylisophthalic acid, $\text{CH}_3\cdot\text{C}_6\text{H}_3\cdot(\text{COOH})_2$. **xylonic a.**, one of the isomeric forms of tetrahydroxyvaleric acid, $\text{CH}_2\text{OH}(\text{CHOH})_3\text{COOH}$, formed by the gentle oxidation of xylose. **yeast nucleic a.**, ribonucleic a.

acidalbumin (as'id-al'bu-min) a protein that dissolves in acids and shows an acid reaction.

acidaminuria (as'id-am'i-nu're-ah) aminoaciduria.

acidemia (as'id-e'me-ah) [*acid* + Gr. *haima* blood + *-ia*] a decreased pH (increased hydrogen ion concentration) of the blood. **argininosuccinic a.**, argininosuccinicaciduria. **isovaleric a.**, an inborn error of leucine metabolism characterized by high levels of isovaleric acid in the blood, periodic acidosis with coma, objectionable body odor, and psychomotor retardation. **methylmalonic a.**, an inborn error of metabolism characterized by excretion of excessive amounts of methylmalonic acid in the urine, recurrent vomiting, failure to thrive, developmental retardation, hepatomegaly, intermittent neutropenia, and thrombocytopenia, and often by severe metabolic acidosis. It is due to an inability to convert D- to L-methylmalonyl CoA or of the latter to succinyl CoA or to a defect in the metabolism of vitamin B₁₂. **propionic a.**, an excess of propionic acid in the blood, due to failure of activity of propionyl-CoA carboxylase and characterized by ketosis, acidosis, and hyperglycinemia and, in the absence of dietary controls, by developmental retardation, ECG abnormalities, and osteoporosis.

acid-fast (as'id-fast) not readily decolorized by acids when stained, a characteristic of mycobacteria stained by the Ziehl-Neelsen procedure.

acidic (ah-sid'ik) of or pertaining to an acid; acid-forming.

acidifiable (ah-sid'i-fi'ah-b'l) susceptible of being made acid.

acidifier (ah-sid'i-fi'er) an agent that causes acidity; a substance used to increase gastric acidity.

acidify (ah-sid'i-fi) 1. to render acid, as by addition of a strong acid. 2. to become acid.

acidimeter (as'i-dim'e-ter) [L. *acidum* acid + Gr. *metron* measure] an instrument used in performing acidimetry.

acidimetry (as-i-dim'e-tre) the determination of the amount of free acid in a solution.

acidism (as'i-diz-m) a condition due to introduction into the body of acids from outside; called also *acidismus*.

acidismus (as'i-diz'mus) acidism.

acidity (ah-sid'i-te) [L. *aciditas*] the quality of being acid or sour; containing acid (hydrogen ions).

acidocyte (as'i-do-sit') (obs.) 1. an acidophilic cell. 2. eosinophil.

acidogenic (as'i-do-jen'ik) producing acid or acidity, especially acidity of the urine.

Acidol (a'si-dol) trademark for a preparation of betaine hydrochloride.

acidology (as/'i-dol/o-je) [Gr. *akis* bandage + *-logy*] the science of surgical appliances.

acidophil (as/'id-o-fil'') [L. *acidum* acid + Gr. *philein* to love] 1. a structure, cell, or other histologic element staining readily with acid dyes. 2. an alpha cell of the adenohypophysis; see also *carminophil* and *orangeophil*. 3. an organism that grows well in highly acid media. 4. acidophilic. **alpha a.**, orangeophil, def. 3. **epsilon a.**, carminophil, def. 3.

acidophile (as/'id-o-fil'') acidophil.

acidophilic (as/'i-do-fil'ik) 1. readily stained with acid dyes. 2. growing in highly acid media; said of microorganisms.

acidophilism (as/'i-dof'i-lizm) the condition produced by acidophilic adenoma of the pituitary, resulting in acromegaly.

acidotic (as/'i-do'sik) acidotic.

acidosis (as/'i-do'sis) a pathologic condition resulting from accumulation of acid or depletion of the alkaline reserve (bicarbonate content) in the blood and body tissues, and characterized by an increase in hydrogen ion concentration (decrease in pH). Cf. *alkalosis*. **compensated a.**, a condition in which the compensatory mechanisms have returned the pH toward normal; see *metabolic a.*, *compensated*, and *respiratory a.*, *compensated*. **diabetic a.**, a variety of metabolic acidosis produced by accumulation of ketone bodies resulting from uncontrolled diabetes mellitus. **hypercapnic a.**, respiratory a. **hyperchloremic a.**, metabolic acidosis accompanied by elevated plasma chloride. **metabolic a.**, a disturbance in which the acid-base status of the body shifts toward the acid side because of loss of base or retention of noncarbonic, or fixed (nonvolatile), acids; called also *nonrespiratory a.* **metabolic a.**, *compensated*, a state of metabolic acidosis in which the pH of the blood has been returned toward normal by respiratory compensatory mechanisms. **nonrespiratory a.**, metabolic a. **renal hyperchloremia a.**, renal tubular a. **renal tubular a.**, a variety of metabolic acidosis resulting from impairment of renal function. **respiratory a.**, a state due to excess retention of carbon dioxide in the body; called also *hypercapnic a.* **respiratory a.**, *compensated*, respiratory acidosis in which the pH of the blood has been returned toward normal by renal compensatory mechanisms. **starvation a.**, a variety of metabolic acidosis produced by accumulation of ketone bodies which may accompany a caloric deficit. **uremic a.**, the condition in chronic renal disease in which the ability to excrete acid is decreased, causing acidosis.

acidosteophyte (as/'i-dos'te-o-fit'') [Gr. *akis* point + *osteon* bone + *phyton* plant] a sharp-pointed osteophyte.

acidotic (as/'i-dot'ik) pertaining to or characterized by acidosis.

acidulated (ah-sid/'u-lät'ed) rendered acid in reaction.

Acidulin (ah-sid/'u-lin) trademark for a preparation of glutamic acid hydrochloride.

acidulous (ah-sid/'u-lus) somewhat acid.

acidum (as/'i-dum) [L.] acid (def. 2).

aciduria (as/'i-du're-ah) the presence of acid in the urine. **acetoacetic a.**, diaceturia. **beta-aminoisobutyric a.**, excessive excretion of β -aminoisobutyric acid in the urine; it occurs as a benign genetic metabolic variant and in certain illnesses. **methylmalonic a.**, excretion of excessive amounts of methylmalonic acid in the urine; a characteristic symptom of methylmalonic acidemia. **orotic a.**, a hereditary disorder, transmitted as an autosomal recessive trait, in which a defect in the metabolism of pyrimidines is associated with excessive excretion of orotic acid in the urine, characterized by megaloblastic anemia, crystalluria, and frequently physical and mental retardation. **pyroglutamic a.**, 5-oxoprolinuria.

aciduric (as/'i-du'rik) [L. *acidum* acid + *durare* to endure] acid-tolerant; said of bacteria which are able to withstand a degree of acidity usually fatal to nonsporulating bacteria.

acidyl (as/'i-dil) any acid radical.

acydilation (ah-sid/'i-la'shun) acylation.

acies (a'se-ēz) [L.] edge, margin, or border. **a. thal'ami op'tici** (obs.), stria medullaris thalami.

acinar (as/'i-nar) pertaining to or affecting an acinus or acini.

acinesia (as/'i-ne'ze-ah) akinesia.

acinetetic (as/'i-net'ik) akinetic (def. 1).

Acinetobacter (as/'i-net/'o-bak'ter) [a neg. + Gr. *kinētos* movable + *bactērion* rod] a genus of nonmotile, paired, gram-negative bacilli widely distributed in nature. **A. anitra'tus**, *Herellea vaginicola*. **A. lwof'fi**, *Mima polymorpha*.

acini (as/'i-ni) [L.] plural of *acinus*.

acinic (ah-sin'ik) pertaining to an acinus.

aciniform (ah-sin/'i-form) [L. *acinus* grape + *forma* form] shaped like an acinus, or grape.

acinitis (as/'i-ni'tis) inflammation of the acini of a gland.

acinitrazole (as/'i-ni'tro-zōl) aminitroazole.

acinose (as/'i-nōs) [L. *acinus* grape-like] 1. made up of acini. 2. acinar.

acinetotubular (as/'i-no-tu'bu-lar) composed of tubular acini or of tubules ending in acini.

acinous (as/'i-nus) 1. resembling a grape. 2. acinar.

acinus (as/'i-nus), pl. *ac'ini* [L. "grape"] a general term used in anatomical nomenclature to designate a small saclike dilatation, particularly one found in various glands; see also *alveolus*. **a. liena'lis**, **a. lie'nis**, folliculi lymphatici lienales. **liver a.**, a functional unit of the liver, smaller than a portal lobule, being a diamond-shaped mass of liver parenchyma that is supplied by a terminal branch of the portal vein and of the hepatic artery and drained by a terminal branch of the bile duct. **a. rena'lis** [malpig'hii], corpuscula renis. **a. re'nis** [malpig'hii], corpuscula renis.

acipenserin (as/'i-pen'ser-in) a toxic substance from the gonads of the sturgeon, *Acipenser*.

ackee (ah/'ke) akee.

accladiosis (ak-lad'/'e-o'sis) an ulcerative dermatomycosis caused by *Accladium castellani*, occurring in Ceylon, the Malay States, and Macedonia, and marked by the formation of roundish or oval ulcers with sharply defined edges and a granulating fundus.

Accladium (ah-kla'de-um) a genus of imperfect fungi of the family Moniliaceae, order Moniliales, sometimes found in human infection; possibly identical with *Olpitrichum* or *Oidium*.

aclasia (ah-kla'ze-ah) acclasis.

acclasis (ah/'klah-sis) [a neg. + Gr. *klasis* a breaking] pathologic continuity of structure, as in dyschondroplasia. **diaphyseal a.**, enchondromatosis. **tarsoepiphyseal a.**, dysplasia epiphysealis hemimelica.

aclastic (a-klas'tik) [a neg. + Gr. *klan* to break] 1. pertaining to or characterized by acclasis. 2. not refracting.

acleistocardia (ah-kli's/'to-kar'de-ah) [a neg. + Gr. *kleistos* closed + *kardia* heart] an open condition of the foramen ovale cordis.

acclusion (ah-klu'zhun) [a neg. + *occlusion*] (obs.) open bite.

acmastic (ak-mas'tik) (obs.) pertaining to acme; having a period of increase (*epacmastic*) followed by a period of decline (*paracmastic*).

acme (ak/me) [Gr. *akmē* point] the crisis or critical stage of a disease.

acmesesthesia (ak/'mes-the'ze-ah) [Gr. *akmē* + *aisthēsis* perception + *-ia*] a sensation of a sharp point touching the skin.

acne (ak/'ne) [possibly a corruption of Greek *akmē* a point or of *achnē* chaff] an inflammatory disease of the pilosebaceous unit, the specific type usually being indicated by a modifying term; frequently used alone to designate common acne, or *acne vulgaris*. **a. agmina'ta** (obs.), papulonecrotic tuberculid. **a. al'bida** (obs.), milium. **a. atroph'ica**, acne in which, after the disappearance of small papular lesions, there is left a stippling of tiny atrophic pits and scars. **beate a.**, seborrheic dermatitis. **bromide a.**, an acneiform eruption without comedones, one of the most constant symptoms of brominism. **a. cachectico'rum** (Hebra), a form of acne which may accompany wasting diseases or rapid growth; the pustular lesions are soft, scarcely infiltrated, and almost lacking in inflammatory reaction. **chlorine a.**, chloracne. **common a.**, a vulgaris. **a. congloba'ta**, a form of acne characterized by the presence of numerous comedones, marked suppuration, the formation of cysts and sinuses, and severe scarring. **contagious a.**, a contagious skin disease of horses caused by *Corynebacterium* or *Staphylococcus* and characterized by the formation of pustules, which when ruptured release a sticky pus that rapidly dries and leaves a yellow crust. **cystic a.**, acne with the formation of cysts enclosing a mixture of keratin and sebum in varying proportions. **a. erythemato'sa**, rosacea. **a. excoriée des jeunes filles**, Brocq's name for a superficial acne of the face of girls caused chiefly by the patient's picking at and squeezing out small blackheads. **a. fronta'lis**, a varioliformis. **a. ful'minans**, a rare form affecting teenage males, marked by sudden onset of fever and eruption of highly inflammatory, tender, ulcerative, and crusted lesions on the back, chest, and face. **halogen a.**, acne caused by the use of or exposure to halogens (such as chlorine, bromine, or iodine, or their salts) or chloronaphthalene. **halowax a.**, chloracne. **a. hordeola'ris** (obs.), acne in which the tubercles are hard, tough, and arranged in rows. **a. indura'ta**, a progression of papular acne, with deep-seated and destructive lesions that may produce severe scarring. **iodide a.**, an eruption caused by the use of iodine compounds. **a. keloid**, keloidal folliculitis. **a. kerato'sa**, acne characterized by horny conical plugs, typically at the angles of the mouth, which become inflamed. **a. necrot'ica milia'ris**, a rare and chronic form of folliculitis of the scalp, occurring principally in adults, with formation of tiny superficial pustules which are destroyed by scratching. See also *a. varioliformis*. **a. neonato'rum**, a condition found in newborn infants with oily skins, characterized by comedones, papules, and pustules on nose, cheeks, and forehead. **a. papulo'sa**, acne vulgaris in which the lesions are papular. **petroleum a.**, acne-like lesions sometimes seen in petroleum workers. **a. picea'lis**, a form of acne caused by contact with tar or exposure to its vapors. **premenstrual a.**, acne of a cyclic nature, appearing shortly before (rarely after) the onset of menses. **a. pustulo'sa**, acne in which the lesions show central suppuration. **a. rosa'cea**, rosacea. **a. scorbu'tica** (obs.), a papular eruption in scurvy.

a. scrofuloso/rum (Bazin), papulonecrotic tuberculid. **a. syphilitica** (*obs.*), an acuminated pustular syphiloderm. **tropical a., a. tropicalis**, a severe and extensive form of acne occurring in hot, humid climates, characterized by nodular, cystic, and pustular lesions chiefly on the back, buttocks, and thighs. Conglobate abscesses frequently form, especially on the back. **a. urtica/ta**, an acneiform eruption characterized by edematous papular wheals, resembling acne papules. **a. variolifor/mis**, a rare condition, with persistent brown papulopustules, usually localized to the brow and scalp; probably a deep variant of acne necrotica miliaris. Called also *a. frontalis* and *folliculitis varioliformis*. **a. vulga/ris**, a chronic inflammatory disease of the pilosebaceous apparatus, the lesions occurring most frequently on the face, chest, and back. The inflamed glands may form small pink papules, which sometimes surround comedones so that they have black centers, or form pustules or cysts; the cause is unknown, but it has been suggested that many factors, including certain foods, stress, hereditary factors, hormones, drugs, and bacteria, especially *Corynebacterium acnes*, *Staphylococcus albus*, and *Pityrosporon ovale*, play an etiologic role. Called also *common a.*

acneform (ak'ne-form) acneifor'n.

acnegen (ak'ne-jen) a substance that causes acne.

acnegenic (ak'ne-jen'ik) [*acne* + Gr. *gennan* to produce] causing or capable of producing acne.

acneiform (ak-ne'f-form') resembling acne.

acnemia (ak-ne'me-ah) [*a neg.* + Gr. *knēmē* leg] atrophy of the calves of the legs.

acnitis (ak-ni'tis) papulonecrotic tuberculid.

acnitrazole (ak-ni'trah-zōl) aminitrozole.

A.C.N.M. American College of Nurse-Midwives; see *nurse-midwife* and *nurse-midwifery*.

acoasma (a'ko-as'mah) acousma.

Acocanthera (ak'o-kan-the'rah) [Gr. *akōkē* a point, edge + *anthērōs* blooming] a genus of apocynaceous plants of African origin whose members yield a juice from stems and leaves which is used by natives to prepare arrow poison. *A. schimperi* (A.D.C.) Schwf. and other species yield the toxic glycoside ouabain (acocantherin).

acocantherin (ak'o-kan'ther-in) ouabain.

Acoela (ah-se'lah) an order of the class Turbellaria, made up of minute marine flatworms with no intestines that receive food into a porous mass of endodermal tissue.

acoelomate (ah-sēl'o-māt) 1. lacking a body cavity. 2. an animal lacking a body cavity, as the platyhelminths.

acoenesthesia (ah-sen'es-the'ze-ah) acenesthesia.

A.C.O.G. American College of Obstetricians and Gynecologists.

acognosia (ak'og-no'se-ah) [Gr. *akos* cure + *gnōsis* knowledge] knowledge of or study of remedies.

acognosy (ah-kog'no-se) acognosia.

A.C.O.H.A. American College of Osteopathic Hospital Administrators.

Acokanthera (ak'o-kan-the'rah) *Acocanthera*.

acology (ah-kol'o-je) [Gr. *akos* cure + *-logy*] the science of remedies; therapeutics, def. 1.

acomia (ah-ko'me-ah) [*a neg.* + Gr. *komē* hair + *-ia*] (*obs.*) baldness.

Acon (ak'on) trademark for a preparation of vitamin A.

aconative (ah-kon'ah-tiv) without conation; not involving desire or volition.

aconine (ak'o-nin) an alkaloid, C₂₅H₄₁NO₉, from aconitine, much less toxic than aconitine.

aconitase (ah-kon'i-tās) an enzyme that catalyzes the transformation of citric acid into isaconitic acid and l-isocitric acid.

aconite (ak'o-nit) [L. *aconitum*; Gr. *akoniton*] a poisonous drug, from the dried tuberous root of *Aconitum napellus*, which contains several closely related alkaloids, the major one being aconitine. It was once given internally as a febrifuge and gastric anesthetic. Called also *monkshood* and *wolfbane*.

aconitine (ah-kon'i-tin) [L. *aconitina*, *aconitia*] a poisonous white crystalline alkaloid, C₃₄H₄₇O₁₁N, the active principle of aconite.

Aconitum (ak-o-ni'tum), gen. *aconiti* [L.] a genus of poisonous ranunculaceous herbs; *A. napellus* is the source of aconite.

aconuresis (ak'on-u-re'sis) [Gr. *akōn* unwilling + *ourēsis* urination] the involuntary passage of urine.

A.C.O.O.G. American College of Osteopathic Obstetricians and Gynecologists.

acoprosis (ak'o-pro'sis) [*a neg.* + Gr. *kopros* excrement] absence of fecal matter from the intestine.

acoprous (ah-kop'rus) having no fecal matter in the intestine.

acor (a'kor) [L.] 1. acidity. 2. acrimony or bitterness.

acorea (ah'ko-re'ah) [*a neg.* + Gr. *korē* pupil] absence of the pupil of the eye.

acoria (ah-ko're-ah) [*a neg.* + Gr. *koros* satiety + *-ia*] a form of

polyphagia due to loss of the sensation of satiety, a condition in which the patient never feels that he has enough, although the appetite may not be large.

acorin (ak'o-rin) a bitter glycoside, C₃₆H₆₀O₆, from calamus; it splits into oil of calamus and sugar.

acortan (a-kor'tan) corticotropin.

Acorus (ak'o-rus) [L.; Gr. *akoros*] a genus of araceous plants; see *calamus*, def. 2.

A.C.O.S. American College of Osteopathic Surgeons.

acosmia (a-koz'me-ah) [*a neg.* + Gr. *kosmos* order + *-ia*] (*obs.*) ill health.

Acosta's disease (ah-kos'tas) [José d'Acosta, 1539–1600, a Jesuit priest who first described it after his travels in Peru in 1590] acute mountain sickness.

acou- [Gr. *akouein* to hear] a combining form denoting relationship to hearing.

acouasm (ah-koo'azm) acousma.

acousma (ah-kōōs'mah), pl. *acousmata* [Gr. *akousma* a thing heard] (*obs.*) an auditory hallucination or imaginary sound.

acousmatamnesia (ah-kōōs'mat-am-ne'ze-ah) [Gr. *akousma* hearing + *amnēsia* forgetfulness] failure of the memory to call up the images of sounds.

acoustic (ah-kōōs'tik) [Gr. *akoustikos*] pertaining to sound.

Acousticon (ah-koo'stē-kon) trademark for an apparatus for a hearing aid.

acousticophobia (ah-koo's'tē-ko-fō-be-ah) [Gr. *akoustos* heard + *phobia*] morbid fear of sounds.

acoustics (ah-kōōs'tiks) the science of sounds.

acoustigram (ah-koo's'ti-gram) acoustogram.

acoustogram (ah-koo's'to-gram) the graphic tracing of the curves, delineated in frequencies per second and decibel levels, of sounds produced by motion of a joint. Applied to the knee joint, an acoustogram will show the sound of the moving semilunar cartilages, the moving contact between the articular surfaces of the femur and tibia, and the circulation of the synovia.

A.C.P. American College of Pathologists.

acquired (ah-kwird') [L. *acquirere* to obtain] not genetic, but produced by influences originating outside the organism.

acquisition (ah'kwī-zī'shun) in psychology, the period in learning during which progressive increments in response strength can be measured. Also the process involved in such learning.

acquisitus (ah-kwis'ē-tus) [L.] acquired.

A.C.R. American College of Radiology.

acragnosis (ak'rag-no'sis) acroagnosis.

acral (ak'ral) [Gr. *akron* extremity] pertaining to an extremity or apex; affecting the extremities.

acrania (ah-kra'ne-ah) [*a neg.* + Gr. *kranion* skull + *-ia*] a developmental anomaly characterized by partial or complete absence of the cranium, or skull.

acranial (ah-kra'ne-al) having no cranium.

Acranata (ah-kra'ne-a'tah) a subphylum of Chordata comprising species without a true skull.

acranus (ah-kra'ne-us) a monster exhibiting acrania.

acrasia (ah-kra'ze-ah) (*obs.*) lack of self-control; intemperance.

acratia (ah-kra'she-ah) [*a neg.* + Gr. *kratos* power + *-ia*] (*obs.*) loss of power or strength.

acraturessis (ah-krat'u-re'sis) [Gr. *akratēs* feeble + *ourēsis* urination] difficult urination due to atony of the bladder or to obstruction of the urethra, as in prostatism.

Acree-Rosenheim reagent, test (reaction) (ak're-ro'zen-him) [Solomon Farley Acree, American chemist, born 1875; Otto Rosenheim, London scientist] see under *reagent* and *tests*.

Acrel's ganglion (ak'relz) [Olof (or Olaf) Acrel, Swedish surgeon, 1717–1806] see under *ganglion*.

Acremoniella (ak'rē-mo-ne-el'ah), a genus of dematiaceous imperfect fungi of the order Moniliales, resembling *Acremonium*; reportedly isolated from lesions of the lung.

acremoniosis (ak'rē-mo-ne-o'sis) infection with the fungus *Acremonium*, producing a state marked by fever and the formation of gumma-like swellings.

Acremonium (ak'rē-mo-ne-um) a genus of imperfect fungi of the family Moniliaceae, order Moniliales, rarely isolated from human infection. **A. kilien'se**, an etiologic agent of white mycetoma in South and Central America; called also *Cephalosporium falciforme*.

acribometer (ak'rī-bom'ē-ter) [Gr. *akribēs* exact + *metron* measure] an instrument for measuring minute objects.

acrid (ak'rid) [L. *acer*, *acris* sharp] pungent; producing an irritation.

acridine (ak'rī-din) a dibenzopyridine, CH(C₆H₄)₂N, used in the synthesis of dyes and drugs; its derivatives are mostly fluorescent yellow dyes (acridine dyes), and those used in medicine (as antiseptic agents) are acriflavine hydrochloride, acriflavine base, and proflavine. **a. orange**, tetramethyl acridine, CH-

[N(CH₃)₂C₆H₃]₂N, a fluorescent basic dye; sometimes used for vital staining.

acriflavine (ak''rī-fla''vin) a mixture of 3,6-diamino-10-methyl-acridinium chloride and 3,6-diaminoacridine, occurring as a deep orange granular powder; used in solution as a topical antiseptic for the skin and mucous membranes, and has been used orally as a urinary antiseptic. Called also *chromoflavine*, *euflavine*, *neutral acriflavine*, and *neutroflavine*. **a. hydrochloride**, a mixture of the hydrochloride salts of 3,6-diamino-10-methylacridinium chloride and 3,6-diaminoacridine, occurring as a brownish red, crystalline powder; used like the base. This substance was originally prepared by Benda in 1911 for use in trypanosomiasis, and was by him given the name of *trypaflavine*. It has also been called *flavine*. Its use is rapidly diminishing in modern medicine. **neutral a.**, acriflavine.

acrimony (ak''rī-mō''ne) [L. *acrimonia*] an acrid quality, property, or condition; called also *acor*.

acrinyl sulfocyanate (ak-rī''nīl sul''fo-sī''ah-nāt) an acrid vesicating principle found in white mustard.

acrisia (ah-kri''se-ah) (*obs.*) uncertainty about the diagnosis and, especially, about the prognosis of a disease.

acrisorcin (ak-rī-sor''sin) [USP] chemical name: 4-hexyl-1,3-benzenediol compound with 9-acridinamine. A salt of aminacrine and hexylresorcinol, C₁₂H₁₄O₂·C₁₃H₁₀N₂, occurring as a yellow powder; used as a local antifungal, applied topically in the treatment of tinea versicolor.

acritical (ah-krit''ī-kal) [*a neg.* + Gr. *krisis* a crisis] having no crisis, said especially of febrile diseases ending by lysis.

acritochromacy (ah-krit''ō-kro''mah-se) [*a neg.* + Gr. *krinein* to judge + *chrōma* color] defective perception of color.

acro- (ak''ro) [Gr. *akron* extremity; *akros* extreme] a combining form denoting relation to an extremity, top, or summit, or to an extreme.

acroagnosis (ak''ro-ag-no''sis) [*acro-* + *a neg.* + Gr. *gnōsis* knowledge] lack of sensory recognition of a limb; lack of acrognosis. Called also *acragnosis*.

acroanesthesia (ak''ro-an''es-the''ze-ah) [*acro-* + *anesthesia*] loss of sensation in the extremities.

acroarthritis (ak''ro-ar-thri''tis) [*acro-* + *arthritis*] arthritis affecting the extremities.

acroasphyxia (ak''ro-as-fik''se-ah) [*acro-* + *asphyxia*] (*obs.*) acrocyanosis.

acroblast (ak''ro-blast) [*acro-* + Gr. *blastos* germ] Golgi material in the spermatid from which arises the acrosome.

acrobrachycephaly (ak''ro-brak''ē-sef''ah-le) [*acro-* +, Gr. *brachys* short + *kephalē* head] a condition resulting from fusion of the coronal suture, causing abnormal shortening of the anteroposterior diameter of the skull.

acrobystiolith (ak''ro-bis''te-o-lith) [Gr. *akrobystia* prepuce + *lithos* stone] postholith.

acrobystitis (ak''ro-bis-ti''tis) [Gr. *akrobystia* prepuce + *-itis*] inflammation of the prepuce.

acrocentric (ak''ro-sen''trik) [*acro-* + Gr. *kentron*, L. *centrum* center] having the centromere near one end of the replicating chromosome, so that one arm is much longer than the other. Cf. *metacentric* and *submetacentric*.

acrocephalia (ak''ro-sē-fa''le-ah) [Gr. *akra* point + *kephalē* head + *-ia*] oxycephaly.

acrocephalic (ak''ro-sē-fal''ik) oxycephalic.

acrocephalopolysyndactyly (ak''ro-sef''ah-lo-pol''e-sin-dak''tī-le) [*acrocephaly* + *polysyndactyly*] acrocephalosyndactyly (Apert's syndrome) with polydactyly as an additional feature. Two types are known: *type I*, the typical form (Noack's syndrome) is transmitted as an autosomal dominant trait, and *type II* (see *Carpenter's syndrome*, under *syndrome*) is transmitted as an autosomal recessive trait.

acrocephalosyndactylia (ak''ro-sef''ah-lo-sin''dak-tīl''e-ah) acrocephalosyndactyly.

acrocephalosyndactylism (ak''ro-sef''ah-lo-sin-dak''tī-lizm) acrocephalosyndactyly.

acrocephalosyndactyly (ak''ro-sef''ah-lo-sin-dak''tī-le) [*acrocephaly* + *syndactyly*] craniostenosis characterized by acrocephaly associated with syndactyly. Called also *acrocephalosyndactyly type I* and *Apert's disease* or *syndrome*. It also occurs in combination with a variety of other anomalies, which have been designated: *Apert-Crouzon disease* (type II), *Chotzen's syndrome* (type III), *Waardenburg's syndrome*, def. 2 (type IV), and *Pfeiffer's syndrome* (type V). See also *acrocephalopolysyndactyly*.

acrocephalous (ak''ro-sef''ah-lus) oxycephalic.

acrocephaly (ak''ro-sef''ah-le) oxycephaly. **a.-syndactyly**, acrocephalosyndactyly.

acrochordon (ak''ro-kor''don) [*acro-* + Gr. *chordē* string] a soft pendulous growth, usually occurring on the neck, eyelids, or axillary or intercutaneous areas, consisting of a pedunculated excrescence of normal epidermis and dermis.

acrocinesia (ak''ro-si-ne''sis) [*acro-* + Gr. *kinēsis* motion] exces-

sive motility; abnormal freedom of movement. Called also *acrokinnesia*.

acrocinetic (ak''ro-si-net''ik) affected with acrocinesia.

acrocontracture (ak''ro-kon-trak''chūr) [*acro-* + *contracture*] contracture of an extremity; contracture of muscles of the hand or foot.

acrocyanosis (ak''ro-si''ah-no''sis) [*acro-* + *cyanosis*] a condition marked by symmetrical cyanosis of the extremities, with persistent, uneven, mottled blue or red discoloration of the skin of the digits, wrists, and ankles and with profuse sweating and coldness of the digits. Called also *Raynaud's sign*.

acrodermatitis (ak''ro-der''mah-ti''tis) [*acro-* + *dermatitis*] inflammation of the skin of the hands or feet. **a. chronica atrophicans**, a diffuse idiopathic atrophy of the skin, usually confined to the extremities and occurring in two phases: the early, erythematous, edematous phase, and the more characteristic later, atrophic phase. **a. continua**, a chronic inflammation of the skin of the extremities, in some cases becoming more generalized; regarded by many as a variant of inverse or flexural (volar) psoriasis. Called also *Hallopeau's a.*, *a. perstans*, and *dermatitis repens*. **a. enteropathica**, a severe gastrointestinal and cutaneous disease of early childhood, due to an autosomal recessive disorder of zinc uptake and characterized by a vesiculopustulous dermatitis, preferentially located around the body orifices and on the head, hands, and feet, with diarrhea, true steatorrhea, and loss of hair. **Hallopeau's a.**, *a. continua*. **infantile lichenoid a.**, **infantile papular a.**, Gianotti-Crosti syndrome. **a. papulo-sa infantum**, Gianotti-Crosti syndrome. **a. perstans**, *a. continua*.

acrodermatoses (ak''ro-der''mah-to''sēz) plural of *acrodermatosis*.

acrodermatosis (ak''ro-der''mah-to''sis), pl. *acrodermatoses* [*acro-* + *dermatosis*] any disease of the skin of the hands or feet.

acrodolichomelia (ak''ro-dol''ē-ko-me''le-ah) [*acro-* + Gr. *dolichos* long + *melos* limb + *-ia*] abnormal or disproportionate length of hands and feet.

acrodont (ak''ro-dont) [*acro-* + Gr. *odous* tooth] having the teeth attached to the upper surface of the jaw rather than encased in a socket, a condition seen in many lizards.

acrodynia (ak''ro-din''e-ah) [*acro-* + Gr. *odynē* pain + *-ia*] a disease of infancy and early childhood characterized by pain and swelling in, and pink coloration of, the fingers and toes, and by listlessness, irritability, failure to thrive, generalized inconstant rashes, profuse perspiration, photophobia, loss of teeth, and sometimes scarlet coloration of cheeks and tip of nose; repeated ingestion of or contact with mercury is a possible cause, and individual sensitivity may also be a factor. Called also *erythredema polyneuropathy* and *pink disease*. **rat a.**, a condition in rats, dogs, and pigs due to deficiency of pyridoxine, and marked by swelling and necrosis of the paws, the tips of ears and nose, and the lips.

acrodysplasia (ak''ro-dis-pla''se-ah) acrocephalosyndactyly.

acroedema (ak''ro-ē-de''mah) [*acro-* + *edema*] (*obs.*) permanent edema of the hand or foot.

acroesthesia (ak''ro-es-the''ze-ah) [*acro-* + Gr. *aisthēsis* sensation + *-ia*] 1. increased sensitivity. 2. pain in the extremities.

acrognosis (ak''rog-no''sis) [*acro-* + Gr. *gnōsis* knowledge] sensory recognition of the limbs and of the different portions of each limb in relation to each other; limb knowledge.

acrohypothermy (ak''ro-hi''po-ther''me) [*acro-* + Gr. *hypo* under + *thermē* heat] abnormal coldness of the hands and feet.

acrohysteralsalpingectomy (ak''ro-his''ter-o-sal''pin-jek''to-me) [*acro-* + Gr. *hyster* uterus + *salpinx* tube + *ektomē* excision] excision of both fallopian tubes and part of the fundus uteri; formerly done for pelvic inflammatory disease.

acrokeratosis (ak''ro-ker''ah-to''sis) a condition involving the skin of the extremities, with the appearance of horny growths. **a. verruciformis**, a condition resembling epidermodysplasia verruciformis, but with the lesions appearing chiefly on the palms and soles, and not on the face.

acrokinesia (ak''ro-ki-ne''ze-ah) acrocinesia.

acrolein (ak-ro''le-in) [L. *acer* acid + *oleum* oil] a volatile acrid liquid, CH₂:CHCHO, from the decomposition of glycerin; called also *acrylic aldehyde*, *acryaldehyde*, and *allyl aldehyde*.

acromacria (ak''ro-mak''re-ah) [*acro-* + Gr. *makros* long] arachnodactyly.

acromania (ak''ro-ma''ne-ah) [*acro-* + Gr. *mania* madness] mania marked by great motor activity.

acromastitis (ak''ro-mas-ti''tis) [*acro-* + Gr. *mastos* mamma + *-itis*] inflammation of the nipple.

acromegalia (ak''ro-mē-ga''le-ah) acromegaly.

acromegalic (ak''ro-mē-gal''ik) pertaining to or characterized by acromegaly.

acromegalogigantism (ak''ro-meg''ah-lo-jī''gan-tizm) gigantism and acromegaly due to hypersecretion of the pituitary growth hormone beginning before puberty and continuing into maturity.

acromegaloïdism (ak''ro-meg'ah-loid-izm) a bodily condition resembling acromegaly but not due to pituitary disorder.

acromegaly (ak''ro-meg'ah-le) [acro- + Gr. *megalē* great] a condition caused by hypersecretion of the pituitary growth hormone after maturity and characterized by enlargement of the extremities of the skeleton—the nose, jaws, fingers, and toes; the converse of acromicria. Called also *Marie's disease*.

Acromegaly (Dunphy and Botsford).

acromelalgia (ak''ro-mē-lal'je-ah) erythromelalgia.

acromelic (ak''ro-me'lik) [acro- + Gr. *melos* limb] pertaining to or affecting the end of a limb.

acrometagenesis (ak''ro-met'ah-jen'ē-sis) [acro- + Gr. *meta* beyond + *genesis* production] undue growth of the extremities.

acromial (ah-kro'me-al) pertaining to the acromion.

acromicria (ak''ro-mik're-ah) [acro- + Gr. *mikros* small + *-ia*] a condition characterized by hypoplasia of the extremities of the skeleton—the nose, jaws, fingers, and toes; the converse of acromegaly. **congenital a.**, Down's syndrome.

acromikria (ak''ro-mik're-ah) acromicria.

acromioclavicular (ah-kro'me-o-klah-vik'u-lar) pertaining to the acromion and clavicle, especially to the articulation between the acromion and clavicle. See also *articulatio acromioclavicularis*.

acromiocroracoid (ah-kro'me-o-kor'ah-koid) pertaining to the acromion and the coracoid process; called also *coracoacromial*.

acromiohumeral (ah-kro'me-o-hu'mer-al) pertaining to the acromion and humerus.

acromion (ah-kro'me-on) [acro- + Gr. *ōmos* shoulder] [NA] the lateral extension of the spine of the scapula, projecting over the shoulder joint and forming the highest point of the shoulder; called also *acromial process* and *acromion scapulae*.

acromionectomy (ah-kro'me-on-ek'to-me) resection of the distal end of the acromion, done in the treatment of acromioclavicular arthritis.

acromioscapular (ah-kro'me-o-skap'u-lar) pertaining to the acromion and scapula.

acromiothoracic (ah-kro'me-o-tho-ras'ik) pertaining to the acromion and thorax.

acromphalus (ah-krom'fah-lus) [acro- + Gr. *omphalos* navel] 1. undue prominence of the navel; sometimes a sign of umbilical hernia. 2. the center of the navel.

acromycosis (ak''ro-mi-ko'sis) (obs.) mycosis of the limbs.

acromyotonia (ak''ro-mi-o-to'ne-ah) [acro- + Gr. *mys* muscle + *tonos* contraction + *-ia*] contracture of the hand or foot resulting in spastic deformity (Sicard, 1915).

acromyotonus (ak''ro-mi-o'to-nus) acromyotonia.

acronarcotic (ak''ro-nar-kot'ik) both acid and narcotic.

acroneurosis (ak''ro-nu-ro'sis) [acro- + *neurosis*] any neuropathy of the extremities.

acronine (a'kro-nēn) chemical name: 3,12-dihydro-6-methoxy-3,3,12-trimethyl-7H-pyrano[2,3-c]acridin-7-one; an antineoplastic agent, C₂₀H₁₉NO₃.

acronym (ak''ro-nim) [acro- + Gr. *onoma* name] a word formed by the initial letters of the principal components of a compound term, as laser or maser.

acro-osteolysis (ak''ro-os'te-ol'i-sis) osteolysis involving the distal phalanges of the fingers and toes.

acropachy (ak''ro-pak'e) [acro- + Gr. *pachys* thick] clubbing of

the fingers and toes, with distal periosteal bone changes and swelling of the overlying soft tissues.

acropachyderma (ak''ro-pak'e-der'mah) [acro- + Gr. *pachys* thick + *derma* skin] a condition marked by thickening of the skin over the face, scalp, and extremities, clubbing of the extremities, and deformities of the long bones; usually associated with acromegaly. Called also *pachyacria*.

acroparalysis (ak''ro-pah-ral'i-sis) [acro- + *paralysis*] paralysis of the extremities.

acroparesthesia (ak''ro-par'es-the'ze-ah) [acro- + *paresthesia*] 1. paresthesia of the tips of the extremities due to nerve compression at any of several levels, or polyneuritis. 2. a disease marked by attacks of tingling, numbness, and stiffness in the extremities, chiefly the fingers, hands, and forearms, sometimes with pain, pallor of the skin, or slight cyanosis. Two forms have been described—the simple form (Schultze's type), which tends to end in acrocyanosis, and the vasomotor or angiospastic form (Nothnagel's type), which may end in recovery or go on to gangrene.

acropathology (ak''ro-pah-thol'o-je) [acro- + *pathology*] the pathology of diseases affecting the extremities.

acropathy (ah-krop'ah-the) [acro- + Gr. *pathos* disorder] any disease of the extremities.

acropeptide (ak''ro-pep'tid) a protein fraction obtained by heating protein to above 140° C. in nonaqueous solvents.

acropetal (ah-krop'e-tal) [acro- + L. *petere* to seek] rising toward the summit.

acrophobia (ak''ro-fō-be-ah) morbid dread of high places.

acroposthitis (ak''ro-pos-thi'tis) [Gr. *acroposthia* prepuce + *-itis*] inflammation of the prepuce.

acropurpura (ak''ro-pur'pu-rah) purpura affecting the extremities, especially the digits.

acroscleroderma (ak''ro-skle'rō-der'mah) acrosclerosis.

acrosclerosis (ak''ro-skle-ro'sis) [acro- + *sclerosis*] a condition combining the features of Raynaud's disease with scleroderma of the distal parts of the extremities, especially of the digits (sclerodactyly), and of the neck and the face, particularly the nose; called also *acroscleroderma*. It is generally regarded as a form of systemic or generalized scleroderma.

acrosome (ak''ro-sōm) [acro- + Gr. *sōma* body] the caplike, membrane-bound structure derived from Golgi elements found at the anterior portion of the nucleus of a spermatozoon; it contains lysosomal enzymes and a proteolytic enzyme, which are believed to facilitate entry of spermatozoa into ova. Called also *acrosomal cap* and *anterior head cap*. See also *acrosome reaction*, under *reaction*.

acrosphenosyndactylia (ak''ro-sfe'no-sin'dak-til'e-ah) acrocephalosyndactylia.

acrostealgia (ak''ros-te-al'je-ah) [acro- + Gr. *osteon* bone + *algos* pain + *-ia*] a painful apophysitis of the bones of the extremities.

acrosyndactyly (ak''ro-sin-dak'til'e) [acro- + Gr. *syn* with + *daktylos* finger] fusion of the terminal portion of two or more digits, with clefts or sinuses present between their proximal phalanges.

acroteric (ak''ro-ter'ik) pertaining to the tips or outermost parts.

Acrotheca pedrosoi (ak''ro-the'kah pē-dro'soi) *Fonsecaea pedrosoi*.

Acrothesium floccosum (ak''ro-the'se-um flok-ko'sum) *Epidermophyton floccosum*.

acrotic (ah-krot'ik) 1. [Gr. *akros* extreme] affecting the surface. 2. [a neg. + Gr. *krotos* beat] pertaining to absence or weakness of the pulse.

acrotism (ak''ro-tizm) [a neg. + Gr. *krotos* beat + *-ism*] absence or imperceptibility of the pulse.

acrotrophodynia (ak''ro-trof'o-din'e-ah) [acro- + Gr. *trophē* nutrition + *odynē* pain + *-ia*] a trophic disorder with neuritis and paresthesia from exposure of extremities to cold and moisture.

acrotrophoneurosis (ak''ro-trof'o-nu-ro'sis) trophoneurotic disturbance of the extremities.

acrylaldehyde (ak''ril-al'de-hīd) acrolein.

acrylamide (ah-kril'ah-mīd) the crystalline amide of acrylic acid, CH₂CHCONH₂.

acrylic (ah-kril'ik) an acrylic resin; see under *resin*.

acrylonitrile (ak''ri-lo-ni'tril) chemical name: 2-propenenitrile. A compound, CH₂:CH·CN, used in the making of plastics and as a pesticide; its vapors are irritant to the respiratory tract and eyes, and may cause systemic poisoning.

A.C.S. American Chemical Society; antireticular cytotoxic serum.

A.C.S.M. American College of Sports Medicine.

act (akt) a doing, or a thing done; a performance involving motor activity. **compulsive a.**, a ritualistic and repetitive act, such as touching the slats in a fence, or handwashing, carried out by an individual contrary to his wishes and standards, being a

feature of the obsessive-compulsive personality. Failure to perform the act leads to increasing anxiety and tension. **Harrison antinarcotic a.**, see under *H. imperious a.*, compulsive a. **impulsive a.**, a sudden unpremeditated act likely to be regretted after its performance but momentarily in synchrony with the emotional needs of the individual; such acts are characteristic of persons with poor behavior controls and low inhibition. **reflex a.**, a relatively fixed action or pattern of response performed as a result of the triggering of a reflex arc and usually without involvement of the higher centers.

Actaea (ak-te'ah) [L.; Gr. *aktē* elder-tree] a genus of ranunculaceous plants. **A. odora'ta**, bitter weed, a plant that causes heavy losses of sheep and goats in the Southwest. **A. richardso'ni**, rubber weed which is poisonous to sheep. **A. spica'ta**, red cohosh.

actaplanin (ak'tah-pla'nin) a glycopeptide antibiotic of unknown structure derived from a species of *Actinoplanes*, containing a chlorophenyl group, glucose, mannose rhamnose, and several unknown amino acids; a veterinary growth stimulant.

ACTe anodal closure tetanus.

ACTH adrenocorticotrophic hormone; see *corticotropin*.

Acthar (ak'thar) trademark for preparations of corticotropin.

ACTH-RF corticotropin (adrenocorticotrophic hormone) releasing factor.

Actidil (ak'ti-dil) trademark for a preparation of triprolidine hydrochloride.

Actidione (ak'ti-di'ōn) trademark for a preparation of cycloheximide.

actin (ak'tin) a protein of the myofibril, localized in the I band; acting along with myosin particles, it is responsible for the contraction and relaxation of muscle. In the absence of salt, it becomes globular (*G-actin*), and in the presence of potassium chloride and adenosine triphosphate it polymerizes, forming long fibers (*F-actin*). Cf. *actomyosin* and *myosin*.

acting out (ak'ting owt) the behavioral expression of hidden emotional conflicts, such as hostile feelings, in various kinds of neurotic behavior, as a defense pattern analogous to somatic conversion.

actinic (ak-tin'ik) [Gr. *aktis* ray] pertaining to those rays of light beyond the violet end of the spectrum that produce chemical effects.

actinic (ak'ti-nis'i-te) actinism.

actiniform (ak-tin'i-form) [Gr. *aktis* ray] formed like a ray; radiate.

actinine (ak'ti-nin) a base occurring in the sea anemone *Actinia equina*.

actinism (ak'ti-nizm) [Gr. *aktis* ray] that property of radiant energy which produces chemical changes, as in photography or heliotherapy; called also *actinicity*.

actinium (ak-tin'e-um) [Gr. *aktis* ray] a rare metallic chemical element occurring in the ores of uranium and having radioactive properties; its atomic number is 89, its atomic weight 227, and its symbol Ac.

actino- (ak'ti-no) [Gr. *aktis*, *aktinos* a ray] a combining form denoting relation to a ray, as ray-shaped, or pertaining to some form of radiation.

actinobacillosis (ak'ti-no-bas'i-lo'sis) a disease of domestic animals resembling actinomycosis and caused by *Actinobacillus lignieresii*, sometimes seen in man; the bacillus forms radiating structures in the tissues.

Actinobacillus (ak'ti-no-bah-sil'lus) a genus of schizomycetes of the family Brucellaceae, order Eubacteriales. **A. actinoides**, an organism isolated from chronic pneumonias in calves and rats and of uncertain relation to the disease. **A. actinomycetemcomitans**, a microorganism found in the actinomycotic granules in bovine actinomycosis and of doubtful relation to the disease. **A. equu'li**, the causative agent of equulosis of foals. **A. ligniere'sii**, the causative agent of actinomycosis-like disease of cattle and other domestic animals. **A. mal'lei**, *Pseudomonas mallei*. **A. pseudomal'lei**, *Pseudomonas pseudomallei*. **A. whitmor'i**, *Pseudomonas pseudomallei*.

actinobolin (ak'ti-nob'o-lin) a broad-spectrum antibiotic elaborated by *Streptomyces griseoviridis* var. *atrofaciens*, C₁₃H₂₀N₂O₆, which exhibits activity against a wide range of bacteria and against various neoplasms, and inhibits cariogenic microorganisms in rats; it is being studied for use in the control of caries in humans.

actinochemistry (ak'ti-no-kem'is-tre) [*actino-* + *chemistry*] chemistry dealing with action of rays of light; photochemistry.

actinocongestin (ak'ti-no-kon-jēs'tin) congestin.

actinocutitis (ak'ti-no-ku-ti'tis) [*actino-* + *cutitis*] radiodermatitis.

actinodaphnine (ak'ti-no-daf'nin) a crystalline alkaloid, C₁₈H₁₇O₄N, from the bark of *Actinodaphne hookeri*.

actinodermatitis (ak'ti-no-der'mah-ti'tis) radiodermatitis.

actinodiastase (ak'ti-no-di'as-tās) an enzyme found in the

body of coelenterate animals which performs the intracellular digestion characteristic of these animals.

actinoerythrin (ak'ti-no-er'i-thrin) an ester of violerythrin, which gives the color to sea anemones.

actinogen (ak-tin'o-jen) a substance which produces radiation.

actinogenesis (ak'ti-no-jen'ē-sis) [*actino-* + Gr. *genesis* production] the production of rays; radiogenesis.

actinogenic (ak'ti-no-jen'ik) producing or forming rays; radiogenic.

actinogenics (ak'ti-no-jen'iks) the science or study of radiation.

actinogram (ak-tin'o-gram) (*obs.*) roentgenogram.

actinograph (ak-tin'o-graf) [*actino-* + Gr. *graphein* to write] 1. (*obs.*) roentgenogram. 2. an instrument for recording variations in the actinic effect of the sun's rays.

actinography (ak'ti-nog'rah-fe) (*obs.*) roentgenography.

actinohematin (ak'ti-no-hem'ah-tin) a red respiratory pigment occurring in certain sea anemones.

actinokymography (ak'ti-no-ki-mog'rah-fe) [*actino-* + Gr. *kyma* wave + *graphein* to write] (*obs.*) motion picture radiography.

actinolite (ak-tin'o-lit) any substance that is markedly changed by light.

actinology (ak'ti-nol'ō-je) [*actino-* + *-logy*] 1. the science of photochemistry; the science of the chemical effects of light. 2. the study of radiant energy.

Actinomadura (ak'ti-no-mad'ū-rah) a genus of microorganisms of the family Actinomycetaceae, order Actinomycetales.

A. madu'rae, a species distributed worldwide in soil, and a common cause of maduromycosis in which the granules in the discharged pus are white; called also *Nocardia madurae*. **A. pelletier'ii**, a species commonly found in north central Africa and the Sudan; it is the cause of maduromycosis in which the granules discharged in the pus are red.

actinometer (ak'ti-nom'ē-ter) [*actino-* + Gr. *metron* measure] 1. an instrument for measuring the intensity of actinic effects. 2. an apparatus for measuring the penetrating power of actinic rays.

actinometry (ak'ti-nom'ē-tre) the measurement of the photochemical power of light.

actinomycelial (ak'ti-no-mi-se'le-al) 1. pertaining to the mycelium of an actinomyces. 2. actinomycetic.

Actinomyces (ak'ti-no-mi'sēz) [*actino-* + Gr. *mykēs* fungus] a genus of microorganisms of the family Actinomycetaceae, order Actinomycetales, made up of three pathogenic species; called also *ray fungus*. **A. actinoides**, *Actinobacillus actinoides*. **A. baudet'ii**, an etiologic agent of actinomycosis in cats and dogs. **A. bo'vis**, a non-acid-fast anaerobic or microaerophilic microor-

Actinomyces bovis (de Rivas)

ganism; the specific etiologic agent of actinomycosis in cattle.

A. erikson'ii, an etiologic agent of pulmonary actinomycosis in which there is no granule formation. **A. israe'lii**, a non-acid-fast anaerobic actinomyces parasitic in the mouth, proliferating in necrotic tissue, and occurring as the etiologic agent in some cases of human actinomycosis. **A. mur'is**, *A. mur'is-rat'ti*, *Streptobacillus moniliformis*. **A. necroph'orus**, *Fusobacterium necrophorum*. **A. rhusiopath'iae**, *Erysipelothrix insidiosa*. **A. vina'ceus**, a species that produces viomycin.

actinomyces (ak'ti-no-mi'sēz), pl. *actinomyce'tes*. An organism of the genus *Actinomyces*.

Actinomycetaceae (ak'ti-no-mi'sē-ta'se-e) a family of Schizomycetes, order Actinomycetales, divided into three genera, the anaerobic or microaerophilic *Actinomyces*, and two aerobic genera, *Nocardia* and *Actinomadura*.

Actinomycetales (ak'ti-no-mi'sē-ta'lēz) an order of Schizomycetes made up of elongated cells which have a definite tendency to branch; it includes four families, Actinomycetaceae, Actinoplanaceae, Mycobacteriaceae, and Streptomycetaceae.

actinomycete (ak'ti-no-mi'sēt) any organism of the order Actinomycetales.

actinomycetes (ak'ti-no-mi-se'tēz) plural of *actinomyces* and *actinomycete*.

actinomycetic (ak'ti-no-mi-set'ik) of or caused by actinomycetes; of or pertaining to organisms of the order Actinomycetales or diseases caused by such organisms.

actinomycetin (ak'ti-no-mi-se'tin) a substance derived from cultures of the actinomycete *Streptomyces albus*; it lyses dead bacteria.

actinomycin (ak'ti-no-mi'sin) a large, complex family of antibiotics obtained from cultures of various species of *Streptomyces*, which have antibacterial, antifungal, and cytotoxic properties. Some, especially actinomycins C (actinomycin) and D (dactinomycin), are used as antineoplastic agents.

actinomycoma (ak'ti-no-mi-ko'mah) [actinomycosis + -oma] a tumor-like reactive lesion due to actinomycetes.

actinomycosis (ak'ti-no-mi-ko'sis) [actino- + Gr. *mykēs* fungus] an infectious disease caused by *Actinomyces israelii* in man and by *A. bovis* in cattle. It is characterized by indolent inflammatory lesions of the lymph nodes draining the mouth (*cervicofacial area*), by intraperitoneal abscesses, including liver abscess, or by lung abscess due to aspiration, in that order of frequency. The lymphadenitis is characterized by slow, relatively painless enlargement of the lymph nodes (lumpy jaw), with reddening of the overlying skin. Infection of the peritoneal cavity or lung is associated with gradually increasing fever and loss of weight, but few localizing signs. Pus drained from a suppurative lesion sometimes contains dense mycelial clusters in the form of yellowish granules (sulfur granules).

actinomycotic (ak'ti-no-mi-ko'tik) pertaining to or affected with actinomycosis.

actinomycotin (ak'ti-no-mi'ko-tin) a therapeutic preparation of cultures of *Actinomyces*, used in treating actinomycosis.

actinon (ak'ti-non) radon-219.

actinoneuritis (ak'ti-no-nu-ri'tis) [actino- + neuritis] radio-neuritis.

actinophage (ak-tin'o-fāj) a virus that causes the lysis of actinomycetes.

actinophytosis (ak'ti-no-fi-to'sis) infection with *Actinomyces* or *Nocardia*.

Actinoplanaceae (ak'ti-no-plah-na'se-e) a family of schizomycetes, order Actinomycetales.

Actinoplanes (ak'ti-no-pla'nēz) [actino- + Gr. *planēs* one who wanders] a genus of schizomycetes of the family Actinoplanaceae, order Actinomycetales, made up of saprophytic forms found in soil and water.

actinopraxis (ak'ti-no-prak'sis) [actino- + Gr. *praxis* doing] (obs.) the diagnostic and therapeutic use of the rays of radioactive substances; radiopraxis.

actinoquinol sodium (ak-tin'o-kwī-nōl) chemical name: 8-ethoxy-5-quinolinesulfonic acid sodium salt; an ultraviolet screen, $C_{11}H_{10}NNaO_4S$.

actinoscopy (ak'ti-nos'ko-pe) [actino- + Gr. *skopein* to view] (obs.) examination by means of the roentgen ray.

actinostereoscopy (ak'ti-no-ste're-os'ko-pe) (obs.) actinoscopy.

actinotherapeutics (ak'ti-no-ther'ah-pu'tiks) actinotherapy.

actinotherapy (ak'ti-no-ther'ah-pe) [actino- + Gr. *therapeia* treatment] treatment of disease with ultraviolet or actinic rays.

actinotoxemia (ak'ti-no-tok-se'me-ah) [actino- + toxemia] radiation sickness.

actinotoxin (ak'ti-no-tok'sin) a crude poison derived from alcoholic extracts of the tentacles of sea anemones.

action (ak'shun) [L. *actio*] any performance of function or movement either of any part or organ or of the whole body. **ball-valve a.**, the intermittent obstruction caused by a free or partially attached foreign body in a tubular or cavitory structure, as by a foreign body in a bronchus, a stone in a bile duct, or a tumor in the cardiac atrium. **buffer a.**, an action that tends to stabilize an inanimate system or a body function or state, such as pH, blood pressure, $[Ca^{++}]$, etc.; most commonly used to denote the stabilization of pH by acid-base buffers (tampon a.). **calorigenic a.**, 1. specific dynamic action. 2. the total energy released in the body by a food or food constituent. **capillary a.**, the transport of a fluid in a tube, caused by adhesion of the fluid to the tube wall. **contact a.**, contact catalysis. **cumulative a.**, action of increased intensity, as may be evidenced after administration of several doses of a drug due to the accumulation of the drug in the body so that the biological effect is greater than after the first dose. Called also *cumulative effect*. **diastatic a.**, **diastatic a.**, the action of diastase in converting starch into glucose. **opsonic a.**, the effect that opsonins exert on bacteria and other cells, increasing their susceptibility to phagocytosis. **reflex a.**, a response resulting from the passage of excitation potential from a receptor to a muscle or gland, over a system of neurons without the necessity of volition. **specific a.**, the action of a drug which is exerted on a certain definite pathogenic organism. **specific dynamic a.**, the increase in metabolism over the basal rate brought about by the ingestion and assimilation of food, varying from 4 to 6 per cent for fats and carbohydrates

to 30 per cent for protein. **tampon a.**, buffer a. **thermogenic a.**, the action of a food or drug in increasing the production of heat or the temperature of the body. **trigger a.**, an action that releases energy whose character has no relation to the process which released it. **vitaminoid a.**, an action resembling the action of vitamins.

activate (ak'ti-vāt) to render active.

activation (ak'ti-va'shun) the act or process of rendering active, as (a) in the transformation of pre-enzyme into an active enzyme by the action of a kinase or another pre-enzyme, or gain in the purifying of sewage by means of activated sludge; (b) the process by which the central nervous system is stimulated into activity through the mediation of the reticular activating system; (c) the deliberate induction of a pattern of electrical activity in the brain, as in the electrocardiographic diagnosis of epilepsy. **lymphocyte a.**, the biochemical interactions that initiate activation of lymphocytes and release of biologically active mediators. This process may be initiated either by antigens or by plant mitogens. **ovum a.**, initiation of ovum development by a spermatozoon or an artificial substitute. **plasma a.**, the stimulation of the cellular metabolism produced by the successful application of nonspecific agents, such as the injection of foreign proteins or of colloidal metals.

activator (ak'ti-va'tor) 1. a substance that renders some other substance active, especially a substance that combines with an inactive enzyme to render it capable of effecting its proper action. Cf. *coenzyme*. 2. a substance that stimulates the development of a particular structure in the embryo. Cf. *inductor* and *organizer*. **monobloc a.**, a removable orthodontic appliance utilizing muscle forces to achieve therapeutic correction; called also *Andresen appliance* and *functional a.* **plasminogen a.**, a substance that has the ability to activate plasminogen and convert it into plasmin, its active form. **tissue a.**, fibrinokinase.

active (ak'tiv) characterized by action; not passive; not expectant. **optically a.**, capable of rotating the plane of polarization of a light wave.

activity (ak-tiv'i-te) the quality or process of exerting energy or of accomplishing an effect. In physical chemistry, the ratio of the fugacity of a substance in a particular experimental state to the fugacity in its standard state at the same temperature. **displacement a.**, irrelevant activity produced by an excess of one of two conflicting drives in an organism. **enzyme a.**, the catalytic effect exerted by an enzyme, expressed as units per milligram of enzyme (specific activity) or as molecules of substrate transformed per minute per molecule of enzyme (molecular activity). **leukemia-associated inhibitory a. (LIA)**, the inhibition of normal marrow cells of donors from forming colonies of granulocytes and macrophages, induced *in vitro* by the presence of cell extracts, or of culture media conditioned by cells, from the bone marrow, spleen, or blood of patients with acute leukemia. **optical a.**, the ability of a chemical compound to rotate the plane of polarization of plane-polarized light. **specific a.**, the ratio of radioactive to nonradioactive atoms or molecules of the same kind.

actodigin (ak'to-dij'in) chemical name: 3β-(β-D-glucopyranosyloxy)-14,23-dihydroxy-24-nor-5β,14β-chol-20(22)-en-21-oic acid γ-lactone; a cardiotonic, $C_{29}H_{44}O_9$.

actometer (ak-tom'ē-ter) a device for measuring activity, as in hyperkinesis, as reflected in locomotion in the horizontal plane.

actomyosin (ak'to-mi'o-sin) a complex of the proteins actin and myosin occurring in muscle. Cf. *actin* and *myosin*.

Actonia (ak-to'ne-ah) a genus of ascomycetous fungi of the order Endomycetales, described as producing creamy patches in the throat resembling diphtheria; it is probably not a valid genus.

ACTP adrenocorticotrophic polypeptide, a hydrolysate of ACTH (corticotropin).

actual (ak'chu-al) [L. *actualis*] real rather than potential.

actuary (ak'chu-a're) a person whose business is the calculation of premiums and risks in insurance.

acu- (ak'u) [L. *acus* needle] a combining form denoting relationship to a needle.

Acuaria spiralis (ak'u-a're-ah spi-ra'lis) a filarioid parasite in the proventriculus and esophagus of fowls.

acuclosure (ak'u-klo'zhur) arrest of hemorrhage by means of a needle.

acufilopressure (ak'u-fi'lo-presh'er) [acu- + L. *filum* thread + *pressura* pressure] a combination of acupressure and ligation.

acuity (ak-hu'i-te) [L. *acuitas* sharpness] clarity or clearness, especially of the vision. **Vernier a.**, displacement threshold; see under *threshold*.

aculeate (ah-ku'le-āt) [L. *aculeatus* thorny] covered with sharp points; pointed.

acuminate (ah-ku'mī-nāt) [L. *acuminatus*] sharp pointed.

acupoint (ak'u-point) a specific site of needle insertion along a body meridian in acupuncture.

acupression (ak'u-presh'un) acupressure.

acupressure (ak'u-presh'er) [acu- + L. *pressio* or *pressura* pres-

sure] compression of a bleeding vessel by inserting needles into adjacent tissue.

acupuncture (ak''u-pungk'chūr) [*acu-* + *L. punctura* a prick] the Chinese practice of piercing specific peripheral nerves with needles to relieve the discomfort associated with painful disorders, to induce surgical anesthesia, and for therapeutic purposes.

acus (a'kus) [*L.*] a needle or needle-like process.

acusection (ak''u-sek'shun) cutting by means of the electrosurgical needle.

acusector (a' ''u-sek'tor) [*acu-* + *L. sectere* to cut] an electric needle used like a scalpel for incising tissues.

acute (ah-kūt') [*L. acutus* sharp] 1. sharp; poignant. 2. having a short and relatively severe course.

acutorsion (ak''u-tor'shun) [*acu-* + *L. torsio* a twisting] the twisting of a blood vessel with a needle for the control of hemorrhage.

acyanoblepsia (ah-si''ah-no-blep'se-ah) [*a neg.* + *Gr. kyanos* blue + *blepsia* vision] inability to distinguish blue tints.

acyanopsia (ah-si''ah-nop'se-ah) acyanoblepsia.

acyanotic (ah-si''ah-not'ik) characterized by absence of cyanosis.

acyclia (ah-si'kle-ah) arrest of circulation of body fluids.

acyclic (a-si'klik) 1. in chemistry, having an open-chain structure; aliphatic. 2. occurring independently of a cycle, as of the menstrual cycle.

acysis (ah'si-e'sis) [*a neg.* + *Gr. kyēsis* pregnancy] 1. sterility in women. 2. absence of pregnancy.

acyl (as'il) an organic radical derived from an organic acid by removal of the hydroxyl group.

Acylanid (as'il-an'id) trademark for a preparation of acetyldigitoxin.

acylase (as'i-lās) any enzyme that catalyzes the hydrolysis of acylated amino acids.

acylation (as'ē-la'shun) the introduction of an acid radical into the molecule of a chemical compound.

acylmutase (as'il-mu'tās) an enzyme of the isomerase class that catalyzes the intermolecular transfer of acyl groups. **lysolecithin a.**, an enzyme that catalyzes the conversion of 2- to 3-lysolecithin.

acylphosphatase (as'il-fos'fah-tās) acylphosphate hydrolase: an enzyme occurring in muscle, liver, and kidney that catalyzes the hydrolysis of an acyl phosphate to an anion and an orthophosphate.

acyltransferase (as'il-trans'fer-ās) any of a group of enzymes that catalyze the transfer of an acyl group from one substance to another.

acystia (ah-sis'te-ah) [*a neg.* + *Gr. kystis* bladder] congenital absence of the bladder.

acystinervia (ah-sis'tē-ner've-ah) [*a neg.* + *Gr. kystis* bladder + *L. nervus* nerve + *-ia*] defective nervous tone in the bladder.

acystineuria (ah-sis'te-nu're-ah) acystinervia.

Acystosporidia (ah-sis'to-spo-rid'e-ah) [*a neg.* + *Gr. kystis* bladder + *sporidia*] *Haemosporidia*.

AD diphenylchlorarsine; anodal duration.

A.D. abbreviation for *L. auris dextra*, right ear.

ad [*L. ad* to] used in writing prescriptions to indicate that a substance (usually a diluent) be added up to a certain amount.

ad- [*L. ad* to] a prefix expressing to or toward, addition to, nearness, or intensification.

-ad 1. [*L. ad* to] adverbial suffix expressing toward, as in cephalad, caudad. 2. [*Gr.*] suffix indicating a numerical group, as in triad, or derivation from or connection with.

A.D.A. American Dental Association; American Diabetic Association; American Dietetic Association.

adactylia (ah'dak-til'e-ah) adactyly.

adactylism (a-dak'ti-lizm) adactyly.

adactylous (a-dak'ti-lus) pertaining to adactyly; lacking digits on the hand or foot.

adactyly (a-dak'ti-le) [*a neg.* + *Gr. daktylos* finger] a developmental anomaly characterized by the absence of digits on the hand or foot.

adamantine (ad''ah-man'tin) pertaining to the enamel of the teeth.

adamantinocarcinoma (ad''ah-man'ti-no-kar''-si-no' mah) (*obs.*) ameloblastic sarcoma.

adamantinoma (ad''ah-man'ti-no' mah) ameloblastoma. **pituitary a.**, craniopharyngioma. **a. polycysticum**, an adamantinoma (ameloblastoma) that has undergone cystic degeneration.

adamantoblast (ad''ah-man'to-blast) [*Gr. adamas* a hard substance + *blastos* germ] ameloblast.

adamantoblastoma (ad''ah-man'to-blas-to' mah) ameloblastoma.

adamantoma (ad''ah-man-to' mah) ameloblastoma.

adamas (ad''ah-mas) [*Gr.* "unconquerable"] anything fixed or unalterable. **a. den'tis**, the enamel of the teeth.

Adami's theory (ad-am'ēz) [John George Adami, Canadian pathologist, 1862–1926] see under *theory*.

Adamkiewicz's demilunes, test (reaction) (ah-dam-ke'viks) [Albert Adamkiewicz, Polish pathologist, 1850–1921] see under *demilune* and *test*.

Adams' operation, saw (ad'amz) 1. [William Adams, English surgeon, 1810–1900] see under *operation*, defs. 1, 2, and 3, and under *saw*. 2. [Sir William Adams, British surgeon, 1783–1827] see under *operation*, def. 5.

Adams-Stokes disease (syncope, syndrome) [Robert Adams, Irish physician, 1791–1875; William Stokes, Irish physician, 1804–1878] see under *disease*.

adamsite (ad'amz-it) diphenylaminearsine chloride.

Adansonia (ad''an-so'ne-ah) [after Michel Adanson, French naturalist, 1727–1806] a genus of trees in the Bombacaceae family. *A. digitata* is the baobab, a huge tree of Africa, found also in India. In Africa, the young leaves and seeds are eaten as food and the pulp is widely used for its diaphoretic properties.

adansonian (ad''an-son'ne-an) named for Michel Adanson; see *numerical taxonomy*, under *taxonomy*.

adaptation (ad''ap-ta'shun) [*L. adaptare* to fit] 1. the adjustment of an organism to its environment, or the process by which it enhances such fitness. 2. immunization. 3. the normal ability of the eye to adjust itself to variations in the intensity of light; the adjustment to such variations. 4. the decline in the frequency of firing of a neuron, particularly of a receptor, under conditions of constant stimulation. 5. in dentistry, (a) the proper fitting of a denture, (b) the degree of proximity and interlocking of restorative material to a tooth preparation, (c) the exact adjustment of bands to teeth. 6. in microbiology, the adjustment of bacterial physiology to a new environment; see *genetic a.* and *phenotypic a.* **color a.**, 1. fading of hue and dulling of brightness of visual perceptions with prolonged stimulation. 2. adjustment of vision to degree of brightness or color tone of illumination indoors or out; includes *dark a.* **dark a.**, the adaptation of the eye to vision in the dark or in reduced illumination (night vision), with build-up of rhodopsin in the retinal rods; called also *scotopic a.* **enzymatic a.**, inducible enzyme synthesis; see under *synthesis*. **genetic a.**, the natural selection of the progeny of a mutant better adapted to a new environment; especially seen in the development of microbes resistant to chemotherapeutic agents or to other inhibitors of growth (drug resistance). **light a.**, adaptation of the eye to vision in the sunlight or in bright illumination (photopia), with reduction in the concentration of the photosensitive pigments of the eye; called also *photopic a.* **phenotypic a.**, a change in the properties of an organism, without any change in genotype, in response to a change in the environment. In microbiology, especially the formation of specific enzymes required for the utilization of new foodstuffs (induced enzyme formation), or a change in cell size and composition with variation in growth rate. Called also *physiological a.* **photopic a.**, light a. **retinal a.**, the adjustment of the photoreceptor cell of the eye to the surrounding illumination: **scotopic a.**, dark a.

adapter (ah-dap'ter) a device by which different parts of an apparatus or instrument are connected.

adaptometer (ad''ap-tom'ē-ter) [*adaptation* + *Gr. metron* measure] an instrument for measuring the time required for retinal adaptation: i.e., for regeneration of the visual purple. It is used to help detect night blindness, vitamin A deficiency, and retinitis pigmentosa. **color a.**, an instrument using colored and neutral filters and control of illuminant to demonstrate adaptation of eye to color or light.

adaxial (ad-ak'se-al) located alongside of, or directed toward, the axis.

ADC anodal duration contraction; axiodistocervical.

add. abbreviation for *L. adde* add, or *adde'tur* let there be added; used in writing prescriptions.

adde (ad'e) [*L.*] add.

Ad def. an. abbreviation for *L. ad defectio'nem an'imi*, to the point of fainting.

Ad deliq. abbreviation for *L. ad deli'quium*, to fainting.

adder (ad'er) 1. *Vipera berus*. 2. any of many venomous snakes of the family Viperidae, such as the puff adder and the European viper. See table accompanying *snake*. **death a.**, an extremely venomous elapid snake, *Acanthophis antarcticus* of Australia and New Guinea, with a short, stout body and a tail with a spine at the tip. **puff a.**, an extremely venomous, brightly colored, viperine snake, *Bitis arietans*, of Africa and Arabia; when annoyed it inflates its stubby body and hisses loudly.

addict (ad'ikt) a person who cannot resist a habit, especially the use of drugs or alcohol, for physiological or psychological reasons.

addiction (ah-dik'shun) the state of being given up to some habit, especially strong dependence on a drug. **alcohol a.**, alcoholism. **drug a.**, a state of periodic or chronic intoxication produced by the repeated consumption of a drug, characterized by (1) an overwhelming desire or need (compulsion) to continue use

of the drug and to obtain it by any means, (2) a tendency to increase the dosage, (3) a psychological and usually a physical dependence on its effects, and (4) a detrimental effect on the individual and on society. Cf. *habituatio*, def. 3. **opium a.**, the habitual misuse of opium or the consequences of such misuse; see also *drug a.* **polysurgical a.**, habitual seeking of surgical treatment.

addiment (ad'i-ment) complement.

Addis count (method, test) [Thomas Addis, San Francisco physician, 1881-1949] see under *count*.

addisin (ad'i-sin) a substance present in the gastric juice that has stimulating power on bone-marrow formation; such an extract from the gastric juice of the hog is used in pernicious anemia.

Addison's anemia, disease, keloid (ad'i-sonz) [Thomas Addison, English physician, 1793-1860; he was a colleague of Bright at Guy's Hospital] see *pernicious anemia*, under *anemia*; see *circumscribed scleroderma*, under *scleroderma*; and see under *disease*.

Addison's planes, point (ad'i-sonz) [Christopher Addison, English anatomist, 1869-1951] see under *plane* and *point*.

addisonian (ad'di-so'ne-an) named for Thomas Addison; see *pernicious anemia*, under *anemia*, and see under *disease*.

addisonism (ad'i-son-izm') a group of symptoms associated with tuberculosis, consisting of pigmentation and debility, resembling those of Addison's disease.

additive (ad'i-tiv) characterized by addition; see also under *effect*. 2. a substance, as a flavoring agent, preservative, or vitamin, added to another substance to improve its appearance, increase its nutritional value, etc.

adducent (ah-du'sent) performing adduction.

adduct (ah-duk't') [L. *adducere* to draw toward] 1. to draw toward the median plane or (in the digits) toward the axial line of a limb. 2. a chemical addition product.

adduction (ah-duk'shun) the act of adducting or the state of being adducted.

adductor (ah-duk'tor) [L.] that which adducts; see *Table of Musculi*.

Adelmann's method, operation (ad'el-manz) [Georg Franz Blasius Adelmann, German surgeon, 1811-1888] see under *method* and *operation*.

adelomorphie (ah-del'o-mor'fik) adelomorphous.

adelomorphous (ah-del'o-mor'fus) [Gr. *adēlos* not evident + *morphē* form] not having a clearly defined form; see under *cell*.

aden- see *adeno-*.

adenalgia (ad'ē-nal'je-ah) [*aden-* + Gr. *algos* pain + *-ia*] pain in a gland; called also *adenodynia*.

adenase (ad'ē-nās) [*aden-* + *-ase*] a deaminizing enzyme that catalyzes the conversion of adenine into hypoxanthine and ammonia.

adenasthenia (ad'en-as-the'ne-ah) [*aden-* + *a neg.* + Gr. *sthenos* strength + *-ia*] deficient glandular activity.

adendric (ah-den'drik) adendritic.

adendritic (ah'den-drit'ik) [*a neg.* + Gr. *dendron* tree] lacking dendrites.

adenectomy (ad'ē-nek'to-me) [*aden-* + Gr. *ektomē* excision] surgical removal of a gland.

adenectopia (ad'ē-nek'to'pe-ah) [*aden-* + Gr. *ektōpos* displaced + *-ia*] malposition or displacement of a gland.

adenemphraxis (ad'ē-nem-frak'sis) [*aden-* + Gr. *emphraxis* stoppage] (*obs.*) glandular obstruction.

adenia (ah-de'ne-ah) chronic great enlargement of the lymphatic glands; see also *lymphoma* and *pseudoleukemia*.

adenic (ah-de'nik) pertaining to or resembling a gland.

adeniform (ah-den'i-form) [*aden-* + L. *forma* shape] resembling a gland, especially in shape.

adenine (ad'ē-nīn) a white crystalline base, 6-aminopurine, C₅H₅N₅, found in various animal and vegetable tissues as one of the purine base constituents of DNA and RNA. It is one of the decomposition products of nuclein and may be found in the urine. Adenine is nonpoisonous, and occurs in the form of pearly crystals. **a. arabinoside**, vidarabine. **a. hypoxanthine**, a leuko-maine, C₅H₅N₅ + C₄H₄N₄O, a compound of adenine and hypoxanthine. **a. nucleotide**, adenylic a. **a. sulfate**, white crystals, (C₅H₅N₅)₂·H₂SO₄, formerly used in nucleotide therapy in agranulocytosis.

adenitis (ad'ē-ni'tis) inflammation of a gland. Cf. *acinitis*. **acute epidemic infectious a.** (*obs.*), infectious mononucleosis. **acute salivary a.**, Pirera's name for an epidemic disease in Naples and vicinity, marked by inflammation of the parotid and other salivary glands, enlargement of the spleen, and pain in the axillary glands. **cervical a.**, a condition characterized by enlarged, inflamed, and tender lymph nodes of the neck; seen in certain infectious diseases of children, such as acute infections of the throat. **mesenteric a.**, mesenteric lymphadenitis. **phlegmonous a.**, inflammation of a gland and the surrounding connective tissue; called also *adenophlegmon*. **a. tropica'lis**, venereal lymphogranuloma.

Adenium (ah-de'ne-um) a genus of African plants of the family Apocynaceae which are used for arrow poisons; they contain cardioactive glycosides (e.g., somalin) which are close in structure and action to the digitalis glycosides.

adenization (ad'ē-ni-za'shun) the assumption by other tissue of an abnormal glandlike appearance; adenoid change.

adeno-, aden- (ad'ē-no, ad'en) [Gr. *adēn*, *adenos* gland] a combining form denoting relationship to a gland or glands.

adenocanthoma (ad'ē-no-ak'an-tho'mah) an adenocarcinoma in which some or the majority of the cells exhibit squamous differentiation; called also *adenocarcinoid*.

adenoameloblastoma (ad'ē-no-ah-mel'o-blas-to'mah) an odontogenic tumor characterized by the formation of ductlike structures in place of or in addition to a typical ameloblastic pattern.

adenoangiosarcoma (ad'ē-no-an'je-o-sar-ko'mah) (*obs.*) an angiosarcoma involving gland structures.

adenoblast (ad'ē-no-blast') [*adeno-* + Gr. *blastos* germ] an embryonic cell that gives rise to glandular tissue.

adenocarcinoid (ad'ē-no-kang'kroid) adenocanthoma.

adenocarcinoma (ad'ē-no-kar'si-no'mah) carcinoma derived from glandular tissue or in which the tumor cells form recognizable glandular structures; adenocarcinomas may be classified according to the predominant pattern of cell arrangement, as papillary, alveolar, etc., or according to a particular product of the cells, as mucinous adenocarcinoma. **acinar a.**, **acinous a.**, alveolar a. **alveolar a.**, adenocarcinoma composed of cells arranged in the form of alveoli. **follicular a.**, one in which the cells are arranged in the form of follicles, usually of thyroid origin. **a. of kidney**, renal cell carcinoma. **mucinous a.**, mucinous carcinoma. **papillary a.**, **polypoid a.**, an adenocarcinoma in which the tumor elements are arranged as finger-like processes or as a solid spherical nodule projecting from an epithelial surface.

adenocoele (ad'ē-no-sē'l') [*adeno-* + Gr. *kēlē* tumor] an adenomatous cystic tumor.

adenocellulitis (ad'ē-no-sel'u-li'tis) inflammation of a gland and the tissue around it.

adenochirapsology (ad'ē-no-ki'rap-sol'o-je) [*adeno-* + Gr. *cheir* hand + *hapsis* touch + *-logy*] see *royal touch*, under *touch*.

adenochondroma (ad'ē-no-kon-dro'mah) a tumor containing both adenomatous and chondromatous elements, as in the mixed tumor of salivary gland; called also *chondroadenoma*.

adenochondrosarcoma (ad'ē-no-kon'dro-sar-ko'mah) (*obs.*) a tumor containing the elements of adenoma, chondroma, and sarcoma.

adenocyst (ad'ē-no-sist') [*adeno-* + Gr. *kystis* bladder] adenocystoma.

adenocystoma (ad'ē-no-sis-to'mah) an adenoma in which there is cyst formation. **papillary a. lymphomato'sum**, a rare cystic tumor containing epithelial and lymphoid tissues found in the regions of the submaxillary and parotid glands; called also *Warthin's tumor* and *adenolymphoma*.

adenocyte (ad'ē-no-sit') [*adeno-* + Gr. *kytos* hollow vessel] a mature secretory cell of a gland.

adenodynia (ad'ē-no-din'e-ah) [*adeno-* + Gr. *odynē* pain + *-ia*] pain in a gland.

adenoepithelioma (ad'ē-no-ep'i-the'le-o'mah) a tumor composed of glandular and epithelial elements.

adenofibroma (ad'ē-no-fi-bro'mah) a tumor composed of connective tissue containing glandular structures. **a. edemato'des**, a tumor composed of glandular and connective tissue elements in which there is marked edema of the stroma, as in nasal polyp.

adenofibrosis (ad'ē-no-fi-bro'sis) fibroid change in a gland.

adenogenous (ad'ē-noj'ē-nus) [*adeno-* + Gr. *gennan* to produce] originating from glandular tissue.

adenographic (ad'ē-no-graf'ik) pertaining to adenography.

adenography (ad'ē-nog'rah-fe) [*adeno-* + Gr. *graphein* to write] roentgenography of a gland or glands.

adenohypersthenia (ad'ē-no-hi'per-sthe'ne-ah) [*adeno-* + Gr. *hyper* over + *sthenos* strength + *-ia*] (*obs.*) excessive glandular activity.

adenohypophyseal (ad'ē-no-hi'po-fiz'e-al) pertaining to the adenohypophysis.

adenohypophysectomy (ad'ē-no-hi-pof'i-sek'to-me) excision of the glandular portion (the adenohypophysis) of the hypophysis.

adenohypophysial (ad'ē-no-hi'po-fiz'e-al) adenohypophyseal.

adenohypophysis (ad'ē-no-hi-pof'i-sis) [*adeno-* + *hypophysis*] [NA alternative] the anterior (or glandular) lobe of the pituitary gland (hypophysis), as distinguished from the posterior lobe, or neurohypophysis. See *pituitary gland*, under *gland*.

adenoid (ad'ē-noid) [*aden-* + Gr. *eidos* form] 1. resembling a gland. 2. in the plural, lymphoid tissue that normally exists in the nasopharynx of children and is known as the pharyngeal tonsil. Also, a popular term for hypertrophy of this tissue. 3. pertaining to adenoids.

Adenoids

adenoidectomy (ad''ē-noid-ek/'to-me) [*adenoid* + Gr. *ektomē* excision] excision of the adenoids.

adenoidism (ad''ē-noid-izm) the symptom-complex which results from the presence of greatly enlarged adenoids.

adenoiditis (ad''ē-noid-i'tis) inflammation of the adenoid tissue of the nasopharynx.

adenoleiomyofibroma (ad''ē-no-li''o-mi''o-fi-bro'mah) a leiomyofibroma containing adenomatous elements.

adenolipoma (ad''ē-no-li-po'mah) a tumor composed of both glandular and fatty tissue elements.

adenolipomatosis (ad''ē-no-lip''o-mah-to'sis) a condition characterized by the development of multiple adenolipomas.

adenologaditis (ad''ē-no-log'ah-di'tis) [*adeno* + Gr. *logades* whites of the eyes + *-itis*] 1. ophthalmia neonatorum. 2. inflammation of the glands of the conjunctiva.

adenology (ad''ē-nol'o-je) [*adeno* + *-logy*] the scientific study of or the body of knowledge relating to glands.

adenolymphitis (ad''ē-no-lim-fi'tis) lymphadenitis.

adenolymphocele (ad''ē-no-lim'fo-sēl) [*adeno* + *lymphocele*] lymphadenocoele.

adenolymphoma (ad''ē-no-lim-fo'mah) papillary adenocystoma lymphomatosum (Warthin's tumor) of salivary glands.

adenoma (ad''ē-no'mah) [*adeno* + *-oma*] a benign epithelial tumor in which the cells form recognizable glandular structures or in which the cells are clearly derived from glandular epithelium. **acidophilic a.**, a tumor, usually found in the anterior lobe of the pituitary gland, whose cells stain with acid dyes; such pituitary tumors may give rise to excessive secretion of growth hormone, resulting in gigantism or acromegaly. **a. adamantinum**, ameloblastoma. **a. alveola're**, an adenoma whose cells are arranged like those of an alveolar gland. **basophil a.**, **basophilic a.**, a tumor of the anterior lobe of the pituitary gland whose cells stain with basic dyes and may give rise to excessive secretion of adrenocorticotrophic hormone (ACTH), resulting in Cushing's syndrome. **bronchial a's**, adenomas situated in the submucosal tissues of large bronchi; they have a glandular structure and are thought to be derived from the mucous glands of the bronchi or from the ducts of those glands. Sometimes composed of well differentiated cells and usually circumscribed, these tumors have two histologic forms: carcinoid and cylindroma. Although termed "adenomas," these tumors are now recognized as being of low grade malignancy. **carcinoid a. of bronchus**, carcinoid tumor of bronchus; see under *tumor*. **chief-cell a.**, adenoma of the parathyroid composed of solid masses of small chief cells similar to those seen in the normal gland. **chromophobe a.**, **chromophobic a.**, a tumor of the anterior lobe of the pituitary gland whose cells do not stain readily with either acid or basic dyes and whose presence may be associated with hypopituitarism; although classically these adenomas have been said to be composed of sparsely granulated or degranulated (nonfunctioning) cells, some contain functioning cells and may be associated with a hyperpituitary state. **cortical a's**, minute adenomas in the cortex of the kidney, arising from the renal tubules. **a. des'truens** (*obs.*), an invasive, destructive adenocarcinoma of the stomach. **a. endometrio-i-des ova'rii**, ovarian endometriosis. **eosinophil a.**, a tumor of eosinophilic cells of the anterior lobe of the pituitary gland whose presence is associated with acromegaly and gigantism. **a. fibro'sum**, fibroadenoma. **follicular a.**, adenoma of the thyroid in which the cells are arranged in the form of follicles. **a. gelatino'sum**, colloid goiter. **Getsowa's a.** (*obs.*), Hürthle cell tumor; see under *tumor*. **a. hidradenoi'des**, hidradenoma. **Hürthle cell a.**, see under *tumor*. **islet a.**, **langerhansian a.**, an islet cell adenoma of the pancreas. **a's of kidney**, cortical a's. **malignant a.**, adenocarcinoma. **mucinous a.**, an epithelial tumor whose cells produce mucin. **a. ova'rii testicula're**, a Sertoli cell tumor of the ovary, now generally regarded as a variant of arrhenoblastoma. **oxyphilic granular cell a.**, a benign adenoma of salivary glands composed of acidophilic granular cells; called also *oncocyoma* and *pyknocyoma*. **papillary cystic a.**, a form of adenoma in which the alveoli are distended by fluid or by outgrowths of tissue. **pituitary a.**, a benign neoplasm of the pituitary gland; see *acidophilic a.*, *basophilic a.*, and *chromophobe a.* **pleomorphic a.**, a benign mixed tumor of adult glandular epithelium, commonly of the parotid gland. **racemose a.**, an adenoma whose structure

resembles that of a racemose gland. **sebaceous a.**, hypertrophy or benign hyperplasia of a sebaceous gland. **a. seba'ceum**, nevus hyperplasia of sebaceous glands, forming multiple yellow papules or nodules of the face (Balzer type); a cutaneous malformation or hamartoma of the face involving blood vessels and connective tissue associated with the tuberous sclerosis complex (Pringle type). In the Pringle type the term adenoma sebaceum is a misnomer since the sebaceous glands are rarely involved. Called also *Pringle's disease*. **a. sim'plex** (*obs.*), simple hyperplasia of a gland. **a. sudorip'arum**, adenoma of the sweat glands; called also *spiradenoma* and *hidradenoma*. **tubular a.**, a Sertoli cell tumor. **a. tubula're testicula're ova'rii**, a Sertoli cell tumor of the ovary, now generally recognized as a variant of arrhenoblastoma; called also *adenoma ovarii testiculare*. **villous a.**, a large soft papillary polyp on the mucosa of the large intestine.

adenomalacia (ad''ē-no-mah-la'she-ah) [*adeno* + Gr. *malakia* softness] abnormal softening of a gland.

adenomatoid (ad''ē-no'mah-toid) resembling adenoma.

adenomatosis (ad''ē-no-mah-to'sis) a condition characterized by development of numerous adenomatous growths. **multiple endocrine a.**, polyendocrine a. **a. o'ris**, enlargement of the mucous glands of the lip without secretion or inflammation. **pluriglandular a.**, polyendocrine a. **polyendocrine a.**, a rare syndrome in which there are adenomas or hyperplasia of more than one endocrine tissue; common sites are the anterior pituitary gland, the islets of Langerhans, and the parathyroid. The Zollinger-Ellison syndrome may occur in affected families. Called also *multiple endocrine a.*, *pluriglandular a.*, *polyendocrinoma*, and *Wermer's syndrome*. **pulmonary a.**, 1. alveolar cell carcinoma. 2. a chronic progressive pneumonia of sheep, probably of viral origin, with adenomatous proliferation in the alveoli and small bronchioles. Called also *jaagsiekte* and *lunger disease*.

adenomatous (ad''ē-nom'ah-tus) pertaining to adenoma or to nodular hyperplasia of a gland.

adenomegaly (ad''ē-no-meg'ah-le) enlargement of the glands.

adenomere (ad''ē-no-mēr'') [*adeno* + Gr. *meros* part] the blind terminal portion of a developing gland, becoming the functional portion of the organ.

adenomyoepithelioma (ad''ē-no-mi''o-ep'i-the-le-o'mah) adenoid cystic carcinoma. **a. of stomach**, malformation of the gastric glands or Brunner's glands.

adenomyofibroma (ad''ē-no-mi''o-fi-bro'mah) a fibroma containing adenomatous and myomatous tissue.

adenomyoma (ad''ē-no-mi-o'mah) [*adeno* + Gr. *mys* muscle + *-oma*] see *adenomyosis*. **a. psammopapilla're**, a multiple papillary tumor in the broad ligament, described by Pick.

adenomyomatosis (ad''ē-no-mi''o-mah-to'sis) the formation of multiple adenomyomatous nodules in the parauterine tissues or in the uterus.

adenomyomatous (ad''ē-no-mi-o'mah-tus) pertaining to or resembling adenomyoma.

adenomyometritis (ad''ē-no-mi''o-mē-tri'tis) adenomyosis.

adenomyosarcoma (ad''ē-no-mi''o-sar-ko'mah) a mixed mesodermal tumor in which striated muscle cells are one component. **embryonal a.**, Wilms' tumor.

adenomyosis (ad''ē-no-mi-o'sis) a benign condition characterized by ingrowth of the endometrium into the uterine musculature, sometimes associated with an overgrowth of the latter. If the lesion forms a circumscribed tumor-like nodule, it is called *adenomyoma*. Called also *endometriosis interna* or *uterina*, *adenomyosis uteri*, and *adenomyometritis*. **a. exter'na**, endometriosis. **stromal a.**, stromatosis. **a. subbasa'lis**, a bandlike, usually diffuse and superficial invasion of the myometrium by epithelial elements, accompanied by small clusters of endometrial stromal cells. **a. tu'bae**, 1. an old term for salpingitis isthmica nodosa. 2. the growth of the endometrium into the lumen of the uterine tube from the uterus, replacing the endosalpinx. **a. u'teri**, adenomyosis.

adenomyxoma (ad''ē-no-mik-so'mah) (*obs.*) a tumor composed of both glandular and mucous elements.

adenomyxosarcoma (ad''ē-no-mik'so-sar-ko'mah) (*obs.*) a sarcoma containing both glandular and mucous elements.

adenoncus (ad''ē-nong'kus) [*adeno* + Gr. *onkos* weight] enlargement of a gland.

adenoneural (ad''ē-no-nu'ral) pertaining to a gland and a nerve.

adenopathy (ad''ē-nop'ah-the) [*adeno* + Gr. *pathos* disease] enlargement of the glands, especially of the lymphatic glands.

adenopharyngitis (ad''ē-no-far'in-ji'tis) [*adeno* + Gr. *pharynx* pharynx + *-itis*] inflammation of the adenoids and pharynx, usually involving the tonsils.

adenophlegmon (ad''ē-no-fleg'mon) [*adeno* + *phlegmon*] phlegmonous adenitis.

adenophthalmia (ad''ē-nof-thal'me-ah) [*adeno* + Gr. *ophthalmos* eye + *-ia*] inflammation of the meibomian glands.

adenopituitocyte (ad''ē-no-pi-tu'i-sit) see *pituitocyte*.

adenosarcoma (ad''ē-no-sar-ko'mah) a mixed tumor composed of sarcomatous and glandular elements, as Wilms' tumor. **embryonal a.**, Wilms' tumor.

adenosclerosis (ad''ē-no-skle-ro'sis) [*adeno-* + Gr. *sklērōsis* hardening] the hardening of a gland.

adenosinase (ad-ē-no'sin-ās) an enzyme that splits adenosine hydrolytically.

adenosine (ah-den'o-sēn) a nucleoside, adenine-D-ribose, $C_5H_5N_5 \cdot CH(CHOH)_2 \cdot CH_2OH$, derived from nucleic acid. **a.**

3':5'-cyclic phosphate, a cyclic nucleotide participating in the activities of many hormones, including catecholamines, ACTH, vasopressin, etc. Because this compound is formed from ATP by the action of adenyl cyclase which in turn is stimulated by the interaction of the aforementioned hormones with the plasma membrane of target cells, it has been called the "second messenger" in a mechanism of hormone action. Called also **cyclic AMP**. **a. deaminase**, an enzyme that converts adenosine into inosine. **a. diphosphate (ADP)**, a product, along with organic phosphate, of the hydrolysis of adenosine triphosphate (ATP), with the release of free energy; ADP is then readily rephosphorylated to ATP. **a. hydrolase**, an enzyme that converts adenosine into adenine and pentose. **a. monophosphate (AMP)**, adenylic acid. **a. phosphate**, any of the three interconvertible compounds in which adenosine is attached through its ribose group to one (a. monophosphate), two (a. diphosphate), or three (a. triphosphate) phosphoric acid molecules. **a. 3'-phosphate**, see **adenylic acid**, under **acid**. **a. 5'-phosphate**, see **adenylic acid**, under **acid**. **a. triphosphate (ATP)**, a nucleotide compound occurring in all cells, where it represents energy storage in the form of high-energy phosphate bonds; free energy is released when it is hydrolyzed to ADP and a phosphate group.

adenosinetriphosphatase (ah-den'o-sin-tri-fos'fah-tās) any enzyme that catalyzes the splitting of adenosine triphosphate, with liberation of inorganic phosphate and release of free energy; abbreviated ATPase. These enzymes are activated by Ca^{++} and/or Mg^{++} or by Na^+ and K^+ and are associated with formed elements, such as intracellular structures and cell membranes. Thus myosin ATPase is concerned in muscle contraction, mitochondrial ATPase in securing energy from biological oxidations, etc.

adenosis (ad''ē-no'sis) 1. any disease of the glands. 2. the abnormal development or formation of gland tissue. **blunt duct a.**, a form of mammary dysplasia characterized by dominance of the proliferation of the epithelial parenchyma; it is often accompanied by fibrosis and cystic disease of the breast. **a. vagi'nae**, the presence in the vagina of multiple ectopic areas of folded endocervical mucosa.

S-adenosylmethionine (ah-den'o-sil-mē-thi'o-nēn) a reaction product of ATP and methionine in which the S atom of methionine is bound to the ribose of adenosine; it serves as a methyl donor in transmethylation reactions.

adenotome (ad''ē-no-tōm'') [*adeno-* + Gr. *tomē* cutting] an instrument for excision of the adenoids.

adenotonsillectomy (ad''ē-no-ton'sil-lek'to-me) removal of the adenoids and tonsils.

adenous (ad''ē-nus) pertaining to a gland.

adenoviral (ad''ē-no-vi'ral) pertaining to or caused by adenoviruses.

adenovirus (ad''ē-no-vi'rus) one of a group of viruses found in all parts of the world, causing disease of the upper respiratory tract and conjunctivae, and also present in latent infections in normal persons. Some 31 differentiable serotypes have been described and given numbers. Types 1, 2, and 5 have been recovered from tonsils and adenoids of persons not ill with respiratory disease, as well as from patients with febrile respiratory infections; types 3, 4, 7, 14, and 21 have been isolated from patients with acute respiratory disease. Adenovirus type 3 is the specific etiologic agent of pharyngoconjunctival fever, and adenovirus type 8 is thought to be the specific cause of epidemic keratoconjunctivitis. In addition to the human adenovirus types, there are simian, bovine, avian, canine, and murine types. Many adenoviruses induce malignancy in certain species.

adenyl (ad''ē-nil) a chemical radical resulting from the formal loss of an OH group attached to phosphorus from adenosine-5'-monophosphoric acid (5'-AMP). **a. cyclase**, an enzyme found in the liver and muscle cell membranes, which catalyzes the conversion of adenosine triphosphate (ATP) to cyclic adenosine monophosphate (AMP) (see **adenosine 3':5'-cyclic phosphate**) plus pyrophosphate, and is activated by many hormones. Called also **adenylate cyclase**.

adenylate (ah-den'i-lāt) adenylic acid, or a salt of adenylic acid. **a. cyclase**, see under **adenyl**. **a. kinase**, ATP:AMP phosphotransferase. An enzyme occurring in muscle, heart, brain, and liver that converts AMP and ATP to two molecules of ADP. Called also **myokinase**.

adenylcyclase (ad''ē-nil-si'klās) adenyl cyclase.

adenylosuccinase (ad''ē-nil-o-suk'si-nās) adenylosuccinate lyase.

adenylosuccinate (ad''ē-nil-o-suk'si-nāt) a derivative of ade-

nylic and succinic acids, which is cleaved to form adenylic acid plus fumaric acid. **a. lyase**, adenylosuccinate AMP-lyase: an enzyme occurring in the liver that catalyzes the conversion of adenylosuccinate to adenylic acid and fumarate.

adenylpyrophosphate (ad''ē-nil-pi'ro-fos'fāt) adenosine triphosphate.

adenyl (ad''ē-nī-lil) the radical of adenylic acid with one H ion removed.

adephagia (ad''ē-fa'jī-ah) [Gr. *adēn* enough + *phagein* to eat + *-ia*] obsolete term for gluttony and insatiable hunger (bulimia).

adepts (ad'eps), gen. *ad'ipis* [L.] lard; the purified omental fat of the hog, used in the preparation of ointments. **a. anseri'nus**, goose grease. **a. benzoina'tus**, benzoinated lard. **a. la'nae**, anhydrous lanolin. **a. la'nae hydro'sus**, lanolin. **a. ovil'lus**, sheep lard, or tallow. **a. por'ci**, hog lard. **a. re'nis**, the fatty capsule of the kidney. **a. suil'lus**, hog lard.

adequacy (ad''ē-kwah-se) the state of being sufficient for a specific purpose. **velopharyngeal a.**, sufficient functional closure of the velum against the postpharyngeal wall so that air and hence sound cannot enter the nasopharyngeal and nasal cavities.

adermia (ah-der'me-ah) [a neg. + Gr. *derma* skin + *-ia*] congenital defect or absence of the skin.

adermine (ah-der'min) pyridoxine; vitamin B₆.

adermogenesis (ah-der'mo-jen'ē-sis) [a neg. + Gr. *derma* skin + *genesis* production] imperfect development of the skin.

Ad grat. acid abbreviation for L. *ad gra'tum acidita'tem*, to an agreeable sourness, an obsolete instruction in pharmacy.

ADH antidiuretic hormone; see **vasopressin**.

Adhatoda (ad-hat'o-dah) a plant genus of the Acanthaceae family. *A. vasica*, known as the Malabar nut tree, is used in India for its antispasmodic and expectorant properties.

adhere (ad-hēr') to cling together; to become fastened.

adherence (ad-hēr'ens) the act or quality of sticking to something. **immune a.**, a complement-dependent phenomenon in which antigen-antibody complexes or particulate antigens coated with antibody (e.g., antibody-coated bacteria) adhere to red blood cells when complement component C3 is bound. It is a sensitive detector of complement-fixing antibody.

adhesion (ad-he'ze-o), pl. *adhesion'es* [L. "clinging together"] a connecting band or structure. **a. interthalam'ica** [NA], a mass of gray matter connecting the thalami across the midline of the third ventricle; it develops as a secondary adhesion and is often absent. Called also *intermediate mass* and *massa intermedia*.

adhesion (ad-he'zhun) [L. *adhaesio*, from *adhaerere* to stick to] 1. the property of remaining in close proximity, as that resulting from the physical attraction of molecules to a substance, or the molecular attraction existing between the surfaces of contacting bodies. 2. the stable joining of parts to each other, which may occur abnormally. 3. a fibrous band or structure by which parts abnormally adhere. **amniotic a's**, fibrous adhesions from the amnion to the fetus. **attic a's** (obs.), adhesions about the gallbladder and pyloric region. **primary a.**, healing by first intention. **secondary a.**, healing by second intention. **serological a.**, a phenomenon in which nonspecific particulate material tends to adhere to particulate antigen in the presence of antibody and complement. **sublabial a.**, abnormal union of the sublabial mucosa of the upper lip to the alveolar process; usually present in a unilateral or bilateral cleft of the lip. **traumatic uterine a's**, adhesions of the uterus, most often in the cervical canal, frequently in the uterine cavity, and sometimes in both the cervix and the corpus, which are usually caused by curettage; cervical adhesions cause amenorrhea (see *Asherman's syndrome*, under *syndrome*), whereas corporeal adhesions usually are asymptomatic.

adhesiotomy (ad-he'ze-ot'o-me) the cutting or division of adhesions.

adhesive (ad-he'siv) 1. sticky; tenacious. 2. a substance that causes close adherence of adjoining surfaces. **denture a.**, a compound of natural or artificial gums used to stabilize denture bases.

adhesiveness (ad-he'siv-nes) the property of remaining adherent. **platelet a.**, the physical property of platelets by which they stick to a variety of materials in vivo and in vitro, but more specifically this phenomenon as it occurs in the initial formation of a clot and in the maintenance of hemostasis.

Adhib. abbreviation for L. *adhibendus*, to be administered.

adiabatic (ah-di'ah-bat'ik) conducted without the evolution or absorption of heat.

adiactinic (ah-di'ak-tin'ik) [a neg. + Gr. *diathrough* + *aktis* ray] not permitting the passage of actinic rays.

adiadochocinesia (ah-di'ah-do'ko-si-ne'se-ah) adiadochokinesia.

adiadochocinesis (ah-di'ah-do'ko-si-ne'sis) adiadochokinesia.

adiadochokinesia (ah-di'ah-do'ko-si-ne'se-ah) [a neg. + Gr. *diadochos* succeeding + *kinesis* motion + *-ia*] inability to perform rapid alternating movements. Cf. *diadochokinesia*.

adiadochokinesis (ah-di''ah-do''ko-ki-ne'sis) adiadochokinesia.

adiadokokinesia (ah-di''ah-do''ko-ki-ne'se-ah) adiadochokinesia.

adiadokokinesis (ah-di''ah-do''ko-ki-ne'sis) adiadochokinesia.

Adiantum (ad''e-an'tum) [*a neg.* + Gr. *dianein* to moisten] a genus of ferns of the family Polypodiaceae, popularly called maidenhair. *A. pedatum* (North America, eastern Asia) has been used as an expectorant and demulcent.

adiaphoria (ah-di''ah-fo're-ah) [Gr. "indifference"] nonresponse to stimuli as a result of previous exposure to similar stimuli; see also *refractory period*, under *period*.

adiaspiromycosis (ad''i-ah-spi''ro-mi-ko'sis) a pulmonary disease of many species of rodents throughout the world and rarely of man. It is caused by the inhalation of spores produced by the saprophytic soil fungus *Emmonsia parva* or *E. crescens*, and marked by the presence of huge spherules (adiaspores) without endospores in the lungs. The condition is often confused with the tissue phase of *Coccidioides immitis*. Called also *haplomycolosis*.

adiaspore (ad''i-ah-spör) a spore produced by the soil fungi *Emmonsia parva* and *E. crescens*, which, after inhalation into the lungs, enlarges to form a huge spherule without endospores.

adiathermance (ah-di''ah-ther'mans) adiathermancy.

adiathermancy (ah-di''ah-ther'man-se) [*a neg.* + Gr. *diathro* through + *thermansis* heating] the condition of being impervious to heat waves.

adicillin (ad''i-sil'in) chemical name: (4-amino-4-carboxybutyl)-penicillin. A cephalosporin that is less active against gram-positive bacteria than penicillin G but more active against gram-negative organisms and is highly active against *Neisseria*; it has been used in the treatment of typhoid fever and gonorrhea. Called also *cephalosporin N* and *penicillin N*.

Adie's pupil, syndrome (a'dēz) [William John Adie, British neurologist, 1886–1935] see *tonic pupil*, under *pupil*, and see under *syndrome*.

adiemorrhysis (ah-di''ē-mor'i-sis) [*a neg.* + Gr. *dia* through + *haima* blood + *rhyssis* flow] stoppage of circulation of blood.

adient (ad'e-ent) tending toward the source of stimulation; positive. Cf. *abient*.

Adinida (ah-din'i-dah) a suborder of dinoflagellate protozoa marked by the flagella being free and not enclosed in furrows.

adipectomy (ad''i-pek'to-me) [L. *adeps* + Gr. *ektomē* excision] lipectomy.

adiphenine hydrochloride (ad''i-fen'ēn) chemical name; α -phenyl-2-(diethylamino)ethyl ester hydrochloride. An antispasmodic anticholinergic, $C_{20}H_{25}NO_2 \cdot HCl$, used orally as a smooth muscle relaxant in the treatment of hypermotility and spasm of the genitourinary and gastrointestinal tracts.

adipic (ah-dip'ik) [L. *adeps* fat] adipose.

adipo- (ad'i-po) [L. *adeps*, *adipis* fat] a combining form denoting relationship to fat.

adipoccele (ad''i-po-sēl'') [*adipo-* + Gr. *kelē* hernia] a hernia containing fat or fatty tissue, as an epiplocele.

adipocellular (ad''i-po-sel'u-lar) composed of connective tissue and fat.

adipoceratous (ad''i-po-ser'ah-tus) pertaining to or resembling adipocere.

adipocere (ad''i-po-sēr'') [*adipo-* + L. *cera* wax] a peculiar waxy substance formed during the decomposition of animal bodies, and seen especially in human bodies buried in moist places; it consists principally of insoluble salts of fatty acids. Called also *grave wax* and *corpse* or *grave fat*.

adipocyte (ad''i-po-sīt'') a fat cell; see under *cell*.

adipofibroma (ad''i-po-fi-bro'mah), pl. *adipofibro'mas*. A lipoma containing fibrous tissue component.

adipogenesis (ad''i-po-jen'ē-sis) the formation of fat.

adipogenic (ad''i-po-jen'ik) [*adipo-* + Gr. *gennan* to produce] producing fat or fatness.

adipogenous (ad''i-po-jē-nus) adipogenic.

adipohepatic (ad''i-po-hē-pat'ik) pertaining to or marked by fatty degeneration of the liver.

adipoid (ad''i-poid) [*adipo-* + Gr. *eidōs* form] lipid, def. 1.

adipokinesis (ad''i-po-ki-ne'sis) the mobilization of fat in the body, often with the liberation of free fatty acids into the blood plasma; see also *lipolytic hormones*, under *hormone*.

adipokinetic (ad''i-po-ki-net'ik) pertaining to, characterized by, or promoting adipokinesis.

adipokinin (ad''i-po-ki'nin) a theoretical lipolytic hormone of the anterior lobe of the pituitary gland.

adipolysis (ad''i-pol'i-sis) [*adipo-* + Gr. *lysis* dissolution] lipolysis.

adipolytic (ad''i-po-lit'ik) lipolytic.

adipoma (ad''i-po'mah) (*obs.*) lipoma.

adipometer (ad''i-pom'ē-ter) an instrument for measuring the

thickness of the skin fold, as a means of determining the presence of obesity.

adiponecrosis (ad''i-po-nē-kro'sis) necrosis of fatty tissue in the body. **a. subcuta'nea neonato'rum**, subcutaneous fat induration in newborn and young infants; called also *subcutaneous fat necrosis* and *pseudosclerema*.

adipopectic (ad''i-po-pek'tik) pertaining to, characterized by, or promoting adipopexis.

adipopexia (ad''i-po-pek'se-ah) adipopexis.

adipopexic (ad''i-po-pek'sik) adipoplectic.

adipopexis (ad''i-po-pek'sis) [*adipo-* + Gr. *pēxis* fixation] the fixation or storing of fats.

adiposalgia (ad''i-pōs-al'je-ah) [*adipo-* + Gr. *algos* pain + *-ia*] a neuropathic state in which there are painful areas of subcutaneous fat.

adipose (ad''i-pōs) [L. *adiposus* fatty] 1. of a fatty nature; fatty; fat. 2. the fat present in the cells of adipose tissue.

adiposis (ad''i-po'sis) [L. *adeps* fat + *-osis*] 1. obesity or corpulence; an excessive accumulation of fat in the body. 2. fatty change of an organ or tissue. **a. cerebra'lis**, cerebral adiposity. **a. doloro'sa**, a disease accompanied by painful localized fatty swellings and by various nerve lesions. The disease is usually seen in women, and may cause death from pulmonary complica-

Adiposis dolorosa (Homans).

tions. Called also *Dercum's disease*. **a. hepat'ica**, fatty change of the liver. **a. tubero'sa sim'plex**, a disorder resembling adiposis dolorosa, marked by development in the subcutaneous tissue of fatty masses which are sometimes painful to pressure; called also *Anders' disease*. **a. universa'lis**, a deposit of fat generally throughout the body, including the internal organs.

adipositas (ad''i-pos'i-tas) [L.] fatness. **a. abdom'inis**, hyperadiposity of the abdominal wall. **a. cerebra'lis**, cerebral adiposity. **a. cor'dis**, fat heart, def. 2. **a. ex vac'uo**, fatty atrophy.

adipositis (ad''i-po-si'tis) panniculitis.

adiposity (ad''i-pos'i-te) the state of being fat; fatness; obesity. See *adiposogenital dystrophy*, under *dystrophy*. **cerebral a.**, fatness due to cerebral disease, especially disease of the hypothalamus, as in *adiposogenital dystrophy*. **pituitary a.**, obesity due to pituitary insufficiency.

adiposuria (ad''i-po-su're-ah) [*adipo-* + Gr. *ouron* urine + *-ia*] the occurrence of fat in the urine; lipuria, or lipiduria.

adipsa (ah-dip'sah) remedies to allay thirst; foods which do not produce thirst.

adipsia (ah-dip'se-ah) [*a neg.* + Gr. *dipsa* thirst + *-ia*] absence of thirst, or abnormal avoidance of drinking.

adipsous (ah-dip'sus) quenching thirst, as certain fruits.

adipsy (ah-dip'se) adipsia.

aditus (ad'i-tus), pl. *ad'itus* [L.] [NA] a general term for the entrance or approach to an organ or part. **a. ad an'trum** [NA], an opening between the epitympanum and the mastoid antrum. **a. ad aquaeduc'tum cer'ebri** (*obs.*), the posterior portion of the third ventricle where it passes over into the aqueductus cerebri. **a. ad pel'vis**, the pelvic inlet. **a. ad sac'cum peritoneae'i mino'rem**, epiploic foramen. **a. laryn'gis** [NA], the aperture by which the pharynx communicates with the larynx; called also *aperture of larynx*. **a. or'bitae** [NA], the opening to the orbit in the cranium; called also *orbital aperture*, *orbital opening*, and *anterior opening of orbital cavity*. **a. vagi'nae**, ostium vaginae.

adjection (ad-jek'shun) addition; specifically, the principle that as many microbes can be added to the living microbes in the body as will form in combination with the latter the proper dose to immunize the patient.

adjunct (ad'junkt) an accessory or auxiliary agent or measure.

adjunctive (ad-junk'tiv) assisting or aiding.

adjustment (ad-just'ment) 1. a rearrangement of physical parts made in response to changing conditions. 2. in psychology, the relative state of harmony of personality; the relative degree of resolution of emotional conflicts. 3. in chiropractic,

manipulation of the spine, said to restore normal nerve function and cure disease. 4. the mechanism for raising and lowering the tube of a microscope, for bringing the object being examined into proper focus. 5. a modification made in a denture after its completion and insertion in the mouth. **occlusal a.**, modification of the occluding surfaces of teeth to develop more harmonious relationships between these surfaces, usually by grinding away interferences.

adjuvant (ad'ju-vant) [L. *adjuvans* aiding] 1. assisting, or aiding. 2. a substance which aids another, such as an auxiliary remedy; in immunology, nonspecific stimulator (e.g., BCG vaccine) of the immune response. **Freund's a.**, a water-in-oil emulsion incorporating antigen, in the aqueous phase, into light-weight paraffin oil with the aid of an emulsifying agent. On injection, this mixture (*Freund's incomplete a.*) induces strong persistent antibody formation. The addition of killed, dried mycobacteria, e.g., *Mycobacterium butyricum*, to the oil phase (*Freund's complete a.*) elicits cell-mediated immunity (delayed hypersensitivity), as well as humoral antibody formation. **mycobacterial a.**, Freund's complete a.; see *Freund's a.*

adjuvanticity (ad'ju-van-ti'si-te) the ability to modify the immune response.

Adler's test (ad'lerz) [Oscar Adler, German physician, 1879–1932, and his brother Rudolph, 1882–1952] benzidine test; see *Table of Tests*.

Adler's theory (ad'lerz) [Alfred Adler, Vienna psychiatrist, 1870–1937] see under *theory*.

ad lib. abbreviation for L. *ad libitum*, at pleasure.

adlumidine (ad-loo'mi-din) a crystalline alkaloid, $C_{15}H_{16}O_8N$, from *Adlumia fungosa*, a species of herbaceous ferns.

adlumine (ad-loo'min) a crystalline alkaloid, $C_{21}H_{21}NO_8$, from *Adlumia fungosa*, a species of herbaceous ferns.

admedial (ad-me'de-al) situated near the median plane.

admedian (ad-me'de-an) toward the median plane, or midline of the body.

adminicula (ad'mī-nik'u-lah) [L.] plural of *adminiculum*.

adminiculum (ad'mī-nik'u-lum), pl. *adminicula* [L.] a prop or support. **a. lin'cae al'bae** [NA], the expansion of fibers extending from the superior pubic ligament to the posterior surface of the linea alba.

admov. abbreviation for L. *ad'move*, *admovea'tur*, add, let there be added.

ad nauseam (ad-naw'se-am) [L.] to the extent of producing nausea.

adnerval (ad-ner'val) 1. situated near a nerve. 2. toward a nerve, said of an electric current which passes through muscle toward the entrance point of a nerve.

adneurial (ad-nu'ral) [*ad* + Gr. *neuron* nerve] adnerval.

adnexa (ad-nek'sah) [L., pl] appendages or adjunct parts; see also *appendage*. **a. oc'uli**, the eyelids, lacrimal apparatus, and other appendages of the eye. **a. u'teri**, the uterine appendages: the ovaries, uterine tubes, and ligaments of the uterus.

adnexal (ad-nek'sal) pertaining to adnexa, especially the adnexa uteri.

adnexectomy (ad'nek-sek'to-me) [*adnexa* + Gr. *ektomē* excision] excision or removal of the adnexa.

adnexitis (ad'nek-si'tis) inflammation of the adnexa uteri.

adnexogenesis (ad-nek'so-jen'ē-sis) [L. *adnexa* + Gr. *genesis* production] embryonic development of the adnexa or accessory structures.

adnexopexy (ad-nek'so-pek'se) [L. *adnexa* + Gr. *pēxis* fixation] (*obs.*) ovariopexy.

adnexorganogenic (ad-neks'or-gah-no-jen'ik) giving rise to or originating in the adnexa uteri.

adolescence (ad'o-les'ens) [L. *adolescētia*] the period of life beginning with the appearance of secondary sex characters and terminating with the cessation of somatic growth, roughly from 11 to 19 years of age; cf. *puberty*.

adolescent (ad'o-les'ent) 1. pertaining to adolescence. 2. an individual during the period of adolescence.

adonidin (ah-don'i-din) a poisonous glycoside, $C_{24}H_{42}O_9$, from *Adonis vernalis*, not unlike digitalin in its effects; formerly used as a cardiac stimulant.

adonin (ah-do'nin) a glucoside, $C_{20}H_{40}O_9$, from *Adonis amurensis*, a plant of Asia.

Adonis (ah-do'nis) [L.] a genus of poisonous ranunculaceous plants, native to Europe, Asia, and Africa. *A. aestivalis* and *A. vernalis* were formerly used as cardiac stimulants.

adonite (ad'o-nit) adonitol.

adonitol (ah-don'i-tol) a pentahydric alcohol found in *Adonis vernalis*; by oxidation it yields ribose.

adoral (ad'o-ral) [L. *ad* near + *os*, *oris* mouth] toward or near the mouth.

ADP adenosine diphosphate.

Ad pond. om. abbreviation for L. *ad pon'dus om'nium*, to the weight of the whole.

adrenal (ah-dre'nal) [L. *ad* near + *ren* kidney] 1. situated near the kidney. 2. an adrenal gland. **Marchand's a's**, accessory adrenal bodies in the broad ligament.

adrenalectomize (ah-dre'nal-ek'to-miz) to extirpate one or both adrenal glands by surgical means.

adrenalectomy (ah-dre'nal-ek'to-me) [*adrenal* + Gr. *ektomē* excision] excision of one or both adrenal glands; suprarenalectomy.

Adrenalin (ah-dren'ah-lin) trademark for preparations of epinephrine; in Great Britain, a generic name.

adrenaline (ah-dren'ah-lēn) the official British Pharmacopoeia name for epinephrine. **a. acid tartrate**, epinephrine bitartrate.

adrenalinemia (ah-dren'ah-lin-e'me-ah) [*adrenalin* + Gr. *haima* blood + *-ia*] the presence of epinephrine in the blood.

adrenalinogenesis (ah-dren'ah-lin-o-jen'ē-sis) the formation of epinephrine.

adrenalinuria (ah-dren'ah-lin-u're-ah) the presence of epinephrine in the urine.

adrenalism (ah-dren'al-izm) ill health due to adrenal dysfunction. Cf. *dysadrenalism*.

adrenalitis (ah-dre'nal-i'tis) inflammation of the adrenal glands.

adrenalone (ah-dren'ah-lōn) chemical name: 1-(3,4-dihydroxyphenyl)-2-(methylamino)ethanone. An adrenergic, $C_9H_{11}NO_3$, obtained by oxidation of an epinephrine derivative; it has vasoconstrictor activity.

adrenolopathy (ah-dre'nal-op'ah-the) [*adrenal* + Gr. *pathos* disease] any disease of the adrenal glands.

adrenolotropic (ah-dren'ah-lo-trop'ik) [*adrenal* + Gr. *tropos* a turning] having a special affinity for the adrenal glands.

adrenarche (ad'ren-ar'ke) [*adrenal* + Gr. *archē* beginning] augmentation of adrenal cortex function, involving especially androgens, a physiologic change that occurs at approximately the age of eight years.

adrenergic (ad'ren-er'jik) 1. activated by, characteristic of, or secreting epinephrine or substances with similar activity; the term is applied to those nerve fibers that liberate norepinephrine at a synapse when a nerve impulse passes, i.e., the sympathetic fibers. See also under *receptor*. 2. an agent that produces such an effect. Called also *sympathomimetic*. Cf. *cholinergic*.

adrenic (ah-dren'ik) pertaining to the adrenal glands.

adrenin (ah-dre'nin) epinephrine.

adrenine (ah-dre'nin) epinephrine.

adrenitis (ad're-ni'tis) adrenalitis.

adreno- [L. *ad* near + *ren* kidney] a combining form denoting relationship to the adrenal gland.

adrenoceptive (ah-dre'no-sep'tiv) pertaining to the sites on effector organs that are acted upon by adrenergic transmitters.

adrenoceptor (ah-dre'no-sep'tor) adrenergic receptor; see under *receptor*.

adrenochrome (ad-re'no-krōm) chemical name: 2,3-dihydroxy-1-methyl-1*H*-indole-5,6-dione. A red oxidation product of epinephrine, $C_9H_9NO_3$, which possesses hemostatic properties due to its effect on capillary permeability, and has been used as an experimental psychomimetic. It is used in the form of its stable derivative *carbazochrome salicylate*.

adrenocortical (ad-re'no-kor'te-kal) pertaining to or arising from the cortex of the adrenal gland.

adrenocorticohyperplasia (ah-dre'no-kor'ti-ko-hi'per-pla'ze-ah) adrenal cortical hyperplasia.

adrenocorticomimetic (ad-re'no-kor'te-ko-mi-met'ik) producing effects similar to those of hormones of the cortex of the adrenal glands.

adrenocorticotropic (ad-re'no-kor'te-ko-trof'ik) corticotropic.

adrenocorticotrophin (ad-re'no-kor'te-ko-trof'in) corticotropin.

adrenocorticotropic (ad-re'no-kor'te-ko-trop'ik) corticotropic.

adrenocorticotropin (ad-re'no-kor'te-ko-trop'in) corticotropin.

adrenodontia (ad-ren'o-don'she-ah) [*adreno* + Gr. *odous* tooth] tooth form once thought to be indicative of adrenal predominance: the canines are large and sharp, and the occlusal surfaces of the teeth have a brownish coloration.

adrenodoxin (ah-dre'no-dok'sin) an iron-sulfide protein of the adrenal cortex that serves as an electron carrier in the biosynthesis of adrenal steroids.

adrenogenous (ad'ren-oj'ē-nus) [*adreno* + Gr. *gennan* to produce] produced or arising in the adrenals.

adrenoglomerulotropin (ah-dre'no-glo-mer'u-lo-trof'in) a hormone alleged to stimulate the production of aldosterone by the adrenal cortex.

adrenogram (ad-ren'o-gram) a roentgenogram of the adrenal glands.

adrenokinetic (ad-re/'no-ki-net/'ik) [*adreno-* + Gr. *kinētikos* moving] stimulating the adrenal gland.

adrenoleukodystrophy (ah-dre/'no-loo/'ko-dis/'tro-fe) a hereditary disease of childhood marked by diffuse abnormality of the cerebral white matter and adrenal atrophy. It is marked by mental deterioration progressing to dementia and by aphasia, apraxia, dysarthria, and loss of vision. Clinical adrenal insufficiency occurs in about a third of the patients, but almost all show abnormal adrenal functioning when tested. It is transmitted as a sex-linked recessive trait.

adrenolutin (ah-dre/'no-lu/'tin) chemical name: 1-methyl-1*H*-indole-3,5,6-triol; degradation product of epinephrine, $C_9H_9NO_3$.

adrenolytic (ad/'ren-o-lit/'ik) [*adreno-* + Gr. *lysis* a loosening] inhibiting the action of adrenergic nerves; inhibiting the response to epinephrine.

adrenomedullotropic (ad-re/'no-med/'u-lo-trop/'ik) having a hormonal influence on the adrenal medulla.

adrenomegaly (ad-ren/'o-meg/'ah-le) [*adreno-* + Gr. *megaleia* bigness] enlargement of one or both of the adrenal glands.

adrenomimetic (ah-dre/'no-mi-met/'ik) having actions similar to those of adrenergic compounds; sympathomimetic.

adrenopathy (ad/'ren-op/'ah-the) [*adreno-* + Gr. *pathos* disease] adrenalopathy.

adrenopause (ad-ren/'o-pawz) cessation or suppression of function of the adrenal glands.

adrenoprival (ad-ren/'o-pri/'val) pertaining to or characterized by deprivation of the adrenal glands, as a result of their removal or suppression of their function.

adrenoreceptor (ah-dre/'no-re-sep/'tor) adrenergic receptor; see under *receptor*.

Adrenosem (ah-dren/'o-sem) trademark for preparations of carbazochrome salicylate.

adrenostatic (ad-re/'no-stat/'ik) 1. inhibiting the activity of the adrenal glands. 2. an agent that inhibits the activity of the adrenal glands.

adrenosterone (ad/'re-no/'ster-ōn/'n) androst-4-ene-3,11,77-trione, a crystalline androgenic steroid, $C_{19}H_{24}O_3$, isolated from the adrenal cortex.

adrenotoxin (ad-ren/'o-tok/'sin) any substance that is toxic to the adrenals.

adrenotrophic (ad-ren/'o-trof/'ik) [*adreno-* + Gr. *trophē* nutrition] adrenotropic.

adrenotrophin (ad-ren/'o-trof/'in) corticotropin.

adrenotropic (ad-ren/'o-trop/'ik) [*adreno-* + Gr. *tropos* a turning] having specific affinity for or influence on the adrenal glands; suprarenotropic.

adrenotropin (ad-ren/'o-trop/'in) corticotropin.

adrenoxidase (ad/'ren-ok/'sī-dās) an oxygenized adrenal secretion presumed to be distributed by the blood plasma and to act catalytically.

Adriamycin (a/'dre-ah-mi/'sin) [from "Adriatic" + *mycin*] trademark for preparations of doxorubicin hydrochloride.

Adrian (a/'dre-an), Edgar Douglas. An English physiologist, born 1889; co-winner, with Sir Charles Scott Sherrington, of the Nobel prize for medicine and physiology in 1932, for their work on the neuron.

adromia (ah-dro/'me-ah) [*a* neg. + Gr. *dromos* a running + *-ia*] absence of conduction in nerve of muscle.

Adroyd (ad/'roid) trademark for a preparation of oxymetholone.

adru (ad-ru/'a) the *Cyperus articulatus*, a grasslike plant of the West Indies, with an aromatic tonic, antiemetic, and anthelmintic root.

ADS antidiuretic substance; see *vasopressin*.

adsorb (ad-sorb/'b) to attract and retain other material on the surface.

adsorbate (ad-sor/'bāt) a substance taken up on a surface by adsorption.

adsorbent (ad-sor/'bent) 1. pertaining to or characterized by adsorption. 2. an agent that attracts other materials or particles to its surface.

adsorption (ad-sorp/'shun) [*L. ad* to + *sorbere* to suck] 1. the attachment of one substance to the surface of another; the concentration of a gas or a substance in solution in a liquid on a surface in contact with the gas or liquid, resulting in a relatively high concentration of the gas or solution at the surface. Cf. *absorption*. 2. in spectroscopy, the uptake of light energy by a substance. **agglutinin a.**, the taking up by bacteria suspended in diluted antiserum of those agglutinins specific for that microorganism.

adsternal (ad-ster/'nal) toward or near the sternum.

adst. feb. abbreviation for *L. adstan'te feb're*, while fever is present; cf. *abs. feb.*

ADTe symbol for *tetanic contraction*, produced by an application of the positive pole with the circuit closed.

adterminal (ad-ter/'mi-nal) passing toward the end of a muscle; said of an electric current.

adtorsion (ad-tor/'shun) conclination.

Ad 2 vic. abbreviation of *L. ad du'as vi'ces*, at two times, for two doses.

adult (ah-dult/'f) [*L. adultus* grown up] 1. having attained full growth or maturity. 2. a living organism which has attained full growth or maturity.

adulterant (ah-dul/'ter-ant/'f) a substance used as an addition to another substance for sophistication or adulteration.

adulteration (ah-dul/'ter-a/'shun) addition of an impure, cheap, or unnecessary ingredient to cheat, cheapen, or falsify a preparation; in legal terminology, incorrect labeling, including dosage not in accordance with the label.

adumbration (ah/'dum-bra/'shun) a geometric lack of sharpness; an inherent property of the focal spot which causes the production of double images. In radiology, the giving forth of a shadow.

Adv. abbreviation for *L. adverbium*, against.

advance (ad-vans/'f) to perform the operation of advancement.

advancement (ad-vans/'ment) surgical detachment, as of a muscle or tendon, followed by reattachment at an advanced point; chiefly an operation for strabismus. The round ligaments of the uterus have sometimes been advanced for retrodisplacement. **capsular a.**, the artificial attachment of a part of a vaginal bulbi (Tenon's capsule) in such a way as to draw forward the insertion of an ocular muscle. **tendon a.**, advancement applied to a tendon.

adventitia (ad/'ven-tish/'e-ah) [*L. adventitious* from without] outermost; denoting the layer of loose connective tissue forming the outermost coating of an organ. See *tunica adventitia*.

adventitial (ad/'ven-tish/'al) pertaining to the tunica adventitia.

adventitious (ad/'ven-tish/'us) [*L. ad* to + *venire* to come] 1. accidental or acquired; not natural or hereditary. 2. found out of the normal or usual place.

adynamia (ah/'di-na/'me-ah) [*a* neg. + Gr. *dynamis* might + *-ia*] lack or loss of the normal or vital powers; asthenia. **a. episod'ica heredita'ria**, a hereditary form of periodic paralysis.

adynamic (ad/'i-nam/'ik) characterized by adynamia; asthenic.

A.E. abbreviation for Ger. *antitoxineinheit* (antitoxic unit).

ae- for words beginning thus, see also those beginning *e-*.

Aeby's muscle, plane (a/'bēz) [Christopher Theodore Aeby, Swiss anatomist, 1835-1885] see *musculus depressor labii inferioris*, and see under *plane*.

aec- for words beginning thus, see words beginning *ec-*.

aeciospore (e/'se-o-spōr/'f) [*Gr. aikia* injury + *sporas* seed] a yellow, thin-walled, single-celled, binucleate spore of the wheat rust fungus formed in chainlike series within an aecium, produced in the spring on the leaves of barberry plants.

aecium (e/'se-um), pl. *ae'cia* [*Gr. aikia* injury] 1. a cuplike structure formed on certain plants by wheat rust fungi, containing aeciospores. 2. a fruiting body of a fungus that bursts through the epidermis of the host.

Aedes (a-e/'dēz) [*Gr. aēdēs* unpleasant] a genus of culicine mosquitoes with broad appressed scales on the head and scutellum. The palpi in the female are short and sparsely tufted and have three segments of equal length; in the male, the palpi are long and tufted. In addition to the vectors listed below, the following species are annoying because of their bites: *A. aldrichi*, *A. communis*, *A. excrucians*, *A. punctator*, *A. stimulans*, and *A. vexans*. Also *Aēdes*. See *mosquito*. **A. aegyp'ti**, the tiger mosquito, which breeds near houses and transmits urban yellow fever and dengue; it may also transmit filariasis and encephalitis. **A. africa'nus**, an arboreal mosquito that attacks monkeys and is a vector of the yellow fever virus over much of Central Africa. It also carries the Zika virus. **A. albopictus**, a species that transmits yellow fever, equine encephalomyelitis, and dengue. **A. cinereus**, a species occurring in certain parts of the United States which transmits equine encephalomyelitis. **A. flavescens**, a species of the Pacific Islands which transmits filariasis. **A. ingram'i**, a species found in the pool from which Uganda S virus was isolated in 1947. **A. leucocelae'nus**, a South American species that transmits jungle yellow fever. **A. polynesiensis**, a species of the South Pacific islands which is a vector of filaria and dengue. **A. pseudoscutellaris**, a species of the Pacific Islands which is a vector of filaria. **A. scapularis**, a vector of the Cache Valley virus in Trinidad. **A. simp'soni**, a vector of jungle yellow fever in Africa. **A. sollicitans**, the common salt-marsh mosquito of the Atlantic and Gulf coasts; it may transmit equine encephalomyelitis. **A. spenceri**, a species of mosquito found on the Saskatchewan prairies. **A. taeniorhynchus**, a species which transmits dengue in Florida. **A. to'goi**, a species of Japan that serves as a vector of *Brugia malayi*, which causes filariasis malayi. **A. varipal'pus**, a species found along the Pacific coast.

aedoecephalus (ed/'e-o-sef/'ah-lus) [*Gr. aidōia* genitals + *kephalē* head] a monster with no mouth, a nose like a penis, and but one orbit.

Aeg. abbreviation for *L. aeger, aegra*, the patient.

Aegyptianella pullorum (e-jip/'she-ah-nel/'ah pul-lo/'rum) a sporozoan parasite of the family Babesiidae, order Haemosporidia, found in the blood of fowls; called also *Balfour's bodies*.

ailurophobia (e-loo/'ro-fo/'be-ah) [Gr. *ailouros* cat + *phobia*] ailurophobia.

ailuroptosis (e-'loo-rop/'sis) [Gr. *ailouros* cat + *opsis* vision] a slanting palpebral fissure like that of a cat.

aequator (e-kwa/'tor) [L. "equalizer"] equator.

aequum (e/'kwum) [L. "equal"] Pirquet's term for the amount of food required to maintain weight under a given condition of activity.

aer (a'er) [Gr. *aēr*] atmos.

aer- see *aero-*.

aerase (a'er-ās) [aer- + -ase] a hypothetical substance once believed to be the respiratory enzyme of aerobic bacteria; cf. *anaerase*.

aerasthenia (a'er-as-the/'ne-ah) [aer- + *asthenia*] aeroneurosis.

aerated (a'er-āt/'ed) [L. *aeratus*] 1. charged with air. 2. charged with carbon dioxide. 3. oxygenated.

aeration (a'er-a/'shun) 1. the exchange of carbon dioxide for oxygen by the blood in the lungs. 2. the charging of a liquid with air or gas.

aeremia (a'er-e/'me-ah) [aer- + Gr. *haima* blood + -ia] aeroembolism; decompression sickness (bends).

aerendocardia (a'er-en/'do-kar/'de-ah) [aer- + Gr. *endon* in + *kardia* heart] (obs.) the presence of gas or air within the heart.

aerenterectasia (a'er-en/'ter-ek-ta/'ze-ah) [aer- + Gr. *enteron* intestine + *ektasis* distention + -ia] (obs.) distention of the intestines with air or gas.

aerial (a-e/'re-al) pertaining to the air.

aeriferous (a'er-iff'er-us) [aer- + L. *ferre* to bear] conveying air, as the bronchi.

aeriform (a-e/'ri-form) [aer- + L. *forma* form] like the air; gaseous.

aero-, aer- (a'er-o, a'er) [Gr. *aēr*; L. *aer* air or gas] a combining form denoting relationship to air or gas.

aeroasthenia (a'er-o-as-the/'ne-ah) aeroneurosis.

Aerobacter (a'er-o-bak/'ter) [aero- + Gr. *baktērion* little rod] a genus of bacteria of the tribe Escherichieae, family Enterobacteriaceae, order Eubacteriales, made up of short, motile or nonmotile, gram-negative rods, which ferment glucose and lactose to produce acid and gas. It includes two species, *A. (Bacterium) aerogenes* and *A. (Bacterium) cloacae*.

aerobe (a'er-ōb) [aero- + Gr. *bios* life] a microorganism that can live and grow in the presence of free oxygen. **facultative a's**, microorganisms that are able to live under either aerobic or anaerobic conditions. **obligate a's**, microorganisms that require molecular oxygen for growth.

aerobic (a-e'r-o/'bik) 1. having molecular oxygen present. 2. growing, living, or occurring in the presence of molecular oxygen. 3. requiring oxygen for respiration.

aerobiology (a'er-o-bi-ol/'o-je) [aero- + *biology*] that branch of biology which deals with the distribution of living organisms by the air, either the exterior or outdoor air (extramural a.) or the indoor air (intramural a.).

aerobiosis (a'er-o-bi-ō'sis) [aero- + Gr. *biosis* way of life] life in the presence of molecular oxygen.

aerobiotic (a'er-o-bi-ō'tik) pertaining to aerobiosis.

aerobullosis (a'er-o-bu-lo/'sis) decompression sickness.

aerocele (a'er-o-sēl/'o) [aero- + Gr. *kēlē* tumor] a tumor formed by air filling an adventitious pouch, such as laryngocele and tracheocele. **epidural a.**, a collection of air between the dura mater and the wall of the spinal column. **intracranial a.**, traumatic pneumocephalus.

Aerococcus (a'er-o-kok/'us) in some systems of classification, a genus of aerobic, gram-positive cocci of the family Streptococcaceae. **A. viridans**, a species indistinguishable from *Gaffkya homari*, which may be pathogenic for lobsters, and has been found in infections of the urinary tract and in endocarditis in humans.

aerocolpos (a'e-ro-kol/'pos) [aero- + Gr. *kolpos* bosom or fold] distention of the vagina with gas.

aerocystography (a'er-o-sis-tog/'rah-fe) roentgenography of the bladder after it has been injected with air; called also *pneumocystography*.

aerocystoscope (a'er-o-sis/'to-skōp) aerourethroscope.

aerocystoscopy (a'er-o-sis-tos/'ko-pe) [aero- + Gr. *kystis* bladder + *skopein* to inspect] examination of the bladder with the aerourethroscope.

aerodermectasia (a'er-o-der/'mek-ta/'ze-ah) [aero- + Gr. *derma* skin + *ektasis* extension + -ia] subcutaneous emphysema; it may be spontaneous, traumatic, or surgical in origin.

aerodontalgia (a'er-o-don-tal/'je-ah) pain experienced in the teeth at lowered atmospheric pressures, as in aircraft flight or ascent of high mountains; sometimes simulated by pain arising

from maxillary aeroinitis which occurs during recompression. Called also *aero-odontodynia* and *barodontalgia*.

aerodontia (a'er-o-don/'she-ah) aerodontics.

aerodontics (a'er-o-don/'tiks) that branch of dentistry which is concerned with effects on the teeth of high altitude flying.

aerodromophobia (a'er-o-dro/'mo-fo/'be-ah) [aero + Gr. *dromos* quick movement + *phobos* fear + -ia] (obs.) morbid fear of traveling by air.

aerodynamics (a'er-o-di-nam/'iks) [aero- + Gr. *dynamis* might] the science of air and gases in motion.

aeroembolism (a'er-o-em/'bo-lizm) embolism due to air; it may occur in surgery of head, neck, and heart, induced abortion, and severe decompression sickness.

aeroemphysema (a'er-o-em/'fi-ze/'mah) pulmonary emphysema and edema with collection of nitrogen bubbles in the tissues of the lung; due to excessively rapid atmospheric decompression.

aerogastria (a'er-o-gas/'tre-ah) the presence of gas in the stomach; stomach bubble. See also *magenblase*. **blocked a.**, retention of air in the stomach due to spasm of the esophagus.

aerogel (a'er-o-jel/'o) a solid formed by replacing the liquid of a gel with a gas.

aerogen (a'er-o-jen/'o) an aerogenic, or gas-producing, bacterium.

aerogenesis (a'er-o-jen/'ē-sis) [aero- + Gr. *genesis* production] gas production.

aerogenic (a'er-o-jen/'ik) producing gas; said of bacteria that liberate free gaseous products.

aerogenous (a'er-o-jen/'nus) aerogenic.

aerogram (a'er-o-gram/'o) [aero- + Gr. *gramma* mark] a roentgenogram of an organ after it has been injected with air; called also *pneumogram*.

aerohydrotherapy (a'er-o-hi/'dro-ther/'ah-pe) [aero- + Gr. *hydōr* water + *therapeia* treatment] (obs.) the therapeutic use of air and water.

aerionotherapy (a'er-o-i/'no-ther/'ah-pe) [aero- + *ionother-apy*] treatment of respiratory conditions by the inhalation of air with altered electrical charges.

aeromedicine (a'er-o-med/'ē-sin) aviation medicine.

aerometer (a'er-om/'ē-ter) [aero- + Gr. *metron* measure] an instrument for weighing air or for estimating the density of air.

Aeromonas (a'er-o-mo/'nas) a genus of bacteria of the family Pseudomonadaceae, suborder Pseudomonadineae, order Pseudomonadales, occurring as small rod-shaped cells and usually found in water, some being pathogenic for fish and amphibians. It includes four species: *A. hydrophila*, *A. liquefaciens*, *A. punctata*, and *A. salmonicida*.

aeroneurosis (a'er-o-nu-ro/'sis) [aero- + *neurosis*] a functional nervous disorder occurring in pilots, characterized by gastric distress, nervous irritability, insomnia, emotional instability, and increased motor activity. Called also *aeroasthenia* and *flying sickness*.

aero-odontalgia (a'er-o-o/'don-tal/'je-ah) aerodontalgia.

aero-odontodynia (a'er-o-o-'don-'to-din/'e-ah) aerodontalgia.

aero-otitis (a'er-o-o-ti/'tis) [aero- + *otitis*] barotitis.

aeropathy (a'er-op/'ah-the) [aero- + Gr. *pathos* disease] any disease due to change in atmospheric pressure, such as decompression sickness or air sickness.

aeropause (a'er-o-paws/'o) the region between the stratosphere and outer space, where to all practical purposes the atmosphere does not exist.

aeroperitoneum (a'er-o-per/'i-to-ne/'um) [aero- + *peritoneum*] pneumoperitoneum.

aeroperitonia (a'er-o-per/'i-to-ne-ah) pneumoperitoneum.

aerophagia (a'er-o-fa/'je-ah) [aero- + Gr. *phagein* to eat] spasmodic swallowing of air followed by eructations, often seen in conjunction with functional gastrointestinal disturbances; called also *gastrospiry*.

aerophagy (a'er-of/'ah-je) aerophagia.

aerophil (a'er-o-fil/'o) [aero- + Gr. *philein* to love] an aerophilic organism.

aerophilic (a'er-o-fil/'ik) requiring air for proper growth.

aerophilous (a'er-of/'i-lus) aerophilic.

aerophobia (a'er-o-fo/'be-ah) [aero- + *phobia*] 1. morbid dread of air, drafts of air, airborne influences, or bad air (body odor). 2. morbid dread of being up in the air; acrophobia.

aerophyte (a'er-o-fit/'o) [aero- + Gr. *phyton* plant] an air plant; any microbe or other plant organism that derives its sustenance from the air.

aeropiesotherapy (a'er-o-pi-e/'so-ther/'ah-pe) [aero- + Gr. *piesis* pressure + *therapy*] the therapeutic use of compressed or rarefied air.

aeroplankton (a'er-o-plank/'ton) the organisms (bacteria, pollen, etc.) present in the air.

Aeroplast (ār/'o-plast/'o) trademark for a preparation of vibesate.

aeroplethysmograph (a'er-o-plē-thiz'mo-graf) [*aero-* + Gr. *plēthysmos* enlargement + *graphein* to record] an apparatus for measuring respiratory volumes by recording changes in body volume; see also *plethysmograph*.

aeroporotomy (a'er-o-po-ro'to-me) [*aero-* + Gr. *poros* passage + *tomē* cutting] the operation of letting air into the air passages, as by intubation or tracheotomy.

aerosialophagy (a'er-o-si'ah-lof'ah-je) sialoaerophagy.

aerosinusitis (a'er-o-si'nus-i'tis) barosinusitis.

aerosis (a'er-o'sis) the production of gas in the tissues or organs of the body.

aerosol (a'er-o-sol') 1. a colloid system in which the continuous phase (dispersion medium) is a gas, e.g., fog. 2. a bactericidal solution which can be finely atomized for the purpose of sterilizing the air of a room. 3. a solution of a drug which can be atomized into a fine mist for inhalation therapy.

aerosolization (a'er-o-sol'i'za'shun) the process of dispersing in a fine mist.

aerosology (a'er-o-sol-ol'o-je) the scientific study of aerosol therapy.

aerosome (a'er-o-sōm') [*aero-* + Gr. *sōma* body] one of the hypothetical bodies once thought to be in the air of tropical climates and to affect the acclimatization of Europeans.

Aerosporin (a'er-o-spo'rin) trademark for a preparation of polymyxin B sulfate.

aerostatics (a'er-o-stat'iks) [*aero-* + Gr. *statikos* causing to stand] the science of gases in equilibrium.

aerotaxis (a'er-o-tak'sis) [*aero-* + Gr. *taxis* arrangement] a movement of an organism in reaction to the presence of molecular oxygen.

aerotherapeutics (a'er-o-ther'ah-pu'tiks) [*aero-* + Gr. *therapeia* treatment] (obs.) the use of air in treating diseases.

aerotherapy (a'er-o-ther'ah-pe) (obs.) aerotherapeutics.

aerothermotherapy (a'er-o-ther'mo-ther'ah-pe) [*aero-* + Gr. *thermē* heat + *therapeia* treatment] (obs.) treatment with currents of hot air.

aerotitis (a'er-o-ti'tis) barotitis.

aerotolerant (a'er-o-tol'er-ant) surviving and growing in small amounts of air; said of anaerobic microorganisms.

aerotonometer (a'er-o-to-nom'ē-ter) [*aero-* + Gr. *tonostension* + *metron* measure] an instrument for measuring the partial pressure of the gases in the blood.

aerotropism (a'er-ot'ro-pizm) [*aero-* + Gr. *tropos* a turning] movement of an organism toward (positive *a.*) or away from (negative *a.*) a supply of air.

aerotympanal (a'er-o-tim'pah-nal) [*aero-* + L. *tympanum* drum] pertaining to atmospheric pressure (air) and the middle ear.

aerouretroscope (a'er-o-u-re'thro-skōp') [*aero-* + *urethroscope*] a urethroscope by which the urethra is dilated with air before inspection; called also *aerocystoscope*.

aerouretroscopy (a'er-o-u-re'thros'ko-pe) the use of the aerouretroscope.

A.E.S. American Encephalographic Society; American Epidermological Society.

aes-, aet- for words beginning thus, see also those beginning *es-, et-*.

aesculapian (es'ku-la'pe-an) 1. pertaining to Aesculapius, the god of medicine, or to the art of medicine. 2. a physician.

Aesculapius (es'ku-la'pe-us) [Gr. *Asklēpios*] the mythical god of healing, son of Apollo and the nymph Coronis; called also *Asclepios*. See also *Asclepiad*, *asclepiion*, *Hygeia*, and *Panacea*, and under *staff*.

aesculin (es'ku-lin) esculin.

Aesculus (es'ku-lus) a genus of trees, species of which contain a coumarin type of glycoside, esculin, which has been held responsible for their veterinary toxicity. The bark and seeds of *A. hippocastanum*, the horse chestnut, were formerly used in treatment of rheumatism and malaria and as an anticoagulant. *A. glabrus* is popularly known as *buckeye* (q.v.).

aesthesia- for words beginning thus, see those beginning *es-thesio-*.

aesthetic (es-thet'ik) esthetic.

aesthetics (es-thet'iks) esthetics.

aet. abbreviation for *L. aëtas*, age.

Aethusa (e-thoo'sah) a genus of umbelliferous plants, one species of which, *A. cynapium* L. (fool's parsley), has a reputation for human toxicity. The fruit contains a volatile alkaloid, cynapine, purported to be related to coniine.

aethylenum (eth'y-le-num) [L.] ethylene. **a. pro narco'si**, ethylene used for producing surgical anesthesia.

Aëtius (a-e'she-us) (or **Aetios**) of **Amida** (or **Antiochenus**) (6th century A.D.) a Byzantine Greek writer, whose *Tetrabiblion* gives details of the works of Rufus (of Ephesus), Leonides, Soranus, and Philumenus, and good accounts of diseases of the eye, ear, nose, and throat, and also of technical procedures (e.g., tonsillectomy, urethrotomy, and the treatment of hemorrhoids).

A.F. albumose-free; see under *tuberculin*.

afebrile (a-feb'ril) without fever.

afetal (ah-fe'tal) without a fetus.

affect (af'fekt) a Freudian term for the feeling of pleasantness or unpleasantness evoked by a stimulus; also the emotional complex associated with a mental state; the feeling experienced in connection with an emotion.

affection (ah-fek'shun) 1. a state of emotion or feeling. 2. a morbid condition or diseased state. **celiac a.**, the infant form of nontropical sprue (q.v.).

affective (ah-fek'tiv) pertaining to a feeling or mental state.

affectivity (af'ek-tiv'i-te) the affective faculty. In psychology, the feeling tone; the basal tone or tendency of the feeling life.

affectomotor (ah-fek'to-mo'tor) combining emotional disturbance with muscular activity.

afektepilepsie (af'fekt-ep'i-lep'se) Bratz's name for a psychogenic convulsion occurring in psychasthenia and obsessive states.

affenspalte (af'en-spahl'te) [Ger. "ape fissure"] Reidinger's term for sulcus lunatus.

afferent (af'er-ent) [L. *ad* to + *ferre* to carry] centripetal; esodic; conveying toward a center, as an afferent nerve.

afferentia (af'er-en'she-ah) [L.] 1. any afferent vessels, whether blood or lymph vessels. 2. the lymph vessels in general.

affinin (af'i-nin) a lipid amide obtained from *Heliopsis longipes* (A. Gray) Blake, Compositae. It has insecticidal and local anesthetic properties. The plant is used in Mexico as a dental analgesic.

affinity (ah-fin'i-te) [L. *affinitas* relationship] 1. inherent likeness or relationship. 2. a special attraction for a specific element, organ, or structure. 3. a driving force (thermodynamics).

chemical a., 1. the force that unites atoms into molecules. 2. the tendency of substances to undergo reaction with one another. **elective a.**, that force by which a substance chooses or elects to unite with one substance rather than with another. **residual a.**, the force which enables molecules to combine into larger aggregates.

affirmation (af'er-ma'shun) one of the stages in autosuggestion by which is secured a positive reactive tendency.

afflux (af'luks) [L. *affluxus*, *affluxio*] the rush of blood or liquid to a part.

affluxion (ah-fluk'shun) afflux.

affusion (ah-fu'zhun) [L. *affusio*] the pouring of water upon a part or upon the body for reducing fever; now rarely done. See *ablution*.

afibrinogenemia (ah-fi'brin-o-jē-ne'me-ah) deficiency or, more literally, absence of fibrinogen (coagulation factor I) in the blood. **congenital a.**, an uncommon hemorrhagic coagulation disorder, probably transmitted by an autosomal recessive gene, and characterized by complete incoagulability of the blood.

aflatoxicosis (af'lah-tok'si-ko'sis) a form of mycotoxicosis affecting turkeys and other farm animals fed on ground nut meal contaminated with the molds *Aspergillus flavus* and related species, which produce aflatoxin; widespread epidemics with high mortality rates have been reported from all parts of the world. Called also *x disease*.

aflatoxin (af'lah-tok'sin) a toxic factor, C₁₇H₁₂O₆, produced by *Aspergillus flavus* and *A. parasiticus*, molds contaminating ground nut seedlings. It is responsible for deaths of fowl and other farm animals (aflatoxicosis) fed with infected ground nut meal. In experimental animals, aflatoxin causes liver necrosis, bile duct proliferation, and cirrhosis and, on prolonged administration, leads to hepatocellular carcinoma and cholangiocarcinoma. It has also been implicated as a cause of human hepatic carcinoma.

Afrin (af'rin) trademark for a preparation of oxymetazoline hydrochloride.

afteraction (af'ter-ak'shun) an effect occurring after cessation of the causative stimulus, such as the negative variation of the electric current continuing for a short time in a tetanized muscle.

afterbirth (af'ter-berth') the placenta and membranes, delivered from the uterus after the birth of the child.

afterbrain (af'ter-brān') metencephalon.

aftercare (af'ter-kār) the care and treatment of a convalescent patient, especially one who has undergone surgery; called also *aftertreatment*.

aftercataract, after-cataract (af'ter-kat'ah-rakt) see under *cataract*.

aftercurrent (af'ter-kur'ent) a current produced in a muscle and nerve after cessation of an electric current that has been flowing through it.

afterdischarge (af'ter-dis'charj) the portion of the response to stimulation in a sensory nerve which persists after the stimulus has ceased.

aftergilding (af'ter-gild'ing) the histologic application of gold salts to nerve tissue after fixation and hardening.

afterimage (af'ter-im'ij) a visual impression persisting briefly after cessation of the stimuli causing the original image. A *positive*

afterimage is one in which the bright parts of the appearance remain bright, the dark parts dark. In a *negative* afterimage, the bright parts appear dark and the dark parts bright; called also *accidental* or *negative image*.

afterimpression (af'ter-im-presh'un) aftersensation.

aftermovement (af'ter-mōōv'ment) spontaneous elevation of the arm by idiomuscular contraction after benumbing it by powerful pressure against a rigid object; called also *Kohnstamm's phenomenon*.

afterpains (af'ter-pānz'') the cramplike pains felt after the birth of the child, due to the contractions of the uterus.

afterperception (af'ter-per-sep'shun) the perception of a sensation after the stimulus producing it has ceased.

afterpotential (af'ter-po-ten'shal) see under *potential*.

aftersensation (af'ter-sen-sa'shun) a sensation lasting after the stimulus that produced it has been removed; called also *afterimpression*.

afterstain (af'ter-stān'') (obs.) counterstain.

aftertaste (af'ter-tāst'') a taste continuing after the substance producing it has been removed.

aftertreatment (af'ter-trēt'ment) aftercare.

aftervision (af'ter-vizh'un) persistence of visual sensation after cessation of the stimuli producing it.

aftosa (af-to'sah) [Sp.] foot-and-mouth disease.

afunction (a-funk'shun) loss of function.

AG atrial gallop.

Ag chemical symbol for *silver* (*L. argentum*); abbreviation for *antigen*.

A.G.A. American Geriatrics Association.

agalactia (ah'gah-lak'she-ah) [a neg. + *Gr. gala* milk + *-ia*] absence or failure of the secretion of milk; called also *agalactosis*. **contagious a.**, a contagious disease of goats and sometimes of sheep, caused by mycoplasma, a pleuropneumonia-like organism. The disease occurs principally in parts of southern Europe and North Africa, affecting both females and males; it is marked by lesions of the eyes and joints and in the mammary glands of females.

agalactosis (ah-gal'ak-to'sis) agalactia.

agalactosuria (ah-gal'ak-to-su're-ah) [a neg. + *galactose* + *Gr. ouron* urine + *-ia*] absence of galactose from the urine.

agalactous (ah'gah-lak'tus) 1. suppressing the secretion of milk. 2. not nursed; artificially fed.

agalorrhea (ah-gal'o-re'ah) [a neg. + *Gr. gala* milk + *rhoia* flow] absence or arrest of the flow of milk.

agamete (ag'ah-mēt) [a neg. + *Gr. gamos* marriage] the product of asexual multiple fission in protozoa.

agametic (a'gah-met'ik) devoid of germ cells; not possessing gametes.

agamic (ah-gam'ik) [a neg. + *Gr. gamos* marriage] (obs.) 1. asexual. 2. reproducing without impregnation.

agammaglobulinemia (a-gam'ah-glob'u-li-ne'me-ah) [a neg. + *gamma globulin* + *Gr. haima* blood + *-ia*] an immunological deficiency state characterized by an extremely low level of generally all classes of gamma globulin in the blood, resulting in heightened susceptibility to those infectious diseases vulnerable to immunoglobulin-associated defense mechanisms. Called also *hypogammaglobulinemia* (q.v.). Cf. *dysgammaglobulinemia*. **Swiss type a.**, a lethal combined immunity deficiency syndrome associated with thymic aplasia, lymphocytosis, absence of the ability to develop delayed or cell-mediated immunities, and variable capacity to produce humoral immunity.

agamobium (ag'ah-mō'be-um) [a neg. + *Gr. gamos* marriage + *bios* life] (obs.) the asexual stage in the alternation of generations; cf. *gamobium*.

agamocytogeny (ah-gam'o-si-toj'ē-ne) schizogony.

Agamodistomum (ag'ah-mo-dis'to-mum) a genus of immature trematodes whose sexual organs are undeveloped and whose relationship to adult types has not been determined. **A. ophthalmobium**, an immature trematode parasite reported to have been found in the crystalline lens of the human eye.

Agamofilaria (ah-gam'o-fi-la're-ah) a name given to filarial worms which are known only in immature stages and which cannot be assigned to any known genus or species.

agamogenesis (ag'ah-mo-jen'ē-sis) [a neg. + *Gr. gamos* marriage + *genesis* production] schizogony.

agamogenetic (ag'ah-mo-jē-net'ik) reproducing asexually.

agamogony (ag'ah-mog'ō-ne) [a neg. + *Gr. gamos* marriage + *gonos* offspring] schizogony.

Agamomermis culicis (ag'ah-mo-mer'mis ku'li-sis) a mermitid nematode parasitic in the mosquito.

Agamonema (ag'ah-mo-ne'mah) a genus of immature and unidentified nematodes, whose relationship to adult types has not yet been determined.

Agamonematodum migrans (ag'ah-mo-ne'mah-to'dum mi'grans) a name once applied to the nematode larva which

causes creeping eruption in the southern United States. See *Ancylostoma*.

agamont (ag'ah-mont) [a neg. + *Gr. gamos* marriage + *on* being] schizont.

agamous (ag'ah-mus) 1. asexual. 2. having no recognizable sexual organs.

aganglionic (a-gang'gle-on'ik) pertaining to or characterized by the absence of ganglion cells.

aganglionosis (ah-gang'gle-on-o'sis) congenital absence of parasympathetic ganglion cells, as in congenital megacolon.

agar (ahg'ar) [NF] a dried mucilaginous substance extracted from *Gelidium cartilagineum*, *Gracilaria confervoides*, and related red algae, having the property of melting at 100° C. and solidifying into a gel at 40° C. It is not digested by most bacteria and is used as a gel in the preparation of solid culture media for microorganisms, as a bulk laxative, in making emulsions, and as a supporting medium for immunodiffusion and immunoelectrophoresis. See *Table of Culture Media* for specific agars.

agar-agar (ag'ar-ag'ar) [Sinhalese] agar.

Agarbacterium (ag'ar-bak-te're-um) a genus of bacteria of the family Achromobacteraceae, order Eubacteriales, made up of short to medium-sized, motile or nonmotile, rod-shaped bacteria which characteristically digest agar; found primarily on decomposing seaweed and in sea water, they also occur in soil and fresh water. There are twelve species.

agaric (ah-gar'ik) [*Gr. agarikon* a sort of tree fungus] 1. any mushroom, more especially any species of *Agaricus*. 2. the tinder or punk prepared from dried mushrooms. **fly a.**, a poisonous species, *Amanita muscaria*. **larch a.**, purging a., a preparation obtained from *Polyporus officinalis*, a spongy mass growing on several species of trees; formerly used as an anhidrotic. **surgeons' a.**, a preparation obtained from *Polyporus officinalis*, which grows on several species of trees; used as a hemostatic. **white a.**, larch a.

Agaricales (ah-gar'ī-ka'lēz) an order of basidiomycetous fungi of the series Hymenomycetes, subclass Homobasidiomycetidae, made up of the mushrooms, including the genera *Agaricus* and *Amanita*.

Agaricus (ah-gar'ī-kus) a genus of mushrooms. See also *agaric*, and *agaric acid*, under *acid*. **A. campestris**, the common edible, or field, mushroom. **A. muscaria**, *Amanita muscaria*.

agastria (ah-gas'tre-ah) absence of the stomach.

agastrie (ah-gas'trik) [a neg. + *Gr. gastēr* stomach] having no alimentary canal.

Agathinus (ag'ah-thi'nus) of *Sparta* (1st century AD.) a Greek physician who was a pupil of Athenaeus and, like his master, a Pneumatist.

Agave (ah-ga've) [*L.*; *Gr. agauē* noble] a genus of amaryllidaceous plants with many species possessing spiny-margined leaves and tall candelabra-shaped inflorescences. Some species serve as a source of an alcoholic beverage. The fresh juice of *A. americana* L. is purgative and diuretic, and has been used as an abortifacient. Several species contain saponins.

AGCT Army General Classification Test, an intelligence test whose results have been used for purposes of placement in the military situation.

age (āj) 1. the duration of individual existence measured in units of time. 2. the measure of some individual attribute in terms of the chronological age of an average normal individual showing the same degree of proficiency, e.g., achievement age. 3. to undergo change as the result of the passage of time. **achievement a.**, proficiency in study expressed in terms of the chronological age of an average child showing the same degree of attainment. **anatomical a.**, age expressed in terms of the chronological age of the average individual showing the same body development. **Binet a.**, mental age as determined by the Binet tests. **bone a.**, osseous development shown roentgenographically, stated in terms of the chronological age at which the development is ordinarily attained. **chronological a.**, the age of a person expressed in terms of the period elapsed from the time of birth. **coital a.**, the age of a conceptus defined by the time elapsed since the coitus that led to fertilization. **developmental a.**, age estimated from the degree of anatomical development. In psychology, the age of an individual as determined by the degree of his emotional, mental, anatomical, and physiologic maturation. **emotional a.**, the age of an individual expressed in terms of the chronological age of an average normal individual showing the same degree of emotional maturity. **feilization a.**, conceptus age defined by the time elapsed since fertilization. **functional a.**, the combined expression of the chronological, emotional, mental, and physiological ages of an individual. **gestational a.**, age of conceptus or pregnancy. In human clinical practice, pregnancy is timed from onset of the last normal menstruation. Elsewhere the onset may be timed from estrus, coitus, artificial insemination, vaginal plug formation, fertilization, or implantation. **menstrual a.**, conceptus age defined by the time elapsed since the onset of the mother's last normal menstruation. **mental a.**, the score achieved by a person in

an intelligence test, expressed in terms of the chronological age of an average normal individual showing the same degree of attainment. **physical a., physiological a.,** the age of an individual expressed in terms of the chronological age of a normal individual showing the same degree of anatomical and physiological development. **postovulatory a.,** conceptus age defined by the time elapsed since release of the oocyte from the ovary.

agenesia (ah/'jē-ne'se-ah) *agenesis*. **a. cortica'lis,** congenital failure of development of the cortical cells, especially the pyramidal cells, of the brain, resulting in infantile cerebral paralysis and idiocy.

agenesis (ah-jen/'ē-sis) [*a neg. + Gr. genesis* production] 1. absence of an organ; frequently used to designate such absence resulting from failure of appearance of the primordium of an organ in embryonic development. Cf. *aplasia*. 2. sterility or impotence. **callosal a.,** defect of the callosal structures of the brain. **gonadal a.,** complete failure of gonadal development; see *Turner's syndrome*, under *syndrome*. **nuclear a.,** Möbius' syndrome. **ovarian a.,** failure of development of the ovaries; see *Turner's syndrome*, under *syndrome*.

agenitalism (ah-jen/'i-tal-izm) a condition due to lack of the internal secretion of the testes or ovaries.

agenized (a/'jēn-izd") treated with nitrogen trichloride for bleaching purposes, as flour.

agenosomia (ah-jen/'o-so'me-ah) congenital absence or rudimentary development of the genitals and eversion of the lower part of the abdomen.

agenosomus (ah-jen/'o-so'mus) [*a neg. + Gr. gennan* to beget + *sōma* body] a monster exhibiting agenosomia.

agent (a/'jēnt) [*L. agens* acting] any power, principle, or substance capable of producing an effect, whether physical, chemical, or biological. **activating a.,** one of two factors present in adult tissues which, when administered to embryos, interact to induce regional development; when administered alone, this factor induces archencephalic development. Called also *dorsalizing* or *neuralizing a.* Cf. *caudalizing a.* **adrenergic blocking a.,** a compound that selectively inhibits response to sympathetic impulses and to catecholamines and other adrenergic amines. See *alpha-adrenergic blocking a., beta-adrenergic blocking a.,* and *adrenergic neuron blocking a.* **adrenergic neuron blocking a.,** one that inhibits the release of norepinephrine from postganglionic adrenergic nerve endings. **alkylating a.,** any synthetic compound containing two or more end (alkyl) groups that combine readily with other molecules. They react with many cellular components and have a toxic reaction on many types of cells, normal as well as malignant. The exact mechanism of action is not completely understood, but their major biological effect seems to be caused by interaction with the nuclear deoxyribonucleic acid, resulting in inhibition of cell division and the production of mutations, and also inhibition of antibody formation. Although they do not damage malignant cells selectively, they are used in chemotherapy of many types of malignancies, the most widely used being the nitrogen mustards (see under *mustard*). **alpha-adrenergic blocking a.,** one that blocks the alpha receptor sites of effector organs to the effects of catecholamines. **beta-adrenergic blocking a.,** an agent that blocks the beta receptor sites of effector organs to the effects of catecholamines. **Bittner a.,** mouse mammary tumor virus. **blocking a.,** an agent that inhibits the response of effector organs to neural impulses of the autonomic nervous system; it may be an adrenergic or cholinergic blocking agent. **caudalizing a.,** one of two factors present in adult tissues which, when administered to embryos, interact to induce regional development; when administered alone, this factor induces only mesodermal development. Called also *mesodermalizing* or *transforming a.* Cf. *activating a.* **chelating a.,** 1. a compound that combines with metal ions by means of two or more coordinating positions to form stable ring structures, e.g., heme. 2. a substance used to reduce the concentration of free metal ion in solution by complexing it. Called also *metal complexing a.* **chimpanzee coryza a.,** respiratory syncytial virus. **cholinergic blocking a.,** one that blocks or inactivates acetylcholine. **clearing a.,** an agent used in staining technique for fixed cells, which has the same refractive index as that of protein particles. **dorsalizing a.,** activating a. **Eaton a.,** *Mycoplasma pneumoniae*. **fixing a's,** agents, such as formalin, alcohol, acids, salts of heavy metals, or mixtures of these, that precipitate the proteins of cells or tissues and render them insoluble. **ganglionic blocking a.,** one that blocks nerve impulses at autonomic ganglionic synapses. **Gordon a.,** a substance present in certain human and animal tissues which produces characteristic clinical symptoms and pathological changes on intracerebral injection into rabbits and guinea pigs. **levigating a.,** a material used for moistening a solid before reducing it to a powder. **mammary tumor a.,** mouse mammary tumor a., mouse mammary tumor virus. **Marcy a.,** a virus causing afebrile diarrhea in man. **mesodermalizing a.,** caudalizing a. **metal complexing a.** chelating a. **milk a.,** mouse mammary tumor virus. **Norwalk a.,** the causative agent, probably a virus, of an acute infectious gastroenteritis. **A. Orange,** a herbicide containing 2,4,5-trichlorophenoxyacetic acid and 2,4-dichlorophenoxyacetic acid and

used to kill broadleaf plants by overstimulating their phototropic response; it also contains the contaminant dioxin. The compound is suspected of having oncogenic and teratogenic properties. **progestational a's,** a group of hormones secreted by the corpus luteum and placenta and, in small amounts, by the adrenal cortex, including progesterone, Δ^4 -3-ketopregnene-20(α)-ol, and Δ^4 -3-ketopregnene-20(β)-ol. Agents having progestational activity are also produced synthetically. Called also *gestogens, progestins, progestational hormones,* and *progestogens*. **reducing a.,** a substance capable of donating electrons to another substance, thereby reducing the second substance and itself becoming oxidized. **transforming a.,** any substance that produces transformation in a cell, e.g., a substance, shown to be a form of DNA, isolated from pneumococci and certain other bacteria, which on introduction into bacteria of that type of bacteria produces a permanent, inherited change; see also *bacterial transformation*, under *transformation*. **vacuolating a.,** see under *virus*. **virus inactivating a.,** an agent present in the serous secretion of the nose which inactivates the influenza and certain other viruses. Abbreviated VIA. **wetting a's,** substances that lower the surface tension of water and promote wetting.

ageotropic (ah-je/'o-tro'pik) [*a neg. + Gr. gē* earth + *tropikos* turning] not responding to gravity; said of certain plant roots.

agerasia (ah/'jer-a'zee-ah) [*a neg. + Gr. gēras* old age] an unusually youthful appearance in a person of advanced years.

ageusia (ah-gu/'ze-ah) [*a neg. + Gr. geusis* taste] lack or impairment of the sense of taste.

ageusic (ah-gu/'sik) pertaining to ageusia.

ageustia (ah-gōōs'te-ah) ageusia.

agger (a/'jēr), pl. *ag'geres* [L.] an eminence; [NA] a general term for such a structure. **a. na'si** [L. "ridge of the nose"] [NA], a ridge-like elevation midway between the anterior extremity of the middle nasal concha and the inner surface of the dorsum of the nose; called also *ridge of nose* and *nasoturbinal concha*. **a. perpendicula'ris,** eminentia fossae triangularis auriculæ. **a. val'vae ve'nae,** an elevation of the wall of a vein over the site of a valve.

aggreres (a/'jēr-ēz) [L.] plural of *agger*.

agglomerated (ah-glom'er-āt'ed) [L. *agglomeratus*, from *ad* together + *glomus* mass] crowded into a mass.

agglutinable (ah-gloo'ti-nah-bl) capable of agglutination.

agglutinant (ah-gloo'ti-nant) [L. *agglutinans* gluing] 1. promoting union by adhesion. 2. a tenacious or gluey substance which holds parts together during the process of healing.

agglutination (ah-gloo'ti-na'shun) [L. *agglutinatio*] 1. the action of an agglutinant substance. 2. the process of union in the healing of a wound. 3. the clumping together in suspension of antigen-bearing cells, microorganisms, or particles in the presence of specific antibodies (agglutinins). Called also *clumping*. **acid**

Agglutination: a, bacilli unagglutinated; b, bacilli agglutinated.

a., the nonspecific agglutination of microorganisms at relatively low hydrogen ion concentration; it occurs without participation of antibody. **bacteriogenic a.,** clumping of cells due to bacterial action, as in the Huebner-Thomsen-Friedenreich phenomenon; called also *T-agglutination*. **chief a.,** see *chief agglutinin*, under *agglutinin*. **cold a.,** agglutination of red cells in the presence of cold agglutinins. **cross a.,** the agglutination of particulate antigen by antibody raised against a different but related antigen; see also *group a.* **group a.,** agglutination—usually to a lower titer—of various members of a group of biologically related organisms or corpuscles by an agglutinin specific for one of that group. For instance, the specific agglutinin of typhoid bacilli may agglutinate other members of the colon-typhoid group, such as *Escherichia coli* and *Salmonella enteritidis*. **H a.,** the agglutination of motile bacteria in the presence of antibody to the heat-labile flagellar antigens. **intravascular a.,** clumping of particulate elements within the blood vessels; used conventionally to denote red blood cell aggregation. **macroscopic a.,** agglutination in which the product of the reaction, the agglutinate, can be observed with the unaided eye. **microscopic a.,** agglutination so done, usually by means of a hanging drop, that the clumping of the microorganisms or corpuscles can be observed with the microscope. **minor a.,** see *partial agglutinin*, under *agglutinin*. **O a.,** the agglutination of bacteria in the presence of antibody to the heat-stable

somatic antigen. **part a.**, see *partial agglutinin*, under *agglutinin*. **passive a.**, agglutination in antiserum of particles upon which specific soluble antigen has been adsorbed. **platelet a.**, the clumping together of platelets; sometimes used interchangeably with aggregation (q.v.), but probably better reserved for immunological or analogous phenomena. **salt a.**, agglutination that occurs in concentrations of certain salts. **spontaneous a.**, the agglutination of bacteria or other cells in physiologic salt solution due to the lack of sufficient surface polar groups to give stable suspensions in the presence of electrolytes. **T-a.**, bacteriogenic a. **Vi a.**, agglutination of bacteria containing Vi antigen on their surface, in the presence of specific agglutinin.

agglutinative (ah-gloo'ti-na'tiv) promoting adhesion or agglutination.

agglutinator (ah-gloo'ti-na'tor) something which agglutinates; an agglutinin.

agglutinin (ah-gloo'ti-nin) antibody which aggregates a particulate antigen, e.g., bacteria, following combination with the homologous antigen in vivo or in vitro. Also, any substance other than antibody, e.g., lectin, that is capable of agglutinating particles. **anti-Rh a.**, an agglutinin not normally present in human plasma but which may be produced in Rh- mothers carrying an Rh+ fetus or after transfusion of Rh+ blood into an Rh- patient. See *blood type*. **chief a.**, the specific immune agglutinin in the blood of an animal immunized against an infectious disease agent; it is active at a higher dilution of the blood serum than are the partial agglutinins. Called also *haupt-agglutinin* and *major agglutinin*. **cold a.**, an agglutinin that acts only at relatively low temperatures (ranging from 0° to 20° C.) Cf. *autoagglutinin*. **complete a's**, agglutinins, e.g., IgM hemagglutinins, demonstrable by simple direct tests. **cross a.**, an agglutinin which, although formed in response to one particulate antigen, also has specific action on a different but related antigen. **expected a's**, normal human agglutinins directed against erythrocytic antigens of blood group A and/or B. **flagellar a.**, an agglutinin specific for the flagella of a microorganism. **group a.**, an agglutinin which has a specific action on certain organisms or cells, but which will agglutinate other closely related species as well. **H a.**, an agglutinin specific for flagellar antigens of the motile strain of a microorganism. **haupt-a.**, chief a. **immune a.**, a specific agglutinin found in the blood as a result of recovering from the disease or of having been injected with the microorganism causing the disease. **incomplete a.**, an agglutinin which at appropriate concentrations fails to agglutinate the homologous antigen. **leukocyte a.**, a type of agglutinin, directed against neutrophilic and other leukocytes, found in a variety of disorders, the presence of which may not necessarily be related to the manifestations of a particular clinical entity or to the pathogenesis of the manifest leukopenic state. Called also *leukoagglutinin*. **major a.**, chief a. **MG a.**, a specific agglutinin developed against *Streptococcus MG*. **minor a.**, partial a. **normal a.**, a specific agglutinin found in the blood of an animal or of man that has neither had the associated disease nor been injected with the causative microorganism. **O a.**, an agglutinin specific for somatic antigens of a microorganism. **partial a.**, an agglutinin present in an agglutinative serum which acts on organisms and cells that are closely related to the specific antigen, but in a lower dilution; called also *minor a.*, *nebenagglutinin*, *para-agglutinin*, and *coagglutinin*. **platelet a.**, an agglutinin directed against platelets, observed in a number of disorders, the presence of which may not always be correlated with demonstrable thrombocytopenia. Such agglutinins are important in platelet typing. See also *autothromboagglutinin* and *isothromboagglutinin*. **somatic a.**, an agglutinin specific for the body of a microorganism. **unexpected a.**, normal or immune agglutinin directed against erythrocytic antigens other than those of blood groups A and B. **warm a.**, an antibody (IgG) that reacts best at 37° C., usually without producing agglutination, although the immune reaction occasionally fixes small amounts of complement.

agglutininogen (ag'loo-tin'o-jen) 1. any substance which, acting as an antigen, stimulates the production of agglutinin. 2. the particulate antigen used in conducting agglutination tests.

agglutinogenic (ah-gloo'ti-no-jen'ik) pertaining to the production of agglutinin; producing agglutinin.

agglutinophilic (ah-gloo'ti-no-fil'ik) agglutinating readily.

agglutinoscope (ah-gloo'ti-no-sköp') [agglutinin + Gr. *skopein* to view] an apparatus for examining test tubes to ascertain the degree of agglutination in the agglutination reaction.

agglutogenic (ah-gloo'to-jen'ik) agglutinogenic.

agglutometer (ag'loo-tom'ë-ter) an apparatus for performing the test for Gruber's reaction without the use of a microscope.

aggred. feb. abbreviation for L. *aggredien'te feb're*, while the fever is coming on.

aggregate (ag're-gät) [L. *aggregatus*, from *ad* to + *grex* flock] 1. to crowd or cluster together. 2. crowded or clustered together. 3. a mass or assemblage.

aggregation (ag're-ga'shun) 1. massing of materials together as in clumping. 2. a clumped mass of material. **familial a.**, a concentration of cases of a disease in families; the occurrence of

more cases of a given disorder in close relatives of a person with the disorder than in control families. **platelet a.**, a clumping together of platelets induced in vitro and, probably in vivo, by a number of agents, such as ADP, thrombin, and collagen, as part of a sequential mechanism leading to the initiation and formation of a thrombus or hemostatic plug.

aggregen (ag'rë-jen) [L. *aggregare* to collect together + Gk. *gennan* to produce] an organized mass of mammalian cells growing in agitated culture, resembling an aggregate in having a continuous layer of peripheral cells forming a smooth surface, but differing from it in having the capacity to fragment to form daughter aggregens.

aggregometer (ag'grë-gom'ë-ter) an instrument that detects changes in optical density of plasma (or solution) caused by platelet (or particle) clustering.

aggregometry (ag'grë-gom'ë-tre) the measurement of platelet aggregation by means of an aggregometer.

aggressin (ah-gres'in) any of a postulated group of nontoxic substances produced by pathogenic bacteria that inhibit the mechanisms of host resistance.

aggression (ah-gresh'un) [L. *aggressus*, from *ad* to + *gradi* to step] a form of behavior which leads to self-assertion; it may arise from innate drives and/or a response to frustration; it may be manifested by destructive and attacking behavior, by covert attitudes of hostility and obstructionism, or by a healthy self-expressive drive to mastery.

AgI chemical symbol for silver iodide.

aging (ä'j'ing) the gradual changes in the structure of any organism that occur with the passage of time, that do not result from disease or other gross accidents, and that eventually lead to the increased probability of death as the individual grows older. Cf. *senescence*.

agitated (aj'e-tät'ed) marked by restlessness and increased activity intermingled with anxiety, fear, and tension.

agitation (aj'e-ta'shun) 1. exceeding restlessness associated with mental distress. 2. a shaking.

agitographia (aj'e-to-graf'e-ah) [L. *agitare* to hurry + Gr. *graphein* to write + *-ia*] excessive rapidity of writing with unconscious omission of words or parts of words; it is usually associated with agitophobia.

agitotalia (aj'e-to-la'le-ah) agitophobia.

agitophasia (aj'e-to-fa'ze-ah) [L. *agitare* to hurry + Gr. *phasis* speech + *-ia*] excessive rapidity of speech in which words or syllables are unconsciously omitted or imperfectly uttered; called also *agitotalia*.

Agit. vas. abbreviation for L. *agita'to va'se*, the vial being shaken.

Agkistrodon (ag-kis'tro-don) [Gr. *agkistrōn* fishhook + *odous* tooth] a genus of venomous serpents of the family Crotalidae. *A. contortrix* is the copperhead and *A. piscivorus*, the water moccasin of North America. Called also *Ancistrodon*. See table accompanying *snake*.

aglaucopsia (ah'glaw-kop'se-ah) [a neg. + Gr. *glaukos* green + *opsis* vision + *-ia*] deuteranopia.

aglaucopsia (ah'glaw-kop'se-ah) deuteranopia.

aglomerular (ah'glo-mer'u-lar) having no glomeruli; said of a kidney in which the glomeruli have been absorbed or in which they have never formed (as in some fishes).

aglossia (ah-glos'e-ah) [a neg. + Gr. *glōssa* tongue + *-ia*] congenital absence of the tongue.

aglossostomia (ah'glos-o-sto'me-ah) [a neg. + Gr. *glōssa* tongue + *stoma* mouth + *-ia*] a developmental anomaly characterized by absence of the tongue and mouth opening.

aglucone (ah-gloo'kōn) aglycone.

aglutition (ag-loo-tish'un) inability to swallow.

aglycemia (ah'gli-se'me-ah) [a neg. + Gr. *glykys* sweet + *haima* blood + *-ia*] absence of sugar from the blood. Cf. *hyperglycemia* and *hypoglycemia*.

aglycone (ah-gli'kōn) [a neg. + Gr. *glykys* sweet + *ōn* being] the noncarbohydrate group of a glycoside molecule; called also *genin*.

aglycosuric (ah-gli'ko-su'rik) free from glycosuria.

agmatology (ag'mah-tol'o-je) [Gr. *agmos* fracture + *-logy*] the sum of what is known regarding fractures.

agminated (ag'min-ät'ed) [L. *agmen* a group] clustered.

agnate (ag'nāt) in Scotch law, the nearest relative on the father's side of one adjudged insane, and appointed guardian of the same.

Agnatha (äg'na-tha) [a neg. + Gr. *gnathos* jaw] the jawless fishes; a class of vertebrates including lampreys, hagfishes, and many extinct forms.

agnathia (ag-na'the-ah) [a neg. + Gr. *gnathos* jaw + *-ia*] a developmental anomaly characterized by total or virtual absence of the lower jaw.

agnathus (ag-na'thus) a fetus exhibiting agnathia.

agnea (ag-ne'ah) a condition in which objects are not recognized.

Agnew's splint (ag'nūz) [David Hayes Agnew, Philadelphia surgeon, 1818-1892] see under *splint*.

AgNO₃ chemical symbol for *silver nitrate*.

agnogenic (ag'no-jen'ik) [Gr. *agnōs* unknown, obscure + *genesis* origin] of unknown origin or etiology.

agnosia (ag-no'ze-ah) [a neg. + Gr. *gnōsis* perception] loss of the power to recognize the import of sensory stimuli; the varieties correspond with the several senses and are distinguished as *auditory*, *visual*, *olfactory*, *gustatory*, and *tactile*. **acoustic a.**, **auditory a.**, inability to recognize the significance of sounds. **body-image a.**, autotopagnosia. **finger a.**, loss of ability to indicate one's own or another's fingers. **ideational a.**, loss of the special associations which make up the idea of an object from its component ideas. **tactile a.**, inability to recognize familiar objects by touch or feel. **time a.**, loss of comprehension of the succession and duration of events. **visual a.**, inability to recognize familiar objects by sight.

agosterol (ag-nos'ter-ol') polyunsaturated sterol, C₃₀H₄₈O, present in wool fat.

agnus castus (ag'nus kas'tus) [L. "chaste lamb"] the chastetree, *Vi'tex ag'nus-cas'tus*; the herb and fruit were used for centuries as an anaphrodisiac and symbol of chastity.

Ag₂O chemical symbol for *silver oxide*.

agofollin (ah-gof'ol-in) estradiol.

-agogue [Gr. *agōgos* leading, inducing] a word termination meaning an agent which leads or induces.

agomphiasis (ag'om-fi'ah-sis) [a neg. + Gr. *gomphios* molar + *-ia*] absence of the teeth.

agomphious (ah-gom'fe-us) without teeth.

agonad (ah-go'nad) [a neg. + *gonad*] an individual without gonads.

agonadal (ah-gon'ah-dal) having no sex glands; due to absence of sex glands.

agonadism (ah-go'nah-dizm) the condition of being without sex glands.

agonal (ag'o-nal) 1. pertaining to the death agony; occurring at the moment of or just before death. 2. pertaining to terminal infection.

agoniadin (ag'o-ni'ah-din) a glycoside from *Plume'ria suc'cuba*, a genus of tropical American shrubs.

agonist (ag'o-nist) a prime mover; a muscle opposed in action by another muscle, called the antagonist. In pharmacology, a drug that has affinity for and stimulates physiologic activity at cell receptors normally stimulated by naturally occurring substances.

agony (ag'o-ne) [Gr. *agōnia*] 1. severe pain or extreme suffering. 2. the death struggle.

agoraphilia (ag'ō-rah-fil'e-ah) [Gr. *agora* marketplace + *philein* to love] an unusual or morbid attraction to large open spaces.

agoraphobia (ag'ō-rah-fō'be-ah) [Gr. *agora* marketplace + *phobos* fear of being in a large open space; overwhelming and incapacitating anxiety on traveling away from the safety of home or on being in crowded places.

Agostini's test (reaction) (ag-os-te'nēz) see under *tests*.

agouti (ah-goo'te) 1. a rodent of the genus *Dasyprocta*, about the size of a rabbit, found in tropical America. 2. a term used in genetics to indicate the natural wild color pattern of the hair of certain mammals.

-agra (ag'rah) [Gr. *agra* a catching, seizure] a word termination meaning a seizure of acute pain.

agraffe (ah-graf') [Fr.] a clamplike instrument for maintaining the edges of a wound in apposition.

agrammatica (ag'rah-mat'e-kah) agrammatism.

agrammatism (ah-gram'ah-tizm') [Gr. *agrammatos* unlettered] inability to speak grammatically because of brain injury or disease.

agrammatologia (ah-gram'ah-to-lo'je-ah) agrammatism.

agranulocyte (ah-gran'u-lo-sit') a nongranular leukocyte.

agranulocytosis (ah-gran'u-lo-si-to'sis) a symptom complex characterized by marked decrease in the number of granulocytes and by lesions of the throat and other mucous membranes, of the gastrointestinal tract, and of the skin; called also *granulocytopenia* and *Schultz's disease*. **infectious feline a.**, panleukopenia.

agranuloplastic (ah-gran'u-lo-plas'tik) [a neg. + *granule* + Gr. *plassein* to form] forming nongranular cells only; not forming granular cells.

agraphia (ah-graf'e-ah) [a neg. + Gr. *graphein* to write + *-ia*] inability to express thoughts in writing, due to a lesion of the cerebral cortex. **absolute a.**, loss of the power to form even single letters. **acoustic a.**, loss of the power of writing from dictation. **a. amnemō'nica**, agraphia in which letters and words can be written, but not so arranged as to express any idea. **a. atac'tica**, absolute a. **cerebral a.**, mental a. **jargon a.**, agraphia in which the patient can write, but forms only senseless combinations of letters. **literal a.**, inability to write let-

ters of the alphabet. **mental a.**, agraphia due to inability to put thought into phrases. **motor a.**, inability to write because of lack of motor coordination. **musical a.**, loss of the power to write musical symbols. **optic a.**, inability to copy written or printed words, but with ability to write from dictation. **verbal a.**, ability to write single letters, with loss of ability to combine them into words.

agraphic (ah-graf'ik) pertaining to, affected with, or of the nature of agraphia.

agremia (ah-gre'me-ah) [Gr. *agra* seizure + *haima* blood + *-ia*] (obs.) that condition of the blood which characterizes gout.

agria (ag're-ah) [L.; Gr. *agrios* wild] an obstinate pustular eruption.

Agriolimax (ag're-o-li'maks') a genus of slugs. **A. lae'vis**, a species that serves as an intermediate host of *Angiostrongylus cantonensis*, which transmits eosinophilic meningitis.

agriothymia (ag're-o-thim'e-ah) [Gr. *agrios* wild + *thymos* spirit + *-ia*] (obs.) insane ferocity.

agrius (a'gre-us) [L. "wild"] very severe; said of skin eruptions.

Agrobacterium (ag'ro-bak-te're-um) [Gr. *agros* field + *bacterium*] a genus of bacteria of the family Rhizobiaceae, order Eubacteriales, made up of small, short, flagellated rods, found in soil or in the roots or stems of plants; seven species have been named, the type species being *A. tumefaciens*.

agromania (ag'ro-ma'ne-ah) [Gr. *agros* field + *mania* madness] morbid passion for solitude or for wandering in the fields.

Agropyron (ag'ro-pi'ron) a genus of grasses, including *A. repens* (L.) Beauv. (Gramineae), couch grass; see *triticum*.

Agropyrum (ag'ro-pi'rum) *triticum*.

Agrostemma githa'go (ag'ro-stem'ah gith-a'go) corn cockle, *Lychnis githago*, a plant whose seeds may cause poisoning (githagism).

agrypnia (ah-grip'ne-ah) [Gr. *agrypnos* sleepless + *-ia*] former term for sleeplessness, or insomnia.

agrypnocoma (ah-grip'no-ko'mah) wakeful coma; lethargy with wakefulness and muttering delirium.

agrypnod (ah-grip'nōd) agrypnotic.

agrypnotic (ah'grip-not'ik) [Gr. *agrypnotikos*] promoting wakefulness.

Ag₂SO₄ chemical symbol for *silver sulfate*.

AGTH adrenoglomerulotropin.

aguamiel (ag'wah-me-el') the sap from which pulque is made.

ague (a'gu) [Fr. *aigu* sharp] 1. malarial fever, or any other severe recurrent symptom of malarial origin. 2. a chill.

brass-founders' a., a disease of brass-founders, caused by inhalation of zinc fumes. **dumb a.**, ague without well-marked chill, and with only a slight periodicity. **quartan a.**, that in which paroxysms are seventy-two hours apart. **quintan a.**, that in which the paroxysms are ninety-six hours apart. **quotidian a.**, that in which there is a twenty-four hour interval between the paroxysms. **shaking a.**, a severe form of malarial paroxysm, beginning with a marked chill. **tertian a.**, that in which the paroxysms are forty-eight hours apart.

A.G.V. aniline gentian violet.

agyria (ah-ji're-ah) [a neg. + Gr. *gyros* ring + *-ia*] a malformation in which the convolutions of the cerebral cortex are not normally developed and the brain is usually small; called also *lissencephaly*.

agyric (ah-ji'rik) 1. pertaining to or characterized by agyria. 2. having no gyri.

ah symbol for *hyperopic astigmatism*.

A.H.A. American Heart Association; American Hospital Association.

ahaptoglobinemia (a-hap'to-glo'bi-ne'me-ah) the presence of little or no haptoglobin in the blood serum.

AHF antihemophilic factor (blood coagulation Factor VIII, see under *factor*).

AHG antihemophilic globulin (blood coagulation Factor VIII, see under *factor*).

ahistidasia (ah-his'ti-da'ze-ah) absence of histidase activity; see *histidinemia*.

A.H.P. Assistant House Physician.

A.H.S. Assistant House Surgeon.

A.I. aortic incompetence; aortic insufficiency; apical impulse; artificial insemination.

A.I.C. Association des Infirmières Canadiennes.

aichmophobia (āk'mo-fō'be-ah) [Gr. *aichmē* spearpoint + *phobos* fear + *-ia*] abnormal fear of sharp-pointed objects.

aid (ād) help or assistance; by extension, applied to any device by which a function can be improved or augmented, as a hearing aid. **first a.**, emergency assistance and treatment furnished in cases of accident, injury, or illness pending regular surgical or medical therapy. **hearing a.**, a device which amplifies sound to help persons with hearing loss; audiphone; otophone. **pharmaceutic a.**, **pharmaceutical a.**, see under *necessity*. **speech a.**, an appliance used to improve an individual's speech,

or therapy which is designed to promote the improvement of speech. **speech a.**, **prosthetic**, an appliance which is used to close a cleft in the hard or soft palate, or both, or to restore other tissue necessary to the production of vocal sounds.

A.I.D. donor insemination.

aidiomania (a'doy-o-ma'ne-ah) [Gr. *aidoia* genitals + *mania* madness] (*obs.*) abnormal sexual desire.

A.I.H. American Institute of Homeopathy; homologous insemination.

A.I.H.A. American Industrial Hygiene Association.

Ailanthus (a-lan'thus) [L. from Malacca name] a genus of simarubaceous trees; the bark of *A. glandulosa* (tree of heaven) is purgative, tonic, and anthelmintic, and contains a bitter principle (ailanthin), glycosides, and a saponin.

Ailantus (a-lan'tus) *Ailanthus*.

ailment (ā'lment) any disease or affection of the body, usually referring to slight or mild disorder.

ailurophilia (i-lu'ro-fil'e-ah) [Gr. *ailouros* cat + *philein* to love] a morbid or inordinate fondness for cats.

ailurophobia (i-lu'ro-fō-be-ah) [Gr. *ailouros* cat + *phobia* pathologic fear of cats (Weir Mitchell).

ainhum (ān'hum, i'num, or [Portuguese] in-yoom') [African] a condition occurring chiefly in Negroes in tropical countries, marked by linear constriction of a toe, especially the little one, which by its contraction gradually amputates the toe.

air (ār) [L. *aer*; Gr. *aēr*] the gaseous mixture which makes up the earth's atmosphere; it is an odorless, colorless gas, consisting of about 1 part by volume of oxygen and 4 parts of nitrogen, the proportion varying somewhat according to conditions. It also contains a small amount of carbon dioxide, ammonia, argon, nitrites, and organic matter. **alkaline a.** (*obs.*), free ammonia. **alveolar a.**, see under *gas*. **complemental a.**, **complementary a.** (*obs.*), inspiratory capacity. **factitious a.**, nitrous oxide. **functional residual a.** (*obs.*), functional residual capacity; see under *capacity*. **liquid a.**, air liquefied by great pressure; on evaporation it produces intense cold. Liquid air has been used to produce local anesthesia and in the treatment of neuralgia and herpes zoster, and as a source of oxygen for medical use. **reserve a.**, (*obs.*), see *expiratory* and *inspiratory reserve volume*, under *volume*. **residual a.**, see under *volume*. **stationary a.** (*obs.*), functional residual capacity. **supplemental a.** (*obs.*), expiratory reserve volume; see under *volume*. **tidal a.**, see under *volume*. **venous alveolar a.**, alveolar air in CO₂ equilibrium with mixed venous blood.

Airbrasive (ār'bra-siv) trademark for (a) an instrument for preparing a cavity in a tooth or removing deposits from teeth by application of a mixture of sand and aluminum oxide by air blast; (b) the abrasive cutting powder used with the instrument.

Airdent (ār'dent) trademark for a dental unit which utilizes abrasive particles applied by air blast for the preparation of dental cavities.

airway (ār'wa) 1. the route for passage of air into and out of the lungs. 2. a tubular device for securing unobstructed passage of air into and out of the lungs during general anesthesia or on occasions when the patient is not ventilating properly. **oropharyngeal a.**, a hollow tube inserted into the mouth and back of the throat to prevent the tongue from blocking off passage of air in unconscious persons.

Ajellomyces (ah'jē-lo-mi'sēz) a genus of ascomycetous perfect fungi of the family Gymnoascaceae, order Eurotiales. *A. dermatitidis*, the perfect stage of *Blastomyces dermatitidis*, is the etiologic agent of North American blastomycosis.

ak- for words beginning thus, see also words beginning *ac-*.

akaryocyte (ah-kar'e-o-sit') [a neg. + Gr. *karyon* kernel + *kytos* hollow vessel] a non-nucleated cell, e.g., an erythrocyte.

akaryota (ah-kar'e-o'tah) akaryocyte.

akaryote (ah-kar'e-ōt) [a neg. + Gr. *karyon* kernel] akaryocyte.

akatama (ak'ah-tam'ah) a form of chronic peripheral neuritis once observed in West Africa; it is marked by swelling, erythema, prickling sensations, burning, numbness, and sometimes excessive sweating.

akatamathesia (ah-kat'ah-mah-the'zhe-ah) [a neg. + Gr. *kata-mathēsis* understanding] inability to understand.

akatanoesis (ah-kat'ah-no'ē-sis) [a neg. + Gr. *katanoēin* to understand] inability to understand oneself (Heveroch, 1914).

akathisia (ak'ah-the'ze-ah) [a neg. + Gr. *kathisis* a sitting down + *-ia*] a condition of motor restlessness, ranging from a feeling of inner disquiet to inability to sit or lie quietly or to sleep; seen in toxic reactions to the phenothiazines. Called also *acathisia* and *kathisophobia*.

akee (ah'ke) native Jamaican name for the fruit of the tree *Blighia sapida*, Kon. Sapindaceae. The seeds contain the toxic principles hypoglycine A and B, and the aril of the unripe fruit contains hypoglycine A. The whitish, ripe aril is cooked and consumed as a delicacy. Ingestion of unripe fruit causes Jamaican vomiting sickness.

akembe (ah-kem'be) onyalai.

Åkerlund deformity (ek'er-loond) [Åke Olof Åkerlund, Swedish roentgenologist, 1885-1958] see under *deformity*.

akidogalvanocautery (ak'i-do-gal'vah-no-kaw'ter-e) cauterization by means of a needle electrode.

akinesia (ah'ki-ne'ze-ah) [a neg. + Gr. *kinēsis* motion + *-ia*] 1. absence or poverty of movements. 2. the temporary paralysis of a muscle by the injection of procaine. **a. al'gera**, Möbius' syndrome. **O'Brien a.**, paralysis of the orbicularis oculi muscle produced by injection of an anesthetic solution directly over the orbital branch of the seventh nerve as it emerges from behind the ear and extends toward the orbital region along the ramus of the jaw, permitting better exposure of the bulb of the eye. **reflex a.**, loss of reflex movement.

akinesis (ah'ki-ne'sis) akinesia.

akinesesthesia (ah-kin'es-the'ze-ah) absence of kinesthesia; absence of the movement sense.

akineti (ah'ki-net'ik) 1. pertaining to, characterized by, or causing akinesia. 2. amitotic.

Akineton (a'ki-ne'ton) trademark for preparations of biperiden.

akiyami (ah'ke-yah'me) nanukayami.

aklomite (ak'lo-mid) chemical name: 2-chloro-4-nitrobenzamide. A substance, C₇H₅ClN₂O₃, used as a coccidiostatic agent in poultry.

aknephascopia (ak'nef-ah-sko'pe-ah) [a neg. + Gr. *knephastwilight* + *skopein* to view] twilight blindness; reduced visual acuity in weak daylight, such as twilight, or in inadequate artificial illumination. Cf. *nyctalopia*.

Akokanthera (ak'o-kan-the'rah) *Acocanthera*.

akoria (ah-ko're-ah) acoria.

Akrinol (ak'rin-ol) trademark for a preparation of acrisorcin.

Akureyri disease (ah-ku're-re) [Akureyri, a town in northern Iceland] benign myalgic encephalomyelitis.

Al chemical symbol for *aluminum*.

-al a suffix used in forming the names of chemical compounds, indicating presence of the aldehyde group, —CHO, as *chloral*; also used to form adjectives (*usual*) and nouns (*trial*).

A.L.A. American Laryngological Association.

Ala alanine.

ala (a'lah), pl. *a'lae* [L. "wing"] [NA] a general term for a wing-like structure or process; called also *wing*. **a. al'ba media'lis**, area vestibularis. **a. au'ris**, auricula. **a. cerebel'li**, a. lobuli centralis. **a. cine'rea**, trigonum nervi vagi. **a. cris'tae gal'li** [NA], a small winglike process on the anterior part of the crista galli of the ethmoid bone; called also *frontal hamulus*, *hamulus frontalis*, and *processus alaris ossis ethmoidalis*. **a. il'i**, a. ossis illi. **a'lae lin'gulae cerebel'li**, vinctula lingu-lae cerebelli. **a. lob'uli centra'lis cerebel'li** [NA], the hemispheric extensions of the central lobule of the vermis of the cerebellum; called also *a. cerebelli*. **a. mag'na os'sis sphenoida'lis**, **a. ma'jor os'sis sphenoida'lis** [NA], great (major) wing of sphenoid bone: a large wing-shaped process arising from either side of the body of the sphenoid bone; its cerebral surface forms the anterior part of the floor of the middle cranial fossa, and its orbital surface forms the chief part of the lateral wall of the orbit. Called also *a. temporalis ossis sphenoidalis*, *lateral wing of sphenoid bone*, and *alisphenoid bone*. **a. mi'nor os'sis sphenoida'lis** [NA], small wing of sphenoid bone: the thin triangular plate of bone that extends horizontally and laterally from either side of the anterior part of the body of the sphenoid bone; it articulates with the frontal bone and helps form the roof of the orbit and the floor of the anterior cranial fossa. **a. na'si** [NA], wing of nose: the flaring cartilaginous expansion forming the outer side of each naris. **a. os'sis il'i** [NA], **a. os'sis il'i'um**, the expanded superior portion of the ilium which forms the lateral boundary of the greater pelvis. **a. par'va os'sis sphenoida'lis**, a. minor ossis sphenoidalis. **a. pon'tis**, tertia ventriculi quarti. **a. sacra'lis**, **a. sa'cri**, a. of the sacrum, pars lateralis ossis sacri. **a. tempora'lis os'sis sphenoida'lis**, a. major ossis sphenoidalis. **a. vespertilio'nis** ["bat's wing"], mesosalpinx. **a. of vomer**, **a. vo'meris** [NA], wing of vomer: one of the two lateral expansions on the superior border of the vomer, coming into contact with the sphenoidal process of the palatine bone and the vaginal process of the medial pterygoid plate.

alacrima (a-lak'ri-mah) [a neg. + L. *lacrima* tear] marked deficiency or absence of secretion of tears.

alactasia (ah-lak-ta'se-ah) malabsorption of lactose due to deficiency of lactase; it is a genetically determined condition in which lactose is not absorbed from the intestine, but is degraded in the large intestine and excreted in the feces as lactic acid, glucose, and galactose. It is very rare in infants of any race, but is common in nonwhite adults.

alae (a'le) [L.] plural of *ala*.

alalia (ah-la'le-ah) [a neg. + Gr. *lalein* to speak + *-ia*] lack of ability to talk; see also *aphasia*. **a. coph'ica**, deaf-mutism.

a. organ'ica, alalia due to organic disease. **a. physiolo'gica**, deaf-mutism. **a. prolonga'ta**, delayed speech.

alalic (ah-lal'ik) pertaining to, affected with, or of the nature of alalia.

alamécin (al-ah-me'sin) an antibiotic substance produced by *Trichoderma viride*.

alanginge (ah-lan'jin) a yellowish amorphous alkaloid from *Alangium lamarckii*.

Alangium lamarckii (ah-lan'je-um lah-mark'e-e) an East Indian plant whose root is emetic, antipyretic, diuretic, and purgative. *A. salviifolium* is much used in Indian medicine as an emetic substitute for ipecac.

alanine (al'ah-nēn) a natural amino acid occurring in two forms: alpha-alanine, $\text{CH}_3\text{CH}(\text{NH}_2)\cdot\text{COOH}$, 2-aminopropionic acid, and beta-alanine, $\text{CH}_3\text{NH}_2\cdot\text{CH}_2\text{COOH}$, 3-aminopropionic acid. **a. mercury**, mercury aminopropionate, $[\text{CH}_3\cdot\text{CH}(\text{NH}_2)\cdot\text{COO}]_2\text{Hg}$.

Alanson's amputation [Edward Alanson, British surgeon, 1747–1823] see under *amputation*.

alantin (ah-lan'tin) inulin.

alanyl-leucine (al'ah-nil-loo'sin) a dipeptide, $\text{CH}_3\cdot\text{CH}(\text{NH}_2)\cdot\text{CO}\cdot\text{NH}(\text{COOH})\cdot\text{CH}\cdot\text{CH}_2\cdot\text{CH}(\text{CH}_3)_2$.

alar (a'lar) [L. *alaris*] pertaining to an ala, or wing.

alastrim (ah-las'trim) variola minor.

alastrimic (al'as-trim'ik) pertaining to variola minor (alastrim).

alastrinic (al'as-trin'ik) alastrimic.

alate (a'lāt) [L. *alatus* winged] having wings; winged.

alba (al'bah) [L.] white; used as an adjective in names of certain anatomical tissues or structures, as *substantia alba*, and of certain diseases, as *pityriasis alba*.

Albalon (al'bah-lon) trademark for preparations of naphazoline hydrochloride.

Albamycin (al'bah-mi'sin) trademark for preparations of novobiocin.

Albarrán's disease, gland, test, tubules (al'bar-anz') [Joaquin Albarrán y Domínguez, Cuban surgeon in Paris, 1860–1912] see *colibacilluria*, and under *gland, test, and tubule*.

albedo (al-be'do) [L.] whiteness. **a. ret'inae**, edema of the retina.

Albee's operation (awl'bez) [Fred. Houdlett Albee, New York surgeon, 1876–1945] see under *operation*.

albendazole (al-ben'dah-zōl) chemical name: [5-(propylthio)-1*H*-benzimidazol-2-yl] carbamic acid methyl ester; an anthelmintic, $\text{C}_{12}\text{H}_{15}\text{N}_3\text{O}_2\text{S}$.

Albers-Schönberg disease [Heinrich Ernst Albers-Schönberg, Hamburg roentgenologist, 1865–1921] osteopetrosis.

Albert's diphtheria stain (al'bertz) [Henry Albert, American physician, 1878–1930] see *Table of Stains*.

Albert's operation, suture [Eduard Albert, Austrian surgeon, 1841–1900] see under *operation and suture*.

Albertini's treatment (al-ber-tēn'ēz) [Ippolito Francesco Albertini, Italian physician, 1662–1738] see under *treatment*.

albicans (al'bi-kanz), pl. *albican'tia* [L.] white; see *corpus albicans*.

albiduria (al'bi-du're-ah) [L. *albidus* whitish + Gr. *ouron* urine + -ia] the discharge of white or pale urine.

albidus (al'bi-dus) [L.] whitish.

Albini's nodules (al-be'nēz) [Giuseppe Albini, Italian physiologist, 1827–1911] see under *nodule*.

albinism (al'bi-nizm) [L. *albus* white + -ism] congenital absence of pigment in the skin, hair, and eyes, due to absence or defect of tyrosinase, an enzyme that catalyzes the oxidation of tyrosine, a precursor of melanin. It is accompanied by photophobia and astigmatism. **localized a.**, partial **a.** **ocular a.**, absence of pigmentation in the tissues of the eye. **partial a.**, absence of pigment in local areas only; called also *localized a.* and *piebaldism*. **total a.**, complete absence of pigment in the eyes and in the skin and its appendages, often attended with astigmatism, photophobia, and nystagmus; called also *albinismus totalis* and *albinismus universalis*.

albinismus (al'bi-niz'mus) [L.] albinism. **a. circumscriptus**, partial albinism manifested as piebaldism, white forelock (a. *circumscriptus pilorum*), or circumscribed areas of depigmentation of the skin. See *piebaldism*. **a. tota'lis**, **a. uni-versa'lis**, total albinism.

albino (al-bi'no) an individual affected with albinism.

albinoidism (al-bi-noid'izm) deficiency of pigment in the hair, skin, and eyes, but not to the degree seen in albinism.

albinoism (al-bi-no'izm) (obs.) albinism.

albinotic (al'bi-not'ik) pertaining to or characterized by albinism.

albinuria (al'bi-nu're-ah) albiduria.

Albinus' muscle (al-bi'nus) [Bernard Siegfried Albinus, anat-

mist and surgeon in Leyden, 1697–1770] 1. *musculus risorius*. 2. *musculus scalenus medius*.

albocinereous (al'bo-si-ne're-us) [L. *albus* white + *cinereus* gray] (obs.) containing both white and gray matter.

Albrecht's bone (al'brektz) [Karl Martin Paul Albrecht, German anatomist, 1851–1894] basiotic bone.

Albright's syndrome (awl'brits) [Fuller Albright, Boston physician, born 1900] see under *syndrome*.

Albugineus (al'boo-kas'is) [936–1013] the most famous Arabic writer on surgery; the surgical part of his encyclopedic *Altrasrif* greatly influenced medieval European medicine. Known also as *Abulcasis* and *Abulkasim*.

albuginea (al'bu-jin'e-ah) [L. from *albus* white] a tough whitish layer of fibrous tissue investing a part, especially a dense white membrane forming the immediate covering of the testicle; called also *tunica albuginea testis* [NA]. **a. oc'uli**, the sclera. **a. ova'rii**, the outer layer, or tunica, of the ovary. **a. pe'nis**, the outer envelope of the corpora cavernosa.

albugineotomy (al'bu-jin'e-ot'o-me) [*albuginea* + Gr. *tomē* a cutting] incision of the tunica albuginea of the testis.

albugineous (al'bu-jin'e-us) [L. *albugineus*] pertaining to or resembling a tough whitish layer of fibrous tissue (*tunica albuginea testis*).

albuginitis (al'bu-jī-ni'tis) inflammation of any one of the albugineous tissues or tunics.

albugo (al-bu'go) [L. from *albus* white] a white corneal opacity.

albukalin (al-bu-ka'lin) a substance, $\text{C}_8\text{H}_{16}\text{N}_2\text{O}_6$, found in leukemic blood.

albumen (al-bu'men) [L., from *albus* white] albumin.

albumimeter (al'bu-mim'ē-ter) albuminimeter.

albumin (al-bu'min) a protein found in nearly every animal and in many vegetable tissues, and characterized by being soluble in water and coagulable by heat; it contains carbon, hydrogen, nitrogen, oxygen, and sulfur. The formula for crystallized albumin has been given as $\text{C}_{720}\text{H}_{1134}\text{N}_{216}\text{S}_5\text{O}_{249}$. **a. A**, a certain constituent of the blood serum which in cancer patients is reduced in amount but which gathers abundantly in cancer cells; see *Kahn test* (def. 2); under *tests*. **acid a.**, albumin altered by the action of an acid. **alkali a.**, any albumin which has been treated with an alkali. **blood a.**, serum **a.** **circulating a.**, that which is found in the fluids of the body. **coagulated a.**, albumin altered by heat or chemical action so as to be insoluble in water, neutral salt solutions, or dilute acid and alkaline solutions. **derived a.**, any albumin denatured by chemical action, as albuminate. **egg a.**, a glycoprotein that constitutes 20 per cent of the white of hens' eggs; called also *ovalbumin*. **hematin a.**, a preparation of ox blood rich in iron. **human a.**, normal human serum **a.** **iodinated I 125 serum a.**, iodinated I 125 albumin injection; see under *injection*. **iodinated I 131 serum a.**, iodinated I 131 albumin injection; see under *injection*. **Mayer's a.**, white of egg 50 ml., glycerol 50 ml., sodium salicylate 1 gm. **muscle a.**, a variety found in muscle juice. **native a.**, any albumin normally present in the body. **normal human serum a.** [USP], a sterile preparation of serum albumin obtained by fractionating blood from healthy, human donors, not less than 96 per cent of its total volume being albumin; used as a blood-volume supporter in the treatment of shock, hypoproteinemia, hyperbilirubinemia, and erythroblastosis fetalis. Administered intravenously. **organ a.**, any albumin normally present in a particular organ. **radioiodinated (^{125}I) serum a. (human)**, iodinated I 125 albumin injection; see under *injection*. **radioiodinated (^{131}I) serum a. (human)**, iodinated I 131 albumin injection; see under *injection*. **serum a.**, a major protein of human blood plasma. **soap a.**, a combination of soap and albumin which is supposed to constitute the intracellular granules of soap. **a. tannate**, a yellowish white astringent powder containing about 50 per cent tannic acid combined with protein; used in diarrhea. **technetium Tc 99m aggregated a.**, see under *technetium*. **vegetable a.**, any albumin of vegetable origin.

albuminate (al-bu'mī-nāt') albumin denatured by a base or an acid, characterized by solubility in dilute acids or alkalis and by being insoluble in dilute salt solutions, water, or alcohol; called also *derived albumin* and *derived protein*.

albuminaturia (al-bu'mī-na-tu're-ah) [*albuminate* + *urine*] proteinuria in which there is an excess of albuminates in the urine.

albuminemia (al-bu'mī-ne'me-ah) [*albumin* + Gr. *haima* blood + -ia] the presence of albumin in the blood plasma or serum; proteinemia.

albuminimeter (al-bu'mī-nim'ē-ter) [*albumin* + *meter*] an instrument used in determining the proportion of albumin present, as in the urine.

albuminimetry (al-bu'mī-nim'ē-tre) the determination of the proportion of albumin present.

albuminocholia (al-bu'mī-no-ko'le-ah) [*albumin* + Gr. *cholē* bile + -ia] the presence of albumin in the bile.

albuminocytological (al-bu'mī-no-si'to-loj'i-k'l) pertaining

to the level of protein as albumin in relation to number of cells present in cerebrospinal fluid.

albuminoid (al-bu'mī-noid'') [*albumin* + Gr. *eidos* form] 1. resembling albumin. 2. fibrous protein. 3. a scleroprotein.

albuminolysin (al'bu-mī-nol'i-sin) [*albumin* + *lysin*] 1. a lysin that disintegrates albumins. 2. anaphylactin.

albuminolysis (al-bu'mī-nol'i-sis) the splitting up of albumins.

albuminometer (al-bu'mī-nom'ē-ter) albuminimeter.

albuminoptysis (al'bu-mī-nop'tī-sis) [*albumin* + Gr. *ptyein* to spit] presence of albumin in the sputum.

albuminoreaction (al-bu'mī-no-re-ak'shun) the reaction of the sputum to tests for albumin; the presence of albumin (positive reaction) is indicative of pulmonary inflammation.

albuminorrhea (al-bu'mī-no-re'ah) [*albumin* + Gr. *rhoia* flow] excessive excretion of albumins.

albuminous (al-bu'mī-nus) containing, charged with, or of the nature of an albumin.

albuminuretic (al-bu'mī-nu-ret'ik) [*albumin* + Gr. *ourētikos* diuretic] 1. pertaining to, characterized by, or promoting albuminuria. 2. an agent that promotes albuminuria.

albuminuria (al'bu-mī-nu're-ah) [*albumin* + Gr. *ouron* urine + *-ia*] presence in the urine of serum albumin; see *proteinuria*.

Bamberger's hematogenic a., that which occurs during the latter periods of severe anemia.

albuminuric (al'bu-mī-nu'rik) proteinuric.

albuminurophobia (al-bu'mī-nu-'ro-fo'be-ah) [*albuminuria* + *phobia*] 1. an exaggerated fear of acquiring albuminuria. 2. overemphasis on the significance of albumin in the urine.

Albumisol (al-bu'mī-sol) trademark for a preparation of albumin human.

albumoscope (al-bu'mo-skōp'') [*albumin* + Gr. *skopein* to view] an instrument for determining the presence and amount of albumin in the urine.

albuterol (al-bu'ter-ōl) chemical name: α^1 -[(*tert*-butylamino)-methyl]-4-hydroxy-*m*-xylene- α,α' -diol; a β -adrenergic stimulant, $C_{13}H_{21}NO_3$, used as a bronchodilator. Called also *salbutamol*. **a. sulfate**, the sulfate salt of albuterol, $(C_{13}H_{21}NO_3) \cdot H_2SO_4$, having the same actions and uses as the base.

Alcaine (al'kān) trademark for a preparation of proparacaine hydrochloride.

Alcaligenes (al'kah-lij'ē-nēz) a genus of microorganisms of the family Achromobacteraceae, order Eubacteriales, made up of gram-negative rod-shaped bacteria generally found in the intestinal tracts of vertebrates or in dairy products. It includes six species, *A. bo'keri*, *A. faeca'lis* (*Bacillus faecalis alcaligenes*), *A. marshall'ii*, *A. metalcalig'enes*, *A. rect'i*, and *A. viscolac'tis*.

alcapton (al-kap'ton) alkapton body; see under *body*.

alcaptonuria (al-kap'to-nu're-ah) alkaptonuria.

alcaptonuric (al-kap'to-nu'rik) alkaptonuric.

alchemy (al'kē-me) the supposed art of transmutation of baser metals into gold; also chemical magic.

alclofenac (al-klo'fen-ak) chemical name: 3-chloro-4-(2-propenyloxy)benzene-acetic acid; an analgesic, antipyretic, and anti-inflammatory, $C_{11}H_{11}ClO_3$.

Alcmaeon (alk-me'on) of **Crotona** (c. 500 B.C.) a famous physician, supposedly a pupil of Pythagoras, and the reputed discoverer of the optic nerve and the auditory tube.

Alcock's canal (al'koks) [Benjamin *Alcock*, Professor of Anatomy, Queen's College, Cork, from 1849 to 1855; born 1801, date of death in America unknown] canalis pudendalis.

alcohol (al'ko-hol) [Arabic *al-koh'l* something subtle] 1. chemical name: ethanol. A transparent, colorless, mobile, volatile liquid, C_2H_5OH , miscible with water, ether, and chloroform, obtained by fermentation of carbohydrates with yeast. Called also *ethyl alcohol*. 2. [USP] a preparation containing not less than 92.3 per cent and not more than 93.8 per cent by weight, corresponding to not less than 94.9 per cent and not more than 96.0 per cent by volume, at 15.56° C., of C_2H_5OH ; used as a topical anti-infective and solvent. 3. any of a class of organic compounds formed from the hydrocarbons by the substitution of one or more hydroxyl groups for an equal number of hydrogen atoms; the term is extended to various substitution products which are neutral in reaction and which contain one or more of the alcohol groups. They are distinguished as *monohydric*, *dihydric*, *trihydric*, etc., depending on the number of hydroxyl groups present. Alcohols may be classified as *primary*, *secondary*, or *tertiary* according to whether the hydroxyl group is attached to a carbon atom that is covalently bonded to one, two, or three other carbon atoms.

absolute a., dehydrated a. **amyl a.**, a colorless oily liquid, $C_5H_{11}OH$, with characteristic odor; miscible with alcohol, ether, and chloroform and slightly soluble in water. **amyl a.**, **tertiary**, amylene hydrate. **anisyl a.**, an alcohol, *p*-methoxybenzyl alcohol, $CH_3O \cdot C_6H_4 \cdot CH_2 \cdot OH$, in pungent shining prisms. **aromatic a.**, any of the phenols. **azeotropic isopropyl a.** [USP], a preparation containing 91 to 93 per cent of isopropyl alcohol by volume, and the remainder consisting of water.

batyl a., the monooctadecyl ether of glycerol, $CH_2OHCH_2OCH_2O(CH_2)_{17}CH_3$; 3-(octadecyloxy)-1,2-propanediol. An isolate from shark liver oils and from yellow bone marrow, now synthesized. Has been used for bracken fern (*Pteridium aquilinum* (L.) Kuhn; Polypodiaceae) poisoning in cattle. **benzyl a.** [NF], a clear colorless oily liquid, $C_6H_5 \cdot CH_2 \cdot OH$, occurring in balsam of Peru, tolu balsam, and styrax; used as a bacteriostatic in solutions for injection. It is also applied topically as a local anesthetic. Called also *phenylcarbinol* and *phenylmethanol*.

bornyl a., Borneo camphor. **butyl a.**, a clear liquid, C_4H_9OH , from the molasses of beets; four isomeric forms are known. **camphyl a.**, borneol.

carnaubyl a., a constituent, $CH_3(CH_2)_{23}OH$, of carnauba wax and of wool fat. **ceryl a.**, a fatty alcohol, $CH_3(CH_2)_{24}CH_2OH$, from Chinese wool; called also *cerotin*. **cetyl a.** [NF], a fatty alcohol, $CH_3(CH_2)_{24}CH_2OH$, from spermaceti; used as an emulsifying and stiffening agent. Called also *ethyl*.

cinnamyl a., chemical name: 3-phenyl-2-propen-1-ol. It is obtained from storax and balsam of Peru. **dehydrated a.** [USP], an extremely hygroscopic, transparent, colorless, volatile liquid with characteristic odor and burning taste, containing not less than 99.5 per cent by volume of C_2H_5OH ; called also *absolute a.*

denatured a., alcohol which has been rendered unfit for beverage or medicinal purposes by addition of methanol or acetone, but which may still be used for industrial purposes or as a solvent.

deodorized a., one that contains 92.5 per cent of absolute alcohol and is free from fusel oil (amyl alcohol) and organic impurities.

dihydric a., an alcohol containing two hydroxyl groups. **diluted a.** [NF], a mixture of alcohol and water containing 41 to 42 per cent by weight, or 48.4 to 49.5 per cent by volume, at 15.56° C., of C_2H_5OH ; used as a solvent. **ethyl a.**, alcohol. **fatty a.**, any hydroxide of a hydrocarbon derived from the paraffin series.

glyceryl a., **glycyl a.**, glycerin. **isoamyl a.**, amyl a. **isobutyl a.**, chemical name: 2-methyl-1-propanol. A clear colorless liquid, $(CH_3)_2CHCH_2OH$, with a characteristic odor; miscible with alcohol and with ether; called also *isobutanol*. **isopropyl a.** [USP], chemical name: 2-propanol. A clear colorless liquid, $CH_3CH(OH)CH_3$, an isomer of propyl alcohol and a homologue of ethyl alcohol. It is miscible with water, alcohol, ether, and chloroform; used as a solvent and as a basis for isopropyl rubbing alcohol (q.v.).

Called also *avartin* and *dimethyl carbinol*, and *isopropanol*. **isopropyl rubbing a.** [USP], a preparation containing between 68 and 72 per cent isopropyl alcohol in water, used as a rubefacient. Formerly called *isopropyl alcohol rubbing compound*.

ketone a., an alcohol which contains the ketone (carbonyl) group. **lanolin a's** [NF], a mixture of aliphatic alcohols, triterpenoid alcohols, and sterols, obtained by hydrolysis of lanolin and containing not less than 30 per cent cholesterol. **methyl a.**, methanol. **monohydric a.**, an alcohol containing only one hydroxyl group. **nicotinyl a.**, chemical name: 3-pyridinemethanol. An alcohol, C_6H_7NO , used as a peripheral vasodilator in vasospastic conditions. **palmityl a.**, cetyl a.

pantothenyl a., 1. panthenol. 2. dexpantenol. **phenylethyl a.** [USP], chemical name: 2-phenylethanol. A colorless liquid, $C_8H_{10}O$, with a rose-like odor and a sharp, burning taste; used as a bacteriostatic for drug solutions. Called also *benzyl carbonol*.

phenylic a., phenol. **polyglucosic a.**, an alcohol having the formula $C_{6n}H_{10n} + 2O_{5n}$. **polyvinyl a.** [USP], a water-soluble synthetic resin, represented by the formula $(C_2H_4O)_n$, in which *n* varies between 500 and 5000; used as a viscosity-increasing agent in pharmaceutical preparations and as a pharmaceutical necessity for ophthalmic solution dosage forms. **primary a.**, an alcohol containing the monovalent carbinol group, $-CH_2OH$.

n-propyl a., chemical name: 1-propanol. A clear colorless liquid with an alcohol-like odor, $CH_3 \cdot CH_2 \cdot CH_2OH$, miscible with water and most organic solvents; used as a solvent for resins. **rubbing a.** [USP], a preparation of acetone, methyl isobutyl ketone, and 68.5 to 71.5 per cent ethyl alcohol; used as a rubefacient.

secondary a., an alcohol containing the divalent group $=CHOH$. **stearyl a.**, a solid alcohol $[CH_3(CH_2)_{16}CH_2OH]$, prepared from stearic acid by catalytic hydrogenation; a pharmacological preparation [NF], containing not less than 90 per cent of stearyl alcohol, the remainder consisting chiefly of cetyl alcohol, is used as an ingredient of hydrophilic ointment, hydrophilic petrolatum, and polyethylene glycol ointment. **sugar a's**, alcohols that result from the reduction of the functional group (aldehyde or ketone) of sugars. **tertiary a.**, an alcohol containing the trivalent group, $\equiv COH$. **tribromoethyl a.**, tribromoethanol. **trihydric a.**, an alcohol containing three hydroxyl groups. **unsaturated a.**, alcohol that is derived from unsaturated hydrocarbons (alkenes, or olefins). **wood a.**, methanol.

alcoholase (al'ko-hol-ās'') a hypothetical substance once believed to be responsible for the conversion of lactic acid into alcohol.

alcoholemia (al'ko-hol-e'me-ah) [*alcohol* + Gr. *haima* blood + *-ia*] the presence of alcohol in the blood.

alcoholic (al'ko-hol'ik) [L. *alcoholicus*] 1. pertaining to or containing alcohol. 2. a person suffering from alcoholism (q.v.).

alcoholism (al'ko-hol-izm) a chronic behavioral disorder manifested by repeated drinking of alcoholic beverages in excess of the dietary and social uses of the community and to an extent that interferes with the drinker's health or his social or economic

functioning; some degree of habituation, dependence, or addiction is implied. **acute a.**, simple drunkenness due to excessive intake of ethyl alcohol, resulting in depression of the centers of the nervous system. **chronic a.**, long-continued, excessive intake of ethyl alcohol characterized by various conditions, including anorexia, diarrhea, weight loss, mental deterioration, personality changes, peripheral neuropathy, and fatty deterioration of the liver.

alcoholization (al'ko-hol'i-za'shun) treatment by application or injection of alcohol.

alcoholize (al'ko-hol-iz') 1. to treat with alcohol. 2. to transform into alcohol.

alcoholometer (al'ko-hol-om'e-ter) [*alcohol* + Gr. *metron* measure] an instrument used in determining the percentage of alcohol in a solution.

alcoholuria (al'ko-hol-u're-ah) the presence of alcohol in the urine.

alcoholysis (al'ko-hol'i-sis) [*alcohol* + Gr. *lysis* dissolution] a process analogous to hydrolysis, but in which alcohol takes the place of water.

alcuronium chloride (al-kūr-o-ni-um) chemical name: *N,N*-diallylnortoxiferinium dichloride; a skeletal muscle relaxant, $C_{44}H_{50}Cl_2N_4O_2$.

Aldactazide (al-dak'tah-zid) trademark for a preparation of spironolactone with hydrochlorothiazide.

Aldactone (al-dak'tōn) trademark for a preparation of spironolactone.

aldehydase (al'de-hi'dās) an enzyme that oxidizes an aldehyde into its corresponding acid; it may also refer to anaerobic conversion to the corresponding acid and alcohol.

aldehyde (al'dē-hīd) [*alcohol* + L. *de* away from + *hydrogen*] 1. any one of a large class of organic compounds containing the group —CHO, that is, with the carbonyl group, C=O, occurring at the end of the carbon chain. 2. acetaldehyde. **acetic a.**, acetaldehyde. **acrylic a.**, acrolein. **amylic a.**, *n*-valeraldehyde. **anisic a.**, a volatile oil, *p*-methoxybenzaldehyde, C_9H_8O . $C_6H_4 \cdot O \cdot C_3H_7 \cdot CHO$, obtainable from oil of anise and other volatile oils. **benzoic a.**, benzaldehyde. **butylic a.**, a substance, isobutyraldehyde, $(CH_3)_2CH \cdot CHO$. **cinnamic a.**, a colorless aldehyde, $C_9H_8(CH_3)CHO$, obtained from oil of cinnamon, and used in flavors and perfumes. **cumic a.**, an aromatic volatile oil, para-isopropylbenzaldehyde, $C_9H_8 \cdot C_6H_4 \cdot CHO$, from several essential oils. **glyceric a.**, **glycerin a.**, one of the allomeric forms of triose; it is $CH_2OH \cdot CHOH \cdot CHO$, a reference substance for the stereochemical classification of the simple sugars. **glycolic a.**, see *diose*. **keto a.**, an aldehyde that contains the keto group CO and CHO. **salicylic a.**, a fragrant colorless liquid, $C_6H_4OH \cdot CHO$, soluble in water, from volatile oil of shrubs of the genus *Spiraea*; called also *salicylaldehyde*. **trichloroacetic a.**, chloral. **valeric a.**, *n*-valeraldehyde.

aldehyde-lyase (al'dē-hīd-li'ās) a group of lyases that catalyze the removal of an aldehyde group, as from 4-hydroxy-2-oxobutyrate to form pyruvate and formaldehyde, or from L-threonine to form glycine and acetaldehyde. It includes the aldolases.

aldin (al'din) an aldehyde base.

Aldinamide (al-din'ah-mid) trademark for preparations of pyrazinamide.

aldohexose (al'do-hek'sōs) a hexose that is an aldehyde derivative; any of a class of sugars that contain six carbon atoms and an aldehyde group, as glucose or mannose.

aldolase (al'do-lās) an enzyme in muscle extract that acts as a catalyst in the production of dihydroxyacetone phosphate and glyceraldehyde phosphate from fructose 1,6-diphosphate.

Aldomet (al'do-met) trademark for a preparation of methyl-dopa.

aldopentose (al'do-pen'tōs) any of a class of sugars that contain five carbon atoms and an aldehyde group, as arabinose.

aldose (al'dōs) a sugar containing an aldehyde group, —CHO.

aldoside (al'do-sid) a glycoside that on hydrolysis yields an aldose sugar.

aldosterone (al'do-ster-ōn', al-dos'ter-ōn) the main mineralocorticoid hormone secreted by the adrenal cortex, the principal biological activity of which is the regulation of electrolyte and water balance by promoting the retention of sodium (and therefore of water) and the excretion of potassium; the retention of water induces an increase in plasma volume and an increase in blood pressure. The secretion of aldosterone is stimulated by angiotensin II.

aldosteronism (al'do-ster'ōn-izm') an abnormality of electrolyte metabolism caused by excessive secretion of aldosterone; called also *hyperaldosteronism*. **primary a.**, that arising from oversecretion of aldosterone by an adrenal adenoma, characterized typically by hypokalemia, alkalosis, muscular weakness, polyuria, polydipsia, and hypertension. Called also *Conn's syndrome*. **pseudoprimary a.**, that caused by bilateral adrenal hyperplasia and having the same signs and symptoms as primary aldosteronism. **secondary a.**, that due to extra-adrenal stimulation of aldosterone secretion; it is commonly associated with

edematous states, as in nephrotic syndrome, hepatic cirrhosis, heart failure, and accelerated phase hypertension.

aldosteronogenesis (al'do-ster-o-no-jen'e-sis) the production of aldosterone by the adrenal glands.

aldosteronoma (al'do-ster'on-o'mah) an aldosterone-secreting tumor of the adrenal cortex.

aldosteronopenia (al'do-ster-o-no-pe'ne-ah) hypoadosteronism.

aldosteronuria (al'do-ster'ōn-u're-ah) the presence of aldosterone in the urine.

aldotetrose (al'do-tet'rōs) an aldehyde sugar containing four atoms of carbon.

aldoxime (al-dok'sīm) a compound formed by the union of an aldehyde with hydroxylamine.

Aldrich mixture (awl'drich) [Robert Henry Aldrich, American surgeon, born 1902] see under *mixture*.

Aldrich syndrome (awl'drich) [Robert A. Aldrich, American pediatrician, born 1917] Wiskott-Aldrich syndrome.

Aldrich-McClure test (awl'drich-mah-kloor') [Charles Anderson Aldrich, American pediatrician, 1888–1949; William Bradbury McClure, 1884–1936, American physician] McClure-Aldrich test.

aldrin (al'drin) chemical name: 1,2,3,4,10,10-hexachloro-1,4,4a,5,8,8a-hexahydro-1,4:8-dimethanonaphthalene. A chlorinated naphthalene derivative, $C_{12}H_8Cl_6$, used as an insecticide.

alecithal (ah-le's'i-thal) [*a neg.* + Gr. *lekithos* yolk] without yolk; applied to eggs with very little yolk. See under *ovum*.

Alectorobius talaje the tick *Ornithodoros talaje*.

alembic (ah-lem'bik) [Arabic *al-imbīq*, the still, from Gr. *ambix* cup] a retort with a removable cap formerly used by chemists.

alembroth (ah-lem'broth) a compound, $(NH_4Cl)_2HgCl_2 + 2H_2O$, of mercuric and ammonium chlorides, formerly used as an antiseptic dressing.

alemmal (ah-lem'al) [*a neg.* + Gr. *lemma* husk] (*obs.*) having no neurilemma; said of a nerve fiber.

alethia (ah-le'the-ah) [*a neg.* + Gr. *lēthē* forgetfulness] (*obs.*) the inability to forget.

aletoocyte (ah-le'to-sit') [Gr. *alētēs* wanderer + *kytos* hollow vessel] a wandering cell.

Aletris farinosa L. (Liliaceae) (al'ē-tris fah-rī-nōs'ah) a perennial herb indigenous to eastern North America, used medicinally by the Catawba Indians. The dried roots (colic root, or unicorn root) are used as a diuretic and uterine tonic; cold-water leaf infusion is used for colic and stomach ailments. It contains starch and diosgenin.

aleukemia (ah'lu-ke'me-ah) [*a neg.* + Gr. *leukos* white + *haima* blood + *-ia*] 1. absence or deficiency of leukocytes in the blood. 2. aleukemic leukemia.

aleukemic (ah'lu-ke'mik) marked by aleukemia; see under *leukemia*.

aleukia (ah-lu'ke-ah) [*a neg.* + Gr. *leukos* white + *-ia*] absence of leukocytes from the blood; leukopenia. **alimentary toxic a.**, a form of mycotoxicosis associated with the ingestion of grain that has overwintered in the field; causative agents include members of the genera *Fusarium*, *Cladosporium*, *Alternaria*, *Penicillium*, *Mucor*, *Piptocephalis*, *Trichoderma*, *Rhizopus*, *Trichothecium*, *Thamnidium*, *Verticillium*, and *Actinomyces*. Abbreviated ATA. **a. hemorrhagica**, an accessory or auxiliary term which actually refers to the condition of aplastic anemia (see under *anemia*).

aleukocytic (ah-lu'ko-sit'ik) showing no leukocytes.

aleukocytosis (ah-lu'ko-si-to'sis) [*a neg.* + *leukocyte* + *-osis*] deficiency in the proportion of white cells in the blood; leukopenia.

aleuriospore (ah-lu're-o-spōr) [Gr. *aleuron* flour + *spore*] a terminal or lateral, asexual spore similar to a conidium except that it is not shed (not deciduous), being released only by dissolution of its attachment to the mycelium.

Aleurisma (al'u-riz'mah) *Chrysosporium*.

Aleurobius farinae (ah-lu-ro'bī-us fah-ri'ne) *Tyroglyphus farinae*.

Aleuronat (ah-lu'ro-nat') trademark for a brand of wheat flour from which most of the starch has been removed; used by diabetics.

aleurone (ah-lōr'ōn', al'yah-rōn') 1. the protein granule of globulins and peptones found in ripe seeds. 2. the outer layer of the endosperm in gluten-rich cereal grains.

aleuronoid (ah-lu'rō-noid') resembling flour.

Alexander (al'ek-san'der) of Tralles (c. 525–605 A.D.) a Byzantine Greek physician and compiler who practiced latterly in Rome; his writings were mainly on pathology and the treatment of internal diseases, his descriptions of parasites being outstanding. He is also known as *Alexander Trallianus*.

Alexander's operation (al'ek-zan'derz) 1. [Samuel Alexander, New York surgeon, 1858–1910] see under *operation* (def. 3). 2. [William Alexander, Liverpool surgeon, 1844–1919] see under *operation* (defs. 1 and 2).

Alexander-Adams operation (al'ek-zan'der-ad'amz) [William Alexander 1844-1919; James Alexander Adams, gynecologist in Glasgow, 1857-1930] see *Alexander's operation* (def. 1), under *operation*.

alexeteric (ah-lek'sē-ter'ik) [Gr. *alexētēr* defender] effective against infection or poison.

alexia (ah-lek'se-ah) [a neg. + Gr. *lexis* word + *-ia*] a form of receptive aphasia in which there is loss of the ability to understand written language as a result of a cerebral lesion; called also *aphemesthesia*, *optical alexia*, *visual amnesia*, *visual aphasia*, and *word blindness*. **cortical a.**, a form of sensory aphasia due to lesions of the left gyrus angularis. **motor a.**, alexia in which the patient understands what he sees written or printed, but cannot read it aloud. **musical a.**, loss of the ability to read music; music blindness. **optical a.**, alexia. **subcortical a.**, a form due to interruption of the connection between the optic center and the gyrus angularis.

alexin (ah-lek'sik) 1. having the properties of an alexin. 2. pertaining to alexia.

alexidine (ah-leks'i-dēn) chemical name: *N,N'*-bis(2-ethylhexyl)-3,12-diimino-2,4,11,13-tetraazatetradecanediimidamide; an antibacterial, $C_{26}H_{56}N_{10}$.

alexin (ah-lek'sin) [Gr. *alexin* to ward off] a nonspecific thermolabile substance which in the presence of specific sensitizer exerts a lytic action on bacteria and other cells. It is not increased by immunization and is present in plasma and serum. See *complement* and *cytase*, def. 1. **leukocytic a.**, see *leukin*, def. 1.

alexinic (al'ek-sin'ik) pertaining to or having the properties of an alexin.

alexipharmac (ah-lek'se-far'mak) [Gr. *alexin* to ward off + *pharmakon* poison] 1. warding off the ill effects of a poison. 2. an antidote or remedy for poisoning.

alexipyretic (ah-lek'si-pi-ret'ik) [Gr. *alexin* to ward off + *pyretos* fever] (*obs.*) dispelling or preventing fever.

alexocyte (ah-lek'so-sit') [Gr. *alexin* to ward off + *kytos* hollow vessel] a cell of the animal organism secreting alexins; the term was formerly applied to eosinophil cells.

aleydigism (ah-li'dig-izm') absence of androgen secretion of the interstitial cells of Leydig.

Alflorone (al'flo-rōn) trademark for preparations of fludrocortisone.

A.L.G. antilymphocyte globulin.

alga (al'gah) any individual organism of the algae.

algae (al'je) [L., pl., "seaweeds"] a group of cryptogamous plants, in which the body is unicellular or consists of a thallus; it includes the seaweed and many unicellular fresh-water plants, most of which contain chlorophyll. Algae account for about 90 per cent of the earth's photosynthetic activity.

algal (al'gal) of, pertaining to, or caused by algae.

alganesthesia (al-gan'es-the'ze-ah) [Gr. *algos* pain + *anesthesia*] analgesia.

algaroba (al'gah-ro'bah) the finely pulverized meal of the dried ripe fruit (St. John's bread, or carob fruit) of *Ceratonia siliqua* L., Leguminosae. It contains albuminous proteins, carbohydrates, and small amounts of fat and crude fiber, and is used in pharmaceutical formulations as an adsorbent and demulcent in treatment of diarrhea.

alge- see *algesi-*.

algedonic (al'je-don'ik) [*alge-* + Gr. *hēdonē* pleasure] characterized by or relating to pain.

algeficient (al'je-fa'shent) [L. *algeret* to be cold + *faciens* making] cooling; refrigerant.

algedrate (al-jel'drāt) nonreactive, powdered, hydrated aluminum hydroxide; an antacid, $AlH_3O_3 \cdot xH_2O$.

algeoscopy (al'je-os'ko-pe) [Gr. *algos* pain + *skopein* to view] physical examination by pressure, to ascertain whether such pressure produces pain, often used in neurological examinations and in ascertaining depth of coma.

algesi-, alge-, algio-, algo- (al-je'ze, al'je, al'je-o, al'go) [Gr. *algos* pain] combining form denoting relationship to pain.

algisia (al-je'ze-ah) sensitiveness to pain; hyperesthesia.

algesic (al-je'zik) painful.

algesichronometer (al-je'ze-kro-nom'ē-ter) [*algesi-* + Gr. *chronos* time + *metron* measure] an instrument for recording the time required to produce a painful impression.

algesimeter (al'je-sim'ē-ter) [*algesi* + Gr. *metron* measure] an instrument used in measuring the sensitiveness to pain as produced by pricking with a sharp point. **Björnström's a.**, an apparatus for determining the sensitiveness of the skin. **Boas' a.**, an instrument for determining the sensitiveness over the epigastrium.

algesimetry (al'jē-sim'ē-tre) the measurement of sensitiveness to pain; called also *algesimetry*.

algesiogenic (al-je'ze-o-jen'ik) [*algesi-* + Gr. *gennan* to produce] producing pain.

algesiometer (al-je'ze-om'ē-ter) algesimeter.

algesthesia (al'jes-the'ze-ah) pain sensibility; algesthesis.

algesthesis (al'jes-the'sis) [*algesi-* + Gr. *aisthēsis* perception] the perception of pain; any painful sensation.

algestone acetophenide (al-jes'tōn) chemical name: 16α,17-dihydroxypregn-4-ene-3,20-dione cyclic acetal with acetophenone; a progestin, $C_{26}H_{36}O_4$.

algetic (al-jet'ik) painful.

-algia (al'je-ah) [Gr. *algos* pain + *-ia* condition] a word termination indicating a painful condition.

algicide (al'ji-sid) [*algae* + L. *caedere* to kill] a substance which is destructive to algae.

algid (al'jid) [L. *algidus*] chilly or cold, def. 1.

algin (al'jin) sodium alginate, a purified carbohydrate (sodium mannuronate) extracted from brown algae species and used as a stabilizing colloid in numerous pharmaceuticals, cosmetics, and foods.

alginate (al'ji-nāt) a salt of alginic acid, which is extracted from marine kelp. Calcium, sodium, and ammonium alginates have been used as foam, clot, or gauze for absorbable surgical dressings. Soluble alginates, such as sodium, potassium, and magnesium alginates, form a viscous sol which can be changed into a gel by a chemical reaction with compounds such as calcium sulfate, a property which makes them useful as materials for taking dental impressions.

Alginobacter (al'ji-no-bak'ter) a genus of microorganisms of the tribe Escherichieae, family Enterobacteriaceae, order Eubacteriales, made up of short motile rods, found in the soil. The type species is *A. acidofaciens*.

Alginomonas (al'ji-no-mo'nas) a genus of microorganisms of the family Pseudomonadaceae, suborder Pseudomonadineae, order Pseudomonadales, occurring as motile coccoid rods, found on algae and in sea water and soil. It includes five species, *A. alginica*, *A. alginovora*, *A. fucicola*, *A. nonfermentans*, *A. terrestris*.

algiuresis (al'jin-u-re'sis) [Gr. *algos* pain + *ourēsis* urination] painful urination.

algio- see *algesi-*.

algioglandular (al'je-o-glan'du-lar) pertaining to glandular action resulting from painful stimulation.

algiometabolic (al'je-o-met'ah-bol'ik) pertaining to metabolic changes resulting from painful stimulation.

algiomotor (al'je-o-mo'tor) producing painful movements, such as spasm or dysperistalsis.

algiomuscular (al'je-o-mus'ku-lar) causing painful muscular movements.

algiovascular (al'je-o-vas'ku-lar) pertaining to vascular action resulting from painful stimulation.

alge- see *algesi-*.

algodystrophy (al'go-dis'tro-fe) [*alge-* + *dystrophy*] a combination of pain and dystrophic changes in bone, as in Sudeck's atrophy.

allogenesis (al'go-jē-ne'ze-ah) [*alge-* + Gr. *gennan* to produce] the production of pain.

allogenesis (al'go-jen'ē-sis) allogenesis.

allogenic (al-go-jen'ik) 1. [*alge-* + Gr. *gennan* to produce] causing pain. 2. [L. *algor* cold + Gr. *gennan* to produce] producing cold.

allogagnia (al'go-lag'ne-ah) [*alge-* + Gr. *lagneia* lust] abnormal sexual impulse toward persons of opposite sex with a desire for experiencing or causing pain. **active a.**, sadism. **passive a.**, masochism.

allogologist (al-gol'o-jist) 1. one who specializes in algology. 2. phycologist.

algology (al-gol'o-je) 1. [*alge-* + *-logy*] the discipline that deals with the study of pain. 2. [*alga* + *-logy*] phycology.

algonorrhoea (al'go-men-o-re'ah) [*alge-* + *menorrhoea*] (*obs.*) dysmenorrhea.

algotometer (al-gom'ē-ter) [*alge-* + Gr. *metron* measure] an instrument for testing sensitivity to painful stimuli. **pressure a.**, an instrument for measuring sensitivity to pressure.

algotometry (al-gom'ē-tre) the measurement of sensitivity to painful stimuli, as with an algometer.

algophilia (al'go-fil'e-ah) (*obs.*) masochism.

algotrophy (al-got'fī-le) [*alge-* + Gr. *philein* to love] (*obs.*) sexual perversion marked by a desire for experiencing pain; masochism.

algophobia (al'go-fō-be-ah) [*alge-* + *phobia*] morbid dread of experiencing or of witnessing pain.

algotychia (al'go-si-ka'le-ah) [*alge-* + Gr. *psychē* soul] (*obs.*) a condition of melancholia with perverted imaginary perceptions of sounds and sights which cause dread, despair, and inclination to suicide.

algor (al'gor) [L.] (*obs.*) a chill or rigor; coldness. **a. mor'tis** ["chill of death"], the gradual decrease of temperature of the body after death.

algoscopy (al-gos'ko-pe) [L. *algor* cold + Gr. *skopein* to view] (*obs.*) cryoscopy.

algosis (al-go'sis) the presence of algae or fungi in a part of the body.

algotism (al'go-spazm) [*algo-* + *spasm*] painful spasm or cramp.

algotism (al'go-vas'ku-lar) algiovascular.

Ali Abbas (ah'le ab'bas) (10th century A.D.) a celebrated Persian physician who wrote *Al-Maliki* (the "Royal Book"), a comprehensive treatise on medicine.

Ali ben Iza (ah'le ben i'zah) [11th century A.D.] a noted Arabic ophthalmologist, who wrote *Tadhkirat* (or *risala*) *al-kah-halin* (the "Book of Memoranda for Eye-doctors"); known also as *Jesu Haly*.

Alibert's disease, keloid (al-e-berz') [Jean Louis Marc Alibert, French dermatologist, 1768-1837] see *mycosis fungoides*, and under *keloid*.

alible (al'i-b'l) [L. *alibilis*] nutritive; assimilable as a food.

alices (al'i-séz) [pl.] the red spots that appear before the pustules in smallpox.

alicyclic (al'i-sik'lik) having the properties of both aliphatic and cyclic substances.

Alidase (al'i-dās) trademark for a preparation of hyaluronidase for injection.

alienation (āl'yen-a'shun) [L. *alienatio*] 1. a feeling of disconnection or isolation from the standards and values of society. 2. former term for mental derangement.

alienia (āl'i-e-ne-ah) [*a* neg. + L. *lien* spleen] absence of the spleen.

alienism (āl'yen-izm) [L. *alienus* alien] 1. mental disorder. 2. the practice of forensic psychiatry.

alienist (āl'yen-ist) 1. former term for psychiatrist. 2. a forensic psychiatrist.

aliflurane (al'i-floo'rān) chemical name: 1-chloro-1,2,2,3-tetrafluoro-3-methoxy-cyclopropane; an inhalation anesthetic, C₃H₄ClF₄O.

aliform (al'i-form) [L. *ala* wing + *forma* shape] shaped like a wing.

alignment (ah-lin'ment) [Fr. *aligner* to put in a straight line] the act of arranging in a line; the state of being arranged in a line. In dentistry, the bringing of natural teeth into normal articulation, or the arranging of artificial teeth in normal articulation and appearance.

aliment (al'ē-ment) [L. *alimentum*] food or nutritive material.

alimentary (al'ē-men'tar-e) pertaining to food or nutritive material, or to the organs of digestion.

alimentation (al'ē-men-ta'shun) the act of giving or receiving nutriment. **artificial a.**, the giving of food or nourishment to persons who cannot take it in the usual way. **forced a.**, 1. the feeding of a person against his will. 2. the giving of more food to a person than his appetite calls for. **rectal a.**, the administration of concentrated nourishment by instillation into the rectum. **total parenteral a.**, parenteral hyperalimentation.

alimentology (al'ē-men-tol'o-je) the science of nutrition.

alimentotherapy (al'ē-men'to-ther'ah-pe) [*aliment* + Gr. *therapeia* treatment] dietetic treatment; treatment by systematic feeding.

alinasal (al'e-na'sal) pertaining to the ala nasi.

alinement (ah-lin'ment) alignment.

alinjection (al'in-jek'shun) (*obs.*) repeated injection of alcohol for preserving anatomic specimens.

alipamide (ah-lip'ah-mid) chemical name: 3-(aminosulfonyl)-4-chloro-2,2-dimethylhydrazine benzoic acid; a diuretic and antihypertensive, C₉H₁₂ClN₃O₃S.

aliphatic (al'ē-fat'ik) [Gr. *aleiphar*, *aleiphatos* oil] pertaining to an oil; a term applied to the "open-chain" or fatty series of hydrocarbons.

alipogenic (a-lip'o-jen'ik) not lipogenic; not forming fat.

alipoidic (a'lip-oi'dik) free from lipoids.

alipotrophic (ah'lip-o-trop'ik) having no influence on the metabolism of fat.

aliquot (al'ē-kwot) the part of a number which will divide it without a remainder; e.g., 2 is an aliquot of 6. By extension, any portion that bears a known quantitative relationship to a whole or to other portions of the same whole, as an aliquot portion of a solution; a sample of a whole taken to determine the quantitative composition of the whole.

alismin (ah-lis'min) an extractive from *Alisma plantago*, or water plantain.

alisphenoid (al-e-sfe'noid) [*ala* + *sphenoid*] 1. pertaining to the greater wing of the sphenoid. 2. a cartilage of the fetal chondrocranium on either side of the basisphenoid; later in development it forms the greater part of the greater wing of the sphenoid.

alizarin (ah-liz'ah-rin) [Arabic *ala sara* extract] a red crystalline dye, 1,2-dihydroxyanthraquinone, C₁₄H₈(CO)₂C₆H₂(OH)₂ pre-

pared synthetically or obtained from madder; its compounds are used as indicators. **a. monosulfonate**, a red; see under *red*. **a. No. 6**, purpurin (def. 2). **a. red**, see under *red*. **a. yellow**, **a. yellow g.**, see under *yellow*.

alizarinopurpurin (al'i-zar'i-no-pur'pu-rin) purpurin (def. 2).

alkalemia (al'kah-le'me-ah) [*alkali* + Gr. *haima* blood + *-ia*] increased pH or decreased hydrogen ion concentration of the blood.

alkalinescence (al'kah-les'ens) slight or incipient alkalinity.

alkalescent (al'kah-les'ent) having a tendency to alkalinity.

alkali (al'kah-li) [Arabic *al-qalī* potash] any of a class of compounds which form soluble soaps with fatty acids, turn red litmus blue, and form soluble carbonates. Essentially the hydroxides of cesium, lithium, potassium, rubidium, and sodium, they include also the carbonates of these metals and of ammonia. **caustic a.**, any solid hydroxide of a fixed alkali. **fixed a.**, any of the alkalis except ammonium. **volatile a.**, ammonia, NH₃; also ammonium hydroxide.

alkalify (al-kal'e-fi) to make alkaline.

Alkaligenes (al'kah-lij'e-nēz) *Alcaligenes*.

alkaligenous (al'kah-lij'ē-nus) yielding an alkali.

alkalimeter (al'kah-lim'ē-ter) [*alkali* + *meter*] an instrument for measuring the alkali contained in any mixture.

alkalimetry (al'kah-lim'ē-tre) the measurement of the alkalis present in any substance. **Engel's a.**, a method of determining the alkalinity of the blood by titrating a diluted specimen with normal tartaric acid solution until it reddens litmus paper; the amount of tartaric solution necessary to produce the result indicates the degree of alkalinity of the blood.

alkaline (al'kah-lin) [L. *alkalinus*] having the reactions of an alkali.

alkalinity (al'kah-lin'i-te) the fact or quality of being alkaline.

alkalinization (al'kah-lin'i-ta'shun) alkalization.

alkalinize (al'kah-lin-iz") alkalize.

alkalinuria (al'kah-lin-u're-ah) [*alkaline* + *urine*] an alkaline condition of the urine.

alkalithrapy (al'kah-li-ther'ah-pe) treatment by alkalis; the administration of large amounts of alkali in the treatment of peptic ulcer and hyperchlorhydria.

alkalization (al'kah-li-ta'shun) the act of making alkaline.

alkalize (al'kah-liz) to render alkaline.

alkalizer (al'kah-liz'er) an agent that neutralizes acids or causes alkalization.

alkalogenic (al'kah-lo-jen'ik) producing alkalinity.

alkaloid (al'kah-loid") [*alkali* + Gr. *eidos* form] one of a large group of nitrogenous basic substances found in plants. They are usually very bitter and many are pharmacologically active. Examples are atropine, caffeine, coniine, morphine, nicotine, quinine, strychnine. The term is also applied to synthetic substances (*artificial a.*s) which have structures similar to plant alkaloids, such as procaine. **animal a.**, 1. a ptomaine. 2. a leukomaine. **artificial a.**, an alkaloid that is made by synthetic chemical processes.

alkalometry (al'kah-lom'ē-tre) [*alkaloid* + Gr. *metron* measure] the dosimetric administration of alkaloids.

alkalosis (al'kah-lo'sis) a pathologic condition resulting from accumulation of base, or from loss of acid without comparable loss of base in the body fluids, and characterized by decrease in hydrogen ion concentration (increase in pH). Cf. *acidosis*. **altitude a.**, increased alkalinity in blood and tissues due to exposure to high altitudes. **compensated a.**, a condition in which compensatory mechanisms have returned the pH toward normal; see *metabolic a.*, *compensated*, and *respiratory a.*, *compensated*. **hypokalemic a.**, a variety of metabolic alkalosis associated with a low serum potassium level; retention of alkali or loss of acid occurs in the extracellular (but not intracellular) fluid compartment, although the pH of the intracellular fluid may be below normal. It may be caused by hypertrophy and hypoplasia of the juxtaglomerular cells, as in Bartter's syndrome. **metabolic a.**, a disturbance in which the acid-base status of the body shifts toward the alkaline side because of retention of base or loss of noncarbonic, or fixed (nonvolatile), acids. **metabolic a.**, **compensated**, a state of alkalosis in which the pH of the blood has been returned toward normal by respiratory compensation. **respiratory a.**, a state due to excess loss of carbon dioxide from the body. **respiratory a.**, **compensated**, a respiratory alkalosis in which the pH of the blood has been returned toward normal through retention of acid or excretion of base by renal mechanisms.

alkalotherapy (al'kah-lo-ther'ah-pe) alkalithrapy.

alkalotic (al'kah-lot'ik) pertaining to or characterized by alkalosis.

alkaluria (al'kah-lu're-ah) the presence of an alkali in the urine.

alkamine (al'kah-min) an alcohol which contains an amine group.

alkane (al'kān) a saturated hydrocarbon of the methane series,

one in which all carbon atoms are joined by single bonds; called also *paraffin*.

alkanet (al'kă-net) the reddish dye-containing root of *Alkanna tinctoria* Tausch, Boraginaceae; formerly used as an astringent, but now mainly as a colorant for candies, cosmetics, and wines. It contains alkanin (the dye principle) and tannin.

alkapton (al-kap'tôn) [alkali + Gr. *haptō* to fasten or bind to] see *alkapton bodies*, under *body*.

alkaptonuria (al'kap-to-nu're-ah) [*alkapton* + Gr. *ouron* urine + *-ia*] excretion in the urine of alkapton bodies (most commonly homogentisic acid), which causes the urine to turn dark on standing, or on addition of alkali. It may occur without other symptoms, or it may in long-standing cases be associated with ochronosis and arthritic symptoms. **spontaneous a.**, a hereditary and congenital anomaly of the metabolism of tyrosine with excretion in the urine of homogentisic acid.

alkaptonuric (al-kap'to-nu'rik) pertaining to, characterized by, or causing alkaptonuria; by extension, sometimes used as a noun to designate an individual with alkaptonuria.

alkatriene (al'kah-tri'en) an unsaturated aliphatic hydrocarbon containing three double bonds.

alkavervir (al'kah-ver'vir) a yellow powdery mixture of alkaloids obtained from selective extraction of *Veratrum viride*; it is used orally as a vasodilator in the treatment of hypertension.

alkene (al'kēn) an unsaturated aliphatic hydrocarbon containing one double bond; olefin.

Alkeran (al-ker'an) trademark for a preparation of melphalan.

alkyl (al'kil) the radical which results when an aliphatic hydrocarbon loses one hydrogen atom.

alkylamine (al'kil-ah'mēn) an amine containing an alkyl radical.

alkylate (al'kī-lāt) to treat with an alkylating agent.

alkylation (al'kī-la'shun) the substitution of an alkyl group for an active hydrogen atom in an organic compound.

alkylogen (al-kil'o-jen) an alkyl ester of any of the halogen acids, e.g., ethyl chloride.

alkyne (al'kīn) an unsaturated hydrocarbon containing a triple bond between two carbon atoms; the alkynes are members of the acetylene series.

allachesthesia (al'ah-kes-the'ze-ah) [Gr. *allachē* elsewhere + *aisthēsis* perception + *-ia*] allesthesia. **optical a.**, visual allesthesia.

allantiasis (al'an-ti'ah-sis) [*allanto-* + *-iasis*] sausage poisoning; poisoning from sausages containing the toxins of *Clostridium botulinum*. See *botulism*.

allanto- (ah-lan'to) [Gr. *allas*, *allantos* sausage] a combining form denoting relationship to a sausage or to the allantoids.

allantochorion (ah-lan'to-ko're-on) a compound membrane formed by fusion of the allantoids and chorion.

allantogenesis (al'an-to-jen'tē-sis) the formation and development of the allantoids.

allantoic (al'an-to'ik) pertaining to the allantoids.

allantoicase (al'an-to-i-kās) an enzyme that converts the allantoic acid formed by allantoinase from allantoin, producing glyoxylic acid and urea.

allantoid (ah-lan'toid) [*allanto-* + Gr. *eidos* form] 1. resembling the allantoids. 2. sausage shaped.

allantoidean (al'an-toi'de-an) 1. pertaining to the allantoids. 2. any animal with an allantoid during its embryonic development; in the plural, *amniotes* is the more usual term.

allantoidoangiopagous (al'an-toi'do-an'je-op'ah-gus) [*allanto-* + Gr. *angeion* vessel + *pagos* thing fixed] joined by the vessels of the umbilical cord; see under *twin*.

allantoidoangiopagus (al'an-toi'do-an'je-op'ah-gus) twin fetuses joined by the vessels of the umbilical cord; allantoidoangiopagous twins. Called also *omphaloangiopagus*.

allantoin (ah-lan'to-in) chemical name: 5-ureidohydantoin. A white crystallizable substance, $C_4H_6N_4O_3$, the diureide of glyoxylic acid, found in allantoic fluid, fetal urine, and many plants, and as a urinary excretion product of purine metabolism in most mammals but not in man or the higher apes. It is produced synthetically by the oxidation of uric acid, and was once used to encourage epithelial formation in wounds and ulcers and in osteomyelitis. It is the active substance in maggot treatment, being secreted by the maggots as a product of purine metabolism.

allantoinase (al'an-to-i-nās) an enzyme that catalyzes the conversion of allantoin into allantoic acid.

allantoinuria (ah-lan'to-in-u're-ah) the presence of allantoin in the urine.

allantois (ah-lan'to-is) [Gr. *allantos* sausage + *eidos* form] an initially tubular ventral diverticulum of the hindgut of embryos of reptiles, birds, and mammals. In reptiles and birds, it expands to a large sac for storing urine and, after fusing with the chorion which lines the shell, provides for gas exchange. The allantois is prominent in some mammals (carnivores, ungulates); in others, including man, it is vestigial except that its blood vessels give rise to those of the umbilical cord. See illustration under *amnion*.

allantotoxin (ah-lan'to-tok'se-kon) [*allanto-* + Gr. *toxikon* poison] a hypothetical poison formerly supposed to cause allantiasis.

allassotherapy (ah-las'o-ther'ah-pe) [Gr. *allassein* to alter + *therapy*] treatment based on producing a change in the general biological conditions of the organism.

allaxis (ah-lak'sis) [Gr. "exchange"] transformation.

allel (ah-lēl') allele.

allele (ah-lēl') [Gr. *allēlōn* of one another] 1. one of two or more alternative forms of a gene occupying corresponding sites (loci) on homologous chromosomes, any two of which may be carried by a given individual and which determine alternative characters in inheritance. The existence of more than two alleles at a single locus is known as multiple allelism. See also *Mendel's law*, under *law*. 2. one of two or more contrasting characters transmitted by alternative genes. **multiple a's**, alleles of which there are more than two alternative forms possible at any one locus. **silent a.**, one which has no detectable expression.

allelic (ah-le'lik) pertaining to alleles; produced by alternative genes.

allelism (al'e-lizm) the existence of alleles, or their relationship to one another.

allelo- (ah-le'lo) [Gr. *allēlōn* of one another] a combining form denoting relationship to another.

allelocatalysis (ah-le'lo-kah-tal'i-sis) [*allelo-* + *catalysis*] the once held theory of mutual stimulation of cells to growth, or stimulation of growth in a bacterial culture by the addition to it of other cells of the same type.

allelocatalytic (ah-le'lo-kat-ah-lit'ik) catalyzing each other; causing or marked by allelocatalysis.

allelochemicals (al-le'lo-kem'iks) chemical interactions between species, involving release of active chemical substances, such as scents, pheromones, and toxins.

allelomorph (ah-le'lo-morf) [*allelo-* + Gr. *morphē* form] allele.

allelomorphic (ah-le'lo-morf'ik) allelic.

allelomorphism (ah-le'lo-morf'izm) allelism.

allelotaxis (ah-le'lo-tak'sis) [*allelo-* + Gr. *taxis* arrangement] the development of an organ from several embryonic structures.

allelotaxy (ah-le'lo-tak'se) allelotaxis.

Allen's fossa [Harrison Allen, Philadelphia anatomist, 1841-1897] see under *fossa*.

Allen's paradoxical law, treatment [Frederick Madison Allen, American physician, 1879-1964] see under *law* and *treatment*.

Allen's test (al'lenz) 1. [Alfred Henry Allen, American chemist, 1846-1904] see under *tests* (1) and (2). 2. [Charles Warren Allen, American physician, 1854-1906], see under *tests* (4). 3. [Edgar V. Allen, American physician, born 1900] see under *tests* (5).

Allen-Doisy test, unit (al'en doi'se) [Edgar V. Allen, American anatomist, 1892-1943; Edward Adelbert Doisy, American biochemist, born 1893] see under *test*, and see *mouse unit* and *rat unit*, under *unit*.

allenthesia (ah-len'thē-sis) (*obs.*) introduction into the body of a foreign substance.

allergen (al'er-jen) [*allergy* + Gr. *gennan* to produce] 1. a substance capable of inducing allergy or specific hypersensitivity; such a substance may be a protein or a nonprotein. 2. any of the extracts of certain foods, bacteria, or pollen, for example, the proteins of milk, egg, or wheat; they are used in the treatment of or testing for hypersensitivity to specific substances. **pollen a.**, see *pollen antigen*, under *antigen*.

allergenic (al'er-jen'ik) acting as an allergen; inducing allergy.

allergic (ah-ler'jik) pertaining to, caused by, affected with, or of the nature of allergy.

allergicid (al'er-jid) a papular or nodular allergic skin reaction.

allergie (al'er-je) variant of allergy.

allergin (al'er-jin) 1. the antibody responsible for anaphylaxis. 2. allergen.

allergist (al'er-jist) a physician who specializes in the diagnosis and treatment of allergic conditions.

allergization (al'er-jī-za'shun) active sensitization or the introduction of allergens into the body.

allergize (al'er-jiz) to subject to sensitization; to make allergic.

allergological (al'er-go-loj'i-kal) pertaining to allergology.

allergologist (al'er-gol'o-jist) one who specializes in allergology.

allergology (al'er-gol'o-je) the branch of medicine devoted to the study of allergy, its etiology, diagnosis, and treatment.

allergosis (al'er-go'sis), pl. *allergo'ses*. Any allergic disease.

allergy (al'er-je) [Gr. *allos* other + *ergon* work] a hypersensitive state acquired through exposure to a particular allergen, reexposure bringing to light an altered capacity to react. Originally, the term denoted any altered reactivity, whether decreased or increased, but is now usually used to denote a hypersensitive state. Allergies may be classified as immediate and delayed, and include atopy, serum sickness, allergic drug reactions, contact

dermatitis, and anaphylactic shock. The allergies are principally manifested in the gastrointestinal tract, the skin, and the respiratory tract. Cf. *anaphylaxis* and *hypersensitivity*. **atopic a.**, atopy. **bacterial a.**, specific hypersensitivity to a particular bacterial antigen, e.g., *Mycobacterium tuberculosis*; it is dependent on previous infection with the specific organism and shows no circulating antibodies. **bronchial a.**, see *asthma*. **cold a.**, a condition manifested by local and systemic reactions, mediated by histamine, which is released from mast cells and basophils as a result of exposure to cold. **contact a.**, hypersensitivity marked by an eczematous reaction to contact between the epidermis and the allergen. **delayed a.**, see under *hypersensitivity*. **drug a.**, an allergic reaction occurring as the result of unusual sensitivity to a drug. **endocrine a.**, allergy to an endogenous hormone. **food a.**, **gastrointestinal a.**, allergy in which the ingested antigens include food as well as drugs; strawberries, milk, and eggs are the most common offenders. The organ affected is usually the skin. **hereditary a.**, atopy. **immediate a.**, see under *hypersensitivity*. **induced a.**, allergy resulting from the injection of an antigen, contact with an antigen, or infection with a microorganism, as contrasted with hereditary allergy; called also *normal a.* and *physiologic a.* **latent a.**, allergy which is not manifested by symptoms but which may be detected by tests. **nonatopic a.**, one of two general groups of clinical allergies, which includes contact dermatitis and some food and drug allergies. Cf. *atopy*. **normal a.**, induced a. **pathologic a.**, hereditary a. **physical a.**, a condition in which the patient is sensitive to the effects of physical agents, such as heat, cold, light, etc. **physiologic a.**, induced a. **pollen a.**, hay fever. **polyvalent a.**, see *pathergy*, def. 2. **spontaneous a.**, atopy.

Allescheria (al'es-ke're-ah) a genus of ascomycetous fungi of the family Eurotiaceae, order Eurotiales, representing the perfect (sexual) stage of *Monosporium*. **A. boydii**, a species of fungi, commonly isolated from maduromycosis and other human infection; its imperfect (asexual) stage is *Monosporium apiospermum*.

allesthesia (al'es-the'ze-ah) [Gr. *allos* other + *aisthēsis* perception + *-ia*] a condition in which a sensation, as of pain or touch, is experienced at a point remote from that at which the stimulus is applied or occurs, as in *allochiria*. **visual a.**, a condition in which visual images are transposed from one half of the visual field to the other, either vertically or horizontally; called also *optical allachesthesia*.

allethrin (al'ē-thrin) a viscous fluid, C₁₉H₂₆O₃, insoluble in water, used as an insecticide.

allaceous (al'e-a'shus) pertaining to or resembling the smell of garlic; pertaining to the genus *Allium*.

alligation (al'i-ga'shun) the process of finding the cost of a mixture of known quantities of ingredients, each of known value, or of determining the quantities of solutions of various strengths to be used to form a mixture of a particular strength.

alligator boy (al'i-ga'tor boy) a child with severe ichthyosis.

Allingham's operation [Herbert William Allingham, English surgeon, 1862–1904] see under *operation*, def. 1.

Allingham's operation, ulcer [William Allingham, English surgeon, 1829–1908] see under *operation*, def. 2, and under *ulcer*.

Allis's inhaler, sign (al'is-iz) [Oscar Huntington Allis, Philadelphia surgeon, 1833–1921] see under *inhaler* and *sign*.

alliteration (ah-lit'er-a'shun) [L. *ad* to + *litera* letter] a dysphasia in which the patient uses words containing the same consonant sounds.

allithiamine (al'i-thi'ah min) any of several analogues of thiamine that are easily absorbed from the intestinal tract.

Allium (al'e-um) [L. "garlic"] a genus of liliaceous plants, including the garlic and onion. Garlic contains a sulfur ester derivative known as allicin, which has antimicrobial activity. It is a common home remedy among various European ethnic groups as an antitussive, antiseptic, rubefacient, diaphoretic, toothache and earache remedy, vermifuge, and as an aid in nervous conditions.

allo- (al'o) [Gr. *allos* other] a combining form denoting a condition differing from the normal, or reversal, or referring to another.

alloantibody (al'o-an'ti-bod'e) isoantibody.

alloantigen (al'o-an'ti-jen) isoantigen.

alloantiserum (al'o-an'ti-se'rum) antiserum against antigens of another strain of animal of the same species.

allobar (al'o-bar) [*allo-* + Gr. *baros* weight] a form of a chemical element having an atomic weight different from that of the naturally occurring form.

allobarbital (al'o-bar'bī-tal) chemical name: 5,5-di-2-propenyl-2,4,6(1*H*,3*H*,5*H*)pyrimidinetrione. An intermediate to long-acting barbiturate, C₁₀H₁₂N₂O₄, occurring as a white, crystalline powder; used orally as a sedative and hypnotic, and orally in combination with acetaminophen or with acetaminophen and codeine as an analgesic. Formerly called *diallylbarbituric acid*.

allobiosis (al'o-bi-o'sis) [*allo-* + Gr. *bios* life] the condition of altered reactivity which an organism manifests under changed environmental or physiologic conditions.

allocentric (al'o-sen'trik) having all of one's ideas centered on others. Cf. *egocentric*.

allocheiria (al'o-ki're-ah) allochiria.

allochesthesia (al'o-kes-the'ze-ah) allesthesia.

allochezia (al'o-ke'ze-ah) [*allo-* + Gr. *chezein* to defecate] (*obs.*) 1. the discharge of nonfecal matter by the anus. 2. the discharge of feces by an abnormal passage.

allochiral (al'o-ki'ral) [*allo-* + Gr. *cheir* hand] pertaining to allochiria.

allochiria (al'o-ki're-ah) [*allo-* + Gr. *cheir* hand + *-ia*] a condition in which, if one extremity is stimulated, the sensation is referred to the opposite side (Obersteiner).

allochroic (al'o-kro'ik) changeable in color, a term generally applied to minerals.

allochroism (al'o-kro'izm) [*allo-* + Gr. *chroa* color + *-ism*] change or variation in color, as in certain minerals.

allochromacy (al'o-kro'mah-se) the formation of other coloring agents from a dye that is unstable in solution.

allochromasia (al'o-kro-ma'ze-ah) change in color of the hair or skin.

allocinesia (al'o-si-ne'ze-ah) [*allo-* + Gr. *kinēsis* motion + *-ia*] a condition in which the patient performs a movement on the side of the body opposite to that directed.

alocolloid (al'o-kol'oid) [*allo-* + *colloid*] a colloid in which a single element in its allotropic forms makes up the colloid system.

allocortex (al'o-kor'teks) [*allo-* + L. *cortex* bark or outer layer] archipallium.

allocrine (al'o-krin) [*allo-* + Gr. *krīnein* to separate] heterocrine.

allogocytophilic (al'o-si'to-fil'ik) [*allo-* + Gr. *kytos* hollow vessel + *philein* to love] having an affinity for cells derived from the same species.

Allodermanyssus (al'o-der'mah-nis'sus) a genus of blood-sucking mites. **A. sanguineus**, a species that parasitizes mice and is a vector of *Rickettsia akari*, the causative agent of rickettsialpox.

alodesmism (al'o-des'mizm) [*allo-* + Gr. *desmos* bond] allomerism based on a difference in the bonds uniting the atoms.

allodiploid (al'o-dip'loid) [*allo-* + *diploid*] 1. having two sets of chromosomes derived from different parental species, as in hybrids. 2. an individual or cell having two such sets of chromosomes.

allodiploidy (al'o-dip'loi-de) the state of having two sets of chromosomes derived from different parental species, as in hybrids; see also *alloploidy* and *allopolyploidy*.

alldynia (al'o-din'e-ah) [*allo-* + Gr. *odynē* pain] pain resulting from a non-noxious stimulus to normal skin.

alloeosis (al'e-o'sis) (*obs.*) change in the character of a disease.

alloeroticism (al'o-e-rot'i-sizm) sexuality directed to another, in contrast to autoeroticism.

alloerotism (al'o-er'o-tizm) [*allo-* + *erotism*] alloeroticism.

alloesthesia (al'o-es-the'ze-ah) allesthesia.

alogamy (al-log'ah-me) [*allo-* + Gr. *gamos* marriage] cross fertilization.

alogeneic (al'o-jē-ne'ik) 1. having cell types that are antigenically distinct. 2. in transplantation biology, denoting individuals (or tissues) that are of the same species but antigenically distinct. Called also *homologous*. NOTE: In contrast, *syngeneic* (or *isogeneic*) refers to individuals having identical genotypes, and *xenogeneic* to individuals of different species, which by definition have different genotypes.

allogenic (al'o-jen'ik) allogeneic.

allogotrophia (al'o-go-tro'fe-ah) nourishment of one part of the body at the expense of another part.

allograft (al'o-graft) a graft of tissue between individuals of the same species but of disparate genotype; called also *allogeneic graft* and *homograft*.

alloimmune (al'o-im-mūn') specifically immune to an allogeneic antigen.

alloimmunization (al'o-im'u-ni-za'shun) isoimmunization; the development of an immune response to alloantigens (isoantigens), as during pregnancy or in blood transfusions or organ transplantations.

alloisomerism (al'o-i-som'er-izm) isomerism which does not appear in the formula.

allogeratoplasty (al'o-ker'ah-to-plas'te) [*allo-* + *keratoplasty*] repair of the cornea by the use of foreign material.

allokinesis (al'o-ki-ne'sis) movement that is not performed voluntarily but is produced passively or occurs reflexly.

allokinetic (al'o-ki-net'ik) [*allo-* + Gr. *kinēsis* movement] pertaining to or characterized by allokinesis.

allolactose (al'o-lak'tōs) a disaccharide, isomeric with lactose, occurring in milk.

allolalia (al'o-la'le-ah) [*allo-* + Gr. *lalein* to speak + *-ia*] any defect of speech of central origin.

allomerism (ah-lom'er-izm) [*allo-* + Gr. *meros* part] change of chemical constitution without change in the crystalline form. Cf. *allomorphism*.

allometric (al'o-met'rik) [*allo-* + Gr. *metron* measure] denoting the disproportionate growth of organs or parts of an organism; pertaining to allometry.

allometron (al'o-met'ron) [*allo-* + Gr. *metron* measure] an evolutionary change in bodily form or proportion as expressed in measurements and indices.

allometry (al-lom'e-tre) the measurement of changing shape of an organism with increase in size, i.e., the determination of the relationship of two varying dimensions, usually linear.

allomorphism (al'o-mor'fiz'm) [*allo-* + Gr. *morphē* form] change of crystalline form without change in chemical constitution. Cf. *allomerism*.

allongement (al-onzh-mon') [Fr.] elongation; especially any procedure for elongating a uterine tumor after it has been severed from its connections, so as to admit of its extraction. Usually done by making a spiral incision into its substance while it is being pulled down.

allonomous (al-lon'o-mus) [*allo-* + Gr. *nomos* law] regulated by stimuli from the outside.

allopath (al'o-path) a term sometimes applied to a practitioner of allopathy.

allopathic (al'o-path'ik) pertaining to or characteristic of allopathy.

allopathist (al-lap'ah-thist) allopath.

allopathy (al-lap'ah-the) [*allo-* + Gr. *pathos* disease] a term applied to that system of therapeutics in which diseases are treated by producing a condition incompatible with or antagonistic to the condition to be cured or alleviated. Called also *heteropathy*. Cf. *homeopathy*.

allophanamide (al-o-fan-am'id) biuret.

allophanate (al'o-fan'at) a salt of allophanic acid.

allophasia (al-lof'ah-sis) [*allo-* + Gr. *phasis* speech] incoherent speech; delirium.

allophenic (al'o-fe'nik) [*allo-* + Gr. *phainein* to show] of or relating to single individuals originating from more than one conceptus; having orderly coexistence of cells with different phenotypes ascribable to known allelic genotypic differences; mosaic.

allophore (al'o-för) erythrophore.

allophthalmia (al'of-thal'me-ah) heterophthalmia.

alloplasia (al'o-pla'ze-ah) [*allo-* + Gr. *plasis* formation + *-ia*] heteroplasia.

alloplasmatic (al'o-plaz-mat'ik) [*allo-* + Gr. *plassein* to form] formed by differentiation from the cytoplasm.

alloplast (al'o-plast) an inert foreign body used for implantation into tissue.

alloplastic (al'o-plas'tik) [*allo-* + Gr. *plassein* to form] pertaining to or characterized by alloplasty; pertaining to an alloplast.

alloplasty (al'o-plas-te) [*allo-* + Gr. *plassein* to form] the developmental direction of the libido away from self to other people or objects, resulting in the direct and unmodified expression of impulses, as seen in certain antisocial individuals. Cf. *autoplasty*.

alloplod (al'o-ploid) [*allo-* + *-ploid*] 1. having any number (two or many) of chromosome sets derived from different ancestral species. 2. an individual or cell having any number (two or many) of chromosome sets derived from different ancestral species.

alloplodid (al'o-ploi'de) the state of having any number (two or many) of chromosome sets derived from different ancestral species; see also *allodiploidy* and *allopolyploidy*.

allopolyploid (al'lo-pol'e-ploid") [*allo-* + *polyploid*] 1. having more than two chromosome sets derived from different ancestral species. 2. an individual or cell having more than two chromosome sets derived from different ancestral species.

allopolyploidy (al'lo-pol'e-ploi-de) the state of having more than two chromosome sets derived from different ancestral species; see also *allodiploidy* and *alloploidy*.

allopregnadiol (al'o-preg-nan'de-ol) an isomer of pregnadiol occurring in female urine.

allopregnane (al'o-preg'nān) see *pregnane*.

allopregnenolone (al'o-preg-nen'o-lōn) a chemical compound which can be transformed into progesterone, testosterone, or other steroid hormones.

allopsychic (al'o-si'kik) [*allo-* + Gr. *psychē* soul] pertaining to mind in its relation to the external world.

allopsychosis (al'o-si-ko'sis) a psychosis marked by disorganization of the perceptive powers for the outer world (hallucinations and illusions), but without disorder of motor powers such as speech and action (Wernicke).

allopurinol (al'o-pu'r-in-ol) [USP] chemical name: 1H-[3,4-d]-pyrimidin-4-ol. An isomer of hypoxanthine, C₅H₄N₄O, capable of inhibiting xanthine oxidase and thus of reducing serum and

urinary levels of uric acid; it occurs as a fluffy white to off-white powder and is used orally in the treatment of gout.

allorhythmia (al'o-rith'me-ah) [*allo-* + Gr. *rhythmos* rhythm + *-ia*] irregularity in the rhythm of the heart beat or pulse that recurs in a regular fashion.

allorhythmic (al'o-rith'mik) affected with or of the nature of allorhythmia.

all or none the fact, discovered by Bowditch (1871), that the heart muscle, under whatever stimulus, will contract to the fullest extent or not at all. In the heart, stimulation of any single atrial or ventricular muscle fiber causes the action potential to travel over the entire atrial or ventricular mass, or not to travel at all. In other muscles and in nerves, this principle is limited to individual fibers; i.e., stimulation of a fiber causes an action potential to travel over the entire fiber, or not to travel at all. Called also *all-or-none law*.

allorphine (al'lor-fēn) nalorphine.

allose (al'ōs) a sugar, C₆H₁₂O₆, isomeric with glucose.

allosensitization (al'o-sen'si-ti-za'shun) sensitization to alloantigens (isoantigens), as to Rh antigens during pregnancy (see *Rh isoimmunization*). Called also *isosensitization*.

allosome (al'o-sōm) [*allo-* + Gr. *sōma* body] 1. (obs.) a sex chromosome; see under *chromosome*. 2. a foreign constituent of the cytoplasm of a cell which has entered from the outside.

paired a., a diplosome. **unpaired a.**, a monosome, def. 1.

allosteric (al'o-ster'ik) [*allo-* + Gr. *stereos* solid] denoting a macromolecule (an enzyme) whose reactivity with another molecule is altered by combination with a third molecule that is not a substrate; also, denoting the enzyme inhibition exercised by such alteration. See also under *effector* and *site*.

allotetraploid (al'o-tet'rah-ploid) an individual having two sets of chromosomes derived from different ancestral species.

allotherm (al'o-therm") [*allo-* + Gr. *thermē* heat] 1. poikilotherm. 2. heterotherm.

allotope (al'o-tōp) a site on the constant or nonvarying portion of an antibody molecule that can be recognized by a combining site of other antibodies. Cf. *idiotype*.

allotopia (al'o-to'pe-ah) dystopia.

allotopic (al'o-top'ik) dystopic.

allotoxin (al'o-tok'sin) [*allo-* + *toxin*] any substance formed by tissue change within the body which serves as a defense against toxins by neutralizing their poisonous properties.

allotransplantation (al'o-trans'plan-ta'shun) [*allo-* + *transplantation*] transplantation of tissue from one individual into the body of another member of the same species but of a different genotype from the donor.

allotrio- (ah-lot're-o) [Gr. *allotrios* strange] a combining form meaning strange or foreign.

allotriodontia (ah-lot're-o-don'she-ah) [*allotrio-* + Gr. *odous* tooth + *-ia*] 1. the transplantation of teeth. 2. the existence of teeth in abnormal places, as in tumors.

allotriogeusia (ah-lot're-o-gu'ste-ah) [*allotrio-* + Gr. *geusis* taste + *-ia*] a perverted condition of the sense of taste.

allotriolith (al'o-tri'o-lith) [*allotrio-* + Gr. *lithos* stone] a calculus in an abnormal situation, or one composed of unusual materials.

allotriophagia (ah-lot're-o-fa'je-ah) allotriophagy.

allotriophagy (ah-lot're-of'ah-je) [*allotrio-* + Gr. *phagein* to eat] former term for pica.

allotriosmia (al'o-tri-os'me-ah) heterosmia.

allotriuria (ah-lot're-u're-ah) [*allotrio-* + Gr. *ouron* urine + *-ia*] a strange or perverted condition of the urine.

allotrope (al'o-trōp) an allotropic form.

allotrophic (al'o-trof'ik) rendered non-nutritious by the process of digestion.

allotropic (al'o-trop'ik) 1. exhibiting allotropism. 2. concerned with others; said of a type of personality which is inclined to be preoccupied by others rather than oneself; not self-centered.

allotropism (ah-lot'ro-pizm) [*allo-* + Gr. *tropos* a turning] 1. the existence of a substance in two or more distinct forms (allotropic forms) with distinct physical properties, e.g., graphite and diamond, allotropic forms of carbon. 2. a tropism between different structures, e.g., between spermatozoa and ova (Roux).

allotropy (ah-lot'ro-pe) allotropism.

allotrylic (al'o-tril'ik) [*allotrio-* + Gr. *hylē* matter] produced by the presence of a foreign body or principle.

allotype (al'o-tip) any of the alternative characters controlled by allelic genes; see also *allotypy*. **Inv a.**, Km antigen. **Km a.**, an allotypic antigenic marker on the kappa chain of human immunoglobulins. **Oz a.**, an allotypic antigenic marker on the lambda chain of human immunoglobulins, equivalent to the Km allotypes on kappa light chains.

allotypic (al'o-tip'ik) characterized by allotypes.

allotypy (al'o-ti'pe) [*allo-* + Gr. *typos* type] the genetically controlled property, in proteins, of existing in antigenically distinguishable forms in different members of the same species, i.e., as

serum protein isoantigens (not yet distinguishable by chemical or physicochemical means); the condition of being an allotype.

alloxan (al'ok-san) a reddish, crystalline substance, mesoxalyl urea, $\text{CO}\cdot\text{NH}\cdot\text{CO}\cdot\text{NH}\cdot\text{CO}$, an oxidized product of uric acid. It

tends to destroy the islet cells of the pancreas, thus producing diabetes. It has been obtained from the mucus of the intestine in diarrhea and has been used in nutrition experiments and as an antineoplastic agent.

alloxantin (al'ok-san'tin) a crystalline derivative of alloxan and dialuric acid, $[\text{CO}(\text{NH}\cdot\text{CO})_2\text{C}(\text{OH})]_2$, obtained by reduction.

alloxazine (ah-lok'sah-zēn) a heterocyclic compound, $\text{C}_{10}\text{H}_8\text{N}_4\text{O}_2$, an isomer of isalloxazine, which is the basic structure of riboflavin.

alloxuremia (al'ok-su-re'me-ah) [*alloxur* + Gr. *haima* blood + *-ia*] the presence of purine bases in the blood, causing a form of intoxication.

alloxuria (al'ok-su're-ah) [*alloxur* + Gr. *ouron* urine + *-ia*] the presence of purine bases in the urine.

alloxuric (al'ok-su'rik) pertaining to or characterized by alloxuria.

alloy (al'loi) [Fr. *aloyer* to mix metals] a solid mixture of two or more metals or metalloids that are mutually soluble in the molten condition; distinguished as binary, ternary, quaternary, etc., depending on the number of metals in the mixture. An alloy may also be classified on the basis of its behavior when solidified. **amalgam a.**, a metal in the form of filings or spheres which is to be blended with mercury to form an amalgam. **Newton's a.**, Melotte's metal.

alloyage (ah-loi'ij) the combining of metals into alloys.

allspice (awl'spis) pimenta.

all-trans retinal see *retinal* (def. 2).

allyl (al'il) [L. *allium* garlic + Gr. *hylē* matter] a univalent organic group, $\text{CH}_2\cdot\text{CH}\cdot\text{CH}_3$. **a. aldehyde**, acrolein. **a. isothiocyanate**, chemical name: 3-isothiocyanato-1-propene. Volatile oil of mustard, $\text{C}_3\text{H}_5\text{NCS}$, used as a counterirritant in ointments and plasters and in the preparation of flavors; it is also used in the manufacture of war gas. **a. sulfide**, a synthetically prepared compound, $(\text{C}_3\text{H}_5)_2\text{S}$, formerly used in cholera and subcutaneously in tuberculosis; called also *diallyl sulfide* and *thiollylic ether*. **a. sulfocarbamide**, **a. thiocarbamide**, **a. thiourea**, thiosinamine. **a. tribromide**, a colorless or yellowish liquid, $\text{C}_3\text{H}_5\text{Br}_3$, formerly used as an antispasmodic and anodyne.

allylamine (al'il-am'in) a caustic liquid with an ammoniacal odor, 3-aminopropylene, $\text{CH}_2\cdot\text{CH}\cdot\text{CH}_2\cdot\text{NH}_2$, used in the manufacture of mercurial diuretics.

allylguaiacal (al'il-gwi'ah-kol) eugenol.

allylnormorphine hydrochloride (al'il-nor-mor'fēn) nalorphine hydrochloride.

almadrate sulfate (al'mah-drāt) aluminum magnesium hydroxide oxide sulfate hydrate; an antacid, $\text{Al}_4\text{H}_6\text{Mg}_2\text{O}_{14}\text{S}\cdot x\text{H}_2\text{O}$.

Almeida's disease (al-ma-ēd'ahz) [Floriano Paulo de Almeida, Brazilian physician born 1898] paracoccidioidomycosis.

Almén's reagent, test (al-mānz') [August Teodor Almén, Swedish physiologist, 1833-1903] see under *reagent* and *tests*.

almond (ah'mund) [Fr. *amande*, from L. *amygdala* almond] the fruit of *Prunus amygdalus* Batsch. (*P. communis* L.), almond tree, seeds of the sweet variety (var. *dulcis*) being edible. **bitter a.**, the fruit of *P. amygdalus* var. *amara*, whose seeds are inedible but which contains a volatile oil and amygdalin. On maceration and distillation, the seeds yield bitter almond oil, which contains about 80 per cent benzaldehyde and 2-4 per cent hydrocyanic acid. Used in low doses in various cough mixtures, in liqueurs, and in perfumery. **sweet a.**, the fruit of *P. amygdalus* var. *dulcis*.

almoner (al'mo-ner) a person who dispenses alms. **hospital a.**, Brit., a person trained in dispensing the social service funds of a hospital, and in administering social service work.

Al₂O₃ aluminum oxide.

alochia (ah-lo'ke-ah) [L.; a neg. + Gr. *lochias* lochia] absence of the lochia.

Aloe (al'o) [L. *alōe*; Gr. *alōē*] a large genus of succulent South African plants of the Liliaceae family. The dried juice of several species (e.g., *A. barbadensis*, *A. ferox*, *A. pernyi*) contains purgative principles. Aloe may also refer to the fragrant wood of *Aquilaria agallocha* (East Indian tree) of the family Thymelaeaceae.

aloe (al'o) [USP] the dried juice of the leaves of various species of liliaceous plants of the genus *Aloe*, which has purgative properties; it is now used only as an ingredient of *compound benzoin tincture*.

aloe-emodin (al'o-em'o-din) chemical name: 1,8-dihydroxy-3-(hydroxymethyl)-9,10-antracenedione. A compound having cathartic principles, occurring in the free state and as a glycoside in rhubarb, senna leaves, and in various species of *Aloe*.

aloetic (al'o-et'ik) [L. *aloeticus*] pertaining to or containing aloe.

alogia (ah-lo'je-ah) [a neg. + Gr. *logos* word + *-ia*] inability to speak, due to a central lesion.

Al(OH)₃ aluminum hydroxide.

aloin (al'o-in) chemical name: 10-glucopyranosyl-1,8-dihydroxy-3-(hydroxymethyl)-9(10H)-anthracenone. A mixture of active principles, chiefly barbaloin, $\text{C}_{21}\text{H}_{22}\text{O}_8$, extracted from aloes; used as a purgative to relieve temporary constipation and/or atonic chronic constipation.

alanimid (ah-lon'i-mid) chemical name: 2,3-dihydrospiro[naphthalene-1(4H),3'-piperidine]-2',4,6'-trione; a sedative and hypnotic, $\text{C}_{14}\text{H}_{13}\text{NO}_3$.

alopecia (al'o-pe'she-ah) [Gr. *alōpekia* a disease in which the hair falls out] baldness; absence of the hair from skin areas where it normally is present. **a. adna'ta**, congenital **a. a. area'ta**, a microscopically inflammatory, usually reversible, patchy loss of hair, occurring in sharply defined areas and usually involving the beard or scalp; called also *a. circumscripta* and *area celsi*. **a. cap'itis tota'lis**, complete loss of hair from the scalp. **a. cel'si**, *a. areata*. **cicatricial a.**, **a. cicatriza'ta**, an irreversible loss of hair associated with scarring, usually occurring on the scalp; called also *alopecia orbicularis*. **a. circumscrip'ta**, *a. areata*. **congenital a.**, **a. congenita'lis**, congenital absence of hair, usually from the scalp. **drug a.**, *a. medicamentosa*. **a. generalisa'ta**, 1. *a. universalis*. 2. *a. totalis*. **a. limina'ris**, loss of hair along the front and back margins of the scalp, occurring as the result of trauma or pressure; see *ophiasis*. Called also *a. marginalis* or *marginal a.* **male pattern a.**, a progressive, diffuse, symmetrical loss of scalp hair, beginning with characteristic frontal recession and leaving ultimately only a sparse peripheral rim of scalp hair (the hippocentric wreath); the condition is androgen-dependent and is caused by an autosomal dominant gene of variable expressivity. Called also *common male baldness* and *hereditary a. marginal a.*, **a. margina'lis**, *a. liminaris*. **marginal traumatic a.**, baldness occurring above and anterior to the ears. **a. medica-mento'sa**, loss of hair caused by the ingestion of a drug, such as heparin, thallium, or one of the radiomimetic drugs; called also *drug a.* **a. mucino'sa**, a patchy loss of hair associated with follicular mucinosis. **a. orbicula'ris**, *a. cicatriza'ta*. **physiologic a.**, the normal shedding of hair at the end of telogen. **a. pityroi'des**, loss of scalp hair associated with, and presumably at least partially due to, dandruff or seborrheic dermatitis of the scalp. **postpartum a.**, a common, diffuse, temporary loss of resting scalp hair (telogen effluvium), beginning soon after parturition. **a. prematu'ra**, **a. preseni'lis**, early, rapidly progressive male pattern alopecia. **pressure a.**, loss of hair from a body area subjected to prolonged pressure. **radiation a.**, loss of hair after exposure to ionizing radiation, the extent and permanence of which are dependent on the skin field, quality of radiation beam, time-dose relationship, and probably other factors. **roentgen a.**, x-ray **a. a. seborrhe'ica**, loss of scalp hair associated with chronic disorder of the scalp, marked by itching, hyperemia, and dandruff. **senile a.**, **a. seni'lis**, loss of hair accompanying old age. **symptomatic a.**, **a. symp-tomat'ica**, loss of hair occurring after fever or childbirth, as a result of systemic or psychogenic causes, or after some other stress of which the effluvium is symptomatic. **syphilitic a.**, **a. syphilit'ica**, loss of hair resulting from either secondary or tertiary syphilis. **a. tota'lis**, complete loss of hair from the entire scalp, resulting from progression of alopecia areata. **traction a.**, baldness as a consequence of continuous or prolonged traction on the roots of the hair, as applied in certain styles of dressing the hair or in the habit of twisting the hair. **traumatic a.**, **a. traumat'ica**, loss of hair occurring as the result of injury, as in alopecia liminaris or traction alopecia. **a. universa'lis**, loss of hair over the entire body, resulting from progression of alopecia areata. **x-ray a.**, loss of hair after exposure to roentgen radiation, the extent and permanence of which are dependent on the field and dosage; called also *roentgen a.*

alopecic (al'o-pe'sik) pertaining to or characterized by alopecia.

alopécie (al-ō-pa-se') [Fr.] alopecia. **a. du chignon**, baldness developing at the site on which the chignon, or bun of hair, rests on the scalp. **a. marginale traumatique**, marginal traumatic alopecia.

aloxanthin (al'ok-san'thin) a yellow principle, $\text{C}_{15}\text{H}_{10}\text{O}_6$, derivable from aloes by the action of potassium dichromate.

aloxiprin (al-ok'si-prin) chemical name: 2-(acetyloxy)benzoic acid polymer with aluminum hydroxide. A polymeric condensation product of aluminum hydroxide and aspirin, $\text{Al}_2\text{O}_3(\text{C}_6\text{H}_4\cdot\text{OOCCH}_3)_2\text{COO}$, used as an analgesic.

alpenstich (ahl'pen-stikh') [Ger. "alpine stab"] epidemic pneumonia in Alpine valleys.

alpertine (al-per'tēn) chemical name: 5,6-dimethoxy-3-[2-(4-phenyl-1-piperazinyl)ethyl]-1H-indole-2-carboxylic acid ethyl ester; a tranquilizer, $\text{C}_{28}\text{H}_{31}\text{N}_3\text{O}_4$.

alpha (al'fah) the first letter of the Greek alphabet, α or α; used as a part of a chemical name to denote the first of a series of

isomeric compounds, or the carbon atom next to the carboxyl group. The succeeding letters of the Greek alphabet, beta (β), gamma (γ), delta (δ), etc., are used to name, in order, succeeding compounds or carbon atoms.

alpha-amylase (al'fah-am'i-lōs) the linear component of starch, usually amylase.

alpha₁-antitrypsin (al'fa-an'te-trip'sin) a plasma protein (an α_1 -globulin, molecular weight 45000) produced in the liver, which inhibits the activity of trypsin and other proteolytic enzymes. Deficiency of this protein is associated with development of emphysema. Also written α_1 -antitrysin.

Alpha Chymar (al'fah ki'mar) trademark for a preparation of chymotrypsin.

alpha-dinitrophenol (al'fah-di-ni'tro-fe'nol) see under *dinitrophenol*.

alphadione (al'fah-di'ōn) a steroid anesthetic, a combination of two steroids (3 α -hydroxy-5 α -pregnane-11,20-dione and 21-acetoxy-3 α -hydroxy-5 α -pregnane-11,20-dione) which are structurally similar to progesterone. It has a wide margin of safety between anesthetic dose and lethal dose.

Alphadrol (al'fah-drol) trademark for a preparation of fluprednisolone.

alpha-estradiol (al'fah-es'trah-di'ol) see *estradiol*.

alpha-hypophamine (al'fah-hi-pof'ah-min) oxytocin.

alpha-lobeline (al'fah-lob'e-lin) see *lobeline*.

alphalytic (al'fah-lit'ik) blocking the α -adrenergic receptors of the sympathetic nervous system; also, an agent that so acts.

alphamimetic (al'fah-mi-met'ik) stimulating or mimicking the stimulation of the α -adrenergic receptors of the sympathetic nervous system; also, an agent that so acts.

alphanaphthol (al'fah-naf'thol) a form of naphthol occurring as a white or pinkish crystalline compound, soluble in alcohol, ether, and hot water and slightly soluble in cold water; used in the manufacture of dyes, intermediates, and perfumes, and in microscopy.

alphaprodine hydrochloride (al'fah-pro'dēn) [USP] chemical name: *cis*-(+)-13-dimethyl-4-phenyl-4-piperidinol propanoate (ester) hydrochloride. A white, crystalline powder, $C_{18}H_{23}NO_2 \cdot HCl$, used intravenously or subcutaneously as a narcotic analgesic in conditions requiring rapid and brief analgesia.

alpha-tocopherol (al'fah-to-ko'ter-ol) see under *tocopherol*.

alpha-tropeine (al'fah-tro'pe-in) a substance derivable from scopolamine and hyoscyne.

aphelasma (al'fel-as'mah) (*obs.*) leukoplakia.

aliphantomorphous (al'fit-o-mor'fus) [Gr. *aliphiton* barley-meal + *morphē* form] having a mealy appearance; said of certain fungous parasites of plants.

alpihodermia (al'fo-der'me-ah) (*obs.*) absence of pigmentation of the skin.

alphonsin (al-fon'sin) [named for *Alphonse Ferri*, Italian surgeon, 1515-1595] a bullet-forceps having three prongs.

alphos (al'fos) [L.; Gr. *alphos*] a nummular variety of psoriasis.

alprazolam (al-pra'zo-lam) chemical name: 8-chloro-1-methyl-6-phenyl-4*H*-[1,2,4]triazolo[4,3- α][1,4]benzodiazepine; a tranquilizer, $C_{17}H_{13}ClN_4$.

alprenolol hydrochloride (al-pren'o-lol) chemical name: 1-[(1-methylethyl)amino]-3-[2-(2-propenyl)phenyl]-2-propanol hydrochloride; a beta-adrenergic blocking agent, $C_{15}H_{23}NO_2 \cdot HCl$, having the same actions as propranolol (q.v.).

alprostadiol (al-pros'tah-dil) chemical name: 11 α ,15*S*-dihydroxy-9-oxo-prost-13-en-1-oic acid; a vasodilator, $C_{20}H_{34}O_6$. Called also *prostaglandin E₁*.

alrestatin sodium (al'rē-stat'in) chemical name: 1,3-dioxo-1*H*-benz[de]isoquinoline-2(3*H*)acetic acid sodium salt; an aldose reductase inhibitor, $C_{14}H_{18}NNaO_4$.

A.L.R.O.S. American Laryngological, Rhinological, and Otolaryngological Society.

ALS antilymphocytic serum.

alseroxylon (al'ser-ok'si-lon) a purified extract of *Rauwolfia serpentina*, containing reserpine and other amorphous alkaloids, occurring as a reddish brown amorphous powder; used orally as an antihypertensive and sedative.

alstonine (awl'stō-nēn) an alkaloid obtained from several apocynaceous plants, e.g., *Alstonia constricta* F. Muell., *Rauwolfia* species, *Catharanthus roseus* G. Don, etc. The bark of several species of *Alstonia* has been used for its tonic, astringent, antiperiodic, and antipyretic properties.

Alström's syndrome (al'strumz) [Carl Henry *Alström*, Swedish geneticist] see under *syndrome*.

Alt. dieb. abbreviation for *L. alter'nis die'bus*, every other day.

alter (awl'ter) to castrate, as housepets or livestock.

alterant (awl'ter-ant) alternative.

alterative (awl'ter-a'tiv) [L. *alterare* to change] an obsolete term originally used for drugs said to re-establish healthy functions of the system.

alteregoism (awl'ter-e'go-izm) interest and sympathy only for persons who are in the same situation as one's self.

alternans (awl'ter-nanz) [L.] alternating or alternation, as in pulsus alternans (alternating strength of the pulse). **electrical a.**, alternating variations in the amplitude of electrocardiographic waves. **a. of the heart**, alternating strength in the heart beat or pulse. **pulsus a.**, the presence of alteration of intensity of heart sounds, indicating left ventricular failure.

Alternaria (awl'ter-na're-ah) a genus of dematiaceous Fungi Imperfecti of the order Moniliales, having dark-colored conidia somewhat resembling *Trichophyton*; it causes several diseases of plants and has been reported in diseases of the lungs and in skin infection in man, and is also a common allergen in human bronchial asthma.

alternariotoxicosis (awl'ter-nar'i-ah-tok-si-ko'sis) a form of mycotoxicosis caused by members of the genus *Alternaria*.

alternating (awl'ter-nāt'ing) occurring in regular succession; alternately direct and reversed.

alternation (awl'ter-na'shun) [L. *alternatio*] interrupted occurrence, being interspersed with different or opposite events.

cardiac a., a condition in which, during sphygmography, every other beat is weak at 2 to 10 mm. Hg below the systolic level. **a. of generations**, alternate occurrence in regular sequence of asexual and sexual methods of reproduction in the same species; metagenesis.

Althaea (al-the'ah) [L.] a genus of malvaceous plants; the root and leaves of *A. officinalis* (marshmallow) contain sugar, pectin, and mucilage and are used as a demulcent and poultice.

Althausen test (awl'tow-zen) [Theodore L. *Althausen*, American physician, born 1897] see under *tests*.

althaea (al-the'ah) the dried root of *Althaea officinalis*, or marshmallow root; a decoction was once used as a demulcent, and the boiled root as a poultice.

althiazide (al-thi'ah-zid) chemical name: 3-[(allylthio)methyl]-6-chloro-3,4-dihydro-2*H*-1,2,4-benzothiadiazine-7-sulfonamide 1,1-dioxide; an antihypertensive agent, $C_{11}H_{14}ClN_2O_4S_3$.

Alt. hor. abbreviation for *L. alter'nis ho'ris*, every other hour.

Altmann's fluid, granule, theory (ahl'tmanz) [Richard *Altmann*, German histologist, 1852-1900] see under *fluid and theory*, and see *mitochondrion*.

Altmann-Gersh method (ahl'tman gersh) [Richard *Altmann*; Isidore *Gersh*, American anatomist, born 1907] see under *method*.

altofrequent (al'to-fre'quent) [L. *altus* high + *frequent*] marked by high frequency; see *high-frequency current*, under *current*.

altricious (al-trish'us) requiring a long period of nursing care.

altrose (al'trōs) a sugar, $C_6H_{12}O_6$, isomeric with glucose.

Alu-Cap (al'u-kap) trademark for a preparation of dried aluminum hydroxide gel.

Aludrine (ah-lu'drin) trademark for a preparation of isoprote-renol.

Aludrox (al-u'droks) trademark for a preparation of alumina and magnesia.

alum (al'um) [L. *alumen*] 1. [USP] an odorless, colorless, crystalline substance, with local astringent and styptic properties and sweetish taste, and soluble in water, but insoluble in alcohol; it is either potassium alum, $AlK(SO_4)_2 + 12H_2O$, or ammonium alum, $AlNH_4(SO_4)_2 + 12H_2O$. Used as a topical application. 2. a generic term for any member of a class of double sulfates formed on the type of the foregoing compounds. 3. any member of a class of double aluminum-containing compounds. **ammonioferic a.**, a powerfully styptic alum, sulfate of iron, and ammonium; no longer used in medicine. **ammonium a.**, see *alum*, def. 1. **burnt a.**, exsiccated a. **chrome a.**, chromium and potassium sulfate; a violet pigment. **concentrated a.**, aluminum sulfate, incorrectly called an alum. **dried a.**, exsiccated a. **exsiccated a.**, a white odorless powder, with a sweetish, astringent taste, either exsiccated ammonium alum, $AlNH_4(SO_4)_2$, or exsiccated potassium alum, $AlK(SO_4)_2$, and containing at least 96.5 per cent of the labeled product. Called also *burnt* or *dried a.*, and *alumen exsiccatum*. **iron a.**, iron and potassium sulfate. **potassium a.**, see *alum*, def. 1. **sodium a.**, aluminum and sodium sulfate.

alumen (ah-loo'men), gen. *alu'minis* [L.] alum. **a. exsiccatum**, exsiccated alum.

alumina (ah-loo'mi-nah) aluminum oxide, Al_2O_3 ; it occurs in sapphire and ruby, and is extracted from clay and bauxite as raw material for aluminum production. **a. and magnesia** [USP], a preparation containing 90 to 110 per cent of the labeled amounts of aluminum hydroxide and magnesium hydroxide; used as an antacid in tablet form.

aluminated (ah-loo'mi-nāt'ed) charged with alum.

aluminium (al'u-min'e-um) [L.] aluminum.

Aluminoïd (ah-loo'mi-noid) trademark for preparations of aluminum hydroxide gel for use in gastric ulcers and hyperacidity.

aluminosis (ah-loo'mi-no'sis) a form of pneumoconiosis due to

the presence of aluminum-bearing dust in the lungs; called also *a. pulmonum*.

aluminum (ah-loo'mī-nūm) an extremely light, whitish, lustrous, metallic element, obtainable from bauxite or clay: specific gravity, 2.699; atomic weight, 26.982; atomic number, 13; symbol, Al. It is very malleable and ductile, and is used for the manufacture of instruments and as a base for artificial dentures. The aluminum of the pharmacopeia is a fine, free-flowing, silvery powder, free from gritty or discolored particles. Aluminum compounds are used chiefly for their antacid and astringent properties. **a. acetate**, a compound, $C_2H_5AlO_3$, used in solution as an astringent and antiseptic; called also *eston*. **a. aminoacetate**, dihydroxyaluminum aminoacetate. **a. ammonium sulfate**, ammonium alum. **a. carbonate, basic**, an aluminum hydroxide-aluminum carbonate complex, available only in the form of *basic aluminum carbonate gel* (see under *gel*). **a. chloride** [USP], a white or yellowish white, deliquescent powder, $AlCl_3 \cdot 6H_2O$, used as a local astringent in a 10 to 25 per cent solution applied topically to the skin. It is also used as a topical antiseptic and in many deodorant preparations to diminish sweating. **a. chlorhydrex**, a topical astringent, reportedly consisting of a coordination complex of basic aluminum chloride and propylene glycol or polyethylene glycol in which the water molecules normally coordinated to the aluminum in aluminum chlorohydrate have been displaced by the glycol, resulting in a relatively less polar complex of low water content. **a. glycinate**, dihydroxyaluminum aminoacetate. **a. hydrate**, a hydroxide. **a. hydroxide**, a white, bulky, amorphous powder, $Al(OH)_3$, used as a gastric antacid in the form of *aluminum hydroxide gel* or *dried aluminum hydroxide gel* (see under *gel*). **a. hydroxide, colloidal**, aluminum hydroxide gel. **a. monostearate** [NF], a combination of aluminum with variable proportions of stearic acid and palmitic acid; used in preparation of a suspension of procaine penicillin G. **a. nicotinate**, chemical name: 3-pyridinecarboxylic acid aluminum salt. A complex consisting of aluminum nicotinate, aluminum hydroxide, and nicotinic acid; used chiefly as an anticholesterolemic, antilipoproteinemic, and peripheral vasodilator, administered orally. **a. oxide**, a pure compound, Al_2O_3 , produced in various grain sizes and used as an abrasive agent in dentistry; called also *alumina* or *alumina corundum*. **a. penicillin**, see under *penicillin*. **a. phosphate**, a white infusible powder, $AlPO_4$, used with calcium sulfate and sodium silicate in dental cements, and as a gastric antacid in the form of aluminum phosphate gel (see under *gel*). **a. potassium sulfate**, potassium alum. **a. subacetate** [USP], a yellow liquid prepared by the interaction of aluminum sulfate, acetic acid, and precipitated calcium carbonate, and used as an astringent wash when diluted with 20 to 40 volumes of water. **a. sulfate**, an odorless white, crystalline powder, with a sweet taste, $Al_2(SO_4)_3 \cdot 18H_2O$, that is astringent and antiperspirant. Incorrectly called *concentrated alum*.

alundum (ah-lun'dum) electrically fused alumina, used in making laboratory appliances which are to be subjected to intense heat.

Alupent (al'u-pent) trademark for preparations of metaproterenol sulfate.

Alurate (al'ūr-āt) trademark for a preparation of aprobarbital.

Alv. adst. abbreviation for L. *al'vo adstria'ta*, when the bowels are constipated.

Alv. deject. abbreviation for L. *al'vi dejectio'nes*, alvine dejections.

alvei (al've-i) [L.] plural of *alveus*.

alveobronchiolitis (al've-o-brong'ke-o-li'tis) inflammation of the bronchioles and alveoli of the lungs.

alveolalgia (al've-o-lal'je-ah) [*alveolus* + *-algia*] pain occurring in a dental alveolus.

alveolar (al-ve'o-lar) [L. *alveolaris*] pertaining to an alveolus.

alveolate (al-ve'o-lāt) marked by honeycomb-like pits; called also *faveolate*.

alveolectomy (al've-o-lek'to-me) [*alveolus* + Gr. *ektomē* excision] excision of a portion of the alveolar process to aid in the removal of teeth, in the restoration of the normal contour following the removal of teeth, and in the preparation of the mouth for dentures.

alveoli (al-ve'o-li) plural of *alveolus*.

alveolitis (al've-o-li'tis) inflammation of an alveolus. **allergic a., extrinsic allergic a.**, hypersensitivity pneumonitis; a respiratory hypersensitivity reaction to repeated inspiration of organic particles, most often in an occupational setting, with onset about 4 to 8 hours after exposure to the allergen. There is fever, fatigue, chills, unproductive cough, tachycardia, and tachypnea. In the chronic form there is interstitial fibrosis with collagenous thickening of the alveolar septa. The disorder includes farmer's lung, bagassosis, pigeon breeder's lung, etc. **fibrosing a.**, diffuse interstitial pulmonary fibrosis. **a. sic'ca doloro'sa**, dry socket.

alveolo- (al-ve'o-lo) [L. *alveolus*] a combining form denoting relationship to an alveolus, probably most often used in reference to a dental alveolus.

alveolocapillary (al-ve'o-lo-kap'i-lār'e) pertaining to the pulmonary alveoli and capillaries.

alveoloclasis (al-ve'o-lo-kla'ze-ah) [*alveolo-* + Gr. *klasis* breaking] disintegration or resorption of the inner wall of a tooth alveolus, causing looseness of the teeth.

alveolodental (al-ve'o-lo-den'tal) pertaining to a tooth and its alveolus.

alveololabial (al-ve'o-lo-la'be-al) pertaining to the alveolar processes and the lips.

alveololabialis (al-ve'o-lo-la'be-a'lis) *musculus buccinator*.

alveololingual (al-ve'o-lo-ling'gwāl) pertaining to the alveolar processes and the tongue.

alveolomerotomy (al-ve'o-lo'mē-rot'o-me) [*alveolus* + Gr. *meros* part + *tomē* a cutting] alveolectomy.

alveolonasal (al-ve'o-lo-na'sal) pertaining to the alveolar point and the nasion.

alveolopalatal (al-ve'o-lo-pal'ah-tal) pertaining to the alveolar process and palate.

alveoloplasty (al-ve'o-lo-plas'te) [*alveolo-* + Gr. *plassein* to form] the surgical alteration of the shape and condition of the alveolar process, in preparation for immediate or future denture construction. **interradicular a.**, the surgical removal of the interradicular bone and the collapsing of the cortical plates to a more desirable contour. **intrasseptal a.**, interradicular a.

alveolotomy (al've-o-lot'o-me) [*alveolo-* + Gr. *tomē* a cutting] incision into a dental alveolus; see also *alveolectomy*.

alveolus (al-ve'o-lūs), pl. *alve'oli* [L., dim. of *alveus* hollow] a general term used in anatomical nomenclature to designate a small saclike dilatation; see also *acinus*. **dental alveoli**, the bony cavities or sockets in the mandible or maxilla in which the roots of the teeth are attached. See *alveoli dentales mandibulae* and *alveoli dentales maxillae*. **alve'oli denta'les mandib'ulae** [NA], dental alveoli of the mandible: the cavities or sockets in the alveolar process of the mandible in which the roots of the teeth are held by the periodontal ligament; called also *alveolar cavities*. **alve'oli denta'les maxil'lae** [NA], dental alveoli of the maxilla: the cavities or sockets in the alveolar process of the maxilla in which the roots of the teeth are held by the periodontal ligament; called also *alveolar cavities*. **alve'oli pulmo'nis** [NA], small polyhedral outpouchings along the walls of the alveolar sacs and alveolar ducts through the walls of which gas exchange takes place between alveolar gas and pulmonary capillary blood; called also *pulmonary alveoli*, *a. pulmonum*, *Malpighi's vesicles*, *vesiculae pulmonales*, and *pulmonary vesicles*. **alveoli pulmo'num**, alveoli pulmonis.

alveoplasty (al-ve'o-plas'te) alveoloplasty.

alverine citrate (al've-rēn) [NF] chemical name: *N*-ethyl-3,3'-diphenyldipropylamine citrate. An anticholinergic, $C_{26}H_{27}N \cdot C_6H_8O_7$, occurring as a white to off-white powder with a sweet odor and slightly bitter taste; used as a smooth muscle relaxant and antispasmodic.

alveus (al've-us), pl. *al'vei* [L.] a trough or a canal. **a. commu'nis**, utriculus, def. 2. **a. hippocam'pi** [NA], **a. of hippocampus**, the thin layer of white matter that covers the ventricular surface of the hippocampus.

alvine (al'vin) [L. *alvinus*] (*obs.*) pertaining to the abdomen or intestines.

alvinolith (al'vi-no-lith'') [L. *alvus* abdomen + Gr. *lithos* stone] (*obs.*) enterolith.

Alvodine (al'vo-din) trademark for preparations of piminodine esylate.

alvus (al'vus) [L.] the abdomen with its contained viscera.

alymphia (ah-lim'fe-ah) [*a neg.* + L. *lymph* lymph] deficiency or absence of the lymph.

alymphocytosis (ah-lim'fo-si-to'sis) complete or nearly complete absence of lymphocytes from the blood; lymphopenia.

alymphoplasia (ah'lim-fo-pla'ze-ah) failure of development of lymphoid tissue. **thymic a.**, a type of congenital agammaglobulinemia in which there is thymic hypoplasia, sparsity of lymphocytes in the thymus, spleen, lymph nodes, and intestines, absence of plasma cells, and absence of Hassall's corpuscles.

alymphopotent (ah-lim'fo-po'tent) [*a neg.* + *lymphoid* + L. *potens* able] incapable of producing lymphocytes or lymphoid cells.

Alzheimer's basket cells, dementia (disease, sclerosis), stain (altz'hi-merz) [Alois Alzheimer, German neurologist, 1864-1915] see *presenile dementia*, under *dementia*, and see under *basket* (def. 2), *cell*, and *stain*.

A.M. abbreviation for L. *artium magister*, Master of Arts.

Am chemical symbol for americium.

am symbol for *myopic astigmatism*, *meterangle*, and *ametropia*.

A.M.A. American Medical Association; Australian Medical Association.

ama (a'mah), pl. *a'mae* [L.] an enlargement of a semicircular canal of the internal ear at the end opposite the ampulla.

amaas (ah'mahs) variola minor.

amacratic (am'ah-krat'ik) [Gr. *hama* together + *kratos* strength] amasthenic.

amacrinal (am'ah-kri'nal) of the nature of amacrines.

amacrine (am'ah-krin) [a neg. + Gr. *makros* long + *is, inos* fiber] 1. having no long processes. 2. any of a group of branched retinal structures regarded as modified nerve cells.

Amadil (am'ah-dil) trademark for a preparation of acetaminophen.

amadinone acetate (ah-mad'i-nōn) chemical name: 17-(acetyloxy)-6-chloronorpregna-4,6-diene-3,20-dione acetate; a progestin, $C_{22}H_{27}ClO_4$.

amadou (am'ah-doo) [Fr.] touchwood or punk; the fungus *Polyporus fomentarius*, which grows on old trees; formerly used as a wound dressing and a hemostatic.

amakrine (am'ah-krin) amacrine.

AMAL Aero-Medical Acceleration Laboratory.

amalgam (ah-mal'gam) [Gr. *malagma* poultice or soft mass] an alloy of two or more metals, one of which is mercury. **dental a.**, an amalgam of silver, tin, and mercury ($Ag_3Sn + Hg$) with low concentrations of copper and sometimes zinc; used for filling cavities in teeth. **emotional a.**, an unconscious attempt to bind, neutralize, deny, or counteract anxiety. **emotional-object a.**, the union of emotion or emotional significance with a person, event, object, or circumstance, as in phobias, in which anxiety becomes associated with an unconsciously selected phobic object. **retrograde a.**, see under *filling*.

amalgamable (ah-mal'gah-mah-b'l) capable of forming an amalgam with mercury.

amalgamate (ah-mal'gah-māt') to unite a metal in an alloy with mercury; to form an amalgam.

amalgamation (ah-mal'gah-ma'shun) 1. the formation of an amalgam. 2. trituration.

amalgamator (ah-mal'gah-ma'tor) triturator.

amandin (am'an-din) a globulin from the almond nut.

Amanita (am'ah-ni'tah) [Gr. *amanitai* a sort of fungus] a genus of mushrooms of the family Agaricaceae, several species of which are poisonous. *A. phalloides* (destroying angel, death cup) contains a hemolysin and a mixture of peptide toxins (e.g., phalloidin) which are protoplasmic poisons. These cause irreversible damage in cardiac musculature, liver, and kidney cells after 24 hours. Mortality ranges from 50 to 90 per cent. *A. muscaria* (fly agaric) contains muscarine and ibotenic acid. The latter is psychotropic. Ingestion of this species causes intoxication (drunkenness) and ultimate loss of consciousness. Other species are also toxic; some are edible.

amanitine (ah-mā-ni'tin) a poisonous alkaloid from fly agaric; also a poisonous glycoside from the various mushrooms, especially from *Amanita phalloides*.

amanitotoxin (ah-man'i-to-tok'sin) *Amanita* toxin.

Amann's test (ah-man'z) [Jules Amann, Swiss physician] see under *tests*.

amantadine hydrochloride (ah-man'tah-dēn) [USP] chemical name: tricyclo[3.3.1.1^{3,7}]decan-1-amine hydrochloride. An antiviral compound, $C_{10}H_{17}N \cdot HCl$, occurring as a white or nearly white crystalline powder; used in the prophylaxis and management of type A influenza and, because it augments the release of dopamine, as an antidyskinetic in the treatment of parkinsonism.

amara (ah-ma'rah) [L., pl.] (*obs.*) bitters, def. 2

Amaranth (am'ah-ranth) a genus of herbs of the family Amaranaceae, several species of which have various medical and food uses. Some species of the western United States are a problem in causing hay fevers. A source of the dye called amaranth, now prepared synthetically.

amaranth (am'ah-ranth) a dark, red-brown powder, $C_{10}H_6(SO_2 \cdot ONa) \cdot N \cdot N \cdot C_{10}H_4(SO_2 \cdot ONa)_2 \cdot OH$, once used as a coloring agent in food, cosmetics, and drugs.

amaril (am'ah-ril) [Sp. *amarillo*] yellow; a name formerly given to a hypothetical poison that was considered at that time to be a cause of yellow fever. **virus a.**, yellow fever.

amarillic (am'ah-ril'ik) pertaining to amaril.

amarine (am'ah-rin) [L. *amarus* bitter] a poisonous crystalline base, $C_6H_5 \cdot CH \cdot NH \cdot C(C_6H_5)_2 \cdot N \cdot CH \cdot C_6H_5$, triphenyl dihydro-

glyoxaline, from oil of bitter almonds, and also prepared artificially.

amaroid (am'ah-roid) a bitter principle.

amaroidal (am-ah-roi'dal) somewhat bitter; also resembling a bitter in properties.

amarthritis (am'ar-thri'tis) [Gr. *hama* together + *arthron* joint + *-itis*] inflammation of several joints at the same time; polyarthrititis.

amasesis (am'ah-se'sis) [a neg. + Gr. *masēsis* chewing] inability to chew food.

amasthenic (am'as-then'ik) [Gr. *hama* together + *sthenos* strength] bringing the rays of light into one focus; said of a lens.

amastia (ah-mas'te-ah) [a neg. + Gr. *mastos* breast] congenital absence of the mammae; sometimes applied to masculine breast characteristics in an adult female. Called also *amazia*.

amastigote (ah-mas'ti-gōt) [a neg. + Gr. *mastix* whip] the non-flagellate, intracellular, morphologic stage in the development of certain hemoflagellates, resembling the typical adult form of *Leishmania*; called also *leishmanial stage* or *form*. Cf. *epimastigote*, *promastigote*, and *trypomastigote*.

amathophobia (ah-math'o-fo'be-ah) [Gr. *amathos* sand + *phobia*] morbid dread of dust.

amateness (am'ah-tiv'nes) [L. *amare* to love] inclination to love.

amatol (am'ah-tol) a war explosive, being a mixture of trinitrotoluene and ammonium nitrate.

amaurosis (am'aw-ro'sis) [L. from Gr. *amaurosis* darkening] blindness (Hippocrates), especially blindness occurring without apparent lesion of the eye, as from disease of the optic nerve, spine, or brain. Cf. *amblyopia*. **albuminuric a.**, that which is due to renal disease. **Burns's a. (obs.)**, postmarital amblyopia. **cat's eye a.**, blindness of one eye, with bright reflection from the pupil, as from the tapetum of a cat (Beer). **central a.**, **a. centra'lis**, amaurosis due to disease of the central nervous system. **cerebral a.**, that which is due to cerebral or brain disease. **a. congenita of Leber, Leber's congenital a.**, a characteristic and rare type of blindness transmitted as an autosomal recessive trait, occurring at or shortly after birth and associated with an atypical form of diffuse pigmentation and commonly with optic atrophy and attenuation of the retinal vessels. **congenital a.**, that which exists from birth. **diabetic a.**, that which is associated with diabetes. **a. fu'gax**, a transient episode of monocular blindness, or partial blindness, lasting ten minutes or less. **hysteric a.**, that which is associated with hysteria. **intoxication a.**, amaurosis caused by some systemic poison, as alcohol or tobacco. **a. partia'lis fu'gax**, sudden transitory partial blindness. **reflex a.**, that which is caused by the reflex action of a remote irritation. **sa-burral a.**, that which occurs in an attack of acute gastritis.

uremic a., an amaurotic condition due to uremia; sometimes attendant on nephritis.

amaurotic (am'aw-rot'ik) pertaining to, or of the nature of, amaurosis.

amaxophobia (ah-mak'so-fo'be-ah) [Gr. *hamaxa* carriage + *phobia*] (*obs.*) morbid dread of vehicles.

amazia (ah-ma'ze-ah) [a neg. + Gr. *mazos* breast + *-ia*] amastia.

ambi- see *ambi-*.

Ambard's formula (coefficient, constant, equation), laws (ahm-barz') [Léon Ambard, physiologist in Strassburg, born 1876] see under *formula* and *law*.

ambenonium chloride (am'be-no'ne-um) [USP] chemical name: N,N' -(1,2-dioxo-1,2-ethanediyl)bis-(imino-2,1-ethanediyl)-bis[2-chloro- N,N -diethylbenzenemethanaminium] dichloride. A cholinergic, $C_{22}H_{42}Cl_4N_4O_2$, occurring as a white powder; used in the treatment of myasthenia gravis to treat the symptoms of muscular weakness and fatigue, administered orally.

amber (am'ber) a yellowish fossil resin, the gum of several species of coniferous trees, found in the alluvial deposits of northeastern Germany.

Ambert's line (am'bergz) [Emil Ambert, Detroit otologist, 1868-1948] see under *line*.

ambergris (am'ber-gris) [L. *ambra grisea* gray amber] a grayish waxy mass of material ejected from the intestinal tract of the sperm whale, *Physeter catodon*, and made up of cholesterol and varying amounts of fatty oil, benzoic acid, ambrein, and other materials. Used as a fixative in perfumery.

ambi- [L.] an inseparable prefix signifying on both sides; appears as *amb* before stems beginning with a vowel.

ambidexterity (am'bi-dek-ster'i-te) the ability to perform acts requiring manual skill with either hand, some ordinarily being performed with one and some with the other.

ambidextrality (am'bi-dek-stral'i-te) ambidexterity.

ambidextrism (am'bi-deks'trizm) ambidexterity.

ambidextrous (am'bi-dek'strus) pertaining to or characterized by ambidexterity.

ambient (am'be-ent) [L. *ambire* to surround] surrounding; encompassing; prevailing.

ambilateral (am'bi-lat'er-al) [*ambi-* + L. *latus* side] pertaining to or affecting both the right and the left side.

ambilevosity (am'bi-lē-vos'i-te) the inability to perform acts requiring manual skill with either hand.

ambilevous (am'bi-lē'vus) [*ambi-* + L. *laevus* left-handed] pertaining to or characterized by ambilevosity.

ambipopia (am'be-o'pe-ah) [L.] diplopia.

ambisexual (am'bi-seks'u-al) denoting sexual characteristics common to both sexes, e.g., pubic hair. Cf. *bisexual*.

ambisinister (am'bi-sin'is-ter) [*ambi-* + L. *sinister* left] ambilevous.

ambisinistrous (am/'bī-sī-nis/'trus) ambilevous.

ambivalence (am-biv/'ah-lens) [*ambi-* + L. *valentia* strength, power] the simultaneous existence of conflicting attitudes, as of love and hate, toward the same object.

ambivalent (am-biv/'ah-lent) 1. characterized by or pertaining to ambivalence. 2. having equal power in two opposite directions.

ambiversion (am/'bī-ver/'zhun) a personality state intermediate between introversion and extroversion.

ambivert (am/'bī-vert) a person who is intermediate between an extrovert and an introvert.

ambly- (am/'ble) [Gr. *amblyōs* dull] a combining form denoting dullness.

amblyaphia (am-ble-a/'fe-ah) [*ambly-* + Gr. *haphē* touch + *-ia*] bluntness or dullness of the sense of touch.

amblychromasia (am/'ble-kro-ma/'ze-ah) the condition of staining faintly or of having little chromatin.

amblychromatic (am/'ble-kro-mat/'ik) [*ambly-* + Gr. *chrōma* color] feebly staining.

amblygeusia (am/'ble-gu/'ste-ah) [*ambly-* + Gr. *geusis* taste + *-ia*] dullness of the sense of taste.

Amblyomma (am/'ble-om/'ah) [*ambly-* + Gr. *omma* eye] a genus of ticks. **A. americana**, the Lone Star tick of the southern United States, particularly Texas and Louisiana; it is a vector of Rocky Mountain spotted fever. **A. cajennense**, a particularly obnoxious species of tropical America; it transmits Rocky Mountain spotted fever. **A. hebraeum**, the bont tick, an African species which transmits the rickettsial disease of sheep, goats, and cattle known as "heartwater" as well as South African tick-bite fever of man. **A. maculatum**, a species found on the Gulf Coast. **A. ovale**, a tropical tick of dogs and tapirs. **A. tubercula**, a species found in Florida. **A. variegatum**, a species which, like *A. hebraeum*, transmits heartwater; it also transmits the virus causing Nairobi sheep disease.

amblyope (am/blē-'ōp) a person with amblyopia.

amblyopia (am/'ble-o/'pe-ah) [*ambly-* + Gr. *ōps* eye + *-ia*] dimness of vision without detectable organic lesion of the eye. Cf. *amaurosis*. **a. alcoholica**, impairment of the vision as a result of alcohol poisoning; called also *a. crapulosa*. **arsenic a.**, disturbance of vision due to the use of arsenic. **color a.**, impairment of color vision, caused by toxic or other influences. **a. crapulosa**, *a. alcoholica*. **crossed a.**, **a. cruciata**, that which affects one eye, with hemianesthesia of the opposite side. **a. ex anopsia**, that which results from long disuse. **hysteric a.**, that which is associated with hysteria. **nocturnal a.**, abnormal dimness of vision at night. **postmarital a.**, that which was once thought to be caused by sexual excess. **quinine a.**, amblyopia following large doses of quinine; thought to be due to anemia of the retina. **reflex a.**, that which results from peripheral irritation. **strabismic a.**, amblyopia resulting from suppression of vision in one eye to avoid diplopia. **tobacco a.**, a visual disturbance affecting tobacco users, marked by cecentral scotoma and visual field defect. **toxic a.**, amblyopia due to poisoning, as from tobacco or alcohol. **traumatic a.**, amblyopia due to injury. **uremic a.**, loss of vision sometimes seen during a uremic attack.

amblyopiatrics (am/'ble-o/'pe-at/'riks) [*amblyopia* + Gr. *iatreia* healing] the therapeutics or treatment of amblyopia.

amblyoscope (am/'ble-o-skōp') [*amblyopia* + Gr. *skopein* to view] an instrument for training an amblyopic eye to take part in vision and for measuring and increasing fusion of the eyes.

Amblystoma (am-blis/'to-mah) *amblystoma*.

ambo (am/'bo) ambon.

ambo- [L. *ambo* both] a combining form signifying both, or on both sides.

amboceptor (am/'bo-sep/'tor) [*ambo-* + L. *capere* to take] Ehrlich's term for hemolysin, particularly for its double receptors, the one combining with the blood cell, the other with complement. **bacteriolytic a.**, an amboceptor that takes part in bacteriolysis. **Bordet's a.**, an alexin-fixing amboceptor. **hemolytic a.**, a hemolysin; an amboceptor which takes part in hemolysis.

amboceptorigen (am/'bo-sep/'tor-jen) an antigen giving rise to amboceptors.

Ambodryl (am/'bo-dril) trademark for preparations of bromodiphenhydramine hydrochloride.

ambomycin (am/'bo-mi/'sin) an antibiotic substance with antineoplastic properties produced by *Streptomyces ambofaciens*; formerly called *duazomycin C*.

ambon (am/'bon) the ring of fibrocartilage forming the edge of the sockets in which the heads of long bones are lodged.

ambosexual (am/'bo-seks/'u-al) [*ambo-* + *sexual*] ambisexual.

ambrain (am-bra/'in) ambrin.

ambrein (am-bre/'in) ambrin.

ambrin (am/'brin) a white crystalline tricyclic terpenoid, C₃₀H₄₈O₂, resembling cholesterol, found in ambergris and derived metabolically from squalene.

Ambrine (am/'brēn) trademark for preparations of paraffin, rosin, and wax; formerly used as a dressing in the treatment of extensive burns and in rheumatic disorders, introduced by Barthe de Sandfort (1913).

Ambrosia (am-bro/'zhe-ah) [L. and Gr., from Gr. *ambrotos* immortal] a genus of annual weeds which produce quantities of wind-borne pollen and so cause much hay fever. *A. artemisiaefolia* is the common or small ragweed; *A. trifida* is the giant ragweed.

ambrosin (am-bro/'sin) (*obs.*) a substance contained in the pollen of ragweed (*Ambrosia*).

ambrosterol (am-bros/'tē-rol) a phytosterol, C₂₆H₃₄O with a melting point of 147° to 149° C. found in the pollen of ragweed (*Ambrosia*).

ambruticin (am/'broo-ti/'sin) chemical name: 6-[2-[2-[5-(6-ethyl-3,6-dihydro-5-methyl-2H-pyran-2-yl)-3-methyl-1,4-hexadienyl]-3-methoxycyclopropyl]ethenyl]tetrahydro-4,5-dihydroxy-2H-pyran-2-acetic acid; an antifungal antibiotic derived from *Polyan-gium cellulosum* subspecies *fulvum*, C₂₈H₄₂O₈.

ambulance (am/'bu-lans) [Fr.] a vehicle for conveying the sick or injured, and equipped with apparatus for rendering emergency treatment.

ambulant (am/'bu-lant) [L. *ambulans* walking] walking or able to walk.

ambulation (am/'bu-la/'shun) the act of walking.

ambulatory (am/'bu-lah-to/'re) ambulant.

ambuphylline (am-bu/'fi-lēn) chemical name: theophylline compound with 2-amino-2-methyl-1-propanol; a diuretic and smooth muscle relaxant, C₇H₈N₄O₂·C₄H₁₁NO.

ambustion (am-bust/'yun) a burn or scald.

ambutoxate hydrochloride (am-bu-toks/'āt) chemical name: 2-(diethylamino)ethyl 4-amino-2-butoxybenzoate hydrochloride; a spinal anesthetic. Called also *ambucaine*.

Ambystoma (am-bis/'to-mah) a genus of salamanders used for experimental purposes; called also *amblystoma*. See *axolotl*.

amcinafal (am-sin/'ah-fal) chemical name: 9-fluoro-11β,21-dihydroxy-16α,17-[(1-ethylpropylidene)bis(oxy)]pregna-1,4-diene-2,3-dione; an anti-inflammatory, C₂₈H₃₅FO₆.

amcinafide (am-sin/'ah-fid) chemical name: (R)-9-fluoro-11β,21-dihydroxy-16α,17-[(1-phenylethylidene)bis(oxy)]pregna-1,4-diene-3,20-dione; an anti-inflammatory, C₂₈H₃₅FO₆.

amcinonide (am-sin/'o-nid) chemical name: 21-(acetyloxy)-16α,17-[cyclopentylidenebis(oxy)]-9-fluoro-11β-hydroxy-pregna-1,4-diene-3,20-dione; a glucocorticoid, C₂₈H₃₅FO₇.

A.M.D.S. Association of Military Dental Surgeons.

ameba (ah-me/'bah), pl. *amebae* or *amebas* [L., from Gr. *amoibē* change] a minute protozoan of the subphylum Sarcodina. It is a single-celled nucleated mass of protoplasm which changes shape by extending cytoplasmic processes, called pseudopodia, by means of which it moves about and absorbs nourishment. The majority of amebae are free-living in soil or water, but the following are parasitic in man: *Entamoeba coli*, *E. hartmanni*, *E. histolytica*, *E. gingivalis*, *Dientamoeba fragilis*, *Endolimax mana*, and *Iodamoeba bütschlii*. **artificial a.**, combinations of chemicals which behave somewhat like living amebae; for example, a drop of mercury will move toward a crystal of potassium dichromate if they are close together in dilute nitric acid. **coprozoic a.**, free-living amebae, sometimes found in human feces and characterized by the fact that they grow readily on artificial media. There are four genera: *Hartmanella*, *Naegleria*, *Sappinia*, and *Vahlkampfi*.

amebacidal (ah-me/'bah-si/'dal) amebicidal.

amebacide (ah-me/'bah-sid) amebicide.

amebadiastase (ah-me/'bah-di/'as-tās) an intracellular enzyme found in amebae which catalyzes the digestion of material engulfed by them.

amebaism (ah-me/'bah-izm) the power or property of ameboid motion.

ameban (ah-me/'ban) carbarsone.

amebiasis (am/'e-bi/'ah-sis) the state of being infected with amebae, especially with *Entamoeba histolytica*. **a. cutis**, a form of amebiasis in which there is invasion of the skin, with formation of indolent ulcers. **hepatic a.**, amebic hepatitis. **intestinal a.**, amebic dysentery. **pulmonary a.**, amebic infection in the thoracic space, secondary to intestinal amebiasis and usually associated with amebic liver abscesses; it may affect the pleura, the diaphragm, the lung, and/or the bronchi.

amebic (ah-me/'bik) pertaining to or of the nature of an ameba.

amebicidal (ah-me/'bī-si/'dal) destructive to amebae.

amebicide (ah-me/'bī-sid) [*ameba* + L. *caedere* to kill] an agent which is destructive to amebae.

amebiform (ah-me/'bī-form) shaped like or resembling an ameba.

amebiosis (am/'e-bi-o/'sis) amebiasis.

amebism (am/'e-bizm) 1. ameboid movement. 2. invasion of the system with amebae.

amebocyte (ah-me/'bo-sīt') [*ameba* + Gr. *kytos* hollow vessel]

an ameba-like cell found in coelomic fluid, blood (leukocytes), or other tissues of almost all animals.

amebodiastase (ah-me'bo-di'as-tās) amebodiastase.

ameboid (ah-me'bo'id) [ameba + Gr. *eidos* form] resembling an ameba in form or in movements.

ameboididity (am'e-boi-did'i-te) (obs.) ameboidism.

ameboidism (ah-me'bo'id-izm) a type of motility characteristic of amebae and certain other cells, occurring as a result of protrusion of pseudopods.

ameboma (am'e-bo'mah) a tumor-like mass produced by localized inflammation due to amebiasis.

amebosis (am'ē-bo'sis) amebiasis.

amebula (ah-me'bu-lah) [dim. of L. *amoeba*] 1. one of the small amebae formed by division of the multinucleate mass (metacyst) produced by excystation of *Entamoeba histolytica* or other parasitic amebae. 2. the motile ameboid stage of the spores of certain sporozoan parasites; called also *pseudopodiospore*.

ameburia (am'ē-bu're-ah) [ameba + Gr. *ouron* urine + -ia] the discharge or presence of amebae in the urine.

amedalin hydrochloride (ah-me'dah-lin) chemical name: 1,3-dihydro-3-methyl-3-[3-(methylamino)-propyl]-1-phenyl-2H-indol-2-one monohydrochloride; an antidepressant; C₁₉H₂₂N₂O·HCl.

ameiosis (a'mi-o'sis) aberrant meiosis in which only an equational division occurs, as in parthenogenesis.

AMEL Aero-Medical Equipment Laboratory.

amelanotic (ah'mel-ah-not'ik) containing no melanin; unpigmented.

amelia (ah-me'le-ah) [a neg. + Gr. *melos* limb + -ia] congenital absence of a limb or limbs; cf. *phocomelia*.

Amelia in legs; hemimelia in arms (Arey).

amelification (ah-mel'i-fi-ka'shun) [Old Fr. *amel* enamel + L. *facere* to make] the development of enamel cells into enamel.

amelioration (ah-mēl'yo-ra'shun) [L. *ad* to + *melior* better] improvement, as of the condition of a patient.

ameloblast (ah-mel'o-blast') [Old Fr. *amel* enamel + Gr. *blastos* germ] a cylindrical epithelial cell in the innermost layer of the enamel organ which takes part in the elaboration of the enamel prism. The ameloblasts cover the dental papilla. Called also *adamantoblast*, *ganoblast*, *enamel builder*, and *enameloblast*.

ameloblastoma (ah-mel'o-blas-to'mah) a true neoplasm of tissue of the type characteristic of the enamel organ, but which does not undergo differentiation to the point of enamel formation; called also *adamantinoma*. **melanotic a.**, melanotic neuroectodermal tumor. **pigmented a.**, melanotic neuroectodermal tumor. **pituitary a.**, craniopharyngioma.

amelodontinal (am'ē-lo-den'ti-nal) pertaining to the enamel and dentin of a tooth.

amelogenesis (am'ē-lo-jen'ē-sis) the formation of enamel. **a. imperfecta**, a hereditary condition resulting in defective development of enamel of the teeth, caused by improper differentiation of the ameloblasts and characterized by a brown color of the teeth. The condition takes three forms: *agenesis*, in which there is complete absence of enamel; *enamel hypoplasia*, in which the enamel is hard but deficient in quantity; and *enamel hypocalcification*, in which the enamel is soft but normal in quantity. Called also *hereditary brown enamel* and *hereditary enamel hypoplasia*.

amelogenic (am'ē-lo-jen'ik) forming enamel.

amelogenin (am'ē-lo-jen'in) any of several proteins secreted by ameloblasts and forming the organic matrix of tooth enamel.

amelus (am'ē-lus) an individual exhibiting amelia.

amenia (ah-me'ne-ah) [a neg. + *menses* + -ia] amenorrhea.

amenomania (am'ē-no-ma'ne-ah) [L. *amoenus* pleasant + *mania*] (obs.) psychosis with agreeable hallucinations.

amenorrhea (ah-men'o-re'ah) [a neg. + Gr. *mēn* month + *rhoia* flow] absence or abnormal stoppage of the menses; called also *amenia*. **dietary a.**, cessation of menstruation accompanying loss of weight due to dietary restriction, the loss of weight and of appetite being less extreme than in anorexia nervosa and unassociated with psychological problems. Called also *nutritional a.*

dysponderal a., amenorrhea associated with disorder of weight, such as obesity or extreme underweight. **hypothalamic a.**, amenorrhea associated with disorders of the hypothalamus. **lactation a.**, absence of the menses incidental to lactation. **nutritional a.**, dietary a. **ovarian a.**, amenorrhea resulting from deficiency of ovarian (estrus-producing) hormone. **physiologic a.**, absence of menses not due to organic disorder, usually occurring in pregnancy. **pituitary a.**, absence of the menses owing to pituitary deficiency. **premenopausal a.**, physiologic decrease of menstruation during establishment of the climacterium. **primary a.**, failure of menstruation to occur at puberty. **relative a.**, menstrual flow which is less than normal for the individual; called also *oligomenorrhea*. **secondary a.**, cessation of menstruation after it has once been established at puberty. **traumatic a.**, amenorrhea due to blockage of the cervical canal by adhesions, most often a result of curettage, as in Asherman's syndrome.

amenorrheal (ah-men-o-re'al) pertaining to amenorrhea.

amensalism (a-men'sal-izm) symbiosis in which one population (or individual) is adversely affected and the other is unaffected.

ament (a'ment) [L. *a* away + *mens* mind] an idiot; a person with profound mental deficiency. Used in contrast with *dement*.

amentia (ah-men'she-ah) [L. *a* away + *mens* mind + -ia] 1. congenital mental retardation of varying extent. 2. a mental disorder characterized by marked mental confusion, sometimes so severe as to approach stupor; called also *confusion* and *confusional insanity*. **a. agitata** (obs.), amentia attended by great excitement and continuous hallucinations. **a. atton/ita** (obs.), amentia marked by stupor, immobility, and indifference. **nevoid a.**, Sturge-Weber syndrome. **a. occulta** (obs.), mild melancholia with sudden violent actions. **a. paranoi/des** (obs.), amentia with mild symptoms. **phenylpyruvic a.**, idiocy attended by the excretion of phenylpyruvic acid in the urine; now called *phenylketonuria* (q.v.). **Stearns' alcoholic a.**, a form of temporary alcoholic insanity marked by less emotional disturbance than delirium tremens, but of longer duration and characterized by greater mental clouding and amnesia.

amental (ah-men'she-al) pertaining to or characterized by amentia.

Americaine (ah-mer'i-kān") trademark for preparations of benzocaine.

americium (am'ē-ris'e-um) the chemical element of atomic number 95, atomic weight 243, symbol Am, obtained by cyclotron bombardment of uranium and plutonium.

amerism (am'er-izm) [a neg. + Gr. *meros* part] the quality of not splitting into segments or fragments.

ameristic (am'er-is'tik) [a neg. + Gr. *meristos* divided] not split into segments.

ametabolon (ah'mē-tab'o-lon) an animal that develops without undergoing metamorphosis.

ametabolous (ā'mē-tab'o-lus) not undergoing metamorphosis.

ametachromophil (ah'met-ah-kro'mo-fil) orthochromophil.

ametamorphosis (ah-met'ah-mor'fo-sis) (obs.) undue activity of thought leading to a condition of mental absorption and abstraction.

ametaneutrophil (ah-met-ah-nu'tro-fil) orthochromophil.

amethocaine hydrochloride (ah-meth'o-kān) tetracaine hydrochloride.

amethopterin (ah-meth-op'ter-in) methotrexate.

ametria (ah-me'tre-ah) [a neg. + Gr. *mētra* uterus] congenital absence of the uterus.

ametrometer (am'ē-trom'ē-ter) [*ametropia* + Gr. *metron* measure] an instrument for measuring the degree of ametropia.

ametropia (am'ē-tro'pe-ah) [Gr. *ametros* disproportionate + *ōps* eye + -ia] discrepancy between the size and refractive powers of the eye, such that images are not brought to a proper focus on the retina; consequently hypermetropia, myopia, or astigmatism are produced. See illustration. **axial a.**, ametropia due to lengthening of the eyeball along the optic axis. **curvature a.**, ametropia due to variations in the curvature of the surface of the eye. **index a.**, ametropia due to alterations in the refractive index media of the eye. **position a.**, ametropia due to faulty position of the crystalline lens. **refractive a.**, ametropia due to fault in the dioptric system of the eye.

ametropic (am'ē-trop'ik) affected with or pertaining to ametropia.

amfenac sodium (am'fē-nak) chemical name: 2-amino-3-benzoylbenzeneacetic acid sodium salt monohydrate; an anti-inflammatory, C₁₅H₁₁NNaO₃H₂O.

Amh mixed astigmatism with myopia predominating.

AMI acute myocardial infarction.

amianthoid (ah-me'an-thoid) [Gr. *amianthos* asbestos + *eidos* form] having the appearance of asbestos; a term applied to certain fibers seen in degenerated costal and laryngeal cartilage.

amianthosis (am'e-an-tho'sis) [Gr. *amianthos* asbestos + -osis] (obs.) asbestosis.

Refraction by the eye in (A) emmetropia; (B) hyperopia, and (C) myopia (Scheie and Albert).

amibiarson (am'i-bī-ar'sōn) carbarsone.

Amicar (am'i-kar) trademark for a preparation of aminocaproic acid.

amichloral (am'i-klor'ah) chemical name: 6-O-[2,2,2-trichloro-1-hydroxyethyl]-α-D-glucopyranose polymer with α-D-glucopyranose; a food additive for use in veterinary medicine, (C₈H₁₁Cl₃O₆)_x(C₆H₁₀O₅)_y.

Amici's disk, line, striae (ah-me'chēz) [Giovanni Battista Amici, Italian physicist, 1784-1863] see *Z band*, under *band*, and see under *stria*.

amicine (am'i-sin) a substance in the posterior lobe of the pituitary gland which inhibits the growth of both plants and animals.

amicrobic (ah'mi-kro'bik) [a neg. + *microbe*] not caused by microbes.

amicroscopic (ah-mi'kro-skop'ik) too small to be observed by use of the microscope.

amiculum (ah-mik'u-lum) a dense surrounding coat of white fibers, as the sheath of the inferior olive and of the dentate nucleus.

amidapson (ah'me-dap'sōn) chemical name: [4-[(4-amino-phenyl)sulfonyl]phenyl]urea; an antiviral for use in poultry, C₁₃H₁₃N₃O₃S.

amidase (am'i-dās) a deamidizing enzyme.

amide (am'id) [*ammonia* + *-ide*] an organic compound derived from ammonia by substituting an acyl radical for hydrogen, or from an acid by replacing the —OH group by —NH₂. **niacin a.**, **nicotinic acid a.**, **niacinamide**.

amidin (am'i-din) [Fr. *amidon* starch] amylose, def. 2.

amidine (am'i-din) any compound containing the monovalent group ·C(=NH)·NH₂. **insoluble a.**, **tegumentary a.**, **amylpectin**.

amidine-lyase (am'i-dēn-li'ās) an enzyme that catalyzes the removal of an amidino group, as from L-argininosuccinate to form fumarate and L-arginine.

amidinotransferase (ah'mī-din'o-trans'fer-ās) transamidinase.

amido- a prefix indicating the presence of the radical NH₂ along with the radical CO.

amidoazotoluene (am'i'do-a'zo-tol'u-ēn) a reddish brown powder, CH₃·C₆H₄·N₂·C₆H₃·CH₂·NH₂, derived from scarlet red; used in an 8 per cent ointment to stimulate the growth of epithelium.

amidobenzene (am'i'do-ben'zēn) aniline.

amidogen (am'i'do-jen') the hypothetic radical, NH₂, found in amido compounds.

amidohehexose (am'i'do-hek'sōs) a hexose combined with the amido group NH₂.

amido-ligase (am'i'do-li'gās) any enzyme that catalyzes the coupling of two molecules, with glutamine acting as an ammonia donor.

amidopyrine (am'i'do-pi'rēn) aminopyrine.

Amidostomum (am'i'dos'to-mum) a genus of roundworms. **A. an'seris**, a roundworm parasitic in the mucous membrane of the intestinal tract of ducks and geese.

amidoxime (am-i'dok'sīm) any of a class of compounds formed from the amidines by substituting hydroxyl for a hydrogen atom of the amido group.

amidulin (ah-mid'u-lin) the granulose of starch freed from its envelope of amylose by the action of hydrochloric acid; called also *soluble starch*.

Amigen (am'i-jen) trademark for a protein hydrolysate preparation for intravenous injection.

amikacin sulfate (am'i-ka'sin) [USP] chemical name: (S)-O-3-amino-3-deoxy-α-D-glucopyranosyl-(1 → 6)-O-[6-amino-6-deoxy-α-D-glucopyranosyl-(1 → 4)]-N³-(4-amino-2-hydroxy-1-oxobutyl)-2-deoxy-D-streptamine sulfate (1:1) salt. A semisynthetic aminoglycoside antibiotic derived from kanamycin, C₂₂H₄₃N₅O₁₃·2H₂SO₄, effective against gram-negative bacteria including *Pseudomonas*, *Providencia*, *Klebsiella-Enterobacter-Serratia*, *Acinetobacter*, and *Proteus* species, and *Escherichia coli* and *Citrobacter freundii*, and some gram-negative organisms, including penicillinase- and nonpenicillinase-producing staphylococci; used in the treatment of a wide range of infections due to susceptible organisms, administered intramuscularly and intravenously.

Amikin (am'i-kin) trademark for a preparation of amikacin sulfate.

amimia (ah-mim'e-ah) [a neg. + Gr. *mimos* mimic + *-ia*] loss of the power of expression by the use of signs or gestures. **amnesic a.**, a condition in which gestures can be made, but their meaning cannot be remembered.

aminacrine hydrochloride (am-in-ak'rin) chemical name: 9-aminoacridine monohydrochloride. An antiseptic dye, C₁₃H₁₀N₂·HCl, occurring as a pale yellow, crystalline powder, which is effective against many gram-negative and gram-positive bacteria; used as a topical anti-infective, mainly in the treatment of infected wounds. Called also *aminoacridine hydrochloride*.

aminarson (am-in-ar'sōn) carbarsone.

amine (ah-mēn'; am'in) an organic compound containing nitrogen; any member of a group of chemical compounds formed from ammonia by replacement of one or more of the hydrogen atoms by organic (hydrocarbon) radicals. The amines are distinguished as *primary*, *secondary*, and *tertiary*, according to whether one, two, or three hydrogen atoms are replaced. The amines include allylamine, amylamine, ethylamine, methylamine, phenylamine, propylamine, and many other compounds. **biogenic a's**, amines arising by biosynthesis that play a role in neural functioning, e.g., norepinephrine, serotonin, dopamine, and acetylcholine; called also *bioamines*. **catechol a.**, catecholamine. **methyl dimethoxy methyl phenyl ethyl a.**, a long-acting hallucinogenic substance. Abbreviated DMP. **vasoactive a.**, amines that cause vasodilation and increase small vessel permeability, e.g., histamine and serotonin.

aminotroazole (am'i-ni'tro-zōl) chemical name: 2-acetamido-5-nitrothiazole. A compound, C₈H₈N₂O₃S, formerly used in treatment of trichomoniasis. In veterinary medicine, it is used in treatment of blackhead in turkeys. Called also *acnitrazole*.

amino (ah-me'no, am'i-no) the monovalent chemical group —NH₂. As a prefix (amino-) it indicates the presence in a compound of the group —NH₂.

aminoacidemia (ah-me'no-, am'i-no-as'i-de'me-ah) [*amino acid* + Gr. *haima* blood + *-ia*] an excess of amino acids in the blood.

aminoacidopathy (am'i-no-as'i-dop'ah-the) any of a group of disorders due to a defect in an enzymatic step in the metabolic pathway of one or more amino acids or in a protein mediator necessary for transport of certain amino acids into or out of cells.

aminoaciduria (ah-me'no-, am'i-no-as'i-du're-ah) [*amino acid* + Gr. *ouron* urine + *-ia*] an excess of amino acids in the urine; called also *acidaminuria*.

aminoacridine hydrochloride (am'i-no-ak'ri-din) aminacrine hydrochloride.

aminoacylase (am'i-no-as'i-lās) *N*-acylamino-acid amidohydrolase: an enzyme occurring in the kidney that catalyzes the hydrolysis of hippuric acid to benzoic acid and glycine; called also *dehydropeptidase* and *hippuricase*. **a. II**, *aspartoacylase*.

o-aminoazotoluene (ah-me'no-, am'i-no-az'o-tol'u-ēn) chemical name: methyl-4-[(2-methylphenyl)azo]benzeneamine; a red crystalline solid, CH₃·C₆H₄·N₂·C₆H₃(CH₃)NH₂, that is actively carcinogenic.

aminobenzene (ah-me'no-, am'i-no-ben'zēn) aniline.

γ-aminobutyrate (ah-me'no-, am'i-no-bu'ti-rāt) a salt or dissociated form of gamma-aminobutyric acid; see under *acid*.

aminodinitrophenol (am'i-no-di-ni'tro-fe'nol) dinitroaminophenol.

2-aminoethanol (am'i-no-eth'ah-nol) ethanolamine.

aminoform (ah-min'o-form) methenamine.

aminogluthethimide (ah-me'no-, am'i-no-gloo-teth'i-mid) chemical name: 3-(4-aminophenyl)-3-ethyl-2,6-piperidinedione. A glutethimide derivative, C₁₃H₁₆N₂O₂, occurring as a white, crystalline powder; formerly used as an anticonvulsant in epilepsy. It inhibits adrenal cortical secretion, and has been used experimentally in the treatment of secondary hyperaldosteronism and edema.

aminoglycoside (am'i-no-gli-ko'sid) any of a group of bacterial antibiotics (e.g., streptomycin and gentamycin), derived from various species of *Streptomyces*, which interfere with the function of bacterial ribosomes. These compounds contain an inositol substituted with two amino or guanidino groups and with one or more sugars and aminosugars.

aminogram (am-i'no-gram) a graphic representation of the

pattern of amino acids present in a substance as determined quantitatively.

aminoheterocyclic (am/'i-no-het/'er-o-sik/'lik) having a closed chain or ring formation which includes the —NH_2 group.

aminohippurate (am/'i-no-hip/'u-rāt) a salt of aminohippuric acid. **a. sodium** [USP], the sodium salt of aminohippuric acid, $\text{C}_9\text{H}_9\text{N}_2\text{NaO}_3$, which is injected intravenously for the measurement of effective renal plasma flow and determination of the functional capacity of the tubular excretory mechanism.

aminolevulinic acid (ah-me/'no-lev/'u-lin/'āt) a salt or dissociated form of 5-aminolevulinic acid (see under *acid*).

aminolipid (ah-me/'no-, am/'i-no-lip/'id) any of a class of fatty substances containing amino nitrogen and fatty acids.

aminolipin (ah-me/'no-, am/'i-no-li/'pin) aminolipid.

aminolysis (am/'i-nol/'i-sis) [*amine* + Gr. *lysis* dissolution] reaction with an amine, resulting in the addition of (or substitution by) an imino group, —NH— .

aminometradine (ah-me/'no-, am/'i-no-met/'rah-dēn) chemical name: 6-amino-3-ethyl-1-(2-propenyl)-2,4(1*H*,3*H*)-pyrimidinedione; a nonmercurial diuretic for oral administration, $\text{C}_9\text{H}_{13}\text{N}_3\text{O}_2$.

aminometramide (ah-me/'no-, am/'i-no-met/'rah-mīd) aminometradine.

aminonitrogen (ah-me/'no-, am/'i-no-ni/'tro-jen) see under *nitrogen*.

aminonitrothiazole (am/'i-no-ni/'tro-thi/'ah-zōl) chemical name: 2-amino-5-nitrothiazole. A greenish-yellow to orange-yellow fluffy powder, $\text{C}_3\text{H}_3\text{N}_3\text{O}_2\text{S}$, used in the treatment and prevention of blackhead in turkeys.

aminopentamide sulfate (ah-me/'no-, am/'i-no-pen/'tah-mīd) chemical name: α -[2-(dimethylamino)propyl]- α -phenylbenzeneacetamide sulfate; an anticholinergic, $\text{C}_{19}\text{H}_{24}\text{N}_2\text{O}_6\text{SO}_4$, with atropine-like action.

aminopeptidase (ah-me/'no-, am/'i-no-pep/'ti-dās) an exopeptidase that acts on the peptide bond of terminal amino acids possessing a free amino group. **leucine a.**, an enzyme that acts preferentially on peptides in which the free amino group is that of an L-leucine residue; found in all human tissues analyzed, with high activity in the duodenum, liver, and kidney.

aminophenazone (am/'i-no-phen/'ah-zōn) aminopyrine.

aminopherase (am/'i-nof/'er-ās) transaminase.

aminophylline (ah-me/'no-fil/'in) [USP] chemical name: 3,7-dihydro-1,3-dimethyl-1*H*-purine-2,6-dione compound with 1,2-ethanediamine. A salt of theophylline, $\text{C}_{10}\text{H}_{14}\text{N}_4\text{O}_4$, occurring as white or slightly yellowish granules or powder. Aminophylline is a smooth muscle relaxant and is used chiefly for its bronchodilator effect in such diseases as asthma, bronchitis, and emphysema; administered orally, rectally, or intravenously. It also may be used for its myocardial stimulant and coronary vasodilator actions, diuretic action, and respiratory center stimulant effect. Called also *theophylline ethylenediamide*.

aminopolypeptidase (ah-me/'no-, am/'i-no-pol/'e-pep/'ti-dās) an enzyme that hydrolyzes polypeptides by cleaving the peptide linkage adjacent to a free amino group.

aminopterin (am/'i-nop/'ter-in) chemical name: *N*-[p-[(2,4-diamino-6-pteridyl)methyl]amino]benzoyl]glutamic acid. An antimetabolite that functions as a folic acid antagonist, $\text{C}_{19}\text{H}_{20}\text{N}_8\text{O}_5$, which has been used as an antineoplastic in the treatment of acute leukemia; it also is used as a rodenticide. Called also *aminopteroylglutamic acid*. **a. sodium**, the sodium salt of aminopterin, having the same actions and uses as the base.

aminopurine (ah-me/'no-, am/'i-no-pu/'rin) a purine that is a component of nucleic acid and the nucleotides; the aminopurines include adenine and guanine.

aminopyrine (ah-me/'no-, am/'i-no-pi/'rin) chemical name: 4-(dimethylamino)-1,2-dihydro-1,5-dimethyl-2-phenyl-3*H*-pyrazol-3-one. A pyrazole derivative, $\text{C}_{13}\text{H}_{17}\text{N}_3\text{O}$, occurring as a white, bulky powder, which darkens on exposure to light and air. It is an effective analgesic and antipyretic, but is seldom used because it has been associated with cases of fatal agranulocytosis. Called also *amidopyrine* and *aminophenazone*.

aminorex (ah-min/'o-reks) chemical name: 4,5-dihydro-5-phenyl-2-oxazoline; a sympathomimetic anorexic, $\text{C}_9\text{H}_{10}\text{N}_2\text{O}$.

aminosaccharide (ah-me/'no-, am/'i-no-sak/'ah-rid) a sugar in which the OH group has been replaced by an amino group, —NH_2 .

aminosalicylate (am/'i-no-sal/'i-sil/'āt) any salt of aminosalicylic acid. The USP preparations, *Aminosalicylate calcium*, *aminosalicylate potassium*, and *aminosalicylate sodium*, are used as tuberculostatic antibacterials.

aminosidine sulfate (am/'i-no-si/'din) paromomycin sulfate.

aminosis (am/'i-no/'sis) the pathologic production of amino acids in the body.

Aminosol (ah-me/'no-sol) trademark for an amino acid preparation for intravenous injection.

aminostiburia (ah-me/'no-, am/'i-no-sti-bu/'re-ah) the glycoside of urea stibamine.

aminosuria (ah-me/'no-, am/'i-no-su/'re-ah) [*amine* + Gr. *ouron* urine + *-ia*] an excess of amines in the urine.

Aminosyn (ah-me/'no-sin) trademark for a crystalline amino acid solution for intravenous administration; it contains a mixture of essential and nonessential amino acids but no peptides.

aminothiazole (ah-me/'no-, am/'i-no-thi/'ah-zōl) chemical name: 2-thiazylamine. A sulfonamide compound, $\text{NH}_2\cdot\text{C}\cdot\text{N}\cdot\text{CH}\cdot\text{CH}\cdot\text{S}$, that has been used in the treatment of hyperthyroidism.

aminotransferase (ah-me/'no-, am/'i-no-trans/'fer-ās) transaminase.

aminotrate (am/'i-no-trāt/'i) the generic name for compounds composed of proteins and vitamins, used as a dietary food supplement. **a. phosphate**, trolnitrate phosphate.

aminuria (am/'i-nu/'re-ah) an excess of amines in the urine.

amiodarone (ah-me/'o-dah-rōn/'i) a cardiac vasodilator and antiarrhythmic agent.

Amipaque (am/'i-pāk) trademark for metrizamide.

amiphenazole hydrochloride (am/'i-fen/'ah-zōl) chemical name: 2,4-diamino-5-phenylthiazole monohydrochloride; a respiratory stimulant, $\text{C}_9\text{H}_9\text{N}_3\text{S}\cdot\text{HCl}$, which acts as an antagonist to morphine and other narcotics.

amiquinsin hydrochloride (am/'i-kwin/'sin) chemical name: 4-amino-6,7-dimethoxyquinoline hydrochloride monohydrate; an antihypertensive agent, $\text{C}_{11}\text{H}_{12}\text{N}_2\text{O}_2\cdot\text{HCl}\cdot\text{H}_2\text{O}$.

amisometradine (am-i/'so-met/'rah-dēn) chemical name: 6-amino-3-methyl-1-(2-methyl-2-propenyl)-2,4(1*H*,3*H*)-pyrimidinedione. A white crystalline powder, $\text{C}_9\text{H}_{13}\text{N}_3\text{O}_2$, used as an oral diuretic.

amithiozone (am/'i-thi/'ō-zōn) thiacetazone.

amitosis (am/'i-to/'sis) [*a* neg. + Gr. *mitos* thread + *-osis*] direct cell division; cell division by simple cleavage of the nucleus without the formation of spireme (mitotic) spindle figure or chromosomes. Called also *holoschisis*.

amitotic (am/'i-to/'ik) of the nature of amitosis; not occurring by mitosis; called also *akinetic*.

amitriptyline hydrochloride (am/'i-trip/'ti-lēn) [USP] chemical name: 3-(10,11-dihydro-5*H*-dibenzo[*a,d*]cyclohepten-5-ylidene)-*N,N*-dimethyl-1-propanamine hydrochloride. An antidepressant, $\text{C}_{20}\text{H}_{23}\text{N}\cdot\text{HCl}$, occurring as a white or practically white, crystalline powder; administered orally or intramuscularly.

ammeter (am/'me-ter) [*ampere* + Gr. *metron* measure] an instrument calibrated to read in amperes or subdivisions of amperes the strength of a current flowing in a circuit.

Ammi (am/'me) a genus of umbelliferous plants. *A. visnaga* grows in Mediterranean countries and has been used in the treatment of urethral spasm and renal colic. Fruits of this species contain khellin. **A. ma'jus** (L.) Lam. Khella. (Umbelliferae), a species found in Mediterranean countries that is a source of methoxsalen.

ammoaciduria (am/'o-as/'i-du/'re-ah) an excess of ammonia and amino acids in the urine.

Ammon's filaments, fissure, operation (am/'unz) [Friedrich August von Ammon, ophthalmologist and pathologist in Dresden, 1799-1861] see under the nouns.

Ammon's horn (am/'unz) [*Ammon*, a ram-headed god of the Egyptians] hippocampus.

ammonemia (ah/'mo-ne/'me-ah) [*ammonia* + Gr. *haima* blood + *-ia*] hyperammonemia.

ammonia (ah-mo/'ne-ah) [named from Jupiter *Ammon*, near whose temple in Libya it was formerly obtained] a colorless alkaline gas, NH_3 , of a penetrating odor and soluble in water, forming ammonia water; called also *volatile alkali*. **a. hemate**, a compound of ammonia and hematein, used as a violet-black stain for microscopic specimens.

ammoniac (ah-mo/'ne-ak) [L. *ammoniacum*] a fetid gum-resin, stimulant and expectorant, from a Persian umbelliferous plant, *Dorema ammoniacum*, used in bronchitis and asthma. Ammoniac plaster and plaster of ammoniac and mercury are used as counterirritants in pleurisy and rheumatism.

ammoniacal (am/'o-ni/'ah-kal) containing ammonia or treated with excess ammonia.

ammonia-lyase (ah-mo/'ne-ah-li/'ās) any of a group of lyases that catalyze the removal of ammonia by cleaving a C—N bond. **β -alanyl-CoA a.**, one that catalyzes the conversion of β -alanyl-CoA to acrylyl-CoA and ammonia. **aspartate a.**, an enzyme that catalyzes the conversion of L-aspartate to fumarate and ammonia; called also *aspartase*. **histidine a.**, one that catalyzes the conversion of L-histidine to urocanate and ammonia; called also *histidase*. **methylaspartate a.**, one that catalyzes the conversion of methylaspartate to mesaconate and ammonia. **phenylalanine a.**, one that catalyzes the conversion of L-phenylalanine to trans-cinnamate and ammonia.

ammoniate (ah-mo/'ne-āt) 1. to treat or to combine with ammonia. 2. the product of combination with ammonia.

ammoniemia (ah-mo/'ne-e/'me-ah) hyperammonemia.

ammonification (ah-mo/'ni-fi-ka/'shun) the formation of ammonia by the action of bacteria on proteins.

ammonirrhoea (am'-o-ni-re'ah) [*ammonia* + Gr. *rhoia* flow] the excretion of ammonia in the urine or sweat.

ammonium (ah-mo'ne-um) the hypothetical radical, NH_4 ; it forms salts analogous to those of the alkaline metals. **a. acetate**, a crystal compound with an acetous odor, $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2$, formerly used as a diaphoretic; in veterinary medicine it is used as a diuretic, diaphoretic, antipyretic, and as a vehicle. **a. alum**, see *alum*, def. 1. **a. benzoate**, a white crystalline salt, $\text{C}_6\text{H}_5\text{COONH}_4$, stimulant and diuretic. **a. bromide**, a sedative, NH_4Br , occurring as colorless crystals or a yellowish white crystalline powder; used occasionally in treatment of grand mal seizures. See also *bromides*. **a. carbonate**, 1. a white powder, or hard white or translucent masses, with a strong odor of ammonia and a sharp ammoniacal taste. 2. [NF] a compound, $(\text{NH}_2\text{COONH}_4)_2$, consisting of ammonium bicarbonate and ammonium carbamate in varying amounts, and yielding between 30 and 34 per cent ammonia; used as a source of ammonia. It is also used as an ingredient of aromatic ammonia spirit and of smelling salts. Called also *sal volatile* or *volatilis*. **a. chloride** [USP], a hygroscopic compound, NH_4Cl , occurring as colorless crystals or as a fine or coarse, white crystalline powder, with a cool saline taste; used as a systemic acidifier. Called also *a. muriate*. **ferric a. citrate**, **brown**, a preparation containing 16.5 to 18.5 per cent iron, about 9 per cent ammonia, and about 65 per cent hydrated citric acid; formerly used in treatment of iron deficiency anemia. Called also *iron and ammonium citrate*. **ferric a. citrate**, **green**, a preparation containing 14.5 to 16 per cent iron, about 7.5 per cent ammonia, and about 75 per cent hydrated citric acid; formerly used in treatment of iron deficiency anemia. **a. ferric sulfate**, **ferric a. sulfate**, pale violet crystals, $\text{Fe}(\text{NH}_4)(\text{SO}_4)_2 \cdot 12\text{H}_2\text{O}$, very soluble in water, used as a reagent. It has also been used as an astringent, styptic, and an *in vitro* diagnostic aid in phenylketonuria. **a. ferric tartrate**, **ferric a. tartrate**, reddish brown transparent scales used as a hematonic in iron deficiency anemia; called also *iron and ammonium tartrate*. **a. ferrous sulfate**, **ferrous a. sulfate**, pale bluish green crystals or granules, $(\text{NH}_4)_2(\text{SO}_4)_2 \cdot 6\text{H}_2\text{O}$, soluble in water, used as a reagent. **a. hypophosphite**, white powder or colorless crystals, $\text{NH}_4\text{H}_2\text{PO}_2$, formerly used as an expectorant. **a. ichthyolate**, a reddish brown viscous fluid used like ichthammol. **a. ichthyosulfonate**, ichthammol. **a. iodide**, an odorless compound, NH_4I , occurring as minute, colorless, cubic crystals or as a white granular powder, with a sharp salty taste; formerly used as an expectorant. **a. mandelate**, the ammonium salt of mandelic acid, $\text{C}_6\text{H}_5\text{NO}_3$, used orally as a urinary anti-infective. **a. muriate**, *a. chloride*. **a. nitrate**, a colorless crystalline or white granular compound, NH_4NO_3 , readily soluble in water and soluble in 20 parts of alcohol. Used in making nitrous oxide gas; formerly used as a diuretic and urine acidifier. **a. oxalate**, $(\text{NH}_4)_2\text{C}_2\text{O}_4 + \text{H}_2\text{O}$; used as a test solution. **a. persulfate**, a colorless crystalline substance, $(\text{NH}_4)_2\text{S}_2\text{O}_8$; formerly used as a deodorant and disinfectant. **a. phosphate**, a compound occurring in colorless translucent prisms, $(\text{NH}_4)_2\text{HPO}_4$ and $\text{NH}_4\text{H}_2\text{PO}_4$; formerly used in gout and rheumatism. **a. purpurate**, murexide. **a. rhodanilate**, a reagent for proline; it is $\text{NH}_4[\text{Cr}(\text{CNS})_2(\text{C}_6\text{H}_4\text{NH}_2)_2]$. **a. salicylate**, an odorless compound, $\text{C}_7\text{H}_5\text{NH}_4\text{O}_3$, occurring as colorless lustrous prisms or plates, or as a faintly pink crystalline powder; formerly used as an analgesic. **a. sulfoichthyolate**, ichthammol. **a. valerate**, a sedative, $\text{CH}_3(\text{CH}_2)_3\text{COONH}_4$.

ammoniuria (ah-mo'ne-u're-ah) [*ammonia* + Gr. *ouron* urine + *-ia*] an excess of ammonia in the urine.

Ammonius (ah-mo'ne-us) (3rd century B.C.) an Alexandrian surgeon who, according to Celsus, devised a lithotrite.

ammonolysis (am'-o-nol'i-sis) a process analogous to hydrolysis, but in which ammonia takes the place of water, resulting in attachment of (or replacement by) an amino group, NH_2 .

ammonotelic (ah-mo'no-tel'ik) [*ammonia* + Gr. *telikos* belonging to the completion, or end] having ammonia as the chief excretory product of nitrogen metabolism, as in fresh-water fishes.

Ammospermophilus (am'mo-sper-mof'i-lus) a genus (or subgenus) of desert ground squirrels of western North America. **a. leucurus**, the desert antelope ground squirrel, which is a natural host of the plague-transmitting flea, *Thraxsis francisi*.

ammothrapy (am'-o-ther'ah-pe) [Gr. *ammos* sand + *therapeia* healing] (*obs.*) treatment of disease by the sand bath.

amnalgesia (am'nal-je'ze-ah) [*amnesia* + *algasia*] a technique by which all pain and memory of a potentially painful procedure are abolished, involving the use of drugs or, for minor procedures, hypnosis.

amnemonic (am'ne-mon'ik) [*a neg.* + Gr. *mnēmē* remembrance, record] (*obs.*) pertaining to, characterized by, or causing loss of memory.

amnesia (am-ne'ze-ah) [Gr. *amnēsia* forgetfulness] lack or loss of memory, especially inability to remember past experiences. **anterograde a.**, amnesia for events occurring after the trauma or disease which caused the condition. **auditory a.**, word deafness. **Broca's a.**, inability to remember spoken words. **circumscribed a.**, amnesia with sharply delineated limits in time or with respect to events. **emotional a.**, amnesia which

is primarily emotional in origin, as in certain hysterical or dissociative states following intolerable emotional stress. **episodic a.**, amnesia for a particular episode or a small area of experience. **immunologic a.**, the failure of the anamnestic immunologic response to antigens. **infantile a.**, the usual inability to recall the events of the first five or six years of life. **lacunar a.**, loss of memory for certain isolated events only; called also *patchy*. **localized a.**, amnesia for events connected with a certain place, time, or incident. **olfactory a.**, loss of memory for smell. **organic a.**, amnesia secondary to organic defects, damage, or disease. **patchy a.**, lacunar a. **posthypnotic a.**, a directed forgetfulness of the subject for experiences undergone while he was in the hypnotic state. **retroactive a.**, **retrograde a.**, amnesia for events which occurred before the trauma or disease causing the condition. **tactile a.**, astereognosis. **transient global a.**, an episode of short-term memory loss, usually nonrecurrent, and lasting a few hours, without other signs or symptoms of neurological impairment; the cause is unknown but may involve an ischemic or epileptic attack. **traumatic a.**, amnesia following physical injury; it most often occurs following a blow to the head (concussion). **tropic a.**, **tropical a.**, loss of memory affecting white men in the tropics; a condition once very prevalent on the west coast of Africa, where it was called *coast memory*. **verbal a.**, loss of memory for words. **visual a.**, alexia.

amnesiac (am-ne'se-ak) a person affected with amnesia.

amnesic (am-ne'sik) affected with or characterized by amnesia.

amnésie (am-naze') [Fr.] amnesia. **a. memoration**, a defect in memorizing.

amnestic (am-nes'tik) 1. amnesic. 2. causing amnesia.

Amnestrogen (am-nes'tro-jen) trademark for a preparation of esterified estrogens.

amnio- [Gr. *amnion* bowl; membrane enveloping the fetus] a combining form denoting relationship to the amnion.

amniocoele (am'ne-o-sēl) omphalocele.

amniocentesis (am'ne-o-sen-te'sis) surgical transabdominal perforation of the uterus, to obtain amniotic fluid.

amniochorial (am'ne-o-ko're-al) pertaining to the amnion and chorion.

Amniocolidae (am'ne-o-kol'i-de) Hydrobiidae.

amniogenesis (am'ne-o-jen'ē-sis) [*amnio-* + Gr. *genesis* formation] the development of the amnion.

amniography (am'ne-og'rah-fe) [*amnio-* + Gr. *graphein* to record] roentgenography of the gravid uterus after injection of opaque media into the amniotic fluid, outlining the amniotic cavity and fetus.

amnioma (am'ne-o'mah) [*amnio-* + *-oma*] (*obs.*) a tumor formed from the amnion.

amnion (am'ne-on) [Gr. "bowl"; "membrane enveloping the fetus"] the thin but tough extraembryonic membrane of reptiles, birds, and mammals that lines the chorion and contains the fetus and the amniotic fluid around it; in mammals it is derived from trophoblast by folding or splitting. **a. nodo'sum**, multiple fo-

Amnion, chorion, and other embryonic membranes surrounding the embryo of a placental mammal; *amn. cav.* = amniotic cavity. (Balinsky.)

cal lesions of the amnion, consisting of masses of adherent amniotic squamæ partially invaded by amniotic mesoderm; a nodular condition of the fetal surface of the amniotic membrane.

amniotic (am'ne-on'ik) amniotic.

amnionitis (am'ne-o-ni'tis) inflammation of the amnion.

Amnioplastin (am-ne-o-plas'tin) trademark for the dried and sterilized amniotic membrane applied to prevent adhesions after craniotomy.

amniorrhea (am'ne-o-re'ah) [*amnion* + Gr. *rhoia* flow] the escape of the amniotic fluid, or liquor amnii.

amniorrhesis (am'ne-o-rek'sis) [*amnion* + Gr. *rhēxis* rupture] rupture of the amnion.

amnioscope (am'ne-o-skōp'v) an endoscope that, by passage through the maternal abdominal wall into the amniotic cavity, permits direct visualization of the fetus and the amniotic fluid.

amniocopy (am'ne-os'ko-pe) direct observation of the fetus and the color and amount of the amniotic fluid by means of a specially designed endoscope inserted through the uterine cervix.

Amniota (am-ne-o'tah) a major group of vertebrates comprising those which develop an amnion, including reptiles, birds, and mammals; opposed to Anamniota.

amniote (am'ne-ōt) any animal or group belonging to the Amniota.

amniotic (am'ne-ōt'ik) pertaining to or developing an amnion.

Amniotin (am-ni'ō-tin) trademark for estrogens derived from the urine of pregnant mares.

amniotome (am'ne-o-tōm'v) [*amnion* + Gr. *tomē* a cutting] an instrument for cutting the fetal membranes.

amniotomy (am'ne-ōt'ō-me) [*amnion* + Gr. *tomē* a cutting] deliberate rupture of the fetal membranes to induce labor.

amobarbital (am'o-bar'bi-tal) [USP] chemical name: 5-ethyl-5-(methylbutyl)-2,4,6(1*H*,3*H*,5*H*)-pyrimidinetrione. An intermediate-acting barbiturate, $C_{11}H_{18}N_2O_3$, occurring as a white, crystalline powder; used orally as a sedative and hypnotic. Called also amylobarbitone and *isomylethylbarbituric acid*. **a. sodium** [USP], the monosodium salt of amobarbital, $C_{11}H_{17}N_2NaO_3$, occurring as a white, friable, granular powder; administered orally, intravenously, and intramuscularly as a hypnotic and sedative.

amodiaquine hydrochloride (am'ō-di'ah-kwin) [USP] chemical name: 4-[(7-chloro-4-quinolinyl)amino]-2-[(diethylamino)-methyl]-phenol dihydrochloride dihydrate. An antimalarial, $C_{26}H_{22}ClN_3O \cdot 2HCl \cdot 2H_2O$, occurring as a yellow, crystalline powder, whose activity is limited to the asexual erythrocytic forms of plasmodia; administered orally.

Amoeba (ah-me'bah) a genus of amebae of the order Amoe-bida, class Rhizopoda, including many free-living species found in fresh, salt, and brackish water, and characterized by an extremely flexible membrane covering the body and a vesicular nucleus. Many species once included in this genus are now assigned to other taxonomic categories. **A. bucca'lis**, *Entamoeba gingivalis*. **A. co'li**, *Entamoeba coli*. **A. denta'lis**, *Entamoeba gingiva-lis*. **A. dysente'riae** (obs.), *Entamoeba histolytica*. **A. his-toly'tica** (obs.), *Entamoeba histolytica*. **A. li'max**, *Endo-limax nana*. **A. meleag'ridis**, *Histomonas meleagridis*. **A. pro'teus**, a species found in fresh water and widely studied in the laboratory. **A. uri'nae granula'ta**, an ameba-like cell found in the urine in cases of infective jaundice with proteinuria. **A. verruco'sa**, an ameba-like cell having a large knobby nucleus and a deeply staining nucleolus.

amoeba (ah-me'bah) ameba.

Amoebida (ah-me'bī-dah) an order of protozoa of the class Rhizopoda, subphylum Sarcodina, comprising all the amebae symbiotic in animals, including man. The organisms occur as unicellular masses of protoplasm, usually without a covering membrane, although some are surrounded by a thin shell, or testa. Amebae change shape by extending cytoplasmic processes called lobose pseudopodia (lobopodia), by which they move about and absorb nourishment. Most are free-living, inhabiting fresh, salt, or brackish water, soil, and decaying matter, but some are internal parasites of invertebrates and vertebrates. The order includes the genera *Amoeba*, *Sappinia*, *Vahlkampfia*, *Endamoeba*, *Entamoeba*, *Iodamoeba*, *Endolimax*, *Dientamoeba*, *Naegleria*, *Trimastiga-moeba*, *Hartmannella*, and *Craigia*.

Amoebobacter (ah-me'bo-bak'ter) a genus of microorganisms of the family Thiorhodaceae, suborder Rhodobacteriineae, order Pseudomonadales, made up of cells usually occurring without a common capsule. It includes three species, *A. bacillo'sus*, *A. gran'ula*, and *A. ro'seus*.

Amoebotaenia (ah-me'bo-te'ne-ah) a tapeworm parasitic in chickens.

amok (ah-mok') [Malay "impulse to murder"] a psychic disturbance seen chiefly in Malaya, the Philippines, and parts of Africa, marked by sudden homicidal mania, screaming, and attacks on people and inanimate objects, tending to result in social retribution and leading to death of the individual.

Amomum (ah-mō'mum) [L.; Gr. *amōmon*] a genus of perennial herbs of the ginger family native to tropical Asia; its seeds are used as a substitute for cardamom (q.v.).

amopyroquin hydrochloride (am-o-pi'ro-kwin) chemical name: 4-[(7-chloro-4-quinolinyl)amino]- α -1-pyrrolidinyl-o-cresol dihydrochloride; an antimalarial drug.

amor (a'mor) [L.] love. **a. les'bicus** (obs.), lesbianism.

amorph (ah'morf) a gene that has no effect on its substrate; an inactive gene.

amorpha (ah-mor'fah) [a neg. + Gr. *morphē* form] diseases that evince no definite structural changes.

amorphia (ah-mor'fe-ah) [a neg. + Gr. *morphē* form + -ia] the fact or quality of being amorphous.

amorphic (ah-mor'fik) amorphous; in genetics, almost completely inactive, as an amorph.

amorphinism (ah-mor'fi-nizm) the state produced by depriving a morphine addict of his drug.

amorphism (ah-mor'fizm) amorphia.

amorphous (ah-mor'fus) [a neg. + Gr. *morphē* form] having no definite form; shapeless; having no specific orientation of atoms; in pharmacy, not crystallized.

amorphus (ah-mor'fus) [a neg. + Gr. *morphē* form] a shapeless monster.

Amoss' sign (a'mos) [Harold Lindsay Amoss, American physician, 1886-1956] see under *sign*.

amotio (ah-mō'she-o) [L.] a removing. **a. ret'inae**, detachment of the retina.

amoxapine (ah-moks'ah-pēn) chemical name: 2-chloro-11-(1-piperazinyl)dibenz[*b,f*][1,4]oxazepine; an antidepressant, $C_{17}H_{16}ClN_3O$.

amoxicillin (ah-moks'i-sil'in) [USP] chemical name: 6-[[amino(4-hydroxyphenyl)acetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid. A semisynthetic derivative of ampicillin, $C_{16}H_{19}N_3O_5S$, effective against a broad spectrum of gram-positive and gram-negative bacteria; used especially in the treatment of infections due to susceptible strains of *Hemophilus influenzae*, *Escherichia coli*, *Proteus mirabilis*, *Neisseria gonorrhoeae*, streptococci (including *S. faecalis* and *S. pneumoniae*), and nonpenicillinase-producing staphylococci. It is administered orally.

Amoxil (ah-moks'il) trademark for a preparation of amoxicillin.

AMP adenosine monophosphate. **cyclic AMP**, adenosine 3':5'-cyclic phosphate.

amp. ampere.

ampelotherapy (am'pē-lo-ther'ah-pe) [Gr. *ampelos* grape + *ther-apy*] the therapeutic use of grape products.

amperage (am'per-ij) the strength of an electric current expressed in amperes or milliamperes.

ampere (am'pēr) [André M. Ampère, 1775-1836] the unit of electric current in the M.K.S. system of measurement, being the current produced by one volt acting through a resistance of one ohm. The international ampere is the unvarying electrical current which, when passed through a solution of silver nitrate in accordance with certain specifications, deposits silver at the rate of 0.001118 gm. per second. Abbreviated *a.* or *amp.*

amphamphotero-diplopia (am'fam-fō'ter-o-dī-plō'pe-ah) [Gr. *amphi* on both sides + *amphoterōs* both together + *diplopia*] double vision with both eyes together, or with either eye separately.

ampheclexis (am'fē-klek'sis) [Gr. *amphi* on both sides + *eklexis* selection] sexual selection on the part of both male and female.

Amphedroxyn (am'fē-drok'sin) trademark for a preparation of methamphetamine.

amphemerous (am-fem'er-us) (obs.) quotidian; occurring daily, as a fever.

amphetamine (am-fet'ah-min) 1. chemical name: (+)- α -methylbenzeneethannine. Racemic amphetamine; a sympathomimetic amine, $C_9H_{13}N$, occurring as a colorless mobile liquid, has a stimulating effect on both the central and peripheral nervous systems. It relaxes both systolic and diastolic blood pressure and bronchial muscle, contracts the sphincter of the urinary bladder, and depresses the appetite. Abuse of this drug and its salts may lead to dependence, characterized by strong psychic dependence, to marked tolerance, and to mild physical dependence associated with tachycardia, increased blood pressure, restlessness, irritability, insomnia, personality changes, and in the severe form of chronic intoxication, psychosis similar to schizophrenia. Abrupt withdrawal can cause severe fatigue, mental depression, and abnormalities in the electroencephalogram. 2. [pl.] a group of closely related compounds having similar actions, including both racemic amphetamine and its salts, dextroamphetamine, and methamphetamine. **a. phosphate**, a white, crystalline powder, $C_9H_{10}NO_4P$, having the same actions and uses as the sulfate salt; administered orally and parenterally. **a. sulfate** [USP], a white, crystalline powder, $C_{18}H_{20}N_2H_2O_8S$, having the same actions as the base, used chiefly for its central stimulant effects in the treatment of mental depression, psychopathic states, narcolepsy, hyperkinetic behavior disorders in children, and exogenous obesity; administered orally. **a. sulfate, dextro**, dextroamphetamine.

amphi- (am'fe) [Gr. *amphi* on both sides] a prefix signifying on both sides; around or about; double.

amphiarkyochrome (am'fe-ar'ke-o-krōm') [*amphi-* + Gr. *arkys* net + *chrōma* color] a nerve cell, the stainable portion of whose body is a pale network, of which the nodal points are joined by a readily and intensely stainable network.

amphiarthrodial (am''fe-ar-thro'de-al) pertaining to amphiarthrosis.

amphiarthrosis (am''fe-ar-thro'sis) [*amphi-* + Gr. *arthrōsis* joint] a form of articulation permitting little motion, the apposed surfaces of bone being connected by fibrocartilage; called also *junctura cartilaginea* [NA].

amphiaster (am''fe-as'ter) [*amphi-* + Gr. *astēr* star] the figure of achromatin fibers formed in karyokinesis, consisting of two asters joined by a spindle; called also *diaster*.

Amphibia (am-fib'e-ah) [*amphi-* + Gr. *bios* life] a class of vertebrate animals that breathe by means of gills in the larval state, but after metamorphosis generally breathe by means of lungs; it includes frogs, toads, newts, and salamanders.

amphibious (am-fib'e-us) [see *Amphibia*] capable of living both on land and in water.

amphiblastic (am''fe-blas'tik) [*amphi-* + Gr. *blastos* germ] denoting the complete but unequal cleavage of a telolecithal egg.

amphiblastula (am''fe-blas'tu-lah) [*amphi-* + *blastula*] a blastula with unequal blastomeres.

amphiblestritis (am''fe-bles-tri'tis) [Gr. *amphiblēstron* net + *-itis*] retinitis.

amphibolia (am''fe-bo'le-ah) [Gr. *amphibolia* uncertainty] a term once used to describe the course of an untreatable febrile disease at a stage before its outcome was clear.

amphibolic (am''fe-bol'ik) 1. uncertain; vacillating; of doubtful prognosis. 2. having both a catabolic and an anabolic function.

amphibolous (am-fib'o-lus) [Gr. *amphibolos*] amphibolic.

amphicarcinogenic (am''fe-kar'si-no-jen'ik) tending, optionally, to increase or to decrease carcinogenic activity.

amphicelous (am''fe-se'lus) [*amphi-* + Gr. *koilos* hollow] concave at both ends; a term usually applied to the hollow-ended vertebral centra of certain cold-blooded vertebrates.

amphicentric (am''fe-sen'trik) [*amphi-* + Gr. *kentron* center] beginning and ending in the same vessel, as a branch of a rete mirabile.

amphichroic (am''fe-kro'ik) [*amphi-* + Gr. *chrōma* color] exhibiting two colors; affecting both red and blue litmus.

amphichromatic (am''fe-kro-mat'ik) amphichroic.

amphicreatine (am''fe-kre'ah-tin) [*amphi-* + *creatine*] a leukomaine, C₆H₁₆N₇O₄, from muscle, occurring in the form of opaque yellowish white crystals.

amphicreatinine (am''fe-kre-at'i-nin) [*amphi-* + *creatinine*] a poisonous leukomaine, C₆H₁₆N₇O₄, from muscle.

amphicroic (am''fe-kro'ik) [*amphi-* + Gr. *krouein* to test] amphichroic.

amphicyte (am''fe-sit) [*amphi-* + Gr. *kytos* hollow vessel] a satellite cell, def. 1.

amphicytula (am''fe-sit'u-lah) [*amphi-* + *cytula*] a fertilized telolecithal ovum.

amphidiarthrosis (am''fe-di'ar-thro'sis) [*amphi-* + *diarthrosis*] a joint having the nature of both a ginglymus and arthrodia, as the articulation of the lower jaw.

amphidiploid (am''fe-dip'loid) allotetraploid.

amphigastrula (am''fe-gas'tru-lah) [*amphi-* + *gastrula*] a gastrula composed of cells unequal in size in its upper and lower hemispheres.

amphigenetic (am''fe-jē-net'ik) produced by means of both sexes, as *amphigenetic* reproduction.

amphigonadism (am''fe-gon'ah-dizm) possession of both ovarian and testicular tissue; true hermaphroditism.

amphigonium (am''fe-go'ne-um) [*amphi-* + Gr. *gonos* generation] (*obs.*) that stage of the life of a malaria parasite which is passed in the mosquito.

amphigony (am-fig'o-ne) sexual reproduction.

amphikaryon (am''fe-kar'e-on) [*amphi-* + Gr. *karyon* kernel] a diploid nucleus.

Amphileptus (am''fe-lep'tus) a genus of ciliate protozoa, most species of which are free-living. **A. branchia'rum**, a ciliate parasite on the gills of frog tadpoles.

amphileukemic (am''fe-lu-ke'mik) [*amphi-* + *leukemic*] showing leukemic changes which vary in degree with the changes in the organ.

Amphimerus (am-fim'er-us) a genus of trematodes. *A. nover'ca* is a biliary-duct parasite of dogs and foxes and occasionally of hogs and man. *A. pseudofelin'us* infects cats and coyotes in the central United States.

amphimicrobian (am''fe-mi-kro'be-an) [*amphi-* + *microbe*] (*obs.*) see *facultative aerobes*, under *aerobe*.

amphimorula (am''fe-mor'u-lah) [*amphi-* + *morula*] the morula resulting from unequal cleavage, the cells of the two hemispheres being of unequal size.

amphinucleus (am''fe-nu'kle-us) [*amphi-* + *nucleus*] a nucleus that consists of a single body made of spindle fibers and centrosome, around which the chromatin is massed; it is the ordinary form of protozoan nucleus. Called also *centronucleus*.

Amphioxus (am''fe-ok'sus) a primitive fishlike marine chordate, considered similar to the ancestor of the vertebrates.

amphipath (am''fe-path) a molecule showing amphipathic properties.

amphipathic (am''fe-path'ik) of or relating to molecules containing groups with characteristically different properties, e.g., both hydrophilic and hydrophobic properties.

amphipyrenin (am''fe-pi're-nin) [*amphi-* + Gr. *pyrēn* stone of a fruit] the substance of the nuclear membrane of a cell.

Amphistoma, Amphistomum (am-fis'to-mah, am-fis'to-mum) [*amphi-* + Gr. *stoma* mouth] a genus of parasitic trematode worms, many species of which have been reassigned to other genera. **A. conf'icum**, *Paramphistomum cervi*. **A. hom'inis**, *Gastrodiscoides hominis*. **A. watso'ni**, *Watsonius watsoni*.

amphistome (am-fis'tōm) a fluke having the ventral sucker near the posterior end, usually found in the rumen or intestine of herbivorous mammals. The genera *Paramphistomum* and *Watsonius* include most of the medically important amphistomes.

amphistomiasis (am''fe-sto-mi'ah-sis) the condition of being infected with trematodes of the genus *Amphistoma* or of the family Paramphistomidae.

amphitene (am'fē-tēn) zygote.

amphitheater (am''fe-the'ah-ter) an operating room or lecture room with seats arranged in tiers for students or spectators.

amphithymia (am''fe-thi'me-ah) [*amphi-* + Gr. *thymos* spirit + *-ia*] (*obs.*) a mental state characterized by both depression and elation.

amphitrichous (am-fit'rē-kus) [*amphi-* + Gr. *thrix* hair] having a single flagellum, or a single tuft of flagella, at each end; said of a bacterial cell. See *flagellum*.

amphitypy (am-fit'ī-pe) the condition of showing both types.

ampho- (am'fo) [Gr. *amphō* both] a prefix signifying both.

amphochromatophil (am''fo-kro-mat'o-fil) 1. amphophil. 2. amphophilic.

amphochromophil (am''fo-kro'mo-fil) [*ampho-* + Gr. *chrōma* color + *philein* to love] 1. amphophil. 2. amphophilic.

amphocyte (am'fo-sit) an amphophilic cell.

amphodiplopia (am''fo-di'plo'pe-ah) [*ampho-* + *diplopia*] double vision in both eyes.

amphogenic (am''fo-jen'ik) [*ampho-* + Gr. *gennan* to produce] producing offspring of both sexes.

Amphojel (am'fo-jel) trademark for a preparation of aluminum hydroxide gel.

ampholyte (am'fo-lit) [*ampho-* + *electrolyte*] an amphoteric electrolyte.

amphomycin (am-fo-mi'sin) an antibiotic substance produced by *Streptomyces canus*.

amphophil (am'fo-fil) 1. a cell that stains readily with acid or basic dyes; an amphophilic cell. Called also *amphochromatophil* and *amphochromophil*. 2. amphophilic.

amphophile (am'fo-fil'') denoting cells of the adenohypophysis that are thought to be actively secreting; the lightly granulated acidophils and basophils.

amphophilic (am-fo-fil'ik) [*ampho-* + Gr. *philein* to love] stainable with either acid or basic dyes. **a-basophil**, staining with both acid and basic stains, but having a greater affinity for basic ones. **gram-a.**, tending to stain both positive and negative with Gram stain. **a-oxophil**, staining with both acid and basic dyes, but having a greater affinity for the acid ones.

amphophilous (am-fof'i-lus) amphophilic.

amphoric (am-for'ik) [L. *amphoricus*, from L. *amphora*, Gr. *amphoreus* jar] pertaining to a bottle; resembling the sound made by blowing across the mouth of a bottle, particularly such a sound resulting from percussion or a breath sound heard over a cavity in the lung.

amphoricity (am''fo-ris'i-te) the condition of giving off amphoric sounds on percussion or auscultation.

amphoriloquy (am''fo-ril'o-kwe) [L. *amphora* jar + *loqui* to speak] the production of amphoric sounds in speaking.

amphorophony (am''fo-rof'o-ne) [Gr. *amphoreus* jar + *phonē* voice] an amphoric sound of the voice.

amphoteric (am-fo-ter'ik) [Gr. *amphoterōs* pertaining to both] having opposite characters; capable of acting either as an acid or as a base; combining with both acids and bases; affecting both red and blue litmus.

amphotericin B (am''fo-ter'i-sin) [USP] one of two antifungal antibiotics, the other designated amphotericin A (not used clinically), derived from a strain of *Streptomyces nodosus*, C₄₇H₇₃NO₁₇; administered by intravenous infusion in the treatment of systemic fungal infections, such as aspergillosis, histoplasmosis, cryptococcosis, coccidioidomycosis, etc. It may also be applied topically to the skin in lotion or cream in the treatment of candidiasis and related infections.

amphotericity (am''fo-ter-is'i-te) amphoterism.

amphoterism (am-fot'er-izm) the condition or quality of possessing both basic and acid properties.

amphoterodiplopia (am-fot'er-o-dī-plo'pe-ah) [Gr. *amphoterōs* pertaining to both + *diplopia*] amphodiplopia.

amphoterous (am-fot'er-us) amphoteric.

amphotony (am-fot'o-ne) [*ampho-* + Gr. *tonos* tension] a condition in which both sympatheticotonia and vagotony is said to exist; hypertonia of the entire sympathetic nervous system.

ampicillin (amp'i-sil'in) [USP] chemical name: [2S-[2α,5α-6β(S*)]][(aminophenylacetyl)amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid. A semisynthetic, acid-resistant penicillin, $C_{16}H_{18}N_3O_4S$, occurring as a white, crystalline powder, effective orally against many gram-negative and gram-positive bacteria; used mainly in the treatment of infections of the urinary tract and urinary system, and in chronic bronchial infections, especially those due to susceptible strains of *Shigella*, *Salmonella*, *Escherichia coli*, *Hemophilus influenzae*, *Proteus mirabilis*, and *Neisseria gonorrhoeae*. **a. sodium** [USP], **sodium a.**, the monosodium salt of ampicillin, $C_{16}H_{17}N_3NaO_4S$, having the same actions and uses as the base; administered intramuscularly or intravenously.

amplexation (am'plek-sa'shun) [L. *amplexus* embrace] treatment of fractured clavicle by an apparatus which fixes the shoulder and embraces the chest and neck.

amplexus (am-plek'sus) [L.] an embrace, as in the sexual clasping of the female by the male frog; see *pseudocopulation*.

amplification (am'plī-fi-ka'shun) [L. *amplifica'tio*] the process of making larger, as the increase of an auditory or visual stimulus, as a means of improving its perception. **image a.**, amplification of an image by means of an electron-image or electron multiplier tube.

amplifier (am'plē-fi'er) an electronic device that increases the strength of an input signal, or an apparatus for increasing the magnification of a microscope.

amplitude (am'plē-tūd) [L. *amplitudo*] largeness or fullness; wideness or breadth of range or extent. **a. of accommodation**, the total amount of accommodative power of the eye; the difference in refractive power of the eye when adjusted for farthest vision and that when adjusted for nearest vision. **a. of convergence**, the difference in the power required to turn the eyes from their far point to their near point of convergence.

ampoule (am'pūl) ampule.

amprotropine phosphate (am'pro-tro'pēn) chemical name: α-(hydroxymethyl)benzeneacetic acid 3-(diethylamino)-2,2-dimethylpropyl ester phosphate. An anticholinergic, $C_{18}H_{32}NO_7$, occurring as a white, crystalline powder, which has been used as a spasmolytic to depress gastrointestinal motility.

ampul (am'pūl) ampule.

ampule (am'pūl) [Fr. *ampoule*] a small glass or plastic container capable of being sealed so as to preserve its contents in a sterile condition; used principally for containing sterile parenteral solutions.

ampulla (am-pul'lah), pl. *ampul'lae* [L. "a jug"] a general term used in anatomical nomenclature to designate a flasklike dilatation of a tubular structure. **anterior membranaceous a.**, a. membranacea anterior. **a. canaliculi lacrima'lis** [NA], ampulla of lacrimal canaliculus: a dilatation of a lacrimal canaliculus just before it opens into the lacrimal sac; called also *a. ductus lacrimalis*. **a. chy'li**, cisterna chyli. **a. ductus deferen'tis** [NA], the enlarged and tortuous distal end of the ductus deferens; called also *Henle's a.* and *a. of vas deferens*. **a. ductus lacrima'lis**, a. canaliculi lacrimalis. **Henle's a.**, a. ductus deferentis. **hepatopancreatic a.**, **a. hepatopancreat'ica** [NA], the dilatation formed by junction of the common bile and the pancreatic duct proximal to their opening into the lumen of the duodenum; called also *a. of Vater*. **a. of lacrimal canaliculis**, a. canaliculi lacrimalis. **ampul'lae lactif'erae**, sinus lactiferi. **lateral membranaceous a.**, a. membranacea lateralis. **Lieberkühn's a.**, the termination of a lacteal in an intestinal villus. **ampul'lae membrana'ceae** [NA], membranaceous ampullae: the dilatations at one end of each of the three membranous semicircular ducts, each named according to the duct of which it forms a part. **a. membrana'cea ante'rior** [NA], anterior membranaceous ampulla: the dilatation at the end of the anterior membranous semicircular duct. **a. membrana'cea latera'lis** [NA], lateral membranaceous ampulla: the dilatation at the end of the lateral membranous semicircular duct. **a. membrana'cea poste'rior** [NA], posterior membranaceous ampulla: the dilatation at the end of the posterior membranous semicircular duct. **ampul'lae os'seae** [NA], osseous ampullae: the dilatations at one of the ends of the bony semicircular canals, each named according to the canal of which it forms a part, and lodging the correspondingly named ampulla of a semicircular duct. **a. os'sea ante'rior** [NA], the dilatation at one end of the anterior semicircular canal; see *ampullae osseae*. **a. os'sea latera'lis** [NA], the dilatation at one end of the lateral semicircular canal; see *ampullae osseae*. **a. os'sea poste'rior** [NA], the dilatation at one end of the posterior semicircular canal; see *ampullae osseae*. **phrenic a.**, the dilatation at the lower end of the

esophagus. **posterior membranaceous a.**, a. membranacea posterior. **rectal a.**, **a. rec'ti** [NA], the dilated portion of the rectum just proximal to the anal canal. **a. of Thoma**, one of the small terminal expansions of an interlobar artery in the pulp of the spleen. **a. tu'bae uteri'nae** [NA], a. of uterine tube: the thin-walled, almost muscle-free, midregion of the uterine tube; its mucosa is greatly plicated. **a. of uterine tube**, a. tubae uterinae. **a. of vas deferens**, a. ductus deferentis. **a. of Vater**, a. hepatopancreatica.

ampullae (am-pul'le) [L.] plural of *ampulla*.

ampullar (am-pul'ar) pertaining to an ampulla, especially to the ampulla hepatopancreatica.

ampullary (am'pu-la're) ampullar.

ampullate (am-pul'at) flask shaped.

ampullitis (am'pul-li'tis) inflammation of an ampulla, especially of the ampulla ductus deferentis.

ampullula (am-pul'u-lah) [L.] any minute ampulla, like many of those of the lymphatic and lacteal vessels.

amputation (am'pu-ta'shun) [L. *amputare* to cut off, or to prune] the removal of a limb or other appendage or outgrowth of the body; called also *apocope*. **Alanson's a.**, circular amputation, the stump being shaped like a hollow cone. **Alouette's a.**, amputation at the hip, with a semicircular outer flap to the great trochanter and a large internal flap from within outward; called also *Alouette's operation*. **amniotic a.**, the alleged amputation of a fetal limb by a band of amnion. **aperiosteal a.**, amputation with complete removal of the periosteum from the end of the stump of the bone; called also *Bunge's a.* **Béclard's a.**, amputation at the hip joint by cutting the posterior flap first. **Bier's a.**, osteoplastic amputation of the leg with a bone flap cut out of the tibia and fibula above the stump; called also *Bier's operation*. **Bunge's a.**, aperiosteal a. **Callander's a.**, a tendoplastic amputation at the knee joint with long anterior and posterior flaps, the patella being removed to leave a fossa for the end of the divided femur. **Carden's a.**, a single-flap operation, cutting through the femur just above the knee. **central a.**, one in which the scar is situated at or near the center of the stump. **chop a.**, amputation by a circular cut through the parts without the formation of a flap. **Chopart's a.**, amputation of the foot, with the calcaneus, talus, and other parts of the tarsus being retained; called also *mediotarsal a.* **cinematic a.**, **cineplastic a.**, kineplasty. **circular a.**, one performed by means of a single flap and by a circular cut in a direction vertical to the long axis of a limb. **closed a.**, one in which flaps are made from the skin and subcutaneous tissue and sutured over the end of the bone; called also *flap a.* **coat-sleeve a.**, a circular amputation, with a single skin flap made very long, the end being closed with a tape. **complete a.**, amputation in which the entire limb or segment of the limb is removed. **congenital a.**, the alleged amputation of a fetal limb *in utero* by a constricting band; called also *intrauterine a.* and *natural a.* **consecutive a.**, amputation performed during or after the period of supuration. **a. in contiguity**, an amputation at a joint. **a. in continuity**, an amputation elsewhere than at a joint. **cutaneous a.**, amputation in which the flaps are composed entirely of skin. **diaclastic a.**, an amputation in which the bone is broken by the osteoclast and the soft tissues divided by the écraseur. **Dieffenbach's a.**, see under *operation*, def. 1. **double-flap a.**, one in which two flaps are formed. **Dupuytren's a.**, amputation of the arm at the shoulder joint; called also *Lisfranc's a.* **eccentric a.**, one in which the scar is not at the center of the stump. **elliptic a.**, one in which the cut has an elliptic outline on account of the oblique direction of the incision. **Farabeuf's a.**, amputation of the leg at the "place of choice," with a large external flap. **flap a.**, closed a. **flapless a.**, guillotine a. **Forbe's a.**, a foot amputation which retains the calcaneus, astragalus, scaphoid, and a part of the cuboid bones. **forequarter a.**, interscapulothoracic a. **galvanocautic a.**, one in which the soft parts are divided with the galvanocautery. **Gritti's a.**, amputation of the leg through the knee, using the patella as an osteoplastic flap over the end of the femur. **Gritti-Stokes a.**, a modification of Gritti's amputation, using an oval anterior flap; called also *Stoke's a.* or *operation*. **guillotine a.**, rapid amputation of a limb by a circular sweep of the knife and a cut of the saw, the entire cross-section being left open for dressing; done when primary closure of the stump is contraindicated, owing to the possibility of recurrent or developing infection. Called also *flapless a.* and *open a.* **Guyon's a.**, amputation above the malleoli. **Hancock's a.**, a modification of Pirogoff's amputation, a part of the astragalus (talus) being retained in the flap, the lower surface being sawed off, and the cut surface of the calcaneus being brought into contact with it; called also *Hancock's operation*. **Hey's a.**, disarticulation of the metatarsus from the tarsus, with removal of a part of the medial cuneiform bone; called also *Hey's operation*. **hindquarter a.**, interilioabdominal a. **immediate a.**, one performed within hours after the injury which made it necessary. **interilioabdominal a.**, **interinnominoabdominal a.**, amputation of an entire lower limb, including the whole or part of the hip bone; called also *hindquarter a.* **intermediary a.**, **intermediate a.**, one done during the period of reaction and before supuration;

called also *intrapyretric a.* and *mediate a.* **interpelviabdominal a.**, amputation of the thigh with excision of the lateral half of the pelvis; called also *Jaboulay's a.* or *operation.* **inter-scapulothoracic a.**, amputation of the upper extremity, including the scapula and the clavicle; called also *forequarter a.* **intrapyretric a.**, intermediary a. **intrauterine a.**, congenital a. **Jaboulay's a.**, interpelviabdominal a. **kineplastic a.**, kineplasty. **Kirk's a.**, a tendoplastic amputation just above the femoral condyles, the tendon of the quadriceps femoris muscle being sutured over the end of the divided femur. **Langenbeck's a.**, amputation in which the flaps are cut from without inward. **Larrey's a.**, a method of disarticulation of the humerus at the shoulder joint by an incision extending from the acromion about three inches down the arm, splitting the deltoid muscle, and from this point going around the arm to the center of the axilla; called also *Larrey's operation.* **Le Fort's a.**, a modification of Pirogoff's amputation in which the calcaneus is sawed through horizontally instead of vertically. **linear a.**, amputation by a simple straight division of all the tissues. **Lisfranc's a.**, Dupuytren's a. 2. a division of the foot between the tarsus and the metatarsus. **MacKenzie's a.**, amputation like that of Syme except that the flap is taken from the inner side of the ankle. **Maisonneuve's a.**, amputation by breaking the bone, followed by cutting of the soft parts. **major a.**, amputation of a leg above the ankle or of an arm above the wrist. **Mal-gaigne's a.**, subastragalar a. **mediate a.**, intermediary a. **mediotarsal a.**, Chopart's a. **minor a.**, amputation of a small part, as of a finger or toe. **mixed a.**, that which is performed by a combination of the circular and flap methods. **multiple a.**, amputation of two or more parts at the same time. **musculocutaneous a.**, one in which the flap consists of muscle and skin. **natural a.**, congenital a. **oblique a.**, oval a. **open a.**, guillotine a. **operative a.**, removal of a part by surgery. **osteoplastic a.**, one in which the two severed surfaces of bone are brought into contact so as to unite. **oval a.**, one in which the incision consists of two reversed spirals; called also *oblique a.* and *loxotomy.* **partial a.**, amputation of only a portion or segment of a limb. **pathological a.**, amputation of a part because of its diseased condition. **periosteoplastic a.**, subperiosteal a. **phalangophalangeal a.**, amputation of a digit at a phalangeal joint. **Pirogoff's a.**, amputation of the foot at the ankle, part of the calcaneus being left in the lower end of the stump. **primary a.**, one performed after the period of shock and before the development of inflammation. **pulp a.**, pulpotomy. **quadruple a.**, amputation of all four extremities. **racket a.**, one in which there is a single longitudinal incision continuous below with a spiral incision on each side of the limb. **rectangular a.**, one with a long and a short rectangular skin flap, as in Teale's amputation. **Ricard's a.**, intertibio-calcaneal disarticulation, astragalectomy, and the placing of the calcaneus in the tibiofibular mortise. **root a.**, the removal of one or more roots from a multirooted tooth, leaving at least one root to support the crown; when only the apical portion of a root is involved, it is called *apicoectomy.* **secondary a.**, one performed during the period of healing of a granulative surface. **spontaneous a.**, loss of a part which occurs without surgical intervention, as in leprosy, diabetes mellitus, and Buerger's disease. **Stokes's a.**, Gritti-Stokes a. **subastragalar a.**, amputation of the foot, leaving the astragalus (talus) in the lower end of the stump; called also *Malgaigne's a.* **subperiosteal a.**, one in which the cut end of the bone is covered with a flap of periosteum; called also *periosteoplastic a.* **Syme's a.**, amputation of the foot at the ankle joint with removal of both malleoli; called also *Syme's operation.* **synchronous a.**, multiple amputation, especially multiple amputation in which two or more parts are removed simultaneously by different operators. **Teale's a.**, amputation with preservation of a long rectangular flap of muscle and integument on one side of the limb and a short rectangular flap on the other. **tertiary a.**, amputation done after the secondary stage of inflammatory reaction has subsided. **a. by transfixion**, one performed by thrusting a long knife through the limb and cutting the flaps from within outward. **traumatic a.**, amputation of a part by accidental injury. **Tripier's a.**, one like Chopart's, except that a part of the tarsus is removed. **triple a.**, amputation of three extremities. **Vladimiroff-Mikulicz a.**, osteoplastic resection of the foot with incision of the calcaneus and talus.

amputee (am'pu-tef) a person who has one or more of his limbs amputated.

amrinone (am'ri-nōn) chemical name: 5-amino-[3,4'-bipyridin]-6(1*H*)-one; an oral cardiotonic, $C_{10}H_8N_4O$.

A.M.R.L. Aerospace Medical Research Laboratories.

A.M.S. American Meteorological Society.

ams. amount of a substance.

Amsler's marker (am'slerz) a form of caliper compass used for marking with a dot of India ink the point for the application of the cautery in the Gonion operation.

Amsustain (am'sus-tān) trademark for a preparation of dextroamphetamine.

amu atomic mass unit.

amuck (ah-muk') amok.

amusia (ah-mu'ze-ah) [Gr. *amousia* want of harmony] inability to produce (*motor a.*) or to comprehend (*sensory a.*, *tone deafness*) musical sounds (Knoblunch). **instrumental a.**, that in which the patient has lost the power of playing a musical instrument. **vocal motor a.**, that in which the patient cannot sing in tune.

Amussat's operation, probe, valve (am'oo-sahz') [Jean Zuléma Amussat, French surgeon, 1796-1856] see under *operation* and *probe*.

A.M.W.A. American Medical Women's Association; American Medical Writers' Association.

amyasthenia (ah-mi'as-the'ne-ah) amyosthenia.

amyasthenic (ah-mi'as-then'ik) amyosthenic.

amychophobia (ah-mi'ko-fō-be-ah) [Gr. *amychēa* scratch + *phobia*] morbid fear of being scratched, as by the claws of a cat.

amyctic (ah-mik'tik) caustic or irritating.

amyelencephalia (ah-mi'el-en-seh-fa'le-ah) [a neg. + Gr. *myelos* marrow + *enkephalos* brain + *-ia*] congenital absence of both brain and spinal cord.

amyelencephalus (ah-mi'el-en-sef'ah-lus) a monster exhibiting amyelencephalia.

amyelia (ah'mi-e'le-ah) [a neg. + Gr. *myelos* marrow + *-ia*] congenital absence of spinal cord.

amyelic (ah'mi-el'ik) having no spinal cord.

amyelinic (ah-mi'ē-lin'ik) without myelin; having no medullary sheath.

amyelonic (ah-mi'ē-lon'ik) [a neg. + Gr. *myelos* marrow] 1. having no spinal cord. 2. having no bone marrow.

amyelotrophy (ah-mi'ē-lot'ro-fe) [a neg. + Gr. *myelos* marrow + *trophē* nourishment] atrophy of the spinal cord.

amyelus (ah-mi'e-lus) [a neg. + Gr. *myelos* marrow] a monster exhibiting amyelia.

amygdala (ah-mig'dah-lah) [Gr. *amygdalē* almond] a term used in anatomical nomenclature to designate an almond-shaped structure; often used alone to refer to the corpus amygdaloideum (see under *corpus*). **a. accessoria**, accessory a., tonsilla lingualis. **a. ama'ra**, the bitter almond; see *almond*. **a. of cerebellum**, tonsilla cerebelli. **a. dul'cis**, the sweet almond of many varieties; see *almond*.

amygdalase (ah-mig'dah-lās) an enzyme that splits amygdalose.

amygdalin (ah-mig'dah-lin) chemical name: (R)-α-[(6-O-β-glucopyranosyl-β-D-glucopyranosyl)oxy]benzeneacetonitrile. A cyanogenetic glycoside, $C_6H_5CH(CN) \cdot O \cdot C_{12}H_{21}O_{10}$, characteristically found in seeds and other plant parts of members of the Rosaceae family, e.g., almonds. It is split by the enzyme emulsin into glucose, benzaldehyde, and hydrocyanic acid. The term is sometimes used interchangeably with *Laetrile*.

amygdaline (ah-mig'dah-lin') [L. *amygdalinus*] 1. like an almond. 2. pertaining to a tonsil; tonsillar.

amygdalo- (ah-mig'dah-lo) [Gr. *amygdalē* almond] a combining form denoting relationship to an almond-shaped structure or to the tonsil.

amygdaloid (ah-mig'dah-loid) [amygdalo- + Gr. *eidos* form] resembling an almond, or tonsil.

amygdalophenin (ah-mig'dah-lof'ē-nin) salicyl phenetidin, $C_6H_4(OC_2H_5)NH \cdot OC \cdot CH(OH)C_6H_5$.

amygdalose (ah-mig'dah-los) a disaccharide from amygdalin; it splits into two molecules of dextrose.

amyl (am'il) [Gr. *amylon* starch] the univalent radical, C_5H_{11} . **a. acetate**, a colorless limpid liquid, the acetic acid ester of amyl alcohol, $CH_3 \cdot CO \cdot OC_5H_{11}$; it has the odor of bananas and is called *banana oil*. **a. chloride**, the colorless liquid, $C_5H_{11}Cl$, used as a solvent; formerly used as an anesthetic. **a. nitrite** [USP], a flammable, clear, yellowish liquid, $C_5H_{11}NO_2$, with a peculiar, ethereal, fruity odor, which is volatile at low temperatures; it is a vasodilator, administered by inhalation to relieve pain of anginal syndrome (angina pectoris, angina of effort) and of biliary colic, to relieve asthmatic paroxysms, to control convulsions, and in cyanide poisoning. Called also *isoamyl nitrite*. **a. salicylate**, a compound, $C_5H_{11} \cdot O_2C \cdot C_6H_4 \cdot OH$, formerly used locally as an analgesic.

amylaceous (am'ī-la'she-us) [L. *amylaceus*] starchy; containing starch; of the nature of starch.

amylase (am'ī-lās) [amyl + -ase] an enzyme that catalyzes the hydrolysis of starch into smaller molecules. The α-amylases are found in animals and include salivary amylase and pancreatic amylase; the β-amylases are found in higher plants. α-Amylases act in a random manner in catalyzing the hydrolysis of α-1,4-glucan links in polysaccharides. **pancreatic a.**, the α-amylase of the pancreas. **salivary a.**, α-amylase occurring in the saliva.

amylasuria (am'ī-lās-u're-ah) an excess of amylase in the urine, a sign of pancreatitis.

amylatic (am'ī-lat'ik) characterized by conversion of starch into sugar.

Amylcaine Hydrochloride (am'il-kān hi'dro-klo'rid) trade-mark for a preparation of naepaine.

amylemia (am'i-le'me-ah) [Gr. *amylon* starch + *haima* blood + *-ia*] an excess of starch in the blood.

amylene (am'i-lēn) chemical name: 2-methyl-2-butene. A flammable liquid hydrocarbon of five isomeric forms, C_5H_{10} , practically insoluble in water and miscible with alcohol and ether. It is an unsafe anesthetic. **a. chloral**, an oily colorless liquid, composed of chloral and amylene hydrate; formerly used as a hypnotic. **a. hydrate** [NF], chemical name: 2-methyl-2-butanol. A clear colorless liquid, with camphoraceous odor, $C_5H_8 \cdot C(CH_3)_2OH$; miscible with alcohol, chloroform, ether, and glycerin, it is used as a solvent in pharmaceutical preparations and also as an ingredient of *tribromoethanol solution* and as a hypnotic. Called also *a. alcohol*.

amylenization (am'i-len-i-za'shun) anesthesia produced by amylene.

amyl (ah-mil'ik) [L. *amylus*] pertaining to amyl.

amyl (am'i-lin) amylopectin.

amylism (am'i-lizm) poisoning by amylene hydrate.

amyl- (am'i-lo) [Gr. *amylon* starch] a combining form denoting relationship to starch.

amylobarbitone (am'i-lo-bar'bī-tōn) amobarbital.

amylocellulose (am'i-lo-sel'u-lōs) amylose, def. 2.

amylolast (am'i-lo-klast') a starch-splitting enzyme.

amylolastic (am'i-lo-klas'tik) [*amyl-* + Gr. *klastikos* breaking up] digesting or splitting up starch.

amylcoagulase (am'i-lo-ko-ag'u-lās) a ferment occurring in cereals which coagulates soluble starch.

amylodextrin (am'i-lo-deks'trin) a compound colored yellow by iodine, formed during the change of starch into sugar.

amylodyspepsia (am'i-lo-dis-pep'se-ah) [*amyl-* + *dyspepsia*] inability to digest starch-containing foods.

amyl (ah-mil'o-jen) amylose, def. 2.

amylogenesis (am'i-lo-jen'ē-sis) [*amyl-* + Gr. *gennan* to produce] the formation of starch.

amylogenic (am'i-lo-jen'ik) producing starch.

amyl-1,6-glucosidase (am'i-lo-glu-ko'si-dās) dextrin-1,6-glucosidase.

amlohemcellulose (am'i-lo-hem'e-sel'u-lōs) a polysaccharide found in the cell wall of plants; it is much like the amylose of starch in that it is insoluble in water and stains blue with iodine.

amlohydrolysis (am'i-lo-hi-drol'i-sis) hydrolysis of starch; amylolysis.

amyloid (am'i-loid) [*amyl-* + Gr. *eidos* form] 1. resembling starch; characterized by a starchlike formation. 2. an abnormal complex material, most probably a glycoprotein, the exact biochemical composition of which has not been defined. Its protein component may be related to the immunoglobulins (gamma globulins), and it bears only a superficial resemblance to starch. 3. a substance produced by the action of sulfuric acid on cellulose; it gives a blue color when treated with iodine.

amyloidemia (am'i-loi-de'me-ah) the presence of amyloid in the blood.

amyloidosis (am'i-loi-do'sis) the accumulation of amyloid in various body tissues, which, when advanced, engulfs and obliterates parenchymal cells and thus injures the affected organ. The disorder is divided, mainly for descriptive purposes, into the following categories: (1) primary, (2) secondary, (3) familial, (4) associated with multiple myeloma, and (5) associated with familial Mediterranean fever. **a., Andrade type**, see *hereditary neuropathic a. cutaneous a., a. cu'tis*, amyloid degeneration of the skin characterized by an eruption of papules, nodules, plaques, or pigmentation, usually associated with itching. Called also *gammaloidosis*. See also *lichen amyloidosus*. **hereditary neuropathic a.**, hereditary amyloidosis affecting the peripheral nerves, characterized by paresthesias, sharp pains, and diminished sensitivity to pain. In the Andrade or Portuguese form, the manifestations are predominantly in the legs, but vitreous opacities are frequent. In the Indiana form, they are predominantly in the upper limbs, with carpal tunnel syndrome the characteristic feature. Both forms are autosomal dominant traits. **a., Indiana type**, see *hereditary neuropathic a. lichenoid a.*, *lichen amyloidosus*. **pericollagen a.**, amyloidosis in which the amyloid is originally deposited along collagen fibers. **perireticulin a.**, amyloidosis in which the amyloid is originally deposited along reticular fibers. **a., Portuguese type**, see *hereditary neuropathic a. primary a.*, that with no antecedent or coexisting disease, producing depositions chiefly in mesodermal tissue, including the cardiovascular system. **secondary a.**, that following some chronic destructive disease such as tuberculosis, osteomyelitis, etc., and producing depositions in parenchymal organs (kidney, spleen, liver, etc.). **senile a.**, amyloidosis of the elderly, most frequently affecting the heart.

amylolysis (am'i-lo-l'i-sis) [*amyl-* + Gr. *lysis* solution] the digestion and disintegration of starch, or its conversion into sugar; called also *amlohydrolysis*.

amylolytic (am'i-lo-lit'ik) pertaining to, characterized by, or promoting amylolysis.

amylopectin (am'i-lo-pek'tin) the insoluble constituent of starch; it stains violet red with iodine and forms a paste with hot water. The soluble constituent of starch is amylose. Called also *alpha-amylose*, *amyl*, *insoluble* or *tegumentary amidine*, and *starch cellulose*.

amylopectinosis (am'i-lo-pek'ti-no'sis) glycogen storage disease, type IV; see under *disease*.

amylophagia (am'i-lo-fa'je-ah) [*amyl-* + Gr. *phagein* to eat + *-ia*] starch eating; an abnormal craving for starch.

amyloplast (ah-mil'o-plast') [*amyl-* + Gr. *plassein* to form] a starch-forming vegetable leukoplastid.

amyloplastic (am'i-lo-plas'tik) forming starch.

amyl (am'i-lop'sin) [*amyl-* + *trypsin*] α -amylase occurring in the pancreas.

amylorrhea (am'i-lo-re'ah) [*amyl-* + Gr. *rhoia* flow] the presence of an abnormal amount of starch in the stools.

amylorrhesis (am'i-lo-rek'sis) [*amyl-* + Gr. *rhēsis* a breaking] the enzymatic hydrolysis of starch.

amylose (am'i-lōs) 1. any carbohydrate of the starch group; a polysaccharide. 2. the soluble constituent of starch; it stains blue with iodine and does not form a paste with hot water. The other constituent is amylopectin. Called also *amidin*, *amylcellulose*, *amyl*, and *granulose*. **alpha-a.** amylopectin. **crystalline a's**, crystalline compounds, produced by the growth of *Bacillus macerans* in a solution of starch or glycogen; the degree of polymerization may vary from 4 to 8 residues.

amylosis (am'i-lo'sis) amyloidosis.

amyluria (am'i-lo-su're-ah) the presence of amylose in the urine.

amyl (am'i-lo-sin'the-sis) the synthesis of starch from sugar.

Amylsine Hydrochloride (am'il-sin hi'dro-klo'rid) trade-mark for a preparation of naepaine.

amylum (am'i-lum) [L.; Gr. *amylon*] starch. **a. ioda'tum**, iodized starch.

amyluria (am'i-lu're-ah) [*amyl-* + Gr. *ouron* urine + *-ia*] an excess of starch in the urine.

amyoesthesia (ah-mi'o-es-the'sis) [*a* neg. + Gr. *mys* muscle + *aisthēsis* sensation] the lack of muscle sense.

amyoplasia (ah-mi'o-pla'ze-ah) [*a* neg. + Gr. *mys* muscle + *plassein* to form] lack of muscle formation. **a. congenita**, a generalized lack of muscular development and growth, with contracture and deformity at most of the joints; called *congenital multiple arthrogryposis* and *arthrogryposis multiplex congenita*.

amyostasia (ah-mi'o-sta'ze-ah) [*a* neg. + Gr. *mys* muscle + *stasis* a standing still] a tremor of the muscles, seen especially in locomotor ataxia.

amyostatic (ah-mi'o-stat'ik) marked by amyostasia or muscular tremors.

amyosthenia (ah-mi'os-the'ne-ah) [*a* neg. + Gr. *mys* muscle + *sthenos* strength] deficient muscular power, especially a feeling of weakness in the arms and legs, often seen in hysteria.

amyosthenic (ah-mi'os-then'ik) pertaining to, characterized by, or causing amyosthenia.

amyoataxia (ah-mi'o-tak'se-ah) ataxia.

amyoataxy (ah-mi'o-tak'se) [*a* neg. + Gr. *mys* muscle + *tassein* to arrange] ataxia.

amyotonia (a'mi'o-to'ne-ah; ah-mi'o-to'ne-ah) [*a* neg. + Gr. *mys* muscle + *tonos* tension + *-ia*] atonic condition of the musculature of the body; called also *myatonia* and *myatony*. **a. congenita** (Oppenheim, 1900), a vague term denoting any of several rare congenital diseases of children marked by general hypotonia of the muscles; called also *congenital atonic pseudoparalysis*, *myatonia congenita*, and *Oppenheim's disease*.

amyotroph (ah-mi'o-tro'fe-ah) [*a* neg. + Gr. *mys* muscle + *trophē* nourishment + *-ia*] amyotrophy. **neuralgic a.**, neuralgic amyotrophy. **a. spina'lis progressi'va**, progressive muscular atrophy.

amyotrophic (ah-mi'o-troff'ik) pertaining to or characterized by amyotrophy.

amyotrophy (ah'mi-o'tro'fe) atrophy of muscle tissue. **diabetic a.**, progressive weakening and wasting of muscles accompanied by an aching or stabbing pain, usually limited to the muscles of the pelvic girdle and thigh, and associated with diabetes. **neuralgic a.**, a condition characterized by pain across the shoulder and upper arm, with atrophy and paralysis of the muscles of the shoulder girdle.

amyo (am'e-us) [*a* neg. + Gr. *mys* muscle] deficient in muscular tissue.

amylol (am'i-rol) two isomeric principles, C_5H_8O , from sandalwood oil.

Amytal (am'i-tal) trademark for amobarbital.

amyl (ah-mik'se-ah) [*a* neg. + Gr. *myxa* mucus + *-ia*] absence of mucus.

amyxorrhea (ah-mik/'so-re/ah) [*a neg.* + Gr. *myxamucus* + *rhoia* flow] absence of mucus secretion. **a. gas'trica**, deficiency of mucus in the gastric secretion.

An chemical symbol for *actinon*.

An. 'anode; anodal; anisometropia.

an- 1. see *a* (def. 1). 2. see *ana-*.

A.N.A. American Nurses' Association; American Neurological Association.

ana (an/'ah) [Gr.] so much of each; usually written *āa*.

ana-, an- (an/'ah, an) [Gr. *ana* up, back, again] a prefix indicating upward, backward, excessive, or again.

anabesine (ah-nab/'ah-sin) an alkaloid, $C_5H_4N \cdot C_5H_{10}N$, from the plant, *Anabasis aphylla*, which closely resembles nicotine; it is used as an insecticide.

anabasis (ah-nab/'ah-sis) [Gr. "ascent"] the stage of increase in a disease.

anabatic (an/'ah-bat/'ik) [Gr. *anabatikos*] 1. increasing or growing more intense. 2. pertaining to or characterized by anabasis.

Anabena (ah-nab/'ē-nah) a genus of blue-green algae which sometimes impart an objectionable odor to a water supply.

anabiosis (an/'ah-bi-o/'sis) [Gr. *anabiōsis* a reviving] restoration of vital processes after their apparent cessation.

anabiotic (an/'ah-bi-ot/'ik) apparently lifeless, but still capable of living.

anabolergy (an/'ah-bol'er-je) [Gr. *anabolē* a throwing up + *ergon* work] energy expended in anabolism or in anabolic processes.

anabolic (an/'ah-bol/'ik) [Gr. *anabolikos*] pertaining to or promoting anabolism.

anabolin (ah-nab/'o-lin) anabolite.

anabolism (ah-nab/'o-lizm") [Gr. *anabolē* a throwing up] any constructive process by which simple substances are converted by living cells into more complex compounds, especially into living matter.

anabolistic (ah-nab/'o-lis/'tik) pertaining to anabolism.

anabolite (ah-nab/'o-lit") any product of anabolism or of a constructive metabolic process.

anacamptic (an/'ah-kamp/'tik) pertaining to reflection, as of sound or light.

anacamptometer (an/'ah-kamp-tom/'ē-ter) [Gr. *anakampsis* reflection + *metron* measure] an instrument for measuring the reflexes (Duprat, 1886).

Anacardium (an/'ah-kar'de-um) [L.; *ana-* + Gr. *kardia* heart] a genus of tropical trees with a poisonous juice. *A. occidentale*, the cashew tree, affords the cashew nut and a useful gum, as well as anacardic acid.

anacardol (an/'ah-kar'dol) a constituent, 3-pentadecadienylphenol, $C_{15}H_{27} \cdot C_6H_4OH$, of cashew nut shell liquid; it causes reactions in persons sensitive to poison ivy.

anacatadidymus (an/'ah-kat/'ah-did/'i-mus) anakatadidymus.

anacatesthesia (an/'ah-kat/'es-the/'ze-ah) anakatesthesia.

anachoresis (an/'ah-ko-re/'sis) [Gr. *anachōrēsis* a retreating] the preferential collection or deposits of particles at a certain site, as of bacteria or of metals which have localized out of the blood stream in areas of inflammation; called also *anachoretic effect*.

anachoretic (an/'ah-ko-ret/'ik) pertaining to, characterized by, or resulting from anachoresis.

anachoric (an/'ah-ko/'rik) anachoretic.

anachronobiology (an/'ah-kron/'o-bi-ol/'o-je) a term suggested to denote the study of the constructive effects (growth, development, and maturation) of time on a living system. Cf. *catachronobiology*.

anacidity (an/'ah-sid/'i-te) [*a neg.* + *acidity*] lack of normal acidity. **gastric a.**, achlorhydria.

anacrasimeter (an/'ah-klah-sim/'ē-ter) [Gr. *anaklasis* reflection + *metron* measure] an instrument for measuring eye refraction.

anacrlasis (ah-nak/'lah-sis) [Gr. *anaklasis* reflection] 1. reflection or refraction of light. 2. reflex action. 3. refracture. 4. forcible flexion of a limb; the breaking up of an ankylosis.

anacrlisis (an/'ah-klis/'sis) the state of being anacrlitic.

anacrlitic (an/'ah-klit/'ik) [*ana-* + Gr. *klinein* to lean] leaning against or depending on something; in psychoanalysis, the development of the infant's love for his mother from his original dependence on her for care.

anacmesis (an-ak/'me-sis) anakmesis.

anacobra (an/'ah-ko/'brah) cobra venom treated with formaldehyde and heat.

anacousia (an/'ah-ku/'ze-ah) anakusis.

anacrotic (an/'ah-krot/'ik) pertaining to or characterized by anacrotism.

anacrotism (ah-nak/'ro-tizm) [*ana-* + Gr. *krotos* beat + *-ism*] an anomaly of the pulse evidenced by the presence of a prominent notch on the ascending limb of the pulse tracing.

anacusis (an/'ah-ku/'sis) anakusis.

anadenia (an/'ah-de/'ne-ah) [*a neg.* + Gr. *adēn* gland + *-ia*]

(obs.) 1. absence of glands. 2. insufficiency of glandular function. **a. ventric'uli**, absence or destruction of the glands of the stomach.

anadidymus (an/'ah-did/'i-mus) [*ana-* + Gr. *didymos* twin] a twin monster, divided below but single toward the cephalic pole (monstra duplicia anadidyma—Förster); called also *duplicitas inferior* and *duplicitas posterior*.

anadipsia (an/'ah-dip/'se-ah) [*ana-* + Gr. *dipsa* thirst + *-ia*] intense thirst.

anadrenalism (an/'ah-dre/'nal-izm) absence or failure of adrenal functioning.

anadrenia (an/'ah-dre/'ne-ah) anadrenalism.

Anadrol (an/'ah-drol) trademark for a preparation of oxymetholone.

anaerose (an-a/'er-ās") [*a neg.* + Gr. *aēr* air + *-ase*] a hypothetical substance once believed to be the respiratory enzyme of anaerobic bacteria; cf. *aerose*.

anaerobe (an-a/'er-ōb) [*a neg.* + Gr. *aēr* air + *bios* life] a microorganism that lives and grows in the complete, or almost complete, absence of molecular oxygen. **facultative a's**, microorganisms which are able to grow under either anaerobic or aerobic conditions. **obligate a's**, microorganisms that can grow only in the complete absence of molecular oxygen; some are killed by oxygen. **spore-forming a.**, *Clostridium*.

anaerobia (an/'a-er-o/'be-ah) plural of anaerobion.

anaerobian (an/'a-er-o/'be-an) (obs.) 1. living without air. 2. an anaerobe.

anaerobiase (an-a/'er-o-bi/'ās) a hypothetical substance from *Clostridium welchii* and other anaerobes which was thought to be fully active under anaerobic conditions.

anaerobic (an/'a-er-o/'bik) 1. lacking molecular oxygen. 2. growing in the absence of molecular oxygen.

anaerobion (an/'a-er-o/'be-on), pl. *anaerob'ia*. Former term for anaerobe.

anaerobiosis (an-a/'er-o-bi-o/'sis) [*a neg.* + Gr. *aēr* air + *biosis* way of life] life only in the absence of molecular oxygen; called also *anoxymbiosis*.

anaerobiotic (an-a/'er-o-bi-ot/'ik) (obs.) anaerobic.

anaerobism (an-a/'er-o-bizm") (obs.) the ability to live without oxygen.

anaerogenic (an-a/'er-o-jen/'ik) [*a neg.* + Gr. *aēr* air + *gennan* to produce] 1. producing little or no gas. 2. suppressing the formation of gas by the gas-producing bacteria.

anaeroplasty (an-a/'er-o-plas/'te) [*a neg.* + Gr. *aēr* air + *plassein* to form] exclusion of the air from wounds, as by applying water.

anaerosis (an/'a-er-o/'sis) [*a neg.* + Gr. *aēr* air + *-osis*] interruption of the respiratory function, especially in the newborn.

anagen (an/'ah-jen) the phase of the hair cycle during which synthesis of hair takes place.

anagenesis (an/'ah-jen/'ē-sis) [*ana-* + Gr. *genesis* production] (obs.) reproduction or regeneration of tissue.

anagenetic (an/'ah-jē-net/'ik) pertaining to or producing anagenesis.

anagnosasthenia (an-ag/'nōs-as-the/'ne-ah) [Gr. *anagnōsis* reading + *asthenia*] (obs.) neurasthenia with distress at any attempt to read.

Anagnostakis' operation (ah-nag/'nos-ta/'kis) [Andreas Anagnostakis, Greek ophthalmologist, 1826-1897] see under *operation*.

anagocytic (an-ag/'o-si/'tik) retarding or inhibiting the growth of cells.

anagoge (an/'ah-go/'je) anagogy.

anagogic (an/'ah-go/'ik) [*ana-* + Gr. *agogē* leading] pertaining to the moral, uplifting, progressive strivings of the unconscious.

anagogy (an/'ah-go/'je) psychic material that has an idealistic quality.

anagotoxic (an-ag/'o-tok/'sik) acting antagonistically to toxin; counteracting toxic action.

anahormone (an/'ah-hor/'mōn) a substance capable of inducing antibody formation and of suppressing the secretion of protein hormones.

anakatadidymus (an/'ah-kat/'ah-did/'i-mus) [*ana-* + Gr. *kata* down + *didymos* twin] a twin monster separate above and below, but united in the middle (monstra duplicia anakatadidyma—Förster).

anakatesthesia (an/'ah-kat/'es-the/'ze-ah) [*ana-* + Gr. *kata* down + *aisthēsis* perception + *-ia*] a hovering feeling or sensation.

anakhre (an-ak/'er) goundou.

anakmesis (an-ak/'me-sis) [*a neg.* + Gr. *akmēnos* full grown] arrest of maturation; specifically, increase of early granular cells (stem cells) in the marrow with lack of further maturation, as observed in the marrow in agranulocytosis.

anakusis (an/'ah-koo/'sis) [*a neg.* + Gr. *akouein* to hear] total deafness.

anal (a'nal) [L. *analís*] pertaining to the anus.

albuminemia (an'al-bu'mí-ne'me-ah) a state characterized by deficiency or absence of albumins in the blood serum.

analeptic (an'ah-lep'tik) [Gr. *analepsis* a repairing] a drug which acts as a restorative, such as caffeine, amphetamine, pentylenetetrazol, etc.

analgesia (an'al-je'ze-ah) [an neg. + Gr. *algēsis* pain + *-ia*] absence of sensibility to pain; absence of pain on noxious stimulation; designating particularly the relief of pain without loss of consciousness; called also *algaesthesia*. **a. al'gera**, spontaneous pain in a denervated part; pain in an area or region which is anesthetic; called also *a. dolorosa*. **audio a.**, audioanalgesia. **continuous caudal a.**, the relief of the pain of labor and childbirth by the continuous bathing of the sacral and lumbar plexuses within the epidural space by the injection of an anesthetic solution. This method is used also in general surgery to block the pain pathways below the navel. Called also *continuous caudal anesthesia*. **a. dolorosa**, *a. algera*. **epidural a.**, analgesia induced by introduction of the analgesic agent into the epidural space of the vertebral canal. **infiltration a.**, paralysis of the nerve endings at the site of operation by subcutaneous injection of an anesthetic. **narcolocal a.**, local analgesia preceded by premedication. **paretic a.**, loss of the sense of pain accompanied by partial paralysis. **permeation a.**, surface **a. relative a.**, in dental anesthesia, a maintained level of consciousness-sedation, short of general anesthesia, in which the pain threshold is elevated, usually induced in inhalation of nitrous oxide and oxygen. **surface a.**, local analgesia produced by an anesthetic applied to the surface of such mucous membranes as those of the eye, nose, throat, larynx, and urethra; called also *permeation a.*

analgesic (an'al-je'zik) 1. relieving pain. 2. not sensitive as to pain. 3. an agent that alleviates pain without causing loss of consciousness.

Analgesine (an'al-je'sin) trademark for a preparation of antipyrine.

analgetic (an'al-jet'ik) analgesic.

analgia (an'al-je-ah) [an neg. + Gr. *algos* pain + *-ia*] absence of pain.

analgic (an-al'jik) insensible to pain.

anallergic (an'ah-ler'jik) not allergic; not causing anaphylaxis or hypersensitivity.

analogous (ah-nal'o-gus) [Gr. *analogos* according to a due ratio, conformable, proportionate] resembling or similar in some respects, as in function or appearance, but not in origin or development; cf. *homologous*, def. 1.

analogue (an'ah-log) 1. a part or organ having the same function as another, but of a different evolutionary origin; cf. *homologue* (def. 1). 2. a chemical compound with a structure similar to that of another but differing from it in respect to a certain component; it may have a similar or opposite action metabolically. Cf. *homologue* (def. 2). **base a.**, an analogue of a purine or pyrimidine base, as aminopurine. **homologous a.**, a part that is similar to another in both function and structure. **metabolic a.**, a closely similar compound which tends to replace an essential metabolite. **substrate a.**, a substance with a structure similar to the natural substrate of an enzyme and which, because of this similarity, inhibits the action of the enzyme, as in competitive inhibition.

analogy (ah-nal'o-je) [Gr. *analogia* equality of ratios, proportion] the quality of being analogous; resemblance or similarity in function or appearance, but not in origin or development.

analphalipoproteinemia (an-al'fah-lip'o-pro'te-in-e'me-ah) Tangier disease.

analysand (ah-nal'i-sand) one who is being psychoanalyzed.

analysis (ah-nal'i-sis), pl. *analyses* [ana- + Gr. *lysis* dissolution]

1. separation into component parts or elements; the act of determining the component parts of a substance. 2. psychoanalysis. **activation a.**, a quantitative determination of the presence of certain types of nuclei in a sample by transmuting them into radioactive nuclei and analyzing the emanating radiation. **antigenic a.**, the determination of the components of the antigenic mosaic of a bacterial species. **bite a.**, occlusal **a. blood gas a.**, the determination of oxygen and carbon dioxide concentrations and the pH of the blood by laboratory tests; the following measurements may be made: PO_2 , partial pressure of oxygen in arterial blood; PCO_2 , partial pressure of carbon dioxide in arterial blood; SO_2 , percent saturation of hemoglobin with oxygen in arterial blood; the total CO_2 content of (venous) plasma; and the pH. **bradycinetical a.**, cineradiographic study of motor activity. **cephalometric a.**, a study or analysis of the skeletal and dental relationships used in orthodontic case analysis, as seen in cephalograms. **character a.**, the systematic psychotherapeutic investigation or analysis of the personality traits or defenses of an individual. **chromatographic a.**, chromatography. **colorimetric a.**, analysis by means of the various color tests. **densimetric a.**, analysis by ascertaining the specific gravity of a solution and estimating the amount of matter dissolved. **distributive a.**, psychobiologic treatment by the

directed study and interpretation of the patient's present and past behavior. **Downs' a.**, a series of cephalometric criteria developed by Downs as an aid in orthodontic diagnosis. **ego a.**, the intensive therapeutic study and analysis of the ways in which the ego resolves or attempts to deal with intrapsychic conflicts. **end-group a.**, evaluation of the degree of linearity and branching of polysaccharide by determination of the number of end groups; determination of the amino- and carboxyl-terminal amino acids of a protein permitting an evaluation of the number of peptide chains per molecule as well as the state of purity of the protein. **existential a.**, existential psychoanalysis. **gasometric a.**, the measurement of the different components of a gaseous mixture. **gravimetric a.**, quantitative **a. group a.**, intensive psychotherapeutic analysis in which two or more patients actively participate. **occlusal a.**, a study of the relations of the occlusal surfaces of opposing teeth, and of the relations of the teeth in one jaw to those in the opposite jaw as units; called also *bite a.* **organic a.**, the analysis of animal and vegetable tissues. **polariscopic a.**, analysis by means of the polariscope. **proximate a.**, the determination of the simpler constituents of a substance. **qualitative a.**, **qualitive a.**, the determination of the nature of the constituents of a compound or a mixture of compounds. **quantitative a.**, **quantitive a.**, the determination of the proportionate quantities of the constituents of a compound. **radiochemical a.**, direct or indirect identification or determination of the content of specific elements in a substance through measurement of the disintegration rates of radionuclides. **spectroscopic a.**, **spectrum a.**, analysis by means of determining the wave length(s) at which electromagnetic energy is absorbed by a sample. **tetrad a.**, the analysis of crossing over by studying all the tetrads arising from the meiotic divisions of a single primary gametocyte. **transaccional a.**, a type of psychotherapy involving an understanding of the interpersonal interchanges between the components of the personalities of the participants (individuals or members of a group). **ultimate a.**, the determination of the ultimate elements of a compound. **vector a.**, analysis of a moving force to determine both its magnitude and its direction, e.g., analysis of the scalar electrocardiogram to determine the magnitude and direction of the electromotive force for one complete cycle of the heart. **volumetric a.**, quantitative analysis by measuring volumes of liquids.

analyzer (an'ah-li'zor) analyzer.

analyte (an'ah-lit) a substance undergoing analysis.

analytic (an'ah-lit'ik) pertaining to analysis.

analyzer (an'ah-li'zer) 1. a Nicol prism attached to a polarizing apparatus which extinguishes the ray of light polarized by the polarizer. 2. Pavlov's name for a specialized part of the nervous system which controls the reactions of the organism to changing external conditions. 3. a nervous receptor together with its central connections, by means of which sensitivity to stimulations is differentiated. **amino acid a.**, an analytical instrument that separates, identifies, and measures quantities of amino acids and related compounds. **amino acid sequence a.**, an instrument for determining protein components in plasma, useful in blood-lipid evaluation. **blood gas a.**, an instrument for measuring partial pressures of oxygen, carbon dioxide, carbon monoxide, and nitrogen in blood. **breath a.**, an instrument for determining the volume and composition of respired gases; some types are specifically designed for detecting alcohol in the breath. **image a.**, an instrument that counts, measures and classifies cells and images viewed on microscopes, photographs, transparencies, etc. **oxygen gas a.**, an instrument for measuring the oxygen content of a gaseous mixture, or dissolved oxygen in a liquid, or saturation of blood hemoglobin with O_2 or partial pressure of O_2 in blood. **voice a.**, an electronic instrument for printing out waveforms corresponding to vocal characteristics, as an aid in identifying voice and speech problems or a particular speaker.

Aname (an'ah-me) a genus comprising the venomous "bird spiders" of the family Theraphosidae.

Anamirta cocculus L. Wight & Arn. (Menispermaceae) (an'ah-mer'tah kok'u-lus) a species of East Indian woody vines whose dried berries or fruit, cocculus indicus, yield picrotoxin. Called also *A. paniculata*.

anamirtin (an'ah-mer'tin) an oily glyceride, $C_{19}H_{34}O_{10}$, from the dried berries or fruit of *Anamirta cocculus*.

anamnesis (an'am-ne'sis) [Gr. *anamnēsis* a recalling] 1. the faculty of memory. 2. the collected data concerning a patient, his family, previous environment, and experiences, including any abnormal sensations, moods, or acts observed by the patient himself or by others, with the dates of their appearance and duration, as well as any results of treatment. 3. in immunology, the faculty of immunological memory as exemplified by events in the secondary or anamnestic immune response.

anamnestic (an'am-nes'tik) pertaining to anamnesis. See also under *response*.

Anamniota (an'am-ne-o'tah) [an priv. + Gr. *amnion*] a major group of vertebrates comprising those which develop no amnion, including fishes and amphibians; opposed to Amniota.

anamniote (an-am/'ne-ōt') any animal or group belonging to the Anamniota.

anamniotic (an'am-ne-ōt'ik) [*an* neg. + *amnion*] having no amnion.

anamorphosis (an'ah-mor-'fo'sis) [*ana-* + Gr. *morphē* form] an ascending progression or change of form in the evolution of a group of animals or plants.

anabasia (an-an'ah-ba'se-ah) [*an* neg. + Gr. *anabasis* ascent + *-ia*] (*obs.*) inability to ascend high places.

anabolic (an'an-ah-bol'ik) [*an* neg. + *anabolic*] characterized by absence of anabolism.

anaphylaxis (an-an'ah-fi-lak'sis) antianaphylaxis.

Ananase (an'ah-nās) trademark for a preparation of bromelains.

anastasia (an-an'as-ta'se-ah) [*an* neg. + Gr. *anastasis* a standing up + *-ia*] inability to stand up or to rise from a sitting posture.

anancastic (an'an-kas'tik) [Gr. *anankastos* forced] obsessive-compulsive.

anandia (an-an'de-ah) aphemia.

anandria (an-an'dre-ah) [*an* neg. + Gr. *anēr* man] (*obs.*) the loss of masculinity or virility.

angioid (an-an'je-oid) [*an* neg. + Gr. *angeion* vessel + *eidos* form] seemingly without blood vessels.

anapepsia (an'ah-pep'se-ah) complete absence of pepsin from the stomach secretion.

anaphalantiasis (an-af'ah-lan-ti'ah-sis) [Gr. "forehead-baldness"] absence of the eyebrows. Cf. *madarosis*.

anaphase (an'ah-fāz) [*ana-* + Gr. *phasis* phase] that stage in meiosis and mitosis, following the metaphase, in which the centromeres split and the chromatids lined up on the spindle begin to move apart toward the poles of the spindle to form the daughter chromosomes. See also *meiosis* and *mitosis*. **flabby a.**, a mitotic phase in which the gel is disoriented and separation of the doubled chromosomes fails to occur, owing to interference with spindle formation caused by cell poisoning.

anaphia (an-a'fe-ah) [*an* neg. + Gr. *haphē* touch + *-ia*] lack or loss of the sense of touch.

anaphoresis (an'ah-fo-re'sis) 1. the passage of charged particles toward the positive pole (anode) in electrophoresis. 2. (*obs.*) diminution in the activity of the sweat glands.

anaphoria (an'ah-fo're-ah) [*ana-* + Gr. *pherein* to bear + *-ia*] a tendency for the visual axes of both eyes to divert above the horizontal plane.

anaphrodisia (an'af-ro-diz'e-ah) [*an* neg. + Gr. *Aphrodite* Venus + *-ia*] absence or loss of sexual desire; called also *sexual anesthesias*.

anaphrodisiac (an'af-ro-diz'e-ak) 1. repressing sexual desire. 2. a drug or medicine that allays sexual desire.

anaphylactic (an'ah-fi-lak'tik) decreasing immunity instead of increasing it; pertaining to anaphylaxis; possessing anaphylaxis.

anaphylactin (an'ah-fi-lak'tin) the antibody in anaphylaxis; it is formed after the first injection of the foreign protein (antigen) and interacts with it on the second injection. Called also *sensibilisin*. Cf. *anaphylactic antibody*.

anaphylactogen (an'ah-fi-lak'to-jen) a substance which is capable of inducing a condition of anaphylaxis; see also *allergen*, def. 1., *anaphylactic antibody*, under *antibody*, and *sensitizing*.

anaphylactogenesis (an'ah-fi-lak'to-jen'ē-sis) the production of anaphylaxis.

anaphylactogenic (an'ah-fi-lak'to-jen'ik) producing anaphylaxis.

anaphylactoid (an'ah-fi-lak'toid) resembling anaphylaxis.

anaphylactotoxin (an'ah-fi-lak'to-tok'sin) anaphylatoxin.

anaphylatoxin (an'ah-fi-lak'tok'sin) a substance produced in blood serum during complement fixation which serves as a mediator of inflammation by inducing mast cell degranulation and histamine release (thereby indirectly increasing vascular permeability). Its injection into animals results in the development of signs and symptoms consistent with those of systemic anaphylaxis. Anaphylatoxin activity is a property of low-molecular-weight complement fragments C3a and C5a.

anaphylaxin (an'ah-fi-lak'sin) anaphylactin.

anaphylaxis (an'ah-fi-lak'sis) [*ana-* + Gr. *phylaxis* protection] an unusual or exaggerated allergic reaction of an organism to foreign protein or other substances. Use of the term was originally restricted to a condition of sensitization in laboratory animals produced by the injection of foreign matter, such as horse serum, but has since been extended to human reactions. Such an injection renders the individual hypersusceptible to a subsequent injection. This is termed *active a.* Anaphylaxis produced in an animal by injecting the blood serum of a sensitized animal is termed *passive a.* The reaction results from the release of histamine, serotonin, and other vasoactive substances when antigen combines with antibody on cell surfaces. Cf. *allergy* and *hypersensitivity*. Called also *hypersensitization*, *Theobald Smith phenomenon*, *hypersus-*

ceptibility, and *protein sensitization*. **acquired a.**, anaphylaxis in which sensitization is known to have been produced by the administration of a foreign immunogen. **active a.**, the anaphylactic state produced in an individual by the injection of a foreign immunogen; distinguished from passive anaphylaxis. **aggregate a.**, an anaphylactic reaction caused by pharmacological mediators whose release is effected by large amounts of soluble antigen-antibody complexes; it occurs within minutes after antigen is injected. **antiserum a.**, passive anaphylaxis. **cutaneous a.**, **active**, localized anaphylaxis in the form of the wheal and flare reaction on injection of antigen into the skin of a sensitized subject; used as a test for allergy to pollen. **cutaneous a.**, **passive (PCA)**, localized anaphylaxis passively transferred by intradermal injection of an antibody and, after a latent period (about 24 to 72 hours), intravenous injection of the homologous antigen and Evans blue dye. Blueing of the skin at the site of the intradermal injection is evidence of the permeability reaction. Used in studies of antibodies causing immediate hypersensitivity reactions. **cytotoxic a.**, anaphylaxis following the injection of antibodies specific for natural antigenic constituents of the body cell surfaces. **cytotropic a.**, that induced by antigen reacting with antibody that has become fixed to mediator cells (mast cells, basophilic leukocytes) which release mediators of anaphylaxis when reacting with allergens. **heterologous a.**, a passive anaphylaxis induced by the transference of serum from a donor animal of a species different from that of the recipient. **homologous a.**, a passive anaphylaxis induced by the transference of serum from one animal to another of the same species. **indirect a.**, anaphylaxis induced by an animal's own antigen modified in some way. **inverse a.**, 1. anaphylaxis in which the shocking agent is antibody (anaphylactin) rather than antigen (anaphylactogen). 2. anaphylactic shock produced by a single intravenous injection into guinea pigs of Forssman antibody which interacts with Forssman antigen in their tissues. Called also *reverse anaphylaxis*. **local a.**, anaphylaxis confined to a limited area, e.g., cutaneous anaphylaxis. **passive a.**, anaphylaxis occurring in a normal individual as a result of the injection of the serum of a previously sensitized individual; called also *antiserum a.* **reverse a.**, anaphylaxis following the injection of antigen succeeded by the injection of antiserum; also local reactions from the union of circulating antibodies with antigen fixed by tissue cells. **systemic a.**, that in which many tissues are involved, in contrast to local anaphylaxis. Target tissues or organs vary from one species to another, e.g., terminal bronchiole smooth muscle in the guinea pig and portal vascular system in the dog.

anaphylodiagnosis (an'ah-fi'lō-di'ag-no'sis) diagnosis of disease by means of anaphylactic reactions.

anaphylotoxin (an'ah-fi'lō-tok'sin) anaphylatoxin.

anaplasia (an'ah-pla'ze-ah) [Gr. *ana* backward + *plassein* to form] a loss of differentiation of cells (dedifferentiation) and of their orientation to one another and to their axial framework and blood vessels, a characteristic of tumor tissue. **monophasic a.**, reversion of a cell form to embryonic type, as in cancer formation. **polyphasic a.**, change of a cell into a cell of more complex character.

Anaplasma (an'ah-plaz'mah) [Gr. *anaplasma* something formed] a genus of microorganisms of the family Anaplasmataceae (q.v.), including three species, *A. centrale*, *A. marginale* (the causative agent of anaplasmosis), and *A. ovis*.

Anaplasmataceae (an'ah-plaz'mah-ta'se-e) a family of the order Rickettsiales, made up of microorganisms parasitic in red blood cells, in which they appear as spherical granules staining a deep reddish violet; naturally parasitic in ruminants and transmitted by arthropods. It includes a single genus, *Anaplasma*.

anaplasmodastat (an'ah-plaz-mō'dah-stat') any of a group of chemical agents for control of anaplasmosis in animals.

anaplasmosis (an'ah-plaz-mō'sis) a disease of cattle and related ruminants marked by high temperature, anemia, and icterus, and caused by *Anaplasma marginale*, which is transmitted by ticks and other blood-sucking arthropods. Called also *gallsickness*.

anaplastia (an'ah-plas'te-ah) anaplasia.

anaplastic (an'ah-plas'tik) [*ana-* + Gr. *plassein* to form] 1. restoring a lost or absent part. 2. characterized by anaplasia or reversed development; said of cells.

anaplasty (an'ah-plas'te) [*ana-* + Gr. *plassein* to form] (*obs.*) restorative or plastic surgery.

anaplerosis (an'ah-ple-ro'sis) (*obs.*) the repair or replacement of lost or defective parts.

anaplerotic (an'ah-plē-ro'tik) 1. pertaining to anaplerosis. 2. relating to a sequence of enzymatic actions in central metabolic cycles (e.g., the tricarboxylic acid cycle) by which intermediates are produced from catabolic products of a substrate needed for the growth of an organism; the mechanism thus serves to replenish an intermediate depleted during growth.

anapnograph (an-ap'no-graf) [Gr. *anapnoē* respiration + *graphein* to record] (*obs.*) a device once used to register the speed and pressure of the respired air current; replaced by the pneumotachygraph.

anapnometer (an''ap-nom''ē-ter) [Gr. *anapnoē* respiration + *metron* measure] (*obs.*) a spirometer.

anapnotherapy (an''ap-no-ther''ah-pe) [Gr. *anapnein* to inhale + *therapeia* treatment] treatment by inhalation of gas, as in resuscitation.

anapophysis (an''ah-poff''i-sis) [*ana-* + Gr. *apophysis* process of a bone] an accessory vertebral process, especially an accessory process of a thoracic or lumbar vertebra.

anaptic (an-ap''tik) [*an neg.* + Gr. *haphē* touch] marked by anaphia.

anarchic (an-ar''kik) of the nature of anarchy; against rule; different from the usual.

anaric (ah-na''rik) [*a neg.* + L. *naris* nose] having no nose.

anarithmia (an''ah-rith''me-ah) [*an neg.* + Gr. *arithmos* number] inability to count, due to a central lesion.

anarrhexis (an''ah-rek''sis) [*ana-* + Gr. *rhēxis* fracture] the operation of refracturing a bone.

anarthria (an-ar''thre-ah) [*an neg.* + Gr. *arthron* to articulate + *-ia*] severe dysarthria resulting in speechlessness. **a. litera'**lis, stuttering.

anasarca (an''ah-sar''kah) [*ana-* + Gr. *sarx* flesh] generalized massive edema.

anasarcous (an''ah-sar''kus) affected with or of the nature of anasarca.

anascitic (an''ah-sit''ik) without ascites.

anastalsis (an''ah-stal''sis) [*ana-* + Gr. *stalsis* contraction] reversed peristalsis.

anastaltic (an''ah-stal''tik) [Gr. *anastaltikos* contracting] 1. astrigent 2. a styptic medicine.

anastate (an''ah-stāt'') [Gr. *anastatos* raised up] an anabolite.

anastigmatic (an''ah-stig-mat''ik) not astigmatic; corrected for astigmatism.

anastole (ah-nas''to-le) [Gr. *anastolē*] retraction, as of the edges of a wound.

anastomose (ah-nas''to-mōs) 1. to communicate with one another by anastomosis, as arteries and veins. 2. to create a communication between two formerly separate structures.

anastomosis (ah-nas''to-mo''sis), pl. *anastomoses* [Gr. *anastomōsis* opening, outlet] 1. a communication between two vessels by collateral channels. 2. an opening created by surgical, traumatic, or pathological means between two normally distinct spaces or organs. **antiperistaltic a.**, enterostomy in which the in-

Methods of intestinal anastomosis (Babcock).

testinal segments are so joined that the directions of the peristaltic waves in the two conjoined portions are opposed. See illustration.

a. arterioveno'sa [NA], a vessel that directly interconnects an artery and a vein and that acts as a shunt to bypass the capillary bed. **arteriovenous a.**, 1. anastomosis arteriovenosa [NA]. 2. a communication surgically created between an artery and a vein. **Braun's a.**, formation of an anastomosis between the afferent and efferent intestinal loops just distal to a gastroenteric stoma to prevent vicious cycling of gastric and duodenal contents. **Clado's a.**, the anastomosis between the appendicular and ovarian arteries in the appendiculo-ovarian ligament. **crucial a.**, an arterial anastomosis in the proximal part of the thigh, formed by the anastomotic branch of the sciatic, the internal circumflex, the first perforating, and the transverse portion of the external circumflex. **Galen's a.**, the anastomosis between the superior and inferior laryngeal nerves; called also *Galen's nerve*. **heterocladic a.**, an anastomosis between branches of different arteries. **homocladic a.**, an anastomosis between branches of the same artery. **Hyrtl's a.**, see *Hyrtl's loop*, under *loop*. **ileo-rectal a.**, surgical anastomosis of the ileum and rectum after total colectomy, as is sometimes done in ulcerative colitis. **in-**

testinal a., the establishment of a communication between two portions of the intestinal tract; see illustration. **isoperistaltic a.**, enterostomy in which the intestinal segments are so joined that the peristaltic waves in the two conjoined portions progress in the same direction; see illustration. **Jacobson's a.** (*obs.*), the anastomosing part of the tympanic plexus. **portosystemic a.**, anastomosis between the portal and systemic venous circulation. **postcostal a.**, a longitudinal linkage of the seven highest intersegmental arteries in the embryo that gives rise to the vertebral artery. **precapillary a.**, anastomosis between small arteries just before they become capillaries. **precostal a.**, a longitudinal anastomosis of intersegmental arteries in the embryo that gives rise to the thyrocervical and costocervical trunks. **pyeloileocutaneous a.**, direct connection of the renal pelvis to an isolated loop of the ileum, which is then anchored to the abdominal wall at the stoma, to drain exteriorly. **a. of Rioloan**, anastomosis of the superior and inferior mesenteric arteries. **Roux-en-Y a.**, any Y-shaped anastomosis in which the small intestine is included. **stirrup a.**, an arterial branch joining the dorsalis pedis with the external plantar artery. **Sucquet-Hoyer a.**, regulatory connections between small peripheral arteries and veins, especially in the hands and feet; called also *Sucquet-Hoyer canal*. **terminoterminal a.**, surgical anastomosis between the peripheral end of an artery and the central end of the corresponding vein and between the central end of the artery and the terminal end of the vein. **transureteroureteral a.**, the operation of transplanting one ureter into the ureter on the opposite side. **ureteroileocutaneous a.**, connection of the transected ureter to an isolated loop of the ileum, which is then anchored to the abdominal wall at the stoma, to drain exteriorly. **ureterotubal a.**, an anastomosis between the ureter and fallopian tube. **ureteroureteral a.**, the operation of joining portions of the same ureter.

anastomotic (ah-nas''to-mot''ik) pertaining to or of the nature of an anastomosis.

anastral (an-as''tral) [*an neg.* + Gr. *astēr* star] lacking, or pertaining to the lack of, an aster; used in reference to a mitotic figure.

anastrophic (an''ah-strof''ik) [Gr. *anastrophē* a turning back, reversal] capable of being inactivated and then reactivated; said of certain proteinases.

anat. anatomy; anatomical.

anatherapeusis (an''ah-ther''ah-pu''sis) [Gr. *ana* upward + *therapeusis*] treatment by increasing doses.

anatomic (an''ah-tom''ik) anatomical.

anatomical (an''ah-tom''i-kal) pertaining to anatomy, or to the structure of the organism.

anatomicomedical (an-ah-tom''e-ko-med''i-kal) pertaining to anatomy and medicine or to medical anatomy.

anatomicopathological (an''ah-tom''e-ko-path''o-loj''i-kal) pertaining to pathological anatomy.

anatomicophysiological (an-ah-tom''e-ko-fiz''e-o-loj''i-kal) pertaining to anatomy and physiology.

anatomicosurgical (an-ah-tom''e-ko-ser''ji-kal) pertaining to anatomy and surgery.

anatomist (ah-nat''o-mist) a person skilled or learned in anatomy; a specialist in the field of anatomy.

anatomist's snuff-box the hollow at the back of the hand and the base of the thumb, between the tendons of the extensor pollicis longus and extensor pollicis brevis muscles.

anatomopathology (an''ah-to-mo-pah-thol''o-je) the anatomical aspects of pathology.

anatomy (ah-nat''o-me) [*ana-* + Gr. *temnein* to cut] 1. the science of the structure of the animal body and the relation of its parts; it is largely based on dissection, from which it obtains its name. 2. dissection of an organized body. **applied a.**, anatomy as applied to diagnosis and treatment. **artificial a.**, the study of anatomical structure by use of models or other artificial means. **artistic a.**, the study of anatomy as applied to painting and sculpture. **clastic a.**, anatomy studied by the aid of models in which various layers can be removed to show the position of organs and parts underneath. **comparative a.**, a comparison of the structure of different animals and plants, one with another. **corrosion a.**, anatomy studied by means of corrosive agents that remove the tissues not intended to be observed. **dental a.**, the study of the structure of the teeth and their correlated parts. **descriptive a.**, the study or description of individual parts of the body; called also *systematic a.* **developmental a.**, the field of embryology concerned with the changes that cells, tissues, organs, and the body as a whole undergo from a germ cell of each parent to the resulting, adult offspring. **general a.**, the study of the structure and composition of the body, and its tissues and fluids in general. **gross a.**, that which deals with structures that can be distinguished with the naked eye; called also *macroscopic a.* **histologic a.**, histology. **homologic a.**, the study of the correlated parts of the body in different animals. **macroscopic a.**, gross a. **medical a.**, anatomy concerned with the study of points connected with the diagnosis and situation of internal diseases. **microscopic a.**, minute a., histology. **morbid a.**, pathologi-

cal a., the anatomy of diseased tissues. **physiognomonic a.**, the study of the external expression of the body surface, especially of the face. **physiological a.**, the study of the organs with respect to their normal functions. **plastic a.**, the study of anatomy by the aid of models and manikins, especially those that can be taken apart. **practical a.**, anatomy studied by means of demonstration and dissection. **radiological a.**, the study of the anatomy of organs and tissues based on their visualization on x-ray films. **regional a.**, the study of limited portions or regions of the body, and the relationships of their parts. **special a.**, the study of particular organs or parts. **surface a.**, the study of the form and markings of the surface of the body, especially in relation to deeper parts. **surgical a.**, the study of limited portions or regions of the body, with a view to the diagnosis and treatment of surgical conditions. **systematic a.**, descriptive a. **topographic a.**, the study of parts in their relation to surrounding parts. **transcendental a.**, the study of the general design and morphology of the body and the analogies and homologies of its parts. **veterinary a.**, the anatomy of domestic animals. **x-ray a.**, radiological a.

anatomism (an-nat'o-pizm) [*ana-* + Gr. *topos* place + *-ism*] (*obs.*) a mental condition in which the patient fails to conform to the customs of the social group to which he belongs; called also *ectopism*.

anatoxic (an'ah-tok'sik) pertaining to anatoxin.

anatoxin (an'ah-tok'sin) [*ana-* + *toxin*] toxoid. **diphtheria a.**, **a-Ramon**, diphtheria toxoid.

anatoxireaction (an'ah-tok'se-re-ak'shun) Moloney's test; see under *tests*.

anatripsis (an'ah-trip'sis) [Gr. "rubbing"] (*obs.*) therapeutic rubbing or friction massage.

anatriptic (an'ah-trip'tik) [Gr. *anatriptos* rubbed up] 1. pertaining to anatripsis. 2. a medication applied by rubbing.

anatrophic (an'ah-trof'ik) 1. correcting or preventing atrophy. 2. a remedy that prevents waste of the tissues.

anatropia (an'ah-tro'pe-ah) [*ana-* + Gr. *trepein* to turn] upward deviation of the visual axis of one eye when the other eye is fixing.

anatropic (an'ah-trop'ik) pertaining to anatropia; deviating upward.

anavenin (an'ah-ven'in) a venom which has become inactivated by the addition of formaldehyde but which retains its antigenic properties.

anaxon (an-ak'son) [*an neg.* + Gr. *axōn* axis] a term formerly used to describe a nerve cell which appears to lack an axon.

anazole sodium (an-az'o-lēn) chemical name: 4-[(4-anilino-5-sulfo-1-naphthyl)azo]-5-hydroxy-2,7-naphthalenedisulfonic acid trisodium salt. A reddish black powder, $C_{26}H_{18}N_2Na_3O_{10}S_4$, used as a diagnostic aid in the determination of blood volume and cardiac output; called also *anoxynaphthionate sodium*.

Ancef (an'sef) trademark for a preparation of cefazolin sodium.

ancho (ang-ko'ne) (*obs.*) spasmodic constriction of the throat in hysteria.

anchor (ang'ker) a means by which something is held securely.

anchorage (ang'ker-ij) fixation, such as the surgical fixation of a displaced viscus. In operative dentistry, the fixation of fillings or of artificial crowns or bridges; in orthodontics, the support used for a regulating apparatus, which may be *intramaxillary*, by means of teeth located in the same arch; *intermaxillary*, by means of both maxillary and mandibular teeth; or *extramaxillary* (extraoral), by means of a device that is located outside the mouth. **cervical a.**, anchorage in which the back of the neck is used for resistance through means of a cervical headgear. **extraoral a.**, anchorage in which the resistance unit is outside the oral cavity, as in cranial, occipital, or cervical anchorage. **intraoral a.**, anchorage in which the resistance units are all located within the oral cavity. **multiple a.**, anchorage in which more than one type of resistance unit is utilized. **occipital a.**, anchorage in which the top and back of the head are used for resistance through means of a headgear. **reciprocal a.**, anchorage in which the movement of one or more dental units is balanced against the movement of one or more opposing dental units. Cf. *reciprocal force*. **reinforced a.**, multiple a. **simple a.**, dental anchorage in which the resistance to the movement of one or more dental units comes solely from resistance to the tipping movement of the anchorage unit. **stationary a.**, dental anchorage in which the resistance to the movement of one or more dental units comes from the resistance to bodily movement of the anchorage unit. A questionable concept of anchorage implying that selected teeth remain stable.

anchylo- for words beginning thus, see those beginning *an-kylo-*.

ancillary (an'sil-lār'e) [L. *ancillaris* relating to a maid servant] assisting in the performance of a service or the achievement of a result.

ancipital (an-sip'i-tal) [L. *an'ceps* two headed] having two heads or two eyes.

Ancistrodon (an-sis'tro-don) *Agkistrodon*.

ancistroid (an-sis'troid) [Gr. *ankistron* fishhook + *eidos* form] hook shaped.

Ancobon (an'ko-bon) trademark for a preparation of flucytosine.

anconad (ang'ko-nad) [Gr. *ankōn* elbow + L. *ad* toward] toward the elbow or olecranon.

anconagra (ang'kon-ag'rah) [Gr. *ankōn* elbow + *agra* seizure] gout of the elbow.

anconal (ang'kō-nal) anconeal.

anconeal (ang-ko'ne-al) pertaining to the elbow.

anconitis (ang'ko-ni'tis) inflammation of the elbow joint.

anconoid (ang'ko-noid) resembling the elbow.

ancrod (an'krod) a proteinase obtained from the venom of the Malayan pit viper *Agkistrodon rhodostoma*, acting specifically on fibrinogen; used as an anticoagulant in the treatment of retinal vein occlusion and deep vein thrombosis and to prevent postoperative rethrombosis.

ancylo- for words beginning thus, see also words beginning *an-kylo-*.

Ancylostoma (an'ki-lo'sto-mah, an'si-lo'sto-mah) [Gr. *ankylos* crooked + *stoma* mouth] a genus of nematode parasites of the family Ancylostomidae, the Old World hookworms. **A. americana**, *Necator americanus*. **A. braziliense**, a species found in cats and dogs in the southeastern United States, Brazil, and other tropical countries; its larvae may cause creeping eruption in man. **A. caninum**, the common hookworm of dogs and cats; the larvae of which may cause creeping eruption in man. **A. ceylonicum**, *A. braziliense*. **A. duodenale**, the common European or Old World hookworm, a nematode worm, the male being 10 to 12 mm. ($\frac{3}{8}$ to $\frac{1}{2}$ inch) long and 0.4 mm. ($\frac{1}{60}$ inch) broad, the female somewhat larger; the mature parasites inhabit the small intestine, producing the condition known as ancylostomiasis. Called also *Uncinaria duodenale*.

ancylostomatic (an'ki-lo-sto-mat'ik, an'si-lo-sto-mat'ik) caused by *Ancylostoma*.

ancylostome (an-kil'o-stōm, an-sil'o-stōm) 1. an individual of the genus *Ancylostoma*. 2. an individual of the family Ancylostomidae; a hookworm.

ancylostomiasis (an'ki-lo's-to-mi'ah-sis, an'si-lo's-to-mi'ah-sis) hookworm disease; see under *disease*. **a. braziliense**, larva migrans.

Ancylostomidae (an'ki-lo-sto'mī-de, an'si-lo-sto'mī-de) a family of phasmid nematodes of the superfamily Strongyloidea, comprising all the hookworms, including the genera *Ancylostoma*, *Bunostomum*, *Necator*, and *Uncinaria*.

Ancylostomum (an'ki-lo's-to'mum, an'si-lo's-to'mum) *Ancylostoma*.

ancyroid (an'si-roid) [Gr. *ankyra* anchor + *eidos* form] shaped like an anchor or hook.

Anda (an'dah) [Brazilian] a genus of euphorbiaceous trees. *A. as'su* and *A. gome'sii*, of Brazil, afford purgative oils.

Andernach's ossicles (ahn'der-nahks) [Johann Winther von Andernach, German physician, 1487-1574] ossa suturarum.

Anders' disease (an'ders) [James Meschter Anders, Philadelphia physician, 1854-1936] adiposis tuberosa simplex.

Andersch's ganglion, nerve (an'dersh-ez) [Carolus Samuel Andersch, German anatomist of the 18th Century] see *ganglion inferius nervi glossopharyngei* and *nervus tympanicus*.

Andersen's disease, syndrome (triad) (an'der-sonz) [Dorothy Hansine Andersen, New York pathologist, born 1901] see under *disease* and *syndrome*.

Anderson splint (an'der-son) [Roger Anderson, Seattle orthopedic surgeon, born 1891] see under *splint*.

Anderson-Goldberger test (an'der-son-göld'ber-ger) [John F. Anderson, American Physician, born 1873; Joseph Gow'berger, American physician, 1874-1929] see under *tests*.

Andira (an-di'rah) a genus of tropical leguminous trees. Goa powder (q.v.) and chrysarobin (q.v.) are derived from *A. araro'ba*, of Brazil. Many species afford poisons, and several are anthelmintic.

andirine (an-di'rin) surinamine.

andr- see *andro-*.

Andrade's indicator (an-drah'dēz) [Eduardo Penny Andrade, American bacteriologist, 1872-1906] see under *indicator*.

Andral's decubitus (sign) (an-dralz') [Gabriel Andral, French physician, 1797-1876] see under *decubitus*.

andreïoma (an'dre-o'mah) [*andr-* + *-oma*] arrhenoblastoma.

andreoblastoma (an'dre-o-blas-to'mah) arrhenoblastoma.

Andrewes' test (an'drōōz) [Sir Christopher Howard Andrewes, British physician, born 1896] see under *tests*.

Andrews' disease [George Clinton Andrews, New York dermatologist, born 1891] pustular bacterid.

andriatics, andriatry (an'dre-at'riks; an-dri'ah-tre) [Gr. *anēr* man + *iatrikos* healing] (*obs.*) that branch of medicine which deals with diseases of men and their treatment.

andrin (an'drin) [Gr. *anēr* man] a general term for the androgens of the testis, namely testosterone, androsterone, and dehydroandrosterone.

andro-, andr- (an'dro) [Gr. *anēr*, *andros* man] a combining form denoting relationship to man or to the male.

androblastoma (an'dro-blas-to'mah) 1. a rare, benign tumor of the testis that histologically resembles the fetal testis; there are three varieties: diffuse stromal, mixed (stromal and epithelial), and tubular (epithelial). The epithelial elements contain Sertoli cells, which may produce estrogen and thus cause feminization. Called also *Sertoli cell tumor*. 2. arrhenoblastoma.

androcye (an'dro-sīt) [*andro-* + Gr. *kytos* hollow vessel] male sex cell, especially an immature stage.

androdotoxin (an'dro-de'do-tok'sin) a poisonous principle from the leaves of rhododendrons.

androecium (an'dro-e'she-um) stamen.

androgalactozemia (an'dro-gah-lak'to-ze'me-ah) [*andro-* + Gr. *gala* milk + *zēmia* loss] the secretion or escape of milk from the male breast.

androgamone (an'dro-gam'ōn) a gamone released by spermatzoa.

androgen (an'dro-jen) [*andro-* + Gr. *gennan* to produce] any substance that possesses masculinizing activities, such as the testicular hormone; see *androsterone* and *testosterone*.

androgenesis (an'dro-jen'ē-sis) [*andro-* + Gr. *genesis* production] development of an egg which contains only paternal chromosomes.

androgenic (an'dro-jen'ik) producing masculine characteristics.

androgenicity (an'dro-jē-nis'ī-te) the quality of exerting a masculinizing effect.

androgenization (an'dro-jen-ī-za'shun) the state of producing an excess of androgens in the female.

androgenized (an-droj'ē-nizd) subjected to the production or presence of an excess of androgen in the female.

androgenous (an-droj'ē-nus) [*andro-* + Gr. *gennan* to beget] pertaining or tending to the production of male rather than female offspring.

androglossia (an'dro-glos'e-ah) [*andro-* + Gr. *glōssa* tongue] a quality of maleness in a woman's voice.

androgone (an'dro-gōn) [*andro-* + Gr. *gonos* seed] a spermatogenic cell.

androgynē (an'dro-jīn) a female pseudohermaphrodite.

androgynēity (an'dro-jī-ne'ī-te) female pseudohermaphroditism.

androgynism (an-droj'ī-nizm) female pseudohermaphroditism.

androgynoid (an-droj'ī-noid) 1. a pseudohermaphrodite. 2. pertaining to female pseudohermaphroditism.

androgynous (an-droj'ī-nus) pertaining to or characterized by female pseudohermaphroditism.

androgynus (an-droj'ī-nus) [*andro-* + Gr. *gynē* woman] a female pseudohermaphrodite.

androgyny (an-droj'ī-ne) female pseudohermaphroditism.

android (an'droid) [*andro-* + Gr. *eidōs* shape] resembling a man; manlike.

androidal (an-droi'dal) android.

androkinin (an'dro-kin'in) [*andro-* + Gr. *kinein* to move] a general term for androgenic substances; no longer in good usage.

andrology (an-drol'o-je) [*andro-* + *-logy*] scientific study of the masculine constitution and of the diseases of the male sex; especially the study of diseases of the male organs of generation. Cf. *andriatrics*.

androma (an-dro'mah) [*andr-* + *-oma*] arrhenoblastoma.

Andromachus (an-drom'ah-kus) (1st century A.D.) known as Andromachus the Elder, of Crete, he was body physician to the Emperor Nero and supposedly the originator of a famous universal remedy, *theriaca andromachi*.

andromania (an'dro-ma'ne-ah) [*andro-* + Gr. *mania* madness] (*obs.*) nymphomania.

Andromeda (an-drom'ē-dah) [L.] a genus of ericaceous shrubs and trees, some of which afford a poisonous narcotic principle. *A. maritima*, *A. nitida*, and *A. polifolia* are among the poisonous species.

andromedotoxin (an-drom'ē-do-tok'sin) [*Andromeda* + *toxin*] a poisonous crystalline principle, $C_{22}H_{38}O_7$, from various ericaceous plants, such as *Kalmia latifolia* (mountain laurel) and related species; it is toxic to sheep and other livestock that graze on the plants, causing salivation, nasal discharge, emesis, paralysis, coma, and death.

andromerogon (an'dro-mer'o-gon) [*andro-* + Gr. *meros* part + *gonē* seed] an organism developed from an ovum containing the male pronucleus only, the cells, as a result, containing only the paternal set of chromosomes.

andromerogone (an'dro-mer'o-gon) andromerogon.

andromerogony (an'dro-mē-ro-g'o-ne) [*andro-* + Gr. *meros* a part + *gonos* procreation] development of a portion of an ovum con-

taining the male pronucleus only, the nucleus of the ovum having been removed before fusion of the male and female pronuclei occurred. Cf. *gynomerogony* and *merogony*.

andromimetic (an'dro-mī-met'ik) [*andro-* + Gr. *mimētikos* imitating] producing male characteristics; having a masculinizing effect; simulating the action of androgens.

andromorphous (an'dro-mor'fus) [*andro-* + Gr. *morphē* form] having a masculine appearance.

andropathy (an-drop'ah-the) [*andro-* + Gr. *pathos* disease] any disease peculiar to males.

androphile (an'dro-fil) anthropophilic.

androphilous (an-drof'i-lus) anthropophilic.

androphobia (an'dro-fō-be-ah) [*andro-* + Gr. *phobein* to be frightened by + *-ia*] morbid dislike of the male sex.

Andropogon (an'dro-po'gon) a genus of grasses. *A. sorghum* includes broom corn, kafir corn, and sorghum.

androstane (an'dro-stān) the tetracyclic hydrocarbon nucleus ($C_{19}H_{32}$) from which the androgens are derived.

androstane diol (an'dro-stān'de-ol) an androgen, $C_{19}H_{32}O_2$.

androstane dione (an'dro-stān'de-ōn) an androgen, $C_{19}H_{28}O_2$, (3,17-diketo androstane), formed in the testes.

androstane lone (an'dro-stān'o-lōn) an androgen, $C_{19}H_{30}O_2$, occurring in two isomeric forms; see *androsterone*.

androstene (an'dro-stēn) a cyclic hydrocarbon, $C_{19}H_{30}$, with one double bond; a steroid occurring in two isomeric forms forming the nucleus of testosterone and some other androgens.

androstene diol (an'dro-stēn'de-ol) an androgen, $C_{19}H_{30}O_2$, occurring in two isomeric forms, 3-trans, 17-dihydroxy Δ^5 -androstene and 3-cis, 17-dihydroxy Δ^5 -androstene.

androstene dione (an'dro-stēn'de-ōn) an androgen, $C_{19}H_{28}O_2$, 3,17-diketo Δ^5 -androstene; less potent than testosterone, it is secreted by the testis, adrenal cortex, and ovary.

androsterone (an-dros'ter-ōn) an androgen excreted in the urine of both men and women. It is 3 α -hydroxy-5 α -androstane-17-one, $C_{19}H_{30}O_2$. When injected intramuscularly it counteracts the effects of castration.

androtin (an'dro-tin) a generic term for androgenic substances; no longer in good usage.

-ane a word termination denoting (1) a saturated open-chain hydrocarbon, C_nH_{2n+2} ; (2) an organic compound in which hydrogen has replaced the hydroxyl group.

anecdotal (an'ek-do'tal) [Gr. *anekdotos* not published] based on descriptions of unmatched individual cases rather than on controlled studies.

anecdysis (an-ek'dī-sis) [*an* neg. + Gr. *ekdysis* a way out] a long period during the molting cycle of arthropods when there are no signs of either recovery from a molt or preparations for the next molt.

anechoic (an-ē-ko'ik) without echoes; quiet; said of a chamber for measuring the effects of sound.

anectasin (an-ek'tah-sin) [*an* neg. + Gr. *ektasis* distention] a hypothetical substance once thought to be produced by bacteria and to have an effect on the vasomotor nerves opposite to that of ectasin.

anectasis (an-ek'tah-sis) [*an* neg. + Gr. *ektasis* distention] congenital atelectasis due to developmental immaturity.

Anectine (an-ek'tin) trademark for preparations of succinylcholine chloride.

Anel's operation, probe, syringe [Dominique Anel, French surgeon, 1679-1730] see under *operation, probe, and syringe*.

anelectrotonic (an'e-lek-tro-ton'ik) pertaining to anelectrotonus.

anelectrotonus (an'e-lek-trot'o-nus) [Gr. *ana* up + *electrotonus*] lessened irritability of a nerve in the region of the positive pole or anode during the passage of an electric current.

anemia (ah-ne'me-ah) [Gr. *an* neg. + *haima* blood + *-ia*] a reduction below normal in the number of erythrocytes per cu. mm., in the quantity of hemoglobin, or in the volume of packed red cells per 100 ml. of blood which occurs when the equilibrium between blood loss (through bleeding or destruction) and blood production is disturbed. **achrestic a.**, megaloblastic anemia morphologically resembling pernicious anemia, but with multiple other causes. **achylic a.**, **achylia**, hypochromic a., idiopathic. **acute a.**, a nonspecific term indicating anemia of relatively short duration, as acute hemorrhagic anemia. **acquired sideroachrestic a.**, refractory sideroblastic a. **Addison's a.**, **Addison-Biermer a.**, **addisonian a.** (*obs.*), pernicious a. **anematopoietic a.**, **anhemopoietic a.**, anemia due to defective formation of erythrocytes. **aplastic a.**, a form of anemia generally unresponsive to specific antianemia therapy, often accompanied by granulocytopenia and thrombocytopenia, in which the bone marrow may not necessarily be acellular or hypoplastic but fails to produce adequate numbers of peripheral blood elements. The term actually is all-inclusive and most probably encompasses several clinical syndromes. Called also **aregenerative a.** and **refractory a.** **aregenerative a.**, aplastic a. **aregenerative a.**, **chronic congenital**, hypoplastic a.,

congenital. **Bagdad Spring a.** (*obs.*) a type of hemolytic anemia most probably due to erythrocyte deficiency of glucose-6-phosphate dehydrogenase. **Bartonella a.**, Oroya fever in man; also occurring in a number of animals, e.g., the dog, as well as in the rat, in which the anemia is latent until splenectomy. **Biermer's a.**, **Biermer-Ehrlich a.** (*obs.*), pernicious a. **a. of Blackfan and Diamond** (*obs.*), hypoplastic a., congenital. **cameloid a.**, elliptocytosis. **cattle a.**, a condition caused by infection with *Theileria parva*; East Coast fever. **chlorotic a.**, chlorosis. **congenital hypoplastic a.**, see *hypoplastic a.*, congenital. **congenital a. of newborn**, erythroblastosis fetalis. **congenital nonspherocytic hemolytic a.**, see *hemolytic a.*, congenital nonspherocytic. **Cooley's a.**, see *β -thalassemia*, under *thalassemia*. **cow's milk a.**, anemia in infants due to lack of iron in a cow's milk diet. **cytogenic a.** (*obs.*), progressive pernicious a. **deficiency a.**, anemia caused by a lack of a specific substance required for normal hemoglobin synthesis and erythrocytic maturation arising by several means, such as malabsorption or poor dietary intake; called also *nutritional a.* **dilution a.**, a condition in which the anemia is more apparent than real, being due to an increased plasma volume rather than to a decreased total circulating red cell mass. **dimorphic a.**, a condition characterized by a dual erythrocyte population, as defined by a double peak of the diameter frequency curve, observed when combined deficiencies of vitamin B₁₂ (or analogous substance) and iron exist concurrently in the same patient. It may also occur in persons receiving blood transfusions. **drepanocytic a.** (*obs.*), sickle cell a. **Edelmann's a.** (*obs.*), a type of chronic infectious anemia. **elliptocytary a.**, **elliptocytotic a.**, elliptocytosis. **equine infectious a.**, a viral disease of equines marked by recurring attacks of malaise with abrupt rises of temperature, and spread through the blood by inoculation, especially by blood-sucking insects. Called also *infectious a. of horses*, *Vallee's disease*, and *swamp fever*. **erythroblastic a. of childhood**, erythroblastic a., familial; see *β -thalassemia*, under *thalassemia*. **erythronormoblastic a.** (*obs.*), hypochromic a. **essential a.**, primary a. **familial erythroblastic a.**, see *thalassemia*. **Fanconi's a.**, see under *syndrome* (def. 1). **folic acid deficiency a.**, macrocytic anemia due to deficiency of folic acid. **globe cell a.** (*obs.*), hereditary spherocytosis. **glucose-6-phosphate dehydrogenase deficiency a.**, a genetically determined hemolytic anemia caused by a deficiency of this enzyme in erythrocytes which results in hemolysis of the erythrocyte by drugs of certain groups (such as antimalarials, sulfonamides, nitrofurans, antipyretics and analgesics, and sulfones), fava beans, and other agents. Recent studies imply that this predisposition to hemolysis may be expressed in varying degrees and that other biochemical defects, in addition to that involving glucose-6-phosphate dehydrogenase, may also be present in the erythrocytes. **goat's milk a.**, a macrocytic anemia, observed particularly in Germany and Italy, occurring in infants fed exclusively on goat's milk, associated with a megaloblastic bone marrow, thrombocytopenia, leukopenia, hyperbilirubinemia, and hyperferremia. **ground itch a.**, hookworm disease. **Heinz-body a's.**, a group of hemolytic syndromes of diverse etiology with the common morphologic characteristic of having one or more Heinz bodies within affected erythrocytes. **hemolytic a.**, anemia due to shortened *in vivo* survival of mature red blood cells and inability of the bone marrow to compensate completely for their decreased life span. **hemolytic a., acquired**, that due to causes other than hereditary factors, including infectious agents, poisons, and physical agents, in which there is premature destruction of red blood cells. **hemolytic a., acute**, a condition characterized by sudden destruction of erythrocytes by hemolysis. **hemolytic a., autoimmune**, acquired hemolytic anemia in which serum antibodies, usually of the IgG class, react with erythrocytes and the Coombs test is positive. It occurs in several autoimmune diseases, including systemic lupus erythematosus. The antibodies may be of the cold or warm type. **hemolytic a., congenital**, a general term for anemia, present at birth, in which the lifespan of red blood cells is diminished. **hemolytic a., congenital nonspherocytic**, a heterogeneous group of nonspherocytic hereditary anemias in which shortened red cell survival is associated with erythrocyte membrane defects, multiple intracellular deficiencies, or unstable hemoglobins. **hemolytic a., hereditary nonspherocytic**, a heterogeneous group of congenital hemolytic anemias characterized by absence of spherocytosis, negative antiglobulin tests, and absence of a detectable abnormal hemoglobin. **hemolytic a., infectious**, that due to an incompletely compensated decrease in red blood cell survival secondary to infectious agents, including protozoa (e.g., *Plasmodium* in malaria), bacteria, and certain viruses. **hemolytic a., microangiopathic**, hemolytic anemia due to intravascular fragmentation of red blood cells. **hemolytic a., toxic**, that due to toxic agents, including drugs and animal and vegetable poisons. **hemorrhagic a.**, anemia caused by the sudden and acute loss of blood; called also *acute posthemorrhagic a.* **hookworm a.**, hypochromic microcytic anemia resulting from infection with *Ancylostoma* or *Necator*. **hypochromic a.**, a condition characterized by a disproportionate reduction of red cell hemoglobin and an increased area of central pallor in the red cells. **hypo-**

chromic a., idiopathic, iron deficiency a. **hypochromic microcytic a.**, hypochromic anemia in which the red cells are reduced in size and in hemoglobin content. **a. hypochromic/siderochrestica hereditaria**, a hereditary, chronic, refractory sideroblastic anemia affecting males; called also *hereditary sideroachrestic a.* **hypoferric a.** (*obs.*), iron deficiency a. **hypoplastic a.**, a general term indicating a form of anemia due to varying degrees of erythrocytic hypoplasia without leukopenia or thrombocytopenia. **hypoplastic a., congenital**, 1. a progressive anemia of unknown etiology encountered in the first year of life, unaccompanied by leukopenia and thrombocytopenia, unresponsive to hematinics, and often requiring multiple blood transfusions to sustain life; called also *chronic congenital aregenerative anemia*, *erythrogenesis imperfecta*, and *anemia of Blackfan and Diamond*. 2. Fanconi's syndrome, def. 1. **icterohemolytic a.** (*obs.*), hemolytic anemia with jaundice. **idiopathic a.**, primary a. **infectious a. of horses**, equine infectious a. **intertropical a.**, hookworm disease. **iron deficiency a.**, anemia characterized by low or absent iron stores, low serum iron concentration, low transferrin saturation, elevated transferrin, low serum ferritin, low hemoglobin concentration or hematocrit, and hypochromic microcytic red blood cells. Symptoms may include pallor, angular stomatitis and other oral lesions, gastrointestinal complaints, and thinning and brittleness of the nails, occasionally leading to spoon nails (koilonychia). **kennel a.**, a disease of dogs caused by *Ancylostoma caninum*. **Lederer's a.** (*obs.*), an acute hemolytic anemia of short duration and unknown etiology, possibly autoimmune, which, when originally described, further helped to establish the concept of acquired hemolytic anemia as distinct from the congenital spherocytic type. **Leishman's a.** (*obs.*), kala-azar. **leukoerythroblastic a.**, leukoerythroblastosis. **macrocytic a.**, a name applied to a category of anemias, of varying etiologies, characterized by larger than normal red cells, absence of the customary central area of pallor, and an increased mean corpuscular volume and mean corpuscular hemoglobin. **macrocytic a., nutritional**, folic acid deficiency a. **macrocytic a., tropical**, a type of nutritional macrocytic anemia occurring in India, China, and the African west coast, resembling pernicious anemia in many respects but without achlorhydria and only erratically responsive to vitamin B₁₂. Folic acid produces marked improvement in most cases. **Mediterranean a.**, see *β -thalassemia*, under *thalassemia*. **megaloblastic a.**, anemia characterized by the presence of megaloblasts in the bone marrow. **megaloblastic a., familial**, a rare familial form of anemia observed in Norwegian and Finnish children, characterized by selective intestinal malabsorption of vitamin B₁₂ uninfluenced by intrinsic factor, and associated with proteinuria, and structural genitourinary tract anomalies. **megalocytic a.**, macrocytic a. **microangiopathic a.**, hemolytic a., microangiopathic. **microcytic a.**, anemia characterized by erythrocytes the majority of which are smaller than normal. **milk a.**, cow's milk a. **miners' a.**, hookworm disease. **mountain a.**, a form of mountain sickness. **myelopathic a.**, **myelophthisic a.**, leukoerythroblastosis. **a. neonatorum**, the mildest form of erythroblastosis fetalis in which anemia is the chief manifestation; now replaced by the term erythroblastosis qualified by an adjective indicating the degree of severity. **normochromic a.**, anemia in which the hemoglobin content of the red cells as measured by the MCHC is in the normal range. **normocytic a.**, anemia characterized by a proportionate decrease in the hemoglobin content, the packed red cell volume, and the number of erythrocytes per cubic millimeter of blood. **nutritional a.**, deficiency a. **osteosclerotic a.**, a form of myelophthisis occurring in association with osteosclerosis, as a result of the effect on bone marrow of changes in the bones. **pernicious a.**, a megaloblastic anemia occurring in children but more commonly in later life, characterized by histamine-fast achlorhydria, in which the laboratory and clinical manifestations are based on malabsorption of vitamin B₁₂ due to a failure of the gastric mucosa to secrete adequate and potent intrinsic factor. Called also *Addison's* or *addisonian a.*, *Addison-Biermer a.*, *cytogenic a.*, and *malignant a.* **pernicious a., juvenile**, megaloblastic anemia occurring in infancy, childhood, or adolescence, resembling the adult form in its response to vitamin B₁₂ but distinguished from it by inconstant histamine-fast achlorhydria. **phenylhydrazine a.**, a hemolytic anemia resulting from ingestion of phenylhydrazine, which most probably is converted to a compound that, by acting as an oxidant, transforms oxyhemoglobin to methemoglobin, and then sulfhemoglobin, and finally produces Heinz-Ehrlich bodies. In certain instances, due to an intracellular deficiency of reduced glutathione, and enzymes such as glucose-6-phosphate dehydrogenase, erythrocytes may be particularly sensitive to this agent. **physiologic a.**, the normocytic, normochromic anemia that occurs in infants at the age of two or three months, owing to normal depression of erythropoiesis and hemoglobin synthesis, probably resulting as an adjustment to the change-over from placental to pulmonary oxygenation. **polar a.**, an anemic condition that occurs during exposure to low temperature; initially microcytic, but subsequently becoming normocytic. The basic mechanism is not defined precisely, but it may be due to loss of circulating erythrocytes secondary to trauma or

capillary wall diapedesis, in addition to failure of compensatory bone marrow response. Called also *arctic a.* **posthemorrhagic a.**, **acute**, hemorrhagic *a.* **posthemorrhagic a. of newborn**, anemia of the newborn due to hemorrhage into the placenta or from umbilical vessels; it may range from mild to severe. **primaquine-sensitive a.**, glucose-6-phosphate dehydrogenase *a.* **primary a.**, an outmoded concept, since all the anemias are regarded as symptoms, and are therefore "secondary." **a. pseudoleukemia infantum**, a condition originally described as a specific entity in children under age three, with anisocytosis, poikilocytosis, peripheral red blood cell immaturity, leukocytosis, lymphadenopathy, and hepatosplenomegaly; now considered to be a syndrome produced by many factors such as malnutrition, chronic infection, malabsorption, and hemoglobinopathies. **pure red cell a.**, anemia characterized by absence of red cell precursors in the bone marrow. **pyridoxine-responsive a.**, a form of sideroblastic anemia in which there is a therapeutic response to pyridoxine; it affects predominately young or middle-aged males. **refractory a.**, anemia unresponsive to hematinics. **a. refractoria sideroblastica**, **refractory sideroblastic a.**, sideroblastic anemia characterized by failure to respond to hematinics; called also *acquired siderochrestic a.* **Runeberg's a.** (*obs.*), a remittent form of pernicious anemia; called also *Runeberg's disease* or *type*. **scorbutic a.**, anemia due to deficiency of ascorbic acid (vitamin C); in naturally occurring human scurvy the anemia is generally normocytic, although in experimentally induced vitamin C deficiency the anemia is of the megaloblastic type. **secondary a.**, a term originally used to distinguish anemia due to antecedent or associated disease from anemia thought to be a fundamental disease of the hematopoietic system (primary anemia); the distinction is obsolete since anemia is now recognized as a symptom and thus is always "secondary." **sickle cell a.**, a hereditary, genetically determined hemolytic anemia, one of the hemoglobinopathies, occurring almost exclusively in Negroes, characterized by arthralgia, acute attacks of abdominal pain, ulcerations of the lower extremities, sickle-shaped erythrocytes in the blood, and, for full clinical expression, the homozygous presence of S hemoglobin in the red blood cells, as defined by hemoglobin electrophoresis. Called also *sickleemia*, and *Herrick's a.* See also *sickle cell-thalassemia disease*, under *disease*. **siderochrestic a.**, sideroblastic *a.* **sideroblastic a.**, a heterogeneous group of anemias with diverse clinical manifestations and with multiple causes each involving a derangement in the final pathway of heme synthesis, in which iron stores of the reticuloendothelial tissues are almost always increased and bone marrow normoblasts contain iron (sideroblasts). Called also *siderochrestic a.* **sideropenic a.**, a group of anemias characterized by low levels of iron in the plasma; it includes iron deficiency anemia and the anemias of chronic disorders. **simple achlorhydric a.** (*obs.*), iron deficiency *a.* **slaty a.**, a term applied to a grayish color of the face in poisoning by acetanilid or silver. **spherocytic a.**, hereditary spherocytosis. **splenic a.**, **a. splenetica**, congestive splenomegaly; Banti's disease. **spur-cell a.**, anemia in which the red cells have a bizarre spiculated shape and are destroyed prematurely, primarily in the spleen; it is an acquired form occurring in severe liver disease and represents an abnormality in the cholesterol content of the red-cell membrane. **tropical a.**, hookworm disease. **Von Jaksch's a.**, a pseudoleukemic infantum.

anemic (ah-ne'mik) pertaining to or characterized by anemia.

anemo- [Gr. *anemos* wind] a combining form denoting relationship to wind.

anemometer (an''ē-mom''ē-ter) [*anemo-* + Gr. *metron* measure] an instrument for measuring the velocity of air or gas flow.

Anemone (ah-nem'o-ne) a large genus of plants of the family Ranunculaceae, with divided leaves and conspicuous flowers of sepals. They generally contain ranunculin, which converts enzymatically to toxic protoanemonin, a principle held responsible for animal poisoning. Protoanemonin ultimately converts to anemonin, a substituted diacrylic acid dilactone, which has been used as a sedative and antispasmodic. Anemonin is present in *A. pulsatilla* and other species. Several species have been used medicinally.

anemonin (ah-nem'o-nin) the active principle of *Anemone pulsatilla*, a colorless crystalline substance, C₁₀H₈O₄, or pulsatilla camphor.

anemonism (ah-nem'o-nizm) poisoning by plants of the genus *Anemone*.

anemonol (ah-nem'o-nol) an exceedingly poisonous volatile oil from various species of *Anemone* and from other ranunculaceous plants.

anemophilous (an''ē-moff'i-lus) [*anemo-* + Gr. *philein* to love] pollinated by the wind; said of certain flowers.

anemophobia (an''ē-mo-fō-be-ah) [*anemo-* + Gr. *phobein* to be affrighted by + *-ia*] morbid fear of wind or of drafts.

anemotaxis (an''ē-mo-tak'sis) [*anemo-* + Gr. *taxis* arrangement] adjustment with reference to the wind.

anemotrophy (an''ē-mot'ro-fe) [an neg. + Gr. *haima* blood + *trophē* nourishment] deficiency of blood nourishment.

anemotropism (an''ē-mot'ro-pism) [*anemo-* + Gr. *tropos* a turning] a turning toward or away from the wind.

anencephalia (an''en-sē-fa'le-ah) anencephaly.

anencephalic (an''en-sē-fal'ik) exhibiting anencephaly; having no brain.

anencephalous (an''en-sēf'ah-lus) having no brain.

anencephalus (an''en-sēf'ah-lus) a monster exhibiting anencephaly.

anencephaly (an''en-sēf'ah-le) [*an neg.* + Gr. *enkephalos* brain] congenital absence of the cranial vault, with cerebral hemispheres completely missing or reduced to small masses attached to the base of the skull.

anenterous (an-en'ter-us) [*an neg.* + Gr. *enteron* intestine] lacking intestines.

anenzymia (an''en-zī'me-ah) a morbid condition resulting from absence of an enzyme normally present in the body. **a. catalesea**, acatalasia.

anephric (a-nēf'rik) being without kidneys.

anephrogenesis (a''nēf-ro-jen''ē-sis) [*a neg.* + Gr. *nephros* kidney + *genesis*] congenital absence of kidney tissue.

anepiploic (an-ep'e-plo'ik) devoid of omentum.

anepithymia (an-ep'e-thim'e-ah) loss of any natural appetite.

anerethisia (an-er''ē-thiz'e-ah) [*an neg.* + Gr. *erethizein* to excite + *-ia*] deficient irritability.

aneretic (an''e-ret'ik) [Gr. *anairetikos*] destructive.

anergasia (an''er-ga'ze-ah) [*an neg.* + Gr. *ergasia* work] lack of functional activity; Meyer's term for a psychosis associated with a structural lesion of the central nervous system.

anergastic (an''er-gas'tik) Meyer's term for psychic disorders from structural loss of brain function (loss of memory and judgment, fits, contractures, palsies, etc.).

anergia (an-er'je-ah) anergy.

anergic (an-er'jik) [*an neg.* + Gr. *ergon* work] 1. characterized by abnormal inactivity; inactive. 2. marked by asthenia or lack of energy. 3. pertaining to anergy.

anergy (an'er-je) diminished reactivity to specific antigen(s); it may take the form of diminished immediate hypersensitivity or diminished delayed hypersensitivity, or both. **absolute a.**, transient reduction or complete lack of reactivity to antigen (or allergen), e.g., tuberculin allergens, in a sensitized individual, occurring as a result of intervening events, such as cachexia. **cachectic a.**, transient lessened reactivity to allergens in a sensitized individual, occurring as a result of debilitation. **negative a.**, transient reduction in reactivity to allergens in a sensitized individual, occurring as a result of intervening events, such as cachexia. **positive a.**, reduction in reactivity to allergens in a sensitized individual, owing to alterations in the immune response in the course of disease, as in tuberculosis.

aneroid (an'er-oid) [*a neg.* + Gr. *nēros* liquid + *eidos* form] not containing liquid.

anerythroblepsia (an''ē-rith''ro-blep'se-ah) anerythroptasia.

anerythroplasia (an''ē-rith''ro-pla'ze-ah) [*an neg.* + Gr. *erythros* red + *plassein* to form + *-ia*] absence of erythrocyte formation.

anerythroplastic (an''ē-rith''ro-plas'tik) pertaining to or characterized by anerythroplasia.

anerythropoiesis (an''ē-rith''ro-poi-e'sis) [*an neg.* + *erythropoiesis*] deficient production of erythrocytes.

anerythroptasia (an'er-i-throp'se-ah) [*an neg.* + Gr. *erythros* red + *opsis* sight + *-ia*] impaired perception of red tints.

anerythroregenerative (an''ē-rith''ro-re-jen'er-a'tiv) see *aregenerative*.

anesthescinesia (an-es''the-si-ne'ze-ah) [*an neg.* + Gr. *aisthēsis* perception + *kinēsis* movement + *-ia*] loss of sensibility and motor power.

anesthekinesia (an-es''the-kī-ne'ze-ah) anesthescinesia.

anesthesia (an''es-the'ze-ah) [*an neg.* + Gr. *aisthēsis* sensation] loss of feeling or sensation. Although the term is used for loss of tactile sensibility, or of any of the other senses, it is applied especially to loss of the sensation of pain, as it is induced to permit performance of surgery or other painful procedures. **angio-spastic a.**, loss of sensibility dependent on spasm of the blood vessels. **balanced a.**, anesthesia which utilizes a combination of drugs, each in an amount sufficient to produce its major or desired effect to the optimum degree and keep its undesirable or unnecessary effects to a minimum. **basal a.**, anesthesia which acts as a basis for further and deeper anesthesia; a state of narcosis produced by preliminary medication so profound that the added inhalation anesthetic necessary to produce surgical anesthesia is greatly reduced. **Bier's local a.**, local anesthesia produced by injection of a 0.5 per cent solution of procaine in the veins of a limb that has been rendered bloodless by elevation and constriction; called also *vein a.* **block a.**, see *regional a.* and *block*. **bulbar a.**, lack of sensation caused by a lesion of the pons. **caudal a.**, anesthesia produced by injection of a local anesthetic into the caudal or sacral canal. **central a.**, lack of sensation caused by disease of the nerve centers. **cerebral a.**,

lack of sensation caused by a cerebral lesion. **closed a.**, inhalational anesthesia maintained by the continuous rebreathing of a relatively small amount of the anesthetic gas, normally used with an absorption apparatus for the removal of carbon dioxide. **colonic a.**, anesthesia induced by injection of the anesthetic agent into the rectum and lower colon. **compression a.**, loss of sensation resulting from pressure on a nerve. **conduction a.**, regional a. **continuous caudal a.**, see under *analgesia*. **Corning's a.**, see *spinal a.*, def. 1. **crossed a.**, hemianesthesia cruciata. **dissociated a.**, dissociation a., loss of certain sensations while others remain intact. **doll's head a.**, loss of sensation affecting the head, neck, and upper part of the thorax. **a. dolorosa**, pain in an area or region that is anesthetic. **electric a.**, anesthesia induced by passage of an electric current. **endobronchial a.**, anesthesia produced by introduction of a gaseous mixture through a slender tube placed in a large bronchus. **endotracheal a.**, anesthesia produced by introduction of a gaseous mixture through a wide-bore tube inserted into the trachea. **epidural a.**, anesthesia produced by injection of the anesthetic agent between the vertebral spines and beneath the ligamentum flavum into the extradural space; called also *peridural a.* **facial a.**, loss of sensation caused by a lesion of the facial nerve. **frost a.**, abolition of feeling or sensation as a result of topical refrigeration produced by a jet of highly volatile liquid. **gauntlet a.**, loss of sensation in the hand and wrist; called also *glove a.* **general a.**, a state of unconsciousness, produced by anesthetic agents, with absence of pain sensation over the entire body and a greater or lesser degree of muscular relaxation; the drugs producing this state can be administered by inhalation, intravenously, intramuscularly, rectally, or via the gastrointestinal tract. **girdle a.**, loss of sensation in a zone encircling the hips. **glove a.**, gauntlet a. **gustatory a.**, loss of the sense of taste. **Gwathmey's oil-ether a.**, anesthesia produced by introduction into the rectum of a mixture of liquid ether and olive oil. **high pressure a.**, anesthesia produced by controlled application of pressure to a nerve trunk or its branches. **hypnosis a.**, production of insensibility to pain during surgical procedures by means of hypnotism. **hypotensive a.**, anesthesia accompanied by the deliberate lowering of the blood pressure, a procedure said to reduce blood loss. **hypothermic a.**, anesthesia accompanied by the deliberate lowering of the body temperature. **hysterical a.**, loss of sensation occurring in hysteria, characterized by its failure to conform to anatomical nerve distributions, as in *gauntlet a.* **infiltration a.**, the production of local anesthesia by deposition of a local anesthetic solution in the area of small, terminal nerve endings. **inhalation a.**, anesthesia produced by the inhalation of vapors of a volatile liquid or gaseous anesthetic agent. **insufflation a.**, anesthesia produced by blowing a mixture of gases or vapors through a tube introduced into the respiratory tract. **intercostal a.**, anesthesia produced by blocking intercostal nerves with a local anesthetic. **intranasal a.**, local anesthesia produced by insertion into the nasal fossae of pledgets soaked in a solution of an anesthetic agent which is effective after topical application, or by insufflation of a mixture of anesthetic gases or vapors through a tube introduced into the nose. **intraoral a.**, anesthesia produced within the oral cavity by injection, spray, pressure, etc. **intraosseous a.**, a local anesthetic effect produced by the administration of an anesthetic agent directly into the cancellous portion of bone. **intrapulpal a.**, a local anesthetic effect produced by the administration of an anesthetic agent directly into the dental pulp. **intraspinous a.**, spinal a., def. 1. **intravenous a.**, anesthesia produced by introduction of an anesthetic agent into a vein. **Kulenkampff's a.**, anesthesia of the upper extremity produced by injection of a local anesthetic around the brachial plexus. **local a.**, anesthesia confined to one part of the body. **lumbar epidural a.**, anesthesia produced by injection of the anesthetic agent into the epidural space at the second or third lumbar interspace. **Meltzer's a.**, see under *method*. **mental a.**, loss of ability to recognize or identify sensory stimulations. **mixed a.**, anesthesia which is produced by administration of more than one anesthetic agent; see also *balanced a.* **muscular a.**, loss of the muscular sense. **nausea a.**, loss of the sensation of nausea, usually stimulated by noxious and disgusting substances. **nerve blocking a.**, regional a. **olfactory a.**, anosmia. **open a.**, general inhalation anesthesia utilizing a cone; there is no significant rebreathing of expired gases. **paraneural a.**, anesthesia produced by injection of the anesthetic agent around a nerve; called also *paraneural infiltration*. **parasacral a.**, regional anesthesia produced by injection of a local anesthetic around the sacral nerves as they emerge from the sacral foramina. **paravertebral a.**, regional anesthesia produced by injection of a local anesthetic around the spinal nerves at their exit from the spinal column, and outside the spinal dura. **partial a.**, anesthesia with retention of some degree of sensibility. **peridural a.**, epidural a. **perineural a.**, regional anesthesia produced by injection of the anesthetic agent close to the nerve. **peripheral a.**, loss of sensation which is due to changes in the peripheral nerves. **permeation a.**, analgesia of a body surface produced by the application of a local anesthetic, most commonly to mucous membranes; called also *surface a.*

plexus a., anesthesia produced by the injection of a local anesthetic around a nerve plexus. **pressure a.**, anesthesia produced by a local anesthetic forced into the tissues by pressure. **rectal a.**, anesthesia induced by introduction of an anesthetic agent into the rectum. **refrigeration a.**, local anesthesia produced by applying a tourniquet and chilling the part to near freezing temperature; called also *crymoanesthesia*. **regional a.**, the production of insensibility of a part by interrupting the sensory nerve conductivity from that region of the body. It may be produced by (1) *field block*, that is, the creation of walls of anesthesia encircling the operative field by means of injections of a local anesthetic; or (2) *nerve block*, that is, injection of the anesthetic agent close to the nerves whose conductivity is to be cut off. Called also *blocking a.*, *conduction a.*, and *block*. **sacral a.**, anesthesia produced by injection of a local anesthetic into the extradural space of the sacral canal. **saddle block a.**, the production of anesthesia in a region corresponding roughly with the areas of the buttocks, perineum, and inner aspects of the thighs which impinge on the saddle in riding, by introducing the anesthetic agent low in the dural sac. **segmental a.**, loss of sensation caused by lesions of nerve roots. **semiclosed a.**, general inhalation anesthesia in which there is partial rebreathing of the expired gases, with a carbon dioxide absorber in the circuit. **semiopen a.**, general inhalation anesthesia administered by use of an open cone or a partially open circuit; there is partial rebreathing of the expired gases without a carbon dioxide absorber in the circuit. **sexual a.**, anaphrodisia. **spinal a.**, 1. anesthesia produced by injection of a local anesthetic into the subarachnoid space around the spinal cord; called also *Corning's a.* or *method*, *intraspinous a.*, and *subarachnoid a.* 2. loss of sensation due to a spinal lesion. **splanchnic a.**, anesthesia produced by injection of a local anesthetic around the semilunar ganglia. **subarachnoid a.**, spinal a., def. 1. **surface a.**, permeation a. **surgical a.**, that degree of anesthesia at which surgery may safely be performed; ordinarily used to designate such depth of general anesthesia. **tactile a.**, loss or impairment of the sense of touch. **thalamic hyperesthetic a.**, see *thalamic syndrome*, under *syndrome*. **thermal a.**, **thermic a.**, loss of the temperature sense. **topical a.**, anesthesia produced by application of a local anesthetic directly to the area involved, as to the oral mucosa or the cornea. **total a.**, loss of all sensibility in the affected part. **transsacral a.**, spinal anesthesia produced by injection of the anesthetic agent into the sacral canal and about the sacral nerves through each of the posterior sacral foramina. **traumatic a.**, loss of sensation caused by injury to a nerve. **twilight a.**, twilight sleep. **unilateral a.**, hemianesthesia. **vein a.**, Bier's local a. **visceral a.**, loss of visceral sensations.

anesthesiometer (an-es'thē-sim'ē-ter) [*anesthesia* + Gr. *metron* measure] 1. an instrument to regulate the amount of an anesthetic administered. 2. an instrument for taking the degree of insensitiveness.

Anesthesin (ah-nēs'thē-sin) trademark for a preparation of benzocaine.

anesthesiologist (an'es-the'ze-ol'o-jist) a physician specializing in anesthesiology. Cf. *anesthetist*.

anesthesiology (an'es-the'ze-ol'o-je) [*anesthesia* + -logy] that branch of medicine which studies anesthesia and anesthetics.

anesthesiophore (an'es-the'ze-o-fōr) [*anesthesia* + Gr. *phoros* bearing] 1. conveying the anesthetic action. 2. the portion of the molecule of a chemical compound which is responsible for its anesthetic action.

anesthetic (an'es-thet'ik) 1. pertaining to, characterized by, or producing anesthesia. 2. a drug or agent that is used to abolish the sensation of pain. **general a.**, an agent that produces general anesthesia. **local a.**, an agent whose anesthetic action is limited to an area of the body determined by the site of its application; it produces its effect by blocking nerve conduction. **topical a.**, a local anesthetic applied directly to the area to be anesthetized, usually the mucous membranes or the skin.

anesthetist (ah-nēs'thē-tist) a person, such as a nurse or technician, trained in the administration of anesthetics. Cf. *anesthesiologist*.

anesthetization (ah-nēs'thē-tī-za'shun) the production of insensibility to pain.

anesthetize (ah-nēs'thē-tīz) to put under the influence of anesthetics.

anesthetometer (an'es-thē-tom'ē-ter) an apparatus for measuring and mixing anesthetic vapors and gases.

anesthetospasm (an'es-thet'o-spazm) spasm with anesthesia.

anestrum (an-es'trum) anestrum.

anestrus (an-es'trus) a period of sexual inactivity intervening between two estrous cycles.

anethene (an'e-thēn) a hydrocarbon, C₁₀H₁₈, from oil of dill.

anethole (an'ē-thōl) [NF] chemical name: (*E*)-1-methoxy-4-(1-propenyl)benzene. A colorless or faintly yellow liquid, C₁₀H₁₂O, obtained from anise and fennel oils and other sources, or prepared synthetically; used as a flavoring agent for drugs, and formerly as a carminative and expectorant. Called also *anise camphor*.

Anethum (ah-ne'thum) [L.; Gr. *anēthon*] a genus of plants, including fennel and dill, the source of oil of dill and a source of carvone. The fruit of *A. graveolens* (*Peucedanum graveolens*), or dill, is carminative and stimulant.

anetic (ah-net'ik) relaxing or soothing.

anetiological (an-e'te-o-loj'e-kal) [an neg. + *etiologic*] not conforming to etiologic principles.

anetoderma (an'e'to-der'mah) [Gr. *anetos* slack + *derma* skin] atrophy and looseness of the skin; primary macular atrophy. There are two forms: that of Schweninger and Buzzi, in which the skin becomes loosened, gray, thickened, and stiff and contains multiple new growths; that of Jadassohn in which erythematous lesions develop which become baglike protrusions. Called also *atrophia maculosa cutis*.

aneugamy (an-u'gah-me) [an neg. + Gr. *eu* well + *gamos* marriage] union of gametes in one or both of which the chromosomes have not been reduced to the normal haploid number, resulting in an abnormal number of chromosomes (aneuploidy) in the zygote.

aneuploid (an'u-ploid) [an- + *euploid*] 1. having more or less than the normal diploid number of chromosomes. 2. an individual or cell having more or less than the normal diploid number of chromosomes.

aneuploidy (an'u-ploi'de) any deviation from an exact multiple of the haploid number of chromosomes, whether fewer (hypoploidy, as in Turner's syndrome) or more (hyperploidy, as in Down's syndrome). Individuals exhibiting aneuploidy are usually abnormal physiologically and morphologically and, animals especially, seldom survive. Cf. *euploidy* and *polyploidy*.

aneurin (ah-nu'rin) [an neg. + Gr. *neuron* nerve] thiamine hydrochloride (vitamin B₁).

aneurine hydrochloride (an'u-rin) thiamine hydrochloride.

aneurogenic (a'nu-ro-jen'ik) pertaining to or characterized by absence of formation of nerve fibers.

aneurysm (an'u-rizm) [Gr. *aneurysma* a widening] a sac formed by the dilatation of the wall of an artery, a vein, or the heart. The chief signs of arterial aneurysm are the formation of a pulsating tumor, and often a bruit (*aneurysmal bruit*) heard over the swelling. Sometimes there are symptoms from pressure on contiguous parts. **abdominal a.**, an aneurysm of the abdominal aorta. **ampullary a.**, sacculated a. **a. by anastomosis**, **a. anastomotica** (obs.), a dilatation of several arteries which forms a pulsating tumor under the skin. **aortic a.**, aneurysm of the aorta. **aortic sinus a.**, aneurysm arising in the aortic sinuses of Valsalva; these rare lesions may be either developmental or syphilitic. **arteriovenous a.** (William Hunter, 1761), a communication, sometimes congenital, often traumatic, between an artery and a vein in which the blood flows directly into a neighboring vein (*aneurysmal varix*) or else is carried into such a vein by a connecting sac (*varicose aneurysm*). **arteriovenous pulmonary a.**, arteriovenous fistula. **atherosclerotic a.**, an aneurysm arising as a result of weakening of the media in severe atherosclerosis. **axillary a.**, aneurysm of the axillary artery. **bacterial a.**, infected a. **berry a.**, a small saccular aneurysm of a cerebral artery, usually at the junction of vessels in the circle of Willis, having a narrow opening into the artery; such aneurysms frequently rupture, causing subarachnoid hemorrhage. **brain a.**, berry a. **cardiac a.**, thinning and dilatation of a portion of the wall of the left ventricle, usually consequent to myocardial infarction but rare forms have been described. **cerebral a.**, berry a. **cirsoid a.**, racemose a. **compound a.**, one in which some of the coats are ruptured and others merely dilated; called also *mixed a.* **congenital cerebral a.**, berry a. **Crisp's a.** (obs.), aneurysm of the splenic artery. **cylindroid a.**, the uniform dilatation of a considerable part of an artery; called also *tubular a.* **cystogenic a.** (obs.), one formed by the rupture of a cyst into an artery. **dissecting a.**, one resulting from hemorrhage that causes longitudinal splitting of the arterial wall, producing a tear in the intima and establishing communication with the lumen; it usually affects the thoracic aorta. Called also *aortic dissection*, *Laennec's disease*, and *Shekelton's a.* **ectatic a.**, one formed by distention of a section of an artery without rupture of any of its coats. **embolic a.**, the most common form of mycotic aneurysm. **embolomycotic a.** (obs.), aneurysm due to embolism from some vegetative condition in the heart. **false a.**, one in which the entire wall is injured and the blood is contained by the surrounding tissues, with eventual formation of a sac communicating with the artery (or heart); called also *aneurysmal hematoma*, *pulsatile hematoma*, and *spurious a.* **fusiform a.**, a spindle-shaped arterial aneurysm in which the stretching process affects the entire circumference of the artery; called also *Richet's a.* Cf. *saccular a.* **hernial a.**, one in which the sac is formed by an inner coat projecting through the outer. **infected a.**, aneurysm produced by growth of microorganisms in the vessel wall, or infection arising within a preexisting arteriosclerotic aneurysm. Called also *bacterial a.* and *mycotic a.* **innominate a.**, aneurysm of the innominate artery (brachiocephalic trunk). **intracranial a.**, any aneurysm situated within the cranium. **lateral a.**, one that projects from one side of an artery. **miliary a.**, aneu-

rysm of a minute artery, chiefly intracranial or retinal. **mixed a.** (obs.), compound a. **muscular a.** (obs.), aneurysm of the heart wall. **mycotic a.**, infected a. **orbital a.**, one situated within the orbit of the eye. **Park's a.**, an arteriovenous aneurysm occurring at the elbow and establishing communication between the brachial artery and the brachial and median basilic veins. **pelvic a.**, one situated within the pelvis. **Pott's a.**, an aneurysmal varix. **racemose a.**, a condition in which the blood vessels become dilated, lengthened, and tortuous; called also *cirsoid a.* and *diffuse arterial ectasia*. **Rasmussen's a.**, dila-

Racemose aneurysm (Homans).

tation of an artery in a tuberculous cavity; its rupture produces hemorrhage. **renal a.**, an aneurysm within the kidney. **Richet's a.**, fusiform a. **Rodrigues' a.**, a varicose aneurysm with the sac lying contiguous to the artery. **saccular a.**, **sacculated a.**, an eccentric localized distended sac affecting only a part of the circumference of the arterial wall. Cf. *fusiform a.* **serpentine a.**, an elongated and varicose senile condition of certain arteries, such as the splenic, iliac, and temporal. **Shekelton's a.**, dissecting a. **spurious a.**, false a. **suprasellar a.**, aneurysm of the internal carotid artery above the sella turcica. **syphilitic a.**, aortic aneurysm occurring in cases of cardiovascular syphilis. **thoracic a.**, one situated within the thorax. **traumatic a.**, an aneurysm due to injury. **true a.**, an aneurysm in which the sac is formed by the arterial walls one of which, at least, is unbroken. **tubular a.**, cylindroid a. **varicose a.**, an aneurysm in which the artery communicates with contiguous veins by means of an intervening sac. **venous a.**, aneurysm of a vein. **ventricular a.**, an aneurysmal dilatation of a portion of the wall of the left ventricle or, rarely, a saccular protrusion through it (*false a.* of the heart). **verminous a.**, aneurysm of equines caused by strongylid worms; called also *worm a.* **worm a.**, verminous a.

aneurysmal (an'u-riz'mal) pertaining to or resembling an aneurysm.

aneurysmatic (an'u-riz-mat'ik) aneurysmal.

aneurysmectomy (an'u-riz-mek'to-me) [*aneurysm* + Gr. *ektomē* excision] extirpation of an aneurysm by removal of the sac.

aneurysmoplasty (an'u-riz'mo-plas'te) [*aneurysm* + Gr. *plassein* to form] plastic restoration of the artery in the treatment of aneurysm.

aneurysmorrhaphy (an'u-riz-mor'ah-fe) [*aneurysm* + Gr. *rhaphe* suture] the operation of suturing an aneurysm.

aneurysmotomy (an'u-riz-mot'o-me) [*aneurysm* + Gr. *tomē* cut] the operation of incising the sac of an aneurysm.

ANF antinuclear factor.

anfractuosity (an-frak'tu-os'i-te) [L. *anfractus* a bending] (obs.) a cerebral sulcus.

anfractuous (an-frak'tu-us) (obs.) convoluted, sinuous, or tortuous.

angi- for words beginning thus, see those beginning *angi-*.

Angelica (an-jel'e-kah) [L., from Gr. *angelikos* angelic] a genus of umbelliferous plants; the roots and fruit of *A. archangelica* (garden angelica) afford volatile oils, angelic acid (formerly a sedative), and several acids. The plant has carminative, diaphoretic, and diuretic properties.

angeline (an'jē-lin) surinamine.

Angelucci's syndrome (an'jē-loo'chēz) [Arnaldo Angelucci, Naples ophthalmologist, 1854-1933] see under *syndrome*.

Anghelescu's sign (ahn-jē-les'kōōz) [Constantin Anghelescu, Roumanian surgeon, 1869-1948] see under *sign*.

angi- see *angio-*.

angialgia (an'jē-al'je-ah) [*angi-* + Gr. *algos* pain + *-ia*] pain in a blood vessel; called also *angiodynia*.

angiaesthesia (an'jē-as-the'ne-ah) [*angi-* + a neg. + Gr. *sthenos* strength + *-ia*] loss of tone in the vascular system; vascular instability.

angiectasis (an'jē-ek'tah-sis) [*angi-* + Gr. *ektasis* dilatation] gross dilatation and often lengthening of a blood vessel.

angiectatic (an'jē-ek-tat'ik) pertaining to or characterized by angiectasis.

angiectomy (an'jē-ek'to-me) [*angi-* + Gr. *ektomē* excision] the excision or resection of a vessel.

angiectopia (an'jē-ek-to'pe-ah) [*angi-* + Gr. *ek* out + Gr. *topos* place + *-ia*] abnormal position or course of a vessel.

angiempyrraxis (an''je-em-frak'sis) [*angi-* + Gr. *emphraxis* stoppage] (*obs*) the stopping up of a vessel, as by an embolus.

angiitis (an''je-i'tis), pl. *angii'tides* [*angi-* + *-itis*] inflammation of a vessel, chiefly of a blood or a lymph vessel; called also *vasculitis*. **allergic cutaneous a.**, angiitis due to allergic reaction, marked by such cutaneous lesions as papules, macules, vesicles, urticarial wheals, purpura, and small ulcers, and accompanied by itching and usually by a slight fever and malaise; called also *allergic cutaneous vasculitis* and *nodular vasculitis*. **consecutive a.**, inflammation of a vessel caused by extension of the inflammation from the neighboring tissues. **necrotizing a.**, any condition in which vascular inflammation leads to fibrinoid necrosis of the vessel walls (arteries or veins, or both). **necrotizing a. with granulomata**, allergic granulomatosis. **nodular cutaneous a.**, angiitis in which small muscular-walled arteries are involved, along with cutaneous lesions. **visceral a.**, a term proposed for a group of disorders marked by peculiar lesions of the small arteries, such as periarteritis nodosa, allergic angiitis, and lupus erythematosus disseminatus.

angina (an-jī'nah, an-jī-nah) [L.] spasmodic, choking, or suffocative pain; now used almost exclusively to denote angina pectoris. **abdominal a.**, **a. abdomina'lis**, **a. abdom'inis**, intestinal a. **a. acu'ta**, simple sore throat. **agranulocytic a.**, agranulocytosis. **benign croupous a.**, pharyngitis herpetic. **Bretonneau's a.**, diphtheria. **a. cap'itis**, headache, especially that due to refractive errors. **a. catarrha'lis**, acute pharyngitis. **a. cor'dis**, a. pectoris. **a. croupo'sa** (*obs.*), pseudomembranous or croupous sore throat. **a. cru'ris**, intermittent claudication. **a. decu'bitus**, cardiac pain occurring in a recumbent position. **a. diphtherit'ica**, diphtheritic pharyngitis or laryngitis. **a. dyspep'tica**, a condition resembling angina pectoris but due to distention of the stomach with gas. **a. epiglottide'a**, inflammation of the epiglottis. **exudative a.**, croup. **a. follicula'ris**, follicular tonsillitis. **fusospir'ochet a.** (*obs.*), necrotizing ulcerative gingivitis. **a. gan-greno'sa**, gangrenous inflammation of the fauces. **hippocratic a.**, retropharyngeal abscess. **hysteric a.**, pain simulating angina in a hysterical patient. **intestinal a.**, cramping postprandial abdominal pain caused by ischemia of the smooth muscle of the bowel in patients with mesenteric vascular insufficiency. **a. inver'sa**, a variant form of angina pectoris in which there is elevation, rather than depression, of the RS-T interval of the electrocardiogram. **lacunar a.**, tonsillitis. **a. laryn'gea**, laryngitis. **a. ludovi'ci**, **a. ludwig'ii**, **Ludwig's a.**, diffuse purulent inflammation of the floor of the mouth, its fascial spaces, muscles, and glands, and spreading to the soft tissues of the upper neck; edema may cause airway obstruction. Called also *Gensoul's disease*. **malignant a.**, a gangrenosa. **a. membrana'cea**, croup. **monocytic a.** (*obs.*), infectious mononucleosis. **neutropenic a.**, agranulocytosis. **a. nosoco'mii**, pharyngitis ulcerosa. **a. parotid'ea**, mumps. **a. pec'toris**, a paroxysmal thoracic pain, with a feeling of suffocation and impending death, due, most often, to anoxia of the myocardium and precipitated by effort or excitement; has been called *a. cordis*, *angor pectoris*, *Elsner's asthma*, *Heberden's asthma* or *disease*, *Rougon-Heberden disease*, and *stenocardia*. **a. pec'toris vasomoto'ria**, a condition marked by precordial pain due to vasomotor disturbance and showing no organic disease of the heart; called also *vasomotor a.* **a. phlegmono'sa**, peritonsillar abscess. **Plaut's a.**, pseudomembranous a., necrotizing ulcerative gingivitis. **preinfarction a.**, status anginosus. **Prinzmetal's a.**, a variant of angina pectoris in which the attacks occur during rest, exercise capacity is well preserved, and attacks are associated electrocardiographically with elevation of the ST-segment. Called also *variant a. pectoris*. **a. rheumat'ica**, pharyngitis associated with rheumatic diathesis. **a. scarlatino'sa**, pharyngitis associated with scarlet fever. **Schultz's a.**, agranulocytosis. **a. sim'plex**, simple sore throat. **a. sine dolo're**, an episode of coronary insufficiency in which no pain is experienced. **streptococcal a.**, angina due to a streptococcus. **a. tonsilla'ris**, peritonsillar abscess. **a. trachea'lis**, croup. **ulceromembranous a.** (*obs.*), necrotizing ulcerative gingivitis. **a. ulcero'sa**, pharyngitis ulcerosa. **variant a. pectoris**, Prinzmetal's a. **vasomotor a.**, a. pectoris vasomotoria. **Vincent's a.**, necrotizing ulcerative gingivitis.

anginal (an-jī'nal, an-jī-nal) pertaining to or characteristic of angina.

anginiform (an-jin'i-form) resembling angina.

anginoid (an-jī-noid) resembling angina.

anginophobia (an''jin-o-fō-be-ah) [*angina* + Gr. *phobein* to be affrighted by + *-ia*] morbid dread of angina pectoris.

anginose (an-jī-nōs) [L. *anginosus*] pertaining to or affected with angina, especially angina pectoris.

anginosus (an''jī-no'sis) a general term for anginal conditions; angina; often used to denote continuing pain; status anginosus.

anginous (an-jī-nus) anginose.

angio-, angi- (an''je-o, an''je) [Gr. *angeion* vessel] a combining form denoting relationship to a vessel, usually a blood vessel.

angioasthenia (an''je-o-as-the'ne-ah) angiasthenia.

angioataxia (an''je-o-ah-tak'se-ah) [*angio-* + *ataxia*] irregular tension of the blood vessels.

angioblast (an''je-o-blast'') [*angio-* + Gr. *blastos* germ] 1. the mesenchymal tissue of the embryo from which the blood cells and blood vessels differentiate; called also *angioderm*. 2. an individual vessel-forming cell.

angioblastic (an''je-o-blas'tik) pertaining to angioblast.

angioblastoma (an''je-o-blas-to'mah) a term applied to certain blood-vessel tumors of the brain: those arising in the cerebellum (cerebellar angioblastoma) may be cystic and associated with Von Hippel-Lindau's disease; also, a blood-vessel tumor arising from the meninges of the brain or spinal cord (angioblastic meningioma).

angiocardigram (an''je-o-kar'de-o-gram) the film produced by angiocardiology.

angiocardiology (an''je-o-kar'de-og'rah-fe) [*angio-* + Gr. *kardia* heart + *graphein* to write] roentgenography of the heart and great vessels after introduction of contrast material into a blood vessel or one of the cardiac chambers.

angiocardio-kinetic (an''je-o-kar'de-o-ki-net'ik) [*angio-* + Gr. *kardia* heart + *kinēsis* motion] 1. affecting the motions or movements of the heart and blood vessels. 2. any agent that affects the movements of the heart and vessels.

angiocardopathy (an''je-o-kar'de-op'ah-the) any disease of the heart and blood vessels.

angiocarditis (an''je-o-kar-di'tis) [*angio-* + Gr. *kardia* heart + *-itis*] inflammation of the heart and great blood vessels.

angiocavernous (an''je-o-kav'er-nus) of the nature of angioma and cavernoma.

angioceratoma (an''je-o-ser'ah-to'mah) angiokeratoma.

angiocheiloscope (an''je-o-ki'lo-skōp') [*angio-* + Gr. *cheilos* lip + *skopein* to view] an instrument for observing blood circulation of the lips under magnification.

angiochondroma (an''je-o-kon-dro'mah) a chondroma about which there is an excessive development of blood vessels.

angioclast (an''je-o-klast'') [*angio-* + Gr. *klastos* broken] former name for hemostat.

Angiococcus (an''je-o-kok'us) [Gr. *angeion* vessel + *kokkos* berry] a genus of microorganisms of the family Myxococcaceae, with two species, *A. cellulorum* and *A. discoformis*.

Angio-CONRAY (an''je-o-kon'ra) trademark for a preparation of sodium iothalamate.

angiocrine (an''je-o-krin) [*angio-* + *endocrine*] denoting vasomotor disorders of endocrine origin.

angiocrinosis (an''je-o-kri-no'sis) a vasomotor disorder of endocrine origin.

angiocyst (an''je-o-sist'') [*angio-* + *cyst*] angioblastic cyst.

angioiderm (an''je-o-derm) angioblast, def. 1.

angiodermatitis (an''je-o-der-mah-ti'tis) (*obs.*) inflammation of the vessels of the skin.

angiodiascopy (an''je-o-di-as'ko-pe) [*angio-* + Gr. *dia* through + *skopein* to view] direct visual inspection of blood vessels of the extremities, a light being held behind the part.

angiodiathermy (an''je-o-di'ah-ther'me) [*angio-* + *diathermy*] coagulation by diathermy of the long posterior ciliary arteries in treatment of glaucoma; now rarely done.

angiodynia (an''je-o-din'e-ah) [*angio-* + Gr. *odynē* pain + *-ia*] angialgia.

angiodysplasia (an''je-o-dis-pla'ze-ah) small vascular abnormalities, especially of the intestinal tract.

angiodystrophia (an''je-o-dis-tro-fe-ah) [*angio-* + *dystrophy*] defective nutrition of blood vessels. **a. ova'rii**, angiodystrophia of the blood vessels of the ovary.

angiodystrophy (an''je-o-dis'tro-fe) angiodystrophia.

angioectatic (an''je-o-ek-tat'ik) angiectatic.

angioedema (an''je-o-e-de'mah) angioneurotic edema.

angioelephantiasis (an''je-o-el'ē-fan-ti'ah-sis) extensive angiomatous condition of the subcutaneous tissues.

angioendothelioma (an''je-o-en'do-the'le-o'mah) hemangioendothelioma.

angiofibroma (an''je-o-fi-bro'mah) an angioma containing fibrous tissue; called also *telangiectatic fibroma*. **a. contagi-o'sum trop'icum**, a skin disease of Brazil characterized by an eruption of red papules which develop into bluish nodules. **juvenile a.**, nasopharyngeal a. **nasopharyngeal a.**, a tumor of the nasopharynx composed of fibrous connective tissue with abundant endothelium-lined vascular spaces, usually occurring during puberty, most commonly in boys. It is characterized by nasal obstruction which may become total, hyponasal, discomfort in swallowing, auditory tube obstruction and massive epistaxis. Called also *juvenile a.* and *nasopharyngeal fibroangioma*.

angiofollicular (an''je-o-fol-lik'u-lar) pertaining to a lymphoid follicle and its blood vessels.

angiogenesis (an''je-o-jen'ē-sis) [*angio-* + *genesis*] the development of the vessels. **tumor a.**, the induction of the growth of

blood vessels from surrounding tissue into a solid tumor by a diffusible chemical factor released by the tumor cells.

angiogenic (an''je-o-jen''ik) 1. arising in the vascular system. 2. developing into blood vessels.

angioglioma (an''je-o-gli-o'mah) a very vascular form of glioma.

angiogliomatosis (an''je-o-gli'o-mah-to'sis) a condition marked by the formation of multiple vascular gliomas.

angiogliosis (an''je-o-gli-o'sis) (obs.) a condition marked by the development of angiogliomas.

angiogram (an''je-o-gram'') a roentgenogram of blood vessels filled with a contrast medium.

angiograph (an''je-o-graf'') [angio- + Gr. *graphein* to record] angiogram.

angiography (an''je-og''rah-fe) [angio- + Gr. *graphein* to record] 1. the roentgenographic visualization of blood vessels following introduction of contrast material; used as a diagnostic aid in such conditions as cerebrovascular attacks (strokes) and myocardial infarctions. 2. a treatise on the vessels; the study of the vessels.

cerebral a., radiography of the vascular system of the brain after injection of contrast material into the arterial blood stream.

coronary a., radiographic visualization of the coronary arteries after the introduction of contrast material.

angiohemophilia (an''je-o-he''mo-fil'e-ah) von Willebrand's disease.

angiohyalinosis (an''je-o-hi''ah-li-no'sis) [angio- + *hyalinosis*] hyaline degeneration of the walls of blood vessels. **a. hemorrhagica**, a variety characterized by congenital hemorrhage.

angioid (an''je-oid) [angio- + Gr. *eidos* form] resembling a blood vessel.

angioinvasive (an''je-o-in-va'siv) tending to invade the walls of blood vessels.

angiokeratoma (an''je-o-ker''ah-to'mah) [angio- + Gr. *keras* horn + *-oma*] a disease of the skin characterized by telangiectases or warty growths, in groups, together with thickening of the epidermis (Mibelli); the dorsal aspect of the fingers and toes, and the scrotum are sites of predilection. Called also *angiokeratosis*. **a. circumscriptum**, a rare form characterized by discrete papules and nodules usually localized to a small area on the leg or trunk. **a. corporis diffusum**, Fabry's disease.

angiokeratosis (an''je-o-ker''ah-to'sis) angiokeratoma.

angiokinesis (an''je-o-kī-ne'sis) [angio- + Gr. *kinēsis* movement] vascular activity.

angiokinetic (an''je-o-kī-net''ik) pertaining to vascular activity; vasomotor.

angioleucitis (an''je-o-lu-si'tis) [angio- + Gr. *leukos* white + *-itis*] lymphangitis.

angioleukitis (an''je-o-lu-kī'tis) lymphangitis.

angiolipoleiomyoma (an''je-o-lip''o-li-o-mi-o'mah) see *angiolipoma*.

angiolipoma (an''je-o-lī-po'mah) a tumor composed of a mixture of adipose tissue and blood vessels.

angiologia (an''je-o-lo''je-ah) angiology; in NA terminology *angiologia* encompasses the nomenclature relating to the heart, arteries, veins, lymphatic system, and spleen.

angiology (an''je-o-lo''je) [angio- + Gr. *logos* treatise] the scientific study of the vessels of the body; applied also to the sum of knowledge relating to the blood vessels and lymph vessels.

angiolupoid (an''je-o-lu''poid) a granuloma consisting of small red oval infiltrated plaques with telangiectases over the surface and occurring chiefly on the sides of the nose.

angiolymphangioma (an''je-o-lim-fan''je-o'mah) a mixed angioma in which lymph vessels and blood vessels are involved.

angiolymphitis (an''je-o-lim-fi'tis) lymphangitis.

angiolymphoma (an''je-o-lim-fo'mah) (obs.) a tumor made up of lymph vessels.

angiolysis (an''je-o-lī'sis) [angio- + Gr. *lysis* dissolution] retrogression or obliteration of blood vessels, such as occurs during embryonic development.

angioma (an''je-o'mah) [angio- + *-oma*] a tumor whose cells tend to form blood vessels (*hemangioma*) or lymph vessels (*lymphangioma*); a tumor made up of blood vessels or lymph vessels. **a. arteriale racemosum**, a dilatation and complex intertwining of many new-formed and altered vessels of small caliber with subsequent involvement of normal vessels. **arteriovenous a. of brain**, congenital angioma of the brain composed of arterial and venous channels with many arteriovenous shunts, and characterized by frequent focal epileptic seizures and progressive impairment of the blood supply, which gives rise to increasing hemiparesis. It is distinguished by an intracranial bruit. **capillary a's**, cherry a's. **a. cavernosum**, cavernous a., cavernous hemangioma. **cherry a's**, bright red, circumscribed, round or oval angiomas, 2 to 6 mm. in diameter, containing many vascular loops, caused by a telangiectatic vascular disturbance; they are usually seen on the trunk but may appear on other areas of the body, as in angioma serpiginosum, and occur in well over 85 per cent of the middle-aged and elderly.

Called also *capillary a's*, *De Morgan's spots*, and *senile a's*. **a. cutis**, a kind of nevus made up of a network of dilated blood vessels. **fissural a.**, angioma occurring in embryonal fissures of the face, neck, or lips. **hereditary hemorrhagic a.**, hereditary hemorrhagic telangiectasia. **hypertrophic a.**, hemangioendothelioma. **infective a.** (obs.), a. serpiginosum. **a. lymphaticum**, lymphangioma. **a. pigmentosum atrophicum** (obs.), xeroderma pigmentosum. **plexiform a.**, ordinary angioma made up of dilated and tortuous capillaries usually located in the skin. **senile a's**, cherry a's. **a. serpigino'sum**, a skin disease characterized by minute vascular points, looking like grains of cayenne pepper, arranged in rings on the skin; called also *Hutchinson's disease*. **simple a.**, a nevus or telangiectasis; a tumor composed of a network of small vessels or of distended capillaries bound together by connective tissue. **spider a.**, vascular spider. **strawberry a.**, cavernous angioma resembling a strawberry in size and color, occurring in the newborn and infants. **telangiectatic a.**, an angioma made up of dilated blood vessels. **a. venosum racemosum**, the swellings caused by severe varicosity of superficial veins. **venous a. of brain**, congenital angioma of the brain composed of abnormal venous arteries and characterized by frequent focal epileptic seizures and progressive hemiparesis.

angiomatosis (an''je-o-mah-to'sis) a diseased state of the vessels with the formation of multiple angiomas. **cerebroretinal a.**, von Hippel-Lindau disease. **encephalofacial a.**, encephalotrigeminal a., Sturge-Weber syndrome. **hemorrhagic familial a.**, hereditary hemorrhagic telangiectasia. **hepatic a.**, peliosis hepatis. **a. of retina**, von Hippel's disease. **retinocerebral a.**, von Hippel-Lindau disease.

angiomatous (an''je-om''ah-tus) of the nature of an angioma.

angiomegaly (an''je-o-meg''ah-le) [angio- + Gr. *megas* large] enlargement of blood vessels; especially a condition of the eyelid marked by great increase in its volume.

angiometer (an''je-om''ē-ter) [angio- + Gr. *metron* measure] an instrument once used for measuring the diameter or caliber and the tension of the blood vessels.

angiolipoma (an''je-o-mi''o-lī-po'mah) a benign tumor containing vascular, adipose, and muscle elements; it occurs most often in the kidney with smooth muscle elements (angiolipoleiomyoma) in association with tuberous sclerosis, and is considered to be a hamartoma.

angiolipoma (an''je-o-mi-o'mah) a hamartoma composed of blood vessels and smooth muscle. **a. cutis**, a variety of leiomyoma cutis arising from the tunica media of blood vessels and embryonic muscle rests, usually on the lower leg.

angioliponeuroma (an''je-o-mi''o-nu-ro'mah) glomangioma.

angioliposarcoma (an''je-o-mi''o-sar-ko'mah) a tumor made up of elements of angioma, myoma, and sarcoma.

angiolipoxoma (an''je-o-mik-so'mah) a chorioangioma in which capillary-like blood vessels are very evident; it may extend into the umbilical cord and often contains myxomatous tissue resembling that in the normal cord.

angioneclerosis (an''je-o-nē-kro'sis) [angio- + Gr. *nekros* dead + *-osis*] necrosis of the walls of blood vessels.

angioneoplasm (an''je-o-ne'o-plazm) [angio- + *neoplasm*] a tumor or neoplasm of blood vessels.

angioneuralgia (an''je-o-nu-ral''jē-ah) [angio- + *neuralgia*] a condition marked by burning pain in an extremity attended by edema and redness of the part; thought to be an early stage of Raynaud's disease.

angioneurectomy (an''je-o-nu-rek'to-me) [angio- + Gr. *neuron* nerve + *ektomē* excision] excision of vessels and nerves.

angioneuroedema (an''je-o-nu''ro-e-de'mah) [angio- + Gr. *neuron* nerve + *oidēma* swelling] (obs.) angioneurotic edema.

angioneuroma (an''je-o-nu-ro'mah) glomangioma.

angioneuromyoma (an''je-o-nu''ro-mi-o'mah) glomangioma.

angioneuropathic (an''je-o-nu''ro-path'ik) pertaining to or of the nature of an angioneuropathy.

angioneuropathy (an''je-o-nu-ro''pā-the) [angio- + *neuropathy*] any neuropathy affecting primarily the blood vessels; a disorder of the vasomotor system, as angiospasm, angioparalysis, or vasomotor paralysis.

angioneurotic (an''je-o-nu-rot''ik) denoting a neuropathy affecting the vascular system; see under *edema*.

angioneurotomy (an''je-o-nu-rot'o-me) [angio- + Gr. *neuron* nerve + *tomē* cutting] the operation of cutting vessels and nerves.

angionoma (an''je-o-no'mah) [angio- + Gr. *nomē* ulcer] ulceration of a blood vessel.

angiopancreatitis (an''je-o-pan''kre-ah-ti'tis) (obs.) inflammation of the pancreatic vessels or of the vascular tissue of the pancreas.

angioparalysis (an''je-o-pah-ral''i-sis) [angio- + *paralysis*] vasomotor paralysis.

angioparesis (an''je-o-par'e-sis) [angio- + *paresis*] vasomotor paralysis.

angiopathology (an'je-o-pah-thol'o-je) the pathology of, or the changes seen in, diseases of the blood vessels.

angiopathy (an-je-op'ah-the) [*angio-* + *Gr. pathos* disease] any disease of the vessels.

angiophakomatosis (an'je-o-fak'o-mah-to'sis) [*angio-* + *Gr. phakos* lens + *-oma*] von Hippel-Lindau disease.

angioplasty (an'je-o-plas'te) [*angio-* + *Gr. plassein* to form] surgical reconstruction of blood vessels. **percutaneous transluminal a.**, dilatation of a blood vessel by means of a balloon catheter inserted through the skin and into the chosen vessel and then passed through the lumen of the vessel to the site of the lesion, where the balloon is inflated to flatten plaque against the artery wall.

angiopoiesis (an'je-o-poi-e'sis) [*angio-* + *Gr. poiein* to make] the process of vessel formation.

angiopoietic (an'je-o-poi-et'ik) pertaining to or causing angiopoiesis.

angiopressure (an'je-o-presh'ur) the application of pressure to a blood vessel to control hemorrhage.

angioreticuloendothelioma (an'je-o-rē-tik'u-lo-en'do-the-le-o'mah) Kaposi's sarcoma.

angioreticuloma (an'je-o-re-tik'u-lo'mah) a hemangioma, especially one of the brain.

angiorrhaphy (an'je-or'ah-fe) [*angio-* + *Gr. rhapsē* suture] suture of a vessel or vessels. **arteriovenous a.**, the suturing of an artery to a vein, so as to divert the arterial current into the vein.

angiosarcoma (an'je-o-sar-ko'mah) [*angio-* + *sarcoma*] a hemangiosarcoma. **a. myxomato'des** (obs.), an angiosarcoma in which the walls of the vessels are affected with mucous degeneration.

angiosclerosis (an'je-o-skle-ro'sis) [*angio-* + *sclerosis*] a non-specific term indicating hardening of the walls of the blood vessels.

angiosclerotic (an'je-o-skle-rot'ik) pertaining to or marked by angiosclerosis.

angioscope (an'je-o-skōp') [*angio-* + *Gr. skopein* to view] a microscope for observing capillary blood vessels.

angioscotoma (an'je-o-sko-to'mah) a scotoma, or defect in the visual field, caused by shadows of the retinal blood vessels.

angioscotometry (an'je-o-sko-tom'ē-tre) [*angio-* + *scotoma* + *Gr. metron* measure] the plotting or mapping of the scotoma caused by the shadow of retinal blood vessels; used particularly in the diagnosis of glaucoma.

angiospasm (an'je-o-spaz'm') [*angio-* + *Gr. spasmos* spasm] spasmodic contraction of the blood vessels.

angiospastic (an'je-o-spas'tik) of the nature of angiospasm; causing contraction of the blood vessels.

angiosperm (an'je-o-sperm') [*angio-* + *Gr. sperma* seed] a true flowering plant; a plant having its seeds in an enclosed ovary.

angiospermin (an'je-o-sper'min) a substance derived from flowering plants and said to have hormone-like properties.

angiostaxis (an'je-o-stak'sis) [*angio-* + *Gr. staxis* hemorrhage] (obs.) hemorrhagic diathesis.

angiostenosis (an'je-o-ste-no'sis) [*angio-* + *stenosis*] narrowing of the caliber of a vessel.

angioosteosis (an'je-os'te-o'sis) [*angio-* + *Gr. osteon* bone] ossification or calcification of a vessel.

angiostenia (an'je-os-the'ne-ah) [*angio-* + *Gr. sthenos* strength + *-ia*] arterial tension.

angiostomy (an'je-os'to-me) [*angio-* + *Gr. stomoun* to provide with an opening, or mouth] the operation of making an opening into a blood vessel and inserting a cannula therein.

angiostrongyliasis (an'je-o-stron'jī-li'ah-sis) infection with *Angiostrongylus cantonensis*.

Angiostrongylus (an'je-o-stron'jī-lus) [*Gr. angeion* vessel + *strongylos* round] a genus of parasitic nematodes of the family Metastrongylidae. **A. cantonensis**, the lungworm that parasitizes the domestic rat in Australia and many of the Pacific islands, including Hawaii. Larval development occurs in snails, slugs, and planarians; in rats, the adult worms are found in the bronchioles. Human infection, which is thought usually to be due to ingestion of larvae in paratenic hosts, such as prawns or freshwater crabs, results in migration of the larval worms to the central nervous system, where they provoke eosinophilic meningo-encephalitis. **A. vaso'rum**, a species parasitic in the pulmonary arteries of dogs.

angiotrophe (an'je-os'tro-fe) [*angio-* + *Gr. strophē* a twist] the twisting of a vessel to arrest hemorrhage.

angiotrophy (an'je-os'tro-fe) angiotrophe.

angiotelectasis (an'je-o-tē-lek'tah-sis), pl. *angiotelectases* [*angio-* + *Gr. telos* end + *ektasis* dilatation] dilatation of the minute arteries and veins.

angiotensin (an'je-o-ten'sin) a polypeptide present in the blood and formed by the catalytic action of renin on angiotensinogen in the blood plasma. The decapeptide angiotensin I, the inactive form, is in turn acted upon by a peptidase (converting

enzyme), chiefly in the lungs, to form the octapeptide hormone angiotensin II, a powerful vasopressor and a stimulator of aldosterone secretion by the adrenal cortex. By its vasopressor action, it raises blood pressure and diminishes fluid loss in the kidney by restricting flow. Angiotensin II is hydrolyzed to form the heptapeptide angiotensin III, which has lesser vasopressor activity but is more active on the adrenal cortex. **a. amide**, chemical name: 1-L-asparagine-5-L-valineangiotensin II. An amide derivative of angiotensin, $C_{49}H_{70}N_{14}O_{11}$, occurring as a white to slightly off-white, amorphous powder, which is a powerful vasoconstrictor and vasopressor, and is used in the treatment of certain hypotensive states; usually administered by slow intravenous infusion, and sometimes intramuscularly or subcutaneously.

angiotensinase (an'je-o-ten'si-nās) any of a group of peptidases in plasma and tissues that inactivate angiotensin.

angiotensinogen (an'je-o-ten'sin-o-jen) a serum α_2 -globulin secreted in the liver which, on hydrolysis by renin, gives rise to angiotensin; formerly called *hypertensinogen*.

angiotome (an'je-o-tōm') [*angio-* + *Gr. tomē* a cutting] any one of the segments of the vascular system of the embryo; called also *vascular segment* and *intersegment*.

angiotomy (an'je-ot'o-me) [*angio-* + *Gr. tomē* a cutting] the cutting or severing of a blood or lymph vessel.

angiotonase (an'je-o-to'nās) an enzyme formed by the kidneys which inactivates angiotensin.

angiotonia (an'je-o-to'ne-ah) vasotonia.

angiotonic (an'je-o-ton'ik) [*angio-* + *Gr. tonos* tension] increasing the vascular tension.

angiotonin (an'je-o-to'nin) angiotensin.

angiotribe (an'je-o-trib') [*angio-* + *Gr. tribein* to crush] an exceedingly strong forceps in which pressure is applied by means of a screw; the instrument is used to crush tissue containing an artery in order to check hemorrhage from the vessel. Called also *vasotribe*.

Angiotribe.

angiotripsy (an'je-o-trib'se) production of hemostasis by use of the angiotribe; called also *vasotripsy*.

angiotrophic (an'je-o-trof'ik) [*angio-* + *Gr. trophē* nutrition] pertaining to vascular nutrition.

angitis (an-jī'tis) angiitis.

angle (ang'g'l) [*L. angulus*] 1. the area or point of junction of two intersecting borders or surfaces; see *angulus*. 2. the degree of divergence of two intersecting lines or planes. **a. of aberration**, a. of deviation. **acromial a.**, angulus acromialis. **acromial a. of scapula**, angulus lateralis scapulae. **alpha a.**, that formed by the intersection of the visual line with the optic axis at the nodal point. It is *positive* when the visual axis crosses the cornea on the nasal side of the optic axis, as in most individuals; *negative* when the visual axis crosses the cornea on the temporal side of the optic axis; and *nil* when the visual axis and the optic axis coincide. **Alsberg's a.**, see Alsberg's triangle, under *triangle*. **alveolar a.**, the angle between a line running through a point beneath the nasal spine and the most prominent point of the lower border of the alveolar process of the superior maxilla and the cephalic horizontal. **anterior a. of petrous portion of temporal bone**, angulus anterior pyramidis ossis temporalis. **a. of aperture**, the angle between two lines from the focus of a lens to the ends of its diameter. **auriculo-occipital a.**, the angle between lines from the auricular point to the lambda and opisthion. **axial a.**, any angle the formation of which is partially dependent on the axial wall of a tooth cavity. **axial line a.**, any line angle which is parallel with the long axis of a tooth. For names of various angles see the table of *Cavity Angles* and illustration of *Tooth Angles*. **Bennett a.**, the angle formed by the sagittal plane and the path of the advancing condyle during lateral movement of the mandible, as viewed in the horizontal plane. **beta a.**, the angle between the radius fixus and a line joining the bregma and hormon. **biorbital a.**, the angle formed by intersection of a posterior extension of the axes of the two orbits. **Broca's a.**, ophryosignal a. **buccal a's**, the angles formed between the buccal surface and the other surfaces of a posterior tooth, or between the buccal wall of a tooth cavity and other walls, named according to the surfaces which participate in their formation. See the table of *Cavity Angles* and illustration of *Tooth Angles*. **cardiodiaphragmatic a.**, the angle formed by the junction of the shadows of the heart and diaphragm in posteroanterior roentgenograms of the chest; called also *cardiophrenic a.* **cardiohepatic a.**, the angle formed by the horizontal limit of hepatic dullness with the upright line of cardiac dullness in the fifth right intercostal space, close to the sternal border; called also *Ebstein's a.* **cardio-**

phrenic a., cardiodiaphragmatic a. **carrying a.**, angle formed by the axes of the arm and forearm when the forearm is extended in the anatomical position. **cavity a's**, the angles formed by the junction of two or more walls of a tooth cavity, named according to the walls participating in their formation. See table of *Cavity Angles*. **cavosurface a.**, the angle formed by

distobuccopulpal	mesio-occlusal
distolingual	pulpobuccoaxial
distopulpal	pulpolingual

the junction of a wall of a cavity and a surface of the crown of the tooth. **cephalic a.**, various angles of the skull or face. **cephalic-medullary a.**, the angle at which the brain stem meets the base of the brain. **cephalometric a.**, measurement of intersecting anthropometric lines on tracings made of oriented head films in radiologic orthodontic diagnosis. **cerebello-pontile a.**, that between the cerebellum and the pons. **chi a.**, the angle between two lines from the hornion to the staphylin and to the basion, respectively. **collodiaphyseal a.**, the angle formed by the intersection of the long axes of the neck and shaft of the femur. **condylar a.**, the angle between the planes of the basilar clivus and the foramen magnum. **a. of convergence**, that between the visual axis and the median line when an object is looked at. **a. of convexity**, a cephalometric measurement formed by connecting the nasion, point A, and pogonion (NAP), which reflects the convexity or concavity of the facial profile. **coronary a.**, angulus frontalis ossis parietalis. **costal a.**, angulus costae. **costophrenic a.**, the angle formed at the junction of the costal and diaphragmatic pleurae. **costovertebral a.**, the angle formed on either side of the vertebral column, between the last rib and the lumbar vertebrae. **craniofacial a.**, the angle between the basifacial and basicranial axes at the middle of the ethmoidosphenoid suture. **critical a.**, the angle of incidence at which a ray of light passing from one medium to another of different density changes from refraction to total reflection; called also *limiting a.* **cusp a.**, 1. the angle made by the slopes of a cusp of a tooth with the plane that passes through the tip of the cusp and that is perpendicular to a line bisecting the cusp, measured mesiodistally or buccolingually. 2. the angle made by the slopes of a cusp with a perpendicular line bisecting the cusp, measured mesiodistally or buccolingually. 3. one half of the included angle between the buccal and lingual or mesial and distal cusp inclines. **cusp plane a.**, the incline of the cusp plane in relation to the plane of occlusion. **Daubenton's a.**, an angle formed by junction of the opisthiobasal and opisthionasial lines; called also *occipital a.* **a. of declination**, Mikulicz's a. **a. of deviation**, the angle between a refracted ray and the incident ray prolonged; called also *a. of aberration*. **a. of direction**, the angle through which the eye must move to bring the image onto the fovea. **distal a's**, the angles formed between the distal surface and other surfaces of a tooth, or between the distal wall of a tooth cavity and other walls; named according to the surfaces which participate in their formation. See table of *Cavity Angles* and illustration of *Tooth Angles*. **Ebstein's a.**, cardiohepatic a. **elevation a.**, 1. the angle made by the visual plane when moved upward or downward with its normal position. 2. see *Alsberg's triangle*, under *triangle*. **epigastric a.**, the angle made by the xiphoid process with the body of the sternum. **ethmocranial a.**, the angle formed by the plane of the cribriform plate of the ethmoid bone prolonged to meet the basicranial axis; called also *ethmoid angle*. **ethmoid a.**, ethmocranial a. **external a. of border of tibia**, margo interosseus tibiae. **external a. of scapula**, angulus lateralis scapulae. **facial a.**, an expression of the degree of recession or protrusion of the chin, determined by a line drawn from the nasion to the pogonion as it intersects

with the eye-ear (Frankfort) plane; a cephalometric diagnostic measurement. **filtration a.**, angulus iridocornealis. **frontal a. of parietal bone**, angulus frontalis ossis parietalis. **gamma a.**, the angle formed by junction of the line of fixation and the optic axis at the center of rotation of the eye. **gonial a.**, the angle formed by the intersection of the body of the mandible and the ascending mandibular ramus; an important consideration in prognathic procedures. Called also *angulus mandibulae* [NA]. **horizontal a.**, in dental radiology the angle, measured within a horizontal plane, at which the central ray of the useful beam is projected relative to a vertical plane of reference. **impedance a.**, the ratio between the resistance of the body to an electric current and its condenser function; cf. *impedance*. **a. of incidence**, the angle made with the perpendicular by a ray of light which strikes a denser or a rarer medium; see *refraction*. **incisal a.**, one of the angles formed by the junction of the incisal and the mesial or distal surface of an anterior tooth; called the *mesial* and the *distal incisal angle*, respectively. **incisal guide a.**, the angle formed with the horizontal plane by drawing a line in the sagittal plane between incisal edges of the maxillary and mandibular central incisors when the teeth are in centric occlusion. **incisal mandibular plane a.**, one of the three angles composing the Tweed triangle, designating the axial inclination of the lower incisor to the mandibular plane in the lateral cephalometric radiograph. **a. of inclination**, inclinatio pelvis. **inferior a. of duodenum**, flexura duodeni inferior. **inferior a. of parietal bone**, anterior, angulus sphenoidalis ossis parietalis. **inferior a. of parietal bone, posterior**, angulus mastoideus ossis parietalis. **inferior a. of scapula**, angulus inferior scapulae. **infrasternal a. of thorax**, angulus infrasternalis thoracis. **inner a. of humerus**, margo medialis humeri. **internal a. of tibia**, margo medialis tibiae. **iridial a.**, iridocorneal a., a. of iris, angulus iridocornealis. **Jacquart's a.**, ophryospinal a. **a. of jaw**, angulus mandibulae. **kappa a.**, the angle between the pupillary axes. **kyphotic a.**, the superior angle formed by intersection of two lines drawn on the lateral chest roentgenogram, tangential to the anterior borders of the second and eleventh intervertebral spaces, an index of the degree of deformity in thoracic kyphosis. **labial a's**, the angles formed between the labial surface and other surfaces of an anterior tooth, or between the labial wall of a tooth cavity and other walls; named according to the surfaces participating in their formation. See tables of *Cavity Angles* and *Tooth Angles*. **lambda a.**, the angle between the pupillary axis and the line of sight. **lateral a. of border of tibia**, margo interosseus tibiae. **lateral a. of eye**, angulus oculi lateralis. **lateral a. of humerus**, margo lateralis humeri. **lateral a. of scapula**, angulus lateralis scapulae. **limiting a.**, critical a. **line a.**, an angle formed by junction of two planes. Used in dentistry to designate the junction of two surfaces of a tooth, or of two walls of a tooth cavity; named according to the tooth surfaces or the cavity walls which participate in its formation. See tables of *Cavity Angles* and *Tooth Angles*. **lingual a's**, the angles formed between the lingual and other surfaces of a tooth, or between the lingual wall of a tooth cavity and other walls; named according to the surfaces which participate in their formation. See tables of *Cavity Angles* and *Tooth Angles*. **Louis' a.**, Ludwig's a., angulus sterni. **lumbosacral a.**, sacrovertebral a. **a. of mandible, mandibular a.**, angulus mandibulae. **mastoid a. of parietal bone**, angulus mastoideus ossis parietalis. **maxillary a.**, the angle between two lines extending from the point of contact of the upper and lower central incisors to the ophryon and the most prominent point of the lower jaw. **medial a. of eye**, angulus oculi medialis. **medial a. of humerus**, margo medialis humeri. **medial a. of scapula**, angulus superior scapulae. **medial a. of tibia**, margo medialis tibiae. **mesial a's**, the angles formed between the mesial surface and other surfaces of a tooth, or between the mesial wall of a tooth cavity and other walls, named according to the surfaces participating with the mesial in their formation. See tables of *Cavity Angles* and *Tooth Angles*. **metafacial a.**, the angle between the base of the skull and the pterygoid process; called also *Serres' a.* **meter a.**, a unit of convergence of the eye: that amount of convergence required for binocular fixation of an object at 1 meter and using 1 diopter of accommodation. **Mikulicz's a.**, an angle formed by two planes, one passing through the long axis of the epiphysis of the femur and the other through the long axis of the diaphysis; it is normally 130 degrees. Called also *a. of declination*. **minimum visual a.**, the angle which the minimum separable subtends at the eye; 60 seconds of arc is usually taken as standard for a normal eye. **a. of mouth**, angulus oris. **a. of Mulder**, the angle formed by the intersection of the facial line of Camper and a line from the root of the nose to the speno-occipital suture. **nu a.**, the angle between the radius fixus and a line joining the hornion and nasion. **occipital a.**, Daubenton's a. **occipital a. of parietal bone**, angulus occipitalis ossis parietalis. **ocular a's**, see *angulus oculi lateralis* and *angulus oculi medialis*. **olfactive a.**, the angle formed by the line of the olfactory fossa and the os planum of the sphenoid bone; called also *olfactory a.* **olfactory a.**, olfactive a. **ophryospinal a.**, the angle at the anterior nasal spine between lines from the auricular point

Tooth angles: Top, line angles; Bottom, point angles (Wheeler).

and the glabella; called also *Jacquart's a.*, *Topinard's a.*, and *Broca's a.* **optic a.**, visual a. **orifacial a.**, in cephalometrics, the angle formed by the junction of the Frankfort horizontal plane (eye-ear plane) with the facial plane (nasion-pogonion). **parietal a.**, the angle formed by junction of lines passing through the extremities of the transverse bizygomatic diameter and the maximum transverse frontal diameter; called also *Quatrefage's a.* **parietal a. of sphenoid bone**, margo parietalis alae majoris. **a. of pelvis**, inclinatio pelvis. **pelvivertebral a.**, inclinatio pelvis. **phrenopericardial a.**, the space or angle between the pericardium and the diaphragm. **Pirogoff's a.**, venous a. **point a.**, in dentistry, the junction of three surfaces of a tooth, or of three walls of a tooth cavity, named according to the tooth surfaces or the cavity walls participating in its formation. See tables of *Cavity Angles* and *Tooth Angles*. **a. of polarization**, the angle at which light is most completely polarized. **posterior a. of petrous portion of temporal bone**, angulus posterior pyramidis ossis temporalis. **principal a.**, refracting a. **a. of pubis**, angulus subpubicus. **Quatrefage's a.**, parietal a. **Ranke's a.**, the angle between the horizontal plane of the skull and a line through the center of the maxillary alveolar margin and the center of the nasofrontal suture. **a. of reflection**, that which a reflected ray makes with a line perpendicular to the reflecting surface. **refracting a.**, that between the two refracting faces of a prism; called also *principal a.* **a. of refraction**, the angle between a refracted ray and a line perpendicular to the refracting surface; see *refraction*. **a. of rib**, angulus costae. **rolandic a.**, a. of **Rolando**, the angle formed by junction of the median plane and the central sulcus (fissure of Rolando). **sacrovertebral a.**, the angle formed at the junction of the sacrum with the lowest lumbar vertebra; called also *lumbosacral a.* **Serres' a.**, meta-facial a. **sigma a.**, the angle between the radius fixus and a line from the staphylion to the hormion. **somatosplanchnic a.**, the angle formed by junction of the somatic and splanchnic layers of the mesoblast in the embryo. **sphenoid a.**, **sphenoidal a.**, 1. an angle at the top of the sella turcica between lines from the nasal point and from the tip of the rostrum of the sphenoid. 2. the anterior inferior angle of the parietal bone; called also *Welcher's a.* **sphenoidal a. of parietal bone**, angulus sphenoidalis ossis parietalis. **squint a.**, the angle by which the visual line of the squinting eye deviates from a line drawn to the object which should be fixed; called also *squint deviation*. **sternal a.**, angulus sterni. **sternoclavicular a.**, the angle formed by junction of the sternum and clavicle. **a. of sternum**, angulus sterni. **subcostal a.**, angulus infrasternalis thoracis. **subpubic a.**, angulus subpubicus. **subscapular a.**, a transverse depression on the costal or ventral surface of the scapula, where the bone appears bent on itself perpendicular to and passing through the glenoid cavity. **substernal a.**, angulus infrasternalis thoracis. **superior a. of**

duodenum, flexura duodeni superior. **superior a. of parietal bone**, anterior, angulus frontalis ossis parietalis. **superior a. of parietal bone**, posterior, angulus occipitalis ossis parietalis. **superior a. of petrous portion of temporal bone**, angulus superior pyramidis ossis temporalis. **superior a. of scapula**, angulus superior scapulae. **a. of Sylvius**, the angle formed by junction of the lateral sulcus (fissure of Sylvius) and a line perpendicular to the horizontal plane tangential to the highest point of the hemisphere. **tentorial a.**, the angle between the basicranial axis and the plane of the tentorium. **tooth a's**, the angles formed by the junction of two or more surfaces of a tooth, named according to the surfaces participating in their formation (see illustration). **Topinard's a.**, ophryospinal a. **a. of torsion**, the angle between the axes of any two different portions of long bones. **tuber a.**, the angle formed by junction of two lines, one parallel with the superior surface of the tuber calcanei and the other joining the anterior and posterior articular facets; normally about 30 degrees. **venous a.**, the angle formed by junction of the internal jugular and subclavian veins; called also *Pirogoff's a.* **vertical a.**, in dental radiology the angle, measured within a vertical plane, at which the central ray of the useful beam is projected relative to a horizontal plane of reference. **vesicourethral a.**, the angle formed by junction of the bladder wall and the urethra. **vesicourethral a., anterior**, the angle formed by junction of the anterior wall of the bladder and the urethra. **vesicourethral a., posterior**, the angle formed by junction of the posterior wall of the bladder and the urethra. **a. of Virchow**, the angle between the nasobasilar line and the nasosubnasal line. **visual a.**, the angle formed between two lines extending from the nodal point of the eye to the extremities of the object seen; called also *optic a.* **Vogt's a.**, the angle between the nasobasilar and alveolonasal lines. **Weisbach's a.**, the angle at the alveolar point between lines passing from the basion and from the middle of the frontonasal suture. **Welcher's a.**, sphenoid a. **xiphoid a's**, the angles formed by the borders of the xiphoid notch. **Y a.**, the angle between the radius fixus and line joining the lambda and the inion.

Angle's classification, splint (ang'elz) [Edward Hartley Angle, American orthodontist, 1855-1930] see under *malocclusion* and *splint*.

Anglesey leg (ang'g'l-se) [Marquis of Anglesey, 1768-1854, for whom the leg was made] see under *leg*.

anglicus sudor (ang'le-kus su'dor) the English sweating fever; a deadly pestilential fever which has several times ravaged England.

angophrasia (ang'go-fra'zhe-ah) [Gr. *anchein* to choke + *phrasis* utterance + *-ia*] a drawling and broken form of speech occurring in dementia (Kussmaul).

angor (ang'gōr) [L. "a strangling"] angina. **a. an'imi**, a feeling of impending dissolution. **a. noctur'nus** (obs.), pavor nocturnus. **a. ocula'ris**, a condition marked by fear of imminent blindness and by sudden attacks of mist before the eyes, possibly due to angiospasm of ocular vessels. **a. pec'toris**, angina pectoris.

angstrom (ang'strem) the unit of wavelength of electromagnetic and corpuscular radiations, equal to 10^{-7} mm. Called also *Angström unit*. Symbol Å or Å.

Angström's law, unit (awng'strem) [Anders Jonas Angström, Swedish physicist, 1814-1874] see under *law*, and see *angstrom*.

Anguillula (ang-gwil'u-lah) [L. "little eel"] a genus of nematode parasites, many species of which have been reassigned to other genera. **A. ace'ti**, *Turbatrix aceti*. **A. intestina'lis**, **A. stercora'lis**, *Strongyloides stercoralis*.

anguilluliasis (ang'gwil-u-li'ah-sis) (obs.) the presence of *Anguillula* in the body.

Anguilluli'na putrefa'ciens (ang-gwil'u-li'nah pu'trē-fa'she-enz) *Ditylenchus dipsaci*.

anguillulosis (ang'gwil-u-lo'sis) (obs.) anguilluliasis.

angular (ang'gu-lar) [L. *angula'ris*] sharply bent; having corners or angles.

angulation (ang'gu-la'shun) [L. *angula'tus* bent] 1. the formation of a sharp obstructive angle, as in the intestine, the ureter, or similar tubes. 2. deviation from a straight line, as in a badly set bone.

anguli (ang'gu-li) [L.] plural of *angulus*.

angulus (ang'gu-lus), pl. *an'guli* [L.] an angle; used as a general term in anatomical nomenclature to designate a triangular area or the angle of a particular structure or part of the body. **a. acromia'lis** [NA], acromial angle: the easily palpable subcutaneous bony point where the lateral border of the acromion becomes continuous with the spine of the scapula. **a. ante'rior pyram'idis os'sis tempora'lis**, a short area on the petrous part of the temporal bone consisting of two parts: one, adjoined to the squamous part of the bone at the petrosquamous suture; the other, a free part articulating with the great wing of the sphenoid; called also *anterior angle of petrous portion of temporal bone*. **a. cos'tae** [NA], costal angle: a prominent line on the external surface of a rib, a little in front of the tubercle, where the rib is bent in two directions and at the same time twisted on its long axis; called also *angle of rib*. **a. fronta'lis os'sis parieta'lis** [NA], frontal angle of parietal bone: the anterosuperior angle of the parietal bone, which is membranous at birth and forms part of the anterior fontanelle; called also *anterior superior angle of parietal bone* and *coronary angle*. **a. infecti'o'sus**, *perleche*. **a. infe'rior scap'ulae** [NA], inferior angle of scapula: the angle formed by the junction of the medial and lateral borders of the scapula. **a. infra'sterna'lis thora'cis** [NA], infrasternal angle of thorax: the angle on the anteroinferior surface of the thorax, the apex of which is the sternoxiphoid junction, and the sides of which are the seventh, eighth, and ninth costal cartilages; it partially delimits two sides of the triangular epigastric region on the ventral body surface; called also *subcostal* or *substernal angle*. **a. i'ridis**, *iridocornealis*. **a. irido'cornea'lis** [NA], iridocorneal angle: a narrow recess between the sclerocorneal junction and the attached margin of the iris, marking the periphery of the anterior chamber of the eye; it is the principal exit site for the aqueous fluid. Called also *filtration angle*, *iridial angle*, *angle of iris*, and *angulus iridis*. **a. latera'lis scap'ulae** [NA], lateral angle of scapula: the head of the scapula, which bears the glenoid cavity and articulates with the head of the humerus; called also *acromial* or *external angle of scapula*, and *condyle of scapula*. **a. latera'lis tib'iae**, *margo interosseus tibiae*. **a. Ludovi'ci**, *a. sterni*. **a. man'dib'ulae** [NA], angle of mandible: the angle created at the junction of the posterior edge of the ramus and the lower edge of the mandible; called also *angle of jaw*, *gonial angle*, and *mandibular angle*. **a. mastoi'deus os'sis parieta'lis** [NA], mastoid angle of parietal bone: the posteroinferior angle of the parietal bone, which articulates with the posterior part of the temporal bone and the occipital bone; called also *posterior inferior angle of parietal bone*. **a. media'lis scap'ulae**, *a. superior scapulae*. **a. media'lis tib'iae**, *margo medialis tibiae*. **a. occipita'lis os'sis parieta'lis** [NA], occipital angle of parietal bone: the posterosuperior angle of the parietal bone, which during fetal life participates in the formation of the posterior fontanelle; called also *posterior superior angle of parietal bone*. **a. oc'uli latera'lis** [NA], lateral angle of eye: the angle formed by the lateral junction of the superior and inferior eyelids. **a. oc'uli media'lis** [NA], medial angle of eye: the angle formed by the medial junction of the superior and inferior eyelids. **a. o'ris** [NA], angle of mouth: the angle formed at either side of the mouth by junction of the upper and the lower lip. **a. parieta'lis os'sis sphenoida'lis**, *margo parietalis alae majoris*. **a. poste'rior pyram'idis os'sis tempora'lis**, the angle on the petrous portion of the temporal bone that separates the posterior from the inferior surface; called also *posterior angle* or *border of petrous portion of temporal bone*. **a. pubis**, *a. subpubicus*.

a. sphenoida'lis os'sis parieta'lis [NA], sphenoid angle of parietal bone: the anteroinferior angle of the parietal bone, which articulates with the great wing of the sphenoid bone and the frontal bone; called also *anterior inferior angle of sphenoid bone*. **a. ster'ni** [NA], sternal angle: the angle formed on the anterior surface of the sternum at the junction of its body and manubrium; called also *a. Ludovici*, and *Louis' or Ludwig's angle*. **a. of stomach**, *incisura angularis ventriculi*. **a. subpu'bicus** [NA], subpubic angle: the apex of the pubic arch; the angle formed at the point of meeting of the conjoined rami of the ischial and pubic bones of the two sides of the body. Called also *a. pubis*, *subpubic arch*, and *arch of pelvis*. **a. supe'rior pyram'idis os'sis tempora'lis**, the angle on the internal surface of the petrous portion of the temporal bone that separates its posterior and anterior surfaces. Called also *superior angle of petrous portion of temporal bone* and *superior border of petrous portion of temporal bone*. **a. supe'rior scap'ulae** [NA], superior angle of scapula: the angle made by the superior and medial borders of the scapula; called also *medial angle of scapula* and *a. medialis scapulae*. **a. veno'sus**, the angle at the junction of the internal jugular vein and the subclavian vein.

angusty (ang-gus'te) [L. *angustus* narrow] (obs.) narrowness.

anhalamine (an-hal'ah-min) a crystalline alkaloid, $C_{11}H_{15}NO_3$, from *Lophophora williamsii*.

anhalonine (an'hah-lo'nin) a crystalline alkaloid, $C_{12}H_{15}NO_3$, from *Lophophora williamsii*, with the pharmacological properties of mescaline.

Anhalonium lewinii (an'hah-lo'ne-um lu-win'e-e) *Lophophora williamsii*.

anhaphia (an-ha'fe-ah) anaphia.

anhedonia (an'he-do'ne-ah) [an neg. + Gr. *hēdonē* pleasure + *-ia*] total loss of feeling of pleasure in acts that normally give pleasure.

anhelation (an-hē-la'shun) [L. *anhela'tio*] (obs.) dyspnea, with panting; shortness of breath.

anhelous (an-he'lus) (obs.) short of breath; marked by dyspnea.

anhidrosis (an'hī-dro'sis) [an neg. + Gr. *hidrōs* sweat + *-osis*] an abnormal deficiency of sweat. **thermogenic a.**, tropical anhidrotic asthenia.

anhidrotic (an'hī-drot'ik) 1. checking the secretion of sweat. 2. an agent that checks the secretion of sweat.

anhydrase (an-hi'drās) an enzyme that catalyzes the removal of water from a compound. **carbonic a.**, a zinc-containing enzyme that catalyzes the decomposition of carbonic acid into carbon dioxide and water and thus facilitates the transfer of carbon dioxide from tissues to blood and to alveolar air.

anhydration (an'hi-dra'shun) dehydration.

anhydremia (an'hi-dre'me-ah) [an neg. + Gr. *hydōr* water + *haima* blood + *-ia*] deficiency of water in the blood.

anhydride (an-hi'drid) [an neg. + Gr. *hydōr* water] a chemical compound derived from a substance, especially an acid, by the abstraction of a molecule of water. The anhydrides of bases are oxides; those of alcohols are ethers. **abietic acid a.**, a resinous substance, $C_{19}H_{19}O_4$, found in rosin. **acetic a.**, a colorless mobile liquid of a pungent acetic odor, the anhydride of acetic acid (CH_3CO_2O). **arsenous a.**, arsenic trioxide. **carbonic a.**, carbon dioxide. **chromic a.**, chromic acid. **perosmic a.**, osmium tetroxide. **silicic a.**, silica. **sorbitol a.**, sorbitan. **sulfurous a.**, sulfur dioxide.

anhydrochloric (an'hi-dro-klo'rik) achlorhydric.

anhydrohydroxyprogesterone (an'hi'-'dro-hi-drok'se-'pro-'jes'ter-ōn) ethisterone.

anhydromuscine (an'hi-dro-mus'kah-rin) a synthetic alkaloid, $OH(CH_2)_3N \cdot CH_2 \cdot CHO$, that has been used in experimental medicine.

Anhydron (an'hi'dron) trademark for a preparation of cyclothiazide.

anhydrosugar (an'hi-dro-shug'ar) a substance produced from cane sugar by heating it under diminished pressure to about $170^\circ C$. It does not ferment nor reduce copper solutions, and it has been used as a food in diabetes.

anhydrous (an'hi'drus) [an neg. + Gr. *hydōr* water] deprived or destitute of water.

anhypnia, anhypnosis (an-hip'ne-ah; an'hip-no'sis) [an neg. + Gr. *hypnos* sleep + *-ia*] (obs.) insomnia.

aniacinamidosis (ah-ni'ah-sin-am'i'do'sis) any disorder due to nicotinamide deficiency.

aniacinosis (ah-ni'ah-si-no'sis) nicotinic acid (niacin) deficiency.

aniantinopsy (an'e-an'thi-nop'se) [an neg. + Gr. *ianthinos* violet + *opsis* vision] inability to distinguish violet tints.

Anichkov's (Anitschkow's) myocyte (cell) (ah-nich'kof's) [Nikolai Nikolaevich Anichkov, Russian pathologist, born 1885] see under *myocyte*.

anicteric (an'ik-ter'ik) without icterus; not associated with jaundice.

anidean (ah-nid'e-an) pertaining to anideus.

anideus (ah-nid'e-us) [an neg. + Gr. *idea* form] holoacardius

amorphous. **embryonic a.**, a blastoderm in which no embryonic axis develops.

anidoxime (an''ī-doks'ēm) chemical name: 3-(diphenylamino)-1-phenyl-1-propanone *O*-[[[(4-methylphenyl)amino]carbonyl]oxime; an analgesic, $C_{21}H_{27}N_3O_3$.

anidrosis (an-i-dro'sis) anhidrosis.

anidrotic (an''ī-drot'ik) anhidrotic.

anile (a'nīl) [L. *anus*, old woman] 1. like an old woman. 2. imbecile.

anileridine (an''ī-ler'ī-dēn) [USP] chemical name: 1-[2-(4-aminophenyl)ethyl]-4-phenyl-4-piperidinecarboxylic acid. A synthetic narcotic analgesic, $C_{22}H_{28}N_2O_2$, occurring as a white, crystalline powder, used as the phosphate salt for premedication for general anesthesia in surgery, as a postoperative sedative, and obstetric analgesic; administered subcutaneously or intramuscularly. Abuse of this drug may lead to dependence. **a. hydrochloride** [USP], a white or nearly white, crystalline powder, $C_{22}H_{28}N_2O_2 \cdot 2HCl$, having the same actions and uses as the base; administered orally.

anilid (an'ī-lid) anilide.

anilide (an'ī-lid) any compound formed from aromatic amines by substitution of an acyl group for the hydrogen of NH_2 .

anilinctio (a'nī-link'shun) [L. *anus* + *lingere*, *linctum* to lick] application of the mouth to, or licking of, the anus.

anilinctus (a'nī-link'tus) anilinctio.

aniline (an'ī-lin) [Arabic *an'nil* indigo, *nīl* blue; L. *nil* indigo] a colorless oily liquid, $C_6H_5NH_2$, from coal tar and from indigo, made commercially by reducing nitrobenzene. It is slightly soluble in water; freely so in ether and alcohol. Combined with other substances, especially chlorine and the chlorates, it forms the aniline colors or dyes that are derived from coal tar. It is an important cause of serious industrial poisoning associated with bone-marrow depression as well as methemoglobinemia. Called also *amidobenzene* and *aminobenzene*. See also *anilism*. **a. sulfate**, a white crystalline substance, $(C_6H_5NH_2)_2H_2SO_4$.

anilingus (a'nī-lin'gus) an individual who practices anilinctio.

anilism (an'ī-lin-izm) a condition produced by exposure to aniline, and marked by methemoglobinemia and aplastic anemia, vertigo, muscular weakness, cyanosis, and digestive derangement.

anilinophil (an-ī-lin'o-fil) [*aniline* + Gr. *philein* to love] (*obs.*) an anilinophilous element or structure.

anilinophile (an'ī-lin'o-fil) (*obs.*) 1. anilinophilous. 2. anilinophil.

anilinophilous (an'ī-lin-of'ī-lus) (*obs.*) staining readily with aniline dyes.

anilism (an'ī-lizm) anilism.

anility (ah-nīl'ī-te) [L. *anus*, old woman] 1. the state of being like an old woman. 2. imbecility.

anilopam hydrochloride (an'īl-o-pam'') chemical name: 4-[2-(1,2,4,5-tetrahydro-8-methoxy-2-methyl-3-*H*-3-benzazepin-3-yl)ethyl]benzenamine dihydrochloride; an analgesic, $C_{20}H_{26}N_2 \cdot O \cdot 2HCl$.

anil-quinoline (an'īl-kwin'o-lin) synthetic quinoline prepared from aniline.

anima (an'ī-mah) [L. "air"] 1. the soul. 2. the active principle of a drug. 3. Jung's term for the unconscious, or inner being, of the individual, as opposed to the personality he presents to the world (persona). In Jungian psychoanalysis, the more feminine soul or feminine component of a man's personality; cf. *animus*.

animal (an'ī-mal) [L. *animalis*, from *anima* life, breath] 1. a living organism having sensation and the power of voluntary movement and requiring for its existence oxygen and organic food. 2. pertaining to such an organism. **control a.**, see *control*, def. 2. **conventional a.**, an experimental animal that has not been reared under gnotobiotic conditions. **decerebrate a.**, an experimental animal that has been subjected to decerebration; such an animal exhibits rigid extension of the legs, with strong tonic contraction of the extensor muscles and to some extent the flexor muscles. See also *decerebrate*, and see *decerebrate rigidity*, under *rigidity*. **experimental a.**, an animal which is used as a subject of experimental procedures in the laboratory. **Houssay a.**, an experimental animal deprived of both pituitary gland and pancreas. **hyperphagic a.**, an experimental animal in which the cells of the ventromedial nucleus of the hypothalamus have been destroyed, abolishing its awareness of the point at which it should stop eating; excessive eating and savagery characterize such an animal. **Long-Lukens a.**, an experimental animal which has been deprived of the pancreas and adrenal glands. **nuclein a.**, an animal into which a certain amount of nuclein has been injected. **slime a.**, a protozoan of the order Mycetozoida; slime mold. **spinal a.**, an animal whose spinal cord has been severed, thus cutting off communication with the brain. **thalamic a.**, an animal in which the brain stem has been transected just above the thalamus.

animalcule (an'ī-mal'kūl) [L. *animalculum*] any minute or microscopic animal organism.

animalculist (an'ī-mal'ku-list) a believer in the theory that

the undeveloped embryo exists preformed in the spermatozoon; cf. *ovist*.

animality (an'ī-mal'ī-te) the distinguishing characteristics of animals.

animation (an'ī-ma'shun) 1. the state of being alive. 2. liveliness of spirits. **suspended a.**, a temporary state of apparent death.

animism (an'ī-mizm) [L. *anima* soul] 1. the obsolete doctrine that the soul is the source of all organic development. 2. the belief that nonliving objects and phenomena (such as clouds) are inhabited and motivated by a nonphysical agent; it is a characteristic of the thinking of early childhood. 3. the theory that behavior is controlled by an immaterial mind or soul.

animus (an'ī-mus) in Jungian psychoanalysis, the more male soul or masculine component of a woman's personality; cf. *anima*, def. 3.

anincretinosis (an-in'kre-tī-no'sis) [*an neg.* + *incretion*] (*obs.*) a disorder due to defect or lack of some internal secretion.

anion (an'ī-on) [Gr. *ana* up + *ion* going] an ion carrying a negative charge owing to the gain of one or more electrons. Hence, because unlike forms of electricity attract each other, it is attracted by, and travels to, the anode or positive pole. See *ion*. The anions include all the nonmetals, the acid radicals, and the hydroxyl ion. They are indicated by a minus sign, as Cl^- (formerly by an accent mark, as Cl').

anionic (an'ī-on'ik) pertaining to or containing an anion.

anionotropy (an'e-on-ot'ro-pe) [*anion* + Gr. *tropos* a turning] a type of tautomerism in which the migrating group is a negative ion rather than the more usual hydrogen ion. Cf. *prototropy*.

aniridia (an'ī-rid'e-ah) [*an neg.* + *iris*] absence of the iris; a rare, usually bilateral, hereditary anomaly that is rarely complete, a rudimentary stump usually being visible on gonioscopy.

anisakiasis (an'is-sa-ki'ah-sis) infection with the roundworm *Anisakis marina*. Human infection is caused by third-stage larvae eaten in undercooked infected marine fish (e.g., herring); the larvae then burrow into the stomach wall, producing an eosinophilic granulomatous mass. Called also *eosinophilic granuloma*.

Anisakis (an'ī-sa'kis) a genus of nematodes that parasitize the stomachs of marine mammals and birds, where they reach the adult stage; the infective third-stage larvae occur in various marine fishes. See also *anisakiasis*. **A. ma'rina**, a species causing anisakiasis.

anisate (an'ī-sāt) a salt of anisic acid.

anischuria (an'is-ku're-ah) [*an neg.* + Gr. *ischouria* retention of the urine] (*obs.*) incontinence of urine; enuresis.

anise (an'is) [L. *anisum*] the fruit of *Pimpinella anisum*, an umbelliferous plant; it is used as a carminative and expectorant. **Chinese a.**, **Indian a.**, the dried ripe fruit of *Illicium verum*, an Asian tree. It yields anise oil and is used as a stimulant and carminative. **star a.**, the fruit of *Illicium religiosum* (*I. japonicum*; *I. anisatum*), the Japanese star anise (shikimmi); it is very poisonous due to content of hananomin.

aniseikonía (an'ī-si-ko'ne-ah) [Gr. *anisos* unequal + *eikōn* image + *-ia*] a condition in which the ocular image of an object as seen by one eye differs in size and shape from that seen by the other.

aniseikonic (an'ī-si-kon'ik) pertaining to or correcting aniseikonía.

anisiondione (an'is-in-di'ōn) [NF] chemical name: 2-(4-methoxyphenyl)-1-*H*-indene-1,3(2*H*)-dione. One of the indanedione anticoagulants, $C_{16}H_{12}O_3$, occurring as a white to creamy white powder; administered orally.

anisine (an'ī-sin) a crystalline alkaloid, $C_{22}H_{24}N_2O_3$, from anise; used as a bactericide and wood fungicide.

aniso- (an-i'so) [Gr. *anisos* unequal, uneven] a combining form denoting unequal or dissimilar.

anisoaccommodation (an-i'so-ah-kom'mo-da'shun) a difference in the accommodative capacity of the two eyes.

anisochromasia (an-i'so-kro-ma'ze-ah) [*aniso-* + Gr. *chrōma* color] a condition in which only the peripheral zone of an erythrocyte is colored.

anisochromatic (an-i'so-kro-mat'ik) [*aniso-* + Gr. *chrōma* color] not of the same color throughout; applied to solutions used for testing color blindness, containing two pigments which are distinguished by both the normal and the color blind eye. Cf. *pseudoisochromatic*.

anisochromia (an'ī-so-kro'me-ah) [*aniso-* + Gr. *chrōma* color + *-ia*] variation in the color of the erythrocytes due to unequal hemoglobin content.

anisocoria (an'ī-so-ko're-ah) [*aniso-* + Gr. *korē* pupil + *-ia*] inequality of the pupils in diameter.

anisocytosis (an-i'so-si-to'sis) [*aniso-* + Gr. *kytos* hollow vessel + *-osis*] presence in the blood of erythrocytes showing excessive variation in size.

anisodactylous (an-i-so-dak'tī-lus) [*aniso-* + Gr. *daktylos* finger] having corresponding digits of unequal length.

anisodactyly (an-i-so-dak'tī-le) a condition characterized by having corresponding digits of unequal length.

anisodiametric (an-i'so-di'ah-met'rik) characterized by different dimensions in different diameters.

anisodont (an-i'so-dont) [*aniso-* + Gr. *odous* tooth] having teeth of unequal size or length.

anisogamete (an'i-so-gam'et) a gamete of different size and structure than the one with which it unites.

anisogametic (an'i-so-gah-met'ik) characterized by the production of gametes of different size and structure.

anisogamous (an'i-sog'ah-mus) having conjugating elements (gametes) that differ in size and structure.

anisogamy (an'i-sog'ah-me) [*aniso-* + Gr. *gamos* marriage] sexual conjugation in which the gametes differ in structure and size, as in the malarial parasites.

anisoic (an'i-so'ik) pertaining to anise.

anisoiconia (an-i'so-i-ko'ne-ah) aniseikonia.

anisokaryosis (an-i'so-kar'e-o'sis) [*aniso-* + Gr. *karyon* nucleus + *-osis*] inequality in the size of the nuclei of cells.

Anisobis (an-i'so-lo'bis) a genus of beetles, the earwigs. Nymphs and adults of *A. euborellia* (Lucas) are intermediate hosts of helminth parasites of man and animals.

anisomastia (an-i'so-mas'te-ah) [*aniso-* + Gr. *mastos* breast + *-ia*] inequality in the size of the breasts.

anisomelia (an-i'so-me'le-ah) [*aniso-* + Gr. *melos* limb + *-ia*] inequality between paired limbs.

anisomeric (an-i'so-mer'ik) not isomeric.

anisometrope (an-i'so-met'rōp) a person affected with anisometropia.

anisometropia (an-i'so-mē-tro'pe-ah) [*aniso-* + Gr. *metron* measure + *ōps* eye + *-ia*] a difference in the refractive power of the two eyes.

anisometropic (an-i'so-mē-trop'ik) pertaining to or characterized by anisometropia.

Anisomorpha (an-i'so-mor'fah) a genus of insects. **A. buprestoides**, the walking stick; a species of orthopterous insects capable of discharging an irritating fluid.

anisophoria (an'i-so-fo're-ah) [*aniso-* + *phoria*] a condition in which the balance of the vertical muscles of one eye differs from that of the other eye, so that the visual lines do not lie in the same horizontal plane.

anisopia (an'i-so'pe-ah) [*aniso-* + Gr. *ōps* eye + *-ia*] inequality of vision in the two eyes.

anisopiesis (an-i'so-pi'e'sis) [*aniso-* + Gr. *piesis* pressure] variation or inequality in the blood pressure as registered in different parts of the body.

anisopoikilocytosis (an-i'so-poi'ki-lo-si-to'sis) the presence in the blood of erythrocytes of varying sizes and abnormal shapes.

anisorhythmia (an-i'so-rith'me-ah) [*aniso-* + Gr. *rhythmos* rhythm + *-ia*] (*obs.*) irregular heart action marked by lack of synchronism in the rhythm of atria and ventricles.

anisosmotic (an'i-sos-mot'ik) not having the same osmotic pressure or not containing the same effective concentration of osmotically active components.

anisospore (an-i'so-spōr') [*aniso-* + Gr. *sporos* spore] 1. an anisogamete of organisms that reproduce by spores. 2. an asexual spore produced by a heterosporous organism. See *isospore*.

anisoporous (an-i'sos'po-rus) having anisospores.

anisosthenic (an-i'sos-then'ik) [*aniso-* + Gr. *sthenos* strength] not having equal strength; said of paired muscles.

anisotonic (an-i'so-ton'ik) 1. showing a variation in tonicity or tension. 2. having an osmotic pressure differing from that of a solution with which it is compared.

anisotropical (an'i-sot'ro-pal) anisotropic.

anisotropic (an-i'so-trop'ik) [*aniso-* + Gr. *tropos* a turning] 1. having unlike properties in different directions, as in any unit lacking spherical symmetry. 2. doubly refracting or having a double polarizing power.

anisotropic methylbromide (an-is'o-tro'pēn) chemical name: *endo*-8,8-dimethyl-3-[(1-oxo-2-propylpentyl)oxy]-8-azonia-bicyclo[3.2.1]octane bromide. An anticholinergic, C₁₇H₃₂BrNO₂, occurring as a white, crystalline powder or plates, which produces relaxation of visceral smooth muscle, and is used as a spasmolytic in various gastrointestinal disorders; administered orally.

anisotropy (an'i-sot'ro-pe) the quality or condition of being anisotropic.

anisum (an-i'sum), gen. *ani'si* [L.] anise.

anisia (an-i'su're-ah) [*aniso-* + Gr. *ouron* urine + *-ia*] a condition marked by alternating oliguria and polyuria.

antigenous (ah'ni-troj'ē-nus) not nitrogenous.

Anitschkow *Anichkov*.

ankle (ang'k'l) 1. the part of the leg just above the foot. 2. the joint between the foot and the leg; ankle joint (articulatio talocruralis [NA]). **cocked a.**, a partial anterior flexion of the fetlock joint of a horse. **deck a's**, edema of the ankles ob-

served on troop ships. **tailors' a.**, an abnormal bursa over the lower end of the fibula in tailors, from pressure caused by sitting on the floor with the legs crossed in front.

ankylo- (ang'ki-lo) [Gr. *ankylos* bent or crooked] a combining form meaning bent, or in the form of a noose or loop.

ankyloblepharon (ang'ki-lo-blef'ah-ron) [*ankylo-* + Gr. *blepharon* eyelid] the adhesion of the ciliary edges of the eyelid to each other. **a. filifor'me adna'tum**, congenital adhesion of the margins of the upper and lower lids by filamentous bands. **a. tota'le**, cryptophthalmos.

ankylocheilia (ang'ki-lo-ki'le-ah) [*ankylo-* + Gr. *cheilos* lip + *-ia*] adhesion of the lips to each other.

ankylocolpos (ang-ki-lo-kol'pos) [*ankylo-* + Gr. *kolpos* vagina] atresia or imperforation of the vagina.

ankyloclactyly (ang'ki-lo-dak'tī-le) [*ankylo-* + Gr. *daktylos* finger] fusion or adhesion of fingers or toes to one another.

ankyloglossia (ang'ki-lo-glos'e-ah) [*ankylo-* + Gr. *glōssa* tongue + *-ia*] tongue-tie. **a. super'ior**, an unusual association of an extensive adhesion of the tongue to the palate, with deformities of the extremities.

ankylophobia (ang'ki-lo-fo'be-ah) [*ankylo-* + Gr. *phobein* to be affrighted by + *-ia*] morbid fear of ankylosis in cases of fracture or joint affection.

ankylopoietic (ang'ki-lo-poi-et'ik) [*ankylo-* + Gr. *poiein* to make] producing or characterized by ankylosis.

ankyloproctia (ang'ki-lo-prok'she-ah) [*ankylo-* + Gr. *prōktos* anus + *-ia*] (*obs.*) a stricture of the anus.

Ankyloproglypha (ang'ki-lo-pro-glif'ah) *Proteroglypha*.

ankylosed (ang'ki-lōsd) fused or obliterated, as a joint.

ankyloses (ang'ki-lo'sēz) plural of *ankylosis*.

ankylosis (ang'ki-lo'sis), pl. *ankylos'es* [Gr. *ankylōsis*] immobility and consolidation of a joint due to disease, injury, or surgical procedure: **artificial a.**, arthrodesis. **bony a.**, the union of the bones of a joint by proliferation of bone cells, resulting in complete immobility; called also *true a.* **cricoarytenoid joint a.**, complete fixation of the cricoarytenoid joint of the larynx due to inflammation and characterized by hoarseness, cough, and difficulty in expectoration. **dental a.**, solid fixation of a tooth, resulting from fusion of the cementum and alveolar bone, with obliteration of the periodontal membrane. **extracapsular a.**, ankylosis due to rigidity of structures exterior to the joint capsule. **false a.**, fibrous **a. fibrous a.**, reduced mobility of a joint due to proliferation of fibrous tissue; called also *false a.* and *spurious a.* **intracapsular a.**, obliteration of joint motion due to disease, injury, or surgical procedure within the joint capsule. **spurious a.**, fibrous **a. stapedial a.**, fixation of the footplate of the stapes in otosclerosis, causing a conductive hearing loss. **true a.**, bony **a.**

Ankylostoma (ang'ki-los'to-mah) *Ancylostoma*.

ankylostomiasis (ang'ki-lo-sto-mi'ah-sis) hookworm disease.

ankylotic (ang'ki-lot'ik) pertaining to or marked by ankylosis.

ankylotomy (ang'ki-lot'o-me) [*ankylo-* + Gr. *tomē* cut] the surgical procedure for relieving tongue-tie; frenectomy.

ankylurethria (ang'kil-u-re'thre-ah) [*ankylo-* + *urethra* + *-ia*] stricture of the urethra.

ankyroid (ang'ki-roid) [Gr. *ankyra* hook + *eidos* form] hook-shaped.

anlage (ahn'lah-geh, or an'lāj), pl. *anla'gen* [Ger. "a laying on"] primordium.

Annandale's operation (an'an-dālz) [Thomas Annandale, Scottish surgeon, 1838-1907] see under *operation*.

anneal (ah-nēl') to soften a material, such as a metal, by controlled heating and cooling, making it less brittle and more easily adapted, bent, or swaged.

annectent (ah-nek'tent) [L. *annectens*] connecting or joining.

annelid (ah-nel-id) any member of *Annelida*.

Annelida (ah-nel'i-dah) a phylum of metazoan invertebrates, the segmented worms; it contains only one class of medical interest, *Hirudinea*, the leeches.

Annona (ah-no'nah) a genus of trees and shrubs of tropical America; the bark, fruit, and leaves of various species are used in native medicine, and the seeds are poisonous for fish and insects and have emetic properties. *A. muricata* L. is the soursop, a popular tropical American edible fruit.

annotto (ah-not'o) a red color or stain from the fruit of *Bixa orellana*, a South American tree, used for coloring butter, cheese, margarine, and other foods; called also *arnotto*.

annoyer (ah-noi'er) a stimulus which arouses an unpleasant feeling reaction.

annular (an'u-lar) [L. *annularis*] shaped like a ring.

annuli (an'u-li) [L.] plural of *annulus*.

annuloplasty (an'u-lo-plas'te) plastic repair of a cardiac valve.

annulorrhaphy (an'u-lor'ah-fe) [L. *annulus* ring + Gr. *raphē* suture] closure of a hernial ring or defect by sutures.

annulus (an'u-lus), pl. *an'nuli* [L. "a ring"; dim. of *annus* a year,

originally a circuit] a ring, or ringlike or circular structure. This word has been replaced by *anulus* in NA terminology. For official names which were otherwise unchanged, see under *anulus*. **a. abdomina'lis**, see *anulus inguinalis profundus* and *anulus inguinalis superficialis*. **a. abdomina'lis abdom'inis**, *anulus inguinalis profundus*. **a. cilia'ris**, orbiculus ciliaris. **a. haemorrhoida'lis**, zona hemorrhoidalis. **a. inguina'lis abdomina'lis**, *anulus inguinalis profundus*. **a. inguina'lis subcuta'neus**, *anulus inguinalis superficialis*. **a. mi'grans**, a disease marked by formation on the tongue of raised red patches with a yellow border, which spread in eccentric circles over the upper and under surfaces; cf. *geographic tongue*, under *tongue*. **a. of nuclear pore**, a filamentous, circular structure at the edge of the nuclear pore of a cell nucleus and extending into the pore as a lining layer; the pore and its annulus together form the pore complex. **a. ova'lis**, limbus of recessus ellipticus vestibuli. **a. of spermatozoon**, the so-called ring centriole (see under *centriole*). **a. tendin'eus commu'nis [Zinni]**, *anulus tendineus communis*. **a. tra'cheae**, any of the rings of the trachea. **tympanic a.**, *anulus tympanicus*. **a. urethra'lis**, a thickening around the urethral opening of the bladder formed by a thickening of the middle muscular coat. **Vioussens' a.**, 1. limbus of the recessus ellipticus vestibuli. 2. ansa subclavia. **a. zin'nii**, *anulus tendineus communis*.

Anocentor (a'no-sen'tor) a genus of ticks of the family Ixodidae. **A. ni'tans**, a species of yellow-brown ticks parasitizing horses and related animals, originally described in Jamaica and Santo Domingo, and later found in the United States in southern Texas, Florida, and Georgia. It transmits *Babesia caballi*, an etiologic agent of biliary fever of horses. Called also *Dermacentor nitans* and *Otocentor nitans*.

anochlesia (an'o-kle'ze-ah) (obs.) 1. tranquillity. 2. catalepsy.

anochromasia (an'o-kro-ma'se-ah) 1. absence of the usual staining reaction from a tissue or cell. 2. a condition in which the erythrocytes show a piling up of hemoglobin at the periphery so that the center is pale.

anociassociation (ah-no'se-ah-so'se-a'shun) [a neg. + L. *nocere* to injure + *association*] the blunting of harmful association impulses; a method of anesthesia designed to minimize the effect of surgical shock. [The mind of the patient is calmed by an injection of scopolamine and morphine one hour before the operation. The general anesthetic employed is usually nitrous oxide and oxygen.] The field of operation is blocked by infiltration with procaine and every division of sensitive tissue during the operation is preceded by the injection of procaine. Sharp dissection and gentle manipulations are employed. [To minimize postoperative discomfort in serious cases, quinine and urea hydrochloride solution is injected at some distance from the wound] (Crile). Called also *anocithesia*.

anociated (ah-no'se-āt'ed) in a condition of anociassociation.

anociation (ah-no'se-a'shun) anociassociation.

anocithesia (ah-no'se-the'ze-ah) anociassociation.

anococcygeal (a'no-kok-sij'e-al) pertaining to the anus and coccyx.

anodal (an-o'dal) pertaining to the anode.

anode (an'ōd) [Gr. *ana* up + *hodos* way] the positive electrode or pole to which negative ions are attracted. In x-ray tubes, it is usually made of solid copper equipped with a tungsten insert which serves as a target. **hooded a.**, in radiology, an anode incorporating a copper shield to overcome problems of secondary x-ray emission. **rotating a.**, in radiology, an anode on which the tungsten target area is constantly rotated in relation to the electron stream.

anoderm (a'no-derm) the epithelial lining of the anal canal.

anomia (an-od'me-ah) [an neg. + Gr. *odmē* smell + *-ia*] anosomia.

anodontia (an'o-don'she-ah) [an neg. + Gr. *odous* tooth + *-ia*] congenital absence of the teeth; it may involve all (*total a.*) or only some of the teeth (*partial a.*, *hypodontia*), and both the deciduous and the permanent dentition, or only teeth of the permanent dentition. **partial a.**, **a. partia'lis**, congenital absence of some of the teeth; called also *hypodontia*. **total a.**, **a. tota'lis**, congenital absence of all of the teeth. **a. ve'ra**, total failure of development of the teeth, usually associated with other anomalies, such as absence of sebaceous glands and deficiency of the sweat, lacrimal, pharyngeal, conjunctival, and salivary glands, and other congenital defects.

anodontism (an'o-don'tizm) anodontia.

anodyne (an'o-din) [an neg. + Gr. *odynē* pain] 1. relieving pain. 2. a medicine that relieves pain; the anodynes include opium, morphine, codeine, aspirin, and others. Called also *acesodyne*. **Hoffmann's a.**, compound ether spirit.

anodynism (an'o-din'e-ah) [an neg. + Gr. *odynē* pain + *-ia*] freedom from pain.

anoia (ah-noi'ah) [Gr. *anoia*] idiocy; amentia.

anol (a'no) a compound, *p*-hydroxy propenyl benzene, which is readily polymerized to form active carcinogenic and estrogenic substances.

anomalad (ah-nom'ah-lad) [*anomaly* + Gr. *-ad* connected with] a term proposed to designate a single, localized anomaly occurring during morphogenesis, together with the pattern of subsequent morphologic defects that stem from it.

anomalos- (ah-nom'ah-lo) [Gr. *anōmalos* irregular, *anōmalia* irregularity, unevenness; from an neg. + Gr. *homalos* even] a combining form meaning irregular or uneven.

anomalopia (ah-nom'ah-lo'pe-ah) [*anomalos-* + Gr. *ōpe* vision + *-ia*] a slight anomaly of visual perception. **color a.**, a minor deviation of color vision, without loss of ability to distinguish the four primary colors; see *deutanomalopia* and *protanomalopia*.

anomaloscope (ah-nom'ah-lo-skōp'') [*anomalos-* + Gr. *skopein* to view] an instrument used in testing for anomalies of color vision by having the subject match mixed spectral lines.

anomalotrophy (ah-nom'al-ōt'ro-fe) [*anomalos-* + Gr. *trophē* nutrition] abnormality of nutrition.

anomalous (ah-nom'ah-lus) [Gr. *anōmalos*] irregular; marked by deviation from the natural order. Applied particularly to congenital and hereditary defects.

anomaly (ah-nom'ah-le) [Gr. *anōmalia*] marked deviation from the normal standard, especially as a result of congenital or hereditary defects. **Alder's a.**, **Alder's constitutional granulation a.**, **Alder-Reilly a.**, a hereditary, clinically unimportant condition in which all leukocytes, but mainly those of the myelocytic series, contain coarse azurophilic granules. **Aristotle's a.**, if the first and second fingers are crossed and a pencil is placed between them, the person feels two pencils. **Axenfeld's a.**, see under *syndrome*. **Chédiak-Higashi a.**, **Chédiak-Steinbrinck-Higashi a.**, see under *syndrome*. **developmental a.**, a defect which is the result of imperfect development of the embryo. **Ebstein's a.**, a malformation of the tricuspid valve, the septal and posterior leaflets being attached to the wall of the right ventricle to a varying degree, and the anterior leaflet being normally attached to the annulus fibrosus; usually associated with an atrial septal defect. Called also *Ebstein's disease*. **Freund's a.**, stenosis of the upper thoracic aperture from shortening of the first rib, resulting in deficient expansion of the apex of the lung. **May-Hegglin a.**, a rare dominantly inherited disorder of blood cell morphology, characterized by the presence of blue, RNA-containing cytoplasmic inclusions similar to Döhle bodies in most granulocytes (neutrophils, eosinophils, basophils, and monocytes), accompanied by abnormally large, poorly granulated platelets and, at times, thrombocytopenia, usually without associated distinguishing features. **Pelger's nuclear a.**, **Pelger-Huët a.**, **Pelger-Huët nuclear a.**, def. 1. **Pelger-Huët nuclear a.**, 1. an inherited defect interfering with normal nuclear lobulation of neutrophils and eosinophils so that the nuclei appear rodlike, spherical, or dumbbell-shaped. The nuclear structure is coarse and lumpy. Called also *Pelger's nuclear a.* and *Pelger-Huët a.* 2. an acquired condition with changes similar to those observed in the genetically determined abnormality, occurring in certain types of anemia and leukemia. **Poland's a.**, see under *syndrome*. **Rieger's a.**, see under *syndrome*. **Uhl's a.**, congenital hypoplasia of the myocardium of the right ventricle, resulting in decreased output of the right side of the heart. **Undritz a.**, hereditary hypersegmentation of neutrophils; see under *hypersegmentation*.

anomer (an'o-mer) [Gr. *ana* up + *meros* part] the α or β form of a sugar produced when the possibility of stereoisomerism is available to the reducing carbon atom by the formation of an oxygen-containing ring.

anomeric (an'o-mer'ik) pertaining to an anomer; denoting the reducing carbon atom in an anomer.

anomia (ah-no'me-ah) [an neg. + Gr. *anoma* name + *-ia*] loss of the power of naming objects or of recognizing and recalling their names; cf. *nominal aphasia* and *dysnomia*.

anonacein (an'o-na'se-in) an alkaloid of *Hylopiia aethiopica* used in Africa as an aphrodisiac.

anonaine (an'o-na'in) an alkaloid, C₁₇H₁₇O₂N, from *Annona reticulata*.

anonychia (an'o-nik'e-ah) [an neg. + Gr. *onyx* nail + *-ia*] congenital absence of a nail or nails.

anonymous (ah-non'i-mus) nameless; innominate.

anoopsia (an'o-op'se-ah) hypertropia.

anoperineal (a'no-per-i-ne'al) pertaining to the anus and perineum.

Anopheles (ah-nof'ē-lēz) [Gr. *anōphēlēs* hurtful] a genus of mosquitoes characterized by long slender palpi, nearly as long as the proboscis, and by holding the body at an angle with the surface on which it rests while the head and proboscis are in line with the body. Many species are vectors of malaria, and some are vectors of *Wuchereria bancrofti*; called also *Cellia*. See table on following page.

anophelicide (ah-nof'ē-lē-sid'') [*anopheles* + L. *caedere* to kill] destructive to anopheline mosquitoes.

anophelifuge (ah-nof'ē-lē-fūj) [*anopheles* + L. *fugare* to put to flight] preventing the bite or attack of anopheline mosquitoes.

anopheline (ah-nof'i-lin) pertaining to or caused by mosquitoes of the tribe Anophelini.

CHIEF MALARIA-CARRYING ANOPHELES SPECIES OF THE WORLD

Anophelini (ah-nof'f-i-li'ni) a tribe of mosquitoes of the subfamily Culicinae, family Culicidae. It includes the genera *Anopheles*, *Chagasia*, and *Nyssorhynchus*, and the subgenus *Stethomyia*. Members of the genus *Anopheles* act as carriers of the malarial parasite.

anophelism (ah-nof'fē-lizm) infestation of a district with anopheline mosquitoes.

anophoria (an-o-fō're-ah) [Gr. *anō* upward + Gr. *pherein* to bear] hyperphoria.

anophthalmia (an'of-thal'me-ah) [an neg. + Gr. *ophthalmoseye*] a developmental defect characterized by complete absence of the eyes (rare) or by the presence of vestigial eyes.

anophthalmos (an'of-thal'mos) anophthalmia.

anophthalmus (an'of-thal'mus) an individual exhibiting anophthalmia.

anopia (an-o'pe-ah) [an neg. + Gr. *ōpē* sight + *-ia*] 1. absence or rudimentary condition of the eye. 2. anopsia (def. 1). 3. hypertropia.

anoplasty (a'no-plas'te) [L. *anus* anus + Gr. *plassein* to form] a plastic or restorative operation on the anus.

Anoplocephala (an'op-lo-sef'ah-lah) [Gr. *anoplos* unarmed + Gr. *kephalē* head] a genus of tapeworms of the family Anoplocephalidae, found in horses.

Anoplocephalidae (an'o-plo-sē-fal'i-de) a family of medium-sized or large tapeworms of the order Cyclophyllidea, subclass Cestoda, commonly parasitic in various herbivorous animals and man. Genera of medical and veterinary importance are *Anoplocephala*, *Moniezia*, *Bertiella*, and *Thysanosoma*.

Anoplura (an'o-plu'rah) [Gr. *anoplos* unarmed + *oura* tail] an order of insects, the sucking lice, characterized by the absence of wings; it includes only two genera of medical interest, *Pediculus* and *Phthirus*. Cf. *Mallophaga*.

anopsia (an-op'se-ah) [an neg. + Gr. *opsis* vision + *-ia*] 1. non-use of or suppression of vision in one eye, as in heterotropia. 2. hypertropia.

anorchia (an-or'ke-ah) anorchism.

anorchid (an-or'kid) [an neg. + Gr. *orchis* testis] an individual with no testes in the scrotum.

anorchidic (an'or-kid'ik) pertaining to anorchism; having no testes in the scrotum.

anorchidism (an-or'ki-dizm') anorchism.

anorchis (an-or'kis) anorchid.

anorchism (an-or'kizm) congenital absence of the testis, which may occur unilaterally or bilaterally.

anorectal (a'no-rek'tal) pertaining to the anus and rectum or to the junction region between the two.

anorectic (an'o-rek'tik) [Gr. *anorektos* without appetite for] 1. pertaining to anorexia; having no appetite. 2. a substance that diminishes the appetite.

anorectitis (a'no-rek-ti'tis) inflammation of the anorectum.

anorectocolonic (a'no-rek'to-ko-lon'ik) pertaining to the anus, rectum, and colon.

anorectum (a'no-rek'tum) [anus + *rectum*] the anus and rectum considered together as a single unit.

anorectic (an'o-ret'ik) anorectic.

anorexia (an'o-rek'se-ah) [Gr. "want of appetite"] lack or loss of the appetite for food. **a. nervosa**, a psychophysiological condition, usually seen in girls and young women, characterized by

severe and prolonged inability or refusal to eat, sometimes accompanied by spontaneous or induced vomiting, extreme emaciation, amenorrhea (impotence in males), and other biological changes.

anorexiant (an'o-rek'se-ant) anorexigenic.

anorexic (an'o-rek'sik) anorectic.

anorexigenic (an'o-rek'si-jen'ik) [anorexia + Gr. *gennan* to produce] 1. producing anorexia, or diminishing the appetite. 2. an agent that produces anorexia, or controls the appetite. Called also *anorexiant*.

anorganic (an'or-gan'ik) denoting tissue (e.g., bone) from which the organic material has been removed.

anorganology (an'or-gan-ol'o-je) the study of nonliving things; abiology.

anorgasm (an-or-gaz'me) [an neg. + *orgasm*] failure to experience orgasm in coitus.

anorthography (an'or-thog'rah-fe) [an neg. + Gr. *orthos* straight + *graphein* to write] loss of the power of writing correctly.

anorthopia (an'or-tho'pe-ah) [an neg. + Gr. *orthos* straight + *opsis* vision + *-ia*] distorted vision.

anorthoscope (an-or'tho-skōp') [an neg. + Gr. *orthos* straight + *skopein* to examine] an instrument for combining two disconnected pictures in one perfect visual image.

anorthosis (an'or-tho'sis) [an neg. + Gr. *orthos* straight + *-osis*] absence of penile erectility, a form of impotence.

anoscope (a'no-skōp) [anus + Gr. *skopein* to examine] a speculum for examining the anus and lower rectum.

anoscopy (ah-nos'ko-pe) examination of the anus and lower rectum by means of an anoscope.

anosigmoidoscopic (a'no-sig-moi'do-skop'ik) pertaining to anosigmoidoscopy.

anosigmoidoscopy (a'no-sig'moi-dos'ko-pe) [anus + *sigmoid* + Gr. *skopein* to examine] endoscopic examination of the anus, rectum, and sigmoid colon.

anosmatic (an'oz-mat'ik) [an neg. + Gr. *osmasthanai* to smell] having no sense of smell, or only an imperfect sense of smell. Cf. *osmatic*, def. 2.

anosmia (an-oz'me-ah) [an neg. + Gr. *osmē* smell + *-ia*] absence of the sense of smell; called also *anosphrasia* and *olfactory anesthesia*. **a. gustatoria**, the loss of the power to smell foods. **preferential a.**, lack of ability to sense certain odors only. **a. respiratoria**, loss of smell due to nasal obstruction.

anosmic (an-oz'mik) 1. pertaining to or characterized by anosmia. 2. odorless. Called also *aosmic*.

anosodiaphoria (an-o'so-di-ah-fō're-ah) [a neg. + Gr. *nosos* disease + *diaphoria* difference] (obs.) indifference to the existence of disease.

anosognosia (an-o'so-no'zhe-ah) [a neg. + Gr. *nosos* disease + *gnosis* knowledge + *-ia*] loss of ability to recognize or to acknowledge bodily defect; it is usually associated with lesions of the nondominant hemisphere and resultant left hemiparesis, but it may also occur with other brain lesions.

anosphrasia (an'os-fra'ze-ah) [an neg. + Gr. *osphrasia* sense of smell] anosmia.

anospinal (a'no-spi'nal) pertaining to the anus and the spinal cord.

anosteoplasia (an-os'te-o-pla'se-ah) [an neg. + Gr. *osteon* bone + *plasis* formation + *-ia*] defective bone formation.

anostosis (an'os-to'sis) [an neg. + Gr. *osteon* bone + *-osis*] defective development of bone.

antia (an-o'she-ah) [an neg. + Gr. *ous* ear + *-ia*] congenital absence of the external ear(s).

anotropia (an'o-tro'pe-ah) [Gr. *anō* upward + *trepein* to turn] a condition in which the visual axes tend to rise above the object looked at.

anotus (an-o'tus) [an neg. + Gr. *ous* ear] an earless fetus.

anovaginal (a'no-vaj'i-nal) pertaining to the anus and vagina, or communicating with the anal canal and vagina, as an anovaginal fistula.

anovaria (an'o-va're-ah) anovarism.

anovarism (an-o'var-izm) [an neg. + *ovary*] absence of the ovaries.

anovesical (a'no-ves'i-kal) [L. *anus* fundament + *vesica* bladder] pertaining to the anus and urinary bladder.

anovular (an-ov'u-lar) not accompanied with the discharge of an ovum.

anovulation (an'ov-u-la'shun) absence of ovulation.

anovulatory (an-ov'u-lah-to're) anovular.

anovulia (an'ov-u'le-ah) (obs.) anovulation.

anovulomenorrhea (an-ov'u-lo-men'o-re'ah) anovular menstruation.

anoxemia (an'ok-se'me-ah) [an neg. + *oxygen* + Gr. *haima* blood + *-ia*] reduction of oxygen content of the blood below physiologic levels.

anoxemic (an''ok-se'mik) characterized by or due to a lack of the normal proportion of oxygen in the blood.

anoxia (ah-nok'se-ah) absence of oxygen supply to tissue despite adequate perfusion of the tissue by blood; the term is often used interchangeably with *hypoxia*, to indicate a reduced oxygen supply. **altitude a.**, high-altitude sickness. **anemic a.**, anoxia resulting from a decrease in amount of hemoglobin or number of erythrocytes in the blood. **anoxic a.**, anoxia resulting from interference with the source of oxygen. **fulminating a.**, a rapid fall in the oxygen content of the blood. **histotoxic a.**, anoxia resulting from disturbance in the tissues that impairs utilization of oxygen. **myocardial a.**, failure of coronary blood flow to keep up with myocardial needs. **a. neonatorum**, anoxia of the newborn. **stagnant a.**, anoxia resulting from inadequate blood flow through the capillaries with resultant abnormal oxygen extraction and low tissue oxygen tension.

anoxiate (ah-nok'se-ät) to put into a state of anoxia.

anoxic (ah-nok'sik) pertaining to or characterized by anoxia.

anoxymbiotic (an-ok''se-bi-on'tik) (obs) anaerobic.

anoxymbiosis (an-ok''se-bi-o'sis) [an neg. + oxygen + Gr. *bios* life] (obs) anaerobiosis.

ANS 1. anterior nasal spine, a cephalometric landmark; the tip of the anterior nasal spine as seen on the x-ray film in norma lateralis. 2. autonomic nervous system.

ansa (an'sah), pl. *an'sae* [L. "handle"] a general term used in anatomical nomenclature to designate a looplike structure; called also *loop*. **a. cervicalis** [NA], a nerve loop in the neck that supplies the infrahyoid muscles and that presents a superior root, which connects with the hypoglossal nerve (and actually consists of fibers of the second or first cervical nerve), and an inferior root (nervus descendens cervicalis), which connects with the second and third cervical nerves. Called also *a. hypoglossi*. **a. hypoglossi**, a. cervicalis. **a. lenticularis** [NA], a small fiber tract arising in the globus pallidus of the lenticular nucleus and extending around the medial border of the internal capsule to reach the anterior portion of the ventral thalamic nucleus. **an'sae nervorum spinalium** [NA], loops of nerve fibers joining the ventral roots of the spinal nerves. **a. peduncularis** [NA], a complex grouping of fibers connecting the amygdaloid nucleus, the piriform area, and the anterior part of the hypothalamus, and various thalamic nuclei. The fiber bundles pass below the internal capsule, a principal bundle being the inferior peduncle of the thalamus. **a. subclavia** [NA], nerve filaments that pass anterior and posterior to the subclavian artery to form a loop interconnecting the middle and inferior cervical ganglia; called also *a. of Viessens* and *annulus of Viessens*. **a. of Viessens**, a. subclavia. **a. vitelli'na**, an embryonic vein from the yolk sac to the umbilical vein.

ansae (an'se) [L.] plural of *ansa*.

ansate (an'sät) [L. *ansatus*, from *ansa* handle] having a handle; loop-shaped.

Ansbacher unit (ahn'sbahk-er) [Stefan Ansbacher, German-American biologist, born 1905] see under *unit*.

anseriform (an'ser-i-form'') of or belonging to the Anseriformes.

Anseriformes (an'ser-i-form'ez) the order including ducks, geese, and swans.

anserine (an'ser-in) [L. *anserinus*] 1. pertaining to or like a goose. 2. a basic substance, beta-alanyl-methylhistidine, first found in goose muscle, and subsequently in the muscle of many animals, not including man.

ansiform (an'si-form) loop-shaped.

Ansolysen (an'so-li'sen) trademark for preparations of pentolinum tartrate.

Anspor (an'spör) trademark for a preparation of cephradine.

Anstie's limit, reagent, rule (limit), test (an'stēz) [Francis Edmund Anstie, English physician, 1833-1874] see under *reagent, rule, and tests*.

ant. anterior.

ant- see *anti-*.

Antabuse (an'tah-būs'') trademark for a preparation of disulfiram.

antacid (ant-as'id) [ant- + L. *acidus* sour] 1. counteracting acidity. 2. a substance that counteracts or neutralizes acidity, usually of the stomach.

antagonism (an-tag'o-nizm'') [Gr. *antagōnisma* struggle] opposition or contrariety between similar things, as between muscles, medicines, or organisms; cf. *antibiosis*. **bacterial a.**, the antagonistic (inhibiting) effect of one bacterial organism on another by reason of its production of an antibiotic (antibiosis) or by its superior competitive ability to absorb nutrients. **induced bacterial a.**, the interaction between two bacteria, induced by close association, which results in antagonism between them. **metabolic a.**, interference with the metabolism or function of a given chemical compound by another bearing a close structural resemblance, the similarity in structure being the basis of the interference. For the various forms of such interference, see under

inhibition. **salt a.**, the antagonistic action of different salts in maintaining normal permeability of the plasma membrane.

antagonist (an-tag'o-nist) [Gr. *antagōnistēs* an opponent] 1. a muscle that acts in opposition to the action of another muscle, its agonist. 2. a substance that tends to nullify the action of another, as a drug that binds to a cell receptor without eliciting a biological response. 3. a tooth in one jaw that articulates with a tooth in the other jaw. **associated a's**, muscles that act on different parts, and by their combined actions move the parts in parallel directions. **competitive a.**, a substance that competes with a substrate or with an enzyme which ordinarily attacks the substrate, thus interfering with usual metabolic activity. The antagonist is usually a substrate analogue. See *antimetabolite*. **direct a's**, muscles that act on the same part, and by their combined actions keep the part at rest. **enzyme a.**, an antimetabolite that interferes with the normal action of an enzyme. See *enzyme inhibition*, under *inhibition*. **insulin a.**, any of a number of factors which block the action of insulin, including epinephrine, somatotropin, glucocorticoids, and glucagon (all of which counteract the metabolic effects of insulin), and the more direct-acting factors associated with plasma protein fractions. **metabolic a.**, an antimetabolite that interferes with the utilization of a substance essential in metabolism. **narcotic a.**, an agent that opposes the action of narcotics on the nervous system. **sulfonamide a.**, para-aminobenzoic acid.

antalgic (ant-al-je'zik) antalgic.

antalgic (ant-al'jik) 1. counteracting or avoiding pain, as a posture or gait assumed so as to lessen pain. 2. analgesic.

antalkaline (ant-al'kah-līn'') [ant- + *alkali*] 1. neutralizing alkalinity. 2. an agent that neutralizes alkalis.

antaphrodisiac (ant'af-ro-diz'e-ak) 1. abrogating the sexual instinct. 2. an agent that allays sexual impulses; called also *anterotic*.

antapopleptic (ant'ap-o-plek'tik) [ant- + Gr. *apoplēxia* apoplexy] an agent for alleviating stroke.

antarthritic (ant'ar-thrit'ik) [ant- + Gr. *arthritikos* gouty] 1. alleviating arthritis. 2. an agent that alleviates arthritis.

antasthenic (ant'as-then'ik) [ant- + Gr. *astheneia* weakness] 1. alleviating weakness, or restoring strength. 2. an agent that alleviates weakness and restores strength.

antasthmatic (ant'az-mat'ik) [ant- + Gr. *asthma* asthma] 1. affording relief in asthma. 2. an agent that relieves the spasm of asthma.

antatrophic (ant'ah-trof'ik) correcting or opposing the progress of atrophy.

antazoline (an-taz'o-lēn) chemical name: 4,5-dihydro-*N*-phenyl-*N*-(phenylmethyl)-1*H*-imidazole-2-methanamine. An antihistaminic, C₁₇H₁₉N₃. Called also *imidamine*. **a. hydrochloride**, a white or almost white, crystalline powder, C₁₇H₁₉ClN₃, used to relieve allergic symptoms and to treat allergic manifestations; administered orally. **a. phosphate** [USP], a white to off-white crystalline powder, C₁₇H₁₉N₃·H₃PO₄, used in a 0.5 per cent solution, applied topically to the eyes in the treatment of allergic conjunctivitis.

ante- (an'te) [L. *ante* before] a prefix signifying "before" in time or place.

antebrachium (an'te-bra'ke-um) [ante- + L. *brachium* arm] [NA] the part of the upper member of the body, between the elbow and the wrist; called also *antibrachium* and *forearm*.

antecardium (an-te-kar'de-um) epigastrium.

antecedent (an'te-se'dent) [L. *antecedere* to go before, precede] a precursor. **plasma thromboplastin a. (PTA)**, Factor XI; see *coagulation factors*, under *factor*.

ante cibum (an'te si'būm) [L.] before meals, usually abbreviated a.c. in prescriptions, etc.

antecornu (an'te-kor'nu) (obs.) cornu anterius ventriculi lateralis.

antecubital (an'te-ku'bī-tal) situated in front of the cubitus, or elbow.

antecurvature (an'te-kur'vah-chur'') [ante- + L. *curvatura* bend] a slight antelexion.

antefebri (an'te-feb'ril) [ante- + L. *febris* fever] before the onset of fever.

anteflect (an'te-flekt) to bend forward.

anteflexed (an'te-flekt) in a condition of antelexion.

anteflexio (an'te-flek'se-o) [L.] antelexion. **a. u'teri**, antelexion, def. 2.

anteflexion (an-te-flek'shun) [ante- + L. *flexio* bend] 1. an abnormal forward curvature of an organ or part. 2. the normal forward curvature of the uterus (anteflexio uteri).

antegrade (an'te-grād) anterograde.

antelocation (an'te-lo-ka'shun) [ante- + L. *locatio* placement] the forward displacement of an organ.

antemet (ant'e-met'ik) antiemetic.

ante mortem (an'te mor'tem) [L.] before death.

antenatal (an'te-na'tal) [ante- + L. *natus* born] occurring or formed before birth; prenatal. Cf. *antepartal*.

antenna (an-ten'ah), pl. *anten'nae*. a feeler of an arthropod; one of the two lateral appendages on the anterior segment of the head of arthropods.

Antepar (an'te-par) trademark for a preparation of piperazine citrate and piperazine phosphate.

antepartal (an'te-par'tal) occurring before parturition, or childbirth, with reference to the mother. Cf. *antenatal*.

ante partum (an'te par'tum) [L.] in obstetrics, before the onset of labor, with reference to the mother.

antepartum (an'te-par'tum) [L.] antepartal.

antephase (an'te-fāz) the portion of interphase immediately preceding mitosis (or meiosis) when energy is being produced and stored for mitosis (or meiosis) and chromosome reproduction is taking place.

antephiatic (ant'ef-e-al'tik) [ant- + Gr. *ephialtēs* nightmare] alleviating or preventing nightmare.

anteposition (an'te-po-zish'un) forward displacement, as of the uterus.

anteprostate (an'te-pros'tāt) [ante- + *prostate*] glandula bulbourethralis.

anteprostatitis (an'te-pros-tah-ti'tis) inflammation of glandula bulbourethralis.

antepyreptic (an'te-pi-ret'ik) [ante- + *pyretic*] occurring before the stage of fever.

Antergan (ant'er-gan) trademark for a preparation of phenbenzamine.

antergia (ant-er'je-ah) [ant- + Gr. *ergon* work] antagonism; resistance.

antergic (ant-er'jik) working in opposite directions; a term applied to antagonistic muscles.

antergy (ant'er-je) antergia.

anteriad (an-te're-ad) toward the anterior surface of the body.

anterior (an-ter'e-or) [L. "before"; neut. *anterius*] situated in front of or in the forward part of an organ, toward the head end of the body; [NA] a term used in reference to the ventral or belly surface of the body.

antero- [L. *anterior* before] a prefix signifying before.

anteroocclusion (an'ter-o-kloo'zhun) mesioocclusion.

anteroexternal (an'ter-o-eks-ter'nal) situated on the front and to the outer side.

anterograde (an'ter-o-grād") [antero- + L. *gredi* to go] moving or extending forward; called also *antegrade*.

anteroinferior (an'ter-o-in-fer'e-or) situated in front and below.

anterointernal (an'ter-o-in-ter'nal) situated on the front and to the inner side.

anterolateral (an'ter-o-lat'er-al) situated in front and to one side.

antromedian (an'ter-o-me'de-an) situated in front and toward the median plane.

anteroposterior (an'ter-o-pos-ter'e-or) from front to back of the body; in roentgenology it denotes such direction of the beam.

anteroseptal (an'ter-o-sep'tal) situated in front of the atrioventricular septum.

anterosuperior (an'ter-o-su-per'e-or) situated in front and above.

anterotic (ant'e-rot'ik) antaphrodisiac.

anteroventral (an'ter-o-ven'tral) situated in front and toward the ventral surface.

anteversion (an'te-ver'zhun) [ante- + L. *versio* a turning] the forward tipping or tilting of an organ; displacement in which the organ is tipped forward, but is not bent at an angle, as occurs in antelexion.

antexed (an-tekst') bent forward.

antexion (an-tek'shun) an abnormal forward bending, as of the spine.

anthelix (ant'he-likes) [ant- + Gr. *helix* coil] [NA] the prominent semicircular ridge seen on the lateral aspect of the auricle of the external ear, anteroinferior to the helix; called also *antihelix*.

anthelminthic (ant'hel-min'thik) anthelmintic.

anthelmintic (ant'hel-min'tik) [ant- + Gr. *helmins* worm] 1. destructive to worms. 2. an agent that is destructive to worms.

anthelmycin (an-thel-mi'sin) an antibiotic substance produced by *Streptomyces longissimus*, which has anthelmintic activity.

anthelone (ant-he'lōn) [ant- + Gr. *helkos* ulcer] a substance obtained from the small intestine (anthelone E; see *enterogastrone*) or from the urine (anthelone U; see *urogastrone*).

anthelotic (ant'he-lot'ik) [ant- + Gr. *hēlos* nail] 1. effective against corns. 2. a remedy for corns.

anthema (an'the-mah) (obs.) an exanthem; a skin eruption.

Anthemis (an'the-mis) [L.; Gr. *anthemis*] 1. a genus of composite-flowered plants. 2. the flower heads of *A. nobilis*, or common camomile, formerly used for coughs, in spasmodic conditions in infants, and as a stomachic tonic.

anthemorrhagic (ant'hem-o-raj'ik) [ant- + *hemorrhage*] anti-hemorrhagic.

anther (an'ther) [Gr. *anthēros* blooming] the portion of the stamen of flowering plants containing the microsporangia (pollen sacs) in which haploid microspores (pollen grains) are formed.

antheridium (an'ther-id'e-im), pl. *antherid'ia* [L. *anthera* medicine made from flowers + Gr. *idion* a diminutive ending] male organ of a cryptogamic plant in which microgametes are produced. Cf. *archegonium*.

antherozoid (an'ther-o-zoid") the motile fertilizing cell of certain fungi.

antherpetic (ant'her-pet'ik) curing or preventing herpes.

anthiolimine (an-thi-o'li-mēn) antimony lithium thiomalate.

Anthiomaline (an'thi-o-mal'in) trademark for antimony lithium thiomalate.

anthocyanidin (an'tho-si-an'i-din) a pigment obtained by hydrolysis of anthocyanin.

anthocyanin (an'tho-si'ah-nin) [Gr. *anthos* flower + *kyanos* blue] any of a class of pigments of blue, red, and violet flowers; they are glycosides, yielding anthocyanidin and a sugar on hydrolysis.

anthocyaninemia (an'tho-si'ah-nin-e'me-ah) the presence of anthocyanin in the blood.

anthocyaninuria (an'tho-si'ah-nin-u're-ah) the presence of anthocyanin in the urine.

Anthomyia (an'tho-mi'yah) a genus of small black houseflies. Two species of medical importance were formerly assigned to this genus. See *Fannia canicularis* and *F. scalaris*.

Anthomyiidae (an'tho-mi'i-de) [Gr. *anthos* flower + *myia* fly] in some systems of classification, a family of the order Diptera; the only genus of medical importance is *Fannia*, the larvae of which may cause both urinary and intestinal myiasis in man.

anthophobia (an'tho-fo-be-ah) [Gr. *anthos* flower + *phobein* to be affrighted by + *ia*] (obs.) a morbid dislike or dread of flowers.

anthorisma (an'tho-riz'mah) [ant- + Gr. *horisma* boundary] (obs.) a diffuse swelling.

Anthozoa (an'tho-zo'ah) [Gr. *anthos* flower + *zoia* animal] a class of coelenterates with large polyps and no medusa stage; it includes corals.

anthracene (an'thrah-sēn) 1. a colorless crystalline hydrocarbon, $C_{14}H_{10}$, from coal tar, used in the manufacture of anthracene dyes. 2. a ptomaine obtained from cultures of the anthrax bacillus, *Bacillus anthracis*.

anthracic (an-thras'ik) pertaining to or resembling anthrax.

anthracidal (an'thrah-si'dal) (obs.) destructive to *Bacillus anthracis*.

anthracoc- [Gr. *anthrax* coal] a combining form denoting relationship to coal or to a carbuncle; also to carbon dioxide.

anthracoid (an'thrah-koid) [anthracoc- + Gr. *eidos* form] resembling anthrax or a carbuncle.

anthracometer (an'thrah-kom'ē-ter) [anthracoc- + Gr. *metron* measure] an instrument for measuring the carbon dioxide of the air.

anthracomucin (an'thrah-ko-mu'sin) a protective substance against anthrax existing in the tissues.

anthraconecrosis (an'thrah-ko-nē-kro'sis) [anthracoc- + Gr. *nekrosis* death] necrotic transformation of a tissue into a black dry mass.

anthracosilicosis (an'thrah-ko-sil'i-ko'sis) [anthracoc- + *silicon*] a mixed condition of anthracosis and silicosis.

anthracosis (an-thrah-ko'sis) [anthracoc- + *osis*] a usually asymptomatic form of pneumoconiosis caused by deposition of coal dust in the lungs; it is present in most urban dwellers. When the coal dust accumulates in large amounts, it may result in pneumoconiosis of coal workers. a. *lin'guae*, black tongue.

anthracotherapy (an'thrah-ko-thēr'ah-pe) [Gr. *anthrax* coal + *therapy*] treatment with charcoal.

anthracotic (an'thrah-kot'ik) pertaining to or affected with anthracosis.

anthracycline (an'thrah-si'klēn) a class of fermentation products of the fungus *Streptomyces peucetius*; it includes doxorubicin and daunomycin, both used as antineoplastic agents.

Antra-Derm (an'thrah-derm) trademark for a preparation of anthralin.

anthragallol (an'thrah-gal'ol) chemical name: 1,2,3-trihydroxy-9,10-anthracenedione. A product of the interaction of gallic, benzoic, and sulfuric acids, $C_{14}H_8O_5$.

anthralin (an'thrah-lin) [USP] chemical name: 1,8,9-anthracenetriol. A synthetic compound, $C_{14}H_{10}O_3$, occurring as a yellowish brown, crystalline powder; applied topically to the skin in the treatment of dermatophytoses, chronic eczema, alopecia areata, and other skin diseases. Called also *dithranol*.

anthramucin (an'thrah-mu'sin) (obs.) anthrax capsule.

anthramycin (an'thrah-mi'sin) (E)-3-(5,10,11,11a-tetrahydro-9,11-dihydroxy-8-methyl-5-oxo-1H-pyrrolo[2,1-c] [1,4]benzodiazepin-2-yl)-2-propanamide. An antineoplastic antibiotic, $C_{16}H_{17}N_5O_4$, produced by *Streptomyces refuineus* var. *thermotolerans*.

anthraquinone (an'thrah-kwin'ōn) chemical name: 9,10-anthracenedione. A derivative of anthracene, $C_{14}H_8O_2$; its derivatives, which are found in aloes, cascara sagrada, senna, and rhubarb, have cathartic properties.

anthrarobin (an'thrah-ro'bin) [*anthracene* + *araroba*] chemical name: 1,2,10-anthracenetriol. A yellowish white powder from alizarin, $C_{15}H_8O_3$; it is useful in psoriasis and various skin diseases in 10 to 20 per cent ointment, and as a parasiticide.

anthrax (an'thraks) [Gr. "coal", "carbuncle"] an infectious disease of ruminants resulting from the ingestion of spores of *Bacillus anthracis* in the soil, often leading to sudden death due to bacteremia (*malignant a.*). It is transmissible to man by direct inoculation from contaminated wool or other animal products, by ingestion of raw meat, or by inhalation of airborne spores from such products, and is characterized by a papule, often with one or more satellite lesions, that enlarges, ulcerates, and becomes crusted with an adherent, dense black eschar. The reddened or red (erythematous) underlying skin is elevated by subcutaneous edema. The lesion persists for two weeks or longer unless treated at its inception. Spread of the bacilli to regional lymph nodes may result in systemic disease marked by widespread edema and hemorrhage. Called also *charbon* and *splenic fever*. **acute a.**,

Anthrax: showing the malignant pustule (Homans).

a usually rapidly fatal form with high fever, death occurring in a day or two. **apoplectic a.**, fulminant anthrax, so called because the symptoms resemble those of cerebral apoplexy. **cerebral a.**, anthrax in which the bacilli invade the brain. **chronic a.**, a persistent form with local lesions confined to the tongue and throat. **cutaneous a.**, anthrax due to inoculation of *Bacillus anthracis* into superficial wounds or abrasions of the skin, producing a black crusted pustule surmounting a broad zone of edema. **industrial a.**, anthrax in man due to contact with wool, hair, hides, or other material from infected animals. **intestinal a.**, a severe form of anthrax in which the intestine is affected. **localized a.**, cutaneous anthrax. **malignant a.**, anthrax. **pulmonary a.**, anthrax of the lungs due to the inhalation of dust or animal hair containing anthrax spores; it is an occupational disease, usually affecting those who handle and sort wools and fleeces. Called also *a. pneumonia* and *woolsorter's disease* or *pneumonia*. **symptomatic a.**, blackleg.

anthropo- (an'thro-po) [Gr. *anthrōpos* man] a combining form denoting a relationship to man, or to a human being.

anthropobiology (an'thro-po-bi-ol'o-je) the biological study of man and the anthropoid apes.

anthropocentric (an'thro-po-sen'trik) [*anthropo-* + Gr. *kentrikos* of or from the center] with a human bias; considering man the center of the universe.

anthropocracy (an'thro-pok'rah-se) [*anthropo-* + Gr. *kratein* to rule] (*obs.*) the tendency in therapeutics to actively interfere in the course of disease; cf. *physiocracy*.

anthropogeny (an'thro-poj'ē-ne) [*anthropo-* + Gr. *gennan* to produce] the evolution and development of man.

anthropography (an'thro-pog'rah-fe) [*anthropo-* + Gr. *graphein* to write] that branch of anthropology which deals with the distribution of the varieties of man, as distinguished by physical character, institutions, customs, etc.; cf. *ethnography*.

anthropoid (an'thro-poid) [*anthropo-* + Gr. *eidos* form] resembling man. The anthropoid apes are the tailless apes, including the chimpanzee, gibbon, gorilla, and orang-utan.

Anthropoidea (an'thro-poi'de-ah) a suborder of Primates including the monkeys, apes, and man.

anthropokinetics (an'thro-po-ki-net'iks) [*anthropo-* + Gr. *kinētikos* for putting in motion] the study of the total human being in action, with integrated applications from the special fields of the biological and physical sciences, psychology, and sociology.

anthropology (an'thro-pol'o-je) [*anthropo-* + *-ology*] the science that treats of man, his origins, historical and cultural development, and races. **criminal a.**, that branch of anthropology which treats of criminals and crimes. **cultural a.**, that branch of anthropology which treats of man in relation to his fellows and to his environment. **physical a.**, that branch of anthropology which treats of the physical characteristics of man.

anthropometer (an'thro-pom'ē-ter) an instrument especially designed for measuring various dimensions of the body.

anthropometric (an'thro-po-met'rik) pertaining to or connected with anthropometry.

anthropometrist (an'thro-pom'ē-trist) a person skilled in anthropometry.

anthropometry (an'thro-pom'ē-tre) [*anthropo-* + Gr. *metron* measure] the science which deals with the measurement of the size, weight, and proportions of the human body.

anthropomorphism (an'thro-po-mor'fiz-m) [*anthropo-* + Gr. *morphe* form] the attribution of human form or character to nonhuman objects.

anthroponomy (an'thro-pon'o-me) [*anthropo-* + Gr. *nomos* law] the science that deals with the laws of human development in relation to environment and to other organisms.

anthropopathy (an'thro-pop'ah-the) [*anthropo-* + Gr. *pathos* suffering] the ascription of human emotions to nonhuman subjects.

anthropophagy (an'thro-pof'ah-je) [*anthropo-* + Gr. *phagein* to eat] 1. cannibalism. 2. a sexual perversion with cannibalistic tendencies.

anthropophilic (an'thro-po-fil'ik) [*anthropo-* + Gr. *philein* to love] preferring human beings to other animals; said of certain mosquitoes. Cf. *anthropozoophilic* and *zoophilic*.

anthropophobia (an'thro-po-fō-be-ah) [*anthropo-* + Gr. *phobein* to be affrighted by + *-ia*] (*obs.*) morbid dread of human society.

anthroposcopy (an'thro-pos'ko-pe) [*anthropo-* + Gr. *skopein* to examine] the judging of the type of body build by inspection rather than by anthropometry.

anthroposophy (an'thro-pos'o-fe) [*anthropo-* + Gr. *sophos* wise] knowledge of the nature of man.

anthropozoonosis (an'thro-po-zo'o-no'sis), pl. *anthropozoonoses* [*anthropo-* + *zoonosis*] a disease of either animals or man that may be transmitted from one species to the other.

anthropozoophilic (an'thro-po-zo'o-fil'ik) [*anthropo-* + Gr. *zōon* animal + *philein* to love] attracted to both human beings and animals; said of certain mosquitoes. Cf. *anthropophilic* and *zoophilic*.

antihypnotic (ant'hip-not'ik) (*obs.*) antihypnotic.

anthysteric (ant'his-ter'ik) antihysteric.

anti-, ant- (Gr. *anti* against) a prefix signifying counteracting, effective against, or opposing.

antiabortifacient (an'ti-ah-bor'ti-fa'shent) an agent that prevents abortion or promotes successful gestation.

antiabortus (an'ti-ah-bor'tus) (*obs.*) neutralizing or destructive to *Brucella abortus*.

antiadrenergic (an'ti-ah-dren-er'jik) 1. opposing the effects of impulses conveyed by adrenergic postganglionic fibers of the sympathetic nervous system. 2. an agent that so acts. Called also *sympatholytic*. Cf. *anticholinergic*.

antiagglutinating (an'ti-ah-gloo'ti-nāt'ing) preventing agglutination.

antiagglutinin (an'ti-ah-gloo'ti-nin) a substance that opposes the action of an agglutinin.

antiaggressin (an'ti-ah-gres'in) a substance once thought to be formed in the body by repeated injection of an aggressin, and tending to oppose the action of the aggressin.

antialbumin (an'ti-al-bu'min) a precipitin for albumin.

antialexic (an'ti-ah-lek'sik) opposing or counteracting an alexin.

antialexin (an'ti-ah-lek'sin) a substance which opposes the action of alexin.

antiamboceptor (an'ti-am'bo-sep'tor) a substance which opposes the action of an amboceptor. Called also *anti-immune body*.

antiamebic (an'ti-ah-me'bik) 1. destroying or suppressing the growth of amebas. 2. an agent that destroys or suppresses the growth of amebas.

anti-amylase (an'ti-am'i-lās) a substance counteracting the action of amylase.

antianaphylactin (an'ti-an-ah-fi-lak'tin) an antibody which counteracts an anaphylactin.

antianaphylaxis (an'ti-an-ah-fi-lak'sis) a condition in which the anaphylaxis reaction is not obtained because of the presence of free antibodies in the blood; the state of desensitization to antigens.

antiandrogen (an'ti-an'dro-jen) any substance capable of inhibiting the biological effects of androgenic hormones.

antianemic (an'ti-ah-ne'mik) 1. counteracting or preventing anemia. 2. an agent that counteracts or prevents anemia.

antianophe-line (an'ti-ah-nof'ē-lin) directed against anopheline mosquitoes or their larvae.

antiantibody (an'ti-an'ti-bod'e) an immunoglobulin which is formed in the body following the administration of antibody acting as an immunogen, and which interacts with the latter.

antiantidote (an'ti-an'ti-dōt') a substance that counteracts the action of an antidote.

antiantitoxin (an'ti-an'ti-tok'sin) an antibody, formed in immunization with an antitoxin, which counteracts the effect of the latter.

antianxiety (an''te-ang-zī'ě-te) dispelling anxiety; relating to an anxiolytic.

antiapoplectic (an''tī-ap''o-plek'tik) affording relief in or preventing stroke (apoplexy).

antiarrhythmolysin (an''tī-ar''ak-nol'i-sin) a substance counteracting spider toxin.

antiarrhythmia (an''tī-ar-rith'mik) 1. preventing or alleviating cardiac arrhythmia. 2. an agent that prevents or alleviates cardiac arrhythmia.

antiarrhythmic (an''tī-ar-rith'mik) 1. preventing or alleviating cardiac arrhythmia. 2. an agent that prevents or alleviates cardiac arrhythmia.

antiarsenin (an''tī-ar'sē-nin) a nonarsenical substance believed to be developed in the body by immunizing doses of arsenous acid.

antiarthritic (an''tī-ar-thrit'ik) antarthritic.

antiasthmatic (an''tī-az-mat'ik) antasthmatic.

antiatherogenic (an''tī-ath'er-o-jen'ik) combating the formation of atheromatous lesions in arterial walls.

autolysin (an''tī-aw-tol'i-sin) a substance which opposes the action of autolysin.

antibacterial (an''tī-bak-te're-al) 1. destroying or suppressing the growth or reproduction of bacteria. 2. a substance that destroys bacteria or suppresses their growth or reproduction.

antibechic (an''tī-bek'ik) [*anti-* + Gr. *bēchikos* suffering from cough] 1. relieving a cough. 2. an agent that relieves cough.

antibiosis (an''tī-bi-o'sis) [*anti-* + Gr. *bios* life] an association between two organisms that is detrimental to one of them, or between one organism and an antibiotic produced by another.

antibiotic (an''tī-bi-ot'ik) [*anti-* + Gr. *bios* life] 1. destructive of life. 2. a chemical substance produced by a microorganism which has the capacity, in dilute solutions, to inhibit the growth of or to kill other microorganisms. Antibiotics that are sufficiently nontoxic to the host are used as chemotherapeutic agents in the treatment of infectious diseases of man, animals, and plants.

bactericidal a., one that kills bacteria. **bacteriostatic a.**, one that suppresses the growth or reproduction of bacteria.

broad-spectrum a., one that is effective against a wide range of bacteria. **macrolide a.**, an antibiotic characterized by a lactone ring, a ketone function, commonly an α - β unsaturated system, and a deoxyamino sugar containing a dimethylamino group. **oral a.**, one that is effective when administered orally.

polyene a., an antibiotic having the general structure $(CH=CH)_n$, and containing large lactone rings; active against a variety of fungi.

antibiotin (an''tī-bi'o-tin) a compound that is antagonistic to biotin; avidin.

antiblastic (an''tī-blas'tik) [*anti-* + Gr. *blastos* germ] retarding growth or multiplication, as of tumor or bacterial cells.

antiblennorrhagic (an''tī-blen-o-raj'ik) 1. preventing or relieving gonorrhea. 2. an agent that prevents or relieves gonorrhea.

antibody (an''tī-bod'e) an immunoglobulin molecule that has a specific amino acid sequence by virtue of which it interacts only with the antigen that induced its synthesis in cells of the lymphoid series (especially plasma cells), or with antigen closely related to it. Antibodies are classified according to their mode of action as agglutinins, bacteriolysins, hemolysins, opsonins, precipitins, etc. See *immunoglobulin*. **alloctophilic a.**, see *cytotropic a.* **anaphylactic a.**, a substance formed as a result of the first injection of a foreign anaphylactogen and responsible for the anaphylactic symptoms following the second injection of the same anaphylactogen. Cf. *anaphylactin*. **anti-D a.**, an antibody active against Rh-D-antigen-positive erythrocytes. **antinuclear a's**, autoantibodies directed against components of the cell nucleus, e.g., DNA, RNA, histone, etc.; they may be detected by immunofluorescence and are present in systemic lupus erythematosus and sometimes in rheumatoid arthritis and in other collagen-vascular diseases with autoimmune manifestations. **autologous a.**, self-derived antibody; autoantibody. **blocking a.**, 1. an antibody which possesses the same specificity as one from another source and interferes with the reactivity of the other by combining with available epitopes of homologous specificity, thereby preventing undesirable sequelae of antigen-antibody reactions *in vivo*. 2. incomplete a. (def. 2). **cell-bound a.**, **cell-fixed a.**, any antibody bound to the cell surface, such as saline inagglutinable antibody or cytotropic antibody. **complete a.**, Wiener's term for the Rh antibody that is capable of directly agglutinating Rh-positive erythrocytes in physiologic saline and implying that the antibody is multivalent, that is, possesses two or more reactive groups. The definition may be extended to include a number of other globulins with similar agglutinating, but not necessarily type-specific, features. **cross-reacting a.**, one that combines with an antigen other than the one that induced its production. **cytophilic a.**, cytotropic a. **cytotoxic a.**, any specific antibody directed against

cellular antigens, which when bound to the antigen, activates the complement pathway or activates killer cells, resulting in cell lysis. **cytotropic a.**, any of a class of antibodies that attach to tissue cells (such as mast cells and basophils) through their Fc segments to induce the release of histamine and other vasoconstrictive amines important in immediate hypersensitivity reactions. In man this antibody, also known as *reagin*, is primarily of the immunoglobulin class IgE. Called also *cytophilic a.* Cytotropic antibodies derived from the same species are called *homocytotropic a's*, or *homocytotropic* or *alloctophilic a's*; those from different species, *heterocytotropic a's*, or *heterocytotropic* or *xenocytophilic a's*. **despeciated a.**, an antibody that has been deprived of its species characteristics. **Forssman a.**, an antibody produced by injecting rabbits with sheep erythrocytes, saline solutions containing guinea pig kidney, or other tissues that contain Forssman antigen. **heterocytotropic a.**, see *cytotropic a.* **heterogenetic a.**, an antibody capable of reacting with antigens phylogenetically unrelated to the antigen that stimulated its production as well as with the homologous antigen. **heterophile a.**, an accessory antibody produced by the injection of a heterogenetic or heterophilic antigen. **homocytotropic a.**, see *cytotropic a.* **horse-type a.**, antibody from any species which, like that from the horse, forms highly soluble antigen-antibody complexes in both antibody excess and in antigen excess, so that precipitation occurs with sharp peaks. **immune a.**, antibody induced by immunization or by transfusion incompatibility, in contrast to the natural antibodies. **incomplete a.**, 1. antibody with only one antigen-binding site or with two sites so close together that the antibody behaves functionally as a univalent antibody. Such antibodies coat antigen-bearing cells or particles but do not agglutinate them. 2. a gamma globulin, described earlier as a univalent antibody combining specifically with Rh-positive erythrocytes without causing visible agglutination but which, in the presence of antihuman globulin (Coombs) serum or high molecular weight media, e.g., albumin, will cause red cell clumping. Other red cell coating proteins, not group specific, may demonstrate similar properties. **inhibiting a.**, blocking a. **isophil a.**, antibodies against red blood cell antigens produced in members of the species from which the red cells originated. **lipoidotropic a.**, the substance in the blood serum of syphilitics which combines with the (lipoidal) antigen to produce a positive Wassermann test. **maternal a's**, antibodies (e.g., of the IgG class) produced in the body of the mother and transferred to the fetal circulation. **natural a's**, serum proteins present in low titer with the structural properties of immunoglobulins, which can react specifically with their antigens, even though the individuals in which they are formed have had no known previous exposure to those antigens. They may result from unknown exposure to naturally occurring antigens, e.g., food or bacterial flora. **neutralizing a.**, antibody that, on mixture with the homologous toxin or infectious agent, detoxifies or reduces the infectious titer; components of the antigen-antibody complex can be dissociated and recovered in their original forms; reversibility of the association often decreases with time; the host cell influences effectiveness of interaction—e.g., a virus that is neutralized for one kind of host cell may be infectious for another. **P-K a's**, Prausnitz-Küstner a's. **Prausnitz-Küstner a's**, homocytotropic antibodies of the immunoglobulin class IgE that are responsible for cutaneous anaphylaxis. Abbreviated P-K a's. See *reagin*. **protective a.**, antibody responsible for immunity to an infectious agent observed in passive immunity. **reaginic a.**, *reagin*. **Rh a's**, those directed against Rh antigen(s) of human erythrocytes. Not normally present, but may be produced when Rh-negative persons receive Rh-positive blood by transfusion or when an Rh-negative person is pregnant with an Rh-positive fetus. **saline a.**, complete a. **sensitizing a.**, a loosely used term, applied to antibodies that are attached to body cells and that "sensitize" the cells or render them susceptible to destruction by body defenses. **Vi a.**, an antibody produced by immunizing rabbits with cultures of highly virulent typhoid bacilli; it will agglutinate the virulent strain which is resistant to ordinary O antibodies. **warm a.**, antibody that reacts more strongly at temperatures of 37° C. or higher, than at lower temperatures. **xenocytophilic a.**, see *cytotropic a.* **7S a's**, antibodies with a sedimentation coefficient of 7S, including all those of immunoglobulin classes IgG and IgD and some of class IgA.

antibrachium (an''tī-bra'ke-um) antibrachium.

antibromic (an''tī-bro'mik) [*anti-* + Gr. *brōmos* smell] deodorant.

antibubonic (an''tī-bu-bon'ik) effective against bubonic plague.

anticachectic (an''tī-kah-kek'tik) 1. preventing or relieving cachexia. 2. an agent that prevents or relieves cachexia.

anticalculous (an''tī-kal'ku-lus) preventing or alleviating calculus.

anticarcinogen (an''tī-kar-sin'o-jen) an agent that counteracts the effect of a carcinogen.

anticarcinogenic (an''tī-kar-sin'o-jen'ik) inhibiting or preventing the development of carcinoma.

anticardium (an''tī-kar'de-um) [*anti-* + Gr. *kardia* heart] antecardium (epigastrium).

anticariogenic (an"tī-kār'e-o-jen'ik) effective in suppressing caries production.

anticarious (an"tī-ka're-us) anticariogenic.

anticatalyst (an"tī-kat'ah-list) a substance that retards the action of a catalyzer by acting on the catalyzer itself.

anticatalyzer (an"tī-kat'ah-liz'er) anticatalyst.

anticataphylactic (an"tī-kat'ah-fi-lak'tik) 1. pertaining to, characterized by, or causing antcataphylaxis. 2. an agent that inhibits cataphylaxis.

anticataphylaxis (an"tī-kat'ah-fi-lak'sis) inhibition of cataphylaxis.

anticathexis (an"tī-kah-thek'sis) [*anti-* + *cathexis*] expression of an emotional impulse as an emotion of opposite character; called also *counterinvestment*.

anticathode (an"tī-kath'ōd) the part of a vacuum tube opposite the cathode; the target.

anti-Cellano (an"tī-seh-lan'o) see *Cellano*.

anticephalalgic (an"tī-sef-ah-lal'jik) curing or preventing headache.

anticheirotonus (an"tī-ki-rot'o-nus) [Gr. *anticheir* thumb + *tonos* tension] spasmodic flexion of the thumb.

antichlorotic (an"tī-klo-rot'ik) effective against chlorosis.

anticholelithogenic (an"tī-ko'li-lith'o-jen'ik) 1. serving to prevent the formation of gallstones. 2. an agent that so acts.

anticholerin (an"tī-kol'er-in) [*anti-* + *cholera*] a substance from cultures of the cholera vibrio, used against cholera.

anticholesteremic (an"tī-ko-les'ter-e'mik) 1. promoting a reduction of cholesterol levels in the blood. 2. any agent that promotes a reduction of blood cholesterol levels, e.g., the sitosterols and clofibrate. Called also *anticholesterolemic*.

anticholesterolemic (an"tī-ko-les'tē-ro-le'mik) anticholesteremic.

anticholinergic (an"tī-ko'lin-er'jik) [*anti-* + *cholinergic*] 1. blocking the passage of impulses through the parasympathetic nerves. 2. an agent that blocks the parasympathetic nerves. Called also *parasympatholytic*. Cf. *antiadrenergic*.

anticholinesterase (an"tī-ko-lin-es'ter-ās) [*anti-* + *cholinesterase*] a drug that prevents the hydrolysis of acetylcholine by the enzyme acetylcholinesterase, thereby permitting high levels of acetylcholine to accumulate at reactive sites.

antichymosin (an"tī-ki'mo-sin) an antibody that prevents the action of rennin on milk.

anticipate (an-tis'f-pāt) [*ante-* + L. *capere* to take] to occur or recur before the regular time; said of a disease or of symptoms. See *anticipation*.

anticipation (an-tis'f-pa'shun) the apparent occurrence of a hereditary disease at a progressively earlier age in successive generations; now considered by most authorities to be an artifact arising from the ease of identification of succeeding cases.

anticlinal (an"tī-kli'nal) [*anti-* + Gr. *klinein* to slope] sloping in opposite directions, as opposite sides of triangular structures.

anticnemion (an"tik-ne'me-on) [*anti-* + Gr. *kēmē* leg] the shin.

anticoagulant (an"tī-ko-ag'u-lant) 1. serving to prevent the coagulation of blood. 2. any substance that, *in vivo* or *in vitro*, suppresses, delays, or nullifies coagulation of the blood. **circulating a.**, a substance present in the blood which inhibits normal blood clotting and thus may cause a hemorrhagic syndrome; it may be directed against a specific coagulation factor and may accompany various hematologic and nonhematologic diseases.

anticoagulative (an"tī-ko-ag'u-la'tiv) preventing or opposing coagulation.

anticoagulin (an"tī-ko-ag'u-lin) a substance that suppresses, delays, or nullifies the coagulation of blood.

anticodon (an"tī-ko'don) a triplet of nucleotides in transfer RNA that is complementary to the codon in messenger RNA which specifies the amino acid.

anticollagenase (an"tī-ko-laj'fī-nās) an antienzyme that neutralizes the activity of collagenase.

anticomplement (an"tī-kom'ple-ment) a substance that opposes or counteracts the action of a complement.

anticomplementary (an"tī-kom'plē-men'ta-re) capable of reducing or destroying the power of a complement.

anticonceptive (an"tī-kon-sep'tiv) contraceptive.

anticoncipients (an"tī-kon-sip'e-enz) a contraceptive agent.

anticonvulsant (an"tī-kon-vul'sant) 1. preventing or relieving convulsions. 2. an agent that prevents or relieves convulsions.

anticonvulsive (an"tī-kon-vul'siv) anticonvulsant.

anticrotin (an"tī-kro'tin) the antitoxin of crotin.

anticurare (an"tī-koo-rah're) an agent that counteracts the action of curare on skeletal muscle.

anticus (an-ti'kus) [L.] anterior.

anticutin (an"tī-ku'tin) [*anti-* + *cutaneous reaction*] an antibody in the blood of certain tuberculous persons which, when

added to tuberculin, neutralizes the latter so that it will not produce the cutaneous reaction.

anticytolysin (an"tī-si-to'l'i-sin) a substance opposing the action of cytolysin.

anticytotoxin (an"tī-si'to-tok'sin) a substance that opposes the action of a cytotoxin.

anti-D the antibody against the principal D-antigen of the Rh blood groups. IgG antibody formed by the mother against D-positive fetal red cells may lead to hemolytic disease of the newborn. Commercial preparation of anti-D, such as RhoGam, may be administered following parturition to prevent maternal alloimmunization against the D-antigen.

antidepressant (an"tī-de-pres'sant) 1. preventing or relieving depression. 2. an agent that stimulates the mood of a depressed patient. **tricyclic a's**, a group of antidepressant drugs that contain three fused rings in their chemical structure and that potentiate the action of catecholamines; they include imipramine, amitriptyline, nortriptyline, protriptyline, desipramine, and doxepin.

antidiabetic (an"tī-di'ah-bet'ik) 1. preventing or alleviating diabetes. 2. an agent that prevents or alleviates diabetes.

antidiabetogenic (an"tī-di-ah-be'to-jen'ik) 1. preventing the development of diabetes. 2. an agent that prevents the development of diabetes.

antidiarrheal (an"tī-di'ah-re'al) 1. counteracting diarrhea. 2. an agent that is effective in combating diarrhea.

antidiarrheic (an"tī-di'ah-re'ik) antidiarrheal.

anti-diastase (an"tī-di'as-tās) a substance formed in the blood serum on the injection of a diastase, which opposes the action of the diastase.

antidinic (an"tī-din'ik) [*anti-* + Gr. *dinos* whirl] effective against vertigo.

antidipsetic (an"tī-dip-set'ik) pertaining to or causing the suppression of thirst.

antidipsia (an"tī-dip'se-ah) [*anti-* + Gr. *dipsa* thirst + *-ia*] (*obs.*) aversion to the ingestion of fluids; hydrophobia.

antidipticum (an"tī-dip'te-kum) an agent that lessens thirst.

antidiuresis (an"tī-di'u-re'sis) suppression of urinary secretion.

antidiuretic (an"tī-di'u-ret'ik) 1. suppressing the rate of urine formation. 2. an agent that suppresses urine formation.

antidiuretin (an"tī-di-u-re'tin) vasopressin.

antidotal (an"tī-do'tal) serving as an antidote.

antidote (an'tī-dōt) [L. *antidotum*, from Gr. *anti* against + *didonai* to give] a remedy for counteracting a poison. **a. against arsenic**, dimercaprol; hydrated oxide of iron with magnesia was once used. **Bibron's a.**, an antidote once used against snake bite: potassium iodide 0.24, mercury bichloride 0.12, bromine 20. **chemical a.**, an antidote that reacts chemically with a poison to form a harmless compound. **Fantus' a.**, an antidote once used for mercury poisoning, consisting of calcium sulfide solution; given by intravenous injection. **Hall a.**, a solution of 7.35 parts potassium iodide and 4 parts quinine hydrochloride in 480 parts water; once used as an antidote for mercuric chloride poisoning. **mechanical a.**, an antidote that prevents the absorption of a poison. **physiologic a.**, an antidote that counteracts the effects of a poison by producing opposing physiologic effects. **universal a.**, a mixture of 2 parts activated charcoal, 1 part magnesium oxide, and 1 part tannic acid, given as $\frac{1}{2}$ ounce in a half glass of warm water, to be followed, except after ingestion of a corrosive substance, by gastric lavage or an emetic; considered by some to be useful in poisoning by acids, alkaloids, glycosides, and heavy metals.

antidotic (an"tī-dot'ik) antidotal.

antidromic (an"tī-drom'ik) [Gr. *antidromein* to run in a contrary direction] conducting impulses in a direction opposite to the normal; said of neurons in the posterior roots of the spinal cord. Evidence suggests, however, that this phenomenon results from ephaptic transmission rather than backward transmission. Cf. *orthodromic*.

antidysenteric (an"tī-dis'en-ter'ik) 1. preventing, alleviating, or curing dysentery. 2. an agent that prevents, alleviates, or cures dysentery.

antidysentericum (an"tī-dis'en-ter'e-kum) a preparation of myrobalan, pelletierin, extract of rose, extract of pomegranate, and gum arabic.

antieczematic (an"tī-ek-zē-mat'ik) 1. effective against eczema. 2. an agent that is effective against eczema.

antieczematous (an"tī-ek-zem'ah-tus) effective against eczema; antieczematic.

antiedematous (an"tī-e-dem'ah-tus) antiedemic.

antiedemic (an"tī-e-dem'ik) 1. preventing or alleviating edema. 2. an agent that prevents or alleviates edema.

antiemetic (an"tī-e-met'ik) [*anti-* + Gr. *emetikos* inclined to vomit] 1. preventing or alleviating nausea and vomiting. 2. an agent that prevents or alleviates nausea and vomiting.

antiemulsin (an''tī-e-mul'sin) an immune serum counteracting emulsin.

antiendotoxin (an''tī-en''do-tok'sik) counteracting the effect of endotoxins.

antiendotoxin (an''tī-en''do-tok'sin) an antibody that counteracts the effect of endotoxin.

antienzyme (an''tī-en''zīm) [*anti* + *enzyme*] an agent that prevents or retards the action of an enzyme.

antiepileptic (an''tī-ep''ē-lep'tik) 1. combating epilepsy. 2. an agent that combats epilepsy.

antiepithelial (an''tī-ep''ē-the'le-al) destructive to epithelial cells.

antierotica (an''tī-e-rot'e-kah) drugs which have an anaphrodisiac effect.

antiesterase (an''tī-es'ter-ās) an agent that inhibits or counteracts the activity of ester-hydrolyzing enzymes.

antiestrogen (an''tī-es-tro'jen) 1. blocking the action of estrogens. 2. an agent that so acts.

antiestrogenic (an''tī-es'tro-jen'ik) counteracting or suppressing estrogenic activity.

antifebrile (an''tī-feb'rīl) antipyretic.

antifebrin (an''tī-feb'rīn) acetanilid.

antifertilizin (an''tī-fer'tī-li'zin) a substance with which fertilizin reacts in agglutinating spermatozoa of certain marine invertebrates.

antifibrillatory (an''tī-fib'rī-lah-tor'e) 1. preventing or stopping fibrillation of the heart. 2. an agent that prevents or stops fibrillation of the heart.

antifibrinolysin (an''tī-fi'brī-nol'tī-sin) an inhibitor of fibrinolysin.

antifibrinolytic (an''tī-fi'brī-no-lit'ik) inhibiting fibrinolysis.

antifilarial (an''tī-fi-la're-al) 1. effective against filaria. 2. an agent that is effective against filaria.

antiflatulent (an''tī-flat'u-lent) 1. relieving or preventing flatulence. 2. an agent that relieves or prevents flatulence.

antiflux (an''tī-fluks) a substance that prevents the attachment of solder.

Antiformin (an''tī-for'min) trademark for a preparation of alkaline sodium hypochlorite solution.

antifungal (an''tī-fung'gal) 1. destructive to fungi, or suppressing their reproduction or growth; effective against fungal infections. 2. an agent that is destructive to fungi, suppresses the growth or reproduction of fungi, or is effective against fungal infections.

antigalactic (an''tī-gah-lak'tik) [*anti* + Gr. *gala* milk] 1. diminishing the secretion of milk. 2. an agent that tends to suppress milk secretion.

antigametocyte (an''tī-gah-me'to-sit) effective against the gametocytes of malaria.

antigelatinase (an''tī-jeh-lat'ī-nās) a substance in the serum of animals infected with bacteria which prevents the digestion of gelatin.

antigen (an''tī-jen) [*antibody* + Gr. *gennan* to produce] any substance which is capable, under appropriate conditions, of inducing a specific immune response and of reacting with the products of that response, that is, with specific antibody or specifically sensitized T-lymphocytes, or both. Antigens may be soluble substances, such as toxins and foreign proteins, or particulate, such as bacteria and tissue cells; however, only the portion of the protein or polysaccharide molecule known as the antigenic determinant (q.v.) combines with antibody or a specific receptor on a lymphocyte. Abbreviated Ag. **acetone-insoluble a.**, an antigen for the Wassermann reaction consisting of the acetone-insoluble constituents of an alcoholic extract of beef heart. **allergic a.**, allergen. **alogeneic a.**, one occurring in some but not all individuals of the same species, e.g., histocompatibility antigens and human blood group antigens; isoantigen. **Au a.**, **Australia a.**, hepatitis B surface a. **B a.**, an antigenic component of the K antigen complex. **beef heart a.**, an antigen for the Wassermann reaction made by extracting fresh normal beef heart tissue with absolute alcohol; the fresh normal hearts of guinea pigs, rabbits, and human beings are also used. **blood-group a's**, secreted soluble mucopolysaccharides possessing the H, A, and B haptenic structures that are characteristic of erythrocytes and some other tissues of the body; see specific *soluble blood group substances*, under *substance*. **capsular a.**, specific capsular substance. **carbohydrate a's**, numerous polysaccharides isolated from bacteria, other cells, and natural substances, which function as specific haptens or as complete antigens. **carcinoembryonic a.**, oncofetal antigen; a cancer-specific glycoprotein antigen of colon carcinoma, also present in many adenocarcinomas of endodermal origin and in normal gastrointestinal tissues of human embryos. **chick embryo a.**, see *Frei a.* **cholesterinized a.**, beef heart antigen to which has been added 0.4 per cent of cholesterol. **common a.**, an antigenic determinant group (epitope) that is present in two or more different antigen molecules and frequently leads to cross-reactions among them. **complete a.**, an antigen which

both stimulates the immune response and reacts with the products (e.g., antibody) of that response. **conjugated a.**, antigen produced by coupling a hapten to a protein carrier molecule through covalent bonds; when it induces immunization, the resultant immune response is directed against both the hapten and the carrier. **cross-reacting a.**, 1. one that combines with antibody produced in response to a different but related antigen, owing to similarity of antigenic determinants. 2. identical antigens in two bacterial strains, so that antibody produced against one strain will react with the other. **D a.**, a red cell antigen of the Rh blood group system, important in the development of isoimmunization in Rh-negative persons exposed to the blood of Rh-positive persons. **E a.**, a red cell antigen of the Rh blood group system. **e a.**, an antigen contained on the outer lipoprotein coat of the hepatitis B virus (Dane particle); also designated HB₂Ag. **envelope a's**, K a's. **F a.**, 1. a fast-migrating tumor-associated antigen first found in association with Hodgkin's disease and identified as a ferritin compound. 2. Forssman a. **febrile a's**, proprietary preparations consisting of suspensions of members of the typhoid-paratyphoid group for the performance of agglutination tests for enteric infections. **fetal a's**, antigens demonstrable during fetal life but not normally in adults; their reappearance in adults is attributed to reactivation of genes associated with cellular transformation for the malignant state. See also *feto-protein*. **flagellar a.**, H antigen. **Forssman a.**, a heterogeneous antigen inducing the production of antishoop hemolysin, occurring in various unrelated animals, mainly in the organs but not in the erythrocytes (guinea pig, horse), but sometimes only in the erythrocytes (sheep), and occasionally in both (chicken). In the original and strict sense, the antigen is typified by that found in the guinea pig kidney and characterized by heat stability and solubility in alcohol; the antigenic determinant is polysaccharide in nature. Its antibody is absorbed by tissues containing the antigen, contains no lysin for bovine cells and little or no agglutinin for sheep cells. The term is also used loosely to refer to any antigen producing sheep hemolysin, but antibodies to it are not identical, as they are in the case of the true Forssman (or F) antigen. **Frei a.**, sterile pus from an unruptured bubo of suspected venereal lymphogranuloma for use in the intradermal Frei test. The virus of the disease is now propagated by inoculating it into the yolk sac of developing chick embryos (*yolk sac antigen*, *chick embryo antigen*), or by inoculating it into the brain tissue of mice (*mouse brain a.*). **Gm group a.**, one of more than twenty allotypic markers on human γ heavy chains usually located on the Fc or the Fd portion of the chain. **H a.** (Ger. *Hauch*, film), 1. the antigen of the flagella of motile bacteria; called also *flagellar a.* Cf. *O a.* 2. H substance. **heat-aggregated protein a.**, a protein antigen, which on modest heating, for example, to 63° C., undergoes partial denaturation, which lessens the solubility of the molecule and causes it to express new antigenic determinants. **hepatitis a.**, **hepatitis-associated a.** (HAA), hepatitis B surface a. **hepatitis B core a.** (HB₂Ag), the antigen of the DNA-containing core of the Dane particle, produced in the nuclei of hepatocytes in viral hepatitis type B. **hepatitis B surface a.** (HB₂Ag), an antigen present in the serum of those infected with viral hepatitis type B, consisting of the outer lipoprotein coat (surface) of the Dane particle. Originally called *Australia (Au) antigen* because it was first found in an Australian aborigine, it is also known as *hepatitis-associated a.* (HAA) and *serum-hepatitis (SH) a.* **heterogeneic a.**, xenogeneic a. **heterogenetic a.**, **heterologous a.**, an antigen common to more than one species whose species distribution is unrelated to its phylogenetic distribution (viz., Forssman's antigen, lens protein, certain caseins, etc.). Called also *heterophile a.* **heterophile a.**, heterogenetic a. **Hikojima a.**, one of the three serological types of cholera vibrio, the other two being the Inaba antigen and the Ogawa antigen. **histocompatibility a's**, genetically determined isoantigens present on the lipoprotein membranes of nucleated cells of most tissues, which incite an immune response when grafted onto a genetically disparate individual and thus determine the compatibility of tissues in transplantation. **Hitchens and Hansen's a.**, one from cultures of meningococcus that are grown on salt-free agar, suspended in water, precipitated with alcohol then with ether, dried, and rubbed up in a mortar with physiologic sodium chloride solution for use. **HLA a's** (*human leukocyte antigen*) histocompatibility antigens (glycoproteins) on the surface of nucleated cells (including circulating and tissue cells) determined by a region on chromosome 6 bearing several genetic loci, each having multiple alleles and designated HLA-A, HLA-B, HLA-C, HLA-D, and HLA-DR, according to the locus at which the allele appears. Specific antigens are further designated by a numeral (e.g., HLA-B5), and provisionally identified antigens are labeled with the letter "w" (e.g., HLA-Bw22). They are important in cross-matching procedures, and are partially responsible for the rejection of transplanted tissues when donor and recipient HLA antigens do not match. A statistical association has been shown between certain HLA antigens and a number of diseases, e.g., HLA-B27 and ankylosing spondylitis. **homologous a.**, isoantigen. **H-Y a.**, a histocompatibility antigen of the cell membrane, dependent on the Y chromosome; it is the mediator of testicular organization (hence, sexual differentiation) in the male.

Ia a's, histocompatibility antigens governed by the I region of the major histocompatibility complex (MHC), located principally on B cells, although T cells, skin and certain macrophages may also contain Ia antigens. **Inaba a.**, one of the three serological types of cholera vibrio, the other two being the Hikojima antigen and the Ogawa antigen. **Inv group a.**, Km a. **isogenic a.**, an antigen carried by an individual which is capable of eliciting an immune response in genetically different individuals of the same species, but not in an individual bearing it. **isophile a.**, allogeneic a. **K a's**, antigens that function as blocking antigens in that their presence interferes with agglutination with O antisera; called also *somatic surface a's* and *envelope a's*. **Km a.**, one of three alloantigens found in the constant region of the κ light chains in human immunoglobulins. Called also *Inv group a.* and *Inv allotype*. **Kveim a.**, an antigen prepared from human sarcoid tissue, usually lymph node or spleen; see under *tests*. **lens a's**, a series of proteins produced during development of the lens of the eye. **Ly a's**, antigenic cell-surface markers of subpopulations of T-lymphocytes, classified as Ly 1, 2, and 3; they are associated with helper and suppressor activities of T-lymphocytes. **lymphogranuloma venereum a.** [USP], a sterile suspension of inactivated *Chlamydia trachomatis* prepared by growing the organism in embryonic tissue of the domestic fowl (*Gallus domesticus*). It is used as a dermal reactivity indicator in the diagnosis of lymphogranuloma venereum. **M a.**, a type-specific antigen that appears to be located primarily in the cell wall and is associated with virulence of *Streptococcus pyogenes*. **Mitsuda a.**, lepromin. **mouse brain a.**, see *Frei a.* **mumps skin test a.** [USP], a sterile suspension of formaldehyde-inactivated mumps virus-infected chick embryo, concentrated and purified by differential centrifugation, and diluted with isotonic sodium chloride solution so that each milliliter contains not less than 20 complement-fixing units; used as a dermal reactivity indicator. **Nègre a.**, an antigen prepared from dead, dried, and triturated tubercle bacilli by means of acetone and methyl alcohol; used in serum tests for tuberculosis. **NP a.**, a nucleoprotein antigen present in the pox group of viruses. **nuclear a's**, the components of cell nuclei with which antinuclear antibodies (see under *antibody*) react. **O a.** (Ger. *ohne Hauch*, without film), the antigen that occurs in the lipopolysaccharide layer of the wall of gram-negative bacteria; called also *somatic a.* Cf. *H a.* **Ogawa a.**, one of the three serological types of cholera vibrio, the other two being the Hikojima antigen and the Inaba antigen. **oncofetal a.**, carcinoembryonic a. **organ-specific a.**, any antigen that occurs exclusively in a particular organ and serves to distinguish it from other organs. Two types of organ specificity have been proposed: (1) first-order or tissue specificity is attributed to the presence of an antigen characteristic of a particular organ in a single species; (2) second-order organ specificity is attributed to an antigen characteristic of the same organ in many, even unrelated species. **partial a.**, hapten. **pollen a.**, the essential polypeptides of the pollen of plants extracted with a suitable menstruum; used in diagnosis, prophylaxis, and desensitization in hay fever. Called also *pollen allergen*. **private a's**, antigens of the low frequency blood groups, so called because they are found only in members of a single kindred, probably differing from ordinary blood group systems only in their incidence. **public a's**, antigens of the high frequency blood groups, so called because they are found in almost all persons tested. **R a.**, a type-specific antigen similar to M antigen except that it is resistant to tryptic digestion. **recall a.**, an antigen to which an individual has previously been sensitized and which is subsequently administered as a challenging dose to elicit a hypersensitivity reaction. **residue a's**, naturally occurring haptens split from the antigenic complex by autolysis or methods of preparation of purified antigen. **S a.**, a heat-stable, soluble viral antigen that is nucleoprotein in nature; it is found in influenza and mumps viruses. **Sachs's a.**, an antigen consisting of a cholesterolized alcoholic extract of beef heart. **self a.**, self-antigen. **sequestered a's**, the cellular constituents of tissue (e.g., lens of the eye, the thyroid, etc.) sequestered anatomically from the lymphoreticular system during embryonic development and thus thought not to be recognized as "self." Should such tissue be exposed to the lymphoreticular system during adult life, an autoimmune response would be elicited. **serum hepatitis a.**, SH a., hepatitis B surface a. **shock a.**, the specific antigen which is capable of eliciting the characteristic immunological reaction (e.g., anaphylaxis) in a sensitized animal. **somatic a.**, O a. **somatic surface a's**, K a's. **species-specific a's**, specific antigens that are restricted to a single species but occur in all members of that species. **Stein's a.**, an antigen for the serologic diagnosis of relapsing fever. **T a.**, a nonstructural, complement-fixing viral antigen synthesized in the early stage of the infectious cycle; it persists in cells that have been modified by oncogenic adenoviruses. **therapeutic a.**, any substance which, on injection into the body, stimulates the formation of protective antibodies. **Thy 1 a.**, theta (θ) a., a surface antigenic determinant of mice, present on thymus-dependent lymphocytes (T-lymphocytes) in the peripheral lymphoid tissues, in the central nervous system, and on the skin and fibroblasts in small amounts. It occurs in two allelic forms: Thy 1.1 and Thy 1.2. **TL a.**, a surface antigenic determinant on thymic lymphocytes of

mice. **tumor-specific a.**, cell-surface antigens of tumors that elicit a specific immune response in the host; abbreviated TSA. **tumor-specific transplantation a.**, any of the cell surface histocompatibility antigens of any given tumor, that evoke a specific immune response on transplantation to a syngeneic host; abbreviated TSTA. **V a.**, Vi a., an antigen contained in the capsule of a bacterium, as the typhoid bacillus, and thought to contribute to its virulence. **VDRL a.**, an alcohol solution containing 0.03 per cent cardiolipin, 0.99 per cent cholesterol, and enough lecithin to produce standard reactivity. **virulence a.**, V a. **W a.**, an antigen which appears to be invariably associated with virulence of the plague bacillus. **xenogeneic a.**, an antigen common to members of one species but not to members of other species; called also *heterogeneic a.* **yolk sac a.**, see *Frei a.*

antigenemia (an"tĭ-jě-ne'me-ah) [*antigen* + *-emia*] the presence of antigen (e.g., hepatitis B antigen) in the blood.

antigenemic (an"tĭ-jen-e'mĭk) exhibiting antigenemia.

antigenic (an-tĭ-jen'ĭk) having the properties of an antigen.

antigenicity (an"tĭ-jě-nis'ĭ-te) the capacity to react with the antibodies induced in an immune response.

antigenophil (an"tĭ-jen'o-fil) antigenotophil.

antigenotherapy (an"tĭ-jen'o-ther'ah-pe) the treatment of disease by the injection of an antigen to stimulate antibody formation.

antigentophil (an"tĭ-jen'to-fil) [*antigen* + Gr. *philein* to love] having an affinity for the antigen, a property of the antigen-binding sites of immunoglobulin (antibody) molecules.

antigenotherapy (an"tĭ-jen'to-ther'ah-pe) antigenotherapy.

antiglobulin (an"tĭ-glob'u-lin) an antibody directed against gamma globulin, as used in the Coombs' test.

antiglyoxalase (an"tĭ-gli-ok'sah-lās) a pancreatic substance that inhibits the action of glyoxalase.

antigoitrogenic (an"tĭ-goĭ'tro-jen'ĭk) [*anti* + *goiter* + Gr. *gennan* to produce] preventing or inhibiting the development of goiter.

antigonadotropic (an"tĭ-go'nad-o-tro'pik) inhibiting the gonadotropic hormones.

antigonorrheic (an"tĭ-gon'o-re'ĭk) effective against gonorrhea.

antigrowth (an'tĭ-grōth) counteracting the growth hormone.

antihallucinatory (an"tĭ-hah-lu'si-nah-to're) counteracting hallucinogenesis; suppressing hallucinations.

anti-HB_c, antibody to hepatitis B core antigen (HB_cAg).

anti-HB_s, antibody to hepatitis B surface antigen (HB_sAg).

antihelix (an"tĭ-he'lik) anhelix.

antihelminthic (an"tĭ-hel-min'tik) anthelmintic.

antihemagglutinin (an"tĭ-hem-ah-gloo'tĭ-nin) a substance whose action is antagonistic to hemagglutinin.

antihemolysin (an"tĭ-he-mol'ĭ-sin) any agent that opposes the action of a hemolysin.

antihemolytic (an"tĭ-he'mo-lit'ĭk) preventing hemolysis; hemosoic.

antihemophilic (an"tĭ-he'mo-fil'ĭk) see *coagulation Factor VIII*, under *factor*.

antihemorrhagic (an"tĭ-hem'o-raj'ĭk) 1. stopping hemorrhage. 2. an agent that prevents or stops hemorrhage.

antiheterolysin (an"tĭ-het'er-ol'ĭ-sin) a substance that counteracts heterolysin.

antihidrotic (an"tĭ-hi-drot'ĭk) anhidrotic.

antihistamine (an"tĭ-his'tah-mēn) a drug that counteracts the action of histamine. The antihistamines are of two types. The conventional ones, as those used in allergies, block the H₁ histamine receptors, whereas the others block the H₂ receptors. See *histamine*. Called also *antihistaminic*.

antihistaminic (an"tĭ-his-tah-min'ĭk) 1. counteracting the effect of histamine. 2. antihistamine.

antihormone (an"tĭ-hor'mōn) chalone.

antihyaluronidase (an"tĭ-hi-ah-lu-rōn'ĭ-dās) an antienzyme that opposes the action of hyaluronidase.

antihydrophobic (an"tĭ-hi-dro-fo'bĭk) counteracting the development of hydrophobia (rabies).

antihypercholesterolemic (an"tĭ-hi'per-ko-les'ter-ol-e'mĭk) effective in decreasing or preventing an excessively high level of cholesterol in the blood. By extension, sometimes used to designate an agent that exerts such an effect.

antihyperglycemic (an"tĭ-hi'per-gli-se'mĭk) 1. counteracting high levels of glucose in the blood. 2. an agent that counteracts high levels of glucose in the blood.

antihyperlipoproteinemic (an"tĭ-hi'per-lip'o-pro'te-in-e'mĭk) 1. promoting a reduction of lipoprotein levels in the blood. 2. an agent that so acts.

antihypertensive (an"tĭ-hi'per-ten'siv) 1. counteracting high blood pressure. 2. an agent that reduces high blood pressure.

antihypnotic (an''tī-hip-not''ik) 1. preventing or hindering sleep. 2. an agent that prevents or hinders sleep.

antihypotensive (an''tī-hi''po-ten''siv) 1. counteracting low blood pressure. 2. an agent that so acts.

antihysteria (an''tī-his-ter''ik) 1. preventing or relieving hysteria. 2. an agent that counteracts hysteria.

anti-icteric (an''tī-ik-ter''ik) relieving icterus or jaundice.

anti-immune (an''tī-im-mūn'') acting so as to prevent immunity.

anti-infectious (an''tī-in-fek''shus) counteracting infection.

anti-infective (an''tī-in-fek''tiv) 1. counteracting infection. 2. an agent that counteracts infection.

anti-inflammatory (an''tī-in-flam''ah-to''re) 1. counteracting or suppressing inflammation. 2. an agent that counteracts or suppresses the inflammatory process.

anti-insulin (an''tī-in-su-lin) a substance that counteracts the action of insulin.

anti-invasin (an''tī-in-va''sin) an enzyme that antagonizes hyaluronidase. **a. I**, an enzyme present in normal blood plasma which antagonizes hyaluronidase. **a. II**, an enzyme present in normal blood plasma which antagonizes proinvasin I.

anti-isolysin (an''tī-i-sol''i-sin) a substance that counteracts an isolysin.

antikataphylactic (an''tī-kat''ah-fi-lak''tik) interfering with kataphylaxis.

antikenotoxin (an''tī-ke''no-tok''sin) a substance that inhibits the action of kenotoxin.

antiketogen (an''tī-ke''to-jen) a substance that inhibits the formation of ketone bodies.

antiketogenesis (an''tī-ke''to-jen''ē-sis) inhibition of the formation of ketone bodies.

antiketogenetic (an''tī-ke''to-jē-net''ik) antiketogenic.

antiketogenic (an''tī-ke''to-jen''ik) preventing or inhibiting the formation of ketone bodies.

antiketoplastic (an''tī-ke''to-plas''tik) antiketogenic.

antikinase (an''tī-ki''nās) an antibody thought to inhibit the action of kinase.

antikinesis (an''tī-ki-ne''sis) [*anti-* + Gr. *kinēsis* movement] the tendency of organisms to resist and lean in an opposite direction to a dragging rotary force, e.g., on a slowly revolving plane (Dubois, 1898).

antilactase (an''tī-lak''tās) an antienzyme that counteracts lactase.

antilactoserum (an''tī-lak''to-se''rum) a substance that inhibits the action of lactoserum.

antileishmanial (an''tī-lesh-ma''ne-al) 1. effective against leishmania. 2. an agent that is effective against leishmania.

antilemic (an''tī-le''mik) [*anti-* + Gr. *loimos* plague] (*obs.*) effective against the plague.

antileprotic (an''tī-lep-rot''ik) 1. therapeutically effective against leprosy. 2. an agent that is therapeutically effective against leprosy.

antilethargic (an''tī-lē-thar''jik) 1. overcoming a tendency toward lethargy. 2. an agent that counteracts a tendency toward lethargy.

antileukocidin (an''tī-lu-ko''si-din) a substance that counteracts leukocidin; called also *antileukotoxin*.

antileukocytic (an''tī-lu''ko-sit''ik) destructive to white blood corpuscles (leukocytes).

antileukoprotease (an''tī-lu''ko-pro''te-ās) an antienzyme of the blood plasma that inhibits the digestion of protein by leukoprotease.

antileukotoxin (an''tī-lu''ko-tok''sin) antileukocidin.

antilewisite (an''tī-lu''i-sīt) dimercaprol; also called *British antilewisite*, or *BAL*.

antilipase (an''tī-lip''ās) a substance that counteracts a lipase.

antilipemic (an''tī-li-pe''mik) 1. counteracting high levels of lipids in the blood. 2. an agent that counteracts high levels of lipids in the blood.

antilipoid (an''tī-lip''oid) an antibody having the power of reacting with a lipid.

antilipotropic (an''tī-lip''o-trop''ik) interfering with the mobilization of fat in the liver.

antilipotropism (an''tī-lip-ot''ro-pizm) interference with the mobilization of fat in the liver.

Antilirium (an''tē-lir''e-um) trademark for a preparation of physostigmine salicylate.

antilitic (an''tī-lith''ik) [*anti-* + Gr. *lithos* stone] 1. preventing the formation of stone or calculus. 2. an agent that prevents the formation of stone or calculus.

antiluetic (an''tī-lu-et''ik) antisyphilitic.

antilysin (an''tī-li''sin) [*anti-* + *lysin*] a substance that opposes the action of a lysin.

antilysis (an''tī-li''sis) the inhibition or suppression of lysis.

antilyssic (an''tī-lis''ik) [*anti-* + Gr. *lyssa* rabies] (*obs.*) antirabic.

antilytic (an''tī-lit''ik) pertaining to antilysis; inhibiting or suppressing lysis.

antimalarial (an''tī-mah-la''re-al) 1. therapeutically effective against malaria. 2. an agent that is therapeutically effective against malaria. Called also *antipaludian*.

antimaniacal (an''tī-mah-ni''ah-kal) 1. preventing or diminishing mania. 2. an agent that prevents or diminishes mania.

antimephitic (an''tī-mē-fit''ik) preventing or neutralizing mephitic substances.

antimere (an''tī-mēr) [*anti-* + Gr. *meros* a part] one of the opposite corresponding parts of an organism which are symmetrical with respect to the longitudinal axis of its body; cf. *metamere*.

antimeristem (an''tī-me-ris''tem) a preparation of a fungus, *Mucor racemos* (var. *malignus*), isolated from malignant tumors of animals; a supposed antitoxin used against the microorganisms that caused the tumors.

antimesenteric (an''tī-mes'en-ter''ik) designating that part of the intestine which is opposite to the site of attachment of the mesentery.

antimetabolite (an''tī-mē-tab''o-lit) a substance bearing a close structural resemblance to one required for normal physiological functioning, and exerting its effect by interfering with the utilization of the essential metabolite. For various ways in which antimetabolites inhibit metabolic processes, see under *inhibition*.

antimethemoglobinemic (an''tī-met''he-mo-glo''bi-ne''mik) 1. promoting reduction of methemoglobin levels in the blood. 2. an agent that so acts.

antimetropia (an''tī-mē-tro''pe-ah) [*anti-* + Gr. *metron* measure + *ōps* eye + *-ia*] hyperopia in one eye with myopia in the other; heterometropia.

antimiasmatic (an''tī-mi''az-mat''ik) [*anti-* + Gr. *miasma* pollution] effective against noxious emanations or exhalations.

antimicrobial (an''tī-mi-kro''be-al) 1. killing microorganisms, or suppressing their multiplication or growth. 2. an agent that kills microorganisms or suppresses their multiplication or growth.

antimicrobic (an''tī-mi-kro''bik) (*obs.*) antimicrobial.

antimineralocorticoid (an''tī-min''er-al-o-kor''ti-koid) a substance that suppresses the action of mineralocorticoids.

Antiminth (an''tī-minth) trademark for a preparation of pyrantel pamoate.

antimitotic (an''tī-mi-tot''ik) inhibiting or preventing mitosis.

antimongoloid (an''tī-mon''go-loid) denoting a feature opposite to one characteristic of mongolism, as antimongoloid slant of the palpebral fissures.

antimongolism (an''te-mon''go-lizm) a term applied to clinical signs opposite to those of Down's syndrome (mongolism), as the syndromes associated with group G (21 and 22) chromosome deletions or chromosome 21 monosomy, characterized by antimongoloid obliquity of the palpebral fissures, hypertonia, high-arched palate, micrognathia, and microcephaly, and by mental and growth retardation.

antimonial (an''tī-mo''ne-al) pertaining to or containing antimony.

antimonic (an''tī-mon''ik) containing antimony in its pentad valency.

antimonid (an''tī-mo''nid) any binary compound of antimony.

antimonious (an''tī-mo''ne-us) containing antimony in its triad valency.

antimonium (an''tī-mo''ne-um), gen. *antimo'nii* [L.] antimony.

antimony (an''tī-mo''ne) [L. *antimonium* or *stibium*] a crystalline metallic element with a bluish luster, symbol Sb, atomic number 51, atomic weight 121.75, forming various medicinal and poisonous salts. **a. chloride**, *a. trichloride*. **a. dimercaptosuccinate**, stibocaptate. **a. lithium thiomalate**, a compound, $\text{Li}_2\text{C}_{12}\text{H}_8\text{O}_{12}\text{SbS}_3 \cdot 9\text{H}_2\text{O}$, which has been used for the same purposes as antimony potassium tartrate, especially in the treatment of schistosomiasis; administered intramuscularly. Called also *anthiolimine*. **a. pentoxide**, a white or yellowish powder, Sb_2O_5 , used in preparation of antimony compounds; called also *antimonic acid*. **a. potassium tartrate** [USP], a trivalent antimony compound, $\text{C}_8\text{H}_4\text{K}_2\text{Sb}_2\text{O}_{12} \cdot 3\text{H}_2\text{O}$, used as an antischistosomal, especially in *Schistosoma japonicum* infections; administered intravenously. It has been used in various tropical infections, such as leishmaniasis, trypanosomiasis, and granuloma inguinale, and rarely as a nauseant expectorant. Called also *tartar emetic* and *potassium antimonyltartrate*. **a. sodium dimercaptosuccinate**, stibocaptate. **a. sodium gluconate**, 1. a pentavalent antimony compound, $\text{C}_8\text{H}_9\text{Na}_2\text{O}_9\text{Sb}$, used as an antileishmanial, administered intravenously or intramuscularly. 2. a trivalent antimony compound, $\text{C}_8\text{H}_9\text{NaO}_7\text{Sb}$, used as an antischistosomal, administered intravenously. Called also *sodium stibogluconate*, *stibogluconate sodium*, and *sodium antimony gluconate*. **a. sodium tartrate**, a trivalent antimony compound, $\text{C}_8\text{H}_4\text{NaO}_7\text{Sb}$, having the same actions and uses as the potassium tartrate but more water-soluble and less irritant when injected. Called also *Plimmer's a.* and *sodium antimonyltartrate*. **a. so-**

dium thioglycollate, a trivalent antimony compound, $C_4H_4NaO_4S_2Sb$, which has been used as an antileishmanial and antischistosomal. Called also *sodium antimonylthioglycollate*. **tartrated a.**, a. potassium tartrate. **a. thioglycollamide**, an organic antimony compound, $Sb(S-CH_2-CO-NH_2)_3$, the triamide of antimony thioglycollic acid; used in the treatment of granuloma inguinale, kala-azar, and filariasis. **a. trichloride**, very deliquescent, colorless, transparent crystals or crystalline mass, $SbCl_3$, highly soluble in water. **a. trioxide**, a white odorless crystalline powder, Sb_2O_3 , used in the preparation of tartar emetic (antimony potassium tartrate).

antimonyl (an-tim'o-nil') the univalent radical SbO —.

antimorph (an'ti-morf) a mutant gene that acts to antagonize or inhibit the influence of its allele.

antimorphic (an'ti-mor'fik) in genetics, antagonizing or inhibiting normal activity; of or pertaining to an antimorph.

antimuscarinic (an'ti-mus'kah-rin'ik) effective against the poisonous activity of muscarine.

antimutagen (an'ti-mu'tah-jen) a substance that antagonizes the mutagenic effects of other substances.

antimyasthenic (an'ti-mi'as-then'ik) 1. counteracting or relieving muscular weakness in myasthenia gravis. 2. an agent that counteracts or relieves muscular weakness in myasthenia gravis.

antimycobacterial (an'ti-mi'ko-bak-te're-al) active against mycobacteria.

antimycotic (an'ti-mi-kot'ik) suppressing the growth of fungi.

antinarcotic (an'ti-nar-kot'ik) counteracting narcotic depression.

antinatriuresis (an'ti-nā'tre-u-re'sis) inhibition of the excretion of sodium in the urine.

antinauseant (an'ti-naw'ze-ant) 1. preventing or relieving nausea. 2. an agent that prevents or relieves nausea.

antineoplastic (an'ti-ne'o-plas'tik) 1. inhibiting or preventing the development of neoplasms; checking the maturation and proliferation of malignant cells. 2. an agent having such properties.

antineoplaston (an'te-ne'o-plas'ton) any of a number of peptides isolated from human urine that inhibit cell division in certain cancer cells but not in normal cells.

antinephritic (an'ti-nē-frit'ik) counteracting inflammation of the kidneys.

antineuralgic (an'ti-nu-ral'jik) counteracting neuralgia.

antineuritic (an'ti-nu-rit'ik) counteracting neuritis.

antineurotoxin (an'ti-nu'ro-tok'sin) a substance that counteracts a neurotoxin.

antineutrino (an'ti-nu-tre'no) the antiparticle of the neutrino.

antineutron (an'ti-nu'tron) an elementary particle without a charge and with a mass and spin equal to that of a neutron, but with magnetic moment opposite to that of a neutron; the antiparticle of a neutron.

antiniad (an-tin'e-ad) toward the antinion.

antinal (an-tin'e-al) pertaining to the antinion.

antinion (an-tin'e-on) [*anti-* + Gr. *inion* occiput] the frontal pole of the head; the median frontal point farthest from theinion.

antinuclear (an'ti-nu'kle-ar) destructive to or reactive with components of the cell nucleus, as antinuclear antibody.

antiodontalgic (an'ti-o'don-tal'jik) relieving toothache.

antioncotic (an't-ong-kot'ik) [*anti-* + Gr. *onkos* bulk, mass] 1. tending to reduce swelling and effective against tumors. 2. an agent that reduces swelling or suppresses growth of tumors.

antiophidica (an'ti-o-fid'i-kah) [*anti-* + Gr. *ophis* snake] remedies that combat the effects of snake bite.

antiophthalmic (an'ti-of-thal'mik) counteracting ophthalmia.

antiopsonin (an'te-op'so-nin) a substance that has an inhibitory influence on opsonins; antitropin.

antiovarulatory (an'ti-ov'u-lah-to're) suppressing ovulation.

antioxidant (an'ti-ok'si-dant) one of many widely used synthetic or natural substances added to a product to prevent or delay its deterioration by action of oxygen in the air. Rubber, paints, vegetable oils, and prepared foods commonly contain antioxidants.

antioxidase (an'ti-ok'si-dās) a substance that impairs oxidase activity.

antioxidation (an'ti-ok-si-da'shun) the prevention of oxidation.

antioxygen (an'ti-ok'si-jen) antioxidant.

antipaludian (an'ti-pah-lu'de-an) antimalarial.

antiparalytic (an'ti-par'ah-lit'ik) [*anti-* + *paralysis*] relieving paralysis.

antiparasitic (an'ti-par'ah-sit'ik) 1. destructive to parasites. 2. an agent destructive to parasites.

antiparastata (an'ti-pah-ras'tah-tah) [*anti-* + Gr. *parastatēs* testis] bulbourethral gland (glandula bulbourethralis [NA]).

antiparastatitis (an'ti-par'ah-stah-ti'tis) inflammation of the glandula bulbourethralis.

antiparasymphathomimetic (an'ti-par'ah-sim'pah-tho-mi-met'ik) producing effects that resemble those of interruption of the parasymphathetic nerve supply.

antiparkinsonian (an'ti-par'kin-so'ne-an) 1. effective in the treatment of parkinsonism. 2. an agent effective in the treatment of parkinsonism.

antiparticle (an'ti-par'ti-k'l) either of two particles, one of matter and one of antimatter, that annihilate each other upon collision, as an electron and a positron.

antipathic (an'ti-path'ik) [*anti-* + Gr. *pathos* feeling] of diverse nature; antagonistic; marked by antipathy.

antipathogen (an'ti-path'o-jen) any substance that acts against a pathogen.

antipathy (an-tip'ah-the) [*anti-* + Gr. *pathos* feeling] an opposing quality or property; a feeling or attitude of strong aversion.

antipedicular (an'ti-pē-dik'u-lar) effective against *Pediculus* (sucking lice), or in the treatment of pediculosis; antipediculotic.

antipediculotic (an'ti-pē-dik'u-lot'ik) 1. effective against lice. 2. an agent effective against lice.

antipepsin (an'ti-pep'sin) an antienzyme that inhibits the action of pepsin.

antiperiodic (an'ti-pe're-od'ik) preventing periodic recurrence of symptoms, as in malaria.

antiperistalsis (an'ti-per'f-stal'sis) reversed peristalsis.

antiperistaltic (an'ti-per'i-stal'tik) 1. pertaining to or causing antiperistalsis. 2. diminishing peristaltic action. 3. an agent that diminishes peristaltic action.

antiperspirant (an'ti-per'spi-rant') 1. inhibiting or preventing perspiration. 2. an agent that inhibits or prevents perspiration.

antiphagin (an'ti-fa'jin) a hypothetical substance once thought to be the specific component of virulent bacteria which renders them resistant to phagocytosis.

antiphagocytic (an'ti-fag-o-sit'ik) counteracting or opposing phagocytosis.

antiphlogistic (an'ti-flo-jis'tik) 1. counteracting inflammation and fever. 2. an agent that counteracts inflammation and fever.

antiphrynosin (an'ti-frī-nol'i-sin) the antivenin for the toxin of toad venom.

antiphthiriac (an'ti-ther'e-ak) effective against lice.

antiphthisic (an'ti-tiz'ik) checking or relieving pulmonary tuberculosis (phthisis).

antiplasmin (an'ti-plaz'min) a substance in the blood that inhibits plasmin.

antiplasmodial (an'ti-plaz-mo'de-al) having a destructive action on plasmodia.

antiplastic (an'ti-plas'tik) [*anti-* + Gr. *plassein* to form] 1. unfavorable to the healing process. 2. an agent that suppresses formation of the blood or other cells.

antiplatelet (an'ti-plāt'let) directed against or destructive to blood platelets.

antipneumococcic (an'ti-nu'mo-kok'sik) destroying pneumococci.

antipodagric (an'ti-po-dag'rik) effective against gout.

antipodal (an'tip'ō-dal) occupying opposite positions; diametrically opposed; pertaining to an antipode.

antipode (an'ti-pōd) something occupying a directly opposed position. In chemistry, a molecule whose atoms are arranged in a directly opposite manner.

antipolycythemic (an'ti-pol'e-si-the'mik) 1. effective against polycythemia. 2. an agent effective against polycythemia.

antiport (an'ti-port) a mechanism of coupling the transport of two compounds across a membrane in opposite directions.

antiposia (an'ti-po'se-ah) antipathy to drinking.

antiprecipitin (an'ti-pre-sip'i-tin) a substance antagonistic in its action to precipitin.

antiprostata (an'ti-pros'tāt) the bulbourethral gland (glandula bulbourethralis [NA]).

antiprostatitis (an'ti-pros'tah-ti'tis) inflammation of the glandula bulbourethralis.

antiprotease (an'ti-pro'te-ās) a substance that checks the proteolytic action of enzymes, as antitryptase.

antiprophthrombin (an'ti-pro-throm'bin) directed against prothrombin; a general term indicating a type of anticoagulant that acts by retarding the conversion of prothrombin to thrombin, without actually designating the specific means by which this occurs.

antiprotozoal (an'ti-pro-to-zo'al) 1. destroying protozoa, or checking their growth or reproduction. 2. an agent that destroys protozoa, or checks their growth or reproduction.

antiprotozoan (an'ti-pro'to-zo'an) antiprotozoal.

antipruritic (an'ti-proo-rit'ik) 1. relieving or preventing itching. 2. an agent, usually a topical application, that relieves or prevents itching.

antipsoriatic (an"tī-so"re-at'ik) 1. effective against psoriasis. 2. an agent effective against psoriasis.

antipsychomotor (an"tī-si-ko-mo'tor) suppressing or inhibiting the motor effects of cerebral or psychic activity.

antipsychotic (an"tī-si-kot'ik) neuroleptic.

antiputrefactive (an"tī-pu'tre-fak'tiv) counteracting putrefaction.

antipyrogenic (an"tī-pi'o-jen'ik) [*anti* + Gr. *pyon* pus + *gennan* to produce] preventing or hindering the development of pus.

antipyresis (an"tī-pi-re'sis) [*anti* + Gr. *pyressein* to have a fever] the therapeutic use of antipyretics.

antipyretic (an"tī-pi-ret'ik) [*anti* + Gr. *pyretos* fever] 1. relieving or reducing fever. 2. an agent that relieves or reduces fever. Called also *antifebrile*, *antithermic*, and *febrifuge*.

antipyrine (an"tī-pi'rīn) [*anti* + Gr. *pyr* fire] [USP] chemical name: 1,2-dihydro-1,5-dimethyl-2-phenyl-3H-pyrazol-3-one. A pyrazole derivative, $C_{11}H_{12}N_2O$, occurring as colorless crystals or white, crystalline powder. An effective analgesic, it is seldom used because of an association with cases of fatal agranulocytoses. A solution of antipyrine and benzocaine in dehydrated glycerine is used in the treatment of acute otitis media. It was formerly used as an antipyretic and anti-inflammatory. Called also *phenazone* and *phenyldimethylpyrazolon*. **a. camphorate**, an antipyretic compound formerly used in night sweats. **a. mandelate**, a salt, $C_{19}H_{20}N_2O_4$, prepared by fusing antipyrine and mandelic acid.

antipyrotic (an"tī-pi-rot'ik) [*anti* + Gr. *pyrōsis* a burning] 1. therapeutically effective against burns. 2. an agent that is effective in the treatment of burns.

antirabic (an"tī-ra'bik) directed against or effective in preventing the development of rabies; antilyssic.

antirachitic (an"tī-rah-kit'ik) therapeutically effective against rickets.

antiradiation (an"tī-ra'de-a'shun) capable of counteracting the effects of radiation; effective against radiation injury.

antirennin (an"tī-ren'in) an antienzyme formed in the blood serum of animals injected with rennin; it counteracts the rennetic coagulation of milk.

antirheumatic (an"tī-ru-mat'ik) [*anti* + *rheumatic*] 1. relieving or preventing rheumatism. 2. an agent that relieves or prevents rheumatism.

antiricin (an"tī-ri'sin) a substance that opposes the action of ricin (e.g., antitoxin produced following the introduction of ricin into the animal body).

antirickettsial (an"tī-ri-ket'se-al) 1. effective against rickettsiae. 2. an agent that is effective against rickettsiae.

antirobin (an"tī-ro'bin) the antitoxin of robin, a poison of the locust tree.

antisalureis (an"tī-sal'u-re'sis) antinatriuresis.

antiscabietic (an"tī-ska'be-et'ik) 1. effective against scabies. 2. an agent effective against scabies.

antiscabious (an"tī-ska'be-us) [*anti* + L. *scabies* itch] antiscabietic.

antiscarlatinal (an"tī-skar-lah-ti'nal) effective against scarlatina.

antischistosomal (an"tī-shis'to-so'mal) 1. effective against schistosomes. 2. an agent that is destructive to schistosomes.

antiscorbutic (an"tī-skor-bu'tik) [*anti* + *scorbutus*] effective in the prevention or relief of scurvy.

antiseborrheic (an"tī-seb'o-re'ik) 1. effective against seborrhea. 2. an agent effective against seborrhea.

antisecretory (an"tī-se-kre'to-re) 1. inhibiting or diminishing secretion; secretoinhibitory. 2. an agent that so acts, as certain drugs that inhibit or diminish gastric secretions.

antisensibilisin (an"tī-sen-si-bil'i-zin) antianaphylactin.

antisensitizer (an"tī-sen'si-tiz'er) a substance that opposes the action of a sensitizer (e.g., anti-antibody or anti-antibody).

antiseptis (an"tī-sep'sis) [*anti* + Gr. *sepsis* putrefaction] the prevention of sepsis by the inhibition or destruction of the causative organism. **physiologic a.**, the combination of methods by which the body excludes germs; called also *autoantiseptis*.

antiseptic (an"tī-sep'tik) 1. preventing decay or putrefaction. 2. a substance that will inhibit the growth and development of microorganisms without necessarily destroying them. Cf. *disinfectant*. **Crede's a.**, silver citrate. **Dakin's a.**, see *diluted sodium hypochlorite solution*, under *solution*. **Lister's a.**, mercury-zinc cyanide.

antisepticism (an"tī-sep'ti-sizm) the systematic employment of antiseptic agents.

antisepticize (an"tī-sep'ti-siz) to render antiseptic.

antiserum (an"tī-se'rum) a serum that contains antibody or antibodies; it may be obtained from an animal that has been immunized either by injection of antigen into the body or by infection with microorganisms containing the antigen. **Reenstierna a.**, a serum once used in the treatment of leprosy, pre-

pared by inoculating sheep with glycerin bouillon cultures of an organism then thought to be the mycobacterium of leprosy. **Rh a.**, serum that contains antibodies against antigenic determinants shared by some humans and all Rhesus monkeys.

antisialagogue (an"tī-si-al'ah-gog) 1. counteracting the formation of saliva. 2. an agent that counteracts any influence that promotes the flow of saliva.

antisialic (an"tī-si-al'ik) [*anti* + Gr. *sialon* saliva] 1. checking the flow of saliva. 2. an agent that checks the secretion of saliva.

antisideric (an"tī-si-der'ik) [*anti* + Gr. *sidēros* iron] incompatible with iron.

antisocial (an"tī-so'shal) denoting a personality disorder marked by a basic lack of socialization and repeated conflict with society. Called also *psychopathic* and *sociopathic*. See *antisocial personality*, under *personality*.

antisocialism (an"tī-so'shal-izm") the manifestation of antisocial personality.

antispasmodic (an"tī-spaz-mod'ik) 1. relieving spasm, usually of smooth muscle, as in arteries, bronchi, intestine, bile duct, ureters or sphincters, but also of voluntary muscle. Cf. *antispastic*. 2. an agent that relieves spasm. **biliary a.**, an agent that relieves spasm of the biliary duct and sphincter. **bronchial a.**, an agent that relieves bronchial spasm.

antispastic (an"tī-spas'tik) antispasmodic with specific reference to skeletal muscle.

antispermotoxin (an"tī-sper'mo-tok'sin) a substance that opposes the action of a spermotoxin.

antistaphylococcic (an"tī-staf'fī-lo-kok'sik) killing or suppressing staphylococci.

antistaphylohemolysin (an"tī-staf'fī-lo-he-mol'i-sin) antistaphylolysin.

antistaphylolysin (an"tī-staf'fī-lol'i-sin) a substance that opposes the action of staphylolysin.

antisteapsin (an"tī-ste-ap'sin) an antibody that counteracts steapsin.

antisterility (an"tī-ste-ri'l'i-te) combating sterility.

Antistine (an-tis'tin) trademark for preparations of antazoline.

antistreptococcic (an"tī-strep'to-kok'sik) antagonistic to streptococci.

antistreptokinase (an"tī-strep-to'kī-nās) an antibody that inhibits streptokinase.

antistreptolysin (an"tī-strep-tol'i-sin) an antibody that inhibits streptolysin.

antisubstance (an"tī-sub'stans) antibody.

antisudoral (an"tī-su'dor-al) antisudorific.

antisudorific (an"tī-su'dor-if'ik) [*anti* + L. *sudor* sweat] 1. inhibiting perspiration. 2. an agent that inhibits perspiration.

antisympathetic (an"tī-sim'pah-thet'ik) 1. producing effects that resemble those of interruption of the sympathetic nerve supply. 2. an agent that produces effects resembling those of interruption of the sympathetic nerve supply.

antisyphilitic (an"tī-sif'fī-li'tik) [*anti* + *syphilitic*] 1. effective against syphilis. 2. a remedy for syphilis. Called also *antiluetic*.

antitemplate (an"tī-tem'plāt) a hypothetical substance said to inhibit mitosis of normal cells and, on injury to cells, to diffuse out of the cells to initiate mitosis.

antitetanic (an"tī-tē-tan'ik) preventing or curing tetanus.

antitetanolyisin (an"tī-tet-ah-nol'i-sin) the antibody to tetanolyisin.

antithenar (an"tī-the'nar) [*anti* + Gr. *thenar* palm, sole] situated opposite to the palm or the sole.

antithermic (an"tī-ther'mik) [*anti* + Gr. *thermē* heat] antipyretic.

antithrombin (an"tī-throm'bin) [*anti* + *thrombin*] a general term for a naturally occurring or therapeutically administered substance (e.g., heparin) that neutralizes the action of thrombin and thus limits or restricts blood coagulation. Six naturally occurring antithrombins have been designated by Roman numerals (I to VI); of these, antithrombins I and III appear to be of major importance. **a. I**, a term referring to the capacity of fibrin to adsorb large amounts of thrombin and thus neutralize (but not inactivate) it. **a. III**, a protein (an α_2 -globulin molecular weight 64,000) of normal plasma and extravascular sites that inactivates thrombin in a time-dependent irreversible reaction and serves as a cofactor of heparin in its anticoagulant activities. Antithrombin III also inhibits certain coagulation factors.

antithromboplastin (an"tī-throm'bo-plas'tin) any agent or substance that prevents or interferes with the interaction of the blood coagulation factors as they generate prothrombinase (prothrombin converting principle).

antithrombotic (an"tī-throm-bot'ik) preventing or interfering with the formation of thrombi; an agent that so acts.

antithyroid (an"tī-thi'roid) counteracting the functioning of the thyroid, especially in its synthesis of thyroid hormone.

antithyrototoxic (an''tī-thi''ro-tok'sik) counteracting the toxic effect of thyroid and thyroid products.

antithyrotropic (an''tī-thi''ro-trop'ik) inhibiting the action of the thyrotropic hormone.

antitonic (an''tī-ton'ik) reducing tone or tonicity.

antitoxic (an''tī-tok'sik) effective against a poison; pertaining to antitoxin.

antitoxigen (an''tī-tok'sī-jen) [*antitoxin* + Gr. *gennan* to produce] any substance that induces the formation of antitoxin in the animal body; antitoxinogen.

antitoxin (an''tī-tok'sin) [*anti*- + Gr. *toxicon* poison] antibody to the toxin of a microorganism (usually the bacterial exotoxins), to a zootoxin (e.g., spider or bee venom), or to a phytotoxin (e.g., ricin of the castor bean), which combines specifically with the toxin, in vivo and in vitro, with neutralization of toxicity. **botulinal a.**, **botulinum a.**, **botulinus a.**, **botulism a.** [USP], a sterile solution of antitoxic substances (antibodies) from the blood serum or plasma of healthy horses immunized against the toxins of *Clostridium botulinum*, used as a passive immunizing agent. It is available in bivalent (types A and B), trivalent (types A, B, and E), and monovalent (type E) forms. Called also *botulinum a.* and *botulinus a.* **bovine a.**, antitoxin containing antibodies derived from the cow instead of from the horse, for use on persons who are hypersensitive to horse serum. **diphtheria a.** [USP], a sterile solution of refined and concentrated antibody globulins derived from the blood serum or plasma of a healthy animal, usually the horse, immunized against diphtheria toxins; used as a passive immunizing agent, administered intramuscularly or intravenously. **gas gangrene a.**, a sterile solution of antibody globulins from the blood of horses immunized against the toxins of certain species of pathogenic clostridia. Bivalent antitoxin contains antibodies against *Clostridium perfringens* and *Cl. septicum*; trivalent contains these plus antibodies against *Cl. novyi*. Antibodies against *Cl. histolyticum* and *Cl. bifermentans* are added to these in polyvalent antitoxins. **normal a.**, antitoxin capable of neutralizing an equal quantity of normal toxin solution. **scarlet fever streptococcus a.**, a sterile solution of antitoxic substances (i.e., immunoglobulins) from blood serum of healthy animals immunized against toxin from the streptococci causing scarlet fever. **tetanus a.** [USP], a sterile solution of refined and concentrated antibody globulins obtained from the blood serum or plasma of a healthy animal, usually the horse, immunized against tetanus toxin or toxoid; used as a passive immunizing agent, administered intramuscularly, subcutaneously, or intravenously. **tetanus and gas gangrene a's.**, a sterile solution of antitoxic substances (immunoglobulins) obtained from the blood of healthy animals immunized against the toxins of *Clostridium tetani*, *C. perfringens*, and *C. septicum*; used for prophylactic immunization against tetanus.

antitoxinogen (an''tī-tok-sin'o-jen) [*antitoxin* + Gr. *gennan* to produce] an antigen that stimulates the production of antitoxin.

antitoxinum (an''tī-tok-si'num) [L.] antitoxin.

antitragicus (an''tī-traj'e-kus) see *Table of Musculi*.

antitragus (an''tī-tra'gus) [*anti*- + *tragus*] [NA] a projection opposite the tragus, bounding the cavum conchae posteroinferiorly and continuous above with the anthelix.

antitreponemal (an''tī-trep'o-ne'mal) 1. effective against *Treponema*. 2. an agent that is effective against *Treponema*.

antitrichomonal (an''tī-trich'o-mo'nal) 1. effective against *Trichomonas*. 2. an agent that is destructive to *Trichomonas*.

antitrisismus (an''tī-triz'mus) a spasm that prevents the closure of the mouth.

antitrope (an''tī-trōp) [*anti*- + Gr. *trepein* to turn] 1. any organ that forms a symmetrical pair with another. 2. antibody.

antitropic (an''tī-tro'pic) corresponding, but oppositely oriented, as a right and a left glove.

antitropin (an''tī-tro'pin) any substance that opposes the action of tropin; antiopsonin.

antitrypanosomal (an''tī-trī-pan'o-so'mal) 1. effective against trypanosomes. 2. a drug for combating trypanosomiasis.

antitryptic (an''tī-trīp'sik) antitryptic.

α₁-antitrypsin (an''tī-trīp'sin) alpha₁-antitrypsin.

antitryptase (an''tī-trīp'tās) a substance that inhibits or counteracts the action of trypsin.

antitryptic (an''tī-trīp'tik) [*anti*- + *tryptic*] counteracting the activity of trypsin.

antituberculin (an''tī-tu-ber'ku-lin) an antibody developed following the injection of tuberculin into the animal body.

antituberculosic (an''tī-tu-ber'ku-lot'ik) 1. therapeutically effective against tuberculosis. 2. an agent that is therapeutically effective against tuberculosis.

antituberculous (an''tī-tu-ber'ku-lus) therapeutically effective against tuberculosis.

antitubulin (an''tī-too'bu-lin) an agent that prevents the polymerization of tubulin, and thus the formation of microtubules in a cell.

antitumorogenic (an''tī-tu''mor-i-jen'ik) counteracting tumor formation.

antitussive (an''tī-tus'iv) 1. relieving or preventing cough. 2. an agent that relieves or prevents cough.

antityphoid (an''tī-ti'foid) counteracting or preventing typhoid.

antityrosinase (an''tī-ti-ro'si-nās) an antienzyme that counteracts tyrosinase.

antiulcerative (an''tī-ul'ser-a'tiv) 1. preventing or promoting the healing of ulcers. 2. an agent that so acts.

antiuratic (an''tī-u-rat'ik) preventing the deposit of urates.

antiurease (an''tī-u're-ās) an antibody that inhibits the activity of urease.

antiurokinase (an''tī-u''ro-ki'nās) a naturally occurring substance that inhibits clot dissolution by inhibiting the action of urokinase.

antivaccinationist (an''tī-vak'sī-na'shun-ist) a person who is opposed to vaccination.

antivenene (an''tī-vē-nēn') [*anti*- + L. *venenum* poison] antivenin.

antivenereal (an''tī-vē-ne're-al) effective against venereal diseases.

antivenin (an''tī-ven'in) [*anti*- + L. *venenum* poison] a proteinaceous material used in the treatment of poisoning by animal venom. See also *antivenomous serum*, under *serum*. **black widow spider a.**, *Latrodectus mactans a.* **Latrodectus mactans a.**, an antitoxic serum specific in the treatment of black widow spider (*L. mactans*) bites, prepared by immunizing horses against venom of the black widow spider; called also *black widow spider a.* **a. (Micrurus fulvius)** [USP], a sterile, nonpyrogenic preparation derived by drying a frozen solution of specific venom-neutralizing globulins obtained from serum of horses immunized against the venom of Eastern coral snakes (*Micrurus fulvius*). **a. (Crotalidae) polyvalent** [USP], **polyvalent crotaline a.**, a sterile serum containing specific venom-neutralizing globulins, produced by hyperimmunization of horses with the venoms of the fer-de-lance and the Florida, Texas, and tropical rattlesnakes; used as a passive immunizing agent for the treatment of envenomation by most pit vipers throughout the world.

antivenom (an''tī-ven'om) antivenin.

antivenomous (an''tī-ven'o-mus) counteracting venom.

antiviral (an''tī-vi'ral) 1. destroying viruses or suppressing their replication. 2. an agent that destroys viruses or suppresses their replication.

antivirotic (an''tī-vi-rot'ik) 1. antiviral. 2. an agent that destroys viruses or checks their growth or multiplication.

antivirulin (an''tī-vir'u-lin) any substance that opposes the action of virulin; the substance in animals immunized against rabies, which neutralizes or inactivates the virus of rabies.

antivirus (an''tī-vi'rus) Besredka's name for the filtered and heated broth cultures of bacteria used by him to produce local immunity.

antivitamer (an''tī-vi'tah-mer) a substance that inactivates a vitamin.

antivitamin (an''tī-vi'tah-min) a substance that inactivates a vitamin.

antivivisection (an''tī-viv'ī-sek'shun) opposition to vivisection.

antivivisectionist (an''tī-viv'ī-sek'shun-ist) an individual opposed to vivisection.

antixenic (an''tī-ze'nik) [*anti*- + Gr. *xenos* strange or foreign] pertaining to the reaction of living tissue to any foreign substance.

antixerophthalmic (an''tī-ze'rof-thal'mik) counteracting xerophthalmia.

antixerotic (an''tī-ze-rot'ik) counteracting or preventing xerosis.

antizyme (an''tī-zīm) a protein whose synthesis is induced by a product of an enzyme reaction and which combines with and inhibits the action of that enzyme.

antizymohexase (an''tī-zī'mo-hek'sās) an antienzyme that counteracts zymohexase.

antizymotic (an''tī-zī-mot'ik) inhibiting or suppressing the action of enzymes.

antodontalgic (an''to-don-tal'jik) antidontalgic.

Anton's symptom (syndrome) (an''tonz) [Gabriel Anton, German neuropsychiatrist, 1858-1933] see under *symptom*.

antophthalmic (an''of-thal'mik) relieving ophthalmia.

antorphine (an-tor'fēn) nalorphine.

antra (an'trah) [L.] plural of *antrum*.

antracole (an'trah-sēl) antrocele.

antral (an'tral) of or pertaining to an antrum.

antrectomy (an-trek'to-me) [*antrum* + Gr. *ektomē* excision] surgical excision of an antrum, as resection of the pyloric antrum of the stomach.

Antrenyl (an'trē-nīl) trademark for a preparation of oxyphenonium.

Antricola (an-trik/'ō-lah) a genus of soft ticks that infest birds; several species feed on bats.

antritis (an-tri/'tis) inflammation of an antrum, chiefly the maxillary antrum.

antro- (an/'tro) [L. *antrum*; Gr. *antron* cave] a combining form denoting relationship to an antrum, or sinus; often used with specific reference to the maxillary antrum, or sinus.

antroatticotomy (an/'tro-at/'i-kot/'o-me) atticoantrotomy.

antrobuccal (an/'tro-buk/'kal) pertaining to or communicating with the maxillary antrum (sinus) and (oral) buccal cavity, as an antrobuccal fistula.

antrocele (an/'tro-sēl) [*antro-* + Gr. *kēlē* tumor] a cystic accumulation of fluid in the maxillary antrum (sinus).

antroduodenectomy (an/'tro-du/'o-de-nek/'to-me) surgical removal of the pyloric antrum and adjacent portion of the duodenum, formerly done in the treatment of duodenal ulcer.

antrodynia (an/'tro-din/'e-ah) [*antro-* + Gr. *odynē* pain] pain in an antrum.

antronalgia (an/'tro-nal/'je-ah) [*antro-* + *-algia*] pain in the maxillary antrum.

antronal (an/'tro-na/'zal) pertaining to the maxillary antrum and the nose.

antroneurolysis (an/'tro-nu-rol/'i-sis) denervation of the entire gastric antrum by submucosal dissection.

antrophore (an/'tro-fōr) [*antro-* + Gr. *pherein* to bear] a form of soluble medicated bougie.

antrophose (an/'tro-fōz) [*antro-* + *phose*] a phose originating in the central ocular mechanism.

antropyloric (an/'tro-pi-lor/'ik) pertaining to or affecting the pyloric part of the stomach, including its antrum.

antroscope (an/'tro-skōp') [*antro-* + Gr. *skopein* to examine] an instrument for illuminating and examining the maxillary antrum.

antroscoy (an-tros/'ko-pe) the use of the antroscope; inspection of an antrum.

antrostomy (an-tros/'to-me) [*antro-* + Gr. *stomoun* to provide with an opening, or mouth] the operation of making an opening into an antrum for purposes of drainage.

antrotome (an/'tro-tōm) an instrument for performing antrotomy.

antrotomy (an-trot/'o-me) [*antro-* + Gr. *tomē* cut] the cutting open of an antrum.

antrotympanic (an/'tro-tim-pan/'ik) pertaining to the mastoid antrum and the tympanic cavity.

antrotympanitis (an/'tro-tim-'pah-ni/'tis) [*antro-* + *tympanitis*] inflammation of the mastoid antrum and of the middle ear.

antrum (an/'trum), pl. *an'trums* or *an'tra* [L.; Gr. *antron* cave] a cavity or chamber; used as a general term in anatomical nomenclature, especially to designate a cavity or chamber within a bone. **a. au'ris**, meatus acusticus externus. **cardiac a.**, **a. cardi'acum**, the short conical portion of the esophagus below the diaphragm, its base being continuous with the cardiac orifice of the stomach. **ethmoid a.**, **a. ethmoida'le**, **bulia ethmoida'lis cavi nasi**. **frontal a.**, sinus frontalis. **gastric a.**, **a. pylori**. **a. of Highmore**, **a. highmo'ri**, sinus maxillaris. **Malacarne's a.** (*obs.*), **substantia perforata posterior**. **mas-toid a.**, **a. mastoi'deum** [NA], an air space in the mastoid portion of the temporal bone, communicating with the tympanic cavity and the mastoid cells; called also *a. tympanicum*, *tympanic a.*, and *mastoid cavity*. **a. maxilla're**, **maxillary a.**, sinus maxillaris. **a. pylo'ri**, **pyloric a.**, **a. pylori'cum** [NA], the dilated portion of the pyloric part of the stomach, between the body of the stomach and the pyloric canal; called also *a. of Willis* and *gastric a. tympanic a.*, **a. tympani'cum**, **a. mastoi'deum**. **a. of Willis**, **a. pyloricum**.

Antrypol (an/'tri-pol) trademark for a preparation of suramin sodium.

ANTU a powerful rodenticide, alphanaphthyl thiourea, that produces massive pulmonary edema and pleural effusion in rats.

antuitarism (an-tu'i-'tah-rizm) [*ante-* + *pituitarism*] (*obs.*) hyperpituitarism.

Anturane (an/'choo-rān) trademark for a preparation of sulfipyrazone.

Antyllus (an-'til'lus) (2nd century A.D.) a noted Greek surgeon of antiquity, a Pneumatist, whose treatment of aneurysms by ligation above and below remained standard practice until the time of John Hunter (18th century). He also made contributions to plastic surgery, ophthalmology, and public health. His writings remain only in fragments, and in the works of others (particularly Oribasius).

anuclear (ah-nu/'kle-ar) having no nuclei; said of cells, such as erythrocytes, which have lost their nuclei.

anucleated (a-nu/'kle-āt/'ed) denucleated.

annulus (an-'u-lus), pl. *an'uli* [L. dim. of *anus*] [NA] a term used to designate a ringlike anatomical structure; called also *annulus*. **a. of conjunctiva**, **a. conjuncti'vae** [NA], a ring at the junction of the conjunctiva and cornea. **a. femora'lis** [NA], femoral ring; the abdominal opening of the femoral canal,

normally closed by the crural septum and peritoneum; called also *crural fossa*, *inferior digital fossa*, *crural fovea*, *femoral fovea*, *femoral fossa*, and *hiatus femoralis*. **a. fibrocartilagin'eus membra'nae tym'pani** [NA], fibrocartilaginous ring of tympanic membrane: the margin of the pars tensa of the tympanic membrane, which attaches to the sulcus tympanicus. **an'uli fibro'si cor'dis** [NA], fibrous rings of the heart: dense fibrous rings, one of which surrounds each of the four major cardiac orifices: the right and left atrioventricular, the aortic, and the pulmonary trunk orifices. To these four rings, either directly or indirectly, are attached the atrial and ventricular muscle fibers. Called also *Lower's rings*. **a. fibro'sus dis'ci intervertebra'lis** [NA], the circumferential ringlike portion of an intervertebral disk, composed of fibrocartilage and fibrous tissue; called also *annulus fibrosus fibrocartilagin'is intervertebralis* and *fibrous ring of intervertebral disk*. **a. inguina'lis profun'dus** [NA], deep inguinal ring: an aperture in the fascia transversalis for the spermatic cord or for the round ligament; called also *annulus abdominalis abdominalis*, *annulus inguinalis abdominalis*, *deep or internal abdominal ring*, and *internal inguinal ring*. **a. inguina'lis superficia'lis** [NA], superficial abdominal ring: an opening in the aponeurosis of the external oblique muscle for the spermatic cord or for the round ligament; called also *annulus inguinalis subcutaneus*, *external abdominal ring*, and *superficial or external inguinal ring*. **a. i'ridis ma'jor** [NA], greater ring of iris: the less coarsely striated outer concentric circle on the anterior surface of the iris; called also *greater circle of iris*. **a. i'ridis mi'nor** [NA], lesser ring of iris: the more coarsely striated inner concentric circle on the anterior surface of the iris; called also *lesser circle of iris*. **a. tendin'eus commu'nis** [NA], common tendinous ring: the annular ligament of origin common to the recti muscles of the eye, attached to the edge of the optic canal and the inner part of the superior orbital fissure; called also *annulus tendineus communis* [Zinn], *annulus zinnii*, and *Zinn's ring or ligament*. **a. tympani'cus** [NA], tympanic ring: the bony ring forming part of the temporal bone at the time of birth and developing into the pars tympanica of the bone; called also *tympanic annulus*. **a. umbilica'lis** [NA], umbilical ring: the aperture in the abdominal wall through which the umbilical cord communicates with the fetus. After birth it is felt for some time as a distinct fibrous ring surrounding the umbilicus; these fibers later shrink progressively. Called also *umbilical canal*.

Anura (ah-nu/'rah) the order of frogs and toads.

anuran (ah-nu/'ran) any member of Anura.

anuresis (an-'u-re'sis) 1. retention of urine in the bladder. 2. anuria.

anuretic (an-u-ret/'ik) pertaining to or characterized by anuresis.

anuria (ah-nu/'re-ah) [*an neg.* + Gr. *ouron* urine + *-ia*] complete suppression of urinary secretion by the kidneys; called also *anuresis*. **angioneurotic a.**, anuria occurring in cortical necrosis of the kidney. **calculous a.**, anuria caused by a renal calculus. **obstructive a.**, failure of urinary excretion due to a blockage, as by a calculus, in the urinary passages. **postrenal a.**, anuria resulting from obstruction of the ureters. **pre-renal a.**, cessation of renal secretion of urine resulting from fall of blood pressure below the level necessary to maintain adequate filtration pressure in the glomeruli. **renal a.**, failure of urinary secretion by the kidney in the presence of adequate filtration pressure in the glomeruli and patency of the ureters. **suppressive a.**, failure of secretion of urine in the kidneys.

anuric (ah-nu/'rik) pertaining to or characterized by anuria.

anurous (ah-nu/'rus) [*an neg.* + Gr. *oura* tail] without a tail.

anus (a-'nus), pl. *anus*, gen. *a'ni* [L.; said originally to have been derived from an Anglo-Saxon word meaning to sit] the distal or terminal orifice of the alimentary canal. **artificial a.**, an opening from the bowel formed by the operation of colostomy. **ectopic a.**, imperforate a. **imperforate a.**, persistence of the anal membrane, so that the anus is closed. The defect is not always complete; sometimes a narrow opening permits the passage of the bowel contents. When completely imperforate, the anus is seen as a dimple (the proctodeal pit) in the skin of the perineum. The latter condition is often associated with atresia of the lower rectum. **preternatural a.**, an anus situated at some unusual or abnormal place. **a. of Rusconi**, the blastopore. **a. vesica'lis**, anomalous opening of the rectum into the bladder, the anus being imperforate. **a. vestibula'ris**, anomalous opening of the rectum on the vulva, the anus being imperforate. **vulvovaginal a.**, *a. vestibularis*.

anusitis (a-nus-i/'tis) inflammation of the anus.

anvil (an-'vil) incus.

anxietas (ang-'zi-'ē-tas) [L.] a nervous restlessness; anxiety. **a. preseni'lis**, a state of extreme anxiety preceding senility.

anxiety (ang-'zi-'ē-te) a feeling of apprehension, uncertainty, and fear without apparent stimulus, and associated with physiological changes (tachycardia, sweating, tremor, etc.). **castration a.**, castration complex. **free-floating a.**, fear in the absence of known cause for anxiety. **neurotic a.**, that in which the apprehension is objectively out of proportion to any apparent cause. **separation a.**, apprehension due to removal of significant per-

sons or familiar surroundings; common in infants 6 to 10 months old. **situation a.**, a feeling of apprehension coming on with the starting of some undertaking.

anxiolytic (ang'zi-o-lit'ik) 1. dispelling anxiety. 2. any sedative or hypnotic, e.g., diazepam and chlorodiazepoxide, used in the psychoneuroses and anxiety states to reduce anxiety, agitation, or tension; called also *minor tranquilizer*.

anhydremia (an'i-dre'me-ah) [an neg. + Gr. *hydōr* water + *haima* blood + *-ia*] anhydremia.

AO anodal opening; opening of the atrioventricular valves.

A.O.A. American Optometric Association; American Orthopaedic Association; American Orthopsychiatric Association; American Osteopathic Association.

AOC anodal opening contraction.

AOCI anodal opening clonus.

AOO anodal opening odor.

AOP anodal opening picture.

A.O.P.A. American Orthotics and Prosthetics Association.

aorta (a-or'tah), pl. *aor'tas*, *aor'tae* [L.; Gr. *aortē*] the main trunk from which the systemic arterial system proceeds [NA]. It arises from the left ventricle of the heart; passes upward (*a. ascen'dens*), bends over (*arcus aortae*), passes down through the thorax (*a. thoraca'lis*) and through the abdomen to about the level of the fourth lumbar vertebra (*a. abdomina'lis*), where it divides into the two common iliac arteries. Called also *arteria a.* and *arteria maxima Galeni*. See *Table of Arteriae*. **abdominal a.**, **abdomina'lis** [NA], the continuation of the thoracic aorta, which gives rise to the inferior phrenic, lumbar, median sacral, superior mesenteric, inferior mesenteric, middle suprarenal, renal, and testicular or ovarian arteries, and the celiac trunk. **a. ascen'dens** [NA], **ascending a.**, the proximal portion of the aorta, arising from the left ventricle, and giving origin to the right and left coronary arteries before continuing as the arch of the aorta. **a. descen'dens** [NA], **descending a.**, the continuation of the aorta from the arch of the aorta, in the thorax, to the point of its division into the common iliac arteries, in the abdomen. See also *a. abdominalis* and *a. thoracica*. **dextropositioned a.**, a congenital anomaly resulting from increased rotation of the lower end of the bulbar septum, bringing the aorta farther to the right. It is seen in tetralogy of Fallot. **overriding a.**, a congenital anomaly occurring in tetralogy of Fallot, in which the aorta is displaced to the right so that it appears to arise from both ventricles and straddles the ventricular septal defect. **palpable a.**, one which, on account of a thin retracted abdominal wall, is easily palpable. **primitive a.**, either of two main vascular trunks before fusion into a single aorta in the early embryo. **a. sacrococcyg'ea**, *arteria sacralis mediana*. **a. thoraca'lis**, *a. thoracica*. **thoracic a.**, **a. thorac'ica** [NA], the proximal portion of the descending aorta, proceeding from the arch of the aorta, and giving rise to the bronchial, esophageal, pericardiac, and mediastinal branches, and the superior phrenic, posterior intercostal III to XI, and subcostal arteries; it is continuous through the diaphragm with the abdominal aorta. **ventral a.**, a single short vascular segment that, in fishes, in some amphibians, and in the embryo of higher vertebrates, connects the heart with the aortic arches. In mammalian development, it becomes continuous with the aortic arch.

aortae (a-or'te) [L.] plural and genitive of *aorta*.

aortal (a-or'tal) aortic.

aortalgia (a'or-tal'je-ah) [*aorta* + Gr. *algos* pain] pain in the region of the aorta.

aortectomy (a'or-tek'to-me) [*aorta* + Gr. *ektomē* excision] excision of part of the aorta.

aortic (a-or'tik) of or pertaining to the aorta.

aorticopulmonary (a-or'ti-ko-pul'mo-ner'e) pertaining to or lying between the aorta and pulmonary artery.

aorticorenal (a-or'te-ko-re'nal) pertaining to the aorta and the kidneys.

aortitis (a'or-ti'tis) [*aorta* + *-itis*] inflammation of the aorta. **Döhle-Heller a.**, syphilitic *a.* **luetie a.**, syphilitic *a.* **nummular a.**, aortitis with white circular patches on the inner coat of the vessel. **rheumatic a.**, inflammation of the aorta due to rheumatism, which may progress to patchy fibrosis. **syphilitic a.**, **a. syphilit'ica**, aortitis caused by syphilis; its complications include insufficiency of the aortic valve, stenosis or occlusion of the coronary orifices, and aortic aneurysm. Called also *Döhle-Heller a.*, *Heller-Döhle disease*, and *luetie a.*

aortocoronary (a-or'to-ko-r'ō-na-re) pertaining to or communicating with the aorta and coronary arteries.

aortogram (a-or'to-gram'') the roentgenographic record resulting from aortography.

aortography (a'or-tog'rah-fe) [*aorta* + Gr. *graphein* to write] roentgenography of the aorta after the intravascular injection of an opaque medium. **retrograde a.**, roentgenography of the aorta after passage of a catheter through a peripheral artery to the aorta and the rapid injection of a radiopaque substance. **translumbar a.**, roentgenography of the aorta after injection of

a radiopaque medium into it through a needle inserted into the lumbar area at about the level of the 12th thoracic vertebra.

aortopathy (a'or-top'ah-the) [*aorta* + Gr. *pathos* disease] any disease of the aorta.

aortorrhaphy (a'or-tor'ah-fe) [*aorta* + Gr. *rhaphe* suture] suture of the aorta.

aortosclerosis (a-or'to-skle-ro'sis) sclerosis of the aorta.

aortotomy (a'or-tot'o-me) [*aorta* + Gr. *tomē* a cutting] incision of the aorta.

AOS anodal opening sound.

A.O.S. American Otological Society.

aosmic (a-oz'mik) anosmic.

A.O.T.A. American Occupational Therapy Association.

AOTE anodal opening tetanus.

AP anterior pituitary (gland); angina pectoris; anteroposterior; arterial pressure.

ap- see *apo-*.

APA antipernicious anemia factor; see *cyanocobalamin*.

A.P.A. American Pharmaceutical Association; American Podiatric Association; American Psychiatric Association; American Psychoanalytic Association; American Psychological Association; American Psychopathological Association.

apaconitine (ap'ah-kon'i-tin) [*ap-* + *aconitine*] a poisonous base derived from aconitine.

apallesthesia (ah-pal'es-the'ze-ah) pallanesthesia.

Apamide (ap'ah-mid) trademark for a preparation of acetaminophen.

apancreea (ah-pan'kre-ah) absence of the pancreas.

apancreatic (ah-pan'kre-at'ik) due to absence of the pancreas.

apandria (ap-an'dre-ah) [*ap-* + Gr. *anēr* man] (*obs.*) morbid aversion to the male sex.

apanthropia (ap-an-thro'pe-ah) [*ap-* + Gr. *anthrōpos* man + *-ia*] (*obs.*) 1. morbid fear of human companionship. 2. apandria.

apanthropy (ap-an'thro-pe) (*obs.*) apanthropia.

aparalytic (ah-par'ah-lit'ik) without paralysis.

aparathyreosis (ah-par'ah-thi-re-o'sis) aparathyrosis.

aparathyroidism (ah-par'ah-thi'roid-izm) aparathyrosis.

aparathyrosis (ah-par'ah-thi-ro'sis) absence or deficiency of the parathyroid glands.

apareunia (ah'par-u'ne-ah) abstinence from or inability to perform coitus.

arthrosis (ap'ar-thro'sis) [Gr. *aparthrōsis*] junctura synovialis.

apastia (ah-pas'te-ah) [Gr. "fasting"] abstinence from food, as a neurologic symptom.

apastic (ah-pas'tik) pertaining to or characterized by apastia.

apathetic (ap'ah-thet'ik) indifferent; undemonstrative.

apathic (ah-path'ik) without sensation or feeling.

apathism (ap'ah-thizm) the state of being slow in responding to stimuli.

apathy (ap'ah-the) [Gr. *apatheia*] lack of feeling or emotion; indifference.

apatite (ap'ah-tit) a calcium phosphate of the composition $\text{Ca}_3(\text{PO}_4)_2\text{OH}$, one of the two mineral constituents of bones and teeth (the other being CaCO_3). Apatite is soluble in acids of soft drinks and in carbohydrate fermentation, but its OH^- ion is readily exchanged for F^- ion from some fluorides, and the resulting fluoroapatite is not susceptible to acid decay.

apazone (ap'ah-zōn) chemical name: 5-(dimethylamino)-9-methyl-2-propyl-1*H*-pyrazolo [1, 2-*a*] [1, 2, 4] benzotriazine-1,3-(2*H*)-dione, an anti-inflammatory agent, $\text{C}_{16}\text{H}_{20}\text{N}_4\text{O}_2$, which has been used in the treatment of rheumatoid disorders. Called also *azapropazone*.

APC 1. abbreviation for *acetylsalicylic acid*, *phenacetin*, and *caffeine*, available in capsule or tablet form; antipyretic and analgesic. 2. atrial premature contraction.

APE anterior pituitary extract.

apeidosis (ap'i-do'sis) [*ap-* + Gr. *eidos* form] progressive disappearance of characteristic form in either the histologic or clinical aspect of a disease.

apellous (a-pe'l'us) [*a neg.* + L. *pellis* skin] 1. skinless; not covered with skin; not cicatrized (said of a wound). 2. having no prepuce.

apepsia (ah-pep'se-ah) [*a neg.* + Gr. *peptēin* to digest] (*obs.*) cessation or failure of the digestive functions.

apepsinia (ah'pep-sin'e-ah) (*obs.*) total absence or lack of secretion of pepsinogen by the stomach.

aperient (ah-pe're-ent) [L. *aperiens* opening] a mild or gentle purgative; called also *aperitive* and *laxative*.

aperiodic (ah'pe-ri-od'ik) having no definite period; said of membranes that have no definite periods of vibration of their own, but are free to take up any vibrations imparted to them.

aperistalsis (ah'per-i-stal'sis) [*a neg.* + *peristalsis*] absence of peristaltic action.

aperitive (ah-per'ti-tiv) 1. stimulating the appetite. 2. aperient.

Apert's disease (syndrome) (ah-parz') [Eugène Apert, French pediatrician, 1868-1940] acrocephalosyndactylia.

Apert-Crouzon disease (ah-par'kroo-zon') [Eugène Apert; Octave Crouzon, French neurologist, 1874-1938] see under *disease*.

apertognathia (ah-per'tog-na'the-ah) open bite.

apertometer (ap'er-tom'ē-ter) an apparatus for measuring the angle of aperture of microscopical objectives.

apertura (ap'er-tu'rah), pl. *apertu'rae* [L.] a general term used in anatomical nomenclature to designate an opening. **a. exter'na aqueduc'tus vestib'uli** [NA], external aperture of aqueduct of vestibule; the external opening for the aqueduct of the vestibule, located on the posterior surface of the petrous part of the temporal bone, lateral to the opening for the internal acoustic meatus; called also *fissure of aqueduct of vestibule*. **a. exter'na canalic'uli coch'leae** [NA], external aperture of canaliculus of cochlea; the external opening of the cochlear canaliculus on the margin of the jugular foramen in the temporal bone. **a. infe'rior canalic'uli tympan'ici**, inferior aperture of tympanic canaliculus; the lower opening of the tympanic canaliculus on the inferior surface of the petrous portion of the temporal bone; called also *external aperture of tympanic canaliculus*. **a. latera'lis ventric'uli quar'ti** [NA], an opening at the end of each lateral recess of the fourth ventricle by which the ventricular cavity communicates with the subarachnoid space; called also *lateral aperture of fourth ventricle, foramen of Luschka, and foramen of Key and Retzius*. **a. media'lis ventric'uli quar'ti**, a. mediana ventriculi quarti. **a. media'na ventric'uli quar'ti** [NA], a deficiency in the lower portion of the roof of the fourth ventricle through which the ventricular cavity communicates with the subarachnoid space; called also *a. medialis ventriculi quarti, median aperture of fourth ventricle, and foramen of Magendie*. **a. pel'vis infe'rior** [NA], **a. pel'vis [mino'ris] infe'rior**, the inferior, very irregular aperture of the minor pelvis, bounded by the coccyx, the sacrotuberous ligaments, part of the ischium, the sides of the pubic arch, and the pubic symphysis; called also *exitus pelvis and inferior aperture of minor pelvis*. **a. pel'vis super'ior** [NA], **a. pel'vis [mino'ris] super'ior**, the superior aperture of the minor pelvis, bounded by the crest and pecten of the pubic bones, the arcuate lines of the ilia, and the anterior margin of the base of the sacrum; called also *superior aperture of minor pelvis*. **a. pirifor'mis** [NA], piriform aperture; the anterior nasal opening in the skull; called also *bony anterior nasal aperture*. **a. si'nus fronta'lis** [NA], aperture of frontal sinus; the external opening of the frontal sinus into the nasal cavity. **a. si'nus sphenoida'lis** [NA], aperture of sphenoid sinus; a round opening just above the superior nasal concha, interconnecting the sphenoid sinus and nasal cavity; called also *sphenoidal ostium*. **a. super'ior canalic'uli tympan'ici**, superior aperture of tympanic canaliculus; the upper opening of the tympanic canaliculus in the temporal bone, leading to the tympanum; called also *internal aperture of tympanic canaliculus*. **a. thora'cis infe'rior** [NA], inferior aperture of thorax; the irregular opening at the inferior part of the thorax bounded by the twelfth thoracic vertebra, the twelfth ribs, and the curving edge of the costal cartilages as they meet the sternum; called also *inferior thoracic aperture*. **a. thora'cis super'ior** [NA], superior aperture of thorax; the elliptical opening at the summit of the thorax, bounded by the first thoracic vertebra, the first ribs, and the upper margin of the manubrium sterni; called also *superior thoracic aperture*. **a. tympan'ica canalic'uli chor'dae tym'pani** [NA], tympanic aperture of canaliculus of chorda tympani; the opening through which the chorda tympani enters the tympanic cavity.

aperturae (ap'er-tu're) [L.] plural of *apertura*.

aperture (ap'er-chūr) [L. *apertura*] an opening, or orifice; see also *apertura*. **angle of a., angular a.**, the angle formed at a luminous point between the most divergent rays that are capable of passing through the objective of a microscope; called also *a. of lens*. **external a. of aqueduct of vestibule**, *apertura externa aqueductus vestibuli*. **external a. of canaliculus of cochlea**, *apertura externa canaliculi cochleae*. **external a. of tympanic canaliculus**, *apertura inferior canaliculi tympanici*. **a. of frontal sinus**, *apertura sinus frontalis*. **a. of glottis**, *rima glottidis*. **inferior a. of minor pelvis**, *apertura pelvis inferior*. **inferior a. of thorax**, *apertura thora'cis inferior*. **inferior a. of tympanic canaliculus**, *apertura inferior canaliculi tympanici*. **internal a. of tympanic canaliculus**, *apertura superior canaliculi tympanici*. **a. of larynx**, *aditus laryngis*. **lateral a. of fourth ventricle**, *apertura lateralis ventriculi quarti*. **a. of lens**, angle of a. **median a. of fourth ventricle**, *apertura mediana ventriculi quarti*. **nasal a.**, *bony anterior*, *apertura piriformis*. **numerical a.**, a measure of the efficiency of a microscope objective, being the product of the sine of one-half the angle of the aperture times the lowest refractive index of any medium between the objective and specimen; usually abbreviated N.A. **orbital a.**, *aditus orbitae*. **piriform a.**, *apertura piriformis*. **a. of sphenoid sinus**, *apertura sinus sphenoidalis*. **spinal a.**, *foramen vertebrae*. **spurious a. of facial canal**, *hiatus*

canalis nervi petrosi majoris. **spurious a. of fallopian canal**, *hiatus canalis nervi petrosi majoris*. **superior a. of minor pelvis**, *apertura pelvis superior*. **superior a. of thorax**, *apertura thoracis superior*. **superior a. of tympanic canaliculus**, *apertura superior canaliculi tympanici*. **thoracic a., inferior**, *apertura thoracis inferior*. **thoracic a., superior**, *apertura thoracis superior*. **tympanic a. of canaliculus of chorda tympani**, *apertura tympanica canaliculi chordae tympani*.

apex (a'peks), pl. *apexes* or *a'pices* [L.] 1. a general term used in anatomical nomenclature to designate the top of a body, organ, or part, or the pointed extremity of a conical structure; called also *tip*. 2. the point of greatest activity, or the point of greatest response to any type of stimulation, such as electrical stimulation of a muscle. **a. of arytenoid cartilage**, a. *cartilaginis arytenoideae*. **a. auric'ulae** [NA], a pointed protrusion sometimes observed on the upper border of the ear; called also *darwinian a. of bladder*, a. *vesicae urinariae*. **a. cap'itis fib'ulae** [NA], a process pointing upward on the posterior surface of the head of the fibula, giving attachment to the arcuate popliteal ligament of the knee joint and part of the biceps tendon; called also *a. capituli fibulae* and *a. of head of fibula*. **a. capit'uli fib'ulae**, a. *capitis fibulae*. **a. cartilag'inis arytenoi'deae** [NA], apex of arytenoid cartilage; the upper part of the arytenoid cartilage, which bends posteriorly and medially and connects with the corniculate cartilage. **a. colum'nae posterio'ris medull'ae spina'lis**, a. *cornus posterioris medullae spinalis*. **a. cor'dis** [NA], apex of the heart; the blunt rounded extremity of the heart formed by the left ventricle; it is directed ventrally, inferiorly, and to the left. **a. cor'nus posterio'ris medull'ae spina'lis** [NA], a rim of large neurons just dorsal to the substantia gelatinosa of the spinal cord; sometimes used to refer to the gelatinous substance. Called also *a. columnae posterioris medullae spinalis* and *a. of posterior horn of spinal cord*. **a. cus'pidis** [NA], the apex of the cusp of a tooth. **darwinian a.**, a. *auriculae*. **a. of head of fibula**, a. *capitis fibulae*. **a. of heart**, a. *cordis*. **a. lin'guae** [NA], the most distal portion of the tongue; called also *a. of tongue*. **a. of lung**, a. *pulmonis*. **a. na'si** [NA], the most distal portion of the nose. **a. os'sis sa'cri** [NA], apex of the sacrum; the caudal end of the body of the fifth sacral vertebra, which articulates with the coccyx. **a. par'tis petrosae os'sis tempora'lis** [NA], apex of petrous portion of temporal bone; the truncated portion of the petrous part of the temporal bone that is directed anteriorly and medially and ends at the medial opening of the carotid canal; called also *a. pyramidis ossis temporalis*. **a. of patella**, a. *patellae* [NA], the inferiorly directed blunt point of the patella, to which the patellar ligament is attached. **a. of petrous portion of temporal bone**, a. *partis petrosae ossis temporalis*. **a. of posterior horn of spinal cord**, a. *cornus posterioris medullae spinalis*. **a. prosta'tae** [NA], a. *of prostate gland*, the lower portion of the prostate, located just above the urogenital diaphragm. **a. pulmo'nis** [NA], apex of the lung; the rounded upper extremity of either lung, extending upward as high as the first thoracic vertebra. **a. pyram'idis os'sis tempora'lis**, a. *partis petrosae ossis temporalis*. **a. rad'icis den'tis** [NA], the terminal end of the root of a tooth. **root a.**, the terminal end of the root of the tooth. **a. of sacrum**, a. *ossis sacri*. **a. suprarena'lis [gl. dex'trae]**, the apex of the right suprarenal (adrenal) gland. **a. of tongue**, a. *linguae*. **a. vesic'ae urina'riae** [NA], apex of bladder; the site of junction of the superior and inferolateral surfaces of the urinary bladder, from which the middle umbilical ligament (urachus) extends to the umbilicus; called also *fundus of bladder, vertex vesicae urinariae, and fundus or vertex of urinary bladder*.

apexcardiogram (a'peks-kar'de-o-gram) the graphic record obtained by apexcardiography.

apexcardiography (a'peks-kar'de-og'rah-fe) a method of graphically recording the pulsations of the precordium in the region of the cardiac apex.

A.P.F. animal protein factor; anabolism-promoting factor.

Apgar score (scale) (ap'gar) [Virginia Apgar, American anesthesiologist, 1909-1974] see under *score*.

APH anterior pituitary hormone.

A.P.H.A. American Public Health Association; American Protestant Hospital Association.

A.Ph.A. American Pharmaceutical Association.

aphacia (ah-fa'se-ah) aphakia.

aphacic (ah-fa'sik) aphakic.

aphagia (ah-fa'je-ah) [a neg. + Gr. *phagein* to eat + *-ia*] abstinence from eating. **a. al'gera**, refusal of a person to take food because it gives pain.

aphagopraxia (ah-fa'go-prak'se-ah) loss of the ability to swallow.

aphakia (ah-fa'ke-ah) [a neg. + Gr. *phakos* lentil + *-ia*] absence of the lens of the eye; it may occur congenitally or from trauma, but is most commonly caused by extraction of a cataract.

aphakic (ah-fa'kik) pertaining to aphakia; having no lens in the eye.

aphalangia (ah-fah-lan/'je-ah) a developmental anomaly characterized by absence of a digit or of one or more phalanges of a finger or toe.

Aphanozoa (af-'ah-no-zo-'ah) [Gr. *aphanēs* invisible + *zōon* animal] ultramicroscopic organisms.

aphantobiont (ah-fan-'to-bi-'ont) [Gr. *aphantos* invisible + *bioun* a living being] obsolete term for virion.

aphasia (ah-fa/'ze-ah) [a neg. + Gr. *phasis* speech] defect or loss of the power of expression by speech, writing, or signs, or of comprehending spoken or written language, due to injury or disease of the brain centers. For types of aphasia not given below, see *agrammatism*, *anomia*, *paragrammatism*, and *paraphasia*.

acoustic a., auditory a. **ageusic a.**, loss of power to express words relating to the sense of taste. **amnemonic a.**, forgetfulness of words, with consequent aphasia; called also *a. lethica*. **amnesic a.**, **amnesic a.**, **anomic a.**, **anomic a.**, fluent aphasia in which comprehension and repetition are both preserved; called also *amnesic a.* **anosmic a.**, inability to express in words sensations of smell. **associative a.**, aphasia due to a disturbance of connection between the parts comprising the central structure. **ataxic a.**, expressive a. **auditory a.**, aphasia due to disease of the hearing center of the brain; word deafness. **Broca's a.**, expressive a. **central a.**, global a. **combined a.**, aphasia of two or more forms occurring concomitantly in the same person. **commissural a.**, aphasia due to a lesion in the insula interrupting the path between the motor and sensory speech centers; called also *frontolenticular a.* and *lenticular a.* **complete a.**, aphasia due to lesion of all the speech centers, producing inability to communicate with others in any way. **conduction a.**, fluent aphasia in which there is normal comprehension of spoken language but words are repeated incorrectly. **cortical a.**, global a. **expressive a.**, aphasia in which there is impairment of the ability to speak and write, due to a lesion of the cortical center. The patient understands written and spoken words, and knows what he wants to say, but cannot utter the words. Called also *ataxic a.*, *Broca's a.*, *motor a.*, *frontocortical a.*, and *verbal a.* **expressive-receptive a.**, global a. **fluent a.**, aphasia in which speech is well articulated and grammatically correct but is lacking in content. **frontocortical a.**, expressive a. **frontolenticular a.**, commissural a. **functional a.**, aphasia resulting from hysteria or severe hysterical disorder. **gibberish a.**, jargon a. **global a.**, aphasia which involves all the functions which go to make up speech or communication; called also *central a.*, *cortical a.*, *expressive-receptive a.*, and *pictorial a.* **graphomotor a.**, aphasia in which the person cannot express himself in writing. **Grashey's a.**, aphasia due to lessened duration of sensory impressions, causing disturbance of perception and association, without lack of function of the centers or conductivity of the tracts; it is seen in acute diseases and concussion of the brain. **impressive a.**, sensory a. **intellectual a.**, true a. **jargon a.**, a form of receptive aphasia with utterance of meaningless phrases; called also *gibberish a.* **Kussmaul's a.**, voluntary refraining from speech, as in the insane. **lenticular a.**, commissural a. **a. lethica**, amnemonic a. **Lichtheim's a.**, a form of aphasia in which spontaneous speech is lost but the ability to repeat words is retained. **mixed a.**, global a. **motor a.**, expressive a. **nominal a.**, aphasia marked by the defective use of names of objects; cf. *anomia* and *dysnomia*. **nonfluent a.**, aphasia in which little speech is produced, and is uttered slowly, with great effort and poor articulation; it is due to a lesion in Broca's area. **optic a.**, inability to name objects seen, due to interruption of the connection between the speech and visual centers. **parieto-occipital a.**, combined alexia and apraxia. **pathematic a.**, aphasia due to passion or fright. **pictorial a.**, global a. **psychosensory a.**, receptive a. **receptive a.**, inability to understand written, spoken, or tactile speech symbols, due to disease of the auditory and visual word centers, as in word blindness; called also *impression a.*, *sensory a.*, *temporoparietal a.*, and *Wernicke's a.* **semantic a.**, aphasia characterized by a lack of recognition of the full significance of words and phrases or by loss of memory for words. **sensory a.**, receptive a. **subcortical a.**, aphasia due to a lesion interrupting impulses toward the afferent tracts that proceed to the auditory speech center. **syntactical a.**, aphasia characterized by inability to arrange words properly, so that the patient talks jargon. **tactile a.**, inability to name objects which are felt. **temporoparietal a.**, receptive a. **total a.**, global a. **transcortical a.**, aphasia caused by a lesion of a pathway between the speech center and other cortical centers. **true a.**, aphasia due to lesion of any one of the speech centers; called also *intellectual a.* **verbal a.**, expressive a. **visual a.**, alexia. **Wernicke's a.**, receptive a.

aphasiac (ah-fa/'ze-ak) aphasic, def. 2.

aphasic (ah-fa/'zik) 1. pertaining to or affected with aphasia. 2. a person affected with aphasia.

aphasiologist (ah-fa/'ze-ol'o-jist) one who specializes in aphasiology, as a neurologist or psychologist.

aphasiology (a-fa/'ze-ol'o-je) the scientific study of aphasia and the specific neurologic lesions producing it.

aphasid (a-faz/'mid) [a neg. + *phasid*] a nematode belonging to the subclass Aphasididae. Cf. *phasid*.

Aphasididae (a-faz-mid/'e-ah) a subclass of Nematoda comprising those organisms which do not possess phasids, and including the superfamilies Trichuroidea, Mermithoidea, and Dioctophymoidea.

apheliotropism (ap/'he-le-ot/'ro-pizm) negative heliotropism.

aphesthesia (ah/'fe-mes-the/'ze-ah) [a neg. + Gr. *phēmē* voice + *aisthēsis* perception] alexia.

aphemia (ah-fe/'me-ah) [a neg. + Gr. *phēmē* voice] loss of the power of speech, due to a central lesion; see *expressive aphasia*, under *aphasia*. Called also *anandia*.

aphemic (ah-fem/'ik) pertaining to or characterized by aphe-mia.

aphophobia (af/'e-to/'be-ah) [Gr. *haphē* touch + *phobein* to be affrighted by + *-ia*] (*obs.*) a morbid dread of touching or of being touched.

apheresis (ah-fer/'ē-sis) [Gr. *aphairesis* removal] any procedure in which blood is withdrawn from a donor, a portion (plasma, leukocytes, platelets, etc.) is separated and retained, and the remainder is retransfused into the donor. It includes leukapheresis, thrombocytopheresis, etc. Called also *pheresis*.

apheter (af/'ē-ter) [Gr. *aphienai* to dissolve] a supposed material that gives to inogen the stimulus that decomposes it, and thus causes muscular contraction.

aphilopony (ah/'fil-op/'ō-ne) [a neg. + Gr. *philein* to love + *ponos* bodily exertion] (*obs.*) fear of or disinclination to work.

Aphiochaeta ferrugin/ea *Megaselia scalaris*.

aphonia (ah-fo/'ne-ah) [a neg. + Gr. *phōnē* voice] loss of voice. **a. clericorum**, see under *dysphonia*. **hysteric a.**, loss of speech due to hysteria. **a. paralytica**, aphonia due to paralysis or disease of the laryngeal nerves. **a. paranoica**, stubborn and willful silence. **spastic a.**, interference with the voice caused by muscular spasm.

aphonic (ah-fon/'ik) 1. pertaining to or affected with aphonia. 2. without audible voice.

aphonogelia (ah/'fo-no-je/'le-ah) [a neg. + Gr. *phōnē* voice + *gelōs* laughter] inability to laugh aloud.

aphose (ah-fōz') [a neg. + Gr. *phōs* light] any phose or subjective visual sensation due to absence or interruption of light.

aphosphagenic (ah-fos/'fah-jen/'ik) due to deficiency of phosphorus.

aphosphorosis (ah-fos/'fo-ro/'sis) a morbid condition caused by a deficiency of phosphorus in the diet.

aphotesthesia (a/'fot-es-the/'ze-ah) [a neg. + Gr. *phōs* light + *aisthēsis* perception] reduced sensitivity of the retina to light resulting from excessive exposure to rays of the sun.

aphotic (ah-fot/'ik) without light; totally dark.

aphrasia (ah-fra/'ze-ah) [a neg. + Gr. *phrasis* utterance] inability to speak or to understand words arranged as phrases. **a. paranoica** (*obs.*), voluntary abstention from speech in the mentally ill.

aphrenia (ah-fre/'ne-ah) [a neg. + Gr. *phrēn* mind] dementia.

aphrodisia (af/'ro-diz/'e-ah) [Gr. *aphrodisia* sexual pleasures] 1. sexual excitement, especially if morbid or excessive. 2. coitus or sexual congress.

aphrodisiac (af/'ro-diz/'e-ak) 1. exciting the libido. 2. any drug that arouses the sexual instinct.

aphrodisiomania (af/'ro-diz/'e-o-ma/'ne-ah) (*obs.*) erotomania.

aphronesia (af/'ro-ne/'ze-ah) [a neg. + Gr. *phronēsis* good sense] (*obs.*) dementia.

aphronia (ah-fro/'ne-ah) [a neg. + Gr. *phronein* to understand] (*obs.*) deficiency in mental discernment; defect in cerebration.

aphtha (af/'thah), pl. *aph'thae* [L.; Gr. *aphtha*] [usually plural] a small ulcer, especially the reddish or whitish spots in the mouth that characterize aphthous stomatitis. **Bednar's a.**, an infected traumatic ulcer on the posterior portion of the hard palate in infants. **chronic intermittent recurrent aphthae**, periadenitis mucosa necrotica recurrens. **contagious aphthae**, epizootic aphthae, foot-and-mouth disease of cattle. **epizootic aphthae**, foot-and-mouth disease. **malignant aphthae** (*obs.*), foot-and-mouth disease of cattle. **Mikulicz's aphthae**, periadenitis mucosa necrotica recurrens. **recurrent scarring aphthae**, periadenitis mucosa necrotica recurrens. **aphthae resistentiae**, periadenitis mucosa necrotica recurrens.

aphthae (af/'the) [L.] plural of *aphtha*.

aphthoid (af/'thoid) [Gr. *aphtha* thrush + *eidōs* form] 1. resembling thrush; thrushlike. 2. an exanthema resembling that of thrush.

aphthongia (af-'thon/'je-ah) [a neg. + Gr. *phthongos* sound] aphasia due to spasm of the speech muscles.

aphthosis (af-'tho/'sis) any condition marked by aphthae.

aphthous (af/'thus) pertaining to, characterized by, or affected with aphthae.

aphylactic (a''fi-lak'tik) pertaining to or characterized by apylaxis.

aphylaxis (a''fi-lak'sis) absence of phylaxis.

apical (ap'e-kal) pertaining to or located at the apex.

apicectomy (a''pi-sek'to-me) 1. excision of the apex of the petrous portion of the temporal bone. 2. (obs.) apicoectomy.

apices (ap'i-sēz) [L.] plural of *apex*.

apicitis (a''pe-si'tis) inflammation of an apex, as the apex of a tooth, the apex of the lung, or the apex of the petrous portion of the temporal bone (petrositis).

apicoectomy (a''pē-ko-ek'to-me) [apex + Gr. *ektomē* excision] excision of the apical portion of a tooth root through an opening made in the overlying labial, buccal, or palatal alveolar bone; see also *root amputation*.

apicolysis (a''pē-kol'i-sis) [apex + Gr. *lysis* dissolution] the operation of causing the apex of the lung to collapse, for the purpose of obliterating an apical cavity.

apicostomy (a''pē-kos'to-me) [apex + Gr. *stomoun* to provide with an opening, or mouth] surgical formation of an opening through the gum and bone to the apical end of a tooth; called also *dental trephination*.

apicotomy (a''pe-kot'o-me) puncture of the apex of the petrous portion of the temporal bone.

apii (a'pe-i) genitive of *apium*. **a. fructus**, see under *Apium*.

A.P.I.M. abbreviation for *Association Professionnelle Internationale des Médecins*, an international body which deals with the conduct of medical practice from the economic point of view.

apinealism (ah-pin'e-al-izm) the effects allegedly produced by removal of the pineal body.

apinoid (ap'i-noid) [a neg. + Gr. *pinos* dirt + *eidōs* form] clean; free from filth.

apiotherapy (a''pe-o-ther'ah-pe) treatment with bee venom.

apiphobia (a''pē-to'be-ah) [L. *apis* bee + *phobia*] (obs.) morbid dread of bees and their sting.

apisination (a''pis-i-na'shun) [L. *apis* bee] poisoning by the sting of bees.

apitoxin (a''pē-tok'sin) the toxic protein constituent of bee venom.

apituitarism (ah''pi-tu'i-tar-izm) hypopituitarism.

Apium (a'pe-um) [L.] a genus of umbelliferous plants, including celery; celery seed (*apii fructus*), the ripe fruit of *A. graveolens*; has been used as a diuretic and antispasmodic.

A.P.L. trademark for a preparation of human chorionic gonadotropin.

aplacental (a''plah-sen'tal) [a neg. + *placenta*] having no placenta.

aplanatic (ap'lah-nat'ik) [a neg. + Gr. *planan* to wander] pertaining to an optical system in which, for every position of a light source, all the light rays converge to a corresponding image point without aberrations.

aplanatism (ah-plan'ah-tizm) freedom from spherical aberration.

aplasia (ah-pla'zhe-ah) [a neg. + Gr. *plassein* to form] lack of development of an organ or tissue, or of the cellular products from an organ or tissue. Cf. *agenesis* and *hypoplasia*. **a. axialis extracorticalis congenita**, familial centrolobar sclerosis. **a. cutis congenita**, localized failure of development of skin, most commonly of the scalp, less frequently of the trunk and limbs. The defects are usually covered by a thin translucent membrane or scar tissue, or may be raw, ulcerated, or covered by granulation tissue. **dental a.**, lack of formation or development of a tooth or teeth. **germinal a.**, gonadal a. **gonadal a.**, complete failure of gonad development; see *Turner's syndrome*, under *syndrome*. **nuclear a.**, Möbius' syndrome. **a. of ovary**, gonadal dysgenesis. **retinal a.**, failure of the retina to develop into functioning tissue, with subsequent secondary degenerative changes. **thymic a.**, absence of the thymus gland, as in DiGeorge's syndrome. **thymic-parathyroid a.**, DiGeorge's syndrome.

aplasmic (ah-plaz'mik) containing no protoplasm or sarco-plasm.

aplastic (ah-plas'tik) [a neg. + Gr. *plassein* to form] pertaining to or characterized by aplasia; anatomically undeveloped from the primordium or from the stem cell.

Aplectana (ah-plek'tah-nah) a genus of nematodes parasitic in the intestinal tract of amphibians and reptiles.

apleuria (ah-plu're-ah) absence of ribs.

A.P.M. Academy of Physical Medicine; Academy of Psychosomatic Medicine.

apnea (ap-ne'ah) [a neg. + Gr. *pnoia* breath] 1. cessation of breathing. 2. asphyxia. **deglutition a.**, a temporary arrest of the activity of the respiratory nerve center during an act of swallowing. **initial a.**, a condition in which an infant fails to establish sustained respiration within two minutes of delivery. **late a.**, cessation of respiration in an infant for more than 60 seconds after spontaneous breathing has been established and

sustained. **a. neonato'rum**, failure of the newborn infant to initiate pulmonary ventilation. **sleep a.**, transient attacks of failure of automatic control of respiration, resulting in alveolar hypoventilation, which becomes more pronounced during sleep. It may result in acidosis and in vasoconstriction of pulmonary arterioles, producing pulmonary arterial hypertension. **traumatic a.**, cessation of pulmonary ventilation following physical injury.

apneic (ap'ne ik) pertaining or relating to apnea or affected with apnea.

apneumatic (ap'nu-mat'ik) 1. free from air. 2. done with the exclusion of air.

apneumatosi (ap'nu-mah-to'sis) [a neg. + Gr. *pneumatōsis* inflation] congenital atelectasis of the lungs.

apneumia (ap-nu'me-ah) [a neg. + Gr. *pneumōn* lung] congenital absence of the lungs.

apneusis (ap-nu'sis) a condition marked by maintained inspiratory activity unrelieved by expiration, each inspiration being long and cramplike; it follows excision of the upper portion of the pons (pneumotaxic center).

apneustic (ap-nu'stik) pertaining to or characterized by apneusis.

apo-, ap- [Gr. *apo* from] a prefix implying separation or derivation from.

apootropine (ap'o-ah'tro-pēn) chemical name: *endo-α-methylenebenzeneacetic acid 8-methyl-8-azabicyclo[3.2.1]oct-3-yl ester*. An antispasmodic alkaloid, C₁₇H₂₁NO₂, derived from belladonna.

apocamnosis (ap'o-kam-mo'sis) apokamnosis.

apocenosis (ap'o-sē-no'sis) an increased flow of blood or other body fluid.

apochromat (ap'o-kro-mat') [apo- + *chromatic* aberration] an apochromatic objective; see under *objective*.

apochromatic (ap'o-kro-mat'ik) free from chromatic and spherical aberration; see under *objective*.

apocope (ah-pok'o-pe) [Gr. *apokopē*] a cutting off; amputation.

apocoptic (ap'o-kop'tik) resulting from or pertaining to an amputation.

apocrine (ap'o-krin) [Gr. *apokrinesthai* to be secreted] denoting that type of glandular secretion in which the free end or apical portion of the secreting cell is cast off along with the secretory products that have accumulated therein.

apocrinitis (ap'o-krin-i'tis) bacterial infection of isolated single apocrine sweat glands.

apocrustic (ap'o-krus'tik) 1. astringent and repellent. 2. an astringent and repellent agent.

apocynin (ah-pos'ē-nin) see *Apocynum*.

Apocynum (ah-pos'ē-num) a genus of poisonous North American apocynaceous plants noted for their digitalis-like cardioactive principles, e.g., *A. androsaemifolium* L. (dogbane, wild or milk ipecac, rheumatism weed) and *A. cannabinum* L. (Canadian hemp, black Indian hemp). Both contain apocynin, formerly used like digitalis.

apodal (ah-po'dal) having no feet.

apodemialgia (ap'o-de'me-al'je-ah) [Gr. *apodēmia* journey + *algos* pain + *-ia*] (obs.) a morbid longing to go away from home.

Apodemus (ap'o-de'mus) a genus of Old World field mice. **A. sylvaticus**, the wood mouse, a species that serves as a reservoir of *Leptospira grippotyphosa*.

apodia (ah-po'de-ah) [a neg. + Gr. *pous* foot + *-ia*] a developmental anomaly characterized by absence of one or both of the feet.

apoenzyme (ap'o-en'zim) the protein component of an enzyme that is separable from the prosthetic group (or coenzyme) but that requires the presence of the prosthetic group to form the functioning compound (holoenzyme).

apoferment (ap-o-fer'ment) apoenzyme.

apoferritin (ap'o-fer'i-tin) a colorless protein, with a molecular weight of 460,000, occurring in the mucosal cells of the small intestine, forming a compound with iron called ferritin, which has been implicated in the regulation of iron absorption in the gastrointestinal tract.

apogamia, apogamy (ap'o-gam'e-ah; ah-pog'ah-me) [apo- + Gr. *gamein* to wed] 1. reproduction without conjugation of gametes and usually without meiosis, as in certain seed plants. 2. parthenogenesis.

apogee (ap'o-je) the state of greatest severity of a disease.

apokamnosis (ap'o-kam-no'sis) abnormal liability to fatigue in myasthenia; a feeling of tiredness, numbness, and heaviness in a limb motion.

apolar (ah-po'lar) [a neg. + Gr. *polos* pole] not having poles or processes.

apolegamic (ap'o-leh-gam'ik) [Gr. *apolegein* to pick out + *gamos* marriage] pertaining to selection, especially sexual selection.

apolegamy (ap'o-leg'ah-me) selection, especially sexual selection in breeding.

apoplexis (ap'o-lep'sis) the suppression of a natural secretion.
apolipoprotein (ah'po-lip'o-pro'te-in) the protein moiety (moieties) of plasma lipoproteins which binds the lipid moiety to form the holoprotein.

Apollonia (ap'o-lo'ne-ah) the patron saint of dentistry; a Christian martyr who was first persecuted by having her teeth knocked out and then burned alive in A.D. 249. Her feast is observed February 9.

Apollonius (ap'o-lo'ne-us) the name by which several physicians of classical antiquity were known. For example, (1) a Greek physician, also called "the Empiric," who lived c. 200 B.C.; (2) a physician of Citium in Cyprus, who lived in the first century B.C. and who wrote a commentary on Hippocrates' treatise on articulations.

apomixia, apomixis (ap'o-mik'se-ah; ap'o-mik'sis) [apo- + Gr. *mixis* a mingling] 1. asexual reproduction in a species normally reproducing sexually, as in certain seed plants. 2. apogamia.

apomorphine (ap'o-mor'fin) [apo- + *morphine*] a crystalline alkaloid, C₁₇H₁₇NO₂, derived from morphine by the abstraction of a molecule of water; it is administered intravenously to induce instantaneous vomiting and was formerly used as an expectorant.
a. hydrochloride [USP], a grayish crystalline compound, C₁₇H₁₇NO₂·HCl·½H₂O, a potent and prompt emetic.

aponeurectomy (ap'o-nu-rek'to-me) [aponeurosis + Gr. *ektomē* excision] excision of the aponeurosis of a muscle.

aponeurology (ap'o-nu-roi'lo-je) [aponeurosis + -logy] the sum of knowledge regarding aponeuroses and fasciae.

aponeurorrhaphy (ap'o-nu-ror'ah-fe) [aponeurosis + Gr. *rhaphe* suture] suture of an aponeurosis; fasciorrhaphy.

aponeuroses (ap'o-nu-ro'sēz) plural of *aponeurosis*.

aponeurosis (ap'o-nu-ro'sis), pl. *aponeuroses* [Gr. *aponeurosis*] [NA] 1. a white, flattened or ribbon-like tendinous expansion, serving mainly to connect a muscle with the parts that it moves. 2. a term formerly applied to certain fasciae. **abdominal a.**, the conjoint tendons of the oblique and transverse muscles on the abdomen. **bicipital a.**, a. musculi bicipitis brachii. **clavicularoaxillary a.**, fascia clavipectoralis. **crural a.**, fascia cruris. **Denonvilliers' a.**, septum rectovesicale. **epicranial a.**, galea aponeurotica. **falciform a. of rectus abdominis muscle**, falk inguinalis. **femoral a.**, fascia lata femoris. **a. of insertion**, the connection of a muscle with the part or parts that it moves. **interchondral aponeuroses**, **internal** (obs.), see *membrana intercostalis interna*. **intercostal aponeuroses**, **external**, see *membrana intercostalis externa*. **intercostal aponeuroses**, **internal**, see *membrana intercostalis interna*. **a. of investment** (obs.), the fascial investment of a muscle. **ischioprotatic a.** (obs.), fascia diaphragmatis urogenitalis inferior. **ischioanal a.** (obs.), fascia diaphragmatis pelvis inferior. **a. lin'guae** [NA], **lingual a.**, the connective tissue framework of the tongue, supporting and giving attachment to the intrinsic and extrinsic muscles; composed of the connective tissue layer of the tunica mucosa, the lingual septum, and the posterior transverse expansion of the septum which attaches to the hyoid bone. **a. mus'culi bicip'itis bra'chii** [NA], an expansion of the tendon of the biceps brachii muscle by which it is attached to the fascia of the forearm and to the ulna; called also *bicipital a.* or *fascia*, and *lacertus fibrosus*, *semilunar fascia*, and *fibrous fasciculus of biceps muscle*. **a. of occipitofrontal muscle**, galea aponeurotica. **palatine a.**, a fibrous sheet in the anterior part of the soft palate, derived mainly from the tendons of the two tensor muscles, giving attachment to the musculus uvulae and to the palatopharyngeus and levator veli palatini muscles. **palmar a.**, **a. palma'ris** [NA], bundles of fibrous tissue radiating toward the bases of the fingers from the tendon of the palmaris longus muscle; called also *volar fascia*. **perineal a.**, fascia diaphragmatis urogenitalis inferior. **perineal a., superficial**, fascia diaphragmatis pelvis inferior. **perineal a., superior**, fascia diaphragmatis pelvis superior. **pharyngeal a., a. pharyn'gis**, **pharyngobasilar a., a. pharyngobasila'ris**, fascia pharyngobasilaris. **plantar a., a. planta'ris** [NA], bands of fibrous tissue radiating toward the bases of the toes from the medial process of the tuber calcanei; called also *plantar fascia*. **prostatic a., lateral** (obs.), fascia diaphragmatis urogenitalis superior. **Sibson's a.**, membrana suprapleuralis. **subscapular a.**, a fascia attached to the circumference of the subscapular fossa. **a. of superior surface of levator ani muscle**, fascia diaphragmatis pelvis superior. **supraspinous a.**, a dense fascia that partly envelops the supraspinous muscle. **temporal a.**, fascia temporalis. **vertebral a.**, fascia thoracolumbalis. **a. of Zinn**, see *fibrae zonulares*.

aponeurosis (ap'o-nu-ro-si'tis) [aponeurosis + -itis] inflammation of an aponeurosis.

aponeurotic (ap'o-nu-rot'ik) pertaining to or of the nature of an aponeurosis.

aponeurotome (ap'o-nu-ro-tōm) a knife for cutting aponeuroses.

aponeurotomy (ap'o-nu-rot'o-me) [aponeurosis + Gr. *tomē* a cut] surgical cutting of an aponeurosis.

aponia (ah-po'ne-ah) [Gr.] (obs.) freedom from pain.

aponic (ah-po'nik) relieving pain or fatigue.

aponoia (ap'o-noi'ah) [apo- + Gr. *nous* mind] (obs.) amentia.

Aponomma (ap'o-nom'ah) a genus of ticks infesting tropical reptiles of the Old World.

apopathetic (ap'o-pah-thet'ik) (obs.) a term applied to behavior in which the individual adapts his actions to the presence of other persons.

apophlegmatic (ap'o-fleg-mat'ik) causing a discharge of mucus; expectorant.

apophylactic (ap'o-fi-lak'tik) pertaining to or marked by apophylaxis.

apophylaxis (ap'o-fi-lak'sis) [apo- + *phylaxis*] decrease of the phylactic power of the blood, as seen in the negative phase of vaccine therapy.

apophyseal (ah-pof'i-za-re) apophyseal.

apophyseal (ap'o-fiz'e-al) pertaining to or of the nature of an apophysis.

apophyseopathy (ap'o-fiz-e-op'ah-the) [apophysis + Gr. *pathos* disease] disease of an apophysis, particularly Osgood-Schlatter disease.

apophyses (ah-pof'i-sēz) plural of *apophysis*.

apophysal (ap'o-fiz'e-al) apophyseal.

apophysiary (ap'o-fiz'e-a're) apophyseal.

apophysis (ah-pof'i-sis), pl. *apophyses* [Gr. "an offshoot"] [NA] any outgrowth or swelling, especially a bony outgrowth that has never been entirely separated from the bone of which it forms a part, such as a process, tubercle, or tuberosity. **basilar a.**, pars basilaris ossis occipitalis. **cerebral a., a. cer'ebri**, pineal body. **genial a.**, spina mentalis. **a. of Ingrassias**, ala minor ossis sphenoidalis. **a. lenticula'ris in'cudis**, processus lenticularis incudis. **odontoid a.**, dens axis. **a. os'sium**, epiphysis. **pterygoid a.**, processus pterygoideus ossis sphenoidalis. **a. of Rau**, **a. ravia'na**, **a. raw'ii**, processus anterior mallei.

apophysitis (ah-pof'i-zi'tis) inflammation of an apophysis, especially a disorder of the foot caused by disease of the epiphysis of the calcaneus. **a. tibia'lis adolescen'tium**, Osgood-Schlatter disease.

apoplasmatic (ap'o-plaz-mat'ik) pertaining to substances that are produced by cells and form a constituent part of the tissues of an organism, such as fibers of connective tissue or the matrix of bone and cartilage.

apoplectic (ap'o-plek'tik) [Gr. *apoplēktikos*] pertaining to, caused by, or affected with apoplexy.

apoplectiform (ap-o-plek'tē-form) resembling apoplexy.

apoplectoid (ap'o-plek'toid) resembling apoplexy.

apoplexia (ap'o-plek'se-ah) [L.] apoplexy. **a. u'teri**, sudden uterine hemorrhage, due to arterial degeneration or hemorrhagic infarct.

apoplexy (ap'o-plek'se) [Gr. *apoplēxia*] 1. an apoplectic stroke; sudden neurologic impairment due to a cerebrovascular disorder, limited by some to intracranial hemorrhage, extended by others to include occlusive cerebrovascular lesions. See *stroke syndrome*, under *syndrome*. 2. copious extravasation of blood within any organ. **abdominal a.**, spontaneous intraperitoneal hemorrhage due to rupture of an intra-abdominal blood vessel, independent of any trauma to the abdomen. **adrenal a.**, a morbid condition resulting from massive hemorrhage into the adrenal glands, occurring in Waterhouse-Friderichsen syndrome. **asthenic a.**, stroke syndrome resulting from debility. **bulbar a.**, hemorrhage into the substance of the pons; called also *pontile a.* or *pontine a.* **capillary a.**, stroke syndrome resulting from the rupture of capillary vessels. **cerebellar a.**, hemorrhage into the cerebellum. **cerebral a.**, cerebral hemorrhage. **delayed a.**, cerebral hemorrhage which comes on several days after the receipt of the injury. **embolic a.**, stroke syndrome due to stopping of a cerebral artery by an embolus. **fulminating a.**, cerebral hemorrhage in which the patient suddenly falls and quickly becomes unconscious. **heat a.**, heat stroke. **ingravescens a.**, progressive paralysis due to the slow leakage of blood from a ruptured vessel. **neonatal a.**, stroke syndrome in newborn infants. **ovarian a.**, extensive extravasation of blood into the ovary. **pancreatic a.**, extensive hemorrhage of the pancreas; seen in cardiac failure and portal hypertension. **parturient a.**, milk fever, def. 3. **pituitary a.**, sudden massive degeneration with hemorrhagic necrosis of the pituitary gland, associated with pituitary tumor, signaled by abrupt headache, followed by loss of sight, diplopia, drowsiness, and confusion, or coma. **placental a.**, hemorrhage into a separated placenta with formation of a hematoma between the placenta and uterine wall. **pontile a., pontine a., bulbar a.** **Raymond's a.**, a type of ingravescens apoplexy marked by paresthesia of the hand on the side which later becomes paralyzed; called also *Raymond's type of a.* **renal a.**, a morbid condition resulting from rupture of an intrarenal blood vessel. **spinal a.**, bleeding or hemorrhage into the substance of the spinal cord. **thrombotic a.**, stroke syndrome due to thrombosis of a cerebral artery. **trau-**

matic late a., cerebral hemorrhage following trauma and appearing several days or weeks after the accident. **uteroplacental a.**, Couvelaire's term for a severe uterine condition seen in some cases of separation of the placenta, in which the uterine musculature is disrupted and infiltrated with blood.

apoprotein (ap'o-pro'te-in) the protein moiety of a compound, as of a lipoprotein. **a. CII**, an apoprotein of high-density and very-low-density lipoproteins, which functions to activate the enzyme lipoprotein lipase.

aporepressor (ap'o-re-pres/or) in genetic theory, a product of regulator genes, of unknown structure, which combines with low-molecular weight corepressor to form the complete repressor, which specifically represses the activity of certain structural genes.

aporieneurosis (ap-o're-o'nu-ro'sis) [Gr. *aporia* doubt + *neurosis*] (obs.) anxiety neurosis.

aposis (ah-po'ze-ah) [a neg. + Gr. *posis* drinking + *-ia*] (obs.) absence of drinking, or reluctance to ingest fluids.

apositia (ap'o-sish'e-ah) [apo- + Gr. *sitos* food + *-ia*] (obs.) aversion to food.

apositic (ap'o-sit'ik) (obs.) pertaining to, characterized by, or causing apositia.

aposome (ap'o-sōm) [apo- + Gr. *sōma* body] an inclusion within the cytoplasm that has been made by the activity of the cell itself.

apostasis (ah-pos'tah-sis) [Gr.] 1. an abscess. 2. the end or crisis of an attack of disease.

apostem (ap'os-tem) (obs.) an abscess.

apostema (ap'os-te'mah) [Gr. *apostēma*] (obs.) an abscess.

aposthia (ah-pos'the-ah) [a neg. + Gr. *posthē* foreskin + *-ia*] congenital absence of the prepuce.

apothanasia (ap'o-thah-na'ze-ah) [apo- + Gr. *thanatos* death] the postponing of death; the prolongation of life.

apothecary (ah-poth'ē-ka're) [Gr. *apothēke* storehouse] pharmacist. **surgeon a.**, in Great Britain, a practitioner who has passed the examinations required of a surgeon and of an apothecary.

apothecium (ap'o-the'se-um) an open or expanded fruiting body whose asci are contained on its exposed surface. Cf. *cleistothecium*, *gymnothecium*, and *perithecium*.

apothem (ap'o-them) [apo- + Gr. *thema* deposit] a dark deposit that sometimes appears in vegetable infusions and decoctions exposed to the air.

apotheme (ap'o-thēm) apothem.

apotoxin (ap'o-tok'sin) Richet's term for the poison that produces the symptoms of anaphylaxis.

apotripsis (ap'o-trip'sis) [Gr. *apotribein* to abrade] removal of a corneal opacity (Hirschberg).

apotropaic (ap'o-tro-pa'ik) [Gr. *apotropaios* averting evil] prophylactic, in the sense of averting evil influence (in Greek medicine).

apoxemena (ap'ok-sem'ē-nah) the material removed from a periodontal pocket in treatment of periodontitis.

apoxesis (ap'ok-se'sis) [Gr. *apoxein* to scrape off] the removal of detritus from a periodontal pocket.

apozem, apozema, apozeme (ap'o-zem, ap-oz'e-mah, ap'o-zēm) [Gr. *apozema* decoction, from *apo* away + *zein* to boil] a medicinal or medicated decoction.

apozymase (ap'o-zī'mās) the portion of a zymase that requires the presence of a cozymase to become a complete or holozymase.

apparatus (ap'ah-ra'tus), pl. *apparatus* or *apparatuses* [L., from *ad* to + *parare* to make ready] an arrangement of a number of parts acting together in the performance of some special function; used in anatomical nomenclature to designate a number of structures or organs which act together in serving some particular function. **Abbe-Zeiss a.**, Thoma-Zeiss counting chamber.

absorption a., an apparatus used in gas analysis by means of which the sample to be examined is absorbed and its quantity thus estimated. **Barcroft's a.**, a differential manometer for studying small samples of blood or other tissues. **Beckmann's a.**, an apparatus for determining the molecular weight of a substance by dissolving the substance in a pure liquid and observing either the depression of the freezing point or the elevation of the boiling point of the liquid produced by the dissolved substance.

biliary a., the parts concerned in the formation, conduction, and storage of bile, including the secreting cells of the liver, bile ducts, and gallbladder. **central a.**, the dynamic organ of the cell that participates in mitosis; it consists of a centrosome, a centrosphere, and an astrosphere. **chromidial a.**, the chromatin staining material of the cytoplasm of a cell, occurring in the form of granules, rods, strands, and networks. **ciliary a.**, corpus ciliare. **a. derivato'rius**, the direct opening of small arteries into small veins without intervention of capillaries, as in phalanges and erectile tissues. **Desault's a.**, Desault's bandage.

digestive a., **a. digesto'rius** [NA], the organs associated with the ingestion and digestion of food, including the mouth and associated structures, pharynx, and components of the digestive tube, as well as the associated organs and glands; called also *systema digestorius* [NA alternative]. **Fell-O'Dwyer a.**, a de-

vice used in performing artificial respiration and for preventing collapse of the lung in thoracic operations. **Finsen's a.**, Finsen's lamp; see under *lamp*. **genitourinary a.**, **a. urogenitalis**. **Golgi a.**, see under *complex*. **a. of Golgi-Rezzonico** (obs.), spiral filaments seen in the incisures of the myelin sheath, probably artifacts. **a. of Goormaghtigh**, juxtaglomerular cells. **Haldane a.**, see under *chamber*. **Hodgen's a.**, see under *splint*. **Jaquet's a.**, a recording apparatus for venous and cardiac impulses. **Junker a.**, see under *inhale*. **juxtaglomerular a.**, a collective term for the juxtaglomerular cells in a nephron; see under *cell*. **Kirschner's a.**, an apparatus consisting of a wire and stirrup for applying skeletal traction in fractures of the limbs. **lacrimal a.**, **a. lacrima'lis** [NA], the system concerned with the secretion and circulation of the tears and the normal fluid of the conjunctival sac; it consists of the lacrimal gland and ducts, and associated structures. See Plate accompanying eye. **a. ligamento'sus colli**, *membrana tectoria*. **masticatory a.**, see under *system*. **mental a.**, the hypothetical aspects or parts of the mind or psyche, i.e., the id, the ego, and the superego. **a. of Perroncito**, a mass of fibrils in the form of spirals and networks with newly formed axons which develop in the cut stump of a nerve during regeneration; called also *Perroncito's spirals*. **pilosebaceous a.**, the complex consisting of a hair follicle and its sebaceous gland, and the erector pili muscle. **Potain's a.**, an apparatus used for aspiration. **a. respirato'rius** [NA], **respiratory a.**, the tubular and cavernous organs and structures by means of which pulmonary ventilation and gas exchange between ambient air and the blood are brought about. The chief organs involved are the nose, larynx, trachea, bronchi, bronchioles, and lungs. See Plate XLIX. Called also *respiratory system* and *systema respiratorium*. **Sayre's a.**, an apparatus for suspending a patient during the application of a plaster-of-Paris jacket. **Soxhlet's a.**, an apparatus by which fatty or lipid constituents can be extracted from solid matter by repeated treatment with distilled solvent. **spindle a.**, see *spindle*, def. 1. **steadiness a.**, ataxiagraph. **subneural a.**, evenly spaced, ribbon-like lamellae, formed by infolding of the sarcolemma lining the primary synaptic cleft, and projecting into the underlying sarcoplasm of muscle; the clefts between the lamellae are known as *secondary synaptic clefts*. **sucker a.**, sucker foot; see under *foot*. **a. suspensorius len'tis**, *zonula ciliaris*. **Taylor's a.**, see under *splint*. **a. of Timofeev**, a terminal nervous globular network within a lamellar corpuscle. **Tiselius a.**, an apparatus for the electrophoretic separation of the proteins of blood serum, plasma, and other body fluids. **urogenital a.**, **a. urogenitalis** [NA], the organs concerned in the production and excretion of urine, together with the organs of reproduction; see Plate L, under *system*. Called also *genitourinary a.*, *genitourinary* or *urogenital system*, and *systema urogenitale*. **vasomotor a.**, the neuromuscular mechanism controlling the constriction and dilation of blood vessels and thus the amount of blood supplied to a part. **Waldenberg's a.**, an apparatus for exhausting or compressing air which is inhaled by the patient or into which the patient exhales. **Wangenstein's a.**, see under *tube*. **Warburg a.**, a device for measuring the quantity of gas liberated or consumed by respiring tissue slices enclosed in a chamber which is attached to a manometer and immersed in water at constant temperature. **Zander a.**, a group of machines designed for exercise of various parts of the body; rarely employed today.

appearance (ah-pēr'ans) [L. *apparere* to be visible] the visible manifestation of the characteristics of an object or entity.

appendage (ah-pen'dij) a thing or part appended; see also *adnexa* and *appendix*. **atrial a.**, **auricular a.**, *auricula atri*. **cecal a.**, appendix vermiformis. **a. of epididymis**, appendix epididymidis. **epiploic a's**, appendices epiploicae. **a's of the eye**, the lids, eyebrows, lacrimal apparatus, and conjunctiva; called also *adnexa oculi*. **a's of the fetus**, the trophoblast derivatives or extraembryonic membranes, including the umbilical cord, amnion, and chorion (placenta). **fibrous a. of liver**, appendix fibrosa hepatis. **ovarian a.**, the parovarium. **a's of the skin**, the hair, nails, sebaceous glands, sweat glands, and mammary glands. **testicular a.**, **a. of the testis**, appendix testis. **uterine a's**, the ligaments of the uterus, and the oviducts and the ovaries; called also *adnexa uteri*. **a. of ventricle of larynx**, sacculus laryngis. **vermicular a.**, appendix vermiformis. **vesicular a's of epoophoron of Morgagni** (obs.), appendices vesiculosi epoophori.

appendagitis (ah-pen'dah-jī'tis) inflammation of an appendage, particularly of the epiploic appendages. **epiploic a.**, inflammation of one or more of the epiploic appendages of the colon, characterized by pain and tenderness over the affected area.

appendectomy (ap'en-dek'to-me) surgical removal of the vermiform appendix. **auricular a.**, excision of the auricular appendage (auricle) of the heart.

appendical (ah-pen'de-kal) appendiceal.

appendiceal (ap-en-dis'e-al) pertaining to an appendix.

appendicectomy (ah-pen'dī-sek'to-me) [appendix + Gr. *ektomē* excision] appendectomy.

appendices (ah-pen'dī-séz) [L.] plural of *appendix*.

appendicitis (ah-pen/'dī-si'tis) inflammation of the vermiform appendix. **actinomycotic a.**, that caused by *Actinomyces israeli*. **acute a.**, appendicitis of acute onset requiring surgical intervention and usually characterized by pain in the right lower abdominal quadrant with local and referred rebound tenderness, overlying muscle spasm, and cutaneous hyperesthesia. Periumbilical, colicky pain at the onset may be due to obstruction of the appendix by a fecalith. Fever and polymorphonuclear leukocytosis result from the localized infection. Symptoms and signs may be modified by the location of the appendix, by adhesive bands, or by kinking. **amebic a.**, appendicitis caused by infection with *Entamoeba histolytica*. **chronic a.**, 1. appendicitis characterized by fibrotic thickening of the wall of the organ due to previous acute inflammation. 2. a term formerly applied to chronic or recurrent pain in the appendiceal area in the absence of evidence of acute inflammation. **a. by contiguity**, appendicitis caused by infection from neighboring tissues. **foreign-body a.**, appendicitis, usually obstructive, due to a foreign body in the lumen. **fulminating a.**, appendicitis marked by sudden onset and rapid, fatal termination. **gangrenous a.**, appendicitis complicated by gangrene of the organ, owing to interference with the blood supply. **a. granulosa**, appendicitis developing on a disease of the mucous membrane which is marked by formation of granulation tissue between the gland tubules (Riedel). **heminthiac a.**, verminous appendicitis. **left-sided a.**, 1. diverticulitis; so called because the symptoms resemble those of appendicitis, and the descending (or left) colon is the usual site of involvement. 2. left-sided appendicitis associated with situs inversus. **lumbar a.**, a type of appendicitis in which the appendix is posterior, lying against the peritoneum behind or below the cecum. **a. obliterans**, appendicitis with sclerosis and shrinking of the submucous tissue and plastic peritonitis, causing obliteration of the lumen of the appendix; called also *protective a.* **obstructive a.**, a common form of appendicitis attended by obstruction of the lumen of the appendix, usually by a fecalith. **perforating a.**, **perforative a.**, appendicitis with perforation of the organ. **protective a.**, a. obliterans. **purulent a.**, suppurative a. **recurrent a.**, that characterized by recurrent attacks of acute appendicitis. **relapsing a.**, recurrence of appendiceal inflammation after improvement; recurrent appendicitis. **segmental a.**, inflammation confined to a segment of the appendix; it may be proximal, central, or distal. **skip a.**, appendicitis in which two or more areas of focal inflammation are separated by normal appendiceal tissue. **stercoral a.**, appendicitis in which a fecal concretion is the assumed cause. **subperitoneal a.**, appendicitis in which the appendix is buried under the peritoneum instead of being free in the peritoneal cavity. **suppurative a.**, purulent infiltration of the walls of the appendix; called also *purulent a.* **traumatic a.**, appendicitis caused by external trauma. **verminous a.**, appendicitis due to the presence of a worm in the appendix.

appendicocostomy (ah-pen/'dī-ko-se-kos'to-me) the formation of an abnormal opening between the appendix and cecum, usually by surgical means; also, the orifice so established.

appendicocele (ah-pen/'dī-ko-sēl') hernia containing the vermiform appendix.

appendicoenterostomy (ah-pen/'dī-ko'en-ter-os'to-me) the formation of an anastomosis between the vermiform appendix and the intestine.

appendicolithiasis (ah-pen/'dī-ko-'li-thi'ah-sis) [*appendix* + *lithiasis*] a condition marked by concretions in the vermiform appendix.

appendicolysis (ah-pen/'dī-ko-li'sis) [*appendix* + Gr. *lysis* dissolution] the surgical division of adhesions about the appendix.

appendicopathia (ah-pen/'dī-ko-path'e-ah) (*obs.*) appendicopathy. **a. oxyurica**, disease of the vermiform appendix caused by *Oxyuris*.

appendicopathy (ah-pen/'dī-kop'ah-the) [*appendix* + Gr. *pathos* disease] any diseased condition of the vermiform appendix.

appendicostomy (ah-pen/'dī-kos'to-me) [*appendix* + Gr. *stomion* to provide with an opening, or mouth] surgical creation of an opening from the surface of the abdominal wall into the vermiform appendix for the purpose of irrigating or draining the large bowel; called also *Weir's operation*.

appendicular (ap'en-dik'u-lar) 1. pertaining to the vermiform appendix. 2. pertaining to an appendage.

appendix (ah-pen'diks), pl. *appendices*, *appen'dices* [L. from *appendere* to hang upon] a general term used in anatomical nomenclature to designate a supplementary, accessory, or dependent part attached to a main structure; called also *appendage*. Frequently used alone to refer to the *appendix vermiformis* [NA], or *vermiform appendix*. **auricular a.**, auricula atri. **cecal a.**, a. vermiformis. **ensiform a.**, processus xiphoideus. **a. epididymidis** [NA], a. of epididymis, a remnant of the mesonephros sometimes situated on the head of the epididymis; called also *appendage of epididymis*. **epiploic appendices**, *appen'dices epiploicae* [NA], peritoneum-covered tabs of fat, 2 to 10 cm. long, attached in rows along the tenia of the colon. **a. fibrosa hep'atis** [NA], **fibrous a. of liver**, a fibrous band at the left extremity of the liver, being the atrophied remnant of

formerly more extensive liver tissue. **a. morgagnii**, see *appendix testis* and *appendices vesiculosi epooophori*. **a. tes'tis** [NA], the remnant of the müllerian duct (ductus paramesonephricus) on the upper end of the testis; called also *a. morgagnii*, *testicular appendage*, *hydatid of Morgagni*, and *sessile hydatid*. **a. of ventricle of larynx**, **a. ventriculilaryng'is**, *sacculus laryngis*. **a. vermic'ularis**, **vermiform a.**, a vermiformis. **a. vermiform'is** [NA], vermiform appendix; a wormlike diverticulum of the cecum, varying in length from 3 to 6 inches, and measuring about 1/3 inch in diameter. **appen'dices vesiculo'si epoooph'ori** [NA], small pedunculated structures attached to the uterine tubes near their fimbriated end, being remnants of the mesonephric ducts; called also *a. morgagnii*, *vesicular appendages of epooophori*, and *hydatids of Morgagni*. **xiphoid a.**, processus xiphoideus.

appendolithiasis (ah-pen/'do-li-thi'ah-sis) appendicolithiasis.

appereption (ap'er-sep'shun) [L. *ad* to + *percipere* to perceive] conscious perception and appreciation; the power of receiving, appreciating, and interpreting sensory impressions.

apperceptive (ap'er-sep'tiv) pertaining to appereption.

appersonification (ap'er-son/'fi-ka'shun) the identification of one's self with another person.

appestat (ap'pē-stat) [appetite + Gr. *statos* standing] the brain center (probably in the hypothalamus) concerned with controlling the amount of food intake.

appet (ap'et) Dunlap's term for that which in connection with anticipatory thinking constitutes a desire.

appetite (ap'ē-tit) [L. *appetere* to desire] a natural longing or desire, especially the natural and recurring desire for food. **excessive a.**, bulimia. **perverted a.**, the longing for unnatural and indigestible things as articles of food; pica.

appetition (ap'ē-tish'un) [L. *ad* toward + *petere* to seek] the directing of desire toward a definite purpose or object.

appetitive (ap-pet'i-tiv') characterized by approach, or exciting approach behavior; said of stimuli or behavior. Cf. *aversive*.

applanation (ap'lah-na'shun) [L. *applanatio*] undue flatness, as of the cornea.

applanometer (ap'lah-nom'ē-ter) an instrument for determining intraocular pressure in the detection of glaucoma; it may be mechanical or electronic. See *tonometer*.

apple (ap'l) the edible fruit of the rosaceous tree, *Pyrus malus* L. (= *Malus sylvestris* Mill); also the tree itself. Apple seeds are known to be cyanogenetic, and ingestion of large quantities (cupful) have proven fatal to man. Dried apples in powdered form are used as an antidiarrheal. **Adam's a.**, prominentia laryngea. **bitter a.**, colocynth. **Indian a.**, **May a.**, podophyllum. **thorn a.**, stramonium.

appliance (ah-pli'ans) a device used for performing or for facilitating the performance of a particular function. In orthodontics, a device used in the mouth to produce or prevent movement of teeth, so that malopposed teeth and jaws may be brought into proper alignment and occlusion. **Andresen a.**, monobloc activator. **Begg a.**, a fixed, multibanded orthodontic appliance incorporating a concept of differential light forces and using a modified ribbon-arch attachment. **Bimler a.**, a removable orthodontic appliance. **craniofacial a.**, a device used to immobilize and/or reduce mandibular or midfacial fractures. **Crozat a.**, a removable wrought-wire orthodontic appliance, used to align the teeth and correct malocclusion. **extraoral a.**, an appliance that utilizes the top and back of the head and/or neck for anchorage or a resistance unit, such as a headgear, cervical gear, etc. **fixed a.**, an appliance that is cemented to the teeth or attached by means of an adhesive material. **Frankel a.**, function corrector. **functional a.**, monobloc a. **Johnson twin wire a.**, a light wire orthodontic appliance; see *twin wire*, under *wire*. **orthodontic a.**, a mechanism for the application of force to the teeth and their supporting tissues to produce changes in the relationship of the teeth and related osseous structures. **prosthetic a.**, a device affixed to or implanted in the body, designed to take the place, or perform the function, of a missing body part, such as an artificial arm or leg, or a complete or partial denture. **removable a.**, any orthodontic appliance that the patient is able to insert and remove from the mouth. **thumb-sucking a.**, an appliance designed to discourage a deforming thumb-sucking habit. **universal a.**, an orthodontic device incorporating the edgewise and ribbon arch techniques, affording precise control of individual teeth in all planes of space.

applicator (ap'li-ka'tor) an instrument for making local applications. **sonic a.**, an electromechanical transducer used in the local application of sound for therapeutic purposes, as in the treatment of muscular ailments.

appliqué (ap'li-ka') see under *form*.

Apponus, Petrus see *Peter of Abano*.

apposition (ap'o-zish'un) [L. *appositio*] the placing of things in juxtaposition or proximity; specifically, the deposition of successive layers upon those already present, as in cell walls. Called also *juxtaposition*.

apprehension (ap're-hen'shun) 1. perception and understanding. 2. anticipatory fear or anxiety.

approach (ah-prōch') 1. in surgery, the specific procedures by which an organ or part is exposed. 2. in psychiatry, the manner in which personal conflicts are dealt with. **Risdon a.**, a surgical method of exposing the ascending ramus of the mandible by means of an incision made below and behind the angle of the mandible, for treatment of fractures, e.g., condylar fractures, or for reconstructive surgery.

approximal (ah-prok'si-mal) situated close together.

approximate (ah-prok'si-māt') 1. to bring close together, or into apposition. 2. approximal.

approximation (ah-prok'si-ma'shun) the act or process of bringing closer together or into apposition. **successive a.**, shaping.

apractic (ah-prak'tik) pertaining to or characterized by apraxia.

apramycin (ap'rah-mi'sin) an antibacterial antibiotic, $C_{21}H_{41}N_5O_{11}$, produced by *Streptomyces tenebrarius*.

apraxia (ah-prak'se-ah) [Gr. "a not acting," "want of success"] loss of ability to carry out familiar, purposeful movements in the absence of paralysis or other motor or sensory impairment, especially inability to make proper use of an object. **akinetic a.**, loss of ability to carry out spontaneous movement. **amnesic a.**, loss of ability to carry out a movement on command as a result of inability to remember the command, although ability to perform the movement is present. **Brun's a. of gait**, apraxia in which the patient walks with a broad-based gait, taking short steps with the feet placed flat on the ground and with a tendency to retropulsion. **classic a.**, ideokinetic a. **constructional a.**, a type of motor incapacity characterized by lack of ability to copy simple drawings or to reproduce patterns created with building blocks or matchsticks. **cortical a.**, motor a. **ideational a.**, sensory a. **ideokinetic a.**, **ideomotor a.**, a form due to an interruption between the ideation center and the center for the limb; in it, simple movements can be performed but not complicated ones. Called also *limb-kinetic a.* and *transcortical a.* **innervation a.**, motor a. **Liepmann's a.**, inability to perform coordinated movements of the limbs, without actual paralysis. **limb-kinetic a.**, ideokinetic a. **motor a.**, loss of ability to make proper use of an object, although its proper nature is recognized; called also *cortical or innervation a.* **sensory a.**, loss of ability to make proper use of an object, due to lack of perception of its proper nature and purpose; called also *ideational a.* **transcortical a.**, ideokinetic a.

apraxic (ah-prak'sik) apractic.

Apresoline (ah-pres'o-lēn) trademark for preparations of hydralazine.

aprimidine (ah-prin'dēn) chemical name: *N*-(2,3-dihydro-1*H*-inden-2-yl)-*N,N'*-diethyl-*N*-phenyl-1,3-propandiamine; a cardiac depressant, $C_{22}H_{30}N_2$, which has been used as an antirhythmic. **a. hydrochloride**, the monohydrochloride salt of aprimidine, $C_{22}H_{30}N_2 \cdot HCl$, having the same actions and uses as the base.

aprobital (ap'ro-bar'bi-tal) chemical name: 5-(1-methyl-ethyl)-5-(2-propenyl)-2,4,6(1*H*,3*H*,5*H*)-pyrimidinetrione. An intermediate-crystalline barbiturate, $C_{10}H_{14}N_2O_3$, occurring as a fine, white, crystalline powder; used as a sedative and hypnotic, administered orally. Abuse of this drug may lead to dependence.

Aprocta (ah-prok'tah) a genus of filarial organisms. *A. microanalisis* and *A. semenova* infest the orbital and nasal cavities of birds.

aproctia (ah-prok'she-ah) [a neg. + Gr. *prōktos* anus] congenital absence or imperforation of the anus.

apron (a'prun) a piece of clothing worn as a protection for the body in front. **Hottentot a.**, **pubental a.**, artificially or abnormally elongated nuchae.

aprosexia (ap'ro-sek'se-ah) [a neg. + Gr. *prosechein* to heed] (*obs.*) a condition in which there is inability to fix the attention; inattention due to mental weakness or to defective hearing, and often seen in chronic catarrh of the nose or of the nasopharynx (*aprosexia nasalis*).

aprosody (a-pros'o-de) absence of the normal variations in stress, pitch, and rhythm of speech.

aprosopia (ap'ro-so'pe-ah) [a neg. + Gr. *prosōpon* face] partial or complete congenital absence of structures of the face.

aprosopus (ah-pro'so-pus) a monster exhibiting aprosopia.

aprotic (a-pro'tik) denoting a substance that does not possess dissociable protons.

aprotinin (ah-pro-ti'nin) a polypeptide, obtained from animal organs, which inhibits proteinase and kallikrein; it has been used in the treatment of pancreatitis.

A.P.S. American Pediatric Society; American Physiological Society; American Proctologic Society; American Psychological Society; American Psychosomatic Society.

apselaphesia (ap'sel-ah-fe'ze-ah) [a neg. + Gr. *psēlaphēsis* touch] diminution of the sense of touch.

apsithyria (ap'si-thi're-ah) [a neg. + Gr. *psithyros* whispering + *ia*] (*obs.*) hysterical loss of speech and even of the ability to whisper.

apsychia (ah-si'ke-ah) [a neg. + Gr. *psychē* soul + *-ia*] 1. loss or lack of consciousness. 2. a faint or swoon.

apsychical (ah-si'ke-kal) not psychical or mental.

apsychosis (ah'si-ko'sis) [a neg. + Gr. *psychē* soul + *-osis*] (*obs.*) absence or loss of the function of thought.

A.P.T. alum-precipitated toxoid.

A.P.T.A. American Physical Therapy Association.

apterous (ap'ter-us) [a neg. + Gr. *pteron* wing] wingless.

Apterygiformes (ap'tē-rij'i-form'ēz) the order of kiwis, flightless birds with vestigial wings.

aptitude (ap'ti-tūd) natural ability and skill in certain lines of endeavor.

aptyalia, aptyalism (ap'ti-a'le-ah, ap-ti'ah-lizm) [a neg. + Gr. *ptyalizein* to spit] deficiency or absence of the saliva; xerostomia; asialia.

APUD [amine precursor uptake (and) decarboxylation] an acronym for a group of apparently unrelated endocrine cells which share a number of cytochemical and ultrastructural characteristics and that produce polypeptide hormones and neurotransmitters. See *amine precursor uptake and decarboxylation cells*, under *cell*.

apudoma (ah'pud-o'mah) any tumor composed of APUD cells.

apulmonism (ah-pul'mo-nizm) [a neg. + L. *pulmo* lung] a developmental anomaly characterized by partial or complete absence of a lung.

apus (a'pus) [a neg. + Gr. *pous* foot] an individual exhibiting apodia.

apyetous (ah-pi'ē-tus) [a neg. + Gr. *pyon* pus] showing no pus; not suppurating.

apyknomorphous (ah-pik'no-mor'fus) [a neg. + Gr. *pyknos* compact + *morphē* form] not pyknomorphous; not having the stainable cell elements compactly placed—said of certain nerve cells.

apyogenous (ah'pi-oj'ē-nus) not caused by pus.

apyous (ah-pi'us) [a neg. + Gr. *pyon* pus] having no pus; non-purulent.

apyrene (ah'pi-rēn) [a neg. + Gr. *pyrēn* fruit stone, nucleus] having no nucleus or nuclear material.

apyretic (ah'pi-ret'ik) [a neg. + *pyretic*] having no fever; afebrile.

apyrexia (ah'pi-rek'se-ah) [a neg. + *pyrexia*] the absence or intermission of fever.

apyrexial (ah'pi-rek'se-al) pertaining to apyrexia, or to the stage of intermission of a fever.

apyrogenic (ah'pi'ro-jen'ik) [a neg. + Gr. *pyr* fever + *gennan* to produce] not producing fever.

A.Q. achievement quotient.

Aq. Abbreviation for L. *a'qua*, water. **Aq. dest.**, L. *a'qua destilla'ta*, distilled water. **Aq. pur.**, L. *a'qua pu'ra*, pure water.

Aq. tep. L. *a'qua tep'ida*, tepid water.

aqua (ah'kwah, ak'wah), gen. and pl. *a'quae* [L.] water. See also *aromatic water* and various other forms listed under *water*. **a. am'ni**, amniotic fluid. **a. ani'si**, anise water. **a. aromat'ica**, aromatic water. **a. astric'ta**, frozen water. **a. bul'liens**, boiling water. **a. cal'cis**, calcium hydroxide solution. **a. cam'phorae**, camphor water. **a. chlorofo'r'mi**, chloroform water. **a. cinnamo'mi**, cinnamon water. **a. commu'nis**, ordinary water. **a. destilla'ta**, distilled water. **a. destilla'ta steril'is**, sterile distilled water. **a. fer'vens**, hot water. **a. foenic'uli**, fennel water. **a. for'tis**, a solution of nitric acid. **a. gaulthe'ria**, wintergreen water. **a. hamamel'idis**, hamamelis water. **a. labyrin'thi** (*obs.*), the clear fluid in the labyrinth of the ear. **a. men'thae piperi'tae**, peppermint water. **a. men'thae vir'idis**, spearmint water. **a. oc'uli**, the aqueous humor or fluid of the eye. **a. pericar'dii**, the pericardial fluid. **a. pro injectio'ne**, water for injection. **a. pu'ra**, pure water. **a. re'gia**, nitrohydrochloric acid. **a. ro'sae**, rose water. **a. ro'sae for'tior**, stronger rose water. **a. sterilisa'ta**, sterilized water. **a. tep'ida**, warm water. **a. vi'tae**, brandy.

Aquacare (ah'kwah-kār) trademark for preparations of urea.

aqueae (ak'we, ah'kwe) [L.] plural of *aqua*.

aquaeductus (ak'we-duk'tus), pl. *aquaeductus* [L.] aqueductus.

AquaMEPHYTON (ak'wah-mef'i-ton) trademark for a preparation of phytonadione.

aquaphobia (ak'wah-fo'be-ah) morbid fear of water.

aquapuncture (ak'wah-pungk'tūr) [L. *aqua* water + *puncture*] the subcutaneous injection of water.

Aquatag (ah'kwah-tag) trademark for a preparation of benzthiazide.

Aquatensen (ak'wah-ten'sen) trademark for a preparation of methyclothiazide.

aquatic (ah-kwat'tik) inhabiting or frequenting water.

aqueduct (ak'we-duk't') a passage or channel in a body structure or organ; see also *aqueductus*. **cerebral a.**, aqueductus

cerebri. **a. of cochlea**, 1. ductus perilymphatici. 2. canaliculus cochleae. **a. of Cotunnii**, 1. aqueductus vestibuli. 2. canaliculus cochleae. **fallopian a., a. of Fallopius**, canalis facialis. **a. of midbrain**, aqueductus cerebri. **a. of Sylvius**, aqueductus cerebri. **ventricular a.**, aqueductus cerebri. **a. of the vestibule**, aqueductus vestibuli.

aqueductus (ak''we-duk'tus) [L., from *aqua* water + *ductus* canal] [NA] a passage or channel in a body structure or organ, especially a channel for the conduction of fluid; called also *aqueduct* and *aquaeductus*. **a. cer'ebri** [NA], cerebral aqueduct: the narrow channel in the midbrain, called 1 cm. long, that connects the third and fourth ventricles; called also *aqueduct* or *iter of Sylvius*, and *mesocoele*. **a. cochle'ae**, 1. NA alternative for *ductus perilymphatici*. 2. canaliculus cochleae. **a. endolymphaticus**, ductus endolymphaticus. **a. vestib'uli** [NA], aqueduct of vestibule: 1. a small canal extending from the vestibule of the inner ear to open onto the posterior surface of the petrous part of the temporal bone. It lodges the endolymphatic duct and an arteriole and a venule. Called also *aqueduct of Cotunnii*. 2. NA alternative for *ductus endolymphaticus*.

aqueous (a'kwe-us) [L. *aqua* water] 1. watery; prepared with water. 2. the aqueous humor of the eye; see under *humor*.

Aquex trademark for a preparation of clopamide.

aquiparous (ak-wip'ah-rus) [L. *aqua* water + *parere* to produce] producing water or a watery secretion.

aquocapsulitis (a''kwo-kap''su-li'tis) [L. *aqua* water + *capsulitis*] serous iritis.

aquila (ak'woo-lah) [L.] a little stream. **a. auditi'va exter'na** (obs.), perilymph. **a. auditi'va inter'na** (obs.), endolymph. **a. cotun'ni**, **a. labyrin'thi exter'na** (obs.), perilymph. **a. labyrin'thi inter'na** (obs.), **a. labyrin'thi membrana'cei** (obs.), endolymph.

AR alarm reaction; aortic regurgitation; artificial respiration.

Ar chemical symbol for argon.

A.R.A. American Rheumatism Association.

ara-A adenine arabinoside; see *vidarabine*.

araban (ar'ah-ban) a pentosan, (C₅H₁₀O₅)_n, found in various gums and pectins, consisting of a mixture of anhydrides of l-arabinose.

arabanase (ah-rab'i-nās) an enzyme that catalyzes the hydrolysis of araban to arabinose.

arabate (ar'ah-bāt) a salt of arabic acid.

arabin (ar'ah-bin) an amorphous carbohydrate, (C₅H₁₀O₅)₂ + H₂O, from gum arabic, soluble in water; called also *arabic acid*.

arabinose (ah-rab'i-nōs) gum sugar; a crystalline aldo-pentose, CH₂OH(CHOH)₃CHO, obtained from vegetable gums by acid hydrolysis and sometimes found in urine. d-Arabinose is a constituent of aloin; l-arabinose is the gum sugar.

arabinosis (ah-rab'i-no'sis) poisoning by arabinose, which may produce nephrosis.

arabinsuria (ah-rab'i-no-su're-ah) the presence of arabinose in the urine.

arabinosylcytosine (ah-rab'i-no-sil-si'to-sēn) cytarabine.

arabinulose (ar'ah-bin'u-lōs) a ketopentose.

arabite (ar'ah-bit) a sweet crystalline principle, C₅H₁₂O₈, derivable from arabinose by the action of sodium amalgam.

arabitol (ah-rab'i-tol) an alcohol, CH₂OH(CHOH)₃CH₂OH, formed by the reduction of arabinose.

arabopyranose (ar'ah-bo-pi'rah-nōs) arabinose.

ara-C cytosine arabinoside; see *cytarabine*.

arachidate (ah-rak'i-dāt) eicosanoate: the ionic form of arachidic acid, C₂₀H₄₀O₂, a naturally occurring fatty acid.

arachidic (ar'ah-kid'ik) [L. *arachis* peanut] caused by peanut kernels, as arachidic bronchitis following accidental inhalation of a peanut.

arachnephobia (ah-rak''ne-fo'be-ah) arachnophobia.

arachnid (ah-rak'nid) any member of the class Arachnida.

Arachnida (ah-rak'nī-dah) [Gr. *arachnē* spider] a class of the Arthropoda, including the spiders, ticks, mites, and scorpions.

arachnidism (ah-rak'nī-dizm) the condition produced by the bite of a venomous spider; spider envenomation. Called also *araneism*.

arachnitis (ar'ak-ni'tis) [*arachno* + *-itis*] arachnoiditis.

arachno- (ah-rak'no) [Gr. *arachnē* spider] a combining form denoting relationship to the arachnoid membrane or to a spider.

arachnodactylia (ah-rak''no-dak-tī'e-ah) arachnodactyly.

arachnodactyly (ah-rak''no-dak-tī'le) [*arachno* + Gr. *daktylos* finger] a condition characterized by abnormal length and slenderness of the fingers and toes; called also *acromacria*, *dolichostenomelia*, and *spider finger*. Sometimes used in the past as a synonym for *Marfan's syndrome*.

arachnogastria (ah-rak''no-gas'tre-ah) [*arachno* + Gr. *gaster* stomach + *-ia*] the prominent network of veins on the protuberant abdomen caused by ascites, especially in hepatic cirrhosis.

arachnoid (ah-rak'noid) 1. resembling a spider's web. 2.

arachnoidea. **a. of brain, cranial a.**, arachnoidea encephali. **spinal a., a. of spinal cord**, arachnoidea spinalis.

arachnoidal (ar'ak-noi'dal) or of pertaining to the arachnoid.

arachnoidea (ar'ak-noi'de-ah), pl. *arachnoi'deae* [Gr. *arachnoeidēs* like a cobweb] [NA] a delicate membrane interposed between the dura mater and the pia mater, being separated from the pia mater by the subarachnoid space. **a. enceph'ali** [NA], the arachnoidea covering the brain; called also *arachnoid of brain* and *cranial arachnoid*. **a. spina'lis** [NA], spinal arachnoid: the arachnoidea covering the spinal cord; called also *arachnoid of spinal cord*.

arachnoideae (ar'ak-noi'de-ah) plural of *arachnoidea*.

arachnoidism (ah-rak'noi-dizm') the condition produced by the bite of venomous spiders.

arachnoiditis (ah-rak'noi-i'tis) [*arachnoid* + *-itis*] inflammation of the arachnoidea; called also *arachnitis*. **chronic adhesive a.**, thickening and adhesions of the leptomeninges in the brain or spinal cord, resulting from previous meningitis, other disease processes, or trauma; the signs and symptoms vary with extent and location.

arachnolysin (ar'ak-nol'i-sin) [*arachno* + *lysin*] the active hemolytic principle of spider venom.

arachnophobia (ah-rak''no-fo'be-ah) [*arachno* + Gr. *phobos* fear + *-ia*] morbid fear of spiders.

arachnopia (ar'ak-no'pe-ah) [*arachno* + *pia*] (obs.) the pia-arachnoid.

arachnorhinitis (ah-rak''no-ri-ni'tis) [*arachno* + *rhinitis*] disease of the nasal passages caused by the presence of a spider.

arack (ah-rak') arrack.

Aradidae (ah-rad'i-de) a family of broad flat bugs which inhabit crevices under bark and similar sites; some species bite man, but are of no medical importance.

Aralen (ār'ah-len) trademark for a preparation of chloroquine.

Aralia (ah-ra'le-ah) [L.] a genus of aromatic and diaphoretic plants, including spikenard or pectymorrel (*A. racemosa*), dwarf elder (*A. hispida*), and other plants used in domestic medicine. Volatile oil appears to be the active constituent. It is one of the ingredients of compound white pine syrup. Called also *spice berry*.

aralia (ah-ra'le-ah) the dried rhizome and roots of *Aralia racemosa*; an ingredient of compound white pine syrup.

aralkyl (ah-ral'kil) an aryl derived from an alkyl radical.

Aramine (ār'ah-min) trademark for a preparation of metaraminol.

Aran's law (ar-ahnz') [François Amilcar Aran, French physician, 1817-1861] see under *law*.

Aran-Duchenne muscular atrophy (disease) (ar-ahn'-doo-shen') [François Amilcar Aran; Guillaume Benjamin Amand Duchenne, French neurologist, 1806-1875] muscular atrophy; see under *atrophy*.

Araneae (ah-rān'e-e) an order of the Arachnida comprising the spiders; it is divided into the suborders Labidognatha and Orthognatha.

Araneida (ar'ah-ne'i-dah) Araneae.

araneism (ah-ra'ne-izm) spider envenomation.

araneous (ah-ra'ne-us) [L. *araneum* cobweb] like a cobweb.

Arantius' bodies, etc. (ah-ran'she-us) [Julius Caesar Arantius (Italian Aranzi), an Italian anatomist and physician, 1530-1589] see under *body*, *canal*, *duct*, *ligament*, *nodule*, and *ventricle*.

Aranzi see *Arantius*.

araphia (ah-ra'fe-ah) [a neg. + Gr. *raphē* seam] dysraphia.

araroba (ar'ah-ro'bah) [Brazilian] 1. *Andira*. 2. Goa powder.

arbaprostil (ar'bah-prost'il) chemical name: (5Z,11a,13E,15R)-11,15-dihydroxy-15-methyl-9-oxo-prosta-5,13-diene-1-oic acid; a synthetic 15-methyl analogue of dinoprostone, a prostaglandin of the E type, C₂₁H₃₄O₅; its esters have been used orally to reduce gastric secretion in the treatment of gastric ulcer and intramuscularly for termination of pregnancy.

arbor (ar'bor), pl. *arbo'res* [L.] a treelike structure or part; a structure or system resembling a tree with its branches. **a. medulla'ris ver'mis**, a. vitae cerebelli. **a. vi'tae**, *Thuja occidentalis*, or white cedar, a tree of the family Cupressaceae, native to eastern North America. Oil from the leaves is used as an expectorant, antirheumatic, and emmenagogue, and externally as a counterirritant and for dermatological diseases. **a. vi'tae cerebell'i** [NA], the treelike outline of white substance seen in a median section of the cerebellum; called also *a. medullaris vermis*, *a. vitae of vermis*, *medullary body of vermis*, *corpus medullare vermis*, and *arborescent white substance of cerebellum*. **a. vi'tae u'teri**, *plicae palmatae*. **a. vitae of vermis**, *a. vitae cerebelli*.

arboreal (ar-bo're-al) pertaining to trees; inhabiting or attached to trees.

arbores (ar'bo-rēz) [L.] plural of *arbor*.

arborescent (ar'bo-res'ent) [L. *arborescens*] branching like a tree.

arborization (ar'bor-ī-za'shun) 1. the branching termination

of certain nerve cell processes. 2. a form of the termination of a nerve fiber when in contact with a muscle fiber. 3. the treelike appearance of capillary vessels in inflamed conditions.

arboroid (ar'bo-roid) [L. *arbor* a tree] branching like a tree.

arbovirus (ar'bor-vi'rus) former term for *arbovirus*.

arboviral (ar'bo-vi'ral) pertaining to or caused by arboviruses.

arbovirus (ar'bo-vi'rus) [from *arthropod-borne* + *virus*] any of a group of viruses, including the causative agents of yellow fever, viral encephalitis, and certain febrile infections, which are transmitted to man by various mosquitoes and ticks; those transmitted by ticks are often considered in a separate category (tickborne viruses).

arbutin (ar'bu-tin) [L. *Arbutus*] see *Arbutus*.

Arbutus (ar'bu-tus) [L.] a genus of ericaceous trees and shrubs which contain arbutin, a hydroquinone glycoside that has been used for its diuretic and urinary antiseptic properties. **A. uva-ur'si**, *Arctostaphylos uva-ursi*.

A.R.C. American Red Cross; anomalous retinal correspondence.

arc (ark) [L. *arcus* bow] a structure or projected path having a curved or bowlike outline; by extension, a visible electrical discharge generally taking the outline of an arc. In neurophysiology, the pathway of neural reactions. **auricular a.**, **binauricular a.**, a measurement from the center of one auditory meatus to that of the other. **bregmatolambdoid a.**, the arc extending along the course of the sagittal suture from the bregma to the lambda. **carbon a.**, an electrical discharge between carbon electrodes that gives off an intense white light. **mercury a.**, an electric discharge between electrodes in mercury vapor in a vacuum tube which gives off light rich in ultraviolet rays. **nasobregmatic a.**, the arc extending from the nasion to the bregma. **naso-occipital a.**, the arc extending from the nasion to the most inferior part of the external occipital protuberance. **neural a.**, a series of two or more neurons connecting certain receptors and effectors, and constituting the pathway for neural reactions and reflexes; called also *sensorimotor a.* **nu-clear a.**, vortex lentis. **reflex a.**, the neural arc utilized in a reflex action; an impulse travels centrally over afferent fibers to

Three-neuron reflex arc (King and Showers).

a nerve center, and the response outward to an effector organ or part over efferent fibers. **sensorimotor a.**, neural a. **tungsten a.**, see under *lamp*.

arcade (ar-kād') an anatomical structure composed of a series of arches. **arterial a's**, a series of anastomosing arterial arches as in the intestinal branches of the superior mesenteric artery. **Flint's a.**, an arteriovenous arch at the base of the renal pyramids.

arcanum (ar-ka'num) [L. "secret"] a secret medicine or nostrum.

arcate (ar'kāt) arcuate.

arch (arch) [L. *arcus* bow] a structure with a curved or bowlike outline; see also *arcus*. **abdominothoracic a.**, the lower boundary of the front of the thorax. **alveolar a.**, see *arcus alveolaris mandibulae* and *arcus alveolaris maxillae*. **anterior a. of atlas**, arcus anterior atlantis. **a. of aorta**, arcus aortae. **aortic a's**, paired vessels arching from the ventral to the dorsal aorta through the branchial arches of fishes and amniote embryos. In mammalian development, arches 1 and 2 disappear; arch 3 joins the common to the internal carotid; the left arch 4 remains as the arch of the definitive aorta while the right arch 4 joins the aorta to the subclavian artery; arch 5 disappears; and the ventral halves of arch 6 form the pulmonary arteries while the connections to the dorsal aorta are lost, although the left half, or ductus arteriosus, serves until birth. **arterial a's of kidney**, arteriae arcuatae renis. **axillary a.**, a muscular slip occasionally arising from the cranial border of the latissimus dorsi muscle, crossing the axilla ventral to the axillary vessels and nerves, and joining the under surface of the tendon of the pectoralis major, the coracobrachialis, or the fascia of the biceps brachii muscle. **basal a.**, apical base. **branchial a's**, paired arched columns that bear the gills in lower aquatic vertebrates and that, in the embryos of higher vertebrates, appear in comparable form before subsequent modification into structures of the ear and neck. Each arch contains a cartilaginous bar, consisting of right and left halves. The first arch (*mandibular a.*) differentiates into the sphenomandibular and anterior malleolar ligaments, malleus, and incus, the second (*hyoid a.*) into the styloid process, stylohyoid ligament, lesser cornu of the hyoid bone, and

cranial part of the hyoid body, the third into the greater cornu of the hyoid bone and the caudal part of its body, and the fourth and fifth into certain laryngeal cartilages. Called also *pharyngeal a's* and *visceral a's*. **carpal a.**, **anterior**, an arch formed by anastomosis of the anterior carpal branches of the radial and ulnar arteries. **carpal a.**, **dorsal**, **carpal a.**, **posterior**, rete carpi dorsale. **a's of Corti**, a series of arches in the organ of Corti formed by inner and outer pillar cells. **costal a.**, arcus costalis. **a. of cricoid cartilage**, arcus cartilaginis cricoideae. **crural a.**, ligamentum inguinale. **crural a.**, **deep**, a thickened band of fibers derived from the transversalis fascia, which arches over the external iliac vessels as they pass under the inguinal ligament; called also *iliopubic tract*. **dental a.**, the curving structure formed by the teeth in their normal position; called also *arcus dentalis*. The *inferior dental arch* (*arcus dentalis inferior* or *arch of the mandible*) is formed by the mandibular teeth, and the *superior dental arch* (*arcus dentalis superior* or *maxillary arch*) is formed by the maxillary teeth. **dental a.**, **inferior**, see under *dental a.* **dental a.**, **superior**, see under *dental a.* **diaphragmatic a.**, **external**, ligamentum arcuatum laterale. **diaphragmatic a.**, **internal**, ligamentum arcuatum mediale. **digital venous a's**, arcus venosi digitales. **dorsal venous a. of foot**, arcus venosus dorsalis pedis. **double aortic a.**, a congenital anomaly in which the aorta divides into two branches which embrace the trachea and esophagus and reunite to form the descending aorta. **epiphyseal a.**, the embryonic structure in the roof of the third ventricle from which the pineal body develops. **expansion a.**, a wire appliance made to conform to the arch of the jaw, used in orthodontic work to produce movement of the teeth into a larger arch and to eliminate space deficiency and irregularities. **femoral a.**, **superficial**, ligamentum inguinale. **fibrous a. of soleus muscle**, arcus tendineus musculi solei. **a's of foot**, see *arcus pedis longitudinalis* and *arcus pedis transversalis*. **glossopalatine a.**, arcus palatoglossus. **Gothic a.**, a tracing made by the excursions to left and right and the protrusive movement of the mandible, to provide a graphic record of the range of mandibular movement in the occlusal plane. **Haller's a's**, see *ligamentum arcuatum laterale* and *ligamentum arcuatum mediale*. **hemal a.**, the arch formed by the body, pedicles, and transverse processes of a vertebra, a pair of ribs and their costal cartilages, and the sternum; the sum of all such arches forming the thoracic cage. **high labial a.**, a labial arch placed gingival to the anterior tooth crowns, with springs extending downward to maintain pressure on the teeth to be moved. **hyoid a.**, the second branchial arch; see *branchial a's*. **jugular venous a.**, arcus venosus juguli. **labial a.**, a wire appliance made to conform to the outside perimeter of the dental arch; used to promote or to prevent movement of the teeth in orthodontic therapy. **Langer's axillary a.**, axillary a. **lingual a.**, a wire appliance made to conform to the lingual aspect of the dental arch; used to promote or to prevent movement of the teeth in orthodontic work. **longitudinal a. of foot**, arcus pedis longitudinalis. **lumbocostal a.**, **external**, of diaphragm, ligamentum arcuatum laterale. **lumbocostal a.**, **internal**, of diaphragm, ligamentum arcuatum mediale. **lumbocostal a.**, **lateral**, of Haller, ligamentum arcuatum laterale. **lumbocostal a.**, **medial**, of Haller, ligamentum arcuatum mediale. **malar a.**, arcus zygomaticus. **mandibular a.**, 1. the first branchial arch; see *branchial a's*. 2. the inferior dental arch; see under *dental a.* **maxillary a.**, 1. the palatal arch. 2. the superior dental arch; also the residual dental arch. See under *dental a.* **nasal a.**, the arch formed by the nasal bones and by the nasal processes of the maxilla. **neural a. of vertebra**, arcus vertebrae. **open pubic a.**, a congenital anomaly in which the pubic arch is not fused, the bodies of the pubic bones being spread apart. **oral a.**, see *palatal a.* **orbital a. of frontal bone**, margo supraorbitalis ossis frontalis. **palatal a.**, the arch formed by the roof of the mouth from the teeth on one side of the maxilla to the teeth on the other or, if the teeth are missing, from the residual dental arch on one side to that on the other. Called also *maxillary a.*, *palatomaxillary a.*, and *oral a.* **palatine a.**, **anterior**, arcus palatoglossus. **palatine a.**, **posterior**, arcus palatopharyngeus. **palatoglossal a.**, arcus palatoglossus. **palatomaxillary a.**, palatal a. **palatopharyngeal a.**, arcus palatopharyngeus. **palmar arterial a.**, **deep**, arcus palmaris profundus. **palmar arterial a.**, **superficial**, arcus palmaris superficialis. **palmar venous a.**, **deep**, arcus venosus palmaris profundus. **palmar venous a.**, **superficial**, arcus venosus palmaris superficialis. **palpebral a.**, **inferior**, arcus palpebralis inferior. **palpebral a.**, **superior**, arcus palpebralis superior. **paraphyseal a.**, the embryonic structure in the roof of the third ventricle of vertebrates from which the paraphysis develops. **passive lingual a.**, an orthodontic appliance for maintaining space and preserving arch length when bilateral primary molars are prematurely lost. **a. of pelvis**, angulus subpubicus. **pharyngeal a's**, branchial a's. **pharyngoepiglottic a.**, arcus palatopharyngeus. **pharyngopalatine a.**, arcus palatopharyngeus. **plantar arterial a.**, arcus plantaris. **plantar venous a.**, arcus venosus plantaris. **popliteal a.**, ligamentum popliteum arcuatum. **postaural a's**, branchial a's. **poste-**

rior a. of atlas, arcus posterior atlantis. **pubic a., a. of pubis**, arcus pubis. **pulmonary a.'s**, the most caudal of the aortic arches, which become the pulmonary arteries. **residual dental a.**, the curved contour of the ridge remaining after tooth removal. **ribbon a.**, an appliance of flattened wire made to conform to the arch of the jaw and used in producing bodily movement of the teeth in orthodontic work. **a. of ribs**, arcus costalis. **right aortic a.**, a congenital anomaly in which the aorta is displaced to the right and passes behind the esophagus, thus forming a vascular ring that may cause compression of the trachea and esophagus. **Riolan's a.**, the arch formed by the mesentery of the transverse colon. **saddle a., saddle-shaped a.**, a palatal arch in which the lateral parts are contrasted. **Salus' a.**, the arching of a vein where it crosses an artery in the retina, seen in arteriosclerosis. **Shenton's a.**, Shenton's line. **stationary lingual a.**, a lingual arch soldered to the anchor bands. **subpubic a.**, angulus subpubicus. **superciliary a.**, arcus superciliaris. **supraorbital a. of frontal bone**, margo supraorbitalis ossis frontalis. **tarsal a.'s**, see *arcus palpebralis inferior* and *arcus palpebralis superior*. **tendinous a.**, arcus tendineus. **tendinous a. of diaphragm, external**, ligamentum arcuatum laterale. **tendinous a. of diaphragm, internal**, ligamentum arcuatum mediale. **tendinous a. of levator ani muscle**, arcus tendineus musculus levatoris ani. **tendinous a. of lumbodorsal fascia**, ligamentum lumbocostale. **tendinous a. of pelvic fascia**, arcus tendineus fasciae pelvis. **tendinous a. of soleus muscle**, arcus tendineus musculus solei. **thyrohyoid a.**, the third pharyngeal arch, which becomes represented by the greater cornu of the hyoid bone. **transverse a. of foot**, arcus pedis transversalis. **Treitz's a.**, an arch composed of the left superior colic artery and the inferior mesenteric vein; it lies between the ascending portion of the duodenum and the inner edge of the left kidney. **venous a.'s of kidney**, venae arcuatae renis. **a. of vertebra, vertebral a.**, arcus vertebrae. **visceral a.'s**, branchial a.'s. **volar venous a., deep**, arcus venosus palmaris profundus. **volar venous a., superficial**, arcus venosus palmaris superficialis. **V-shaped a.**, a dental arch which narrows and comes to a point at the lingual junction of the maxillary central incisors. **wire a.**, an arch or splint of wire adjusted to the dental arch, used in orthodontic work to produce movement of the teeth and achieve a normal contour of the dental arch. **Zimmermann's a.**, an inconstant, rudimentary arch of the embryo, supposed to explain the origin of certain occasionally occurring vessels between the fourth aortic and the pulmonary arch. **zygomatic a.**, arcus zygomaticus.

arch- See *archi-*.

archaeus (ar-ke'us) Paracelsus' term for the vital principle, the living force in the body or the animate universe.

Archagathus (ark-ag'ah-thus) the first Greek physician to practice in Rome (219 B.C.), according to Pliny. At first known as "the wound-curer" (*Vulnerarius*), because of his surgical exploits he was later termed "the executioner" (*Carnifex*).

archaic (ar-ka'ik) [Gr. *archaios* ancient] very ancient; pertaining to early evolutionary stages.

archamphiaster (ark-am'fe-as'ter) [*arch-* + Gr. *amphi* around + *astēr* star] the primitive amphiaster associated with the formation of polar bodies.

Archangelica (ar'kan-jel'e-kah) [L. from Gr. *archangelikos* archangelic] a genus of umbelliferous plants. See *angelica*.

Archangiaceae (ark-an'je-a'se-e) a systematic family of schizomycetes, order Myxobacterales, and made up of two genera (*Archangium* and *Stelangium*) of soil microorganisms.

Archangium (ark-an'je-um) a genus of schizomycetes of the family Archangiaceae, order Myxobacterales.

arche- see *archi-*.

archebiosis (ar'ke-bi-o'sis) [*arche-* + Gr. *biōsis* way of life] the spontaneous generation of organisms, a concept proved to be false; called also *archegenesis*, *archigenesis*, or *archegony*.

archecentric (ar'kē-sen'trik) [*arche-* + *centric*] denoting a primitive type of structure from which the other types in the members of the group are derived.

archegenesis (ar'kē-jen'ē-sis) [*arche-* + Gr. *genesis* reproduction] archebiosis.

archegonium (ar'kē-go'ne-um) [*arche-* + Gr. *gonos* offspring] the female organ of a cryptogamic plant taking part in the formation of sexually produced spores; cf. *antheridium*.

archegony (ar-keg'o-ne) [*arche-* + Gr. *gonē* seed] archebiosis.

archencephalon (ar'ken-sef'ah-lon) [*arche-* + Gr. *enkephalos* brain] the primitive brain, anterior to the end of the notochord, from which the midbrain and the forebrain are developed.

archenteron (ar-ken'ter-on) [*arche-* + Gr. *enteron* intestine] the primitive digestive cavity of those embryonic forms whose blastula becomes a gastrula by invagination; called also *archigaster*, *coelenteron*, *gastrocoele*, and *primitive gut*.

archeokinetic (ar'ke-o-si-net'ik) archeokinetic.

archeocyte (ar'ke-o-sit'ik) [Gr. *archaios* ancient + *kytos* hollow vessel] any free or wandering ameboid cell.

archeokinetic (ar'ke-o-si-net'ik) [Gr. *archaios* ancient + *kinēsis* motion] a term applied to the primitive type of motor nerve mechanism, as seen in the peripheral and ganglionic nervous systems; cf. *neokinetic* and *paleokinetic*.

archepyon (ar-kep'e-on) [*arche-* + Gr. *pyon* pus] (*obs.*) very thick, cheesy pus.

archespore (ar'kē-spōr) [*arche-* + Gr. *sporos* seed] the mass of cells that give rise to spore mother cells; called also *archesporium* and *archispore*.

archesporium (ar'kē-spo're-um) archespore.

archetype (ar'kē-tip) [*arche-* + Gr. *typos* type] an ideal, original, or standard type or form.

archi-, arch-, arche- [Gr. *archē* beginning] a combining form denoting first, beginning, or original.

archiblast (ar'kī-blast) [*archi-* + Gr. *blastos* germ] 1. the components of an ovum that actively form the embryo, as distinguished from the yolk. 2. His' term for the fundamental part of the blastodermic layers as distinguished from the parablast or peripheral portion of the mesoderm.

archiblastic (ar'kī-blas'tik) derived from or pertaining to the archiblast.

archicarp (ar'kī-karp) the group of cells, including the ascogonium, that give rise to the fruiting body of ascomycetous fungi. Cf. *ascocarp*. See also *ascogonium*.

archicenter (ar'kī-sen'ter) [*archi-* + Gr. *kentron* sharp point] an archetype; an organ or organism that is the primitive form from which another organ or organism is descended.

archicentric (ar'kī-sen'trik) pertaining to an archicenter.

archicerebellum (ar'kī-ser'ē-bel'um) [*archi-* + *cerebellum*] a term sometimes applied to the phylogenetically old part of the cerebellum, viz., the flocculonodular lobe, which is predominantly supplied by vestibulocerebellar fibers and dominated by vestibular functions.

archicortex (ar'kī-kor'teks) archipallium.

archicyte (ar'kī-sit) [*archi-* + Gr. *kytos* hollow vessel] zygote.

archicytula (ar'kī-sit'u-lah) [*archi-* + Gr. *kytos* hollow vessel] a fertilized ovum in the stage in which the nucleus is first discernible.

archigaster (ar'kī-gas'ter) [*archi-* + Gr. *gastēr* belly] archenteron.

archigastrula (ar'kī-gas'troo-lah) [*archi-* + *gastrula*] the gastrula in its most primitive form of development.

Archigenes (ar-kij'ē-nēz) of Apamea (1st century A.D.) a celebrated Greek physician, a pupil of Agathinus (and a Pneumatist). He practiced in Rome and wrote several works, some portions of which are preserved; his surgical observations (e.g., on amputation and ligation) are noteworthy.

archigenesis (ar-kī-jen'ē-sis) archebiosis.

archikaryon (ar'kī-kar'e-on) [*archi-* + Gr. *karyon* kernel] the nucleus of a fertilized ovum.

archil (ar'kil) the lichen *Rocella tinctoria*; also, a violet coloring matter from this and other lichens, employed as an indicator dye for litmus paper: alkalies give a blue color, and acids a red color.

archimorula (ar-kī-mor'u-lah) [*archi-* + *morula*] a mass of cells arising from the division of the archicytula and preceding the archigastrula.

archinephron (ar'kī-nef'ron) [*archi-* + Gr. *nephros* kidney] a unit of the pronephros.

archineuron (ar'kī-nu'ron) [*archi-* + Gr. *neuron* nerve] the neuron at which an efferent impulse starts (Waldeyer).

archipallial (ar'kī-pal'e-al) pertaining to the archipallium.

archipallium (ar'kī-pal'e-um) [*archi-* + L. *pallium* cloak] that portion of the pallium (cerebral cortex) which, with the paleopallium, develops in association with the olfactory system and which is phylogenetically older than the neopallium and lacks its layered structure. The embryonic archipallium corresponds to the cortex of the dentate gyrus and hippocampus in mature mammals. Called also *allocortex*, *archicortex*, *heterotypical cortex*, and *olfactory cortex*.

archiplasm (ar'kī-plazm") [*archi-* + Gr. *plasma* something formed] (*obs.*) Boveri's name for the material of the spindle fibers and astral rays. This material was thought to exist during the entire cell cycle but to become visible after aggregation at mitosis.

archispore (ar'kī-spōr) archespore.

archistome (ar'kī-stōm) [*archi-* + Gr. *stoma* mouth] blastopore.

archistriatum (ar'ke-stri-a'tum) [*archi-* + *striatum*] the primitive corpus striatum, represented in man by the corpus amygdaloideum.

architectonic (ar'ke-tek-ton'ik) 1. pertaining to architectural pattern. 2. the structure or construction of, as architectonic structure of the brain.

archo- [Gr. *archos* rectum, from *archē* beginning, the rectum having been considered the first part of the bowel] a combining form once used to denote relationship to the rectum or anus.

archoceles (ar'ko-sēl) [*archo-* + Gr. *kēlē* hernia] (*obs.*) rectoceles.

archocystocolposyrinx (ar'ko-sis'to-kol'po-sir'inks) [*archo-* + Gr. *kystis* bladder + *kolpos* vagina + *syrinx* pipe] (*obs.*) fistula of the anus, vagina, and bladder.

archocystosyrinx (ar'ko-sis'to-sir'inks) [*archo-* + Gr. *kystis* bladder + *syrinx* pipe] fistula of the anus and bladder.

archoptoma (ar'ko-to'mah) [*archo-* + Gr. *ptōma* fall] (*obs.*) a prolapsed portion of the rectum.

archoptosis (ar'ko-to'sis) [*archo-* + Gr. *ptōsis* fall] (*obs.*) prolapse of the lower rectum through the anal canal.

archorrhagia (ar'ko-ra'je-ah) [*archo-* + Gr. *rhēgnynai* to burst forth + *-ia*] (*obs.*) hemorrhage from the rectum.

archorrhoea (ar'ko-re'ah) [*archo-* + Gr. *rhoia* flow] (*obs.*) a liquid discharge from the rectum.

archostenosis (ar'ko-ste-no'sis) [*archo-* + Gr. *stenōsis* stricture] (*obs.*) stricture of the rectum.

archosyrinx (ar'ko-sir'inks) [*archo-* + Gr. *syrinx* pipe] (*obs.*) 1. fistula in ano. 2. a rectal syringe.

archusia (ar-ku'se-ah) a hypothetical substance once thought to be necessary for cell growth.

arciform (ar'si-form) [L. *arcus* bow + *forma* shape] bow-shaped; arcuate.

arctation (ark-ta'shun) [L. *arctatio*] contracture or narrowing of any canal or opening.

Arctostaphylos uva-ursi (ark'to-staf'i-los u'vah-ur'si) the bearberry shrub of the family Ericaceae. The fruits are edible, and the leaves are used medicinally as an astringent, diuretic tea. It contains arbutin (see *Arbutus*). Called also *Arbutus uva-ursi* L.

arcual (ar'ku-al) [L. *arcualis*] pertaining to an arch.

arcualia (ar'ku-a'le-ah) nodules of cartilage in the continuous mesenchymal sheath in close apposition to the external surface of the notochord in vertebrate embryos.

arcuate (ar'ku-āt) [L. *arcuatus* bow shaped] shaped like an arc; arranged in arches.

arcuation (ark-u-a'shun) [L. *arcuatio*] curvature; especially an abnormal curvature.

arcus (ar'kus), pl. *ar'cus* [L. "a bow"] an arch; a general term used in anatomical nomenclature to designate any structure having a curved or bowlike outline. **a. adipo'sus**, **a. senilis**. **a. alveola'ris mandib'ulae** [NA], alveolar arch of mandible: the superior free border of the alveolar process of the mandible. Called also *alveolar border* or *alveolar limbus of mandible*, and *limbus alveolaris mandibulae*. **a. alveola'ris maxil'lae** [NA], alveolar arch of maxilla: the inferior free border of the alveolar process of the maxilla; called also *alveolar border* or *alveolar limbus of maxilla*, and *limbus alveolaris maxillae*. **a. anterior atlant'is**, anterior arch of atlas: the more slender portion joining the lateral masses of the atlas ventrally, constituting about one-fifth of its entire circumference. **a. aor'tae** [NA], arch of the aorta: the continuation of the ascending aorta, giving rise to the brachiocephalic trunk, and the left common carotid and left subclavian arteries; it continues as the thoracic aorta (aorta thoracica). **a. cartilag'inis cricoi'deae** [NA], arch of cricoid cartilage: the slender anterior portion of the cricoid cartilage. **a. costa'lis** [NA], **a. costa'rum**, costal arch: the anterior portion of the apertura thoracis inferior, consisting of the costal cartilages of ribs 7 to 10, inclusive; called also *arch of ribs*. **a. denta'lis** [NA], the curving structure formed by the crowns of the teeth in their normal position in the jaw; see *dental arch*, under *arch*. **a. denta'lis infe'rior** [NA], the curving structure formed by the teeth of the mandible; see *dental arch*, under *arch*. **a. denta'lis supe'rior** [NA], the curving structure formed by the teeth of the maxilla; see *dental arch*, under *arch*. **a. dorsa'lis pe'dis**, *arteria arcuata pedis*. **a. glossopalati'nus**, a palatoglossus. **a. iliopectin'eus** [NA], the fascial partition that separates the lacuna musculorum and the lacuna vasorum; called also *fascia iliopectinea*. **a. juveni'lis**, a condition identical to arcus senilis, except that it occurs congenitally or before or during middle life, and may be due to early degeneration of the cornea, corneal irritation, interstitial keratitis, or familial hypercholesterolemia; called also *anterior embryotoxon*. **a. lipo'i'des cor'neae**, a crescentic deposit of fat and cholesterol crystals in the cornea. **a. lipo'i'des myrin'gis**, a ring of degeneration in the tympanic membrane of the aged. **a. lumbocosta'lis latera'lis**, ligamentum arcuatum laterale. **a. lumbocosta'lis media'lis**, ligamentum arcuatum mediale. **a. palati'ni**, see *a. palatoglossus* and *a. palatopharyngeus*. **a. palatoglos'sus** [NA], palatoglossal arch: the anterior of the two folds of mucous membrane on either side of the oropharynx, connected with the soft palate and enclosing the palatoglossal muscle; called also *a. glossopalatinus*, *glossopalatine arch*, *anterior palatine arch*, and *anterior column or pillar of fauces*. **a. palatopharyng'eus** [NA], palatopharyngeal arch: the posterior of the two folds of mucous membrane on each side of the oropharynx, connected with the soft palate and enclosing the palatopharyngeal muscle; called also *a. pharyngopalatinus*, *pharyngopalatine* or *pharyngoepiglottic arch*, *posterior palatine arch*, and *posterior column or pillar of fauces*. **a. palma'ris profun'dus** [NA], deep palmar arterial arch: an arch

formed by the terminal part of the radial artery and its anastomosis with the deep branch of the ulnar, and extending from the base of the metacarpal bone of the little finger to the proximal end of the first interosseous space; it gives off palmar metacarpal arteries and perforating branches. Called also *a. volaris profundus*. **a. palma'ris superficia'lis** [NA], superficial palmar arterial arch: an arch formed by the terminal part of the ulnar artery and its anastomosis with the superficial palmar branch of the radial, giving rise to the palmar digital arteries and supplying blood to the palmar aspect of the hands and fingers. Called also *a. volaris superficialis*. **a. palpebra'les**, see *a. palpebralis inferior* and *a. palpebralis superior*. **a. palpebra'lis infe'rior** [NA], inferior palpebral arch: an arch derived from the medial palpebral artery, supplying the lower lid of the eye; called also *a. tarsus inferior*. **a. palpebra'lis supe'rior** [NA], superior palpebral arch: an arch derived from the medial palpebral artery, supplying the upper lid of the eye; called also *a. tarsus superior*. **a. parieto-occipita'lis**, the curved convolution formed by the backward continuation into the occipital lobe of the superior postcentral sulcus. **a. pe'dis longitudina'lis** [NA], the longitudinal arch of the foot, comprising the pars medialis and the pars lateralis. **a. pe'dis transversa'lis** [NA], transverse arch of foot: the metatarsal arch of the foot, formed by the navicular, cuneiform, cuboid, and the five metatarsal bones. **a. pharyngopalati'nus**, a palatopharyngeus. **a. planta'ris** [NA], plantar arterial arch: the deep arterial arch in the foot, formed by the anastomosis of the lateral plantar artery with the deep plantar branch of the dorsal artery of the foot, and giving off the plantar metatarsal arteries. **a. poste'rior atlant'is** [NA], posterior arch of atlas: the slender portion joining the lateral masses of the atlas dorsally, constituting about two-fifths of its entire circumference. **a. pu'bis** [NA], pubic arch: the arch formed by the conjoined rami of the ischial and pubic bones of the two sides of the body. **a. senil'is**, a gray opaque ring surrounding the margin of the cornea, but separated from the margin by an area of clear cornea, usually occurring bilaterally in persons of 50 years or older as a result of lipid degeneration; called also *gerontoxon*. Cf. *a. juvenilis*. **a. supercilia'ris** [NA], superciliary arch: a smooth elevation arching upward and laterally from the glabella, a little above the margin of the orbit. **a. tar'seus infe'rior**, a palpebralis inferior. **a. tar'seus supe'rior**, a palpebralis superior. **a. tendin'eus** [NA], tendinous arch: a linear thickening of fascia over some part of a muscle, such as that over the soleus or the obturator internus. **a. tendin'eus fas'ciae pel'vis** [NA], tendinous arch of pelvic fascia: a thickening of the superior fascia, extending from the ischial spine to the posterior part of the body of the pubis. **a. tendin'eus mus'culi levato'ris a'ni** [NA], tendinous arch of levator ani muscle: a linear thickening of the fascia over the levator ani muscle. **a. tendin'eus mus'culi so'lei** [NA], tendinous arch of soleus muscle: an aponeurotic band in the front part of the soleus muscle, extending from a tubercle on the neck of the fibula to the soleal line of the tibia. **a. veno'si digita'les**, digital venous arches: communicating branches of veins across the backs of the fingers at their bases. **a. veno'sus dorsa'lis pe'dis** [NA], dorsal venous arch of foot: a transverse venous arch across the dorsum of the foot near the bases of the metatarsal bones. **a. veno'sus jug'u'li** [NA], jugular venous arch: a transverse connecting trunk between the anterior jugular veins of either side. **a. veno'sus palma'ris profun'dus** [NA], deep palmar venous arch: a venous arch accompanying the deep palmar arterial arch; called also *a. volaris venosus profundus*. **a. veno'sus palma'ris superficia'lis** [NA], superficial palmar venous arch: a venous arch accompanying the superficial palmar arterial arch; called also *a. volaris venosus superficialis*. **a. veno'sus planta'ris** [NA], plantar venous arch: the deep venous arch that accompanies the arterial plantar arch. **a. ver'tebrae** [NA], vertebral arch: the bony arch composed of the laminae and pedicles of a vertebra; called also *arch of vertebra* and *neural arch of vertebra*. **a. vola'ris profun'dus**, *a. palmaris profundus*. **a. vola'ris superficia'lis**, *a. palmaris superficialis*. **a. vola'ris veno'sus profun'dus**, *a. venosus palmaris profundus*. **a. vola'ris veno'sus superficia'lis**, *a. venosus palmaris superficialis*. **a. zygomat'icus** [NA], zygomatic arch: the arch formed by the articulation of the broad temporal process of the zygomatic bone and the slender zygomatic process of the temporal bone, giving attachment to the masseter muscle and serving as a line of demarcation between the temporal and infratemporal fossae; called also *malar arch*.

ARD acute respiratory disease (of any undefined form).

ardanesthesia (ar'dan-es-the'ze-ah) [L. *ardor* heat + *anesthesia*] thermanesthesia.

ardent (ar'dent) [L. *ardere* to glow] 1. hot or feverish. 2. characterized by eager desire.

ardor (ar'dor) [L.] 1. intense heat. 2. eager desire. **a. uri'nae**, a scalding sensation during the passage of urine. **a. ven'tric'uli** (*obs.*), pyrosis or heartburn.

Arduen'na (ar'du-en'nah) *Ascarops*.

area (a're-ah), pl. *a'reae* or *areas* [L.] a limited space; a general term used in anatomical nomenclature to designate a specific surface or functional region. See also *region*. **acoustic a.**, *a.*

acus'tica, a. vestibularis. **alisphenoid a.**, the surface of the great wing of the sphenoid bone. **aortic a.**, the area on the chest over the inner end of the right second costal cartilage. **apical a.**, the area about the apex of the root of a tooth. **association a's**, areas of the cerebral cortex (excluding the primary areas) that are connected with each other and with the neothalamus by numerous fibers passing through the corpus callosum and the white matter of the hemispheres; these areas are responsible for the higher mental and emotional processes, including memory, learning, etc. **auditory a.**, a. vestibularis. **axial a.**, an area on a limb in which there is a hiatus in the numerical sequence of the spinal nerves in their cutaneous distribution. **Bamberger's a.**, an area of cardiac dullness in the left intercostal region, suggestive of pericardial effusion. **bare a. of liver**, a. nuda hepatis. **basal seat a.**, that portion of the structures of the mouth that is available to support a denture. **Betz cell a.**, motor a. **Broca's motor speech a.**, an area comprising parts of the opercular and triangular portions of the inferior frontal gyrus; injury to this area may result in motor aphasia. **Broca's parolfactory a.**, a. subcallosa. **Brodman's a's**, areas of the cerebral cortex distinguished by differences in the arrangement of their six cellular layers and identified by numbering each area. **a. cel'si**, alopecia areata. **a. centra'lis**, a circular area of cells around the foveola in the ganglion cell layer of the retina. **cingulate a.**, the area comprising cingulate gyrus and isthmus. **a. coch'leae** [NA], the anterior part of the inferior portion of the fundus of the internal acoustic meatus, near the base of the cochlea; called also *cochlear a. of internal acoustic meatus*. **cochlear a. of internal acoustic meatus**, a. cochleae. **Cohnheim's a's**, dark, polygonal areas of myofibrils seen on cross-section of a poorly fixed muscle fiber. **contact a.**, the area at which two bodies or materials touch. In dentistry, the site on the proximal surfaces at which two adjacent teeth touch. **cribriform a. of renal papilla**, a. cribrosa papillae renalis. **a. cribro'sa me'dia**, a. vestibularis inferior. **a. cribro'sa papil'lae rena'lis** [NA], cribriform area of renal papilla: the tip of a pyramid of a kidney, which is perforated by 10-25 openings for the papillary ducts. **a. cribro'sa supe'rior**, a. vestibularis superior. **a. of critical definition**, that part of an optic image within which the detail is clear. **denture-bearing a.**, that portion of the basal seat area that, in occlusion, supports the complete or partial denture base; called also *denture foundation a. or denture-supporting a.* **denture foundation a.**, denture-bearing a. **denture-supporting a.**, denture-bearing a. **dermatome a.**, dermatome. **embryonic a.**, embryonic disk. **excitable a.**, a motor area in the cerebral cortex. **excitomotor a.**, motor a. **eye a.**, the area comprising the frontal eye fields of the cortex in the frontal lobe, which are concerned with the control of eye movements. **a. of facial nerve**, a. nervi facialis. **Flechsig's a's** (*obs.*), three areas— anterior, lateral, and posterior—on each lateral half of the sections of the medulla oblongata, marked out by the fibers of the vagus and hypoglossal nerves. **gastric a's**, *a'reae gas'tricae*, the several areas on organs adjacent to the stomach by which the organs make contact with the stomach. **genital a's**, areas on the inferior nasal concha and upper part of the nasal septum that may become engorged during menstruation. **germinal a.**, *a. germinati'va*, embryonic disk. **glove a.**, that area—fingers, hand, and wrist—ordinarily covered by a glove, which sometimes coincides with the distribution of anesthesia in cases of polyneuropathy. **a. hypoglos'si**, the portion of the mouth beneath the tongue. **impression a.**, the surface of the oral structures recorded in an impression. **insular a.**, the cortex of the insula. **intercondylar a's of tibia**, see *a. intercondylaris anterior tibiae* and *a. intercondylaris posterior tibiae*. **a. intercondyla'ris ante'rior tib'iae** [NA], the broad area between the superior articular surfaces of the tibia; called also *anterior intercondylar a.*, *fossa intercondyloidea anterior tibiae*, *anterior intercondylar fossa of tibia* and *patellar fossa of tibia*. **a. intercondyla'ris poste'rior tib'iae** [NA], a deep notch separating the condyles on the posterior surface of the tibia; called also *posterior intercondylar a.*, *fossa intercondyloidea posterior tibiae*, *posterior intercondylar fossa of tibia*, and *popliteal fossa of tibia*. **interglobular a's**, the areas of dentin lying between the calcoglobules. **Kiesselbach's a.**, an area on the anterior part of the nasal septum above the intermaxillary bone, which is richly supplied with blood vessels and is a common site of nosebleed; called also *Little's a.* **Krönig's a.** (*obs.*), Krönig's field. **Laimer-Haeckerman a.**, the region of the lower pharynx and upper esophagus, where diverticula most frequently develop. **language a.**, any center of the cortex, usually in the dominant hemisphere, controlling the understanding or use of language. **Little's a.**, Kiesselbach's a. **a. luna'ta** (*obs.*), the posterior semilunar lobule of the cerebellar hemisphere situated rostral to the postulate (postclival) fissure. **a. martegia'ni**, a slightly enlarged space at the optic disk, marking the beginning of the hyaloid canal. **a. medullovasculo'sa**, a median elongated area of vascular granulation-like tissue in rachischisis. **mesobranchial a.**, the pharyngeal floor, between the pharyngeal arches and pouches of each side. **mirror a.**, the reflecting surface of the cornea and lens when illuminated through the slit lamp. **motor a.**, that area of the

cerebral cortex which, upon application of brief electrical stimuli, shows the lowest threshold and shortest latency for the production of muscle movement. Called also *Betz cell a.*, *excitomotor a.*, *precentral a.*, *psychomotor a.*, and *rolandic a.* **a. ner'vi facia'lis** [NA], area of facial nerve: the part of the fundus of the internal acoustic meatus where the facial nerve enters the facial canal. **a. nu'da hep'atis** [NA], bare area of liver: the superior surface of the liver, adjacent to the diaphragm, that lacks a peritoneal covering; its boundaries are formed by the hepatic coronary ligament proper and the triangular ligaments. **Obersteiner-Redlich a.** (*obs.*), the constricted area at the point where a posterior nerve root enters the spinal cord. **olfactory a.**, a general area, including the olfactory bulb, tract, and trigone, the anterior portion of the gyrus cinguli, and the uncus. **a. opa'ca**, the outer part of the embryonic disk, as seen in the bird egg: **Panum's a's**, fusional areas on the retina. **a. parolfacto'ria** [Brocae], **parolfactory a. of Broca**, a. subcallosa. **a. pelli'cida**, the central clear part of the embryonic disk, as seen in the bird egg. **a. perfora'ta**, substantia perforata (perforated space). **peristriate a.**, an area of the occipital cortex nearly surrounding the striate (visual) cortex. **piriform a.**, an area in the rhinencephalon comprising the lateral olfactory process or gyrus, the limen insulae, the uncus, and at least part of the parahippocampal gyrus; in some species it is pear-shaped. Called also *piriform lobe*. **postcentral a.**, the sensory area just posterior to the central sulcus of the cerebral hemisphere, the primary receptive area for general sensations; called also *postrolandic a.* and *somesthetic cortex*. **post dam a.**, posterior palatal seal a. **posterior hypothalamic a.**, see *hypothalamic a's*. **posterior palatal seal a.**, the soft tissues along the junction of the hard and soft palates on which pressure can be applied by a denture to aid in its retention; called also *post dam a.* **a. postpterygoi'dea** (*obs.*), the part of the ansiform lobule of the cerebellar hemisphere immediately behind the postclival fissure. **a. postre'ma**, an area on the floor of the fourth ventricle immediately lateral to the trigonum nervi vagi and separated from it by the sulcus limitans. **postrolandic a.**, postcentral a. **precentral a.**, motor a. **prefrontal a.**, the cortex of the frontal lobe immediately in front of the premotor cortex, concerned chiefly with associative functions. **premotor a.**, the motor cortex of the frontal lobe immediately in front of the precentral gyrus. **preoptic a.**, several groups of cells in the median plane immediately below the anterior commissure which are functionally related to the hypothalamus. **pressure a.**, an area which is subjected to excessive pressure, with consequent displacement of tissue. **primary a's**, areas of the cerebral cortex comprising the motor and sensory regions. Cf. *association a's*. **primary receptive a.**, the area of cerebral cortex which receives the thalamic projections of the primary sensory modalities, such as vision, hearing, touch, etc. **projection a's**, those areas of the cerebral cortex that receive the most direct projection of the sensory systems of the body. **psychomotor a.**, motor a. **a. pterygoi'dea** (*obs.*), the part of the ansiform lobule of the cerebellar hemisphere immediately behind the great horizontal (postpterygoid) fissure. **pyriform a.**, piriform a. **receptive a.**, primary receptive a. **relief a.**, that portion of the surface of oral structures upon which pressures exerted by a denture are reduced or eliminated. **rest a.**, that portion of a tooth or of a restoration in a tooth prepared to receive the incisal, lingual, or occlusal rest of a removable partial denture. **rolandic a.**, motor a. **rugae a.**, the portion of the mouth in which rugae are found; called also *rugae zone*. **saddle a.**, the edentulous portion of the dental arch upon which a fixed or removable prosthesis rests. **sensorimotor a.**, the cortex of the pre- and postcentral gyri—the motor area and the primary receptive area for general sensations, respectively. **sensory a.**, primary receptive a. **septal a.**, the area on either cerebral hemisphere comprising the parolfactory area of Broca (area subcallosa) and the corresponding half of the septum pellucidum; the area has olfactory, hypothalamic, and hippocampal connections. **silent a.**, an area of the brain in which pathologic conditions may occur without producing symptoms. **somatic sensory a.**, **somatosensory a.**, the cortical projection area in the postcentral gyrus for information initiated by stimulation of receptors in the skin, joints, muscles, and viscera; it is involved in conscious perception of somatic sensation. Called also *somesthetic a.* **somesthetic a.**, somatosensory a. **stress-bearing a.**, 1. the portion of the mouth capable of providing support for a denture. 2. surfaces of oral structures which resist forces, strains, or pressures brought upon them during function. **a. stria'ta**, striate cortex. **strip a.**, a strip of cortex between the motor and premotor areas thought to be suppressor in function. **a. subcallo'sa** [NA], **subcallosal a.**, a small area of cortex on the medial surface of each cerebral hemisphere, immediately in front of the gyrus subcallosus; called also *a. parolfactoria* [Brocae], *parolfactory a. of Broca*, and *gyrus olfactorius medialis* (of Retzius). **supporting a.**, 1. the surface of the mouth available for support of a denture. 2. those areas of the maxillary and mandibular edentulous ridges which are considered best suited to carry the forces of mastication when the dentures are in function. **supplementary a's**, small motor and sensory areas of the cerebral cortex in addition to the primary areas.

suppressor a's, cortical areas whose activation suppresses or prevents movement. **temporal a.**, an area above the temporal fossa, reaching to the outer canthus of the eye. **thymus-dependent a's**, those areas of the peripheral lymphoid organs populated by thymus-dependent lymphocytes, e.g., the pericortical areas of the lymph nodes, the centers of the malpighian corpuscle of the spleen, and the internodular zone of Peyer's patches. See also *T-lymphocytes*, under *lymphocyte*. **thymus-independent a's**, those areas of the peripheral lymphoid organs populated by thymus-independent lymphocytes, e.g., the medullary and outer cortical regions of the lymph node; see also *B-lymphocytes*, under *lymphocyte*. **trigger a.**, an area the stimulation of which may cause physiologic or pathologic changes in another area. **vagus a.**, the area on the floor of the fourth ventricle in which the vagus nerve has its origin (trigonum nervi vagi [NA]). **a. vasculo'sa**, that part of the area opaca where the blood vessels are first seen, as in the bird egg. **vestibular a.**, a. vestibularis. **vestibular a., inferior, of internal acoustic meatus**, a. vestibularis inferior. **vestibular a., superior, of internal acoustic meatus**, a. vestibularis superior. **a. vestibula'ris** [NA], the triangular lateral and median part of the floor of the fourth ventricle over which pass the striae medullares of the fourth ventricle; called also *a. acustica*, *acoustic a.*, *auditory a.*, and *ala alba medialis*. **a. vestibula'ris infe'rior** [NA], the lower portion of the fundus of the internal acoustic meatus; called also *inferior vestibular a. of internal acoustic meatus* and *a. cribrosa media*. **a. vestibula'ris supe'rior** [NA], the upper portion of the fundus of the internal acoustic meatus; called also *superior vestibular a. of internal acoustic meatus* and *a. cribrosa superior*. **visual a.**, the striate and peristriate cortex of the occipital lobe. **visuopsychic a.**, the area of the cerebral cortex concerned in the interpretation of visual sensations. **visuosensory a.**, cortical projection area for information initiated by stimulation of the retina area surrounding the calcarine fissure; the area involved in conscious perception of visual information. **a. vitelli'na**, the yolk area beyond the area vasculosa in meroblastic eggs. **vocal a.**, the part of the glottis between the vocal cords. **Wernicke's a.**, originally a term denoting a speech center on the posterior part of the superior temporal gyrus, now used to include the supramarginal and angular gyri as well; called also *Wernicke's center*, *field*, or *zone*.

areata, areatus (ar'e-a'tah; ar'e-a'tus) occurring in patches, as alopecia areata.

Areca (ar'ē-kah) [L.; East Indian] a genus of palm trees, chiefly Asiatic. *A. catechu* L., Palmaceae affords betel nut and an inferior catechu (see *areca*).

areca (ar'e-kah) the dried ripe seed of *Areca catechu* L., Palmaceae, a palm native to the East Indies. It is a common masticatory throughout Asia and India, and contains the alkaloid arecoline and astringent tannins; it has parasymphathomimetic and anthelmintic properties. Called also *betel nut* and *pinang*.

arecoline (ah-rek'o-lin) chemical name: 1,2,5,6-tetrahydro-1-methyl-3-pyridinecarboxylic acid methyl ester. An alkaloid obtained from areca (betel nut), $C_8H_{13}NO_2$. **a. hydrobromide**, a cholinergic, $C_8H_{13}NO_2 \cdot HBr$, occurring as a white, crystalline powder, having actions similar to those of pilocarpine; it was formerly used in the treatment of glaucoma. Now used as a cathartic and anthelmintic in veterinary medicine.

areflexia (ah're-flek/se-ah) [a neg. + *reflex* + *-ia*] absence of the reflexes.

aregenerative (ah're-jen'er-a'tiv) characterized by absence of regeneration; applied especially to blood cells in aplastic anemia.

arenaceous (ar'ē-na'se-us) sandy; gritty.

arenation (ar'ē-na'shun) [L. *arena* sand] (obs.) ammotherapy.

Arenaviridae (ah're-nah-vi'ri-de) a family of viruses comprising the arenaviruses (genus *Arenavirus*).

arenavirus (ah're-nah-vi'rus) [L. *arenaceus* sandy + *virus*] any of a group of viruses made up of pleomorphic virions, from 50 to 300 nm. in diameter, having four large and one to three small segments of single-stranded RNA and having ribosomes within the virions that give a sandy appearance. It includes the lymphocytic choriomeningitis virus, the American hemorrhagic fever viruses (Amapari, Junin, Latino, Machupo, Parana, Pichinde, Tacaribe, and Tamiami viruses), and the Lassa fever virus. Rodents are the common hosts of these viruses. The term (*Arenavirus*) is also used as the genus name (of the family Arenaviridae) of the group.

arenoid (ar'ē-noid) [L. *arena* sand + Gr. *eidos* form] resembling sand.

areola (ah-re'o-lah), pl. *are'olae* [L., dim. of *area* space] 1. any minute space or interstice in a tissue. 2. a circular area of a different color, surrounding a central point, as such an area surrounding a pustule or vesicle, or the part of the iris surrounding the pupil of the eye, or surrounding the nipple of the breast. **Chaussier's a.**, the areola of induration of a malignant pustule. **a. mam'mae** [NA], **a. of mammary gland**, the darkened ring surrounding the nipple of a breast. **a. of nipple**, a. mammae. **a. papilla'ris**, a. mammae. **second a.**, a ring which, during pregnancy, surrounds the areola mammae. **um-**

bilical a., a pigmented patch that sometimes surrounds the navel. **vaccinal a.**, the ring of redness that surrounds a vaccinia pustule.

areolae (ah-re'o-le) [L.] plural of *areola*.

areolar (ah-re'o-lar) pertaining to or containing areolae; containing minute interspaces.

areolitis (ar'e-o-li'tis) inflammation of the areola of the breast.

areometer (ar'e-om'ē-ter) [Gr. *araios* thin + *metron* measure] a hydrometer.

areometric (ar'e-o-met'rik) pertaining to hydrometry.

areometry (ar'e-om'ē-tre) hydrometry.

Aretaeus (ar-ē-te'us) of Cappadocia (2nd century A.D.) a famous Greek Pneumatist who wrote works on acute and chronic diseases. His clinical descriptions (e.g., of diabetes, pleurisy, tetanus) are outstanding, and in the best Hippocratic tradition.

Arey's rule (ār'ēz) [Leslie Brainerd Arey, American anatomist, born 1891] see under *rule*.

Arfonad (ar'fon-ad) trademark for a preparation of trimethaphan camsylate.

Arg arginine.

arg. abbreviation for *L. argen'tum*, silver.

argamblyopia (ar'gam-ble-o-pe-ah) [Gr. *argos* idle + *amblyopia*] amblyopia due to long disuse of the eye.

Argand burner [Aimé Argand, Swiss physicist, 1755-1803] see under *burner*.

Argas (ar'gas) a genus of ticks. **A. america'nus**, *A. persicus*. **A. brumpt'i**, a species found in Africa whose bite causes local inflammation in man. **A. minia'tus**, *A. persicus*. **A. per'sicus**, a cosmopolitan tick, the tampan or tampan tick, one of the most important parasites of poultry, which sucks the blood of fowls, producing a weak condition of flocks, with great economic losses. In Iran, Egypt, India, Australia, and Brazil, it acts as the carrier of fowl spirochetosis. Called also *A. americanus* and *A. minatus*, and *miana bug*. **A. reflex'us**, an ectoparasite of pi-

Argas persicus (after Braun).

geons and other roosting birds, which frequently attacks man and may cause a cutaneous inflammatory lesion.

Argasidae (ar-gas'i-de) a family of the superfamily Ixodoidea, comprising the soft ticks, distinguished from the hard-bodied ticks (Ixodidae) by absence of the scutum. The genera are *Argas*, *Otobius*, *Antricola*, and *Ornithodoros*.

argema (ar'je-mah) a white ulcer of the cornea.

argentaffin (ar-jen'tah-fin) [L. *argentum* silver + *affinis* having affinity for] having an affinity for silver and chromium salts; said of tissues. See also under *cell*.

argentaffinoma (ar'jen-taf'i-no'mah) carcinoid; a tumor of the gastroenteric tract formed from the argentaffin cells (Kultschitzky's cells) found in the enteric canal; such tumors elaborate a variety of catecholamines that produce the symptom complex called carcinoid syndrome. Cf. *enterochromaffin gland*. **a. of bronchus**, carcinoid tumor of the bronchus, highly vascular tumors of the bronchus similar to argentaffinoma of the gastrointestinal tract.

argentation (ar'jen-ta'shun) [L. *argentum* silver] staining with a silver salt.

argenti (ar-jen'ti) genitive of *argentum*. **a. io'didum colloida'le**, colloidal silver iodide. **a. ni'tras**, silver nitrate.

argentic (ar-jen'tik) containing silver.

argentoproteinum (ar-jen'to-pro'te-i-num) silver protein; see under *silver*.

argentum (ar-jen'tum), gen. *argen'ti* [L.] silver. **a. protein'icum for'te**, strong silver protein; see under *silver*. **a. protein'icum mi'te**, mild silver protein; see under *silver*.

argilla (ar-jil'lah) kaolin.

argillaceous (ar'jī-la'shus) composed of clay.

arginase (ar'jī-nās) an enzyme existing primarily in the liver, but also in the mammary gland, testis, and kidney, which splits arginine into urea and ornithine.

arginine (ar'jī-nin) chemical name: 2-amino-5-guanidovaleric acid. An amino acid, $C_6H_{14}N_4O_2$, produced by the hydrolysis or digestion of proteins. It is one of the hexone bases (Schulze and

Steiger, 1886), and it supplies the amidine group for the synthesis of creatine. Arginine is also formed by the transfer of a nitrogen atom from aspartate to citrulline in the urea cycle. It then gives off urea, to form ornithine. **a. glutamate**, the L(+)-arginine salt, $C_{11}H_{23}N_5O_6$, of L(+)-glutamic acid, used intravenously as an adjunct in the management of ammonia intoxication due to hepatic failure; called also *glutargin*. **a. hydrochloride** [USP], the L(+)-arginine salt of hydrochloric acid, used intravenously as an adjunct in the management of conditions in which there is an excess of ammonia in the blood. **a. monohydrochloride**, a salt of arginine sometimes used in place of ammonium chloride to potentiate mercurial diuretics in refractory heart failure. **suberyl a.**, a compound that functions in the bufotoxins as glucose does in the glucosides; it is $COOH(CH_2)_6CONHCO:NH(CH_2)_3CH(NH_2)COOH$.

argininosuccinate (ar'jī-nī-no-suk'sī-nāt) a compound formed by the condensation of aspartic acid and citrulline, which is an intermediate in the urea cycle. **a. lyase**, L-argininosuccinate arginine-lyase: an enzyme occurring in the liver that converts argininosuccinate to arginine and fumarate.

argininosuccinicacidemia (ar'jī-nī'no-suk-sin'ik-as'fī-de'me-ah) the presence in the blood of argininosuccinic acid.

argininosuccinicaciduria (ar'jī-nī'no-suk-sin'ik-as'fī-du're-ah) presence in the urine of argininosuccinic acid, characteristic of a condition resulting from an inborn error of metabolism and accompanied by mental retardation.

argipressin (ar'jē-pres'in) chemical name: 8- α -arginine vasopressin. Vasopressin containing arginine, as that from most mammals, including man. See also *lypressin*.

argon (ar'gon) [Gr. *argos* inert] a chemical element, atomic number 18, discovered in the atmosphere in 1895. One of the inert gases, its symbol is Ar and its atomic weight 39.948.

Argyll Robertson pupil (sign) (ar-gīl' rob'ert-son) [Douglas Moray Cooper Lamb *Argyll Robertson*, Scottish physician, 1837-1909] see under *pupil*.

argyremia (ar'jī-re'me-ah) [Gr. *argyros* silver + *haima* blood + *-ia*] the presence of silver or silver salts in the blood.

argyria (ar-jir'e-ah) a permanent ashen-gray discoloration of the skin, conjunctiva, and internal organs that results from long-continued use of silver salts. Called also *argyrosis*. **a. nasa'lis**, argyric discoloration of the nasal mucosa.

argyriasis (ar'jī-ri'ah-sis) argyria.

argyric (ar-jī'rik) pertaining to or caused by silver; pertaining to argyria.

argyrim (ar'jī-rizm) argyria.

Argyrol (ar'jī-rol) trademark for mild silver protein; see under *silver*.

argyrophil (ar-jī'ro-fil) [Gr. *argyros* silver + *philein* to love] capable of binding silver salts, which may subsequently be reduced by light or by a reducing agent to give a black deposit of silver; said of tissues.

argyrosis (ar'jī-ro'sis) [Gr. *argyros* silver] argyria.

arhigosis (ah'rī-go'sis) [a neg. + Gr. *rhigos* cold] inability to perceive cold; absence of the cold sense.

arhinencephalia (ah'rīn-en'se-fa'le-ah) [a neg. + *rhinencephalon*] congenital absence of the rhinencephalon.

arhinia (ah-rīn'e-ah) [a neg. + Gr. *rhis* nose + *-ia*] congenital absence of the nose.

arrhythmia (ah-rith'me-ah) arrhythmia.

Arias-Stella reaction [Javier Arias-Stella, Peruvian pathologist, born 1920] see under *reaction*.

ariboflavinosis (a-ri'bo-fla'vī-no'sis) deficiency of riboflavin in the diet, a condition marked by lesions in the angles of the mouth, on the lips, and around nose and eyes, by corneal or other eye changes, and by seborrheic dermatitis.

aril (ar'il) [L. *arillus* dried grape] an accessory covering or appendage of seeds.

arildone (ar'il-dōn) chemical name: 4-[6-(2-chloro-4-methoxyphenoxy)hexyl]-3,5-heptanedione; an antiviral agent, $C_{20}H_{29}ClO_4$.

arillode (ar'ī-lōd) an appendage of certain seeds attached to the micropyle or raphe.

aristin (ah-ris'tin) a crystalline principle from various species of *Aristolochia*.

Aristocort (ah-ris'to-cort) trademark for preparations of triamcinolone and its derivatives.

Aristogel (ah-ris'to-jel) trademark for a preparation of triamcinolone acetone.

aristogenesis (ah-ris'to-jen'ē-sis) [Gr. *aristos* best + *genesis* generation] the gradual continuous adaptive genoplastic origin of new and better organic mechanisms.

aristogenics (ah-ris'to-jen'iks) [Gr. *aristos* best + *gennan* to produce] improvement of the race through promotion of optimal mating between individuals possessing superior characteristics.

Aristolochia (ah-ris'to-lo'ke-ah) [L.; Gr. *aristos* best + *lochias* lochia] a genus of shrubs and herbs of many species, often actively medicinal; see *serpentaria*. *A. reticulata* Nutt. (Texas snakeroot) and *A. serpentaria* L. (Virginia snakeroot) are the

source (dried rhizome and roots) of serpentaria, an aromatic bitter. The plants contain aristolochic acid, a phenanthrene-carboxylic acid derivative, the major aromatic bitter principle. It is toxic to experimental animals in sufficient dosage, causing cardiac and respiratory arrest.

aristolochine (ah-ris-to'l'o-chēn) aristolochic acid.

Aristospan (ah-ris'to-span) trademark for preparations of triamcinolone hexacetone.

Aristotle's anomaly (ar'fī-stot-elz) [A Greek philosopher, 384-322 B.C.] see under *anomaly*.

arithmomania (ah-rith'mo-ma'ne-ah) [Gr. *arithmos* number + *mania* madness] (obs.) a morbid impulse to count, with worriment about numbers.

arkyochrome (ar'ke-o-krōm) [Gr. *arkys* net + *chrōma* color] any nerve cell in which the chromatic substance arranges itself in the form of a network. Cf. *gyrochrome*, *perichrome*, and *stichochrome*.

arkyostichochrome (ar'ke-o-stik'o-krōm) [Gr. *arkys* net + *stichos* row + *chrōma* color] any nerve cell that is both an arkyochrome and a stichochrome.

Arlidin (ar'li-din) trademark for preparations of nyldrin hydrochloride.

Arloing-Courmont test (ahr-lyahn'koo'r'mont) [Saturnin Arloing, French pathologist, 1846-1911; Courmont, Paul] see under *test*.

Arlt's operation, recessus, sinus, trachoma (arltz) [Carl Ferdinand Ritter von Arlt, ophthalmologist in Vienna, 1812-1887] see under *operation*, *recess*, and *trachoma*, and see *sinus of Maier*.

arm (arm) [L. *armus*] 1. the part of the upper extremity between the shoulder and elbow, as distinguished from the forearm; popularly the upper extremity from shoulder to hand. See also *brachium*. 2. an armlike appendage or extension. In dentistry, the portion of the clasp by which a removable partial denture is retained in position in the mouth. In genetics, one of the portions of a mitotic chromosome on either side of the centromere. **bar clasp a.**, an extension originating in the base or major connector of a denture, and consisting of the arm that traverses but does not contact the gingival structures, and a terminal end that approaches its contact with the tooth in a gingivo-occlusal direction. **bird a.**, a wasted condition of the forearm due to atrophy of the muscles. **circumferential clasp a.**, an extension originating in a minor connector of a removable partial denture, which follows the contour of the tooth approximately in a plane perpendicular to the path of insertion of the denture. **glass a.**, a painful condition of the upper arm due to an injury to the long tendon of the biceps muscle or to the tendon of the supraspinatus muscle, at times resulting in subdeltoid bursitis. **golf a.**, a form of neuritis seen in golf players after excessive exercise. **Krukenberg's a.**, see under *hand*. **lawn tennis a.**, tennis elbow. **reciprocal a.**, the arm of the clasp of a removable partial denture which stabilizes against lateral movement of the appliance and resists force transmitted by the retentive arm, during seating and removal of the prosthesis; called also *stabilizing a.* **retention a., retentive a.**, the arm of the clasp of a removable partial denture which aids in resistance to displacement of the appliance in an occlusal direction and stabilizes against lateral forces. **stabilizing a., reciprocal a.**

armadillo (ar'mah-dil'o) one of a group of burrowing mammals belonging to the order Edentata and possessing horny shields on the dorsal surface of the body; one species in South America is a reservoir for *Trypanosoma cruzi*.

armamentarium (ar'mah-men-tā're-um) [L.] the equipment of a practitioner or institution, including books, instruments, medicines, and surgical appliances.

Armanni-Ebstein cells [Luciano Armanni, Italian pathologist, 1839-1903; Wilhelm Ebstein, German internist, 1836-1912] see under *cell*.

armarium (ar-ma're-um) [L.] armamentarium.

armature (ar'mah-chūr) [L. *armatura* a defensive apparatus] 1. the iron bar or keeper across the open end of a horseshoe magnet. 2. a protective organ or structure.

A.R.M.H. Academy of Religion and Mental Health.

Armigeres (ar-mij'er-ēz) a genus of mosquitoes. **A. obturbans**, a mosquito which transmits dengue in Japan.

Armillifer (ar-mil'li-fer) a genus of endoparasitic animals of the family Porocephalidae, order Porocephalida. **A. armillatus**, a species whose adult members are found in the lungs and trachea of the python (*Python sebae* and *P. regius*) and whose larvae occur in the internal organs of monkeys and lions and occasionally of man in Africa. Called also *Porocephalus armillatus* and *P. constrictus*. **A. moniliformis**, a species whose larvae are parasitic in man in China, the Philippines, and other Asian islands.

armpit (arm'pit) 1. fossa axillaris. 2. axilla.

Arnaldus de Villanova see *Arnold of Villanova*.

Arndt's law, Arndt-Schulz law [Rudolf Arndt, German psychiatrist, 1835-1900; Hugo Schulz, German pharmacologist, 1853-1932] see under *law*.

Arneth's formula (classification, count, index) (ar-näts') [Joseph Arneth, German physician, 1873-1955] see under *formula*.

Arnica (ar'ně-kah) [L.] a genus of composite-flowered plants, known also as *leopard's bane*, *wolf's bane*, and *mountain tobacco*. The dried flowerheads of *A. montana* contain a volatile oil, arnicin, arnistrol, and anthoxanthine, tannin, and resin. Used topically as a tincture for contusions, sprains, and superficial wounds, and as a counterirritant.

arnica (ar'nī-kah) the dried flowerheads of *Arnica montana*. Called also *wolf's bane* and *leopard's bane*.

A.R.N.M.D. Association for Research in Nervous and Mental Disease.

Arnold (ar'nold) of Villanova, or **Arnaldus de Villanova** (c. 1235 to c. 1312) a celebrated Catalan physician who wrote extensively on medicine, alchemy, and religion and who translated Avicenna's writings on the heart from Arabic into Latin.

Arnold's bodies [Julius Arnold, German pathologist, 1835-1915] see under *body*.

Arnold's canal, etc. [Philipp Friedrich Arnold, German anatomist, 1803-1890] see under *canal*, *fold*, *ganglion*, *ligament*, *nerve*, *substance*, and *syndrome*.

Arnold's test [Vincenz Arnold, Austrian physician, born 1864] see under *tests*.

Arnold-Chiari deformity (malformation, syndrome) [Julius Arnold; Hans Chiari, German pathologist, 1851-1916] see under *deformity*.

Arnott's bed (ar'nots) [Neil Arnott, Scottish physician, 1788-1874] see under *bed*.

arnotto (ar-not'o) annotto.

A.R.O. Association for Research in Ophthalmology.

aroma (ah-ro'mah) [Gr. *arōma* spice] fragrance or odor, especially that of a spice or medicine or of articles of food or drink.

aromatase (ah-ro'mah-tās) an enzyme that catalyzes the aromatization of its substrate, as in the conversion of testosterone to estradiol.

aromatic (ar'o-mat'ik) [L. *aromaticus*; Gr. *arōmatikōs*] 1. having a spicy odor. 2. (in chemistry) denoting a compound characterized by the benzene ring.

aromatization (ah-ro'mah-tī-za'shun) chemical conversion to an aromatic form.

aromine (ah-ro'min) a fragrant alkaloid from urine containing benzene derivatives.

Aron's test (ar'onz) [Hans Aron, German pediatrician, born 1881] see under *test*.

arousal (ah-row'sal) a state of responsiveness to sensory stimulation; called also *activation*, *vigilance*, and *wakefulness*.

arprinocid (ar-pri'no-sid) chemical name: 9-[(2-chloro-6-fluorophenyl)methyl]-9H-purin-6-amine; a coccidiostat, C₁₂H₆ClFN₅.

arrachement (ar'ash-mahw') [Fr. "extraction"] extraction of a membranous cataract by pulling out the capsule through a corneal incision.

arrack (ar'rak) an alcoholic liquor distilled from fermented dates, rice, the sap of palms, mahua flowers, etc.

arrangement (ah-rānj'ment) the disposal or positioning of parts. **anterior tooth a.**, the arrangement of anterior teeth for esthetic or phonetic effects. **tooth a.**, 1. the positioning of teeth on a denture for specific purposes. 2. the setting of teeth on temporary bases.

arrector (ah-rek'tor), pl. *arrecto/res* [L.] raising, or that which raises. **a. pi/li**, pl. *arrecto/res pilo/rum* [L. "raisers of the hair"], minute smooth muscles of the skin, attached to the connective tissue sheath of the hair follicles, the contraction of which causes the hair to stand erect and produces the appearance called cutis anserina, or goose flesh.

arrectores (ar'rek-to'rez) [L.] plural of *arrector*.

arrest (ah-rest) stoppage; the act of stopping. **cardiac a.**, sudden cessation of cardiac function, with disappearance of arterial blood pressure, connoting either ventricular fibrillation or ventricular standstill. **deep transverse a.**, the condition during delivery in which the occiput of the fetus turns and stops in the transverse diameter of the pelvis. **developmental a.**, a temporary or permanent cessation of the process of development. **epiphyseal a.**, interruption of growth at the epiphysis of a bone by diaphyseal-epiphyseal fusion. **heart a.**, cardiac a. **maturation a.**, interruption of the process of development before it is complete; applied especially to failure of maturation of granulocytes, with myeloblasts and promyelocytes constituting the dominant bone marrow elements. **sinus a.**, a pause in cardiac rhythm due to a momentary failure of the sinus node to initiate an impulse; called also *sinus standstill*.

arrested (ah-rest'ed) detained; stopped. In obstetrics, the head of the child is said to be arrested when it is *detained*, but not *impacted*, in the pelvic cavity.

arrhaphia (ah-ra'fe-ah) status dysrhapia.

Arrhenius' equation, formula, theory (doctrine) (ah-

re'ne-us) [Svante August Arrhenius, Swedish chemist, 1859-1927] see under *equation*, *formula*, and *theory*.

arrhen- (ah-re'no) [Gr. *arrhēn* male] a combining form meaning male.

arrhenoblastoma (ah-re'no-blas-to'mah) [*arrhen-* + Gr. *blastos* germ + *-oma*] a neoplasm of the ovary, arising from the ovarian stroma, mimicking to a greater or lesser extent derivatives of the sex cord mesenchyme of the testis, and sometimes causing defeminization and virilization. Called also *andreioma*, *andreiblastoma*, *androma*, *arrhenoma*, and *Sertoli-Leydig cell tumor*.

arrhenogenic (ar'ē-no-jen'ik) [*arrhen-* + Gr. *gennan* to produce] producing only male offspring.

arrhenokaryon (ar'ē-no-kar'e-on) an organism that is produced by androgenesis.

arrhenoma (ar'ē-no'mah) arrhenoblastoma.

arrhenoplasm (ah-re'no-plazm) [*arrhen-* + *plasm*] the male element of idioplasm.

arrhenotocia (ar'ē-no-to'se-a) arrhenotoky.

arrhenotoky (ar'ē-not'o-ke) [*arrhen-* + Gr. *tokos* birth] the production of males only by a virgin mother, as in the unfertilized queen bee.

arrhigosis (ah'rī-go'sis) arrhigosis.

arrhinencephalia (ah'rīn-en'se-fa'le-ah) arrhinencephalia.

arrhinia (ah-rīn'e-ah) arhinia.

arrhythmia (ah-rith'me-ah) [*a* neg. + Gr. *rhythmos* rhythm] any variation from the normal rhythm of the heart beat, including sinus arrhythmia, premature beat, heart block, atrial fibrillation, atrial flutter, pulsus alternans, and paroxysmal tachycardia. **continuous a.**, irregularity in the force, quality, and sequence of the pulse beat, continuing as a permanent phenomenon; called also *perpetual a.* **juvenile a.**, sinus arrhythmia occurring in children. **nodal a.**, nodal rhythm; see under *rhythm*. **perpetual a.**, continuous a. **phasic a.**, sinus a. **respiratory a.**, sinus a. **sinus a.**, the physiologic cyclic variation in heart rate related to vagal impulses to the sinoatrial node; it occurs commonly in children (juvenile a.) and in the aged, and requires no treatment. Called also *phasic a.* and *respiratory a.*

arrhythmic (ah-rith'mik) [*a* neg. + Gr. *rhythmos* rhythm] characterized by absence of rhythm.

arrhythmogenic (ah-rith'mo-jen'ik) [*a* neg. + Gr. *rhythmos* rhythm + *gennan* to produce] producing or promoting arrhythmia.

arrhythmokinesis (ah-rith'mo-kī-ne'sis) [*a* neg. + Gr. *rhythmos* rhythm + *kinēsis* movement] defective ability to perform voluntary successive movement of a definite rhythm.

arrow (ar'o) a sharply pointed instrument or tool. **caustic a.**, a sharply pointed bit of nitrate of silver or other caustic substance.

arrowroot (ar'o-root) a starch prepared from the rhizome of *Maranta arundinacea* L., Marantaceae, a plant native to northern South America and the West Indies and now extensively cultivated in almost all tropical countries. It is a prominent constituent of infant, geriatric, and convalescent diets.

Arroyo's sign (ar-ro'yōz) [Carlos F. Arroyo, American physician, 1892-1928] asthenocoria.

A.R.R.S. American Roentgen Ray Society.

A.R.S. American Radium Society.

arsambide (ar-sam'bid) carbarsone.

arsenate (ar'sē-nāt) any salt of arsenic acid. **ferric a.**, a brownish yellow powder, 4Fe₂O₃·5H₂O, used in anemia; called also *iron arsenite*. **ferrous a.**, a green amorphous powder, Fe₃(AsO₄)₂·6H₂O, insoluble in water; formerly used in chronic skin conditions and now employed as an insecticide. Called also *iron arsenate*.

arseniasis (ar'sē-nī'ah-sis) chronic arsenical poisoning.

arsenic¹ (ar'sē-nik) [L. *arsenicum*, *arsenium*, or *arsenum*; from Gr. *arsēn* strong] 1. a medicinal and poisonous element; it is a brittle, lustrous, grayish solid, with a garlicky odor. Symbol, As; atomic number, 33; atomic weight, 74.922; specific gravity, 5.73. See also under *poisoning*. 2. arsenic trioxide. **a. chloride**, a trichloride. **a. disulfide**, a poisonous compound, As₂S₃, used as a pigment, in fireworks, in shot manufacture, and in the leather industry; called also *red arsenic sulfide* and *realgar*. **fuming liquid a.**, a trichloride. **a. iodide**, a red crystalline compound, AsI₃, once used in cornea and skin diseases. **red a. sulfide**, a disulfide. **a. trichloride**, a very poisonous fuming liquid, AsCl₃, which readily liberates highly irritant hydrochloric acid; it is used in war gas and as an intermediate for organic chemicals. **a. trioxide**, white arsenic, a white or glassy compound, As₂O₃, with a sweetish taste and erythropoietic effect; taken in repeated small doses in Alpine countries to increase hemoglobin, resulting in increased working capacity and a ruddy complexion. Formerly used in treatment of skin and hematologic disorders. Called also *arsenous acid*, *arsenous anhydride*, and *flowers of arsenic*. **a. trisulfide**, a poisonous substance, As₂S₃, occurring in nature as the mineral orpiment; used as a pigment and sometimes as a medicine. Called also *a. yellow*

and auripigment. **white a.**, a. trioxide. **a. yellow**, a. trisulfide.

arsenic² (ar-sen'ik) pertaining to or containing arsenic in a pentavalent state.

arsenical (ar-sen'i-kal) [L. *arsenicalis*] 1. pertaining to or containing arsenic. 2. a drug containing arsenic.

arsenicalism (ar-sen'ē-kal'izm) chronic arsenical poisoning.

arsenicophagy (ar'sen-i-kof'ah-je) [*arsenic* Gr. *phagein* to eat] the eating of arsenic.

arsenicum (ar-sen'ē-kum) [L.] arsenic.

arsenide (ar'sē-nid) any compound of arsenic with another element, in which arsenic is the negative element.

arsenious (ar-sen'e-us) arsenous; pertaining to arsenic in a trivalent state.

arsenism (ar'sen-izm) chronic arsenic poisoning.

arsenite (ar'sē-nīt) any salt of arsenous acid.

arsenium (ar-se'ne-um) [L.] the element arsenic.

arsenization (ar'sen-i-za'shun) treatment with arsenic.

arseno- (ar'sē-no) a prefix indicating the chemical group —As—.

arsenoactivation (ar'sē-no-ak'ti-va'shun) increase in the manifestations of syphilis under treatment by arsenicals.

arsenoautohemotherapy (ar'sē-no-aw'to-he'mo-ther'ah-pe) treatment of syphilis by injection of arsenical drug mixed with some of the patient's own blood.

arsenobenzene (ar'sē-no-ben'zēn) a general term for the various arsphenamine compounds used in the treatment of spirochetal diseases.

arsenoblast (ar-sen'o-blast) [Gr. *arsēn* male + *blastos* germ] the male element of a zygote; a male pronucleus.

arsenoreceptor (ar-sen'o-sep'tor) a supposed receptor in cells for arsenic.

arsenolysis (ar'sen-ol'i-sis) the enzyme-induced, reversible combination and separation of sugar and arsenic acid.

arsenophagy (ar'sē-nof'ah-je) arsenicophagy.

arsenorelapsing (ar-sen'o-re-laps'ing) relapsing after apparent cure by arsenical treatment; said of certain cases of syphilis.

arsenoresistant (ar-sen'o-re-zis'tant) resistant to arsenicals such as arsphenamine; said of certain cases of syphilis.

arsenotherapy (ar'sē-no-ther'ah-pe) [*arsenic* + Gr. *therapeia* treatment] treatment of disease by the use of arsenic and arsenical preparations.

arsenous (ar'sē-nus) containing arsenic in its lower or triad valency.

arsenoxide (ar'sen-ok'sid) oxophenarsine.

arsenum (ar-se'num) [L.] arsenic.

arsine (ar'sin) any member of a peculiar group of volatile arsenical bases, formed when arsenous acid is brought in contact with albuminous substances. The typical arsine is AsH₃, arsenous hydride or arseniuretted hydrogen, a very poisonous gas, and some of its compounds have been used in warfare. It causes hemolysis, jaundice, gastroenteritis, and nephritis.

arsonium (ar-so'ne-um) the univalent radical or ion, AsH₄, which acts in combination like the ammonium ion, NH₄.

arsonvalization (ar'son-val'i-za'shun) d'arsonvalism.

arsphenamine (ars-fen'ah-min) chemical name: 4,4'-(1,2-diar-senediyl)bis[2-aminophenol]dihydrochloride. A yellow hygroscopic powder, [OH·C₆H₃(NH₂·HCl)·As]₂, introduced as the first specific for the treatment of syphilis, yaws, and other spirillum infections but later virtually replaced in medicine, first by arsenoxide and then by penicillin. It rapidly oxidizes on exposure to air, and is, therefore, put up in hermetically sealed capsules. The substance is converted, immediately before injection, into an unstable sodium salt by the addition of sodium hydroxide solution. Called also *salvarsan* (Germany), *arsenobenzol* (France), *diarsenol* (Canada), *arsaminol* (Japan), 606, *Ehrlich-Hata* or *Hata's preparation*, and *magic bullet*. **silver a.**, sodium salt of silver diaminodihydroxyarsenobenzene; it contains about 19 per cent arsenic and 12 to 14 per cent silver; formerly used in the treatment of the neurologic complications in syphilis. Called also *argentum arsphenamina* and *silver salvarsan*. **sodium a.**, a bright yellow powder, the sodium salt of arsphenamine, C₁₂H₁₀As₂N₂Na₂O₂, unstable in air and freely soluble in water; formerly used in the treatment of syphilis. Called also *sodiarsphenamine*. **a. sulf-oxylate**, a condensation product of arsphenamine and sodium formaldehyde bisulfite, [NaO·SO₂·CH·NH(OH)C₆H₄As]₂.

arsthinol (ars'thī-nol) chemical name: N[2-hydroxy-5-[4-(hydroxymethyl)-1,3,2-dithiarsolan-2-yl]phenyl]acetamide. An antiprotozoal agent, C₁₁H₁₄AsNO₃S₂, effective in amebiasis and yaws; administered orally.

A.R.T. Accredited Record Technicians.

Artane (ar'tān) trademark for preparations of trihexyphenidyl.

artarine (ar'tah-rin) an alkaloid, C₂₁H₂₃NO₄, from the root of *Xanthoxylum senegalense*.

artefact (ar'te-fakt) artifact.

Artemisia (ar'tē-mis'e-ah) [L.; Gr. *artemisia* from *Artemis* Diana] a genus of composite-flowered plants, including *A. abrotanum* (southernwood), *A. absinthium* (wormwood), and *A. maritima* (*A. pauciflora*), from which santonin is derived. The oil of *A. absinthium* was formerly used in the preparation of the alcoholic beverage, absinthe, but because it contains neurotoxic agents (l-thujone and d-isothujone), its use has been discontinued. Absinthin is the active bitter principle.

arteralgia (ar'ter-al'je-ah) pain emanating from an artery, such as headache from an inflamed temporal artery.

arterectomy (ar'tē-rek'to-me) arteriectomy.

arterenol (ar'tē-re'nol) norepinephrine.

arteria (ar-te're-ah), pl. *arte'riae* [L.; Gr. *artēria*] a general term used in anatomical nomenclature to designate any vessel carrying blood away from the heart. For names and description of specific vessels, see *Table of Arteriae*. See also *artery*. **a. luso'ria**, an abnormally situated retroesophageal vessel, usually the subclavian artery from the aortic arch, which may cause symptoms by compression of the esophagus, the trachea, or a nerve.

arteriae (ar-te're-e) [L.] plural of *arteria*.

TABLE OF ARTERIAE

Description of vessels are given on NA terms, and include anglicized names of specific arteries. Although each artery is identified by its origin, branches, and distribution, it should be borne in mind that there are variations in the point of origin, that only named branches are listed, and that only the more noteworthy structures are given in the distribution.

a. aceta'buli, ramus acetabularis arteriae obturatoriae.

a. alveola'ris infe'rior [NA], inferior alveolar artery: *origin*, maxillary artery; *branches*, dental, mylohyoid rami, mental artery; *distribution*, lower jaw, lower lip, and chin. Called also *inferior dental artery* and *mandibular artery*.

arte'riae alveola'ris superio'ris anterio'ris [NA], anterior superior alveolar arteries: *origin*, infraorbital artery; *branches*, dental; *distribution*, incisors and canine regions of upper jaw, maxillary sinus. Called also *anterior dental arteries*.

a. alveola'ris supe'rior poste'rior [NA], posterior superior alveolar artery: *origin*, maxillary artery; *branches*, dental; *distribution*, molar and premolar regions of upper jaw, maxillary sinus. Called also *superior dental artery*.

a. angula'ris [NA], angular artery: *origin*, facial artery; *branches*, none; *distribution*, lacrimal sac, lower eyelid, nose.

a. anon'yma, truncus brachiocephalicus.

a. aor'ta, aorta.

a. appendicula'ris [NA], appendicular artery: *origin*, ileocolic artery; *branches*, none; *distribution*, vermiform appendix. Called also *vermiform artery*.

arte'riae arcifor'mes re'nis, arteriae arcuatae renis.

a. arcua'ta pe'dis [NA], arcuate artery of foot: *origin*, dorsal artery of foot; *branches*, deep plantar branch and dorsal metatarsal artery; *distribution*, foot, toes. Called also *arcus dorsalis pedis*.

arte'riae arcua'tae re'nis [NA], arcuate arteries of kidney: *origin*, interlobar artery; *branches*, interlobular artery and arterio-

lae rectae; *distribution*, parenchyma of kidney. Called also *arteriae arciformes renis* and *arterial arches of kidney*.

a. ascen'dens ileocol'ica [NA], *origin*, ileocecal; *branches*, none; *distribution*, ascending colon.

a. auditi'va inter'na, a. labyrinthi.

arte'riae auricula'ris anterio'ris, rami auriculares anteriores arteriae temporalis superficialis.

a. auricula'ris poste'rior [NA], posterior auricular artery: *origin*, external carotid; *branches*, auricular and occipital rami, stylomastoid artery; *distribution*, middle ear, mastoid cells, auricle, parotid gland, digastric and other muscles.

a. auricula'ris profun'da [NA], deep auricular artery: *origin*, maxillary artery; *branches*, none; *distribution*, skin of auditory canal, tympanic membrane, temporomandibular joint.

a. axilla'ris [NA], axillary artery: *origin*, continuation of subclavian artery; *branches*, subscapular rami, and supreme thoracic, thoracoacromial, lateral thoracic, subscapular, and anterior and posterior circumflex humeral arteries; *distribution*, upper limb, axilla, chest, shoulder.

a. basila'ris [NA], basilar artery: *origin*, from junction of right and left vertebral arteries; *branches*, pontine branches, and anterior inferior cerebellar, labyrinthine, superior cerebellar, and posterior cerebral arteries; *distribution*, brain stem, internal ear, cerebellum, posterior cerebrum.

a. brachia'lis [NA], brachial artery: *origin*, continuation of axillary artery; *branches*, superficial brachial, deep brachial, nutrient of

TABLE OF ARTERIAE (Continued)

humerus, superior ulnar collateral, inferior ulnar collateral, radial, and ulnar arteries; *distribution*, shoulder, arm, forearm, hand.

a. brachia/lis superficialis [NA], superficial brachial artery: a name given to a vessel that arises from high bifurcation of the brachial artery and assumes a more superficial course than usual.

arte/riae bronchia/les, rami bronchiales aortae thoracicae.

a. bucca/lis [NA], buccal artery: *origin*, maxillary artery; *branches*, none; *distribution*, buccinator muscle, mucous membrane of mouth. Called also *a. buccinatoria* and *buccinator artery*.

a. buccinato/ria, *a. buccalis*.

a. bul/bi pe/nis [NA], artery of bulb of penis: *origin*, internal pudendal artery; *branches*, none; *distribution*, bulbourethral gland, bulb of penis. Called also *a. bulbi urethrae* and *bulbourethral artery*.

a. bul/bi ure/thrae, *a. bulbi penis*.

a. bul/bi vestib/uli vagi/nae [NA], artery of bulb of vestibule of vagina: *origin*, internal pudendal artery; *branches*, none; *distribution*, vestibular bulb, greater vestibular glands.

a. cana/lis pterygoi/dei [NA], artery of pterygoid canal: *origin*, maxillary artery; *branches*, none; *distribution*, roof of pharynx, auditory tube. Called also *vidian artery*.

a. carot/is commu/nis [NA], common carotid artery: *origin*, brachiocephalic trunk (right), aortic arch (left); *branches*, external and internal carotids; *distribution*, see *a. carotis externa* and *a. carotis interna*. Called also *cephalic artery*.

a. carot/is exter/na [NA], external carotid artery: *origin*, common carotid; *branches*, superior thyroid, ascending pharyngeal, lingual, facial, sternocleidomastoid, occipital, posterior auricular, superficial temporal, maxillary; *distribution*, neck, face, skull. Called also *facial artery*.

a. carot/is inter/na [NA], internal carotid artery: *origin*, common carotid; *branches*, caroticotympanic rami, and ophthalmic, posterior communicating, anterior choroid, anterior cerebral, and middle cerebral arteries; *distribution*, middle ear, brain, pituitary gland, orbit, choroid plexus.

a. cau/dae pancre/atidis [NA], *origin*, splenic; *branches* and *distribution*, supplies branches to tail of pancreas, and accessory spleen (if present).

a. ceca/lis ante/rior [NA], anterior cecal artery: *origin*, ileocecal; *branches*, none; *distribution*, cecum.

a. ceca/lis poste/rior [NA], posterior cecal artery: *origin*, ileocecal; *branches*, none; *distribution*, cecum.

a. centra/lis ret/inae [NA], central artery of retina: *origin*, ophthalmic artery; *branches*, none; *distribution*, retina. Called also *Zinn's artery*.

a. cerebel/li infe/rior ante/rior [NA], anterior inferior cerebellar artery: *origin*, basilar artery; *branches*, labyrinthine artery; *distribution*, anteroinferior part of cerebellum, inner ear.

a. cerebel/li infe/rior poste/rior [NA], posterior inferior cerebellar artery: *origin*, vertebral artery; *branches*, none; *distribution*, lower cerebellum, medulla, choroid plexus of fourth ventricle.

a. cerebel/li supe/rior [NA], superior cerebellar artery: *origin*, basilar artery; *branches*, none; *distribution*, upper cerebellum, midbrain, pineal body, choroid plexus of third ventricle.

arte/riae cer/ebri [NA], cerebral arteries: the arteries supplying the cerebral cortex, including *a. cerebri anterior*, *a. cerebri media*, and *a. cerebri posterior*.

a. cer/ebri ante/rior [NA], anterior cerebral artery: *origin*, internal carotid; *branches*, cortical (orbital, frontal, parietal), anterior choroidal, and central branches (including the medial striate artery), and anterior communicating artery; *distribution*, orbital, frontal, and parietal cortex, corpus callosum, diencephalon, corpus striatum, internal capsule, choroid plexus of lateral ventricle.

a. cer/ebri me/dia [NA], middle cerebral artery: *origin*, internal carotid; *branches*, cortical (orbital, frontal, parietal, temporal) and central (striate) branches; *distribution*, orbital, frontal, parietal, and temporal cortex, corpus striatum, internal capsule. Called also *sylvian artery*.

a. cer/ebri poste/rior [NA], posterior cerebral artery: *origin*, terminal bifurcation of basilar artery; *branches*, cortical (temporal, occipital, parietooccipital), central, and choroid branches; *distribution*, occipital and temporal cortex, diencephalon, midbrain, choroid plexus of lateral and third ventricles.

a. cervica/lis ascen/dens [NA], ascending cervical artery: *origin*, inferior thyroid artery; *branches*, spinal rami; *distribution*, muscles of neck, vertebrae, vertebral canal.

a. cervica/lis profun/da [NA], deep cervical artery: *origin*, costocervical trunk; *branches*, none; *distribution*, deep neck muscles.

a. cervica/lis superficialis, NA alternative for *ramus superficialis arteriae transversae colli*.

arte/riae cervicovagina/les, several large branches of the uterine artery given off at the side of the uterus at the level of the cervix, to supply the vagina.

a. chorioi/dea, *a. choroidea anterior*.

a. choroide/a ante/rior [NA], anterior choroidal artery: *origin*, internal carotid or middle cerebral artery; *branches*, none; *distribution*, choroid plexus of lateral ventricle and adjacent parts. Called also *a. choroidea*.

arte/riae cilia/res anterio/res [NA], anterior ciliary arteries: *origin*, ophthalmic and lacrimal arteries; *branches*, episcleral and anterior conjunctival arteries; *distribution*, iris, conjunctiva.

arte/riae cilia/res posterio/res bre/vae [NA], short (poste-

rior) ciliary arteries: *origin*, ophthalmic artery; *branches*, none; *distribution*, choroid coat of eye.

arte/riae cilia/res posterio/res lon/gae [NA], long (posterior) ciliary arteries: *origin*, ophthalmic artery; *branches*, none; *distribution*, iris, ciliary process.

a. circumflex/a fem/oris latera/lis [NA], lateral circumflex femoral artery: *origin*, deep femoral artery; *branches*, ascending, descending, and transverse branches; *distribution*, hip joint, thigh muscles.

a. circumflex/a fem/oris media/lis [NA], medial circumflex femoral artery: *origin*, deep femoral artery; *branches*, deep, ascending, transverse, and acetabular branches; *distribution*, hip joint, thigh muscles.

a. circumflex/a hu/meri ante/rior [NA], anterior circumflex humeral artery: *origin*, axillary artery; *branches*, none; *distribution*, shoulder joint and head of humerus, long tendon of biceps, tendon of pectoralis major muscle.

a. circumflex/a hu/meri poste/rior [NA], posterior circumflex humeral artery: *origin*, axillary artery; *branches*, none; *distribution*, deltoideus, shoulder joint, teres minor and triceps muscles.

a. circumflex/a il/ium profun/da [NA], deep circumflex iliac artery: *origin*, external iliac artery; *branches*, ascending branches; *distribution*, iliac region, abdominal wall, groin. Called also *external epigastric artery*.

a. circumflex/a il/ium superficialis [NA], superficial circumflex iliac artery: *origin*, femoral artery; *branches*, none; *distribution*, groin, abdominal wall.

a. circumflex/a scap/ulae [NA], circumflex artery of scapula: *origin*, subscapular artery; *branches*, none; *distribution*, inferolateral muscles of the scapula.

a. clitor'idis, artery of clitoris.

a. coelia/ca, truncus celiacus.

a. col'ica dex'tra [NA], right colic artery: *origin*, superior mesenteric artery; *branches*, none; *distribution*, ascending colon.

a. col'ica me'dia [NA], middle colic artery: *origin*, superior mesenteric artery; *branches*, none; *distribution*, transverse colon. Called also *accessory superior colic artery*.

a. col'ica sinis'tra [NA], left colic artery: *origin*, inferior mesenteric; *branches*, none; *distribution*, descending colon.

a. collatera/lis me'dia [NA], middle collateral artery: *origin*, deep brachial artery; *branches*, none; *distribution*, triceps muscle, elbow joint.

a. collatera/lis radia/lis [NA], radial collateral artery: *origin*, deep brachial artery; *branches*, none; *distribution*, brachioradialis and brachialis muscles.

a. collatera/lis ulna'ris infe/rior [NA], inferior ulnar collateral artery: *origin*, brachial artery; *branches*, none; *distribution*, arm muscles at back of elbow.

a. collatera/lis ulna'ris supe/rior [NA], superior ulnar collateral artery: *origin*, brachial artery; *branches*, none; *distribution*, elbow joint, triceps muscle.

a. comitans/ ner/vi ischia/dici [NA], sciatic artery: *origin*, inferior gluteal artery; *branches*, none; *distribution*, accompanies sciatic nerve. Called also *accompanying artery of ischiatic nerve*.

a. commu/nicans ante/rior cer/ebri [NA], anterior communicating artery of cerebrum: *origin*, anterior cerebral artery; *branches*, none; *distribution*, establishes connection between the anterior cerebral arteries.

a. commu/nicans poste/rior cer/ebri [NA], posterior communicating artery of cerebrum: establishes connection between internal carotid and posterior cerebral arteries; *branches*, none.

arte/riae conjunctiva/les anterio/res [NA], anterior conjunctival arteries: *origin*, anterior ciliary; *branches*, none; *distribution*, conjunctiva.

arte/riae conjunctiva/les posterio/res [NA], posterior conjunctival arteries: *origin*, medial palpebral artery; *branches*, none; *distribution*, caruncula lacrimalis, conjunctiva.

a. corona'ria [cor/dis] dex'tra, *a. coronaria dextra*.

a. corona'ria dex'tra [NA], right coronary artery of heart: *origin*, right aortic sinus; *branches*, posterior interventricular; *distribution*, right ventricle, right atrium. Formerly called *right auricular artery*.

a. corona'ria [cor/dis] sinis'tra, *a. coronaria sinistra*.

a. corona'ria sinis'tra [NA], left coronary artery of heart: *origin*, left aortic sinus; *branches*, anterior interventricular and circumflex rami; *distribution*, left ventricle, left atrium. Formerly called *left auricular artery*.

a. cremaster'ica [NA], cremasteric artery: *origin*, inferior epigastric; *branches*, none; *distribution*, cremaster muscle, coverings of spermatic cord. Called also *a. spermatica externa* and *external spermatic artery*.

a. cys'tica [NA], cystic artery: *origin*, right branch of proper hepatic artery; *branches*, none; *distribution*, gallbladder.

a. deferentia/lis, *a. ductus deferentis*.

arte/riae digita/les dorsa/les ma'nus [NA], dorsal digital arteries of hand: *origin*, dorsal metacarpal arteries; *branches*, none; *distribution*, dorsum of fingers.

arte/riae digita/les dorsa/les pe'dis [NA], dorsal digital arteries of foot: *origin*, dorsal metatarsal arteries; *branches*, none; *distribution*, dorsum of toes.

arte/riae digita/les palma/res commu'nes [NA], common palmar digital arteries: *origin*, superficial volar arch; *branches*,

PRINCIPLE ARTERIES OF THE BODY AND PULMONARY VEINS

ARTERIES OF THE HEAD, NECK, AND BASE OF THE BRAIN

ARTERIES OF THE THORAX AND AXILLA

ARTERIES OF THE ABDOMEN AND PELVIS

ARTERIES OF THE UPPER EXTREMITY

ARTERIES OF THE LOWER EXTREMITY

TABLE OF ARTERIAE (Continued)

proper palmar digital arteries; *distribution*, fingers. Called also *arteriae digitales volares communis*, common volar digital arteries, and *ulnar metacarpal arteries*.

arte'riae digita'les palma'res pro'priae [NA], proper palmar digital arteries: *origin*, common palmar digital arteries; *branches*, none; *distribution*, fingers. Called also *arteriae digitales volares propriae*, collateral digital arteries, and *proper volar digital arteries*.

arte'riae digita'les planta'res commu'nes [NA], common plantar digital arteries: *origin*, plantar metatarsal arteries; *branches*, proper plantar digital arteries; *distribution*, toes.

arte'riae digita'les planta'res pro'priae [NA], proper plantar digital arteries: *origin*, common plantar digital arteries; *branches*, none; *distribution*, toes.

arte'riae digita'les vola'res commu'nes, arteriae digitales palmares communes.

arte'riae digita'les vola'res pro'priae, arteriae digitales palmares propriae.

a. dorsa'lis clitor'idis [NA], dorsal artery of clitoris: *origin*, internal pudendal artery; *branches*, none; *distribution*, clitoris.

a. dorsa'lis na'si [NA], dorsal artery of nose: *origin*, ophthalmic artery; *branches*, lacrimal; *distribution*, dorsum of nose.

a. dorsa'lis pe'dis [NA], dorsal artery of foot: *origin*, continuation of anterior tibial; *branches*, lateral and medial tarsal and arcuate arteries; *distribution*, foot, toes.

a. dorsa'lis pe'nis [NA], dorsal artery of penis: *origin*, internal pudendal artery; *branches*, none; *distribution*, glans, corona, prepuce of penis.

a. duc'tus deferen'tis [NA], artery of ductus deferens, deferential artery: *origin*, umbilical artery; *branches*, ureteral artery; *distribution*, ureter, ductus deferens, seminal vesicles, testes. Called also *a. deferentialis*.

a. epigas'trica infe'rior [NA], inferior epigastric artery: *origin*, external iliac; *branches*, pubic branch, cremasteric artery, a. of round ligament of uterus; *distribution*, abdominal wall.

a. epigas'trica superficia'lis [NA], superficial epigastric artery: *origin*, femoral; *branches*, none; *distribution*, abdominal wall, groin.

a. epigas'trica supe'rior [NA], superior epigastric artery: *origin*, internal thoracic artery; *branches*, none; *distribution*, abdominal wall, diaphragm.

arte'riae episclera'les [NA], episcleral arteries: *origin*, anterior ciliary artery; *branches*, none; *distribution*, iris, ciliary process.

a. ethmoida'lis ante'rior [NA], anterior ethmoidal artery: *origin*, ophthalmic artery; *branches*, anterior meningeal; *distribution*, dura mater, nose, frontal sinus, anterior ethmoidal cells.

a. ethmoida'lis poste'rior [NA], posterior ethmoidal artery: *origin*, ophthalmic artery; *branches*, none; *distribution*, posterior ethmoidal cells, dura mater, nose.

a. facia'lis [NA], facial artery: *origin*, external carotid; *branches*, ascending palatine, tonsillar, submental, inferior labial, superior labial, angular, glandular; *distribution*, face, tonsil, palate, submandibular gland. Called also *a. maxillaris externa* or *external maxillary artery*.

a. femora'lis [NA], femoral artery: *origin*, continuation of external iliac; *branches*, superficial epigastric, superficial circumflex iliac, external pudendal, deep femoral, descending geniculate; *distribution*, lower abdominal wall, external genitalia, lower extremity. NOTE: Vascular surgeons refer to the portion of the femoral artery proximal to the branching of the deep femoral as the *common femoral a.*, and to its continuation as the *superficial femoral a.* In this classification, the descending geniculate artery is a branch of the superficial femoral artery.

a. fibula'ris, NA alternative for *a. peronea*.

a. fronta'lis, a. supratrochlearis.

arte'riae gas'tricae bre'ves [NA], short gastric arteries: *origin*, splenic; *branches*, none; *distribution*, upper part of stomach.

a. gas'trica dex'tra [NA], right gastric artery: *origin*, common hepatic artery; *branches*, none; *distribution*, lesser curvature of stomach. Called also *right coronary artery of stomach* and *pyloric artery*.

a. gas'trica sinis'tra [NA], left gastric artery: *origin*, celiac; *branches*, esophageal; *distribution*, esophagus, lesser curvature of stomach. Called also *left coronary artery of stomach*.

a. gastroduodena'lis [NA], gastroduodenal artery: *origin*, common hepatic artery; *branches*, superior pancreaticoduodenal, right gastropiploic; *distribution*, stomach, duodenum, pancreas, greater omentum.

a. gastroepiplo'ica dex'tra [NA], right gastroepiploic artery: *origin*, gastroduodenal artery; *branches*, epiploic branches; *distribution*, stomach, greater omentum. Called also *right inferior gastric artery*.

a. gastroepiplo'ica sinis'tra [NA], left gastroepiploic artery: *origin*, splenic artery; *branches*, epiploic branches; *distribution*, stomach, greater omentum. Called also *left inferior gastric artery*.

a. ge'nu infe'rior latera'lis, a. genus inferior lateralis.

a. ge'nu infe'rior media'lis, a. genus inferior medialis.

a. ge'nu me'dia, a. genus media.

a. ge'nu supe'rior latera'lis, a. genus superior lateralis.

a. ge'nu supe'rior media'lis, a. genus superior medialis.

a. ge'nu supre'ma, a. genus descendens.

a. ge'nus descen'dens [NA], descending genicular artery: *ori-*

gin, femoral artery; *branches*, saphenous, articular; *distribution*, knee joint, upper and medial part of leg. Called also *a. genu suprema*.

a. ge'nus infe'rior latera'lis [NA], lateral inferior genicular artery: *origin*, popliteal artery; *branches*, none; *distribution*, knee joint. Called also *a. genu inferior lateralis*.

a. ge'nus infe'rior media'lis [NA], medial inferior genicular artery: *origin*, popliteal artery; *branches*, none; *distribution*, knee joint. Called also *a. genu inferior medialis*.

a. ge'nus me'dia [NA], middle genicular artery: *origin*, popliteal artery; *branches*, none; *distribution*, knee joint, cruciate ligaments, patellar synovial and alar folds. Called also *a. genu media*.

a. ge'nus supe'rior latera'lis [NA], lateral superior genicular artery: *origin*, popliteal artery; *branches*, none; *distribution*, knee joint, femur, patella, contiguous muscles. Called also *a. genu superior lateralis*.

a. ge'nus supe'rior media'lis [NA], medial superior genicular artery: *origin*, popliteal artery; *branches*, none; *distribution*, knee joint, femur, patella, contiguous muscles. Called also *a. genu superior medialis*.

a. glu'taea infe'rior, a. glutea inferior.

a. glu'taea supe'rior, a. glutea superior.

a. glu'tea infe'rior [NA], inferior gluteal artery: *origin*, internal iliac; *branches*, sciatic; *distribution*, buttock, back of thigh. Called also *a. glutea inferior*.

a. glu'tea supe'rior [NA], superior gluteal artery: *origin*, internal iliac artery; *branches*, superficial and deep branches; *distribution*, buttocks. Called also *a. glutea superior*.

a. haemorrhoida'lis infe'rior, a. rectalis inferior.

a. haemorrhoida'lis me'dia, a. rectalis media.

a. haemorrhoida'lis supe'rior, a. rectalis superior.

arte'riae helici'nae pe'nis [NA], helicine arteries of penis: helicine arteries arising from the vessels of the penis, whose engorgement causes erection of the organ. Called also *arteries of Mueller*.

a. hepat'ica, a. hepatica communis.

a. hepat'ica commu'nis [NA], common hepatic artery: *origin*, celiac trunk; *branches*, right gastric, gastroduodenal, hepatic proper; *distribution*, stomach, pancreas, duodenum, liver, gallbladder, greater omentum. Called also *a. hepatica*.

a. hepat'ica pro'pria [NA], proper hepatic artery: *origin*, common hepatic artery; *branches*, right and left branches; *distribution*, liver, gallbladder. Called also *hepatic funiculus of Rauber*.

a. hyaloi'dea [NA], hyaloid artery: a fetal vessel that continues forward from the central retinal artery through the vitreous body to supply the lens; it normally is not present after birth.

a. hypogas'trica, a. iliaca interna.

arte'riae il'eae, arteriae ilei.

arte'riae il'ei [NA], ileal arteries: *origin*, superior mesenteric; *branches*, none; *distribution*, ileum. Called also *a. ileae*.

a. ileoco'lica [NA], ileocolic artery: *origin*, superior mesenteric; *branches*, ascending, anterior, and posterior cecal, appendicular; *distribution*, ileum, cecum, vermiform appendix, ascending colon. Called also *inferior right colic artery*.

a. ili'aca commu'nis [NA], common iliac artery: *origin*, abdominal aorta; *branches*, internal and external iliac; *distribution*, pelvis, abdominal wall, lower limb.

a. ili'aca exter'na [NA], external iliac artery: *origin*, common iliac; *branches*, inferior epigastric, deep circumflex iliac; *distribution*, abdominal wall, external genitalia, lower limb. Called also *anterior iliac artery*.

a. ili'aca inter'na [NA], internal iliac artery: *origin*, continuation of common iliac; *branches*, iliolumbar, obturator, superior gluteal, inferior gluteal, umbilical, inferior vesical, uterine, middle rectal, and internal pudendal arteries; *distribution*, wall and viscera of pelvis, buttock, reproductive organs, medial aspect of thigh. Called also *a. hypogastrica*, *hypogastric artery*, and *posterior pelvic artery*.

a. iliolumba'lis [NA], iliolumbar artery: *origin*, internal iliac; *branches*, iliac and lumbar branches, lateral sacral arteries; *distribution*, pelvic muscles and bones, fifth lumbar segment, sacrum. Called also *small iliac artery*.

a. infraorbita'lis [NA], infraorbital artery: *origin*, maxillary artery; *branches*, anterior superior alveolar; *distribution*, maxilla, maxillary sinus, upper teeth, lower lid, cheek, nose.

a. innomina'ta, truncus brachiocephalicus.

arte'riae intercosta'les, see *arteriae intercostales posteriores I et II, III-XI*.

arte'riae intercosta'les postero'ries I et II [NA], posterior intercostal arteries I and II: *origin*, highest intercostal artery; *branches*, dorsal and spinal rami; *distribution*, upper thoracic wall.

arte'riae intercosta'les postero'ries III-XI [NA], posterior intercostal arteries III-XI: *origin*, thoracic aorta; *branches*, dorsal, lateral, and lateral cutaneous; *distribution*, thoracic wall.

a. intercosta'lis supre'ma [NA], highest intercostal artery: *origin*, costocervical trunk; *branches*, posterior intercostal arteries I and II; *distribution*, upper thoracic wall.

arte'riae interlobula'res hep'atis [NA], interlobular arteries of liver: arteries originating from the right or left branch of the proper hepatic artery, and passing between the lobules of the liver.

arte'riae interlobula'res re'nis [NA], interlobular arteries of kidney: arteries originating from the arcuate arteries of the kidney and distributed to the renal glomeruli. Called also *radiate arteries of kidney*.

TABLE OF ARTERIAE (Continued)

a. interos/sea ante'rior [NA], anterior interosseous artery: *origin*, posterior or common interosseous artery; *branches*, median artery; *distribution*, deep parts of front of forearm. Called also *a. interossea volaris* or *volar interosseous artery*.

a. interos/sea commu/nis [NA], common interosseous artery: *origin*, ulnar artery; *branches*, anterior and posterior interosseous arteries; *distribution*, antecubital fossa.

a. interos/sea dorsa'lis, *a. interossea posterior*.

a. interos/sea poste'rior [NA], posterior interosseous artery: *origin*, common interosseous artery; *branches*, recurrent interosseous; *distribution*, deep parts of back of forearm. Called also *a. interossea dorsalis*, and *dorsal* or *posterior interosseous artery of forearm*.

a. interos/sea recur'rens [NA], recurrent interosseous artery: *origin*, posterior interosseous or common interosseous artery; *branches*, none; *distribution*, back of elbow joint.

a. interos/sea vola'ris, *a. interossea anterior*.

arte'riae intestina'les, intestinal arteries: the arteries arising from the superior mesenteric, and supplying the intestines, including the pancreaticoduodenal, jejunal, ileal, ileocolic, and colic arteries.

arte'riae jejuna'les [NA], jejunal arteries: *origin*, superior mesenteric; *branches*, none; *distribution*, jejunum.

arte'riae labia'les anterio'res vul'vae, rami labiales anteriores arteriae femoralis.

a. labia'lis infe'rior [NA], inferior labial artery: *origin*, facial artery; *branches*, none; *distribution*, lower lip.

arte'riae labia'les posterio'res vul'vae, rami labiales posteriores arteriae pudendae internae.

a. labia'lis supe'rior [NA], superior labial artery: *origin*, facial artery; *branches*, septal and alar; *distribution*, upper lip, nose.

a. labyrin'thi [NA], artery of labyrinth, labyrinthine artery: *origin*, basilar or anterior inferior cerebellar artery; *branches*, vestibular and cochlear rami; *distribution*, internal ear. Called also *a. auditiva interna* and *internal auditory artery*.

a. lacrima'lis [NA], lacrimal artery: *origin*, ophthalmic artery; *branches*, lateral palpebral artery; *distribution*, lacrimal gland, upper and lower eyelids, conjunctiva.

a. laryn'gea infe'rior [NA], inferior laryngeal artery: *origin*, inferior thyroid artery; *branches*, none; *distribution*, larynx, trachea, esophagus.

a. laryn'gea supe'rior [NA], superior laryngeal artery: *origin*, superior thyroid; *branches*, none; *distribution*, larynx.

a. liena'lis [NA], splenic artery: *origin*, celiac trunk; *branches*, pancreatic and splenic branches, left gastroepiploic, and short gastric arteries; *distribution*, spleen, pancreas, stomach, greater omentum.

a. ligamen'ti ter'etis u'teri [NA], artery of round ligament of uterus: *origin*, inferior epigastric artery; *branches*, none; *distribution*, round ligament of uterus.

a. lingua'lis [NA], lingual artery: *origin*, external carotid; *branches*, suprahyoid, sublingual, dorsal lingual, deep lingual; *distribution*, tongue, sublingual gland, tonsil, epiglottis.

a. lo'bi cauda'ti [NA], either of two branches, one from the right and one from the left hepatic artery, supplying twigs to the caudate lobe of the liver.

arte'riae lumba'les [NA], lumbar arteries: *origin*, abdominal aorta; *branches*, dorsal and spinal branches; *distribution*, posterior abdominal wall, renal capsule.

a. lumba'lis i'ma [NA], lowest lumbar artery: *origin*, middle sacral; *branches*, none; *distribution*, sacrum, gluteus maximus muscle. Called also *fifth lumbar artery*.

a. malleola'ris ante'rior latera'lis [NA], lateral anterior malleolar artery: *origin*, anterior tibial artery; *branches*, none; *distribution*, ankle joint.

a. malleola'ris ante'rior media'lis [NA], medial anterior malleolar artery: *origin*, anterior tibial artery; *branches*, none; *distribution*, ankle joint.

a. malleola'ris poste'rior latera'lis, see *rami malleolares laterales arteriae peroneae*.

a. malleola'ris poste'rior media'lis, see *rami malleolares mediales arteriae tibialis posterioris*.

a. mamma'ria inter'na, *a. thoracica interna*.

a. masseter'ica [NA], masseteric artery: *origin*, maxillary artery; *branches*, none; *distribution*, masseter muscle.

a. maxilla'ris [NA], maxillary artery: *origin*, external carotid artery; *branches*, pterygoid rami, and deep auricular, anterior tympanic, inferior alveolar, middle meningeal, masseteric, deep temporal, buccal, posterior superior alveolar, infraorbital, descending palatine, sphenopalatine, and the artery of the pterygoid canal; *distribution*, both jaws, teeth, muscles of mastication, ear, meninges, nose, nasal sinus, palate. Called also *a. maxillaris interna*, *internal maxillary artery*, and *deep facial artery*.

a. maxilla'ris exter'na, *a. facialis*.

a. maxilla'ris inter'na, *a. maxillaris*.

a. max'ima Gale'ni, *aorta*.

a. media'na [NA], median artery: *origin*, anterior interosseous artery; *branches*, none; *distribution*, median nerve, muscles of front forearm.

arte'riae mediastina'les anterio'res, rami mediastinales arteriae thoracicae internae.

a. menin'gea ante'rior [NA], anterior meningeal artery: *ori-*

gin, anterior ethmoidal artery; *branches*, none; *distribution*, dura mater of anterior cranial fossa.

a. menin'gea me'dia [NA], middle meningeal artery: *origin*, maxillary artery; *branches*, frontal, parietal, and lacrimal anastomotic, accessory meningeal, and petrosal rami, and the superior tympanic artery; *distribution*, cranial bones, dura mater.

a. menin'gea poste'rior [NA], posterior meningeal artery: *origin*, ascending pharyngeal; *branches*, none; *distribution*, bones, dura mater of posterior cranial fossa.

a. menta'lis [NA], mental artery: *origin*, inferior alveolar; *branches*, none; *distribution*, chin.

a. mesenter'ica infe'rior [NA], inferior mesenteric artery: *origin*, abdominal aorta; *branches*, left colic, sigmoid, and superior rectal arteries; *distribution*, descending colon, rectum.

a. mesenter'ica supe'rior [NA], superior mesenteric artery: *origin*, abdominal aorta; *branches*, inferior pancreaticoduodenal, jejunal, ileal, ileocolic, right colic, and middle colic arteries; *distribution*, small intestine, proximal half of colon.

arte'riae metacar'peae dorsa'les [NA], dorsal metacarpal arteries: *origin*, dorsal carpal rete and radial artery; *branches*, dorsal digital arteries; *distribution*, dorsum of fingers.

arte'riae metacar'peae palma'res [NA], palmar metacarpal arteries: *origin*, deep palmar arch; *branches*, none; *distribution*, deep parts of metatarsus. Called also *arteriae metacarpeae volares*, *volar metacarpal arteries*, and *palmar intermetacarpal arteries*.

arte'riae metacar'peae vola'res, *arteriae metacarpeae palmares*.

arte'riae metatar'seae dorsa'les [NA], dorsal metatarsal arteries: *origin*, arcuate artery of foot; *branches*, dorsal digital arteries; *distribution*, foot, toes.

arte'riae metatar'seae planta'res [NA], plantar metatarsal arteries: *origin*, plantar arch; *branches*, perforating branches, common and proper plantar digital arteries; *distribution*, toes. Called also *common digital arteries of foot*.

a. musculophren'ica [NA], musculophrenic artery: *origin*, internal thoracic artery; *branches*, none; *distribution*, diaphragm, abdominal and thoracic walls.

arte'riae nasa'les posterio'res, latera'les et sep'ti [NA], lateral and septal posterior nasal arteries: *origin*, sphenopalatine artery; *branches*, none; *distribution*, nasal cavity, nasal septum, adjacent sinuses.

arte'riae nutri'ciae hu'meri [NA], nutrient arteries of humerus: *origin*, brachial and deep brachial arteries; *branches*, none; *distribution*, humerus.

a. obturato'ria [NA], obturator artery: *origin*, internal iliac; *branches*, pubic, acetabular, anterior, and posterior branches; *distribution*, pelvic muscles, hip joint.

a. obturato'ria accesso'ria [NA], accessory obturator artery, a name given to the obturator artery when it arises from the inferior epigastric instead of the internal iliac artery.

a. occipita'lis [NA], occipital artery: *origin*, external carotid; *branches*, auricular, meningeal, mastoid, descending, occipital, and sternocleidomastoid rami; *distribution*, muscles of neck and scalp, meninges, mastoid cells.

arte'riae oesoph'ageae, rami esophagei aortae thoracicae.

a. ophthal'mica [NA], ophthalmic artery: *origin*, internal carotid; *branches*, lacrimal, supraorbital, central artery of retina, ciliary, posterior and anterior ethmoidal, palpebral, supratrochlear, dorsal nasal; *distribution*, eye, orbit, adjacent facial structures.

a. ova'rica [NA], ovarian artery: *origin*, abdominal aorta; *branches*, uterine branch; *distribution*, ureter, ovary, uterine tube. Called also *tubo-ovarian artery* or *aortic uterine artery*.

a. palati'na ascen'dens [NA], ascending palatine artery: *origin*, facial artery; *branches*, none; *distribution*, soft palate, wall of pharynx, tonsil, auditory tube.

a. palati'na descen'dens [NA], descending palatine artery: *origin*, maxillary artery; *branches*, greater and lesser palatine arteries; *distribution*, soft palate, hard palate, tonsil.

a. palati'na ma'jor [NA], greater palatine artery: *origin*, descending palatine; *branches*, none; *distribution*, hard palate.

arte'riae palati'nae mino'res [NA], lesser palatine arteries: *origin*, descending palatine; *branches*, none; *distribution*, soft palate, tonsil.

arte'riae palpebra'les latera'les [NA], lateral palpebral arteries: *origin*, lacrimal artery; *branches*, none; *distribution*, eyelids, conjunctiva.

arte'riae palpebra'les media'les [NA], medial palpebral arteries: *origin*, ophthalmic artery; *branches*, posterior conjunctival; *distribution*, eyelids.

a. pancreat'ica dorsa'lis [NA], dorsal pancreatic artery: *origin*, splenic; *branches*, inferior pancreatic; *distribution*, neck and body of pancreas.

a. pancreat'ica infe'rior [NA], inferior pancreatic artery: *origin*, dorsal pancreatic; *branches*, none; *distribution*, body and tail of pancreas.

a. pancreat'ica mag'na [NA], great pancreatic artery: *origin*, splenic artery; *branches and distribution*, right and left branches anastomose with other pancreatic arteries.

arteriae pancreaticoduodena'les infe'riores [NA], inferior pancreaticoduodenal arteries: *origin*, superior mesenteric artery; *branches*, none; *distribution*, pancreas, duodenum. Called also *duodenal arteries*.

TABLE OF ARTERIAE (Continued)

a. pancreaticoduodena'lis supe'rior, superior pancreaticoduodenal artery: *origin*, gastroduodenal artery; *branches*, none; *distribution*, pancreas, duodenum.

arte'riae perforan'tes [NA], perforating arteries: *origin*, deep femoral artery; *branches*, none; *distribution*, adductor, hamstring, and gluteal muscles, and femur. Called also *a. perforans prima femoris*, *a. perforans secunda femoris*, and *a. perforans tertia femoris*.

a. per'forans pri'ma fem'oris, see *arteriae perforantes*.

a. per'forans secun'da fem'oris, see *arteriae perforantes*.

a. per'forans ter'tia fem'oris, see *arteriae perforantes*.

a. pericardiacophren'ica [NA], pericardiacophrenic artery: *origin*, internal thoracic artery; *branches*, none; *distribution*, pericardium, diaphragm, pleura. Called also *superior phrenic artery*.

a. perinea'lis [NA], perineal artery: *origin*, internal pudendal artery; *branches*, none; *distribution*, perineum, skin of external genitalia. Called also *a. perinei*.

a. perine'i, *a. perinealis*.

a. pero'nea [NA], peroneal artery: *origin*, posterior tibial artery; *branches*, perforating, communicating, calcaneal, and lateral and medial malleolar branches, and the calcaneal rete; *distribution*, outside and back of ankle, deep calf muscles. Called also *a. fibularis* [NA alternative] and *fibular artery*.

a. pharyn'gea ascen'dens [NA], ascending pharyngeal artery: *origin*, external carotid; *branches*, posterior meningeal, pharyngeal, and inferior tympanic; *distribution*, pharynx, soft palate, ear, meninges.

arteriae phren'icae infe'riores [NA], inferior phrenic arteries: *origin*, abdominal aorta; *branches*, superior suprarenal; *distribution*, diaphragm, suprarenal gland. Called also *great phrenic arteries* and *diaphragmatic arteries*.

arte'riae phren'icae superio'res [NA], superior phrenic arteries: *origin*, thoracic aorta; *branches*, none; *distribution*, upper surface of vertebral portion of diaphragm. Called also *superior diaphragmatic arteries*.

a. planta'ris latera'lis [NA], lateral plantar artery: *origin*, posterior tibial artery; *branches*, plantar arch, and plantar metatarsal arteries; *distribution*, sole of foot and toes. Called also *external plantar artery*.

a. planta'ris media'lis [NA], medial plantar artery: *origin*, posterior tibial artery; *branches*, deep and superficial branches; *distribution*, sole of the foot and toes.

a. poplit'ea [NA], popliteal artery: *origin*, continuation of femoral artery; *branches*, lateral and medial superior genicular, middle genicular, sural, lateral and medial inferior genicular, anterior and posterior tibial arteries, and the genicular articular and the patellar rete; *distribution*, knee, calf.

a. prin'ceps pol'lucis [NA], principal artery of thumb: *origin*, radial artery; *branches*, radial of index finger; *distribution*, each side and palmar aspect of thumb.

a. profun'da bra'chii [NA], deep brachial artery: *origin*, brachial artery; *branches*, deltoid ramus, nutrient artery, medial and radial collateral arteries; *distribution*, humerus, muscles and skin of arm.

a. profun'da clitor'idis [NA], deep artery of clitoris: *origin*, internal pudendal artery; *branches*, none; *distribution*, clitoris.

a. profun'da fem'oris [NA], deep femoral artery: *origin*, femoral artery; *branches*, medial and lateral circumflex arteries of thigh, perforating arteries; *distribution*, thigh muscles, hip joint, gluteal muscles, femur.

a. profun'da lin'guae [NA], deep lingual artery: *origin*, lingual artery; *branches*, none; *distribution*, tongue. Called also *ranine artery*.

a. profun'da pe'nis [NA], deep artery of penis: *origin*, internal pudendal artery; *branches*, none; *distribution*, corpus cavernosum penis.

arte'riae puden'dae exter'nae [NA], external pudendal arteries: *origin*, femoral artery; *branches*, anterior scrotal or anterior labial and inguinal branches; *distribution*, external genitalia, upper medial thigh.

a. puden'da inter'na [NA], internal pudendal artery: *origin*, internal iliac artery; *branches*, posterior scrotal or posterior labial branches and inferior rectal, perineal, urethral arteries, artery of bulb of penis or vestibule, deep artery of penis or clitoris, dorsal artery of penis or clitoris; *distribution*, external genitalia, anal canal, perineum.

a. pulmona'lis, truncus pulmonalis.

a. pulmona'lis dex'tra [NA], right pulmonary artery: *origin*, pulmonary trunk; *branches*, numerous branches named according to the part of the lung to which they distribute unaerated blood; *distribution*, right lung.

a. pulmona'lis sinis'tra [NA], left pulmonary artery: *origin*, pulmonary trunk; *branches*, numerous branches named according to the part of the lung to which they distribute unaerated blood; *distribution*, left lung.

a. radia'lis [NA], radial artery: *origin*, brachial artery; *branches*, palmar carpal, superficial palmar and dorsal carpal rami, recurrent radial artery, principal artery of thumb, deep palmar arch; *distribution*, forearm, wrist, hand.

a. radia'lis in'dicis [NA], radial artery of index finger: *origin*, principal artery of thumb; *branches*, none; *distribution*, index finger. Called also *a. volaris indicis radialis* and *volar radial artery of index finger*.

a. recta'lis infe'rior [NA], inferior rectal artery: *origin*, internal pudendal artery; *branches*, none; *distribution*, rectum, anal canal. Called also *a. haemorrhoidalis inferior* and *inferior hemorrhoidal artery*.

a. recta'lis me'dia [NA], middle rectal artery: *origin*, internal iliac artery; *branches*, none; *distribution*, rectum. Called also *a. haemorrhoidalis media* and *middle hemorrhoidal artery*.

a. recta'lis supe'rior [NA], superior rectal artery: *origin*, inferior mesenteric artery; *branches*, none; *distribution*, rectum. Called also *a. haemorrhoidalis superior* and *superior hemorrhoidal artery*.

a. recur'rens radia'lis [NA], radial recurrent artery: *origin*, radial artery; *branches*, none; *distribution*, brachioradialis, brachialis, elbow region.

a. recur'rens tibia'lis ante'rior [NA], anterior tibial recurrent artery: *origin*, anterior tibial artery; *branches*, none; *distribution*, tibialis anterior, extensor digitorum longus, knee joint, contiguous fascia and skin.

a. recur'rens tibia'lis poste'rior [NA], posterior tibial recurrent artery: *origin*, anterior tibial artery; *branches*, none; *distribution*, knee.

a. recur'rens ulna'ris [NA], ulnar recurrent artery: *origin*, ulnar artery; *branches*, anterior and posterior; *distribution*, elbow joint region.

arte'riae recurren'tes ulna'res, see *a. recurrens ulnaris*.

a. rena'lis [NA], renal artery: *origin*, abdominal aorta; *branches*, ureteral branches, inferior suprarenal artery; *distribution*, kidney, suprarenal gland, ureter. Called also *emulgent artery*.

arte'riae re'nis [NA], renal arteries: the arteries of the kidney, including the interlobar, arcuate, and interlobular arteries, and arteriolar rectae.

arte'riae retroduodena'les [NA], retroduodenal arteries: *origin*, first branch of gastroduodenal; *branches*, none; *distribution*, bile duct, duodenum, head of pancreas.

a. sacra'lis latera'lis, see *rami spinales arteriarum sacralium lateralium*.

arte'riae sacra'les latera'les [NA], lateral sacral arteries: *origin*, ilio lumbar artery; *branches*, spinal branches; *distribution*, structures about coccyx and sacrum.

a. sacra'lis me'dia, *a. sacralis mediana*.

a. sacra'lis media'na [NA], median sacral artery: *origin*, continuation of abdominal aorta; *branches*, lowest lumbar artery; *distribution*, sacrum, coccyx, rectum. Called also *a. sacralis media*, *aorta sacrococcygea*, and *caudal, coccygeal, or sacrococcygeal artery*.

a. scapula'ris descen'dens [dorsa'lis], NA alternative for *ramus profundus arteriae transversae colli*.

arte'riae scrota'les antero'res, rami scrotales anteriores arteriae femoralis.

arte'riae scrota'les postero'res, rami scrotales posteriores arteriae pudendae internae.

a. segmen'ti antero'ris [NA], anterior segmental artery: *origin*, right hepatic; *branches*, none; *distribution*, anterior segment of right lobe of liver.

a. segmen'ti antero'ris inferio'ris [NA], anterior inferior segmental artery: *origin*, anterior branch of renal artery; *branches*, none; *distribution*, anterior inferior segment of kidney.

a. segmen'ti antero'ris superio'ris [NA], anterior superior segmental artery: *origin*, anterior branch of renal artery; *branches*, none; *distribution*, anterior superior segment of kidney.

a. segmen'ti inferio'ris [NA], inferior segmental artery: *origin*, anterior branch of renal artery; *branches*, none; *distribution*, inferior segment of kidney.

a. segmen'ti latera'lis [NA], lateral segmental artery: *origin*, left branch of common hepatic artery; *branches*, none; *distribution*, lateral segment of left lobe of liver.

a. segmen'ti media'lis [NA], medial segmental artery: *origin*, left branch of common hepatic artery; *branches*, none; *distribution*, medial segment of left lobe of liver.

a. segmen'ti postero'ris [NA], posterior segmental artery: 1. *origin*, right hepatic; *branches*, none; *distribution*, posterior segment of right lobe of liver. 2. *origin*, posterior branch of renal artery; *branches*, none; *distribution*, posterior segment of kidney.

a. segmen'ti superio'ris [NA], superior segmental artery: *origin*, anterior branch of renal artery; *branches*, none; *distribution*, superior segment of kidney.

arte'riae sigmoi'deae [NA], sigmoid arteries: *origin*, inferior mesenteric artery; *branches*, none; *distribution*, sigmoid colon.

a. spermat'ica exter'na, *a. cremasterica*.

a. sphenopalati'na [NA], sphenopalatine artery: *origin*, maxillary artery; *branches*, lateral and septal posterior nasal arteries; *distribution*, structures adjoining nasal cavity, the nasopharynx. Called also *nasopalatine artery*.

a. spina'lis ante'rior [NA], anterior spinal artery: *origin*, vertebral artery; *branches*, none; *distribution*, spinal cord.

a. spina'lis poste'rior [NA], posterior spinal artery: *origin*, vertebral artery; *branches*, none; *distribution*, spinal cord.

a. sternocleidomasto'i'dea, see *rami sternocleidomastoidei arteriae occipitalis*.

a. stylomasto'i'dea [NA], stylomastoid artery: *origin*, posterior auricular; *branches*, mastoid and stapedial rami, posterior tympanic artery; *distribution*, tympanic cavity walls, mastoid cells, stapedius muscle.

a. subcla'via [NA], subclavian artery: *origin*, brachiocephalic

TABLE OF ARTERIAE (Concluded)

trunk (right), arch of aorta (left); *branches*, vertebral, internal thoracic arteries, thyrocervical and costocervical trunks; *distribution*, neck, thoracic wall, spinal cord, brain, meninges, upper limb.

a. subcosta'lis [NA], subcostal artery: *origin*, thoracic aorta; *branches*, dorsal and spinal branches; *distribution*, upper posterior abdominal wall.

a. sublingua'lis [NA], sublingual artery: *origin*, lingual artery; *branches*, none; *distribution*, sublingual gland.

a. submenta'lis [NA], submental artery: *origin*, facial artery; *branches*, none; *distribution*, tissues under chin.

a. subscapula'ris [NA], subscapular artery: *origin*, axillary artery; *branches*, thoracodorsal and circumflex scapular arteries; *distribution*, scapular and shoulder region.

arte'riae supraduodena'les superio'res [NA], superior supraduodenal arteries: *origin*, gastroduodenal; *branches*, pancreatic and duodenal; *distribution*, pancreas, duodenum.

a. supraorbita'lis [NA], supraorbital artery: *origin*, ophthalmic artery; *branches*, none; *distribution*, forehead, upper muscles of orbit, upper eyelid, frontal sinus.

a. suprarena'lis infe'rior [NA], inferior suprarenal artery: *origin*, renal artery; *branches*, none; *distribution*, suprarenal gland. Called also *inferior capsular artery*.

a. suprarena'lis me'dia [NA], middle suprarenal artery: *origin*, abdominal aorta; *branches*, none; *distribution*, suprarenal gland. Called also *middle capsular artery* and *aortic suprarenal artery*.

arte'riae suprarena'les superio'res [NA], superior suprarenal arteries: *origin*, inferior phrenic artery; *branches*, none; *distribution*, suprarenal gland.

a. suprascapula'ris [NA], suprascapular artery: *origin*, thyrocervical trunk; *branches*, acromial branch; *distribution*, clavicular, deltoid, and scapular regions. Called also *a. transversa scapulae* and *transverse scapular artery*.

a. supratrochlea'ris [NA], supratrochlear artery: *origin*, ophthalmic artery; *branches*, none; *distribution*, anterior scalp. Called also *a. frontalis* and *frontal artery*.

arte'riae sura'les [NA], sural arteries: *origin*, popliteal artery; *branches*, none; *distribution*, popliteal space, calf.

a. tar'sea latera'lis [NA], lateral tarsal artery: *origin*, dorsal artery of foot; *branches*, none; *distribution*, tarsus.

arte'riae tar'seae media'les [NA], medial tarsal arteries: *origin*, dorsal artery of foot; *branches*, none; *distribution*, side of foot.

a. tempora'lis me'dia [NA], middle temporal artery: *origin*, superficial temporal artery; *branches*, none; *distribution*, temporal region.

arte'riae tempora'les profun'dae [NA], deep temporal arteries: *origin*, maxillary artery; *branches*, none; *distribution*, deep parts of temporal region.

a. tempora'lis profun'da ante'rior, see *arteriae temporales profundae*.

a. tempora'lis profun'da poste'rior, see *arteriae temporales profundae*.

a. tempora'lis superficia'lis [NA], superficial temporal artery: *origin*, external carotid; *branches*, parotid, anterior auricular, frontal, and parietal rami, transverse facial, zygomaticoorbital, and middle temporal arteries; *distribution*, parotid and temporal regions.

a. testicula'ris [NA], testicular artery: *origin*, abdominal aorta; *branches*, ureteral branches; *distribution*, ureter, epididymis, testis. Called also *funicular artery*.

a. thoraca'lis latera'lis, a. thoracica lateralis.

a. thoraca'lis supre'ma, a. thoracica suprema.

a. thoracica inter'na [NA], internal thoracic artery: *origin*, subclavian artery; *branches*, mediastinal, thymic, bronchial, sternal, perforating, lateral costal, and anterior intercostal branches, pericardiophrenic, musculophrenic, and superior epigastric arteries; *distribution*, anterior thoracic wall, mediastinal structures, diaphragm. Called also *a. mammaria interna* and *internal mammary artery*.

a. thora'lica latera'lis [NA], lateral thoracic artery: *origin*, axillary artery; *branches*, mammary branches; *distribution*, pectoral muscles, mammary gland. Called also *a. thoracalis lateralis* and *external mammary artery*.

a. thora'lica supre'ma [NA], highest thoracic artery: *origin*, axillary artery; *branches*, none; *distribution*, axillary aspect of chest wall. Called also *a. thoracalis suprema*.

a. thoracoacromia'lis [NA], thoracoacromial artery: *origin*, axillary artery; *branches*, clavicular, pectoral, deltoid, acromial rami; *distribution*, deltoid, clavicular, and thoracic regions. Called also *thoracic axis*.

a. thoracodorsa'lis [NA], thoracodorsal artery: *origin*, subscapular artery; *branches*, none; *distribution*, subscapular and teretes muscles.

arte'riae thy'micae, rami thymici arteriae thoracicae inter-nae.

a. thyreo'i/dea i'ma, a. thyroidea ima.

a. thyreo'i/dea infe'rior, a. thyroidea inferior.

a. thyreo'i/dea supe'rior, a. thyroidea superior.

a. thyroi'dea i'ma [NA], lowest thyroid artery: *origin*, arch of aorta, brachiocephalic trunk or right common carotid; *branches*, none; *distribution*, thyroid gland. Called also *a. thyroidea ima* and *Neubauer's artery*.

a. thyroi'dea infe'rior [NA], inferior thyroid artery: *origin*, thyrocervical trunk; *branches*, pharyngeal, esophageal, and tracheal rami, inferior laryngeal and ascending cervical arteries; *distribution*, thyroid gland and adjacent structures. Called also *a. thyroidea inferior*.

a. thyroi'dea supe'rior [NA], superior thyroid artery: *origin*, external carotid artery; *branches*, hyoid, sternocleidomastoid, superior laryngeal, cricothyroid, muscular, and glandular branches; *distribution*, thyroid gland and adjacent structures. Called also *a. thyroidea superior*.

a. tibia'lis ante'rior [NA], anterior tibial artery: *origin*, popliteal artery; *branches*, posterior and anterior tibial recurrent, and lateral and medial anterior malleolar arteries, lateral and medial malleolar retes; *distribution*, leg, ankle, foot.

a. tibia'lis poste'rior [NA], posterior tibial artery: *origin*, popliteal artery; *branches*, fibular circumflex branch, peroneal, medial plantar, and lateral plantar arteries; *distribution*, leg, foot.

a. transver'sa col'li [NA], transverse cervical artery: *origin*, subclavian artery; *branches*, deep and superficial rami; *distribution*, root of neck, muscles of scapula.

a. transver'sa facie'i [NA], transverse facial artery: *origin*, superficial temporal artery; *branches*, none; *distribution*, parotid region.

a. transver'sa scap'ulae, a. suprascapularis.

a. tympan'ica ante'rior [NA], anterior tympanic artery: *origin*, maxillary artery; *branches*, none; *distribution*, tympanic cavity.

a. tympan'ica infe'rior [NA], inferior tympanic artery: *origin*, ascending pharyngeal; *branches*, none; *distribution*, tympanic cavity.

a. tympan'ica poste'rior [NA], posterior tympanic artery: *origin*, stylomastoid artery; *branches*, none; *distribution*, tympanic cavity.

a. tympan'ica supe'rior [NA], superior tympanic artery: *origin*, middle meningeal artery; *branches*, none; *distribution*, tympanic cavity.

a. ulna'ris [NA], ulnar artery: *origin*, brachial artery; *branches*, palmar carpal, dorsal carpal, and deep palmar rami, ulnar recurrent and common interosseous arteries, superficial palmar arch; *distribution*, forearm, wrist, hand.

a. umbilica'lis [NA], umbilical artery: *origin*, internal iliac artery; *branches*, deferential, superior vesical arteries; *distribution*, ductus deferens, seminal vesicles, testes, urinary bladder, ureter.

a. urethra'lis [NA], urethral artery: *origin*, internal pudendal artery; *branches*, none; *distribution*, urethra.

a. uteri'na [NA], uterine artery: *origin*, internal iliac artery; *branches*, ovarian and tubal rami, vaginal artery; *distribution*, uterus, vagina, round ligament of uterus, uterine tube, ovary. Called also *fallopian artery*.

a. vagina'lis [NA], vaginal artery: *origin*, uterine artery; *branches*, none; *distribution*, vagina, fundus of bladder.

a. vertebra'lis [NA], vertebral artery: *origin*, subclavian artery; *branches*, spinal and meningeal branches, posterior inferior cerebellar, basilar, and anterior and posterior spinal arteries; *distribution*, muscles of neck, vertebrae, spinal cord, cerebellum, interior of cerebrum.

a. vesica'lis infe'rior [NA], inferior vesical artery: *origin*, internal iliac; *branches*, none; *distribution*, bladder, prostate, seminal vesicles.

arte'riae vesica'les superio'res [NA], superior vesical arteries: *origin*, umbilical artery; *branches*, none; *distribution*, bladder, urachus, ureter.

a. vola'ris in'dicis radia'lis, a. radialis indicis.

a. zygomaticoorbita'lis [NA], zygomaticoorbital artery: *origin*, superficial temporal; *branches*, none; *distribution*, lateral side of orbit.

arterial (ar-te're-al) pertaining to an artery or to the arteries.

arterialization (ar-te're-al-i-za'shun) (obs.) the change of venous into arterial blood; the provision or supplying of oxygenated instead of venous blood.

arteriartia (ar'tē-re-ark'she-ah) [artery + L. *arctare* to contract] (obs.) contraction of an artery; narrowing of the caliber of an artery.

arteriectasia (ar'tē-re-ek-ta'ze-ah) arteriectasis.

arteriectasis (ar'tē-re-ek'tah-sis) [artery + Gr. *ektasis* dilatation] dilatation and, usually, lengthening of an artery.

arteriectomy (ar'tē-re-ek'to-me) [artery + Gr. *ektomē* excision] excision of a portion of an artery.

arteriectopia (ar'tē-re-ek-to'pe-ah) [artery + Gr. *ektos* out of place] displacement of an artery from its normal location.

arterio- (ar-te're-o) [L. *arteria*, Gr. *artēria*] a combining form denoting relationship to an artery or arteries.

arteriocapillary (ar-te're-o-kap'i-la're) pertaining to the arteries and the capillaries.

arteriodilating (ar-te're-o-di'lāt-ing) increasing the caliber of the arteries, particularly of arterioles.

arteriogenesis (ar-te're-o-jen'ē-sis) [artery + Gr. *genesis* production] the formation of arteries.

arteriogram (ar-te're-o-gram") [artery + Gr. *gramma* a writing] 1. a roentgenogram of an artery after injection of a radiopaque medium. 2. (obs.) a sphygmographic tracing of the arterial pulse.

arteriograph (ar-te're-o-graf) a film produced by arteriography.

arteriography (ar'te-re-og'rah-fe) [artery + Gr. *graphein* to write] roentgenography of arteries after injection of radiopaque material into the blood stream. **catheter a.**, radiography of vessels after introduction of contrast material through a catheter inserted into an artery. **selective a.**, radiography of a specific vessel which is opacified by a medium introduced directly into it, usually via a catheter.

arteriola (ar-te're-o'lah), pl. *arterio'lae* [L., dim. of *arteria*] arteriole: a minute arterial branch, especially [NA] one just proximal to a capillary. **a. macula'ris infe'rior** [NA], inferior macular arteriole: the inferior arteriole supplying the macula retinae. **a. macula'ris supe'rior** [NA], superior macular arteriole: the superior arteriole supplying the macula retinae. **a. media'lis ret'inae** [NA], medial arteriole of retina: the small branch supplying blood to the central region of the retina. **a. nasa'lis ret'inae infe'rior** [NA], inferior nasal arteriole of retina: a small branch of the central artery of the retina supplying the inferior nasal region of the retina. **a. nasa'lis ret'inae supe'rior** [NA], superior nasal arteriole of retina: a small branch of the central artery of the retina, supplying the superior nasal region of the retina. **arterio'lae rec'tae re'nis** [NA], branches of the arcuate arteries of the kidney arising from the efferent glomerular arterioles, and passing down to the renal pyramids; called also *straight arteries*, or *arterioles*, of the kidney and *vasa recta*. Also sometimes called *arteriolae rectae spuriae* or *false straight arterioles* of the kidney to distinguish them from straight direct branches from the arcuate and interlobular arteries that are called *arteriolae rectae verae* or *true straight arterioles* of the kidney. **arterio'lae rec'tae spu'riae**, see *arteriolae rectae renis*. **arterio'lae rec'tae ve'ra**, see *arteriolae rectae renis*. **a. tempora'lis ret'inae infe'rior** [NA], inferior temporal arteriole of retina: a branch of the central artery of the retina, supplying the inferior temporal region of the retina. **a. tempora'lis ret'inae supe'rior** [NA], superior temporal arteriole of retina: a branch of the central artery of the retina, supplying the superior temporal region of the retina.

arteriolae (ar-te're-o'le) [L.] plural of arteriola.

arteriolar (ar'te-re-o-lar) pertaining to or resembling arterioles.

arteriole (ar-te're-ōl) [L. *arteriola*] a minute arterial branch, especially one just proximal to a capillary; called also *arteriola* [NA]. **ellipsoid a's**, sheathed arteries. **glomerular a.**, afferent, a branch of an interlobular artery that goes to a renal glomerulus; called also *vas afferens glomeruli* [NA]. **glomerular a.**, efferent, an arteriole that arises from a renal glomerulus, breaking up into capillaries to supply renal tubules; called also *vas efferens glomeruli* [NA]. **Isaacs-Ludwig a.**, an arteriolar twig that sometimes branches from the afferent glomerular arteriole of the kidney to communicate directly with the tubular capillary plexus. **macular a.**, inferior, arteriola macularis inferior. **macular a.**, superior, arteriola macularis superior. **medial a. of retina**, arteriola medialis retinae. **nasal a. of retina**, inferior, arteriola nasalis retinae inferior. **nasal a. of retina**, superior, arteriola nasalis retinae superior. **postglomerular a.**, efferent glomerular a. **precapillary a's**, arterial capillaries. **preglomerular a.**, afferent glomerular a. **sheathed a's**, see under *artery*. **straight a's of kidney**, arteriolae rectae renis. **straight a's of kidney**, false, see *arteriolae rectae renis*. **straight a's of kidney**, true, see *arteriolae rectae renis*. **temporal a. of retina**, inferior, arteriola temporalis retinae inferior. **temporal a. of retina**, superior, arteriola temporalis retinae superior.

arteriolith (ar-te're-o-lith") [artery + Gr. *lithos* stone] a chalky concretion in an artery.

arteriolitis (ar-tēr'ī-o-li'tis) inflammation of the arterioles.

arteriology (ar-te're-ol'o-je) [artery + *-logy*] the sum of what is known regarding the arteries; the science or study of the arteries.

arteriolonecrosis (ar-te're-o'lo-ne-kro'sis) necrosis of arterioles, as may be seen in nephrosclerosis; called also *arteriolar necrosis*.

arteriolosclerosis (ar-te're-o'lo-sklē-ro'sis) sclerosis and thickening of the walls of the smaller arteries (arterioles). *Hyaline arteriolosclerosis*, in which there is homogeneous pink hyaline thickening of the arteriolar walls, is associated with benign nephrosclerosis. *Hyperplastic arteriolosclerosis*, in which there is a concentric thickening with progressive narrowing of the lumina, may be associated with malignant hypertension, nephrosclerosis, and scleroderma.

arteriolosclerotic (ar-te're-o'lo-skle-rot'ik) pertaining to or characterized by arteriolosclerosis.

arteriomalacia (ar-te're-o-mah-la'she-ah) [artery + Gr. *malakia* softness] (obs.) abnormal softness of the arterial coats.

arteriometer (ar'te-re-om'ē-ter) [artery + Gr. *metron* measure] (obs.) an apparatus used for measuring any changes in the caliber of a pulsating artery.

arteriomotor (ar-te're-o-mo'tor) pertaining to or causing change in the caliber of an artery.

arteriomyomatosis (ar-te're-o-mi'o-mah-to'sis) a growth of irregular muscular fibers in the walls of an artery causing thickening of the walls.

arterionecrosis (ar-te're-o-ne-kro'sis) necrosis of an artery or of arteries.

arteriopalmus (ar-te're-o-pal'mus) (obs.) palpitation or throbbing of an artery.

arteriopathy (ar'te-re-op'ah-the) [artery + Gr. *pathos* disease] any arterial disease. **hypertensive a.**, widespread involvement, chiefly of arterioles and small arteries, associated with arterial hypertension and characterized primarily by hypertrophy and thickening of the media.

arterioperissia (ar-te're-o-pē-ris'e-ah) [artery + Gr. *perissos* excessive] (obs.) excessive arterial development.

arterioplania (ar-te're-o-pla'ne-ah) [artery + Gr. *planan* to wander + *-ia*] (obs.) the condition in which an artery takes an unusual course.

arterioplasty (ar-te're-o-plas'te) [artery + Gr. *plassein* to form] surgical repair or reconstruction of an artery; applied to Matas' operation (endoaneurysmorrhaphy) for aneurysm, restoring the continuity of the parent artery by making a new channel out of the sac walls.

arteriopressor (ar-te're-o-pres'or) producing increased blood pressure in the arteries.

arteriorenal (ar-te're-o-re'nal) pertaining to the arteries of the kidney.

arteriorrhagia (ar-te're-o-ra'je-ah) (obs.) arterial hemorrhage.

arteriorrhaphy (ar-te're-or'ah-fe) [artery + Gr. *rhaphe* suture] suture of an artery.

arteriorrhexis (ar-te're-o-rek'sis) [artery + Gr. *rhēxis* rupture] rupture of an artery.

arteriosclerosis (ar-te're-o-sklē-ro'sis) [artery + Gr. *sklēros* hard] a group of diseases characterized by thickening and loss of elasticity of arterial walls; it comprises three distinct forms: atherosclerosis, Mönckeberg's arteriosclerosis, and arteriolosclerosis. **cerebral a.**, arteriosclerosis of the arteries of the brain. **coronary a.**, arteriosclerosis (atherosclerosis) of the coronary arteries. **hyaline a.**, a homogeneous hyaline thickening of the walls of arterioles with consequent narrowing of the lumina. **hypertensive a.**, arteriosclerosis intensified by hypertension. **infantile a.**, see *infantile arteritis*, under *arteritis*. **intimal a.**, arteriosclerosis in which the major changes affect the intima of the arteries. **medial a.**, a condition of large and medium-sized arteries, with primary destruction of the muscle and elastic fibers of the medial coat, which are replaced by fibrous tissue; sometimes there are deposits of calcium (akin to Mönckeberg's arteriosclerosis). **Mönckeberg's a.**, medial arteriosclerosis with extensive deposits of calcium in the media of the artery; called also *Mönckeberg's calcification*, *degeneration*, *sclerosis*, or *medial calcific sclerosis*. **nodose a.**, **nodular a.** (obs.), disease of the arteries marked by the formation of fibrous nodes or plaques in the lining membrane of the arteries. **a. oblit'erans**, arteriosclerosis in which proliferation of the intima of small vessels has caused complete obliteration of the lumen of the artery. **peripheral a.**, arteriosclerosis of the extremities. **presenile a.**, physiological arteriosclerosis occurring at an unusually early age and without apparent cause. **senile a.**, arteriosclerosis that accompanies old age, but is not specifically age related.

arteriosclerotic (ar-te're-o-sklē-rot'ik) pertaining to or affected with arteriosclerosis.

arteriosity (ar-te're-os'ī-te) the condition or quality of being arterial.

arteriospasm (ar-te're-o-spaz'm") spasm of an artery.

arteriospastic (ar-te're-o-spas'tik) pertaining to, characterized by, or causing arteriospasm.

arteriostenosis (ar-te're-o-ste-no'sis) [artery + Gr. *stenos* narrow] the narrowing or diminution of the caliber of an artery.

arteriosteogenesis (ar-te're-o-s'ē-te-o-jen'ē-sis) [artery + Gr. *osteon* bone + *gennan* to produce] calcification of an artery.

arteriostosis (ar-te're-os-to'sis) [artery + Gr. *osteon* bone + *-osis*] ossification of an artery.

arteriostrepsis (ar-te're-o-strep'sis) [artery + Gr. *streptos* twisted] the twisting of an artery for the arrest of hemorrhage.

arteriosympathectomy (ar-te're-o-sim'pah-thek'to-me) periarterial sympathectomy; see under *sympathectomy*.

arteriotomy (ar'te-re-ot'o-me) [artery + Gr. *tomē* cut] incision of an artery.

arteriotony (ar-te're-ot'o-ne) [artery + Gr. *tonos* tension] the intra-arterial tension of the blood; blood pressure.

arteriotrepsis (ar-te're-o-trep/sis) arteriotrepsis.
arterious (ar-te're-us) pertaining to the arteries; arterial.
arteriovenous (ar-te're-o-ve'nus) both arterial and venous; pertaining to or affecting an artery and a vein.
arteritides (ar'tē-rit'i-dēz) plural of *arteritis*.
arteritis (ar'tē-rit'is), pl. *arterit'ides* [artery + -itis] inflammation of an artery; cf. *endarteritis* and *periarteritis*. **brachiocephalic a.**, a. **brachiocephal'ica**, pulseless disease. **coronary a.**, inflammation of the coronary arteries. **cranial a.**, temporal a. **a. defor'mans** (obs.), chronic endarteritis with calcareous infiltration. **equine viral a.**, a frequently fatal viral disease of horses affecting especially the smaller arteries, with hemorrhagic enteritis, abdominal pain and diarrhea, and pulmonary edema. Abortion is common in affected mares. **giant cell a.**, temporal a. **Horton's a.**, temporal a. **a. hyperplas'tica** (obs.), arteritis with the formation of new connective tissue. **infantile a.**, diffuse arteritis in infants and children, rarely with atherosclerotic processes. **localized visceral a.**, allergic vasculitis. **a. nodo'sa**, periarteritis (polyarteritis) nodosa. **a. oblit'erans**, endarteritis obliterans. **rheumatic a.**, generalized inflammation of arterioles and arterial capillaries occurring in rheumatic fever. **syphilitic a.**, a late manifestation of syphilis characterized by intimal proliferation and degeneration of the medial coat, usually involving the ascending aorta, aortic arch, and pulmonary artery, which may lead to aneurysm. **Takayasu's a.**, pulseless disease. **temporal a.**, a chronic vascular disease of unknown origin, largely confined to the carotid arterial system, characterized by proliferative inflammation, often with giant cells and granulomas, and by headache, difficulty in chewing, weakness, weight loss, fever, and symptoms of sepsis, with a markedly increased erythrocyte sedimentation rate and leukocytosis. Ocular involvement, ranging from diplopia to complete blindness, occurs in about half the subjects. The disease occurs exclusively in older persons, and is often associated with polymyalgia rheumatica. Called also *cranial a.*, *giant cell a.*, and *Horton's arteritis, disease, or syndrome*. **tuberculous a.**, endarteritis obliterans in those arteries intimately involved in a tubercular focus. **a. umbilica'lis**, septic inflammation of the umbilical artery in newborn infants. **a. verruco'sa** (obs.), arteritis marked by finger-like projections from the wall into the lumen of the blood vessel.

artery (ar'ter-e) [L. *arteria*; Gr. *artēria*, from *aēr* air + *tērein* to keep, because the arteries were supposed by the ancients to contain air, or from Gr. *aeirein* to lift or attach] a vessel through which the blood passes away from the heart to the various parts of the body; called also *arteria* [NA]. The wall of an artery consists typically of an outer coat (tunica adventitia), a middle coat (tunica media), and an inner coat (tunica intima). **accompa-**

Artery; representation of arterial coats; A, tunica intima; B, internal elastic lamina; C, tunica media; D, tunica adventitia.

nying a. of ischiadic nerve, arteria comitans nervi ischii.
acetabular a., 1. ramus acetabularis arteriae circumflexae femoris medialis. 2. ramus acetabularis arteriae obturatoriae. **adipose a's of kidney**, rami capsulares arteriae renis. **afferent a. of glomerulus**, vas afferens glomeruli. **alveolar a., inferior**, arteria alveolaris inferior. **alveolar a's, superior, anterior**, arteriae alveolares superiores anteriores. **alveolar a., superior, posterior**, arteria alveolaris superior posterior. **angular a.**, arteria angularis. **appendicular a.**, arteria appendicularis. **arcuate a. of foot**, arteria arcuata pedis. **arcuate a's of kidney**, arteriae arcuatae renis. **articular a., proper**, of little head of fibula, ramus circumflexus fibulae arteriae tibialis posterioris. **auditory a., internal**, arteria labyrinthi. **auricular a's, anterior**, rami auriculares anteriores arteriae temporales superficiales. **auricular a., deep**, arteria auricularis profunda. **auricular a., left**, arteria coronaria sinistra. **auricular a., posterior**, arteria auricularis posterior. **auricular a., right**, arteria coronaria dextra. **axillary a.**, arteria axillaris. **basilar a.**, arteria basilaris. **brachial a.**, arteria brachialis.

brachial a., deep, arteria profunda brachii. **brachial a., superficial**, arteria brachialis superficialis. **brachiocephalic a.**, truncus brachiocephalicus. **bronchial a's, rami bronchiales aortae thoracicae**. **bronchial a's, anterior**, rami bronchiales arteriae thoracicae internae. **buccal a.**, arteria buccalis. **buccinator a.**, arteria buccalis. **bulbourethral a.**, arteria bulbi penis. **a. of bulb of penis**, arteria bulbi penis. **a. of bulb of vestibule of vagina**, arteria bulbi vestibuli vaginae. **capsular a., inferior**, arteria suprarenalis inferior. **capsular a., middle**, arteria suprarenalis media. **caroticotympanic a.**, see *rami caroticotympanici*. **carotid a., common**, arteria carotis communis. **carotid a., external**, arteria carotis externa. **carotid a., internal**, arteria carotis interna. **caudal a.**, arteria sacralis mediana. **celiac a.**, truncus celiacus. **cecal a., anterior**, arteria cecalis anterior. **cecal a., posterior**, arteria cecalis posterior. **central a. of retina**, arteria centralis retinae. **central a's of spleen**, branches of the splenic artery after they leave the trabeculae; their tunica adventitia is replaced by a cylindrical lymphoid sheath and they pass through the aggregations of lymphatic nodules and branch out to terminate as splenic penicilli. **cephalic a.**, arteria carotis communis. **cerebellar a., inferior, anterior**, arteria cerebelli inferior anterior. **cerebellar a., inferior, posterior**, arteria cerebelli inferior posterior. **cerebellar a., superior**, arteria cerebelli superior. **cerebral a's, arteriae cerebri**. **cerebral a., anterior**, arteria cerebri anterior. **a. of cerebral hemorrhage**, lenticulostriate a. **cerebral a., middle**, arteria cerebri media. **cerebral a., posterior**, arteria cerebri posterior. **a's of cerebrum, arteriae cerebri**. **cervical a., ascending**, arteria cervicalis ascendens. **cervical a., deep**, a. cervicalis profunda. **cervical a., descending, deep**, see *rami occipitales arteriae occipitalis*. **cervical a., superficial**, ramus superficialis arteriae transversae colli. **cervical a., transverse**, arteria transversa colli. **choroidal a., anterior**, arteria choroidea anterior. **ciliary a's, anterior**, arteriae ciliares anteriores. **ciliary a's, long**, arteriae ciliares posteriores longae. **ciliary a's, posterior, long**, arteriae ciliares posteriores longae. **ciliary a's, posterior, short**, arteriae ciliares posteriores breves. **ciliary a's, short**, arteriae ciliares posteriores breves. **circumflex a., deep, internal**, ramus profundus arteriae circumflexae femoris medialis. **circumflex a., femoral, lateral**, arteria circumflexa femoris lateralis. **circumflex a., femoral, medial**, arteria circumflexa femoris medialis. **circumflex a., humeral, anterior**, arteria circumflexa humeri anterior. **circumflex a., humeral, posterior**, arteria circumflexa humeri posterior. **circumflex a., iliac, deep**, arteria circumflexa ilium profunda. **circumflex a., iliac, superficial**, arteria circumflexa ilium superficialis. **circumflex a. of scapula**, arteria circumflexa scapulae. **a. of clitoris, deep**, arteria profunda clitoridis. **a. of clitoris, dorsal**, arteria dorsalis clitoridis. **coccygeal a.**, arteria sacralis mediana. **cochlear a.**, ramus cochlearis arteriae labyrinthi. **Cohnheim's a., terminal a.** **colic a., left**, arteria colica sinistra. **colic a., middle**, arteria colica media. **colic a., right**, arteria colica dextra. **colic a., right, inferior**, arteria ileocolica. **colic a., superior, accessory**, arteria colica media. **collateral a., middle**, arteria collateralis media. **collateral a., radial**, arteria collateralis radialis. **collateral a., ulnar, inferior**, arteria collateralis ulnaris inferior. **collateral a., ulnar, superior**, arteria collateralis ulnaris superior. **communicating a., anterior, of cerebrum**, arteria communicans anterior cerebri. **communicating a., posterior, of cerebrum**, arteria communicans posterior cerebri. **conducting a's**, large arterial trunks, characterized by their large size and elasticity, such as the aorta, subclavian, and common carotid, and the brachiocephalic and pulmonary trunks. **conjunctival a's, anterior**, arteriae conjunctivales anteriores. **conjunctival a's, posterior**, arteriae conjunctivales posteriores. **copper-wire a's**, retinal arteries on which the bright line of reflex is exaggerated; seen in arteriosclerosis. **corscrew a's**, small arteries in the macular region of the eye that appear markedly tortuous. **coronary a., descending, posterior**, ramus interventricularis posterior. **coronary a., left, of heart**, arteria coronaria sinistra. **coronary a., left, of stomach**, arteria gastrica sinistra. **coronary a., right, of heart**, arteria coronaria dextra. **coronary a., right, of stomach**, arteria gastrica dextra. **cremasteric a.**, arteria cremasterica. **cricothyroid a.**, ramus cricothyroideus arteriae thyroideae superioris. **cystic a.**, arteria cystica. **deferential a.**, arteria ductus deferentis. **deltoid a.**, ramus deltoideus arteriae thoracoacromialis. **dental a., anterior**, arteriae alveolares superiores anteriores. **dental a., inferior**, arteria alveolaris inferior. **dental a., posterior**, arteria alveolaris superior posterior. **diaphragmatic a's**, arteriae phrenicae inferiores. **diaphragmatic a's, superior**, arteriae phrenicae superiores. **digital a's, collateral**, arteriae digitales palmares propriae. **digital a's of foot, common**, arteriae metatarsae plantares. **digital a's of foot, dorsal**, arteriae digitales dorsales pedis. **digital a's of hand, dorsal**, arteriae digitales dorsales manus. **digital a's, palmar**,

common, arteriae digitales palmares communes. **digital a's, palmar, proper**, arteriae digitales palmares propriae. **digital a's, plantar, common**, arteriae digitales plantares communes. **digital a's, plantar, proper**, arteriae digitales plantares propriae. **digital a's, volar, common**, arteriae digitales palmares communes. **digital a's, volar, proper**, arteriae digitales palmares propriae. **distributing a's**, most of the arteries except the conducting arteries; of muscular type, they extend from the large vessels to the arterioles. **dorsal a. of clitoris**, arteria dorsalis clitoridis. **dorsal a. of foot**, arteria dorsalis pedis. **dorsal a. of nose**, arteria dorsalis nasi. **dorsal a. of penis**, arteria dorsalis penis. **a. of ductus deferens**, arteria ductus deferentis. **duodenal a's**, arteriae pancreaticoduodenales inferiores. **efferent a. of glomerulus**, vas efferens glomeruli. **elastic a's**, conducting a's. **emulgent a.**, arteria renalis. **end a.**, one which undergoes progressive branching without development of channels connecting with other arteries, so that if occluded it cannot supply sufficient blood to the tissue depending on it. **epigastric a., external**, arteria circumflexa iliū profunda. **epigastric a., inferior**, arteria epigastrica inferior. **epigastric a., superficial**, arteria epigastrica superficialis. **epigastric a., superior**, arteria epigastrica superior. **episclear a's**, arteriae episclerales. **esophageal a's**, rami esophagei aortae thoracicae. **esophageal a's, inferior**, rami esophagei arteriae gastricae sinistrae. **ethmoidal a., anterior**, arteria ethmoidalis anterior. **ethmoidal a., posterior**, arteria ethmoidalis posterior. **facial a., 1.** arteria facialis. **2.** arteria carotis externa. **facial a., deep**, arteria maxillaris. **facial a., transverse**, arteria transversa faciei. **fallopian a.**, arteria uterina. **femoral a.**, arteria femoralis. **femoral a., common**, see arteria femoralis. **femoral a., deep**, arteria profunda femoris. **femoral a., superficial**, see arteria femoralis. **fibular a.**, arteria peronea. **a. of foot, dorsal**, arteria dorsalis pedis. **frontal a.**, arteria supratrochlearis. **funicular a.**, arteria testicularis. **gastric a., left**, arteria gastrica sinistra. **gastric a., left inferior**, arteria gastroepiploica sinistra. **gastric a., right**, arteria gastrica dextra. **gastric a., right inferior**, arteria gastroepiploica dextra. **gastric a's, short**, arteriae gastricae breves. **gastroduodenal a.**, arteria gastroduodenalis. **gastroepiploic a., left**, arteria gastroepiploica sinistra. **gastroepiploic a., right**, arteria gastroepiploica dextra. **genicular a., descending**, arteria genus descendens. **genicular a., inferior, lateral**, arteria genus inferior lateralis. **genicular a., inferior, medial**, arteria genus inferior medialis. **genicular a., middle**, arteria genus media. **genicular a., superior, lateral**, arteria genus superior lateralis. **genicular a., superior, medial**, arteria genus superior medialis. **a. of glomerulus**, vas afferens glomeruli. **gluteal a., inferior**, arteria glutea inferior. **gluteal a., superior**, arteria glutea superior. **hardening of a's**, arteriosclerosis. **helicine a's**, small arteries that possess on one side, throughout their length, a band of thickened intima in which longitudinal muscle fibers are embedded. They follow a convoluted or curled course and open directly into cavernous sinuses instead of capillaries; they play a dominant role in erection of erectile tissue. **helicine a's of penis**, arteriae helicinae penis. **hemorrhoidal a., inferior**, arteria rectalis inferior. **hemorrhoidal a., middle**, arteria rectalis media. **hemorrhoidal a., superior**, arteria rectalis superior. **hepatic a., common**, arteria hepatica communis. **hepatic a., proper**, arteria hepatica propria. **hyaloid a.**, arteria hyaloidea. **a's of hybrid type**, a term denoting the short transitional regions where arteries of mixed or elastic (conducting) type pass into arteries of the muscular (distributing) type. **hyoid a.**, ramus suprahyoideus arteriae lingualis. **hypogastric a.**, arteria iliaca interna. **hypogastric a., obliterated**, ligamentum umbilicale mediale. **hypophyseal a.**, any of a series of minute branches of the internal carotid artery that supply the pituitary gland. **ileal a's**, arteriae ilei. **ileocolic a.**, arteria ileocolica. **iliac a., anterior**, arteria iliaca externa. **iliac a., common**, arteria iliaca communis. **iliac a., external**, arteria iliaca externa. **iliac a., internal**, arteria iliaca interna. **iliac a., small**, arteria iliolumbalis. **iliolumbar a.**, arteria iliolumbalis. **infracostal a.**, ramus costalis lateralis arteriae thoracicae internae. **infraorbital a.**, arteria infraorbitalis. **inguinal a's**, rami inguinales arteriae femoralis. **innominate a.**, truncus brachiocephalicus. **intercostal a's, anterior**, rami intercostales anteriores arteriae thoracicae internae. **intercostal a's, highest**, arteria intercostalis suprema. **intercostal a's, posterior, I and II**, arteriae intercostales posteriores I et II. **intercostal a's, posterior, III-XI**, arteriae intercostales posteriores III-XI. **interlobar a's of kidney**, arteriae interlobulares renis. **interlobular a's of kidney**, arteriae interlobulares renis. **interlobular a's of liver**, arteriae interlobulares hepatis. **intermetacarpal a's, palmar**, arteriae metacarpeae palmares. **interosseous a., anterior**, arteria interossea anterior. **interosseous a., common**, arteria interossea communis. **interosseous a., dorsal, of forearm**, arteria interossea posterior. **interosseous a., posterior (of forearm)**, arteria interossea posterior. **interosse-**

ous a., recurrent, arteria interossea recurrens. **interosseous a., volar**, arteria interossea anterior. **intersegmental a's**, paired dorsal branches of the embryonic aorta, originally going to the spinal cord but later mainly to the neck, back, and body wall. **interventricular a., anterior**, ramus interventricularis anterior. **intestinal a's**, arteriae intestinales. **jejunal a's**, arteriae jejunes. **labial a's, anterior, of vulva**, rami labiales anteriores arteriae femoralis. **labial a's, inferior**, arteria labialis inferior. **labial a's, posterior, of vulva**, rami labiales posteriores arteriae pudendae internae. **labial a., superior**, arteria labialis superior. **a. of labyrinth, labyrinthine a.**, arteria labyrinthi. **lacrimal a.**, arteria lacrimalis. **laryngeal a., inferior**, arteria laryngea inferior. **laryngeal a., superior**, arteria laryngea superior. **lenticulostriate a.**, one of the central branches (lateral striate arteries) of the middle cerebral artery; it supplies the lenticular (lentiform) nucleus, internal capsule, and caudate nucleus (which together form the corpus striatum) and is a common site of cerebral hemorrhage. Called also *a. of cerebral hemorrhage*. **lingual a.**, arteria lingualis. **lingual a., deep**, arteria profunda linguae. **lumbar a's**, arteriae lumbales. **lumbar a., fifth, lumbar a., lowest**, arteria lumbalis ima. **malleolar a., anterior, lateral**, arteria malleolaris anterior lateralis. **malleolar a., anterior, medial**, arteria malleolaris anterior medialis. **malleolar a., posterior, lateral**, see rami malleolares laterales arteriae peroneae. **malleolar a., posterior, medial**, see rami malleolares mediales arteriae peroneae. **mammary a., external, 1.** arteria thoracica lateralis. **2.** see rami mammarii laterales arteriae thoracicae lateralis. **mammary a., internal**, arteria thoracica interna. **mandibular a.**, arteria alveolaris inferior. **marginal a. (of Drummond)**, a long channel running parallel to the large intestine, from the cecum to the sigmoid colon, formed by branches from the superior and inferior mesenteric arteries and giving rise to straight arteries that supply the intestinal wall. **masseteric a.**, arteria masseterica. **mastoid a's**, rami mastoidei arteriae auricularis posterioris. **maxillary a.**, arteria maxillaris. **maxillary a., external**, arteria facialis. **maxillary a., internal**, arteria maxillaris. **medial a. of foot, superficial**, ramus superficialis arteriae plantaris medialis. **median a.**, arteria mediana. **mediastinal a's, anterior**, rami mediastinales arteriae thoracicae internae. **mediastinal a's, posterior**, rami mediastinales aortae thoracicae. **medullary a.**, nutrient a. **meningeal a., accessory**, ramus meningeus accessorius arteriae meningae mediae. **meningeal a., anterior**, arteria meningea anterior. **meningeal a., middle**, arteria meningea media. **meningeal a., posterior, 1.** arteria meningea posterior. **2.** ramus meningeus arteriae vertebralis. **mental a.**, arteria mentalis. **mesenteric a., inferior**, arteria mesenterica inferior. **mesenteric a., superior**, arteria mesenterica superior. **metacarpal a's, dorsal, 1.** arteriae metacarpeae dorsales. **2.** see ramus carpeus dorsalis arteriae ulnaris. **metacarpal a's, palmar**, arteriae metacarpeae palmares. **metacarpal a's, ulnar**, arteriae digitales palmares communes. **metacarpal a's, volar**, arteriae metacarpeae palmares. **metacarpal a., volar, deep**, ramus palmaris profundus arteriae ulnaris. **metatarsal a's, dorsal**, arteriae metatarsae dorsales. **metatarsal a's, plantar**, arteriae metatarsae plantares. **a's of mixed type**, arteries having elastic (conducting) and muscular (distributing) elements. **a's of Mueller**, arteriae helicinae penis. **muscular a's**, distributing a's. **musculophrenic a.**, arteria musculophrenica. **mylohyoid a.**, ramus mylohyoideus arteriae alveolaris inferioris. **myomastoid a.**, ramus occipitalis arteriae auricularis posterioris. **nasal a's, posterior, lateral and septal**, arteriae nasales posteriores, laterale et septi. **nasopalatine a.**, arteria sphenopalatina. **Neubauer's a.**, arteria thyroidea ima. **a. of nose, dorsal**, arteria dorsalis nasi. **nutrient a.**, any artery that supplies the marrow or medulla of bone; called also *medullary a.* **nutrient a's of humerus**, arteriae nutritiae humeri. **nutrient a's of kidney**, rami capsulares arteriae renis. **obturator a.**, arteria obturatoria. **obturator a., accessory**, arteria obturatoria accessoria. **occipital a.**, arteria occipitalis. **ophthalmic a.**, arteria ophthalmica. **ovarian a.**, arteria ovarica. **palatine a., ascending**, arteria palatina ascendens. **palatine a., descending**, arteria palatina descendens. **palatine a., greater**, arteria palatina major. **palatine a's, lesser**, arteriae palatinae minores. **palpebral a's, lateral**, arteriae palpebrales laterales. **palpebral a's, medial**, arteriae palpebrales mediales. **pancreatic a., dorsal**, arteria pancreatica dorsalis. **pancreatic a., great**, arteria pancreatica magna. **pancreatic a., inferior**, arteria pancreatica inferior. **pancreaticoduodenal a's, inferior**, arteriae pancreaticoduodenales inferiores. **pancreaticoduodenal a., superior**, arteria pancreaticoduodenalis superior. **pelvic a., posterior**, arteria iliaca interna. **a. of penis, deep**, arteria profunda penis. **a. of penis, dorsal**, arteria dorsalis penis. **perforating a's**, arteriae perforantes. **pericardiac a's, posterior**, rami pericardiaci aortae thoracicae. **pericardiacophrenic a.**, arteria pericardiacophrenica. **perineal a.**, arteria perinealis. **peroneal a.**, arteria peronea.

peroneal a., perforating, ramus perforans arteriae peroneae. **pharyngeal a.**, ascending, arteria pharyngea ascendens. **phrenic a's**, great, arteriae phrenicae inferiores. **phrenic a's**, inferior, arteriae phrenicae inferiores. **phrenic a.**, superior, arteria pericardiophrenica. 2. see *arteriae phrenicae superiores*. **plantar a.**, external, arteria plantaris lateralis. **plantar a.**, medial, arteria plantaris medialis. **popliteal a.**, arteria poplitea. **principal a. of thumb**, arteria princeps pollicis. **pterygoid a's**, rami pterygoidei. **a. of pterygoid canal**, arteria canalis pterygoidei. **pubic a.**, ramus pubicus arteriae epigastricae inferioris. **pudendal a's**, external, arteriae pudendae externae. **pudendal a.**, internal, arteria pudenda interna. **pulmonary a.**, truncus pulmonalis. **pulmonary a.**, left, arteria pulmonalis sinistra. **pulmonary a.**, right, arteria pulmonalis dextra. **a. of the pulp**, a name given the first portion of a brushlike group of blood vessels in the spleen. **pyloric a.**, arteria gastrica dextra. **quadriceps a. of femur**, ramus descendens arteriae circumflexae femoris lateralis. **radial a.**, arteria radialis. **radial a.**, collateral, arteria collateralis radialis. **radial a. of index finger**, arteria radialis indicis. **radial a's**, volar, of index finger, arteria radialis indicis. **radiate a's of kidney**, arteriae interlobulares renis. **radicular a's**, a name applied to arteries that enter the spinal canal along the anterior and posterior nerve roots. **ranine a.**, arteria profunda linguae. **rectal a.**, inferior, arteria rectalis inferior. **rectal a.**, middle, arteria rectalis media. **rectal a.**, superior, arteria rectalis superior. **recurrent a.**, radial, arteria recurrens radialis. **recurrent a.**, tibial, anterior, arteria recurrens tibialis anterior. **recurrent a.**, tibial, posterior, arteria recurrens tibialis posterior. **recurrent a.**, ulnar, arteria recurrens ulnaris. **renal a.**, arteria renalis. **renal a's**, arteriae renis. **retrocostal a.**, ramus costalis lateralis arteriae thoracicae internae. **retroduodenal a's**, arteriae retroduodenales. **revehent a.**, vas efferens glomeruli. **a. of round ligament of uterus**, arteria ligamenti teretis uteri. **sacral a's**, lateral, arteriae sacrales laterales. **sacral a.**, median, arteria sacralis mediana. **sacroccocygeal a.**, arteria sacralis mediana. **scapular a.**, dorsal, ramus profundus arteriae transversae colli. **scapular a.**, posterior, ramus profundus arteriae transversae colli. **scapular a.**, transverse, arteria suprascapularis. **sciatic a.**, arteria comitans nervi ischiadici. **scrotal a's**, anterior, rami scrotales anteriores arteriae femoralis. **scrotal a's**, posterior, rami scrotales posteriores arteriae pudendae internae. **segmental a.**, anterior, arteria segmenti anterioris. **segmental a.**, anterior inferior, arteria segmenti anterioris inferioris. **segmental a.**, anterior superior, arteria segmenti anterioris superioris. **segmental a.**, inferior, arteria segmenti inferioris. **segmental a.**, lateral, arteria segmenti lateralis. **segmental a.**, medial, arteria segmenti medialis. **segmental a.**, posterior, arteria segmenti posterioris. **segmental a.**, superior, arteria segmenti superioris. **sheathed a's**, arterial branches having spindle-shaped thickenings in their walls (Schweigger-Seidel sheaths) and forming the penicilli of the spleen; called also *ellipsoid* or *sheathed arterioles*. **sigmoid a's**, arteriae sigmoideae. **spermatic a.**, external, arteria cremasterica. **spermatic a.**, internal, arteria testicularis. **sphenopalatine a.**, arteria sphenopalatina. **spinal a's**, rami spinales arteriae vertebrales. **spinal a.**, anterior, arteria spinalis anterior. **spinal a.**, posterior, arteria spinalis posterior. **splenic a.**, arteria lienalis. **sternal a's**, posterior, rami sternales arteriae thoracicae internae. **sternocleidomastoid a.**, see *rami sternocleidomastoidei arteriae occipitalis*. **sternocleidomastoid a.**, superior, ramus sternocleidomastoideus arteriae thyroideae superioris. **straight a's of kidney**, arteriolae rectae renis. **striate a's**, rami striati arteriae cerebri mediae. **strate a.**, medial, a branch of the anterior medial artery; it supplies the lower anterior portion of the basal ganglia. **stylomastoid a.**, arteria stylomastoidea. **subclavian a.**, arteria subclavia. **subcostal a.**, 1. arteria subcostalis. 2. ramus costalis lateralis arteriae thoracicae internae. **sublingual a.**, arteria sublingualis. **submental a.**, arteria submentalialis. **subscapular a.**, arteria subscapularis. **supraduodenal a's**, superior, arteriae supraduodenales superiores. **supraorbital a.**, arteria supraorbitalis. **suprarenal a.**, aortic, arteria suprarenalis media. **suprarenal a.**, inferior, arteria suprarenalis inferior. **suprarenal a.**, middle, arteria suprarenalis media. **suprarenal a's**, superior, arteriae suprarenales superiores. **suprascapular a.**, arteria suprascapularis. **supratrochlear a.**, arteria supratrochlearis. **sural a's**, arteriae surales. **sylvian a.**, arteria cerebri media. **tarsal a.**, lateral, arteria tarsea lateralis. **tarsal a's**, medial, arteriae tarseae mediales. **temporal a's**, deep, arteriae temporales profundae. **temporal a.**, deep, anterior, see *arteriae temporales profundae*. **temporal a.**, deep, posterior, see *arteriae temporales profundae*. **temporal a.**, middle, arteria temporalis media. **temporal a.**, superficial, arteria temporalis superficialis. **terminal a.**, an artery that does not divide into branches, but is directly continuous with capillaries; called also *Cohnheim's a.* **testicular a.**, arteria

testicularis. **thoracic a.**, highest, arteria thoracica suprema. **thoracic a.**, internal, arteria thoracica interna. **thoracic a.**, lateral, arteria thoracica lateralis. **thoracoacromial a.**, arteria thoracoacromialis. **thoracodorsal a.**, arteria thoracodorsalis. **thymic a's**, rami thymici arteriae thoracicae internae. **thyroid a.**, inferior, arteria thyroidea. **thyroid a.**, inferior, of Cruveilhier, ramus cricothyroideus arteriae thyroideae superioris. **thyroid a.**, lowest, arteria thyroidea ima. **thyroid a.**, superior, arteria thyroidea superior. **tibial a.**, anterior, arteria tibialis anterior. **tibial a.**, posterior, arteria tibialis posterior. **a. of tongue**, dorsal, see *rami dorsales linguae arteriae lingualis*. **tonsillar a.**, ramus tonsillaris arteriae facialis. **transverse a. of face**, arteria transversa faciei. **transverse a. of neck**, ramus superficialis arteriae transversae colli. **tubo-ovarian a.**, arteria ovarica. **tympenic a.**, anterior, arteria tympanica anterior. **tympenic a.**, inferior, arteria tympanica inferior. **tympenic a.**, posterior, arteria tympanica posterior. **tympenic a.**, superior, arteria tympanica superior. **ulnar a.**, arteria ulnaris. **ulnar collateral a.**, inferior, arteria collateralis ulnaris inferior. **ulnar collateral a.**, superior, arteria collateralis ulnaris superior. **umbilical a.**, arteria umbilicalis. **urethral a.**, arteria urethralis. **uterine a.**, arteria uterina. **uterine a.**, aortic, arteria ovarica. **vaginal a.**, arteria vaginalis. **venous a's**, venae pulmonales. **vermiform a.**, arteria appendicularis. **vertebral a.**, arteria vertebralis. **vesical a.**, inferior, arteria vesicalis inferior. **vesical a's**, superior, arteriae vesicales superiores. **vestibular a's**, rami vestibulares arteriae labyrinthi. **vidian a.**, arteria canalis pterygoidei. **a. of Zinn**, arteria centralis retinae. **zygomatooorbital a.**, arteria zygomatooorbitalis.

arthr- see *arthro-*.

arthragra (ar-thrag'rah) [arthr- + Gr. *agra* seizure] a gouty seizure in a joint or in the joints.

arthral (ar'thral) pertaining to a joint.

arthralgia (ar-thral'je-ah) [arthr- + *-algia*] pain in a joint. **a. saturni'na**, arthralgia of lead poisoning.

arthralgic (ar-thral'jik) pertaining to arthralgia; affected with arthralgia.

arthrectomy (ar-threk'to-me) [arthr- + Gr. *ektomē* excision] the excision of a joint; called also *erosion of joint*.

arthrempyesis (ar'threm-pi-e'sis) [arthr- + Gr. *empyēsis* suppuration] suppuration in a joint.

arthresthesia (ar'thres-the'ze-ah) [arthr- + Gr. *aisthēsis* perception] joint sensibility; the perception of joint motions.

arthrifuge (ar'thri-fūj) [arthritis + L. *fugare* to put to flight] a cure for gout.

arthritic (ar-thrit'ik) 1. pertaining to or affected with gout or arthritis. 2. a person affected with arthritis.

arthritide (ar'thri-tid) any skin eruption of arthritic or gouty origin.

arthritides (ar-thrit'i-dēz) plural of arthritis.

arthritis (ar-thri'tis), pl. *arthritides* [Gr. *arthron* joint + *-itis*] rheumatism in which the inflammatory lesions are confined to the joints. **acute a.**, arthritis marked by pain, heat, redness, and swelling, due to inflammation, infection, or trauma. **acute gouty a.**, acute arthritis associated with gout. **acute rheumatic a.**, rheumatic fever. **acute suppurative a.**, pyarthrosis. **atrophic a.**, rheumatoid a. **Bekhterev's a.**, rheumatoid spondylitis. **blennorrhagic a.**, gonococcal a. **chronic inflammatory a.**, rheumatoid a. **chronic villous a.**, a form of rheumatoid arthritis due to villous outgrowths from the synovial membranes, which cause impairment of function and crepitation; called also *dry joint*. **climactic a.**, menopausal a. **cricoarytenoid a.**, inflammation of the cricoarytenoid joint in rheumatoid arthritis; causing laryngeal stridor. **a. deformans**, rheumatoid a. **degenerative a.**, osteoarthritis. **dysenteric a.**, arthritis with joint effusion and redness of overlying skin following *Shigella* dysentery or, less frequently, *Salmonella* enteritis; possibly the result of antigen-antibody reaction. **exudative a.**, arthritis with exudate into or about the joint. **a. fungo'sa**, abnormal changes within a joint secondary to mycotic disease, most commonly blastomycosis. It resembles and is sometimes indistinguishable from tuberculous arthritis. **gonococcal a.**, gonorrheal a., acute arthritis due to gonococcus; called also *blennorrhagic a.* and *urethral a.* **gouty a.**, arthritis due to gout; called also *uratic a.* **hemophilic a.**, bleeding into the joint cavities. **a. hiema'lis**, special forms of arthritis occurring in winter. **hypertrophic a.**, osteoarthritis. **infectional a.**, arthritis due to infection (gonococcal, tuberculous, etc.). **Lyme a.**, a recurrent form of migratory arthritis affecting a few large joints, especially the knees, shoulders, and elbows, and associated with erythema chronicum migrans, malaise, and myalgia. First reported in Old Lyme, Connecticut, it is transmitted by a tick. **menopausal a.**, a condition sometimes seen in women at the menopause, due to ovarian hormonal deficiency and marked by pain in the small joints, shoulders, elbows, or knees; called also *arthropathia ovaripriva* and *climactic a.* **a. mu'tilans**, a severe deforming polyarthritis with gross bone and cartilage destruction, usually an

atypical variant of rheumatoid arthritis. **navicular a.**, inflammation of the navicular bursa and the cartilage covering the navicular bone of the foot of a horse. **neuropathic a.**, neuropathic arthropathy. **a. nodo'sa**, 1. rheumatoid a. 2. gout. **a. pau'perum**, 1. rheumatoid a. 2. poor man's gout. **proliferative a.**, rheumatoid a. **psoriatic a.**, arthritis associated with severe psoriasis, classically affecting the terminal interphalangeal joints. **rheumatoid a.**, a chronic systemic disease primarily of the joints, usually polyarticular, marked by inflammatory changes in the synovial membranes and articular structures and by atrophy and rarefaction of the bones. In late stages deformity and ankylosis develop. The cause is unknown, but autoimmune mechanisms and virus infection have been postulated. Called also *atrophic a.*, *a. deformans*, *a. nodosa*, *a. pauperum*, *chronic inflammatory a.*, *proliferative a.*, *arthronos deformans*, *arthrosis deformans*, and *rheumatic gout*. **rheumatoid a.**, **juvenile**, rheumatoid arthritis of children, with swelling, tenderness, and pain involving one or more joints, leading to impaired growth and development, limitation of movement, and ankylosis and flexion contractures of the joints. It is frequently accompanied by systemic manifestations which may include spiking fever, transient rash on the trunk and extremities, hepatosplenomegaly, generalized lymphadenopathy, and anemia. Called also *Still's disease*. **rheumatoid a. of spine**, rheumatoid spondylitis. **a. sic'ca**, arthritis without exudation into a joint cavity. **suppurative a.**, a form marked by purulent joint infiltration, chiefly due to bacterial infection but also seen in Reiter's syndrome. **syphilitic a.**, a form associated with or due to syphilis. **tuberculous a.**, arthritis due to tuberculous infection; it usually affects a single joint and is characterized by chronic inflammation with effusion and destruction of contiguous bone. **uratic a.**, gouty a. **urethral a.**, gonococcal a. **a. urethrit'ica**, Reiter's syndrome. **venereal a.**, Reiter's syndrome. **vertebral a.**, inflammation involving the intervertebral disks, secondary to joint involvement.

arthritis (ar'thri-tizm) [*arthritis* + *-ism*] the gouty diathesis; the peculiar diathesis or disposition of body that predisposes to joint disease.

arthro-, arthr- [Gr. *arthron* joint] a combining form denoting some relationship to a joint or joints.

Arthrobacter (ar'thro-bak'ter) [Gr. *arthron* a joint + *baktron* a rod] a genus of microorganisms of the family Corynebacteriaceae, order Eubacteriales, consisting of pleomorphic, gram-variable soil bacteria.

arthrobacterium (ar'thro-bak-te're-um) [*arthro-* + *bacterium*] a bacterium that reproduces by separation into joints or arthrospores.

Arthrobotrys (ar'thro-bo'tris) a genus of imperfect fungi of the family Moniliaceae, order Moniliales, some of which infect and destroy nematodes.

arthroceae (ar-throk'ah-se) [*arthro-* + Gr. *kakōs* bad] caries of a joint.

arthrocele (ar'thro-sel) [*arthro-* + Gr. *kēlē* tumor] a swollen joint.

arthrocentesis (ar'thro-sen-te'sis) puncture and aspiration of a joint.

arthrochhalasis (ar'thro-kal'ah-sis) [*arthro-* + Gr. *chhalasis* relaxation] abnormal relaxation or flaccidity of a joint. **a. mul'ti-plex congen'ita**, overflaccidity of multiple joints, not associated with hyperelasticity of the skin.

arthrochondritis (ar'thro-kon-dri'tis) [*arthro-* + *chondritis*] inflammation of the cartilage of a joint.

arthroclasia (ar'thro-kla'ze-ah) [*arthro-* + Gr. *klaein* to break] the surgical breaking down of an ankylosis in order to secure free movement in a joint.

arthroclisis (ar'thro-kli'sis) arthroklesis.

Arthroderma (ar'thro-der'mah) a genus of ascomycetous fungi (family Gymnoascaceae, order Eurotiales) in which the hyphae around the gymnothecium are dichotomously branched, with deep constrictions of the cells to give a dumbbell shape. It contains the perfect (sexual) stages of imperfect fungi of the genus *Trichophyton*.

arthrodesia (ar'thro-de'se-ah) arthrodesis.

arthrodesis (ar'thro-de'sis) [*arthro-* + Gr. *desis* binding] the surgical fixation of a joint by a procedure designed to accomplish fusion of the joint surfaces by promoting the proliferation of bone cells; called also *artificial ankylosis*. **Moberg a.**, fusion of a finger joint with a small squared bone peg.

arthrodia (ar-thro'de-ah) [Gr. *arthrōdia* a particular kind of articulation] articulation plana [NA].

arthrodial (ar-thro'de-al) of the nature of an arthrodia.

arthrodynia (ar'thro-din'e-ah) [*arthro-* + *odynē* pain] pain in a joint.

arthrodysplasia (ar'thro-dis-pla'ze-ah) [*arthro-* + *dysplasia*] a hereditary condition marked by deformity of various joints.

arthroempyema (ar'thro-em'pi-e'sis) [*arthro-* + Gr. *empyēs* suppuration] suppuration within a joint.

arthroendoscopy (ar'thro-en-dos'ko-pe) arthroscopy.

arthroereisis (ar'thro-ē-ri'sis) [*arthro-* + Gr. *ereisis* a raising up] operative limiting of the motion in a joint that is abnormally mobile from paralysis.

arthrogenous (ar-throj'ē-nus) [*arthro-* + Gr. *gennan* to produce] formed as a separate joint, as arthrogenous spore.

arthrogram (ar'thro-gram) a roentgenographic record after introduction of opaque contrast material into a joint.

Arthrographis (ar-throg'rah-fis) a genus of imperfect fungi of uncertain classification, tentatively placed in the family Dermateaceae, order Moniliales. **A. langero'ni**, a species of fungi reported to produce an onychomycosis in man and a benign dermatomycosis in animals. The term is no longer considered valid.

arthrography (ar-throg'rah-fe) [*arthro-* + Gr. *graphein* to write] roentgenography of a joint after injection of opaque contrast material. **air a.**, pneumoarthrography.

arthrogryposis (ar'thro-gri-po'sis) [*arthro-* + Gr. *grypōsis* a crooking] 1. persistent flexure or contracture of a joint. 2. tetanoid spasm. **congenital multiple a.**, **a. mul'tiplex congen'ita**, amyoplasia congenita.

arthrokatadysis (ar'thro-kah-tad'i-sis) [*arthro-* + Gr. *katadysis* a falling down] a sinking in or subsidence of the floor of the acetabulum with protrusion of the femoral head through it (intrapelvic protrusion) resulting in limitation of movement of the hip joint; called also *Otto's disease*.

arthroklesis (ar'thro-kli'sis) [*arthro-* + Gr. *klesis* closure] ankylosis of a joint, or the production of such ankylosis.

arthrolith (ar'thro-lith) [*arthro-* + Gr. *lithos* stone] a calcareous deposit in a joint; cf. *arthrophyte* and *joint mouse*.

arthrolithiasis (ar'thro-li-thi'ah-sis) gout.

arthrology (ar-throl'o-je) [*arthro-* + *-logy*] the sum of what is known regarding the joints.

arthrolysis (ar-throl'i-sis) [*arthro-* + Gr. *lysis* dissolution] the operative loosening of adhesions in an ankylosed joint.

arthromeningitis (ar'thro-men'in-ji'tis) [*arthro-* + Gr. *mēninx* membrane + *-itis*] synovitis.

arthrometer (ar-throm'ē-ter) [*arthro-* + Gr. *metron* measure] an instrument for measuring the angles of movements of joints.

arthrometry (ar-throm'ē-tre) the measurement of the range of mobility of joints.

Arthromitaceae (ar'thro-mi-ta'se-e) a family of Schizomycetes (order Caryophanales), made up of parasitic microorganisms found in the intestinal tracts of insects and crustaceans; it includes two genera, *Arthromitus* and *Coleomitus*.

Arthromitus (ar-throm'i-tus) a genus of bacteria, species of which occur in the intestinal walls of insects, tadpoles, and crustaceans.

arthroncus (ar-throng'kus) [*arthro-* + Gr. *onkos* mass] swelling of a joint.

arthroneuralgia (ar'thro-nu-ral'je-ah) [*arthro-* + *neuralgia*] pain arising in or around a joint.

arthronos (ar'thro-no'sos) [*arthro-* + Gr. *nosos* disease] a disease of the joints. **a. defor'mans**, rheumatoid arthritis.

arthro-onychodysplasia (ar'thro-on'ē-ko-dis-pla'ze-ah) [*arthro-* + Gr. *onyx* nail + *dysplasia*] a hereditary syndrome with involvement of the head of the radius, hypoplasia or absence of the patellae, posterior iliac spurs, and dystrophy of the nails; called also *nail-patella syndrome*.

arthro-ophthalmopathy (ar'thro-of-thal-mop'ah-the) an association of degenerative joint disease and eye disease. **hereditary progressive a.**, a hereditary disorder consisting of myopia, progressing to retinal detachment and blindness, and premature degenerative changes in the joints; it is transmitted as an autosomal dominant trait.

Arthropan (ar'thro-pan) trademark for a preparation of choline salicylate.

arthropathia (ar'thro-path'e-ah) [L.] arthropathy. **a. ovaripri'va**, menopausal arthritis. **a. psoriatic'a**, a disease of the joints seen in persons suffering from psoriasis; it resembles rheumatoid arthritis.

arthropathic (ar'thro-path'ik) pertaining to or characterized by arthropathy.

arthropathology (ar'thro-pah-thol'o-je) [*arthro-* + *pathology*] the study of the structural and functional changes produced in the joints by disease.

arthropathy (ar-throp'ah-the) [*arthro-* + Gr. *pathos* disease] any joint disease. **Charcot's a.**, neuropathic a. **chondrocalcific a.**, progressive polyarthritis with joint swelling and bony enlargement, most commonly in the small joints of the hand but also affecting other joints, characterized roentgenographically by narrowing of the joint space with subchondral erosions and sclerosis and frequently chondrocalcinosis. **inflammatory a.**, a disease of a joint of inflammatory origin. **neurogenic a.**, neuropathic a. **neuropathic a.**, chronic progressive degeneration of the stress-bearing portion of a joint, with bizarre hypertrophic changes at the periphery. It is probably a complication of a variety of neurologic disorders, particularly tabes

dorsalis, involving loss of sensation, which leads to relaxation of supporting structures and chronic instability of the joint. Called also *Charcot's a.*, *neurogenic a.*, *Charcot's disease* or *joint*, and *neuropathic arthritis*. **osteopulmonary a.**, clubbing of the fingers and toes, enlargement and swelling of the ends of the long bones associated with cardiac and pulmonary disease. **psoriatic a.**, see under *arthritis*. **static a.**, a disturbance in a joint of the extremity secondary to a disturbance in some other joint of the same extremity, as one in the knee joint secondary to one in the hip joint. **syphilitic a.**, see under *arthritis*. **tabetic a.**, neuropathic arthropathy (q.v.) occurring in patients with tabes dorsalis.

arthrophyma (ar'thro-fi'mah) [*arthro-* + Gr. *phyma* swelling] the swelling of a joint.

arthrophyte (ar'thro-fit) [*arthro-* + Gr. *phyton* plant] an abnormal growth in a joint cavity; cf. *arthrolith* and *joint mouse*.

arthroplastic (ar'thro-plas'tik) pertaining to arthroplasty.

arthroplasty (ar'thro-plas'te) [*arthro-* + Gr. *plassein* to form] plastic surgery of a joint or of joints; the formation of movable joints. **gap a.**, surgical correction of dental ankylosis by creating a space between the ankylosed part and the portion to be made moveable. **interposition a.**, surgical correction of ankylosis of the temporomandibular joint by separating the immobile fragment from the mobilized fragment and interposing a substance, such as fascia, cartilage, metal, or plastic, between them. **intracapsular temporomandibular joint a.**, operative recontouring of the articular surface of the mandibular condyle without the removal of the articular disk.

arthropneumography (ar'thro-nu-mog'rah-fe) arthropneuroentgenography.

arthropneuroentgenography (ar'thro-nu'mo-rent-genog'rah-fe) [*arthro-* + Gr. *pneuma* air + *roentgenography*] roentgenography of a joint after injection into it of air, oxygen, or carbon dioxide.

arthropod (ar'thro-pod) an animal belonging to the Arthropoda.

Arthropoda (ar-throp'o-dah) [*arthro-* + Gr. *pous* foot] a phylum of the animal kingdom composed of organisms having a hard, jointed exoskeleton and paired, jointed legs, and including, among other classes, the Arachnida and Insecta, many species of which are important medically as parasites or as vectors of organisms capable of causing disease in man.

arthropodan (ar'thro-po'dan) arthropodous.

arthropodic (ar'thro-po'dic) arthropodous.

arthropodous (ar-throp'o-dus) pertaining to or caused by arthropods.

arthropyosis (ar'thro-pi-o'sis) [*arthro-* + Gr. *pyōsis* suppuration] the formation of pus in a joint cavity.

arthrorheumatism (ar'thro-roo'mah-tizm) [*arthro-* + *rheumatism*] inflammation within a joint.

arthrorisis (ar'thro-ri'sis) arthroereisis.

arthroscintigram (ar'thro-sin'ti'gram) a scintiscan of a joint.

arthroscintigraphy (ar'thro-sin-tig'rah-fe) scintigraphy of a joint.

arthrosclerosis (ar'thro-skle-ro'sis) [*arthro-* + *sklērosis* hardening] stiffening or hardening of the joints.

arthroscope (ar'thro-skōp) [*arthro-* + Gr. *skopein* to examine] an endoscope for examining the interior of a joint and for carrying out diagnostic and therapeutic procedures within the joint.

arthroscopy (ar-thros'ko-pe) examination of the interior of a joint with an arthroscope.

arthrosis (ar-thro'sis) 1. [Gr. *arthrōsis* a jointing] a joint or articulation. 2. [*arthro-* + *-osis*] a disease of a joint. **a. deformans**, rheumatoid arthritis.

arthrospore (ar'thro-spōr) [*arthro-* + Gr. *sporos* seed] a type of spore formed in a close sequence in the hyphae of certain fungi, and leading to hyphal fragmentation.

arthrosteitis (ar'thros-te-i'tis) [*arthro-* + Gr. *osteon* bone + *-itis*] inflammation of the bony structures of a joint.

arthrostomy (ar-thros'to-me) [*arthro-* + Gr. *stomoun* to provide with a mouth, or opening] surgical creation of an opening into a joint, as for the purpose of drainage.

arthrosynovitis (ar'thro-sin'o-vi'tis) [*arthro-* + *synovitis*] inflammation of the synovial membrane of a joint.

arthrotome (ar'thro-tōm) [*arthro-* + Gr. *tomē* cut] a knife for incising a joint.

arthrotomy (ar-throt'o-me) [*arthro-* + Gr. *tomē* cut] surgical incision of a joint.

arthrotropic (ar'thro-trop'ik) [*arthro-* + Gr. *tropos* a turning] having an affinity for or tending to settle in the joints.

arthrotyphoid (ar'thro-ti'foid) [*arthro-* + *typhoid*] typhoid fever beginning with symptoms resembling those of rheumatic fever.

arthroxerosis (ar'thro-ze-ro'sis) [*arthro-* + Gr. *xēros* dry + *-osis*] chronic osteoarthritis.

arthroxesis (ar-throk'sé-sis) [*arthro-* + Gr. *xesis* scraping] the scraping of an articular surface.

Arthus's reaction (phenomenon) (ar-toos'ez) [Nicolas-Maurice Arthus, French physiologist, 1862-1945] see under *reaction*.

article (ar'te-kl) [L. *articulus* a little joint] an interarticular segment; one of the portions or segments forming a jointed series.

articular (ar-tik'u-lar) [L. *articularis*] of or pertaining to a joint.

articulare (ar-tik'u-la're) a cephalometric landmark, being the point of intersection of the dorsal contours of the articular process of the mandible and the temporal bone.

articulate (ar-tik'u-lāt) [L. *articulatus* jointed] 1. divided into or united by joints. 2. enunciated in words and sentences. 3. to divide into or to unite so as to form a joint. 4. in dentistry, to adjust or place the teeth in their proper relation to each other in making an artificial denture.

articulated (ar-tik'u-lāt'ed) connected by movable joints; consisting of separate segments so joined as to be movable on each other.

articulatio (ar-tik'u-la'she-o), pl. *articulationes* [L.] an articulation: a place of junction between two discrete objects; used in anatomical nomenclature to designate the place of union or junction between two or more bones of the skeleton, indicated by the modifying term. Also used in the plural as a general term to indicate such joints. Called also *joint*, *junctura ossium* [NA alternative], and *osseous junction*. **a. acromioclavicula'ris** [NA], acromioclavicular articulation: the joint formed by the acromion of the scapula and the acromial extremity of the clavicle; called also *scapuloclavicular articulation* or *joint*. **a. atlantoaxia'lis latera'lis** [NA], lateral atlantoaxial articulation: one of a pair of joints, one on either side of the body, formed by the inferior articular surface of the atlas and the superior surface of the axis. **a. atlantoaxia'lis media'na** [NA], medial atlantoaxial articulation: a single joint formed by the two articular facets of the dens of the axis, one in relation with the articular facet on the anterior arch of the atlas, the other in relation with the transverse ligament of the atlas. **a. atlantoepistroph'ica**, see *a. atlantoaxialis lateralis* and *a. atlantoaxialis mediana*. **a. atlantooccipita'lis** [NA], atlanto-occipital articulation: one of two joints, each formed by a superior articular pit of the atlas and a condyle of the occipital bone; called also *craniovertebral*, *occipital*, or *occipitoatlantal articulation*, and *Cruveilhier's joint*. **a. bicondyla'ris**, a condylar joint with a meniscus between the articular surfaces, as in the temporomandibular joint. **a. calcaneocuboi'dea** [NA], calcaneocuboid articulation: one formed between the cuboidal articular surface of the calcaneus and the cuboid bone. **a. cap'itis cos'tae** [NA], one of the two types of articulations between ribs and vertebrae: the articulation of the head of the rib with the bodies of two vertebrae. Called also *articulation of head of rib*, *articulationes capitulorum costarum*, and *capitular* or *costocentral articulation*. Cf. *a. costotransversaria*. **articulation'es capitulo'rum costa'rum**, see *a. capitis costae*. **articulation'es carpometacar'peae** [NA], carpometacarpal articulations: joints formed by the trapezial, trapezoid, capitate, and hamate bones together with the bases of the four medial metacarpal bones; called also *metacarpocarpal articulations*. **a. carpometacar'pea pol'licis** [NA], the joint formed by the first metacarpal and the trapezial bones; called also *carpometacarpal articulation of thumb* and *first carpometacarpal articulation*. **a. cochlea'ris**, a form of hinge joint that permits of some lateral motion. **a. compos'ita** [NA], composite articulation: a type of synovial joint in which more than two bones are involved; called also *compound articulation* and *compound or composite joint*. **a. condyla'ris** [NA], condylar articulation: a modification of the ball-and-socket type of synovial joint in which, due to the arrangement of the muscles and ligaments around the joint, all movements are permitted except rotation about a vertical axis. Three types have been recognized: *a. bicondylaris*, *a. ellipsoidea*, and *a. sellaris*. Called also *condyloid joint*. **a. condyla'ris inver'sus**, *a. sellaris*. **a. costotransversa'ria** [NA], costotransverse articulation: one of the two types of articulations between ribs and vertebrae: the articulation of the tubercle of the rib with the transverse process of a vertebra. This is lacking for the eleventh and twelfth ribs. Called also *articulation of tubercle of rib*. Cf. *a. capitis costae*. **articulation'es costovertebra'les** [NA], costovertebral articulations: the articulations between the ribs and vertebrae, of which there are two types: *a. capitis costae* and *a. costotransversaria*. **a. cotyl'ica**, NA alternative for *a. spheroidea*. **a. cox'ae** [NA], articulation of hip: the joint formed between the head of the femur and the acetabulum of the hip bone; called also *coxofemoral articulation* of Buisson, *femoral articulation*, and *hip joint*; loosely called *hip*. **a. cricoarytenoi'dea** [NA], cricoarytenoid articulation: the synovial joint between the upper border of the cricoid cartilage and the base of the arytenoid cartilage. **a. cricothyroi'dea** [NA], the articulation between the lateral aspect of the cricoid cartilage and the inferior horn of the thyroid cartilage. **a. cu'biti** [NA], cubital articulation: the joint between the arm and forearm, comprising the humeroulnar, humeroradial, and proximal radio-

ulnar articulations; called also *cubital articulation*, *articulation of elbow*, and *elbow joint*. **a. cuneonavicularis** [NA], cuneonavicular articulation: the joint between the anterior surface of the navicular bone and the proximal ends of the three cuneiform bones. **articulatio/nes digito/rum ma'nus**, articulations interphalangeae manus. **articulatio/nes digito/rum pe'dis**, articulationes interphalangeae pedis. **a. ellipsoideae** [NA], ellipsoidal articulation: a modification of the spheroidal form of synovial joint in which the articular surfaces are ellipsoid rather than spheroid, as in the radiocarpal joint. Called also *ellipsoidal joint* and *condylarthrosis*. **a. ge'nu, a. ge'nus** [NA], articulation of knee: the compound joint formed between the articular surface of the patella, the condyles and patellar surface of the femur, and the superior articular surface of the tibia; called also *knee joint*. **a. hu'meri** [NA], articulation of shoulder: the joint formed by the head of the humerus and the glenoid cavity of the scapula; called also *articulation of humerus*, and *shoulder joint*. **a. humeroradia'lis** [NA], humeroradial articulation: the joint between the humerus and the radius; called also *brachioradial articulation*. **a. humeroulna'ris** [NA], humeroulnar articulation: the joint between the humerus and the ulna; called also *brachioulnar articulation*. **a. incudomallea'ris** [NA], incudomalleolar articulation: the junction of the incus and the malleus. **a. incudomalleola'ris**, a. incudomallearis **a. incudostape'dia** [NA], incudostapedial articulation: the junction of the incus and the stapes. **articulatio/nes intercar'peae** [NA], intercarpal articulations: articulations between the various carpal bones themselves; called also *intercarpal joints*. **articulatio/nes interchondra'les** [NA], the unions, on either side, between the costal cartilages of the upper false ribs, usually ribs seven through ten; called also *articulationes interchondrales costarum*, *intercostal articulations*, and *interchondral articulations of ribs*. **articulatio/nes interchondra'les costa'rum**, articulationes interchondrales. **articulatio/nes intermetacar'peae** [NA], intermetacarpal articulations: the joints formed between the adjoining bases of the second, third, fourth, and fifth metacarpal bones; called also *articulations of metacarpal bones*. **articulatio/nes intermetatar'seae** [NA], intermetatarsal articulations: the joints formed between the adjoining bases of the five metatarsal bones; called also *articulations of metatarsal bones*. **articulatio/nes interphalan'geae ma'nus** [NA], interphalangeal articulations of hand: the joints between the phalanges of the fingers; called also *articulationes digitorum manus*, *interphalangeal articulations of fingers*, *articulations of digits of hand*, and *articulations of fingers*. **articulatio/nes interphalan'geae pe'dis** [NA], interphalangeal articulations of foot: the joints between the phalanges of the toes; called also *articulationes digitorum pedis* and *interphalangeal articulations of toes*, *articulations of digits of foot*, and *articulations of toes*. **articulatio/nes intertar'seae** [NA], intertarsal articulations: the articulations between the various tarsal bones. **a. mandibula'ris**, a. temporomandibularis: **articulatio/nes ma'nus** [NA], articulations of hand: the joints of the hand. **a. mediocar'pea** [NA], metacarpal articulation: the joint between the two rows of carpal bones; called also *mediocarpal joint*. **articulatio/nes metacarpophalan'geae** [NA], metacarpophalangeal articulations: joints formed between the heads of the five metacarpal bones and the bases of the corresponding proximal phalanges. **articulatio/nes metatarsophalan'geae** [NA], metatarsophalangeal articulations: the joints formed between the heads of the five metatarsal bones and the bases of the corresponding proximal phalanges. **articulatio/nes ossiculo/rum audi'tus** [NA], articulations of auditory ossicles, including *a. incudomallearis* and *a. incudostapedia*. **a. os'sis pisifor'mis** [NA], articulation of pisiform bone: the joint formed by the pisiform and triquetral bones. **articulatio/nes pe'dis** [NA], articulations of foot: the joints of the foot, including those of the ankle, the tarsus, the metatarsus, and the phalanges. **a. pla'na** [NA], plane articulation: a type of synovial joint in which the opposed surfaces are flat or only slightly curved; it permits only simple gliding movement, in any direction, within narrow limits imposed by ligaments. Called also *arthrodia*, *gliding articulation*, *plane or gliding joint*, and *arthrodial joint*. **a. radiocar'pea** [NA], radiocarpal articulation: a condylar joint formed by the radius and the articular disk with the scaphoid, lunate, and triquetral bones; called also *brachiocarpal articulation*. **a. radioulna'ris dista'lis** [NA], distal radioulnar articulation: the joint formed by the head of the ulna and the ulnar notch of the radius; called also inferior radioulnar (or *cubitoradial*) articulation. **a. radioulna'ris proxima'lis** [NA], proximal radioulnar articulation: the proximal of the two joints between the radius and the ulna; it enters into pronation and supination of the forearm. Called also superior radioulnar (or *cubitoradial*) articulation. **a. sacroili'a'ca** [NA], sacroiliac articulation: the joint formed between the articular surfaces of the sacrum and ilium; called also *sacroiliac symphysis*, and *ileosacral articulation*. **a. sella'ris** [NA], a type of synovial joint in which the articular surface of one bone is concave in one direction and convex in the direction at right angles to the first (concavoconvex), and the articular surface of the second bone is reciprocally convexoconcave; movement is permitted along two main axes at right angles to each other.

Called also *a. condylaris inversus*, *saddle articulation*, and *saddle or sellar joint*. **a. sim'plex** [NA], simple articulation: a type of synovial joint in which only two bones are involved; called also *simple joint*. **a. sphaeroi'dea**, a. spheroida. **a. sphaeroi'dea** [NA], spheroidal articulation: a type of synovial joint in which a spheroidal surface on one bone ("ball") moves within a concavity ("socket") on the other bone; it is the most moveable type of joint. Called also *a. cotylica*, *a. sphaeroidea*, *ball-and-socket articulation* or *joint*, *spheroidal joint*, *multiapial or polyaxial joint*, and *enarthrodial joint*. **a. sternoclavicula'ris** [NA], sternoclavicular articulation: the joint formed by the sternal extremity of the clavicle, the clavicular notch of the manubrium of the sternum, and the first costal cartilage. **articulatio/nes sternocosta'les** [NA], sternocostal articulations: the joints between the costal notches of the sternum and the medial ends of the costal cartilages of the upper seven ribs; called also *costosternal* or *chondrosternal articulations*. **a. subtala'ris** [NA], subtalar articulation: the joint formed between the posterior calcaneal articular surface of the talus and the posterior articular surface of the calcaneus; called also *a. talocalcanea*. **a. talocalca'nea**, a. subtalaris. **a. talocalcaneonavicularis** [NA], talocalcaneonavicular articulation: a joint formed by the head of the talus, the anterior articular surface of the calcaneus, the plantar calcaneonavicular ligament, and the posterior surface of the navicular bone. **a. talocrura'lis** [NA], talocrural articulation: the ankle joint, formed by the inferior articular and malleolar articular surfaces of the tibia, the malleolar articular surface of the fibula, and the medial malleolar, lateral malleolar, and superior surfaces of the talus; called also *talocrural ankle*, and *talotibiofibular joint*. **a. talonavicularis**, talonavicular articulation: the junction between the talus and navicular bone. **a. tar'si transver'sa** [NA], transverse tarsal articulation: a joint comprising the articulation of the calcaneus and the cuboid bone and the articulation of the talus and the navicular bone. Called also *a. tarsi transversa* [*Chopart*], *transverse tarsal joint*, and *Chopart's articulation or joint*. **articulatio/nes tarsometatar'seae** [NA], tarsometatarsal articulations: joints formed by the cuneiform and cuboid bones together with the bases of the metatarsal bones; called also *Lisfranc's joint*. **a. temporomandibula'ris** [NA], temporomandibular articulation: a bicondylar joint formed by the head of the mandible and the mandibular fossa, and the articular tubercle of the temporal bone; called also *a. mandibularis*, *temporomaxillary articulation*, and *mandibular articulation*. **a. tibiofibula'ris** [NA], 1. the joint formed at the proximal end of the tibia and fibula between the articular surface of the head of the fibula and the fibular articular surface of the tibia; called also *tibiofibular articulation*. 2. NA alternative for *syndesmosis tibiofibularis* when it contains a prolongation of the cavity of the talocrural articulation. **a. trochoi'dea** [NA], trochoidal articulation: a type of synovial joint that allows a rotary motion in but one plane; a pivot-like process turns within a ring, or a ring turns on a pivot. Called also *pivot articulation* or *joint*.

articulation (ar-tik'u-la'shun) [L. *articulatio*] 1. the place of union or junction between two or more bones of the skeleton; see also *articulatio*, *junctura*, and *joint*. 2. the enunciation of words and sentences. 3. in dentistry: (a) the contact relationship of the occlusal surfaces of the teeth while in action; (b) the arrangement of artificial teeth so as to accommodate the various positions of the mouth and to serve the purpose of the natural teeth which they are to replace. **acromioclavicular a.**, articulation acromioclavicularis. **articulator a.**, in dentistry, the use of a mechanical device by which movements of the temporomandibular joint or mandible can be simulated, to facilitate the arrangement of teeth in complete or removable partial dentures so that they articulate properly. **atlantoaxial a.**, lateral, articulation atlantoaxialis lateralis. **atlantoaxial a.**, medial, articulation atlantoaxialis mediana. **atlantoepistrophe a.**, see *articulation atlantoaxialis lateralis* and *articulation atlantoaxialis mediana*. **atlantooccipital a.**, articulation atlantooccipitalis. **a's of auditory ossicles**, articulationes ossiculorum auditus. **balanced a.**, in dentistry, a continuous change from one balanced occlusion into another for all occluded mandibular excursions. **ball-and-socket a.**, articulation spheroida. **brachiocarpal a.**, articulation radiocarpea. **brachioradial a.**, articulation humeroradialis. **brachioulnar a.**, articulation humeroulnaris. **calcaneocuboid a.**, articulation calcaneocuboida. **capitular a.**, articulation capitis costae. **carpal a's**, the junctions between the various carpal bones and between them and the bones of the forearm and hand. **carpometa'carpal a's**, articulationes carpometacarpeae. **carpometa'carpal a.**, first, articulation carpometacarpea pollicis. **carpometa'carpal a. of thumb**, articulation carpometacarpea pollicis. **chondrosternal a's**, articulationes sternocostales. **Chopart's a.**, articulation tarsi transversa. **composite a.**, articulation composita. **compound a.**, articulation composita. **condylar a.**, articulation condylaris. **confluent a.**, a manner of speaking in which the syllables are run together. **costocentral a.**, articulation capitis costae. **costosternal a's**, articulationes sternocostales. **costotransverse a.**, articulation costotransversaria. **costovertebral a's**, articulationes costovertebrales. **coxofemoral a. of Buisson**, articulation coxae.

craniovertebral a., articulatio atlantooccipitalis. **cricoa-**
rytenoid a., articulatio cricoarytenoidea. **cricothyroid a.**,
articulatio cricothyroidea. **cubital a.**, articulatio cubiti. **cu-**
bitoradial a., inferior, articulatio radioulnaris distalis.
cubitoradial a., superior, articulatio radioulnaris proxima-
lis. **cuneonavicular a.**, articulatio cuneonavicularis. **a's**
of digits of foot, articulationes interphalangeae pedis. **a's**
of digits of hand, articulationes interphalangeae manus.
a. of elbow, articulatio cubiti. **ellipsoidal a.**, articulatio
ellipsoidea. **femoral a.**, articulatio coxae. **a's of fingers**,
articulationes interphalangeae manus. **a's of foot**, articulati-
ones pedis. **gliding a.**, articulatio plana. **a's of hand**, ar-
ticulationes manus. **a. of head of rib**, articulatio capitis cos-
tae. **a. of hip**, articulatio coxae. **humero-radial a.**, articu-
latio humeroradialis. **humero-ulnar a.**, articulatio humero-
ulnaris. **a. of humerus**, articulatio humeri. **iliosacral a.**,
articulatio sacroiliaca. **incudomalleolar a.**, articulatio in-
cudomalleolaris. **incudostapedial a.**, articulatio incudostape-
dia. **intercarpal a's**, articulationes intercarpeae. **inter-**
chondral a's of ribs, articulationes interchondrales. **inter-**
costal a's, articulationes interchondrales. **intermeta-**
carpal a's, articulationes intermetacarpeae. **intermetatar-**
sals a's, articulationes intermetatarsae. **interphalangeal**
a's of fingers, articulationes interphalangeae manus. **inter-**
phalangeal a's of foot, articulationes interphalangeae pedis.
interphalangeal a's of hand, articulationes interphalan-
geae manus. **interphalangeal a's of toes**, articulationes
interphalangeae pedis. **intertarsal a's**, articulationes inter-
tarsae. **a. of knee**, articulatio genus. **mandibular a.**, ar-
ticulatio temporomandibularis. **maxillary a.**, articulatio
temporomandibularis. **mediocarpal a.**, articulatio medio-
carpeae. **a's of metacarpal bones**, articulationes interme-
tatarpeae. **metacarpocarpal a's**, articulationes carpometar-
carpeae. **metacarpophalangeal a's**, articulationes metar-
carphalangeae. **a's of metatarsal bones**, articulationes
intermetatarsae. **metatarsophalangeal a's**, articulationes
metatarsophalangeae. **occipital a.**, articulatio atlantooc-
cipitalis. **occipitoatlantal a.**, articulatio atlantooccipitalis.
petrooccipital a., synchondrosis petrooccipitalis. **phalan-**
geal a's, see articulationes interphalangeae manus and articula-
tiones interphalangeae pedis. **a. of pisiform bone**, articula-
tio ossis pisiformis. **pisocuneiform a.**, articulatio ossis pisi-
formis. **pivot a.**, articulatio trochoidea. **plane a.**, ar-
ticulatio plana. **a. of pubis**, symphysis pubica. **radiocar-**
pals a., articulatio radiocarpeae. **radioulnar a.**, distal,
radioulnar a., inferior, articulatio radioulnaris distalis.
radioulnar a., proximal, radioulnar a., superior, articu-
latio radioulnaris proximalis. **sacroccocygeal a.**, junctura
sacroccocygea. **sacroiliac a.**, articulatio sacroiliaca. **sad-**
dle a., articulatio sellaris. **scapuloclavicular a.**, articula-
tio acromioclavicularis. **a. of shoulder**, articulatio humeri.
simple a., articulatio simplex. **spheroidal a.**, articulatio
spheroida. **sternoclavicular a.**, articulatio sternoclavicu-
laris. **sternocostal a's**, articulationes sternocostales. **sub-**
talar a., articulatio subtaralis. **talocalcaneonavicular**
a., articulatio talocalcaneonavicularis. **talocrural a.**, articu-
latio talocruralis. **talonavicular a.**, articulatio talonavicu-
laris. **tarsometatarsal a's**, articulationes tarsometatarsae.
temporomandibular a., articulatio temporomandibularis.
temporomaxillary a., articulatio temporomandibularis.
tibiofibular a., 1. articulatio tibiofibularis. 2. syndesmosis
tibiofibularis. **a's of toes**, articulationes interphalangeae
pedis. **transverse tarsal a.**, articulatio tarsi transversa.
trochoidal a., articulatio trochoidea. **a. of tubercle of**
rib, articulatio costotransversaria.

articulationes (ar-tik'-u-la'-she-o'néz) [L.] plural of *articulatio*.

articulator (ar-tik'-u-la'-tor) a device for effecting a jointlike union; see also *dental articulator*. **adjustable a.**, 1. a dental articulator which may be adjusted to permit movement of the casts into recorded eccentric relationships. 2. a dental articulator capable of adjustment to more than one eccentric position. **dental a.**, a mechanical device by which movements of the temporomandibular joints or mandible can be simulated; used in matching upper and lower dentures and for mounting artificial teeth in order to obtain proper relations of occlusion and articulation. **hinge a.**, **plain-line a.**, a dental articulator with only a hinge joint, permitting no lateral or gliding motion. **semi-adjustable a.**, a dental articulator that may be adjusted so that at least one movement conforms with a mandibular movement of the patient.

articulatory (ar-tik'-u-la'-to-re) pertaining to utterance.

articulo (ar-tik'-u-lo) [L.] moment; crisis. **a. mor'tis**, at the moment or point of death.

articulus (ar-tik'-u-lus), pl. *articuli* [L.] a joint.

artifact (ar-ti-fakt) [L. *ars* art + *factum* made] any artificial product. In histology or microscopy, any structure or feature that has been introduced by processing a tissue. In radiology, a substance or structure not naturally present in living tissue, but of which an authentic image appears in a radiograph.

artificial (ar-ti-fak-tish-us) having the character of an artifact.

artificial (ar-ti-fish'al) [L. *ars* art + *facere* to make] made by art; not natural or pathological.

Artiodactyla (ar-te-o-dak-ti-lah) [Gr. *artios* even + *daktylos* finger] an order of ungulates, having an even number of toes, including ruminants, pigs, deer, and antelopes. Cf. *Perissodactyla*.

artiodactylous (ar-te-o-dak-ti-lus) having an even number of digits on a hand or foot; pertaining to Artiodactyla.

Artyfechinostomum (ar-te-fek-ti-nos-to-mum) *Paryphostomum*. **A. sufar'tyfax**, *Paryphostomum sufar'tyfax*.

arucase (ah-ru-kās) an extract of *Calea pinnatifida* (R. Br.) Less. (aruca plant) of the family Compositae; it has been used in the management of intestinal amebiasis.

Arum (a'rum) a genus of plants. *A. dracontium* is highly poisonous; *A. maculatum* furnishes sago.

Arvin (ar'vin) a purified fraction of the venom of the Malayan pit viper, used as an anticoagulant in thromboembolic disorders.

aryepiglottic (ar'e-ep'i-glot'ik) arytenoepiglottic.

aryepiglotticus (ar'e-ep'i-glot'i-kus) see *Table of Musculi*.

aryepiglottidean (ar'e-ep'i-glo-tid'e-an) arytenoepiglottic.

aryl- (ar'il) a chemical prefix indicating a radical belonging to the aromatic series.

arylamine (ar'il-ah-mén', ar'il-am'in) any of a group of amines in which one or more of the hydrogen atoms are replaced by aromatic groups.

arytenoepiglottic (ar-it'tē-no-ep'i-glot'ik) [Gr. *arytaina* ladle + *epiglottis*] pertaining to the arytenoid cartilage and to the epiglottis.

arytenoid (ar'tē-te'noid) [Gr. *arytaina* ladle + *eidos* form] shaped like a jug or pitcher, as arytenoid cartilage.

arytenoidectomy (ar'tē-te'noid-ek-to-me) [arytenoid + Gr. *ektomē* excision] surgical removal of an arytenoid cartilage.

arytenoideus (ar'tē-te-noi'de-us) [L.] see *musculus arytenoideus obliquus* and *transversus*.

arytenoiditis (ar-it'tē-noi-di'tis) inflammation of the arytenoid cartilage or muscles.

arytenoidopexy (ar'i-tē-noi'do-pek'se) [arytenoid + Gr. *pēxis* fixation] surgical fixation of arytenoid cartilage or muscle; called also *Kelly's operation*.

Arzberger's pear (arz'ber-gerz) [Friedrich Arzberger, Austrian physicist, 1833-1905] a pear-shaped vessel or container for insertion into the rectum, which may be cooled by passing water through the instrument.

As chemical symbol for arsenic.

As. astigmatism.

AS aortic stenosis; arteriosclerosis.

A.S. abbreviation for *L. au'ris sinis'tra*, left ear.

ASA argininosuccinic acid.

A.S.A. 1. American Society of Anesthesiologists; American Standards Association; American Stomatological Association; American Surgical Association. 2. trademark for a preparation of aspirin.

asacria (ah-sa'kre-ah) congenital absence of the sacrum.

asafetida (as'ah-fet'i-dah) the oleo-gum-resin obtained from the roots of *Ferula asafetida* L. and other related species of Umbelliferae. The main odoriferous principle is isobutylpropanyl disulfide. Used in India, Iran, etc., as a condiment and food flavoring, and has been used as an animal repellent in veterinary medicine to prevent bandage chewing, and as a carminative, expectorant, and antispasmodic both in humans and animals.

A.S.A.I.O. American Society for Artificial Internal Organs.

asaphia (ah-sa'fe-ah) [Gr. *asapheia*] indistinctness of utterance.

asaron (as'ah-ron) see *Asarum*.

Asarum (as'ah-rum) [Gr. *asaron*] a genus of the family Aristolochiaceae. *A. europaeum* L. yields a camphor-like aromatic principle known as asaron. *A. canadense* L. (Indian ginger, Canadian snakeroot, wild ginger) yields from its dried roots and rhizomes an acrid resin, methyl eugenol, and an aromatic volatile oil. Both species have been used as aromatics.

A.S.B. American Society of Bacteriologists.

asbestiform (as-bes'ti-form) having a fibrous structure like asbestos.

asbestos (as-bes'tos) [Gr. *asbestos* unquenchable] a fibrous, incombustible, magnesium and calcium silicate, used as thermal insulation; its dust causes asbestosis.

asbestosis (as'bē-stō'sis) [asbestos + -osis] a form of lung disease (pneumoconiosis) caused by inhaling fibers of asbestos and marked by interstitial fibrosis of the lung varying in extent from minor involvement of the basal areas to extensive scarring; it is associated with pleural mesothelioma and bronchogenic carcinoma. Called also *amianthosis*.

A-scan see *scan*, def. 2.

ascariasis (as'kah-ri'ah-sis) [ascaris + -iasis] infection by the roundworm *Ascaris lumbricoides*, which is found in the small intestine, causing colicky pains and diarrhea, especially in children. On ingestion, the larvae migrate from the intestine to the

lungs, where they cause a pneumonitis, and then to the trachea, esophagus, and intestine, where they mature. If adult worms are present in sufficient number they may cause intestinal obstruction. . . **sarcoptic a.**, scabies.

ascaricidal (as-kar'fī-si'dal) destructive to intestinal parasites of the genus *Ascaris*.

ascaricide (as-kar'fī-sid) [Gr. *askaris* ascaris + *L. caedere* to kill] an agent that destroys worms of the genus *Ascaris*.

ascarid (as'kah-rid) any member of the superfamily Ascaridoidea.

ascarides (as-kar'fī-dēz) plural of *ascaris*.

Ascaridia (as'kah-rid'e-ah) a genus of nematode parasites of the superfamily Ascaridoidea. **A. gal'li**, a species parasitic in the large intestine of chickens. **A. linea'ta**, a nematode parasite in the small intestine of fowls, the common roundworm of chickens in the United States.

ascariasis (as'kar-i-di'ah-sis) ascariasis.

Ascaridoidea (as'kah-rī-doi'de-ah) a superfamily of phasmid nematodes, including the genera *Ascaridia*, *Ascaris*, *Toxocara*, and *Toxascaris*.

ascaridole (ah-skar'fī-dōl') chemical name: 1,4-peroxido-*p*-menthene-2. The major constituent of oil of chenopodium or American wormseed (*Chenopodium ambrosioides* L., Chenopodiaceae). The oil was once used as an anthelmintic.

ascariidosis (as-kar-i-dō'sis) ascariasis.

ascariosis (as-kar-e-o'sis) ascariasis.

Ascaris (as'kah-ris) [L.; Gr. *askaris*] a genus of large intestinal nematode parasites of the superfamily Ascaridoidea. **A. ala'ta**, **A. ca'nis**, see *Toxocara canis*. **A. e'qui**, **A. equo'rum**, *Parascaris equorum*. **A. lumbricoi'des**, the eelworm or roundworm, a common worm resembling the earthworm; it is found in the small intestine, causing colicky pains and diarrhea, especially in children (see *ascariasis*). **A. margina'ta**, see

Ascaris lumbricoides (after Brumpt).

Toxocara canis. **A. megaloceph'ala**, **A. equorum**. **A. mys'tax**, *Toxocara cati*. **A. o'vis**, a name given to immature specimens of *A. lumbricoides*, occasionally found in sheep and cattle. **A. su'is**, **A. suil'la**, **A. su'um**, a name given to *A. lumbricoides* found in swine. **A. vermicula'ris**, see *Enterobius vermicularis*. **A. vitulo'rum**, a species found in cattle and the Indian buffalo.

ascaris (as-kah-ris), pl. *ascar'ides*. a worm of the genus *Ascaris*.

Ascarops (as'kah-rops) a genus of parasitic nematodes; formerly called *Ardüenna*. **A. strongyli'na**, a small red blood-sucking species found in the stomach of pigs.

ascending (ah-send'ing) having an upward course.

ascensus (ah-sen'sus) [L.] a going up; ascent. **a. u'teri**, an abnormally high position of the uterus.

ascertainment (ah'ser-tān'ment) in genetic studies, the method by which persons with a trait or disease are selected or found by an investigator. **complete a.**, the method in which every sibship in the population that has at least one affected member is enumerated. **single a.**, the method in which only a sample of the affected sibships is included in the series. **truncate a.**, ascertainment in which only sibships that include at least one affected child are enumerated.

A.S.C.H. American Society of Clinical Hypnosis.

Asch's operation, splint [Morris Joseph Asch, American laryngologist, 1833–1902] see under *operation* and *splint*.

aschelminth (ask'hel-minth) any worm of the phylum Aschelminthes.

Aschelminthes (ask'hel-minth'ēz) a phylum of unsegmented, bilaterally symmetrical, pseudocoelomate, mostly vermiform animals whose bodies are almost entirely covered with a cuticle, and possess a complete digestive tract lacking definite muscular walls. It includes the classes Gastrotricha, Kinorhyncha, Nematoda, Nematomorpha, and Rotifera.

Ascher's glass-rod phenomenon, syndrome [Karl Wolfgang Ascher, Cincinnati ophthalmologist, born in Prague, 1887] see *aqueous-influx phenomenon*, under *phenomenon*, and under *syndrome*.

Ascherson's membrane, vesicles (ash'er-sunz) [Ferdinand Moritz Ascherson, German physician, 1798–1879] see under *membrane* and *vesicle*.

Aschheim-Zondek hormone, test (ash'him-tson'dek) [Selmar Aschheim, German gynecologist, 1878–1965; Bernhard Zondek,

German gynecologist, born 1891] see *luteinizing hormone*, under *hormone*, and see under *test*.

aschistodactylia (ah-skis'to-dak-til'e-ah) [a neg. + Gr. *schistos* cleft + *daktylos* finger + *-ia*] syndactyly.

Aschner's phenomenon (test), reflex, sign (ash'nerz) [Bernhard Aschner, Austrian gynecologist, 1883–1960] see under *phenomenon*, and see *oculocardiac reflex*, under *reflex*.

Aschoff's bodies (nodules), cell, node (ash'ofs) [Karl Albert Ludwig Aschoff, German pathologist, 1866–1942] see under *body* and *cell*, and see *nodus atrioventricularis*.

Aschoff-Tawara node [Karl Albert Ludwig Aschoff; Sunao Tawara, Japanese pathologist, born 1873] *nodus atrioventricularis*.

A.S.C.I. American Society for Clinical Investigation.

asci (as'i) plural of *ascus*.

ascia (as'e-ah) [L. "ax," from the shape of its folds] a form of spiral bandage.

ascites (ah-si'tēz) [L.; Gr. *askitēs*, from *askos* bag] effusion and accumulation of serous fluid in the abdominal cavity; called also *abdominal* or *peritoneal dropsy*, *hydroperitonion*, and *hydrops abdominis*. **a. adipo'sus**, a variety characterized by a milky appearance of the contained fluid, due to the presence of cells that have undergone fatty degeneration; called also *fatty* or *milky a. bile a.*, *choleperitoneum*. **bloody a.**, *hemorrhagic a.* **chyliform a.**, **a. chylo'sus**, **chylous a.**, the presence of chyle in the peritoneal cavity as a result of anomalies, injuries, or obstruction of the thoracic duct. **exudative a.**, *ascites* in which the fluid in the peritoneal cavity is an exudate. **fatty a.**, *a. adiposus*. **hemorrhagic a.**, that in which the fluid is mixed with blood. **hydremic a.**, that which is associated with, or due to, a watery state of the blood, as in severe malnutrition. **milky a.**, *a. adiposus*. **a. prae'cox**, *ascites* that develops prior to edema in constrictive pericarditis. **pre-agonal a.**, a flow of serum into the peritoneal cavity just before death. **pseudochylous a.**, *ascites* in which the contained fluid resembles chyle in appearance, but does not contain fatty matter. **transudative a.**, *ascites* in which the fluid in the peritoneal cavity is a transudate.

ascitic (ah-sit'ik) pertaining to or characterized by ascites.

ascitogenous (as'fī-toj'ē-nus) causing ascites.

asclepia (as-kle'pe-ah) plural of *asclepiion*.

Asclepiad (as-kle'pe-ad) [Gr. *Asklēpiadēs*] a member of an organized guild of physicians, followers of Æsculapius, who were the priests in the early Greek temples of healing (see *asclepiion*). The name is also applied to any devoted, high-minded physician.

Asclepiades (as'kle-pi'ah-dēz) born in Bithynia (Asia Minor), in 124 B.C., this celebrated physician studied in Alexandria, and later popularized Greek medicine in Rome. Opposed to Hippocratic humoralism, he taught that disease resulted from a mechanical disturbance of the passage of atoms through the pores of the body. His followers, the Methodists, further simplified this concept.

Asclepias (as-kle'pe-as) [L.] the milkweeds or swallow-worts, a genus of herbs most species of which are generally recognized as poisonous to animals, while some have medicinal qualities; e.g., *A. tuberosa* L. (pleurisy root) has been used as an emetic, diaphoretic, laxative, and expectorant. They contain asclepiadin, volatile oils, and toxic resins.

asclepiion (as-kle'pe-on), pl. *asclepia* [Gr. *Asklēpieion* temple of Asklepios (Æsculapius)] one of the early Greek temples of healing, the most celebrated of which were at Cos, Epidaurus, Cnidus, and Pergamos. Greek temple medicine flourished during the time of Hippocrates (late 5th century B.C.), but was quite independent of his school. See also *Æsculapius* and *Asclepiad*.

Asclepios (as-klep'e-os) Æsculapius.

A.S.C.L.T. American Society of Clinical Laboratory Technicians.

Ascobolus (as-kob'ō-lus) a genus of ascomycetous fungi (family Pezizaceae, order Pezizales) used in genetic studies of crossing over.

ascocarp (as'ko-karp) [Gr. *askos* bag + *karpōs* fruit] the developed sporophore (fruiting body) in ascomycetous fungi, including the asci and ascospores. Cf. *archicarp*.

Ascocotyle (as'ko-ko'tī-le) a genus of nematode parasites. **A. pithecophagic'ola**, a nematode parasite in the monkey-eating eagle in the Philippines.

ascogonium (as'ko-go'ne-um) the receiving (female) organ in ascomycetous fungi which, after fertilization, gives rise to ascogenous hyphae and later to asci and ascospores. Called also *carpogonium* and, in British usage, *archicarp*.

Ascoli's reaction, test (as-ko'lēz) [Maurizio Ascoli, Italian pathologist, 1876–1958] *miostagmin reaction*.

Ascoli's test, treatment (as-ko'lēz) [Alberto Ascoli, Italian serologist, 1877–1957] see under *test* (def. 1) and under *treatment*.

Ascomycetae (as'ko-mi'sē-te) Ascomycetes.

ascomycete (as-ko'mi-sēt) any individual fungus of the Ascomycetes.

Ascomycetes (as'ko-mi-se'tēz) [Gr. *askos* bag + *mykēs* fungus] a class of perfect fungi of the division Eumycetes, the individual members of which form ascospores. The class consists of the yeasts, mildews, and cheese, jelly, and fruit molds, and includes the subclasses Hemiascomycetidae, Euscomycetidae, and Loculoascomycetidae. Called also *Ascomycetae* and *sac fungus*.

ascomycetous (as'ko-mi-se'tus) of or pertaining to the Ascomycetes.

ascorbate (as-kor'bāt) a compound or derivative of ascorbic acid.

ascorbemia (as'kor-be'me-ah) the presence of ascorbic acid in the blood.

ascorburia (as-kor-bu're-ah) the presence of ascorbic acid in the urine.

ascorbyl palmitate (as-kor'bil) [NF] chemical name: 6-hexadecanoate L-ascorbic acid. An antioxidant, $C_{22}H_{38}O_7$, occurring as a white to yellowish white powder; used as a preservative in pharmaceutical preparations.

ascospore (as'ko-spōr) [Gr. *askos* bag + *sporos* seed] a sexual spore formed within a special sac, or ascus, as in ascomycetous fungi. See *spore*.

A.S.C.P. American Society of Clinical Pathologists.

ascus (as'kus), pl. *as'ci* [Gr. *askos* a bag] the sporangium or spore case of certain lichens and fungi, consisting of a single terminal cell. See *spore*.

-ase (ās) a word termination used in forming the names of enzymes, ordinarily affixed to a stem that indicates the general nature of the substrate, the actual name of the substrate, the type of reaction catalyzed, or a combination of these factors.

asecretory (ah-se'kre-to're) without secretion.

Aselli's pancreas (glands) (ah-sel'ēz) [Gasparo Aselli (or Gaspare Asellio, or Gaspar Asellius), Italian anatomist, 1581-1626] see under *pancreas*.

Asellio, Asellius see *Aselli*.

asemantic (a-sē-man'tik) [a neg. + Gr. *sēmantikos* significant] being or pertaining to a molecule that is not produced by an organism and so is not influenced by the presence in the organism of semantides (q.v.).

asemasia (as'ē-ma'ze-ah) [a neg. + Gr. *sēmasia* the giving of a signal] aphasia in which there is lack or loss of the power of communication by words or by signals.

asemia (ah-se'me-ah) [a neg. + Gr. *sēma* sign + *-ia*] aphasia with inability to employ or to understand either speech or signs, due to a central lesion. **a. graph'ica**, inability either to write (agraphia) or to understand (dyslexia) writing, due to a central lesion. **a. mim'ica**, inability to understand or to perform any action expressive of thought or emotion. **a. verba'lis**, inability to make use of or to understand words.

asepsis (a-sep'sis) [a neg. + Gr. *sēpesthai* to decay] 1. freedom from infection. 2. the prevention of contact with microorganisms. **integral a.**, an aseptic technique in which not only the instruments, the drapes, and the gloved hands of the surgical team are sterile, but also the entire operating room and the air are free of viable microorganisms.

aseptic (a-sep'tik) [a neg. + Gr. *sēpsis* decay] free from infection or septic material; sterile. **a. antiseptic**, both aseptic and antiseptic.

asepticism (a-sep'ti-sizm) the principles and practices of aseptic surgery.

asetake (as'e-tak'e) a poisonous Japanese fungus of the genus *Hebeloma*.

asexual (a-seks'u-al) having no sex; not sexual; not pertaining to sex. Called also *agam* or *agamous*.

asexuality (a'seks-u-al'i-te) the state of being asexual; absence of sexual interests.

asexualization (a-seks'u-al-i-za'shun) sterilization of an individual, as by castration or vasectomy.

ASF a synthetic resin composed of aniline, formaldehyde, and sulfur, used for mounting microscopic objects.

A.S.G. American Society for Genetics.

A.S.H. American Society for Hematology.

As. H. hypermetropic astigmatism.

ash (ash) 1. the incombustible residue remaining after any process of incineration. 2. any tree or species of the genus *Fraxinus*. *F. ornus* and others afford mannitol. The bark of many species is astringent and antiperiodic.

A.S.H.A. American School Health Association; American Speech and Hearing Association.

Ashby's agar (culture medium) (ash'bēz) [Sir Eric Ashby, English botanist, born 1904] see under *culture medium*.

Ashhurst's splint (ash'hursts) [John Ashhurst, Philadelphia surgeon, 1839-1900] see under *splint*.

A.S.H.I. Association for the Study of Human Infertility.

A.S.H.P. American Society of Hospital Pharmacists.

asialia (ah'si-a'le-ah) [a neg. + Gr. *scialon* spittle] absence or deficiency of the secretion of the saliva; apyalism; xerostomia.

asialo (a-si'ah-lo) [a neg. + *sialo*] lacking a sialic acid group, as do certain sphingolipids.

asiaticoside (a'zhe-at'i-ko-sid') a steroidal glycoside of a trisaccharide and asiatic acid, which is the active principle of the umbelliferous plant *Centella asiatica* L. The compound has been used for various dermatological conditions, including wounds and burns.

asiderosis (ah'sid-er-o'sis) [a neg. + Gr. *sidēros* iron] abnormal decrease of the iron reserve of the body.

A.S.I.I. American Science Information Institute.

A.S.I.M. American Society of Internal Medicine.

Asimina (ah-sim'i-nah) [L., from its Algonkian name] a genus of North American trees and shrubs of the family Annonaceae. *A. triloba* (L.) Dunal is the pawpaw or pawpaw; see *pawpaw*, def. 2. *A. reticulata* is used to make Seminole tea, used by Seminole Indians in Florida for kidney problems.

asiminine (ah-sim'i-nin) an alkaloid from the seeds of *Asimina triloba*.

-asis a word termination denoting state or condition; see *-sis*.

asitia (ah-sish'e-ah) [a neg. + Gr. *sitos* food] a loathing for food.

asjike (ahs-ji'ke) beriberi.

Asklepios (as-klep'e-os) [Gr. *Asklēpios* son of Apollo and Coronis, tutelary god of medicine] see *Æsculapius*.

ASL antistreptolysin.

Aslanvitrol (as-lan-vi'tol) [named for Anna Asland, Romanian physiologist, who discovered it] a drug containing procaine hydrochloride, purported to increase longevity by restoring chemical balances in the brain so that its regulatory functions, such as those governing glandular activities, are made more effective.

As.M. myopic astigmatism.

Asn asparagine.

As₂O₃ arsenic trioxide.

ASO arteriosclerosis obliterans.

asoma (a-so'mah), pl. *aso'mata* [a neg. + Gr. *sōma* body] a monster with an imperfect head and the merest rudiments of a trunk.

asomatophyte (a-so'mah-to-fit') [a neg. + Gr. *sōma* body + *phyton* plant] a plant in which there is no distinction between body and reproductive cells; bacteria belong to this class.

Asopia (ah-so'pe-ah) a genus of pyralid moths. *A. farinalis*, the meal moth, or worm, acts as the intermediate host of *Hymenolepis diminuta*.

A.S.P. American Society of Parasitologists.

Asp aspartic acid.

aspalasoma (as'pal-ah-so'mah) [Gr. *aspalax* the mole + *sōma* body] a monster with lateral or median abdominal evagination and other deformities.

asparaginase (as-par'ah-jin-ās') chemical name: L-asparaginase. An enzyme that catalyzes the hydrolysis of asparagine to aspartic acid and ammonia. Asparaginase has antineoplastic activity, and a preparation derived from *Escherichia coli*, *Erwinia* species, or obtained from other sources has been used in the treatment of acute lymphocytic leukemia. Called also *colasase*.

asparagine (as-par'ah-jen, as-par'ah-jin) [Gr. *asparagos* asparagus] chemical name: α-aminosuccinic acid. A nonessential amino acid, $C_4H_8N_2O_3$, which is the β-amide of aspartic acid. It is found in most plants, and has diuretic properties. It is used as a culture medium for certain bacteria.

Asparagus (ah-spar'ah-gus) [L.; Gr. *asparagos*] a genus of liliaceous plants; the root of *A. officinalis* is a mild diuretic. It is claimed by some that methylmercaptan is excreted in urine after ingestion of the vegetable. Others feel that the odoriferous material is asparagine-aminosuccinic acid monoamide.

aspartame (ah-spar'tām) chemical name: *N*-L-α-aspartyl-L-phenylalanine methyl ester. An artificial sweetener, $C_{14}H_{18}N_2O_5$, which is about 200 times as sweet as sucrose and has potential as a low-calorie sweetener.

aspartase (as-par'tās) an enzyme that splits aspartic acid into fumaric acid and ammonia.

aspartate (ah-spahr'tāt) a salt of aspartic acid, or aspartic acid in dissociated form.

asparthione (as-par'thi-ōn') a tripeptide analogous to glutathione but containing aspartic acid in place of glutamic acid.

aspartoacylase (ah-spahr'to-as'i-lās) *N*-acylaspartate amidohydrolase: an enzyme occurring in the kidney that catalyzes the hydrolysis of *N*-acylaspartate to aspartate and a fatty acid ion; called also *aminoacylase II*.

aspartocin (ah-spar'to-sin) an antibacterial substance produced by *Streptomyces griseus*.

aspartokinase (ah-spar'to-ki'nās) aspartate kinase.

aspecific (ah'spē-sif'ik) nonspecific; not caused by a specific organism.

aspect (as'pekt) [L. *aspectus*, from *aspicere* to look toward] 1. that part of a surface facing in any designated direction. 2. the look or appearance. **dorsal a.**, the surface of a body as viewed from the back (human anatomy) or from above (veterinary anatomy). **ventral a.**, the surface of a body as viewed from

the front (human anatomy) or from below (veterinary anatomy).

aspergillar (as'per-jil'ar) pertaining to or caused by *Aspergillus*.

aspergilli (as'per-jil'i) plural of *aspergillus*.

aspergillin (as'per-jil'in) a black antibiotic substance, from the spore of various species of *Aspergillus*; formerly called *vegetable hematin*.

aspergilloma (as'per-jil-o'mah) a tumor-like granulomatous mass formed by colonization of the fungus *Aspergillus* in a bronchus or pulmonary cavity; the organism may disseminate through the blood stream to the brain, heart, and kidneys. Called also *fungus ball*.

aspergillomycosis (as'per-jil'o-mi-ko'sis) aspergillosis.

aspergillosis (as'per-jil-o'sis) a diseased condition caused by species of *Aspergillus* and marked by inflammatory granulomatous lesions in the skin, ear, orbit, nasal sinuses, lungs, and sometimes in the bones and meninges; called also *aspergillomycosis*. **aural a.**, see *otomycosis*. **bronchopneumonic a.**, infection of the bronchi and lungs by *Aspergillus*; see *aspergilloma*. **pulmonary a.**, infection of the lungs with *Aspergillus*.

aspergillotoxycosis (as'per-jil'o-tok'si-ko'sis) aspergillustoxycosis.

Aspergillus (as'per-jil'us) [L. *aspergere* to scatter] a genus of imperfect fungi of the family Moniliaceae. When found, the perfect, or sexual, stage is classified with the ascomycetous fungi in the family Eurotiaceae, order Eurotiales. It includes several of the common molds and some that are opportunistic pathogens. It is characterized by elongated conidiophores thickly set with chains of basipetally formed conidia. See Plate under *mold*. **A.**

Aspergillus (de Rivas).

auricula'ris, a mold of uncertain classification, found in the cerumen of the ear. **A. bar'bae**, a species of uncertain classification that has been found in mycosis of the beard. **A. clava'tus**, a species occurring in soils and manure; its cultures produce the antibacterial substance patulin. **A. concen'tricus**, a species formerly considered to be the cause of tinea imbricata, now known to be caused by *Trichophyton concentricum*. **A. cook'ei**, *A. mucoroides*. **A. fisher'ii**, a thermophilic soil fungus. **A. fla'vus**, a mold found on corn, peanuts, and grain; it produces aflatoxin (q.v.). **A. fumiga'tus**, a thermotolerant fungus growing in soils and manure. It has been found in infections of the ear, nose, lungs, and other organs of humans and animals, and is considered to be a primary pathogen of birds. Its cultures produce various antibiotics, such as fumagillin and helvolic acid. Formerly called *A. gliocladium* and *Eurotium malignum*. **A. gigan'teus**, a species from which gigantic acid is obtained. **A. glau'cus**, a group of species of bluish molds common on dry and decaying vegetation and rarely occurring in otomycosis or other human infectious processes. **A. gliocla'dium**, former name for the species that furnishes the antibiotic gliotoxin; now called *A. fumigatus*. **A. mucoroi'des**, a species of uncertain classification, probably of the *A. glaucus* group, reported in lung tissue; called also *A. cookei*. **A. nid'u-lans**, a species common in soil and occasionally isolated from onychomycosis and rarely from maduromycosis and other disease processes. **A. ni'ger**, a species common in soil and often isolated from otomycosis; it may produce a severe and very persistent infection. **A. ochra'ceus**, the species that ferments the coffee berry and produces the characteristic and desirable odor. **A. parasit'icus**, a mold found on ground nut seedlings that elaborates aflatoxin (q.v.). **A. pic'tor**, a formerly recognized species, probably identical with *A. versicolor*, once thought to cause pinta, a treponeme disease. **A. re'pens**, a species found in the external auditory canal, where it may produce a false membrane. Its perfect stage is *Eurotium repens*. **A. ter'reus**, a species occasionally associated with infection of the bronchi and lungs; see *aspergilloma*. **A. versic'olor**, a species of common soil saprophytes often isolated from dried salted beef; see also *A. pictor*.

aspergillus (as'per-jil'us), pl. *aspergil'i*. An individual of the genus *Aspergillus*.

aspergillustoxycosis (as'per-jil'us-tok'si-ko'sis) a form of mycotoxicosis caused by a member of the genus *Aspergillus*.

asperkinase (ah-sper-ki'nās) a proteolytic enzyme elaborated by *Aspergillus oryzae*.

aspermatis (ah-sper'mah-tizm) aspermia.

aspermatis (ah-sper'mah-to-jen'te-sis) absence of development of spermatozoa.

aspermia (ah-sper'me-ah) [a neg. + Gr. *sperma* seed + *-ia*] failure of formation or emission of semen.

asphalgnesia (as'fal-je'ze-ah) [Gr. *asphē* self + *algos* pain] a sensation of burning felt on touching certain articles occurring during hypnosis.

asphyctic (as-fik'tik) pertaining to, or affected with, asphyxia.

asphyctous (as-fik'tus) asphyctic.

asphygmia (as-fik'me-ah) temporary disappearance of the pulse.

asphyxia (as-fik'se-ah) [Gr. "a stopping of the pulse"] a condition due to lack of oxygen in respired air, resulting in impending or actual cessation of apparent life. **blue a.**, a livida. **a. carbon'ica**, suffocation from the inhalation of coal gas, water gas, or carbon monoxide. **a. cyanot'ica**, a livida. **fetal a.**, asphyxia in utero due to anoxia caused by premature placental separation (abruptio placentae), injudicious use of anesthetic, etc.

a. liv'ida, asphyxia in which the skin is cyanotic from the lack of oxygen in the blood; called also *blue a.* and *a. cyanotica*. **local a.**, Raynaud's disease (def. 2); see under *disease*. **a. neonato'rur**, respiratory failure in the newborn; see also *respiratory distress syndrome*, under *syndrome*. **a. pal'lida**, asphyxia attended with paleness of the skin; called also *white a.* **a. reticula'ris**, livedo reticularis. **secondary a.**, asphyxia recurring after apparent recovery from suffocation. **trau'matic a.**, asphyxia occurring as a result of sudden or severe compression of the thorax or upper abdomen, or both; called also *traumatic apnea*. **white a.**, a. pallida.

asphyxial (as-fik'se-al) characterized by or pertaining to asphyxia.

asphyxiant (as-fik'se-ant) a substance capable of producing asphyxia.

asphyxiate (as-fik'se-āt) to put into a state of asphyxia.

asphyxiation (as-fik'se-a'shun) suffocation.

Aspidium (as-pid'e-um) [L. Gr. *aspidion* little shield] a group of ferns called male shield ferns and male ferns which yield an oleoresin (see under *oleoresin*).

aspidium (as-pid'e-um) the rhizome and stipes of filix mas (male fern), yielding not less than 1.5 per cent of crude filicin. It is a violent poison and is highly irritant to the gastrointestinal tract when taken internally. See also *aspidium oleoresin*, under *oleoresin*.

aspidosperma (as'pi-do-sper'mah) the dried bark of *Aspidosperma quebracho-blanco* Schlecht., a tree of the family Apocynaceae. It contains several alkaloids, the main one being aspidospermine. It has been used to control parasitic worms in soil. Medically, it has been used in asthma and dyspnea as a respiratory stimulant.

aspidospermene (as'pi-do-sper'mēn) an alkaloid, C₂₃H₂₅N₂O₂, from aspidosperma (q.v.).

aspirate (as'pi-rāt) 1. to treat by aspiration. 2. the substance or material obtained by aspiration. 3. a consonantal sound in which some part of the respiratory tract is constricted, the nasal cavity shut off, and the breath makes a whistling noise.

aspiration (as'pi-ra'shun) [L. *ad* to + *spirare* to breathe] 1. the act of inhaling. 2. the removal of fluids or gases from a cavity by the application of suction. **meconium a.**, aspiration of meconium by the fetus or newborn, which may result in atelectasis, emphysema, or pneumonia. **vacuum a.**, removal of the uterine contents by application of a vacuum through a hollow curet or a cannula introduced into the uterus. Called also *vacuum extraction*.

aspirator (as'pi-ra'tor) an apparatus used for removal by suction of fluids or gases contained within a cavity. **Dieulafoy's a.**, an apparatus that consists of a glass cylinder containing a piston and having two openings, one for a trocar and cannula, the other for a discharge tube.

aspirin (as'pi-rin) chemical name: 2-(acetyloxy) benzoic acid. A compound, C₉H₈O₄, occurring as white crystals that are commonly tabular or needle-like, or as a white, crystalline powder, used as an analgesic, antipyretic, and antirheumatic. Called also *acetyl-salicylic acid*. **aluminum a.**, chemical name: *hydroxyphenyl-salicylate*/aluminum diacetate. A combination of aspirin and aluminum oxide used as an analgesic and antipyretic.

asplenia (a-sple-ne-ah) absence of the spleen. **functional a.**, impaired reticuloendothelial function of the spleen, as in children with sickle-cell anemia.

asplenic (a-sple-nik) pertaining to asplenia; caused by absence of the spleen.

asporogenic (as'po-ro-jen'ik) [a neg. + *sporogenic*] not producing spores; not reproduced by spores.

asporogenous (as'po-ro-jen'us) asporogenic.

asporous (ah-spo-rus) [a neg. + Gr. *sporos* seed] having no true spores; applied to microorganisms.

A.S.R.T. American Society of Radiologic Technologists.

A.S.S. anterior superior spine.

assanation (as'ah-na'shun) [L. *ad* to + *sanus* sound] sanitation; the improvement of sanitary conditions.

assay (as-sa') determination of the amount of a particular constituent of a mixture, or of the biological or pharmacological potency of a drug. **biological a.**, bioassay. **four-point a.**, an assay based on a mixture of two doses of test material and two doses of standard material. **immune a.**, immunoassay. **microbiological a.**, assay by the use of microorganisms. **stem cell a.**, a test for determining the effectiveness of particular drugs against human cancer, in which human tumor cell suspensions are first incubated with various drugs and then suspended in agar and plated over a layer of agar at the bottom of the plate. Effectiveness of the drugs is determined by counting the number of colonies that grow in comparison with the number of colonies on control plates.

Assézat's triangle (ah-se-zahz') [Jules Assézat, French anthropologist, 1832-1876] facial triangle.

assident (as'i-dent) generally but not always accompanying a disease.

assimilable (ah-sim'i-lah-bl) susceptible of being assimilated.

assimilation (ah-sim'i-la'shun) [L. *assimilatio*, from *ad* to + *similare* to make like] 1. the transformation of food into living tissue; anabolism. 2. in psychology, the absorption of new experiences into the existing psychological make-up.

assistant (ah-sis'tant) one who aids or helps another; an auxiliary. **physician a.**, see under *physician*.

Assmann's focus (tuberculous infiltrate). [Herbert Assmann, German internist, 1882-1950] see under *focus*.

association (ah-so'se-a'shun) [L. *associatio*, from *ad* to + *socius* a fellow] the coordination of a number of similar parts. In neurology, correlation involving a high degree of modifiability and also consciousness; see *association areas*, under *area*. In genetics, the occurrence together of two characteristics at a frequency greater than would be predicted on the basis of chance, i.e., at a frequency greater than the product of the frequency of each. An example is the association of blood group O and peptic ulcers. **clang a.**, association of disconnected ideas resulting only from the similarity of the sounds of words, called also *clang a.* **controlled a's**, ideas called up into the consciousness in response to words spoken by the examiner. **dream a's**, emotions or thoughts associated with previous dreams, as developed by the patient in psychoanalysis. **free a.**, a psychoanalytical method in which the patient is encouraged to describe the association of thoughts and emotions as they arise spontaneously during the analysis. **klang a.**, clang a.

assonance (as'o-nans) a morbid tendency to alliteration in speaking.

assortment (ah-sort'ment) the random distribution of non-homologous chromosomes to daughter cells in metaphase of the first meiotic division. **independent a.**, the phenomenon that during meiosis members of different pairs of genes are distributed to the gametes independently of one another.

assurin (as'u-rin) a diaminodiphosphate, $C_{46}H_{94}N_2P_2O_8$, said to occur in the brain substance.

Ast. astigmatism.

astacene (as'tah-sen) astacin.

astacin (as'tah-sin) a carotenoid pigment, $C_{40}H_{56}O_4$, obtained from the shells of various crustaceans, where it occurs partly protein-bound and partly esterified.

astasia (as-ta'zhe-ah) [a neg. + Gr. *stasis* stand] motor incoordination with inability to stand. **a-abasia**, inability to stand or to walk although the legs are otherwise under control; called also *abasia astasia*.

astatic (as-tat'ik) pertaining to astasia.

astatine (as'tah-tin) [Gr. *astatos* unstable] the radioactive element of atomic number 85, atomic weight 210, symbol At. It is prepared by alpha particle bombardment of bismuth on the cyclotron. It has a half-life of 75 hours and may be of use in the treatment of hyperthyroidism.

astaxanthin (as'tah-zan'thin) a red carotenoid pigment, $C_{40}H_{52}O_4$, constituent of the green chromoprotein from the eggs of crayfish.

asteatodes (as'te-ah-to'dēz) asteatosis.

asteatosis (as'te-ah-to'sis) [a neg. + Gr. *stear* tallow + *-osis*] any disease characterized by such persistent fine dry scaling of the skin surface as to suggest scantiness or absence of the sebaceous secretion. **a. cu'tis**, a dry, scaly, or fissured state of the skin, attended with a deficient secretion of sebaceous matter; called also *xerosis cutis*.

aster (as'ter) [L.; Gr. *aster* star] a structure seen in a cell during the prophase of mitosis, composed of a system of microtubules arranged in astral rays around the centrosome; called also *astrosphere*, *cytaster*, and *kinosphere*. **sperm a.**, the centriole, with astral rays, that precedes the male pronucleus during fertilization.

astereocognosy (ah-ste're-o-kog'nō-se) astereognosis.

astereognosis (ah-ster'e-og-no'sis) [a neg. + Gr. *stereos* solid + *gnōsis* recognition] loss of power to recognize objects or to ap-

preciate their form by touching or feeling them; called also *tactile amnesia*.

asterion (as-te're-on), pl. *aste'ria* [Gr. "starred"] the point on the surface of the skull where the lambdoid, parietomastoid, and occipitomastoid sutures meet.

asterixis (as'ter-ik'sis) [a neg. + Gr. *stērix* a fixed position] a motor disturbance marked by intermittent lapse of an assumed posture, as a result of intermittency of the sustained contraction of groups of muscles, a characteristic of hepatic coma but observed also in numerous other conditions; called also *liver flap* and *flapping tremor*.

asternal (a-ster'nal) 1. not joined to the sternum. 2. pertaining to asternia; lacking a sternum.

asternia (ah-ster'ne-ah) [a neg. + Gr. *sternon* sternum + *-ia*] congenital absence of the sternum.

Asterococcus (as'ter-o-kok'us) a genus of bacteria resembling filtrable viruses, which cause pleuropneumonia (def. 2) and other diseases; called also *Coccobacillus*. **A. ca'nis**, pleuropneumonia-like microorganisms found in the purulent nasal discharge of dogs with distemper. **A. mycoi'des**, *Mycoplasma mycoides*.

asteroid (as'ter-oid) [Gr. *aster* star + *eidos* form] star-shaped; resembling the aster.

Asterol (as'ter-ol) trademark for preparations of diamthazole dihydrochloride.

asterubin (as'ter-roo'bin) a basic substance, $NH_2C(NH_2)CH_2SO_3H \cdot N(CH_3)_2$, that has been isolated from the starfish.

Asth. asthenopia.

asthenia (as-the'ne-ah) [Gr. *asthenēs* without strength + *-ia*] lack or loss of strength and energy; weakness. **a. gra'vis hypophyseogen'ea**, a pituitary dysfunction marked by emaciation, anorexia, constipation, amenorrhea, hypothermia, hypotonia, and hypoglycemia. **myalgic a.**, a condition in which the general symptoms are a sensation of general fatigue and muscular pains. **neurocirculatory a.**, a symptom-complex characterized by the occurrence of breathlessness, giddiness, a sense of fatigue, pain in the chest in the region of the precordium, and palpitation. It occurs chiefly in soldiers in active war service, though it is seen in civilians also. Called also *effort syndrome*, *cardiac neurosis*, *DaCosta's disease* or *syndrome*, *anxiety neurosis*, *neurasthenia*, *cardiasthenia*, *cardiac neurasthenia*, and *cardioneurosis*. **periodic a.**, a condition marked by periodically returning attacks of marked asthenia. **a. pigmento'sa**, Addison's disease; see under *disease*. **tropical anhidrotic a.**, a condition resulting from generalized, sometimes almost complete, anhidrosis in conditions of high temperature, characterized by a tendency to overfatigability, irritability, anorexia, inability to concentrate, and drowsiness, with headache and vertigo. Called also *anhidrotic heat exhaustion*, *sweat retention syndrome*, *type II heat exhaustion*, and *thermogenic anhidrosis*.

asthenic (as-then'ik) pertaining to or characterized by asthenia.

asthenobiosis (as-the'no-bi-o'sis) [*asthenia* + Gr. *bios* life + *-osis*] a condition of reduced biologic activity resembling hibernation or estivation but not directly related to or dependent on temperature or humidity.

asthenocoria (as-the'no-ko're-ah) [*asthenia* + Gr. *korē* pupil + *-ia*] a condition in which the pupillary light reflex is sluggish; seen in hypoadrenalism. Called also *Arroyo's sign*.

asthenometer (as'thē-nom'ē-ter) [*asthenia* + Gr. *metron* measure] an instrument for measuring the degree of muscular asthenia or of asthenopia.

asthenope (as'then-ōp) a person affected with asthenopia.

asthenophobia (as'thē-no-fō-be-ah) [*asthenia* + *phobia*] (obs.) morbid fear of being weak.

asthenopia (as'thē-no-pe-ah) [*asthenia* + Gr. *ōpē* sight + *-ia*] weakness or easy fatigue of the visual organs, attended by pain in the eyes, headache, dimness of vision, etc. Previously a diagnostic term; now used mainly as a descriptive term. **accommodative a.**, asthenopia due to strain of the ciliary muscle. **muscular a.**, that which is due to weakness of the external ocular muscles. **nervous a.**, asthenopia occurring as one of the symptoms of neurosis and marked by fatigue and contraction of the visual field; called also *retinal a.* and *asthenia of the retina*. **retinal a.**, that which is due to retinal disease. **tarsal a.**, asthenopia due to irregular astigmatism produced by the pressure of the lids on the cornea.

asthenopic (as'thē-nop'ik) characterized by asthenopia.

asthenospermia (as'thē-no-sper'me-ah) [*asthenia* + Gr. *sperma* seed + *-ia*] reduction in the vitality of spermatozoa.

asthenoxia (as'then-ok'se-ah) [*asthenia* + *oxygen*] lack of power to oxidize waste products.

asthma (az'mah) [Gr. *asthma* panting] a condition marked by recurrent attacks of paroxysmal dyspnea, with wheezing due to spasmodic contraction of the bronchi. Some cases of asthma are allergic manifestations in sensitized persons (*bronchial allergy*); others are provoked by a variety of factors, including vigorous exercise, irritant particles, psychological stresses, etc. **abdominal a.**, asthma due to upward pressure on the diaphragm. **al-**

lergic a., bronchial asthma due to allergy; called also *atopic a.* **alveolar a.**, that which is characterized by dilatation of the alveoli of the lungs. **atopic a.**, allergic asthma. **bacterial a.**, asthma due to bacterial infection. **bronchial a.**, see *asthma*. **bronchitic a.**, asthmatic disorder accompanying bronchitis. **cardiac a.**, paroxysmal dyspnea that occurs in association with heart disease, such as left ventricular failure; called also *cardiasthma*. **cat a.**, asthma brought on by inhalation of cat dander by a sensitized person. **catarrhal a.**, bronchitic a. **a. convulsi/vum**, bronchial a. **cotton-dust a.**, byssinosis. **cutaneous a.**, reflex asthma believed to be caused by some irritation of the skin. **diisocyanate a.**, isocyanate a. **dust a.**, asthma caused by inhalation of dust. **Elsner's a.**, angina pectoris. **emphysematous a.**, emphysema of the lungs attended with asthmatic paroxysms. **essential a.**, asthma of unknown or inapparent cause; called also *true a.* **extrinsic a.**, asthma caused by some factor in the environment, usually allergic asthma. **food a.**, asthma brought on by ingestion of certain foods to which the person is allergic. **grinders' a.**, asthmatic symptoms related to the inhalation of fine particles set free in the grinding of metals. **Heberden's a.**, angina pectoris. **horse a.**, a form of allergic asthma in which the attacks are brought on by the presence of horses or of horse products. **humid a.**, asthma with profuse expectoration. **infective a.**, asthma due to infection. **intrinsic a.**, asthma attributed to pathophysiologic disturbances and not to environmental factors. **isocyanate a.**, bronchial asthma caused by allergy to toluene diisocyanate and similar materials. **Kopp's a.**, laryngismus stridulus. **Millar's a.**, laryngismus stridulus. **millers' a.**, a condition of the lungs found in millers, caused by the inhalation of cereal dusts. **miners' a.**, asthma associated with anthracosis. **nasal a.**, asthma caused by a disease of the nose. **nervous a.**, essential asthma, usually associated with emotional disturbances. **pollen a.**, hay fever. **pottery's a.**, asthmatic symptoms associated with the pneumoconiosis of workers in the ceramic industries. **reflex a.**, asthma attributed to some reflex action. **Rostan's a.**, cardiac a. **sexual a.**, asthma resulting from sexual intercourse. **spasmodic a.**, bronchial a. **steam-fitters' a.**, asthmatic symptoms associated with asbestosis. **stone a.**, asthmatic symptoms due to broncholithiasis. **stripper's a.**, asthmatic symptoms associated with byssinosis. **symptomatic a.**, asthma that is secondary to some other physical condition. **thymic a.**, an alleged condition occurring usually in children, associated with enlargement of the thymus, paroxysmal attacks of asthma, and a tendency to sudden death. **true a.**, essential asthma. **Wichmann's a.**, laryngismus stridulus.

asthmatic (az-mat'ik) [L. *asthmaticus*] pertaining to or affected with asthma.

asthmaticiform (az-mat'i-form) resembling asthma.

asthmogenic (az'mo-jen'ik) 1. causing asthma. 2. a substance capable of causing asthma.

astigmatograph (ah-stig'mah-graf) an instrument for demonstrating astigmatism.

astigmatic (as'tig-mat'ik) pertaining to or affected with astigmatism.

astigmatism (ah-stig'mah-tizm) [a neg. + Gr. *stigma* point] unequal curvature of the refractive surfaces of the eye as a result of which a ray of light is not sharply focused on the retina but is spread over a more or less diffuse area. This results from the radius of curvature in one plane being longer or shorter than that of the radius at right angles to it (Airy, 1827). **acquired a.**,

Astigmatism: the appearance of lines as seen by (a) the normal eye and (b) the astigmatic eye.

that due to some disease or injury of the eye. **a. against the rule**, that in which the meridian along which the greatest refraction takes place is horizontal; called also *inverse a.* **compound a.**, that which is complicated with hypermetropia in all meridians or with myopia in all meridians. **congenital a.**, that which exists at birth. **corneal a.**, that due to irregularity in the curvature or refracting power of the cornea. **direct a.**, a. with the rule. **hypermetropic a.**, **hyperopic a.**, that which complicates hyperopia. **hyperopic a.**, simple, astigmatism in which one meridian, usually the vertical, is emmetropic and the horizontal meridian is hyperopic. The focus of the vertical meridian is not in the retina; that of the horizontal is behind the retina: horizontal lines appear distinct. **inverse a.**, a. against the rule. **irregular a.**, astigmatism in which the curvature in different parts of the same meridian of the eye varies or in which successive meridians differ irregularly in refraction, the image produced being an irregular area. **lenticular a.**, that which is due to some irregularity or abnormality

of the lens. **mixed a.**, that in which one principal meridian is myopic and the other hyperopic. **myopic a.**, that which complicates myopia. **myopic a.**, **compound**, astigmatism in which all meridians are myopic, both principal meridians having their foci in front of the retina; vertical lines are usually more distinct. **myopic a.**, **simple**, astigmatism in which the focus of one meridian is situated on the retina, while that of the other lies in front of the retina; vertical lines appear distinct. **oblique a.**, astigmatism in which the direction of the principal meridians approaches 45° and 135°. **physiological a.**, the slight astigmatism possessed by nearly all eyes and causing the twinkling sensation when distant points of light are viewed. **regular a.**, astigmatism in which the refractive power of the eye shows a uniform increase or decrease from one meridian to the other, being practically constant in each meridian; the image produced is regular in shape, either a line, an oval, or a circle. See also *Sturm's conoid*, under *conoid*. **a. with the rule**, that wherein the meridian in which the greatest refraction takes place is vertical or nearly so; called also *direct a.*

astigmatometer (as'tig-mah-tom'ē-ter) [astigmatism + Gr. *metron* measure] an instrument used in measuring astigmatism.

astigmatoscope (as'tig-mat'o-skōp) [astigmatism + Gr. *skopein* to inspect] an instrument for discovering and measuring astigmatism.

astigmatoscopy (ah-stig'mah-tos'ko-pe) the use of the astigmatoscope.

astigmatia (ah-stig'me-ah) [a neg. + Gr. *stigma* a mathematical point + *ia*] astigmatism.

astigmatic (ah-stig'mik) astigmatic.

astigmometer (as'tig-mom'ē-ter) astigmatometer.

astigmatometry (as'tig-mom'ē-tre) [astigmatism + Gr. *metron* measure] the measurement of astigmatism, the use of the astigmatometer.

astigmatoscope (as-tig'mo-skōp) astigmatoscope.

A.S.T.M.H. American Society of Tropical Medicine and Hygiene.

astomatous (as-tom'ah-tus) [a neg. + Gr. *stoma* mouth] having no mouth, as certain ciliates.

astomia (ah-sto'me-ah) [a neg. + Gr. *stoma* mouth] congenital absence of the mouth.

astomus (ah-sto'mus) a fetus without a mouth opening.

Astraf (as'trah-fer) trademark for a preparation of dextriferon.

astragalar (as-trag'ah-lar) pertaining to the astragalus (talus).

astragalectomy (as'trag-ah-lek'to-me) [astragalus + Gr. *ektomē* excision] excision of the astragalus (talus).

astragalocalcanean (as-trag'ah-lo-kal-ka'ne-an) pertaining to the astragalus (talus) and the calcaneus.

astragalocrural (as-trag'ah-lo-kroo'ral) relating to the astragalus (talus) and the leg.

astragaloscaphoid (as-trag'ah-lo-ska'foid) pertaining to the astragalus (talus) and the scaphoid (navicular) bone.

astragalotibial (as-trag'ah-lo-tib'e-al) pertaining to the astragalus (talus) and the tibia.

Astragalus (ah-strag'ah-lus) a genus of leguminous plants or many species. *A. gummifer* and other oriental species afford tragacanth; others are poisonous. *A. mollissimus*, of the United States (one of the plants called loco), is poisonous, and its active principle is mydriatic.

astragalus (ah-strag'ah-lus) [L.; Gr. *astragalos* ball of the ankle joint or dice] the talus, def. 1.

astral (as'tral) of or relating to an aster.

astraphobia (as'tra-fo'be-ah) (obs.) morbid fear of thunder and lightning.

astraphophobia (as'trah-po-fo'be-ah) [Gr. *astrapē* lightning + *phobia*] (obs.) astraphobia.

astriction (ah-strik'shun) [L. *astringere* to constrict] 1. the action of an astrigent. 2. (obs.) constipation.

astringe (ah-strinj') to act as an astrigent.

astrigent (ah-strinj'ent) [L. *astringere*, from *ad* to + *stringere* to bind] 1. causing contraction, usually locally after topical application. 2. an agent which has an astrigent action.

astro- (as'tro) [Gr. *astron* star] a combining form indicating some relation to a star, as star-shaped.

astroblast (as'tro-blast) [*astro-* + Gr. *blastos* germ] a cell that develops into an astrocyte.

astroblastoma (as'tro-blas-to'mah) an astrocytoma of Grade II, composed of cells with abundant cytoplasm and two or three nuclei.

astrocele (as'tro-sēl) astrocoele.

astrocinetic (as'tro-si-net'ik) astrokinetic.

astrocoele (as'tro-sēl) [*astro-* + Gr. *kōilos* hollow] the clear space within the astrosphere of a cell in which the centrosome lies.

astrocyte (as'tro-sit) [*astro-* + Gr. *kytos* hollow vessel] a neuroglial cell of ectodermal origin, characterized by fibrous, protoplasmic, or plasmatofibrous processes. Collectively, such cells are

called *astroglia*. **fibrous a's**, astrocytes found mainly in the white matter of the brain, having long, thin, infrequently branched cytoplasmic processes containing numerous fibrillar structures. **gemistocytic a.**, gemistocyte. **plasmatofibrous a's**, astrocytes found at the junction of the gray and white matter of the brain; the cytoplasmic processes extending into the white matter are fibrous and those extending into the gray matter are protoplasmic. **protoplasmic a's**, astrocytes found mainly in the gray matter of the brain, having many branching, thick cytoplasmic processes.

astrocytin (as'tro-si'tin) an antigen present on the cell membrane of astrocytes, found in the serum of patients with malignant glial tumors.

astrocytoma (as'tro-si-to'mah) a tumor composed of astrocytes; such tumors have been classified in order of increasing malignancy as: *Grade I*, consisting of fibrillary or protoplasmic astrocytes; *Grade II* (see *astroblastoma*); and *Grades III and IV* (see *glioblastoma multiforme*). **anaplastic a.**, glioblastoma multiforme. **a. fibrilla're**, an astrocytoma composed of astrocytes which produce fibrillary or neuroglial fibers. **gemistocytic a.**, an astrocytoma in which the cytoplasm of the tumor cells is swollen, homogeneously hyaline, and acidophilic in appearance. **pilocytic a.**, a variant of the fibrillary type of astrocytoma in which the fibrils are arranged in parallel rows. **a. protoplasmaticum**, a tumor composed of protoplasmic astrocytes.

astrocytosis (as'tro-si-to'sis) the proliferation of astrocytes owing to the destruction of nearby neurons during a hypoxic or hypoglycemic episode.

astroglia (as-trog'le-ah) [*astro-* + *neuroglia*] the astrocytes considered as tissue; formerly called *microglia*.

astroid (as'troid) [*astro-* + *Gr. eidos* form] 1. star-shaped. 2. (obs.) a structure of the neuroglia formed by a felted mass of fibers.

astrokinetic (as'tro-ki-net'ik) [*astro-* + *Gr. kinēsis* motion] pertaining to the movements of the centrosome.

astroma (as-tro'mah) (obs.) astrocytoma.

astrophobia (as'tro-fō-be-ah) [*astro-* + *phobia*] (obs.) fear of the stars and celestial space.

astrophorous (as-trof'o-rus) [*astro-* + *Gr. phoros* bearing] having star-shaped processes.

astrop plankton (as'tro-plank'ton) [*Gr. astron* star + *planktos* wandering] hypothetical living material drifting in outer space.

astrosphere (as'tro-sfēr) [*astro-* + *Gr. sphaira* sphere] 1. the central mass of an aster, exclusive of the rays. 2. aster.

astrostatic (as'tro-stat'ik) [*astro-* + *Gr. statikos* standing] pertaining to the centrosome in its resting condition.

asty clinic (as'tē-klin'ik) [*Gr. asty* city + *klinē* bed] a city or municipal hospital, dispensary, or clinic.

asuerothrapy (as'oo-ār'o-ther'ah-pe) a system of healing exploited in 1929 by Fernando Asuero, a Spanish physician, and consisting of cauterization of the sphenopalatine ganglion combined with suggestion.

asulfurosis (ah-sul-fu-ro'sis) a condition due to lack of sulfur in the body.

asyllabia (ah'sil-la-be-ah) a condition in which letters are recognized by the patient, but he is unable to form them into syllables.

asylum (ah-si'lum) [L.] a place of refuge and shelter, as an institution of the past for the support and care of helpless and deprived individuals, such as the mentally deficient, emotionally disturbed, or the blind.

asymbolia (ah-sim-bo'le-ah) [*a neg.* + *Gr. symbolon* symbol + *-ia*] loss of power to comprehend symbolic things, as words, figures, gestures, signs, etc. (Wernicke). **pain a.**, absence of psychic reaction to pain sensations; it may be congenital or result from brain lesion, particularly of the supramarginal gyrus of the dominant parietal lobe.

asymboly (ah-sim'bo-le) asymbolia.

asymmetrical (a'sim-met'rī-kal) characterized by or pertaining to asymmetry.

asymmetry (a-sim'ē-tre) [*a neg.* + *Gr. symmetria* symmetry] lack or absence of symmetry; dissimilarity in corresponding parts or organs on opposite sides of the body which are normally alike. In chemistry, lack of symmetry in the special arrangements of the atoms and radicals within the molecule or crystal. **chromatic a.**, difference in color in the irides of the two eyes. **encephalic a.**, a condition in which the two sides of the brain are not the same size.

asymphytous (ah-sim'fi-tus) separate or distinct; not grown together.

asymptomatic (a'simp'to-mat'ik) showing or causing no symptoms.

asynapsis (ah-sī-nap'sis) [*a neg.* + *Gr. synapsis* conjunction] the failure of homologous chromosomes from the male and female to pair during meiosis.

asynchronism (a-sin'kro-nizm) [*a neg.* + *synchronism*] the occurrence at distinct times of events normally synchronous; disturbance of coordination.

asynchrony (a-sin'kro-ne) asynchronism.

asynclitism (ah-sin'klī-tizm) [*a neg.* + *synclitism*] 1. oblique presentation of the fetal head in labor. 2. asynchronous maturation of the nucleus and cytoplasm of blood cells. **anterior a.**, Nägele's obliquity. **posterior a.**, Litzmann's obliquity.

asyndesis (ah-sin'dē-sis) [*a neg.* + *Gr. syn* together + *desis* binding] a disorder of language in which related elements of a sentence cannot be welded together as a whole; observed in schizophrenia and organic brain syndromes.

asynechia (ah'sī-nek'e-ah) [*a neg.* + *Gr. synechia* continuity] absence of continuity of structure.

asynergia (a'sin-er'je-ah) asynergy.

asynergic (a'sin-er'jik) marked by asynergy.

asynergy (a-sin'er-je) [*a neg.* + *Gr. synergia* cooperation] lack of coordination among parts or organs normally acting in harmony. In neurology, disturbance of that proper association in the contraction of muscles which assures that the different components of an act follow in proper sequence, at the proper moment, and are of the proper degree, so that the act is executed accurately. **truncal a.**, see under *ataxia*.

asynodia (ah'sī-no'de-ah) [*a neg.* + *Gr. synodia* a journeying together] sexual impotence.

asynovia (a'h-sī-no've-ah) deficiency of the synovial secretion.

asyntaxis (ah'sin-tak'se-ah) [*Gr. "want of arrangement"*] lack of proper and orderly embryonic development. **a. dorsa'lis**, failure of the neural groove to close in the developing embryo.

asystole (ah-sis'to-le) [*a neg.* + *systole*] cardiac standstill or arrest—absence of a heartbeat; called also *Beau's syndrome*.

asystolia (ah'sis-to'le-ah) asystole.

asystolic (ah'sis-to'l'ik) characterized by asystole.

A. T. German abbreviation for *old tuberculin* (Alt Tuberculin).

A. T. 10 dihydrotachysterol.

At chemical symbol for *astatine*.

ATA alimentary toxic aleukia; see under *aleukia*.

Atabrine (ah'tah-brin) trademark for a preparation of quina-crine hydrochloride.

atactic (ah-tak'tik) [*Gr. ataktos* irregular] lacking coordination; irregular; pertaining to or characterized by ataxia.

atactiform (ah-tak'ti-form) resembling ataxia.

ataractic (at'ah-rak'tik) [*Gr. ataraktos* without disturbance; quiet] 1. pertaining to or capable of producing ataraxia. 2. an agent capable of inducing ataraxia; a tranquilizer.

ataralgnesia (at'ar-al-je'ze-ah) [*Gr. ataraktos* without trouble + *-algnesia*] a method of combined sedation and analgesia designed to abolish the mental distress and pain attendant on surgical procedures, with the patient remaining conscious and alert.

Atarax (ah'tah-raks) trademark for preparations of hydroxyzine hydrochloride.

ataraxia (at'ah-rak'se-ah) [*Gr. "impassiveness," "calmness"*] perfect peace or calmness of mind; used especially to designate a detached serenity without depression of mental faculties or clouding of consciousness.

ataraxic (at'ah-rak'sik) ataractic.

ataraxy (at'ah-rak'se) ataraxia.

atavic (at'ah-vik) atavistic.

atavism (at'ah-vizm) [L. *atavus* grandfather] the apparent inheritance of a characteristic from remote rather than from immediate ancestors, due to a chance recombination of genes or to unusual environmental conditions favorable to their expression in the embryo. Called also *reversion*.

atavistic (at-ah-vis'tik) characterized by atavism.

ataxaphasia (ah-tak'sah-fa'ze-ah) ataxiaphasia.

ataxia (ah-tak'se-ah) [*Gr., from a negative + taxis* order] failure of muscular coordination; irregularity of muscular action.

acute a., ataxia of sudden onset. **acute cerebellar a.**, cerebellar ataxia, usually unilateral, associated with infectious disease, tumor, or trauma, resulting in marked hypotonia of muscles on the affected side, asynergy, and assumption of a characteristic posture. **alcoholic a.**, a condition resembling tabes dorsalis, due to loss of proprioception in chronic alcoholism.

autonomic a., defective coordination between the sympathetic and parasympathetic nervous systems. **Briquet's a.**, a hysterical condition with anesthesia of the skin and leg muscles.

Broca's a., hysterical. **central a.**, ataxia due to lesion of the centers controlling coordination. **cerebellar a.**, ataxia due to disease of the cerebellum. **cerebral a.**, ataxia due to disease of the cerebrum. **a. cor'dis** (obs.), atrial fibrillation.

enzootic a., congenital locomotor ataxia of lambs, thought to be associated with copper deficiency; called also *swayback*. **family a.**, Friedreich's. **Fergusson and Critchley's a.**, a hereditary ataxia resembling multiple sclerosis found in only a few families and appearing between the ages of 30 and 45.

Friedreich's a., Friedreich's disease: an inherited disease, usually beginning in childhood or youth, with sclerosis of the dorsal and lateral columns of the spinal cord. It is attended by ataxia,

speech impairment, lateral curvature of the spinal column, and peculiar swaying and irregular movements, with paralysis of the muscles, especially of the lower extremities (Friedreich 1863-76). It is often associated with hypertrophic cardiomyopathy. Called also *hereditary a.*, *family a.*, and *Friedreich's tabes*. **frontal a.**, disturbance of equilibrium occurring in tumor of the frontal lobe. **hereditary a.**, Friedreich's *a.* **hereditary cerebellar a.**, a disease of early adult life, due to atrophy of the cerebellum, and marked by ataxia, increased knee jerk, speech defects, and nystagmus; called also *cerebellar syndrome*, *Marie's a.*, and *Nonne's syndrome*. **hysteric a.**, hysteria simulating ataxia; called also *Broca's a.* **intrapsychic a.**, an apparent lack of unity of ideation and emotional reaction, as in a patient who weeps at a funny occurrence or laughs outright at the death of a close relative. **kinetic a.**, motor *a.* **labyrinthic a.**, vestibular *a.* **Leyden's a.**, pseudotabes. **locomotor a.**, tabes dorsalis. **Marie's a.**, hereditary cerebellar *a.* **motor a.**, inability to control the coordinate movements of the muscles; called also *kinetic a.* **ocular a.**, nystagmus. **professional a.**, occupation neurosis. **Sanger-Brown's a.**, spinocerebellar *a.* **sensory a.**, ataxia due to loss of proprioception (joint position sensation) between the motor cortex and peripheral nerves, resulting in poorly judged movements, the incoordination becoming aggravated when the eyes are closed. **spinal a.**, that which is due to disease of the spinal cord. **spinocerebellar a.**, hereditary cerebellar ataxia marked by degeneration of the spinocerebellar tracts; called also *Sanger-Brown's a.* **a-telangiectasia**, severe progressive cerebellar ataxia, associated with oculocutaneous telangiectasia, sinopulmonary disease with frequent respiratory infections, and abnormal eye movements; it is a hereditary disorder transmitted as an autosomal recessive trait, usually appearing when the child attempts to learn to walk. It is also associated with immunodeficiency (IgA and IgE) and sometimes with cell-mediated dysfunction. Called also *Louis-Bar syndrome*. **thermal a.**, a condition characterized by great and paradoxical fluctuations of the temperature of the body. **trunkal a.**, ataxia affecting the muscles of the trunk. **vasomotor a.** (*obs.*), paralysis or spasm of blood vessels due to some derangement of vasomotor nerves or centers. **vestibular a.**, incoordination due to vestibular disease; called also *labyrinthine a.*

ataxiadynamia (ah-tak''se-ah-di-na''me-ah) ataxodynamia.

ataxiagram (ah-tak''se-ah-gram'') [ataxia + Gr. *gramma* a writing] a tracing drawn by an ataxic patient; also the record made by an ataxiagraph.

ataxiagraph (ah-tak''se-ah-graf'') [ataxia + Gr. *graphein* to write] an apparatus used in ascertaining the extent of ataxia by measuring the amount of swaying of the body when standing erect and with the eyes closed.

ataxiometer (ah-tak''se-am''ē-ter) [ataxia + Gr. *metron* measure] an apparatus for measuring ataxia.

ataxiamesic (ah-tak''se-am-ne''sik) characterized by both ataxia and amnesia.

ataxiaphasia (ah-tak''se-ah-fa''ze-ah) [ataxia + Gr. *aphasia*] a condition characterized by inability to arrange words into sentences.

ataxic (ah-tak''sik) atactic.

ataxiophemia (ah-tak''se-o-fe''me-ah) ataxophemia.

ataxiophobia (ah-tak''se-o-fo''be-ah) ataxophobia.

ataxodynamia (ah-tak''so-ad''ē-na''me-ah) (*obs.*) ataxia associated with marked weakness.

ataxophemia (ah-tak''so-fe''me-ah) [Gr. *ataxia* disorder + *phēmē* speech] lack of coordination of the speech muscles.

ataxophobia (ah-tak''so-fo''be-ah) [Gr. *ataxia* disorder + *phobia*] (*obs.*) morbid or insane dread of disorder.

ataxy (ah-tak''se) ataxia.

-ate (āt) a word termination forming a participial noun, as the object of the process indicated by the root to which it is affixed, e.g., *hemolysate*, something hemolyzed; *homogenate*, something homogenized; *injectate*, something injected. Also forming adjectives, signifying possession of the quality indicated by the root, e.g., *dentate* and *corticate*; and verbs, signifying performance of the action indicated by the root, e.g., *decussate* and *pulsate*. In organic chemistry, this suffix replaces the *-ic* ending in names of acids (as in glycerate for glyceric acid), indicating that the acid involved is in dissociated form or combined in an ester.

atelectasis (at''e-lek''tah-sis) [Gr. *atelēs* imperfect + *ektasis* expansion] 1. incomplete expansion of a lung or a portion of a lung, occurring congenitally as a primary or secondary condition, or as an acquired condition. 2. airlessness of a lung that had once been expanded. 3. collapse of a lung. **absorption a.**, **acquired a.**, that produced by any factor, e.g., secretions, foreign body, tumor, abnormal external pressure, etc., which completely obstructs the airway, preventing intake of air into the alveolar sacs and permitting absorption of air into the bloodstream. Called also *obstructive a.*, *reabsorption a.*, and *secondary a.* **compression a.**, acquired atelectasis due to abnormal external pressure on the lung. **congenital a.**, that present at birth or shortly thereafter; it may occur as a primary condition (see *primary a.*) or secondary to some other congenital disorder (see *secondary a.*).

initial a., primary *a.* **lobar a.**, that affecting only a lobe of the lung; called also *segmental a.* **lobular a.**, that affecting a lobule of the lung; called also *patchy a.* **obstructive a.**, absorption *a.* **patchy a.**, lobular *a.* **primary a.**, congenital atelectasis, common among premature infants, in which there is failure of initial alveolar expansion, due to pulmonary immaturity or to inadequacy of respiratory effort that may be a result of weakness of respiratory muscles, severe illness, softness of thoracic cage, brain damage with injury to the respiratory center, or oversaturation. Called also *initial a.* **relaxation a.**, absorption atelectasis due to bronchial collapse resulting from large amounts of air or fluid in the pleural cavity, as in pneumothorax or pleural effusion. **resorption a.**, absorption *a.* **secondary a.**, 1. absorption atelectasis occurring at birth or in the newborn period, in which the pulmonary alveoli collapse after initial expansion by air; it is due to obstruction of the airway which prevents further entrance of air or to prevention of air from remaining in the alveoli by increased surface forces, occurring as a result of inhalation of amniotic debris or mucous plugs, deficiency of pulmonary surfactant, obstruction by congenital abnormalities, or abnormal external pressure upon the lung. 2. absorption *a.* **segmental a.**, lobar *a.*

atelectatic (at''ē-lek''tat''ik) pertaining to or characterized by atelectasis.

ateleiosis (ah-te''le-o''sis) [a neg. + Gr. *teleios* complete] hypophyseal infantilism.

atelencephalia (ah-te''len-sē-fa''le-ah) [Gr. *ateleia* incompleteness + *enkephalos* brain + *-ia*] congenital imperfect development of the brain.

atelia (ah-te''le-ah) [Gr. *ateleia* incompleteness] imperfect or incomplete development.

atelioid (ah-te''le-o''sis) hypophyseal infantilism.

ateliotic (ah-te''le-ot''ik) pertaining to or characterized by atelia.

atelo- (at''ē-lo) [Gr. *atelēs* incomplete] a combining form meaning imperfect or incomplete.

atelocardia (at''ē-lo-kar''de-ah) [atelo- + Gr. *kardia* heart] congenitally incomplete development of the heart.

atelocephalous (at''ē-lo-sef''ah-lus) [atelo- + Gr. *kephalē* head] having an incomplete head.

atelocephaly (at''ē-lo-sef''ah-le) imperfect development of the skull.

atelocheilia (at''ē-lo-ki''le-ah) [atelo- + Gr. *cheilos* lip + *-ia*] a congenitally incomplete development of a lip.

atelocheiria (at''ē-lo-ki''re-ah) [atelo- + Gr. *cheir* hand + *-ia*] congenitally incomplete development of the hand.

ateloencephalia (at''ē-lo-en''sē-fa''le-ah) atelencephalia.

ateloglossia (at''ē-lo-glos''e-ah) [atelo- + Gr. *glōssa* tongue + *-ia*] congenitally incomplete development of the tongue.

atelognothia (at''ē-log-na''the-ah) [atelo- + Gr. *gnathos* jaw + *-ia*] congenitally incomplete development of the jaw.

atelomyelia (at''ē-lo-mi-e''le-ah) [atelo- + Gr. *myelos* marrow + *-ia*] congenitally incomplete development of the spinal cord.

atelopidtoxin (a-tel-op''id-tok''sin) a potent dialyzable toxin derived from the skin of frogs of the genus *Atelopus*, of Central and South America. The LD₅₀ in mice is 16 μg/kg. Its chemical and pharmacological nature has not been fully defined.

atelopodia (at''ē-lo-po''de-ah) [atelo- + Gr. *pous* foot + *-ia*] congenitally incomplete development of the foot.

ateloprosopia (at''ē-lo-pro-so''pe-ah) [atelo- + Gr. *prosōpon* face + *-ia*] congenitally incomplete development of the face.

atelorachidia (at''ē-lo-rah-kid''e-ah) [atelo- + Gr. *rhachis* spine + *-ia*] congenitally incomplete development of the vertebral column.

Atelosaccharomyces (at''ē-lo-sak''ah-ro-mi''sēz) former name for *Cryptococcus*.

atelostomia (at''ē-lo-sto''me-ah) [atelo- + Gr. *stoma* mouth + *-ia*] congenitally incomplete development of the mouth.

atenolol (ah-ten''o-lōl) chemical name: 4-[2-hydroxy-3-[(1-methylthyl)amino]propoxyl]benzeneacetamide; an antiadrenergic (β-receptor), C₁₄H₂₂N₂O₃.

athalposis (ah''thal-po''sis) [a neg. + Gr. *thalpos* warmth + *-osis*] inability to perceive warmth.

athelia (ah-the''le-ah) [a neg. + Gr. *thēlē* nipple + *-ia*] congenital absence of the nipple(s).

Athenaeus (ath''ē-ne''us) of **Attalia** (1st century A.D.) a celebrated physician, latterly of Rome, and founder of the Pneumatist school of medicine. Only fragments of his many writings remain.

athermal (ah-ther''mal) [a neg. + Gr. *thermē* heat] not warm; said of springs the water of which is below 15° C.

athermancy (ah-ther''mān-se) the state of being athermanous.

athermanous (ah-ther''mah-nus) [a neg. + Gr. *thermē* heat] absorbing heat rays and not permitting them to pass.

athermic (ah-ther''mik) [a neg. + Gr. *thermē* heat] without fever or rise of temperature; apyretic; afebrile.

athermosystaltic (ah-ther''mo-sis-tal''tik) [a neg. + Gr. *thermē*

heat + Gr. *systaltikos* drawing together] not contracting under the action of cold or heat; said of skeletal muscle.

atheroembolism (ath'er-o-em'bo-lizm) embolism due to blockage of a blood vessel by an atheroembolus.

atheroembolus (ath'er-o-em'bo-lus), pl. *atheroem'boli*. An embolus composed of cholesterol or its esters (typically lodging in small arteries) or of fragments of atheromatous plaques.

atherogenesis (ath'er-o-jen'ē-sis) the formation of atheromatous lesions in the arterial intima.

atherogenic (ath'er-o-jen'ik) conducive to or causing atherogenesis.

atheroma (ath'er-o'mah) [Gr. *athērē* gruel + *-oma*] a mass of plaque of degenerated, thickened arterial intima occurring in atherosclerosis. **a. cu'tis**, sebaceous cyst.

atheromatosis (ath'er-o'mah-to'sis) a diffuse atheromatous disease of the arteries.

atheromatous (ath'er-o'mah-tus) affected with or of the nature of atheroma.

atheronecrosis (ath'er-o'ne-kro'sis) (*obs.*) the necrosis or degeneration accompanying atherosclerosis.

atherosclerosis (ath'er-o'skle-ro'sis) an extremely common form of arteriosclerosis in which deposits of yellowish plaques (atheromas) containing cholesterol, lipid material, and lipophages are formed within the intima and inner media of large and medium-sized arteries. **a. oblit'erans**, arteriosclerosis obliterans.

atherosis (ath'er-o'sis) (*obs.*) atherosclerosis.

athetoid (ath'ē-toid) [Gr. *athetos* not fixed + *ēidos* form] resembling or affected with athetosis.

athetotic (ath'ē-to'sik) athetotic.

athetosis (ath'ē-to'sis) [Gr. *athetos* not fixed + *-osis*] a derangement marked by ceaseless occurrence of slow, sinuous, writhing movements, especially severe in the hands, and performed involuntarily; it may occur after hemiplegia, and is then known as *posthemiplegic chorea*. Called also *mobile spasm*.

Position of fingers in movements of athetosis.

double a., double congenital a., congenital bilateral athetosis due to birth trauma, which may occur in association with spastic paraplegia, as in *Vogt's syndrome* and *Little's disease*. **pupillary a.**, hippus.

athetotic (ath'e-to'tik) pertaining to athetosis.

athiaminosis (ah-thi'ah-mi-no'sis) thiamine deficiency.

Athiorhodaceae (a'thi-o-ro-da'se-e) a family of Schizomycetes (order Pseudomonadales, suborder Rhodobacteriineae), made up of non-sulfur photosynthetic microorganisms that characteristically produce a pigment composed of bacteriochlorophyll and one or more carotenoids. It includes two genera, *Rhodospseudomonas* and *Rhodospirillum*.

athomin (ath'o-min) a bactericidal principle isolated from the root bark of the "horseradish" tree, *Moringa pterygosperma* Gaertn., Moringaceae, used in India as an antiemetic and in the clinical management of cholera. Called also *GL 54*.

athrepsia (ah-threp'se-ah) [a neg. + Gr. *threpsis* nutrition] 1. marasmus. 2. Ehrlich's term for immunity to tumor inoculation due to a supposed lack of the special nutritive material necessary for tumor growth.

athrepsy (ath'rep-se) athrepsia.

athreptic (ah-threp'tik) pertaining to or characterized by athrepsia.

athrocytosis (ath'ro-si-to'sis) absorption of macromolecules from the lumen of the renal tubules by renal tubular cells by means of a process similar to phagocytosis.

athrophagocytosis (ath'ro-fag'o-si-to'sis) non-nutritive phagocytosis; phagocytosis of inert particles, as the removal of injected carbon particles from the body by phagocytes in the carbon clearance test.

athymia (ah-thim'e-ah) [a neg. + Gr. *thymos* mind] 1. dementia. 2. loss of consciousness. 3. absence of the thymus gland.

athymism (ah-thi'mizm) absence of the thymus or the condition induced by absence or removal of the thymus.

athymismus (ah'thi-mis'mus) athymism.

athyrea (ah-thi're-ah) hypothyroidism.

athyreosis (ah-thi're-o'sis) [a neg. + *thyreoid* thyroid + *-osis*] hypothyroidism.

athyria (ah-thi're-ah) 1. a condition resulting from absence of the thyroid gland. 2. hypothyroidism.

athyroidation (ah-thi'roi-da'shun) hypothyroidism.

athyroidemia (ah-thi'roi-de'me-ah) [a neg. + *thyroid* + Gr. *haima* blood + *-ia*] absence of thyroid hormone from the blood.

athyroidism (ah-thi'roid-izm) hypothyroidism.

athyroidosis (ah-thi'roi-do'sis) hypothyroidism.

athyrosis (ah'thi-ro'sis) hypothyroidism.

athyrotic (ah'thi-rot'ik) pertaining to or characterized by hypothyroidism.

Athysanus (ah-this'ah-nus) a genus of blood-sucking flies of Algeria.

atite (at'it) a substance in milk that reduces nitrate to nitrite.

atlantad (at-lan'tad) toward the atlas.

atlantal (at-lan'tal) pertaining to the atlas.

atlantoaxial (at-lan'to-ak'se-al) pertaining to the atlas and the axis.

atlantodidymus (at-lan'to-did'i-mus) a monster with one body and two heads.

atlantomastoid (at-lan'to-mas'toid) pertaining to the atlas and the mastoid process.

atlanto-odontoid (at-lan'to-o-don'toid) pertaining to the atlas and the odontoid process of the axis.

atlas (at'las) [Gr. *Atlas* the Greek god who bears up the pillars of Heaven] 1. [NA], the first cervical vertebra, which articulates above with the occipital bone and below with the axis. 2. a collection of illustrations on one subject, such as anatomy, blood and bone marrow, brain, cardiac disease.

atloaxoid (at'lo-ak'soid) pertaining to the atlas and the axis.

atlodidymus (at'lo-did'i-mus) [*atlas* + Gr. *didymos* twin] atlantodidymus.

atlodo-occipital (at-loi'do-ok-sip'i-tal) pertaining to the atlas and the occiput.

atmiatrics (at'me-at'riks) [*atmo* + Gr. *iatrikos* healing] treatment by medicated vapors (P. Niemeyer).

atmiatry (at-mi'ah-tre) atmiatrics.

atm. atmosphere.

atmo- (at'mo) [Gr. *atmos* steam or vapor] a combining form denoting relationship to steam or vapor.

atmocausis (at'mo-kaw'sis) [*atmo* + Gr. *kausis* burning] (*obs.*) treatment by the direct application of superheated steam; used chiefly in nonmalignant uterine affections and to arrest bleeding (a. u'terī).

atmocautery (at'mo-kaw'ter-e) (*obs.*) an instrument for performing atmocausis.

atmograph (at'mo-graf) [*atmo* + Gr. *graphein* to record] an instrument for recording respiratory movements.

atmolysis (at-mol'i-sis) [*atmo* + Gr. *lysis* loosening] 1. the separation of mixed gases by passing through a porous plate, the more diffusible passing through first. 2. the disintegration of organic tissue by the fumes of volatile fluids, such as benzene, ether, alcohol, etc.

atmometer (at-mom'ē-ter) [*atmo* + Gr. *metron* measure] an instrument for measuring exhaled vapors, or the amount of water exhaled by evaporation in a given time, in order to ascertain the humidity of the atmosphere.

atmos (at'mos) [Gr. "steam" or "vapor"] a unit of air pressure, being a pressure of one degree per square centimeter; called also *aer*.

atmosphere (at'mos-fēr) [*atmo* + Gr. *sphaira* sphere] 1. the entire gaseous envelope surrounding the earth, including the troposphere, tropopause, and stratosphere. 2. the unit of pressure of the air upon the earth at sea level, about 14.7 pounds to the square inch.

atmospheric (at'mos-fer'ik) of or pertaining to the atmosphere.

atmotherapy (at'mo-ther'ah-pe) [*atmo* + Gr. *therapeia* treatment] 1. treatment by medicated vapors. 2. treatment by methodic reduction of respiration.

at. no. atomic number.

atocia (ah-to'se-ah) [a neg. + Gr. *tokos* birth] sterility in the female.

atolide (ah'to-lid) chemical name: 2-amino-4'-(diethylamino)-o-benzotoluidide; an anticonvulsant, C₁₄H₂₃N₃O.

atom (at'om) [Gr. *atomos* indivisible; a- + *tomos* from *temnein* to cut] any one of the ultimate particles of a molecule or of any matter. An atom is the smallest particle of an element that is capable of entering into a chemical reaction. The atom consists of a minute central nucleus, in which practically all of the mass of the atom is concentrated, and of surrounding electrons. The nucleus is positively charged; the amount of the charge corresponds to the atomic number of the atom. See *Table of Elements*, under *element*. In a neutral atom the surrounding negative electrons are equal in number to the positive charges on the nucleus. The number and arrangement of these electrons determine all the properties of the atom except its atomic weight and its radioactivity. **activated a.**, 1. an ionized atom. 2. an atom in which some of the orbital electrons have been driven out

into larger and less stable orbits; the atom is thus prepared to release its stored energy as these electrons return to their normal and stable orbits. Called also *excited a.* **Bohr a.**, the conception of a nuclear atom in which the orbital electrons are able to occupy only certain orbits, these orbits being determined by quantum limitations. **excited a.**, activated atom. **ionized a.**, an atom from which one or more of the outer or valence electrons have been removed, or to which one or more electrons have been added (hence positive and negative ions). **nuclear a.**, the conception or theory of the atom as composed of a small central nucleus surrounded by orbital electrons; called also *Rutherford a.* For table of the atoms see under *element*. **recoil a.**, **rest a.**, the portion of an atom from which an alpha particle or other subatomic particle has been given off; this remaining part recoils with a velocity inversely proportional to its mass. **Rutherford a.**, nuclear a. **stripped a.**, an atom from which the orbital electrons have been more or less completely removed. **tagged a.**, one which has been made radioactive, so that its course in the body may be checked; see *radioactive tracer*, under *tracer*.

atomic (ah-tom'ik) of or pertaining to an atom.

atomism (at'om-izm) the hypothesis that the universe is composed of atoms.

atomization (at'om-i-za'shun) the act or process of breaking a liquid up into spray.

atomizer (at'om-iz'er) an instrument for throwing a jet of spray.

atonia (ah-to'ne-ah) atony. **choreatic a.**, deficient muscular tonicity often seen in chorea.

atonic (ah-ton'ik) lacking normal tone or strength; pertaining to or characterized by atony.

atonicity (at'o-nis'i-te) the quality or condition of being without normal tone or strength.

atony (at'o-ne) [L. *atonia*, from *a* neg. + Gr. *tonos* tension] lack of normal tone or strength. **primary ureteral a.**, megalo-ureter.

atopen (at'o-pen) the antigen responsible for atopy; cf. *reagin*.

atopic (ah-top'ik, a-top'ik) [*a* neg. + Gr. *topos* place] 1. ectopic. 2. pertaining to an atopen or to atopy; allergic.

atopognosia (ah-top'og-no'ze-ah) [*a* neg. + Gr. *topos* place + *gnōsis* knowledge + *-ia*] loss of power of correctly locating a sensation.

atopognosis (ah-top'og-no'sis) atopognosis.

atopomenorrhoea (at'ō-po-men-o-re'ah) [*a* neg. + Gr. *topos* place + *men* month + *rhoia* flow] (*obs.*) vicarious menstruation.

atopy (at'o-pe) a clinical hypersensitivity state, or allergy, with a hereditary predisposition; that is, the tendency to develop some form of allergy is inherited, but the specific clinical form, e.g., hay fever, asthma, eczema, is not. An unusual type of antibody, termed *reagin*, which is in the immunoglobulin E (IgE) class, is involved. Called also *hereditary* or *spontaneous allergy*.

atoxic (ah-tok'sik) [*a* neg. + Gr. *toxikon* poison] not poisonous; not due to a poison.

atoxigenic (a-tok'si-jen'ik) not producing or elaborating toxins.

ATP adenosine triphosphate.

ATPase adenosinetriphosphatase.

atrabiliary (at'rah-bil'e-ä-re) [L. *atra* black + *bilis* bile] pertaining to black bile, one of the four humors, according to the humoral theory; by extension, characterized by melancholy or gloom; melancholic or gloomy.

Attractaspis (ah-trak-tas'pis) a genus of African vipers whose bite is toxic to man.

atransferrinemia (a-trans'fer-i-ne'me-ah) absence from the circulating blood of iron-binding protein (transferrin).

atraumatic (a'traw-mat'ik) [*a* neg. + Gr. *traumatikos* of or for wounds] not inflicting or causing damage or injury.

Atrax (a'traks) a genus of tarantula-like spiders (funnel-web spiders) of Australia belonging to the family Dipluridae. The venom of *A. robustus*, *A. formidabilis* (tree funnel-web spider), and six other species is harmful to man; *A. robustus* has caused several deaths.

atremia (ah-tre'me-ah) [*a* neg. + Gr. *tremein* to tremble] 1. absence of tremor. 2. hysterical inability to walk.

atrepsy (at'rep-se) [*a* neg. + Gr. *threpsis* nutrition] athrepsia (def. 1).

atreptic (ah-trep'tik) athreptic.

atresia (ah-tre'ze-ah) [*a* neg. + Gr. *trēsis* a hold + *-ia*] congenital absence or closure of a normal body orifice or tubular organ; as esophageal and pulmonary atresia; called also *clausura*. **anal a.**, **a. a'ni**, imperforate anus. **aortic a.**, absence or closure of the aortic root orifice, a rare congenital anomaly in which the left ventricle is hypoplastic or nonfunctioning, oxygenated blood passing from the left into the right atrium through a septal defect, and the mixed venous and arterial blood passing from the pulmonary artery to the aorta by way of a patent ductus. **aural a.**, absence or closure of the external auditory canal. **bili-**

ary a., obliteration or hypoplasia of one or more components of the bile ducts due to arrested fetal development, resulting in persistent jaundice and liver damage ranging from biliary stasis to biliary cirrhosis, with splenomegaly as portal hypertension progresses. **choanal a.**, congenital bony or membranous occlusion of one or both choanae, due to failure of the embryonic bucconasal membrane to rupture. **duodenal a.**, congenital absence or occlusion of a portion of the duodenum, characterized by vomiting a few hours after birth, cessation of bowel movements after one to three days, and usually distention of the epigastrium. It is often associated with Down's syndrome. **esophageal a.**, congenital lack of continuity of the esophagus, commonly associated with tracheoesophageal fistula and characterized by excessive salivation, gagging, vomiting when fed, cyanosis, and dyspnea. **follicular a.**, **a. folliculi**, the degeneration and resorption of an ovarian follicle before it reaches maturity and ruptures. **intestinal a.**, congenital obstruction of the intestine at any level, most commonly of the ileum, due to lack of continuity of the lumen; symptoms vary with the site of obstruction. **a. i'ridis**, closure of the pupillary opening. **mitral a.**, congenital obliteration of the mitral valve orifice; it is associated with hyperplastic left-heart syndrome or transposition of the great vessels. **prepyloric a.**, congenital membranous obstruction of the gastric outlet, characterized by vomiting of gastric contents only. **pulmonary a.**, congenital severe narrowing of the opening between the pulmonary artery and the right ventricle, characterized by cardiomegaly, reduced pulmonary vascularity, and right ventricular atrophy. It is usually associated with tetralogy of Fallot, transposition of the great vessels, or other cardiovascular anomalies. **tricuspid a.**, absence of the orifice between the right atrium and ventricle, circulation being made possible by the presence of an atrial septal defect, blood passing from the right to the left atrium and thence to the left ventricle and aorta. Classification by type is made according to the presence or absence of transposition of the great vessels and of pulmonary stenosis.

atresic (ah-tre'zik) atretic.

atretic (ah-tre'tik) [Gr. *atrētos* not perforated] without an opening; pertaining to or characterized by atresia.

atreto- (ah-tre'to) [Gr. *atrētos* not perforated] a combining form denoting absence of a normal opening; imperforate, or closed.

atretoblepharia (ah-tre'to-blē-fa're-ah) [*atreto-* + Gr. *blepharon* eyelid + *-ia*] symblepharon.

atretocephalus (ah-tre'to-sef'ah-lus) [*atreto-* + Gr. *kephalē* head] a monster lacking the orifices normally present in the head.

atretocormus (ah-tre'to-kor'mus) [*atreto-* + Gr. *kormos* trunk] a fetus or infant having one of the body openings imperforate.

atretocystia (ah-tre'to-sis'te-ah) [*atreto-* + Gr. *kystis* bladder + *-ia*] lack of the normal opening from the bladder.

atretogastria (ah-tre'to-gas'tre-ah) [*atreto-* + Gr. *gastēr* stomach + *-ia*] lack of the normal opening into the stomach.

atretolemia (ah-tre'to-le'me-ah) [*atreto-* + Gr. *laimos* gullet + *-ia*] lack of the normal opening into the larynx or the esophagus.

atretometria (ah-tre'to-me'tre-ah) [*atretro-* + Gr. *mētra* uterus + *-ia*] lack of the normal opening into the uterus.

atretopsia (ah'tre-top'se-ah) [*atreto-* + Gr. *ōps* eye + *-ia*] lack of the normal opening in the iris of the eye.

atretorrhinia (ah-tre'to-rin'e-ah) [*atreto-* + Gr. *rhis* nose + *-ia*] absence of the normal opening into the nose.

atretostomia (ah-tre'to-sto'me-ah) [*atreto-* + Gr. *stoma* mouth + *-ia*] lack of the normal opening into the oral cavity.

atreturethria (ah-tre'tu-re'thre-ah) [*atreto-* + Gr. *ourēthra* urethra + *-ia*] lack of the normal urethral opening.

atria (a'tre-ah) [L.] plural of *atrium*.

atrial (a'tre-al) pertaining to an atrium.

atrichia (ah-trik'e-ah) [*a* neg. + Gr. *thrix* hair + *-ia*] 1. absence of the hair; alopecia. 2. absence of flagella or cilia. **universal congenital a.**, congenital alopecia.

atrichosis (at'ri-ko'sis) (*obs.*) alopecia.

atrichous (ah-trik'us) [*a* neg. + Gr. *thrix* hair] 1. having no flagella; said of bacteria. 2. having no hair.

atrio- (a'tre-o) [L. *atrium* hall] a combining form denoting relationship to an atrium of the heart.

atriocommissuropexy (a'tre-o-kom'i-su'ro-pek'se) [*atrio-* + *commissure* + *-pexy*] fixation of the mitral valve with sutures passed from the ventricle through the valve leaflets and the atrial wall, for correction of mitral insufficiency.

atriomegaly (a'tre-o-meg'ah-le) [*atrio-* + Gr. *megaleios* magni-tude] abnormal dilatation or enlargement of an atrium of the heart.

atrionector (at're-o-nek'tor) [*atrio-* + L. *nector* connector] the sinoatrial node.

atrioseptopexy (a'tre-o-sep'to-pek'se) [*atrio-* + *septum* + Gr. *pēxis* a fixing, putting together] surgical repair of a defect in the interatrial septum.

atrioseptoplasty (a'tre-o-sep'to-plas'te) plastic repair of the interatrial septum.

atriotomy (a'tre-ot'o-me) [*atrio-* + Gr. *tomē* a cutting] surgical incision of an atrium of the heart.

atrioventricular (a'tre-o-ven-trik'u-lar) pertaining to an atrium of the heart and to a ventricle.

atrioventricularis communis (a'tre-o-ven-trik'u-la'ris kō-mu'nis) a congenital cardiac anomaly in which the endocardial cushions fail to fuse, the ostium primum persists, the atrioventricular canal is undivided, a single atrioventricular valve has anterior and posterior cusps, and there is a defect of the membranous interventricular septum. Called also *persistent common atrioventricular canal*.

atriplicism (ah-trip/li-sizm) poisoning produced by eating a kind of spinach, *Atriplex littoralis*.

atrium (a'tre-um), pl. *a'tria* [L.; Gr. *atrion* hall] a chamber; used in anatomical nomenclature to designate a chamber affording entrance to another structure or organ. Usually used alone to designate an atrium of the heart (a. cordis). **common a.**, the single atrium found in a form of three-chambered heart. **a. cor'dis** [NA], one of the pair of smaller cavities of the heart, with thin muscular walls, from which the blood passes to the ventricles; see *a. dextrum* and *a. sinistrum*. **a. dex'trum** [NA], right atrium: the atrium of the right side of the heart; it receives blood from the superior and the inferior vena cava, and delivers it to the right ventricle. **a. glot'tidis**, **a. of glottis**, vestibulum laryngis. **a. laryn'gis**, **a. of larynx**, vestibulum laryngis. **left a.**, *a. sinistrum*. **a. mea'tus me'dii** [NA], a. of middle meatus of nose: a depression in front of the middle nasal meatus, between the agger nasi and the middle nasal concha. **a. pulmona'le**, **pulmonary a.**, 1. atrium sinistrum. 2. respiratory atrium. **respiratory a.** (obs.), the expanded cavity at the end of an alveolar duct, into which the alveolar sacs open; called also *a. pulmonale* or *pulmonary a.* **right a.**, *a. dextrum*. **a. sinis'trum** [NA], left atrium: the atrium of the left side of the heart; it receives blood from the pulmonary veins, and delivers it to the left ventricle. Called also *a. pulmonale* and *pulmonary a.* **a. vagi'nae**, vestibulum vaginae.

Atromid-S (at'ro-mid) trademark for a preparation of clofibrate.

Atropa (at'ro-pah) [Gr. *Atropos* "undeviating," one of the Fates] a genus of solanaceous plants, from which various alkaloids are derived, including atropine, hyoscyamine, and scopolamine, which generally possess anticholinergic properties. The genus includes *A. belladonna* and *A. belladonna* var. *acuminata*. See *belladonna*.

atrophedema (ah-trof'ē-de'mah) [*atrophy* + *edema*] a chronic hereditary disease probably of angioneurotic origin.

atrophia (ah-tro'fe-ah) [L.; Gr., from *a neg.* + Gr. *trophē* nourishment] atrophy. **a. bul'bi**, atrophy and fibrosis of all components of the globe of the eye resulting from uveitis. **a. bul-bo'rum heredita'ria**, Norrie's disease. **a. cer'e'brī seni'lis sim'plex**, senile dementia in which there is marked atrophy of the brain associated with conspicuous loss of neurons and abundant lipochrome in those that survive. **a. choro'i deae et ret'inae**, atrophy of the choroid and retina, formerly associated with night blindness. **a. cu'tis**, **a. cu'tis idio-path'ica**, atrophoderma. **a. cu'tis seni'lis**, senile atrophy of the skin. **a. doloro'sa**, atrophy of the eyeball accompanied by violent attacks of pain. **a. infan'tum** (obs.), tabes mesenterica. **a. maculo'sa cu'tis** (Jadassohn), anetoderma. **a. mesenter'ica** (obs.), tabes mesenterica. **a. musculo'rum lipomato'sa**, pseudohypertrophic muscular dystrophy. **a. pilo'rum pro'pria**, atrophy of the hair. **a. seni'lis**, atrophy accompanying old age. **a. stria'ta et maculo'sa**, cutaneous atrophy occurring in white, shining, depressed lines or spots. **a. testic'uli**, wasting of the testis. **a. un'guium**, atrophy of the nails.

atrophic (ah-trof'ik) pertaining to or characterized by atrophy.

atrophia (at'ro-fe) [Fr.] atrophy. **a. blanche** (blahnsh) [Fr. "white atrophy"], a condition marked by areas of atrophy, sometimes with painful and tender ulceration, and vesicular, bullous, or hemorrhagic lesions, eventuating in characteristic whitened plaques, usually on legs and ankles, of middle-aged or older women, with varicosities and associated cutaneous changes. **a. noir** (nwahr) [Fr. "black atrophy"], a condition characterized by ulcers surrounded by areas of blue-black pigmentation on the ankles, the pigmentation occurring after recurrent attacks of dermatitis with ulceration.

atrophied (at'ro-fēd) marked by atrophy; shrunken.

atrophoderma (at'ro-fo-der'mah) [Gr. *atrophia* want of nourishment + *derma* skin] atrophy of the skin or of any part of it; called also *atrophia cutis*. **a. biotrip'ticum**, senile atrophy of the skin. **a. diffu'sum** (obs.), acrodermatitis chronica atrophicans. **idiopathic a. of Pasini and Pierini**, a condition observed in youths and young adults, affecting chiefly the trunk and back, with variously sized pale, bluish, violaceous, or brownish blue depressions, histologically there is edema of collagen bundles of the deep part of the cutis, with loss of elastic tissue in this area. **a. macula'tum**, a condition characterized by atrophic changes in the skin and the formation of macules which gradually fade, leaving shiny white depressed spots; it may occur as a primary condition or be secondary to other diseases. **a.**

neurit'icum, a painful condition of the skin resulting from injury to the nerves, characterized by profuse perspiration and smooth, glossy, pink, ruddy, or blotched appearance. **a. pig-mento'sum** (obs.), xeroderma pigmentosum. **a. reticula'tum symmet'ricum facie'i** (obs.), folliculitis ulerythematosia reticulata. **a. seni'le** (obs.), a weatherbeaten condition of the skin common in the aged, with dyspigmentation, telangiectasia, loss of elasticity, and dryness with fine scaling. **a. ver-micula're** (obs.), folliculitis ulerythematosia reticulata.

atrophodermatosis (at-ro'fo-der-mah-to'sis) any skin disease having cutaneous atrophy as a prominent symptom.

atrophy (at'ro-fe) [L., Gr. *atrophia*] 1. a wasting away; a diminution in the size of a cell, tissue, organ, or part. See also *atrophia* and *atrophia*. 2. to undergo atrophy, or to cause atrophy. **acute yellow a.**, a pathological term describing the shrunken, yellow liver of patients who have suffered from fulminant hepatitis with massive necrosis of the liver. It is an uncommon, usually fatal complication of viral hepatitis, or it may be due to toxic hepatitis, as that resulting from ingestion of carbon tetrachloride, fluorinated hydrocarbons, or *Amanita phalloides*. Called also *acute parenchymatous hepatitis*, *Budd's jaundice*, *malignant jaundice*, *massive hepatic necrosis*, and *Rokitansky's disease*. See also *postnecrotic cirrhosis*, under *cirrhosis* and *fulminant hepatitis*, under *hepatitis*. **Aran-Duchenne muscular a.**, spinal muscular a. **arthritic a.**, wasting of the muscles and bone that surround a joint, due to injury or to constitutional disease. **black a.**, atrophie noir. **blue a.**, a blue pigmentation that sometimes follows self-injection of drugs by individuals addicted to their use. **bone a.**, resorption of bone evident both in external form and in internal density. Cf. *osteoporosis*. **brown a.**, atrophy in which the affected viscus assumes a brownish hue, due to intracellular accumulation of lipofuscin; it is seen chiefly in the heart, liver, and spleen of the aged. **Buchwald's a.** (obs.), progressive atrophy of the skin. **Charcot-Marie a.**, **Charcot-Marie-Tooth a.**, progressive neuropathic (peroneal) muscular a. **circumscribed a. of brain**, lobar a. **compensatory a.**, atrophy, particularly of an endocrine organ, following excessive exogenous supply of its normal secretion or excessive secretion by its paired organ. **compression a.**, atrophy of a part due to constant pressure. **concentric a.**, atrophy of a hollow organ in which its cavity is contracted. **convol-utional a.**, lobar a. **correlated a.**, the wasting of a part following the destruction or removal of a correlated part. **corticostriatospinal a.**, Creutzfeldt-Jakob syndrome. **Cru-veilhier's a.**, spinal muscular atrophy. **degenerative a.**, the wasting of a part due to a degeneration of its cells. **Dejerine-Sottas type of a.**, progressive hypertrophic interstitial neuropathy. **Dejerine-Thomas a.**, olivopontocerebellar a. **denervated muscle a.**, muscular atrophy resulting from severance of the motor nerve supplying the muscle. **dental a.** (obs.), erosion of the teeth. **a. of disuse**, wasting caused by lack of normal exercise of a part. **Duchenne-Aran muscu-lar a.**, spinal muscular a. **eccentric a.**, atrophy of a hollow organ in which the size of the cavity is increased. **Eich-horst's a.**, the femorotibial form of progressive muscular atrophy with contraction of the toes; called also *Eichhorst's type*. **endocrine a.**, atrophy in organs that are dependent upon endo-crine stimulation for the maintenance of their normal structure, occurring when their tropic hormone stimulation diminishes or is absent. **endometrial a.**, atrophy of the endometrium occur-ring physiologically at menopause or pathologically before meno-pause, and accompanied by absence of menstrual flow and shrinkage of the uterus. **Erb's a.**, pseudohypertrophic muscu-lar dystrophy. **exhaustion a.**, atrophy of an endocrine organ caused by prolonged overwork of that organ. **facial a.**, progressive unilateral facial a. **facioscapulohumeral mus-cular a.**, Landouzy-Dejerine dystrophy. **familial spinal muscular a.**, Werdnig-Hoffmann paralysis. **fat replace-ment a.**, the destruction of subcutaneous fat and its replacement by inflammatory cells, as in erythema induratum; called also *wucher a.* **fatty a.**, fatty infiltration following atrophy of the tissue elements of a part; called also *adipositas ex vacuo*. **Fazio-Londe a.**, progressive bulbar paralysis in children; see *bulbar paralysis*, under *paralysis*. **Fuchs's a.**, peripheral at-rophy of the optic nerve. **gastric a.**, a condition in which the thickness of the mucosa of the stomach is greatly reduced, with complete or almost complete disappearance of the gastric and pyloric glands and their replacement by simple mucus-secreting epithelium and by extensive intestinal metaplasia. **granular a. of kidney**, chronic interstitial inflammation of the kidney producing compression and atrophy of the parenchyma. **gray a.**, secondary optic a. **gyrate a. of choroid and retina**, a rare, hereditary, slowly progressive atrophy of the choroid and pigment epithelium of the retina marked by ring-shaped areas of thinning in the periphery of the fundus which enlarge and become confluent, resulting in tunnel vision; night blindness and other disturbances of vision follow. It is inherited as an autosomal recessive trait. **healed yellow a.**, postnecrotic cirrhosis. **hemifacial a.**, atrophy of one side of the face. **hemiling-u-al a.**, atrophy of one side of the tongue. **Hoffmann's a.**, Werdnig-Hoffmann paralysis. **Hunt's a.**, neuropathic atrophy of the small muscles of the hand unattended by sensory distur-

bance. **idiopathic muscular a.**, progressive muscular dystrophy. **infantile a.**, marasmus. **inflammatory a.**, atrophy of the functioning part of an organ caused by overgrowth of the fibrous elements from inflammation. **interstitial a.**, absorption of the mineral matter of bones, so that only the reticulated portion remains. **a. of iris, essential**, a progressive disease of unknown etiology, marked by patchy degeneration and disappearance of the iris stroma followed by loss of epithelium and formation of holes in the iris; it is associated with severe glaucoma. **ischemic muscular a.**, Volkmann's contracture. **Jadassohn's macular a.**, see *anetoderma*. **juvenile muscular a.**, pseudohypertrophic muscular dystrophy. **lactation a.**, hyperinvolution of the uterus which may follow prolonged lactation. **Landouzy-Dejerine a.**, Landouzy-Dejerine dystrophy. **leaping a.**, progressive muscular atrophy beginning in the hand and extending to the shoulder without affecting the muscles of the arm. **Leber's optic a.**, a hereditary disorder of males characterized by bilateral progressive optic atrophy, with onset usually at about the age of twenty. It is thought to be an X-linked trait. **linear a.**, atrophy of the papillary layer of the skin, causing the appearance of blue and white lines. **lobar a.**, progressive atrophy of the cerebral convolutions in a limited area (lobe) of the brain, marked by progressive degeneration of the higher faculties and by the gradual development of aphasia; called also *circumscribed a. of brain* and (*Pick's convolutional a.* **macular a.**, *anetoderma*. **muscular a.**, a wasting of muscle tissue; there are many kinds and causes. See also *spinal muscular a.* **myelopathic muscular a.**, muscular atrophy due to lesion of the spinal cord, as in spinal muscular atrophy. **myopathic a.**, muscular atrophy due to disease of the muscle tissue. **neural a.**, neuropathic. **neuritic muscular a.**, neuropathic. **neuropathic a.**, atrophy of muscular tissue due to disease of the peripheral nervous system; called also *neural a.* **neurotic a.**, neuropathic. **neurotrophic a.**, atrophy attributed to destruction of the peripheral neurons that maintain the nutrition of a tissue. **numeric a.**, atrophy due to diminution in the number of the constituent elements of a tissue, as well as shrinkage of those that remain. **olivopontocerebellar a.**, atrophy affecting the cerebellar cortex, the middle peduncles, and the inferior olivary bodies. **optic a.**, atrophy of the optic disk resulting from degeneration of the nerve fibers of the optic nerve and optic tract. **optic a., primary**, a form in which the optic disk is characterized by sharp margins, enlarged physiologic cup, enhanced visibility of the lamina cribrosa, and a white color. **optic a., secondary**, a form in which the optic disk is characterized by blurred margins, poor visibility of the lamina cribrosa, filling-in of the physiologic cup, and gray-white glial tissue on its surface and along its blood vessels; called also *gray a.* **pallid a.**, juvenile paralysis agitans (of Hunt); see under *paralysis*. **Parrot's a. of the newborn**, primary infantile atrophy or marasmus. **pathologic a.**, a decrease in the size of tissues or organs beyond the range of normal variability. **peroneal a.**, progressive neuropathic (peroneal) muscular. **physiologic a.**, atrophy which affects certain organs in all individuals as part of the normal aging process. **Pick's convolutional a.**, lobar sclerosis. **pigmentary a.**, wasting marked by the deposit of pigment in the atrophied cells. **postmenopausal a.**, atrophy of various tissues, such as the genital mucosa, occurring after menopause. **post-traumatic a. of bone**, post-traumatic osteoporosis. **pressure a.**, decrease in the size of a tissue cell caused by excessive pressure. **progressive choroidal a.**, choroideremia. **progressive muscular a.**, spinal muscular. **progressive neural muscular a.**, progressive neuromuscular. **a.**, progressive neuropathic (peroneal) muscular. **progressive neuropathic (peroneal) muscular a.**, a hereditary form of muscular atrophy, beginning in the muscles supplied by the peroneal nerves, progressing slowly to involve the muscles of the hands and arms. Called also *peroneal a.*, *Charcot-Marie-Tooth a.* or *disease*, *Charcot-Marie type*, *Tooth type*, and *progressive neural muscular (neuromuscular) a.* **progressive spinal muscular a.**, spinal muscular. **progressive unilateral facial a.**, an affection attended by progressive wasting of the skin, tissues, and bone, often of the muscles of one side of the face. **pseudohypertrophic muscular a.**, pseudohypertrophic muscular dystrophy. **pulp a.**, a degenerative state of the dental pulp characterized by a decrease of cellular elements. **receptoric a.**, a condition assumed to be due to atrophy of the cell receptors; animals kept immune by repeated injections of an antigen sometimes cease to respond by the formation of antibodies. **red a.**, atrophy, mainly of the liver, due to chronic congestion from valvular heart disease. **reversionary a.**, anaplasia. **rheumatic a.**, atrophy of muscles after an attack of rheumatism. **Schweninger-Buzzi macular a.**, see *anetoderma*. **senile a.**, the normal atrophy of old age. **serous a.**, atrophy with the effusion of a serous fluid into the wasted tissues; wasting of fat. **simple a.**, atrophy due to a shrinkage in size of individual cells. **spinal muscular a.**, a progressive degenerative disease of the motor cells of spinal cord. Beginning usually in the small muscles of the hands, but in some cases (scapulohumeral type) in those of the upper arm and shoulder, the atrophy progresses slowly to the muscles of the lower extremity. Called

also *Aran-Duchenne muscular a.*, *Aran-Duchenne disease*, *Duchenne-Aran muscular a.*, *Duchenne-Aran disease*, *Cruveilhier's disease*, *Duchenne's disease*, and *progressive spinal muscular a.* **subacute yellow a.**, submassive necrosis of the liver associated with broad zones of necrosis, due to viral, toxic, or drug-induced hepatitis; it may have an acute course with death occurring after several weeks of liver failure, or clinical recovery may be associated with regeneration of the parenchymal cells. **Sudeck's a.**, posttraumatic osteoporosis. **Tooth's a.**, progressive neuropathic (peroneal) muscular atrophy. **toxic a.**, atrophy of an organ in the course of infectious diseases. **tropho-neurotic a.**, atrophy due to disease of the nerves or of a center supplying a part. **unilateral facial a.**, progressive unilateral facial. **vascular a.**, progressive loss of substance in cells and organs when the blood supply to that organ or tissue becomes reduced below a critical level. **von Leber's a.**, Leber's optic. **Vulpian's a.**, scapulohumeral type of spinal muscular atrophy. **Werdnig-Hoffmann a.**, see under *paralysis*. **white a.**, 1. atrophy of a nerve, leaving only white connective tissue. 2. atrophie blanche. **wucher a.**, fat replacement. **yellow a.**, acute yellow. **Zimmerlin's a.**, a hereditary form of progressive muscular atrophy, beginning in the upper part of the body; called also *Zimmerlin's type*.

atropine (at'ro-pēn) [USP] chemical name: *endo-(+)-α-(hydroxymethyl)benzeneacetic acid 8-methyl-8-azabicyclo[3.2.1]oct-3-yl ester*. An alkaloid, $C_{17}H_{23}NO_3$, derived from species of belladonna, hyoscyamus, or stramonium, or produced synthetically, and occurring as white crystals, usually needle-like, or as a white, crystalline powder. Atropine is an anticholinergic and is used chiefly as an antispasmodic to relax smooth muscles; to relieve the tremor and rigidity of parkinsonism; to increase the heart rate by blocking the vagus nerve; as an antidote for various toxic and anticholinesterase agents; and as an antisecretory, mydriatic, and cycloplegic. **a. methonitrate**, **a. methylnitrate**, methylnitropine nitrate. **a. oxide hydrochloride**, a salt of atropine, having the same actions as atropine. **a. sulfate** [USP], colorless crystals or white, crystalline powder, $(C_{17}H_{23}NO_3)_2 \cdot H_2SO_4 \cdot H_2O$, having the same actions as the base; administered parenterally and orally as an anticholinergic, intravenously as a cholinesterase inhibitor, and applied topically to the conjunctiva as a cycloplegic and mydriatic.

atropinic (at'ro-pin'ik) having actions similar to atropine, that is, antagonizing the muscarinic effects of acetylcholine.

atropinism (at'ro-pin-izm) poisoning caused by ingestion of atropine or belladonna or parts or preparations of any of the plants from which the drugs are derived; the symptoms include excessive dryness of the mouth and throat, dilation of the pupils, fever, rapid pulse, flushing of the face, confusion, mania, and hallucinations, and sometimes a skin rash.

atropinization (at-ro'pin-i-za'shun) subjection to the influence of atropine.

atropism (at'ro-pizm) atropinism.

Atropisol (at'ro-pī-sol) trademark for preparations of atropine sulfate.

A.T.S. antitetanic serum (tetanus antitoxin); anxiety tension state.

attachment (ah-tach'ment) 1. the state of being fixed or attached. 2. the means or device by which something is fixed or stabilized. In dentistry, anything, as a clasp, retainer, or artificial crown, that is used to stabilize or to attach a partial denture to a natural tooth in the mouth. **epithelial a. (of Gottlieb)**, the attachment of the oral epithelium (a continuation of the gingiva) to the tooth, forming a peripheral seal around the part of the tooth exposed to the oral cavity. **frictional a.**, **internal a.**, **key-and-keyway a.**, **parallel a.**, **precision a.**, **precision a.**, an attachment used in fixed and removable partial dentures, consisting of closely fitting male and female parts, the latter usually inserted in the crown of the abutment tooth; the denture is maintained precisely because of the friction or resistance between the parallel surfaces of the two parts forming the attachment. Called also *frictional a.*, *internal a.*, *key-and-keyway a.*, *parallel a.*, and *slotted a.* **slotted a.**, precision a.

attack (ah-tak') an episode or onset of illness. **transient ischemic a's**, brief attacks (from a few minutes to hours) of cerebral dysfunction of vascular origin, with no persistent neurological deficit; they are most commonly associated with occlusive vascular disease, especially in the distribution of the carotid and vertebral-basilar systems. **vagal a.**, **vasovagal a.** **vasovagal a.**, a transient vascular and neurogenic reaction marked by pallor, nausea, sweating, bradycardia, and rapid fall in arterial blood pressure which, when below a critical level, results in loss of consciousness and characteristic electroencephalographic changes. It is most often evoked by emotional stress associated with fear or pain. Called also *vasovagal* or *vasodepressor syncope*, and *Gower's syndrome*.

attar (at'ar) [Persian "essence"] any essential or volatile oil of vegetable origin. **a. of roses**, rose oil.

attention (ah-ten'shun) 1. selective awareness of a part or aspect of the environment. 2. selective responsiveness to one class of stimuli.

attenuant (ah-ten'-u-ant) 1. causing thinness, as of the blood. 2. a medicine that thins the blood.

attenuate (ah-ten'-u-ät) [L. *attenuare* to thin] 1. to render thin. 2. to render less virulent; see *attenuation*, def. 2.

attenuation (ah-ten'-u-a'shun) [L. *attenuatio*, from *ad* to + *tenuis* thin] 1. the act of thinning or weakening. 2. the alteration of the virulence of a pathogenic microorganism by passage through another host species, decreasing the virulence of the organism for the native host and increasing it for the new host. 3. the process by which a beam of radiation is reduced in energy when passed through tissue or other material. Cf. *absorption*, def. 3.

Attenuvac (ah-ten'-u-vak) trademark for a preparation of live attenuated measles virus vaccine.

attic (at'ik) [L. *atticus*] the superior part of the tympanic cavity, above the level of the tympanic membrane; called also *recessus epitympanicus* [NA], *epitympanum*, and *attic of middle ear*.

atticitis (at'i-ki'tis) inflammation of the attic.

atticoantrotomy (at'i-ko-an-trot'o-me) the operation of opening the mastoid antrum and the attic of the middle ear; called also *antrotatticotomy*.

atticostoid (at'i-ko-mas'toid) pertaining to the attic and the mastoid process of the temporal bone.

atticotomy (at'i-kot'o-me) [*attic* + Gr. *temnein* to cut] the surgical opening of the attic. **transmeatal a.**, removal through the external auditory meatus of the outer wall of the attic.

attitude (at'i-tüd) [L. *attitudo* posture] 1. a posture or position of the body. In obstetrics, the relation of the various parts of the fetal body to one another, the normal attitude being one of moderate flexion of all the joints, with the back curved forward, the head slightly bent on the chest, and the arms and legs free to move in all natural directions (*habitus*). 2. a tendency to respond positively or negatively to other individuals, institutions, or programs of activity. **a. of combat** [Fr. *attitude de combat*], the stiff defensive position of the corpse of one burned to death in a conflagration. **crucifixion a.**, rigidity of the body, with the arms extended at right angles; seen in hysteroepilepsy and in catatonia. **deflexion a.**, the condition early in labor in which the fetal head lies over the pelvic inlet, the large fontanel is lower than the small one or is even with the root of the nose, and the eyes are palpable. **Devergie's a.**, the posture of a dead body marked by flexed elbows and knees and with closed fingers and extended ankles. **discobolus a.**, a position resembling that of a discus thrower, caused by stimulation of the semicircular canals. **forced a.**, an abnormal position or attitude due to some disease, such as is seen in meningitis or as the result of contractures. **illogical a's**, the strange and grotesque attitudes assumed by those suffering from hysteroepilepsy. **a. passionnelle, passionate a.**, the dramatic or theatrical expression or gesture often assumed by hysterical patients. **stereotyped a.**, an attitude assumed and maintained for a long time, a phenomenon often seen in mental disease.

atto- [Danish *atten* eighteen] a prefix signifying one quintillionth, or 10^{-18} .

attollens (ah-tol'eniz) [L.] lifting up. **a. au'rum** (*obs.*), musculus auricularis superior.

attractant (ah-trak'tant) [L. *attrahere* to draw toward] a substance that exerts an attracting influence, such as one used to attract insect or animal pests to traps or to poisons.

attraction (ah-trak'shun) [L. *tractio*] 1. the force, act, or process that draws one body toward another. 2. in dentistry and anthropology, malocclusion in which the occlusal plane is closer than normal to the eye-ear plane; it causes shortening of the face. Cf. *abstraction*, def. 3. **a. of affinity**, chemical **a. capillary a.**, the force that attracts the particles of a fluid into and along the caliber of a tube. **chemical a.**, the tendency of atoms of one element to unite with those of another; called also *a. of affinity*. **electric a.**, the tendency of bodies bearing opposite electric charges to move toward each other. **magnetic a.**, the tendency of bodies possessing circulating electric currents to move toward each other.

attractans (at'rah-henz) [L.] drawing toward. **a. au'rum** (*obs.*), musculus auricularis anterior.

attractin (ah-trak'sin) Fischer's name for supposed specific bodies existing in solutions which, when the solution is injected into the tissues, exert a chemotactic influence on the epithelial cells.

attrition (ah-trish'un) [L. *attritio* a rubbing against] the physiologic wearing away of a substance or structure (such as the teeth) in the course of normal use.

at. vol. atomic volume.

At. wt. atomic weight.

atypia (a-tip'e-ah) the condition of being irregular or not conforming to type.

atypical (a-tip'i-kal) [a neg. + Gr. *typos* type or model] irregular; not conformable to the type; in microbiology, applied specifically to strains of unusual type.

atypism (a-tip'izm) atypia.

A. U. Angström unit; aures unitas (both ears together) or auris uterque (each ear).

Au chemical symbol for gold (L. *au'rum*); abbreviation for Australian antigen (see under *antigen*).

Au-antigenemia (an'ti-jē-ne'me-ah) the presence of Australian antigen in the blood.

Aub-Dubois table (awb-doo-bois') [Joseph Charles Aub, Boston physician, born 1890; Eugene Floyd Dubois, New York physician, 1882-1953] see under *table*.

Aubert's phenomenon (o-bärz') [Hermann Aubert, German physiologist, 1826-1892] see under *phenomenon*.

Auchmeromyia (awk'mer-o-mi'yah) a genus of flies of the family Calliphoridae. **A. luteola**, a fly of the Congo and Nigeria having a blood-sucking larva known as the Congo floor maggot; called also *Musca luteola*.

audile (aw'dil) pertaining to hearing; a term applied to that type of mentality which recalls most easily that which has been heard.

audioanalgesia (aw'de-o-an'al-je'ze-ah) alleged reduction or abolition of pain accomplished by listening, through a stereophonic head set, to recorded music to which may be added a background sound, so-called "white noise."

audiogenic (aw'de-o-jen'ik) produced by sound.

audiogram (aw'de-o-gram') [L. *audire* to hear + Gr. *gramma* a writing] a record of the thresholds of hearing of an individual for various sound frequencies. **cortical a.**, a graphic representation of the result of cortical audiometry.

audiologist (aw'de-o-l'o-jist) a person skilled in audiology, including the rehabilitation of those whose impaired hearing cannot be improved by medical or surgical means.

audiology (aw'de-o-l'o-je) [L. *audire* to hear + *-logy*] the science of hearing, particularly the study of impaired hearing that cannot be improved by medication or surgical therapy.

audiometer (aw'de-om'e-ter) [L. *audire* to hear + Gr. *metron* measure] an electronic device that produces acoustic stimuli of known frequency and intensity for the measurement of hearing. **evoked response a.**, an instrument that detects response to sound stimuli by changes in the electroencephalogram.

audiometric (aw'de-o-met'rik) pertaining to the measurement of hearing, as by means of an audiometer.

audiometrician (aw'de-o-mē-trish'an) a technician specializing in the measurement of hearing ability (audiometry).

audiometry (aw'de-om'e-tre) measurement of hearing, as by means of an audiometer. **Békésy a.**, audiometry in which the patient, by pressing a signal button, traces his monaural thresholds for pure tones: the intensity of the tone decreases as long as the button is depressed and increases when it is released. Both continuous and interrupted tones are used. **cortical a.**, an objective method of determining auditory acuity by recording and averaging electric potentials evoked from the cortex of the brain in response to stimulation by pure tones. **electrocochleographic a.**, measurement of electrical potentials from the middle ear or external auditory canal (cochlear microphonics and eighth nerve action potentials) in response to acoustic stimuli. **electrodermal a.**, audiometry in which the subject is conditioned by harmless electric shock to pure tones; thereafter he anticipates a shock when he hears a pure tone, the anticipation resulting in a brief electrodermal response, which is recorded. The lowest intensity at which the response is elicited is taken to be his hearing threshold. **localization a.**, a technique for measuring the capacity to locate the source of a pure tone received binaurally in a sound field. **pure tone a.**, audiometry utilizing pure tones that are relatively free of noise and overtones. **speech a.**, that in which the threshold of speech perception (speech reception threshold) in decibels and the ability to understand speech (speech discrimination) are measured.

audiovisual (aw'de-o-vizh'u-al) simultaneously stimulating, or pertaining to simultaneous stimulation of, the senses of both hearing and sight.

audition (aw-dish'un) [L. *auditiō*] the act of hearing; ability to hear. **chromatic a.**, **a. colorée**, a sensation of color produced by sound; a variety of chromesthesia. **gustatory a.**, a condition in which certain sounds call up a sensation of taste.

auditive (aw'di-tiv) a person in whom the prime sense is hearing.

audiotognosis (aw'di-tog-no'sis) [L. *auditiō* hearing + Gr. *gnōsis* knowledge] the sense by which sounds are understood and interpreted.

auditory (aw'di-to're) [L. *auditorius*] pertaining to the sense of hearing.

Audouin's microsporon (ow-doo-anz') [Jean-Victor Audouin, Parisian physician, 1797-1841] *Microsporum audouini*.

Auenbrugger's sign (ow-en-broog'erz) [Leopold Elder von Auenbrugger, Austrian physician, 1722-1809] see under *sign*.

Auer's bodies (ow'erz) [John Auer, American physician, 1875-1948] see under *body*.

Auerbach's ganglion, plexus (ow'er-bahks) [Leopold Auerbach, German anatomist, 1828-1897] see under *ganglion*, and see *plexus myentericus*.

Aufrecht's sign (owf'rekhts) [Emanuel Aufrecht, German physician, 1844–1933] see under *sign*.

augmentor (awg-men'tor) 1. increasing; a term applied to nerves or nerve cells concerned in increasing the size and force of heart contractions. 2. a substance supposed to increase the action of an auxetic.

agnathus (awg-na'thus) [Gr. *au* again + *gnathos* jaw] a monster with a double lower jaw.

Aujeszký's disease (aw-jes'kēz) [Aladár Aujeszký, Hungarian physician, 1869–1933] pseudorabies.

aula (aw'lah) [L.; Gr. *aulē* hall] 1. (obs.) the anterior end of the third ventricle of the cerebrum. 2. the red erythematous areola formed about the periphery of the vesicle of the vaccination lesion.

auliplexus (aw-lē-plek'sus) [*aula* + *plexus*] (obs.) a part of the choroid plexus within the *aula* (def. 1).

aulix (aw'liks) [L. "furrow"] (obs.) sulcus hypothalamicus.

aura (aw'rah), pl. *aurae* [L. "breath"] a subjective sensation or motor phenomenon that precedes and marks the onset of a paroxysmal attack, such as an epileptic attack (Galen). **a. asthmatica**, premonitory symptoms preceding an attack of bronchial asthma. **auditory a.**, an auditory sensation that sometimes precedes an attack of epilepsy. **electric a.**, a breezy sensation experienced on the receipt of a discharge of static electricity. **epigastric a.**, an uncomfortable sensation in the epigastrium that sometimes precedes an epileptic attack. **epileptic a.**, a sensation that sometimes gives warning of an approaching attack of epilepsy. **a. hysterica**, an aura like that preceding an epileptic attack sometimes experienced by hysterical patients. **intellectual a.**, a dreamy condition that sometimes precedes an attack of epilepsy; called also *reminiscent a.* **kinesthetic a.**, a sensation of movement of some part of the body, with or without such actual movement. **motor a.**, movement that precedes an epileptic attack. **a. procursiva**, a spell of running that precedes an epileptic attack. **reminiscent a.**, intellectual a. **a. vertiginosa**, a sudden attack of vertigo.

aural (aw'ral) [L. *auralis*] 1. pertaining to or perceived by the ear, as an aural stimulus. 2. pertaining to or of the nature of an aura.

auranofin (aw-rān'o-fin) chemical name: (2,3,4,6-tetra-*O*-acetyl-1-thio-β-D-glucopyranosato-S)(triethylphosphine)gold; an antirheumatic, C₂₀H₃₄AuO₈PS.

aurantia (aw-ran'she-ah) an orange coal tar stain, the ammonium salt of hexanitrodiphenylamine, C₆H₅(NO₂)₃·N·C₆H₂(NO₂)₂·N·O·O·NH₄; used in staining mitochondria.

aurantiamarin (aw-ran'te-am'ah-rin) a glycoside from orange peel.

aurantiasis (aw'ran-ti'ah-sis) [L. *aurantium* orange + *-iasis*] carotenemia.

Aurelia (aw-rel'i-ah) a genus of large discophorous jellyfish found in Atlantic, Indian, and Pacific waters; nematocysts of many of the larger forms can penetrate the human skin and produce intense pain.

Aureobasidium (aw-re'o-bah-sid'i-um) a genus of imperfect fungi of the family Dematiaceae, order Moniliales, which produce black yeastlike cells; called also *Pullularia*. **A. pul'lulans**, a common soil organism and contaminant; called also *Pullularia pullans*.

aureolin (aw-re'o-lin) a yellow dye.

Aureomycin (aw're-o-mi'sin) trademark for preparations of crystalline chlortetracycline hydrochloride.

aures (aw'rēz) [L.] plural of *auris*.

auriasis (aw-ri'ah-sis) chrysiasis.

auric (aw'rik) pertaining to or containing gold.

auricle (aw'rē-kl) [L. *auricula* a little ear] 1. the portion of the external ear not contained within the head; the pinna, or flap of the ear. Called also *auricula*. 2. auricula atri. The term *auricle* was formerly used to designate an atrium of the heart. **cervical a.**, a flap of skin and yellow cartilage sometimes seen on the side of the neck at the external opening of a persistent branchial cleft. **left a. of heart**, auricula atri sinistri. **right a. of heart**, auricula atri dextri.

auricula (aw-rik'u-lah), pl. *auriculæ* [L., dim. of *auris*] a little ear; the NA term for the portion of the external ear not contained within the head; the pinna, or flap of the ear. Called also *ala auris* and *auricle*. Applied also to the ear-shaped appendage of either atrium of the heart (*auricula atri*), and formerly used as a synonym for the atrium (*atrium cordis*). **a. a'trii** [NA], the ear-shaped appendage of either atrium of the heart; called also *atrial appendage*. **a. a'trii dex'tri** [NA], the ear-shaped appendage of the right atrium of the heart. **a. a'trii sinis'tri** [NA], the ear-shaped appendage of the left atrium of the heart. **a. cor'dis**, a. atri. **a. dex'tra cor'dis**, a. atri dextri. **a. sinis'tra cor'dis**, a. atri sinistri.

auriculæ (aw-rik'u-le) [L.] plural of *auricula*.

auricular (aw-rik'u-lar) [L. *auricularis*] pertaining to an auricle or to the ear, and, formerly, to an atrium of the heart.

auriculare (aw-rik'u-la're) [L. *auricularis* pertaining to the ear] a craniometric point at the top of the opening of the external auditory meatus.

auricularis (aw'rik-u-la'ris) [L.] pertaining to the ear; auricular.

auriculocranial (aw-rik'u-lo-kra'ne-al) pertaining to an ear and the cranium.

auriculotemporal (aw-rik'u-lo-tem'pō-ral) pertaining to an ear and the temporal region.

auriculoventricular (aw-rik'u-lo-ven-trik'u-lar) a former term for atrioventricular.

aurid (aw'rid) [L. *aurum* gold] a skin eruption produced by the systemic administration of gold salts.

auriform (aw'ri-form) ear-shaped.

aurin (aw'rin) chemical name: 4-[bis(*p*-hydroxyphenyl)methylene]-2,5-cyclohexdien-1-one. A triphenylmethane derivative, C₁₈H₁₄O₃, occurring as deep red masses with a greenish metallic luster; used as an indicator and dye intermediate. Called also *pararosolic acid*, *rosolic acid*, and *corallin*.

aurinarium (aw'ri-na're-um) a medicated suppository for insertion onto the external auditory meatus.

aurinasal (aw'rī-na'zal) pertaining to the ear and the nose.

auriphone (aw'rī-fōn) [L. *auris* ear + Gr. *phōnē* voice] a form of ear trumpet in which the sound conveyed is amplified.

auripigment (aw'rī-pig'ment) arsenic trisulfide.

auris (aw'ris), pl. *aurēs* [L.] [NA] the ear; the organ of hearing. See Plate XVI. **a. exter'na** [NA], external ear: the portion of the auditory organ comprising the auricle and the external acoustic meatus. **a. inter'na** [NA], internal ear: the labyrinth, comprising the vestibule, cochlea, and semicircular canals; called also *inner ear*. **a. me'dia** [NA], middle ear: it includes the space medial to the tympanic membrane (mesotympanum), the epitympanum, and the hypotympanum, and it contains the auditory ossicles and connects with the mastoid cells and auditory tube. Called also *cavum tympani* [NA alternative], *eardrum*, *tympanic cavity*, and *tympanum*.

auriscalpium (aw'rī-skāl'pe-um) [L. *auris* ear + *scalpere* to scrape] an instrument for scooping or scraping foreign matter from the ear.

auriscope (aw'rī-skōp) [L. *auris* ear + Gr. *skopein* to examine] a form of otoscope.

aurist (aw'rist) a specialist in ear diseases.

auristics (aw-ris'tiks) [L. *auris* ear] the art of treating diseases of the ear.

aurochromoderma (aw'ro-kro'mo-der'mah) [L. *aurum* gold + Gr. *chrōma* color + Gr. *derma* skin] a permanent greenish-blue staining of the skin due to injection of certain gold compounds.

aurotherapy (aw'ro-ther'ah-pe) [L. *aurum* gold + *therapy*] the use of gold in the treatment of disease; chrysotherapy.

aurothioglucose (aw'ro-thi'o-gloo'kōs) [USP] chemical name: (1-thio-D-glucopyranosato)gold. A gold preparation, C₆H₁₁AuO₆S, occurring as a yellow powder; used in the treatment of rheumatoid arthritis; it is also used in nondisseminated lupus erythematosus. Administered intramuscularly. Called also *gold thioglucose*.

aurothiomalate disodium (aw'ro-thi'o-ma'lāt) gold sodium thiomalate.

aurum (aw'rūm) [L.] gold.

auscult (aws-kult') auscultate.

auscultate (aws'kul-tāt) [L. *auscultare* to listen to] to examine by listening, usually to the sounds of the thoracic or abdominal viscera, with or without a stethoscope.

auscultation (aws'kul-ta'shun) the act of listening for sounds within the body, chiefly for ascertaining the condition of the lungs, heart, pleura, abdomen and other organs, and for the detection of pregnancy. **direct a.**, **immediate a.**, auscultation performed without the stethoscope. **Korányi's a.**, auscultatory percussion done by tapping with one forefinger the second joint of the other forefinger applied perpendicularly to the part; called also *Korányi's percussion*. **mediate a.** (Laennec, 1819), auscultation performed by the aid of an instrument (stethoscope) interposed between the ear and the part being examined. **obstetric a.**, auscultation in pregnancy for the study of the sounds of the fetal heart.

auscultatory (aws-kul'tah-to're) of or pertaining to auscultation.

auscultoplectrum (aws-kul'to-plek'trum) an instrument for use both in auscultation and percussion.

auscultoscope (aws-kul'to-skōp) phonendoscope.

Austin Flint murmur, respiration (aws'tin flint) [*Austin Flint*, American physiologist, 1812–1886] see *Flint's murmur*, under *murmur*, and *cavernous respiration*, under *respiration*.

Australorbis (aws'trah-lor'bis) *Biomphalaria*.

aut- see *auto-*.

autacoid (aw'tah-koid) [*aut-* + Gr. *akos* remedy] a term once proposed to replace the term *hormone* and recently suggested as

a general term for various physiologically active, endogenous substances (histamine, serotonin, angiotensin, prostaglandins, etc.) that do not yet fit into existing functional classifications.

autesthetic (awt/'es-thet/'ik) [*auto-* + *esthetic*] pertaining to an activity (e.g., play or pair-ritual) that rewards the performer as much as other individuals.

autacoid (aw'tah-'koid) [*aut-* + Gr. *akos* remedy] an organic substance formed by the cells of one organ and carried through the circulatory fluid to other organs upon which the substance acts. **chalone a.**, a chalone. **duodenal a.**, secretin. **excitatory a.**, a hormone. **hormonic a.**, a hormone. **inhibitory a.**, **restraining a.**, a chalone.

autarcesthesiology (awt/'ar-se/'se-ol/'o-je) [*autarcesis* + *-logy*] the branch of immunology that has to do with autarcesis.

autarcesis (awt-'ar/'se-sis) [*aut-* + Gr. *arkein* to ward off] the power to resist infection by the normal activity of the body cells as distinguished from immunity of the antibody type.

autarcetic (awt-'ar-set/'ik) pertaining to autarcesis.

autechoscope (aw-tek/'o-sköp) [*aut-* + Gr. *ēchos* sound + Gr. *skopein* to examine] an instrument for auscultating one's own body.

autecic (aw-te/'sik) autoecious.

autoecious (aw-te/'shus) autoecious.

autecology (aw'te-'kol/'o-je) [*aut-* + *ecology*] the ecology of an organism as an individual; cf. *synecology*.

autemesia (aw'tē-me/'se-ah) [*aut-* + Gr. *emesis* vomiting] functional or idiopathic vomiting.

autism (aw'tizm) [Gr. *autos* self + *-ism*] the condition of being dominated by subjective, self-centered trends of thought or behavior; it may occur in adults or children (see *early infantile a.*). Called also *autistic thinking*. **akinetie a.**, coma vigil. **early infantile a.**, **infantile a.**, a severe disorder of communication and behavior, usually beginning at birth, invariably present by age three; it is characterized by self-absorption, profound withdrawal from contact with people, including the mother figure, a desire for sameness, preoccupation with inanimate objects, and developmental language disorders. Called also *Kanner's syndrome*.

autistic (aw-tis/'tik) self-centered; sufficient unto itself.

auto-, aut- [Gr. *autos* self] a prefix denoting relationship to self.

autoactivation (aw'to-'ak/'te-va/'shun) the activation of a gland by its own secretion.

autoagglutination (aw'to-'ah-gloo/'ti-na/'shun) 1. clumping or agglutination of an individual's cells by his own serum, as in autohemagglutination. Autoagglutination occurring at low temperatures is called cold agglutination (see under *agglutination*). 2. agglutination of particulate antigens, e.g., bacteria, in the absence of specific antigens.

autoagglutinin (aw'to-'ah-gloo/'ti-nin) an autologous serum factor with the property of agglutinating the individual's own cellular elements: e.g., the red cells (autoagglutinin) and platelets (platelet autoagglutinin). An autoagglutinin that functions at low temperatures is called a cold agglutinin (see under *agglutinin*).

autoallergic (aw'to-'ah-ler/'jik) pertaining to or characterized by autoallergy.

autoallergy (aw'to-'al-'er-je) autoimmunity.

autoamputation (aw'to-'am-'pu-ta/'shun) the spontaneous detachment from the body and elimination of an appendage or of an abnormal growth, such as a polyp.

autoanalysis (aw'to-'ah-nal/'i-sis) the analysis and interpretation, on the part of a neurotic patient, of the state of mind underlying his disorder; employed as a means of treatment.

autoanamnesis (aw'to-'an-'am-ne/'sis) a history obtained from the patient himself.

autoanaphylaxis (aw'to-'an-'ah-fi-lak/'sis) anaphylaxis from reactions within the body independent of the introduction of substances from without and induced by substances derived from the individual himself; anaphylaxis induced by serum or other substances from the individual himself.

autoantibody (aw'to-'an-'ti-bod/'e) an antibody (immunoglobulin) formed in response to, and reacting against, one of the individual's own normal antigenic endogenous body constituents.

autoanticomplement (aw'to-'an-'ti-kom-'ple-ment) an anti-complement formed in the body against its own complement.

autoantigen (aw'to-'an-'ti-jen) a tissue constituent that is immunogenic in the animal in which it occurs; it stimulates the production of autoantibody in the tissues of the organism in which it occurs.

autoantiseptis (aw'to-'an-'ti-sep/'sis) physiological antiseptis.

autoantitoxin (aw'to-'an-'ti-tok/'sin) [*auto-* + *antitoxin*] antitoxin produced by the tissues of the body to protect it from injury by the homologous toxin.

autoaudible (aw'to-'aw-dī-'bl) audible to one's self; said of heart sounds.

autobacteriophage (aw'to-'bak-te/'re-o-fāj) bacteriophage derived from the patient under treatment.

autobiotic (aw'to-'bi-ot/'ik) any of a group of substances produced by cells and controlling the behavior of the producing cells.

autoblast (aw'to-'blast) an independent solitary bioblast; a microorganism.

autocatalysis (aw'to-'kah-tal/'i-sis) a catalytic reaction that gradually accelerates in velocity because some of the products of the reaction themselves act as catalytic agents.

autocatalyst (aw'to-'kat-'ah-list) an element participating in autocatalysis.

autocatalytic (aw'to-'kat-'ah-lit/'ik) pertaining to, characterized by, or producing autocatalysis.

autocatharsis (aw'to-'kah-thar/'sis) psychiatric treatment by encouraging the patient to write out his troubles and thus rid himself of his mental complexes.

autocatheterism (aw'to-'kath-'ē-ter-'izm) [*auto-* + *catheterism*] the passage of the catheter by the patient himself.

autocerebrospinal (aw'to-'ser/'ē-bro-spi-'nal) the patient's own cerebrospinal fluid used in treating epidemic meningitis.

autocholecystectomy (aw'to-'ko-'le-sis-tek/'to-me) [*auto-* + *cholecystectomy*] invagination of the gallbladder into the intestine, with final separation and expulsion of the organ.

autochthonous (aw-tok/'tho-nus) [Gr. *autochthōn* sprung from the land itself] 1. found in the place of formation; not removed to a new site. 2. denoting a tissue graft to a new site on the same individual. Cf. *heterochthonous*.

autocinesis (aw'to-'si-ne/'sis) [*auto-* + Gr. *kinēsis* motion] auto-kinesis.

autoclasia (aw'to-'kla-'ze-ah) [*auto-* + Gr. *klasis* breaking] a self-perpetuating destructive process in which an autoimmune reaction causes breakdown of tissue, liberating more antigen, which in turn elicits the formation of more autoantibody, and so on.

autoclasis (aw-tok/'lah-sis) [*auto-* + Gr. *klasis* breaking] destruction of a part by influences developed within itself.

autoclave (aw'to-'klāv) [*auto-* + L. *clavis* key] an apparatus for effecting sterilization by steam under pressure; it is fitted with a gauge that automatically regulates the pressure, and therefore the degree of heat to which the contents are subjected.

Autoclip (aw'to-'klip/) trademark for a stainless steel surgical clip inserted by means of a mechanical applicator that automatically feeds a series of clips for wound closing.

autocondensation (aw'to-'kon-den-sa/'shun) (*obs.*) application of high-frequency currents to the entire body for therapeutic purposes in which the patient constitutes one plate of a condenser. Rarely employed today.

autoconduction (aw'to-'kon-duk/'shun) a method of applying high-frequency currents by electromagnetic induction in which the patient placed inside a large solenoid constitutes the secondary of a transformer. Though not employed in this country, this procedure is still used in treatment of psychoses in the U.S.S.R.

autocystoplasty (aw'to-'sis-'to-plas/'te) a plastic operation on the bladder with grafts from the patient's body.

autocytolysin (aw'to-'si-tol/'i-sin) autolysin.

autocytolysis (aw'to-'si-tol/'i-sis) autolysis.

autocytolytic (aw'to-'si-'to-lit/'ik) autolytic.

autocytotoxin (aw'to-'si-'to-tok/'sin) a cytotoxin for the cells of the body in which it is formed.

autodermic (aw'to-'der-'mik) [*auto-* + Gr. *derma* skin] of the patient's own skin; a term applied to skin grafts. See *dermatograft* and *autograft*.

autodestruction (aw'to-'de-struk/'shun) self-destruction, specifically that which certain enzymes undergo in solution.

autodigestion (aw'to-'di-jes/'chun) self-digestion; autolysis; applied especially to the digestion of the walls of the stomach and contiguous structures after death.

autodiploid (aw'to-'dip-'loid) [*auto-* + *diploid*] 1. having two sets of chromosomes as a result of redoubling of the chromosomes of a haploid individual or cell. 2. an individual or cell having two sets of chromosomes as a result of redoubling of the haploid set.

autodiploidy (aw'to-'dip-'loi-de) the state of having two sets of chromosomes as a result of redoubling of the haploid set.

autodrainage (aw'to-'drān-'ij) drainage of an abscess or cavity by diversion of the fluid into a different channel or viscus within the patient's own body; this may be accomplished by surgery or may occur spontaneously.

autocholalia (aw'to-'ek-'o-la-'le-ah) [*auto-* + *echolalia*] repetition of one's own words.

autoecic (aw-te/'sik) [*auto-* + Gr. *oikos* house] autoecious.

autoecious (aw'to-'e-'shus) [*auto-* + Gr. *oikos* house] pertaining to or denoting parasitic fungi that pass through their entire developmental cycle upon the same host. Cf. *heteroecious*.

autoeczematization (aw'to-'ek-zem-'ah-ti-'za/'shun) the spread, at first locally, and later more generally, of lesions from an originally circumscribed focus of eczema.

autoerotic (aw'to-'e-rot/'ik) marked by autoerotism.

autoeroticism (aw''to-ě-rof'i-sizm) erotic behavior directed toward oneself; cf. *heteroeroticism*.

autoerotism (aw''to-er'o-tizm) autoeroticism.

autoerythrophagocytosis (aw''to-ě-rith''ro-fag''o-si-to'sis) [*auto* + *erythracyte* + *phagocytosis*] phagocytosis of erythrocytes by autologous phagocytic cells (e.g., neutrophils, monocytes).

autofluorescence (aw''to-floo''o-res'ens) fluorescence in tissues produced by substances normally present in the tissues. Cf. *secondary fluorescence*, under *fluorescence*.

autofluoroscope (aw''to-floo''o-ro-sköp'') a type of scintillation camera that utilizes in its detector sodium iodide crystals packed in an array especially suited to the study of small tumors in large organs.

autofundoscope (aw''to-fun'do-sköp) an instrument that makes use of the fact that by observing an illuminated blank space through a pin-perforated card one can see faint images of the retinal vessels of his own eyes.

autofundoscopy (aw''to-fun-dos'ko-pe) examination with the autofundoscope.

autogamous (aw-tog'ah-mus) characterized by self-fertilization.

autogamy (aw-tog'ah-me) [*auto* + Gr. *gamos* marriage] 1. self-fertilization; fertilization within a cell itself by union of two chromatin masses derived from the same primary nucleus; called also *automixis* and *syngamic nuclear union*. Cf. *endogamy* (def. 1) and *exogamy* (def. 1). 2. a special case of syngamy in which the gametes are sister cells, resulting from the division of a single mother cell.

autogeneic (aw''to-jen-e'ik) autogenous; pertaining to an autograft.

autogenesis (aw''to-jen'ě-sis) [*auto* + Gr. *genesis* production] self-generation; origination within the organism.

autogenetic (aw''to-jě-net'ik) pertaining to autogenesis.

autogenous (aw-toj'ě-nus) [*auto* + *genesis*] self-generated; originated within the body. As applied to bacterial vaccines, the term denotes those vaccines which are made from the patient's own bacteria, as opposed to stock vaccines which are made from standard cultures. In transplantation immunology, denoting tissue arising, transferred, or transplanted within an individual.

autognosis (aw''tog-no'sis) [*auto* + Gr. *gnōsis* knowledge] (obs.) self-diagnosis; a form of psychoanalysis consisting of giving the patient self-knowledge by revealing to him through his own confessions the course of mental change leading to his symptoms.

autognostic (aw''tog-nos'tik) characterized by self-diagnosis; a term applied to the psychoanalytical method.

autograft (aw'to-graft) a graft of tissue derived from another site in or on the body of the organism receiving it; called also *autologous* or *autochthonous graft*, and *autoplast*.

autografting (aw''to-graft'ing) autotransplantation.

autogram (aw'to-gram) [*auto* + Gr. *gramma* mark] a mark forming on the skin following pressure by a blunt instrument.

autographism (aw-tog'rah-fizm) [*auto* + Gr. *graphein* to write] (obs.) dermatographism.

autohemagglutination (aw''to-hem''ah-gloo'ti-na'shun) agglutination of autologous erythrocytes.

autohemagglutinin (aw''to-hem-ah-gloo'ti-nin) a hemagglutinin that causes the clumping or agglutination of autologous erythrocytes.

autohemic (aw''to-he'mik) [*auto* + Gr. *haima* blood] done with the patient's own blood.

autohemolysin (aw''to-he-mol'i-sin) a type of autoantibody or related factor having the ability to lyse autologous erythrocytes.

autohemolysis (aw''to-he-mol'i-sis) hemolysis of the blood cells of a person by his own serum.

autohemolytic (aw''to-he'mo-lit'ik) pertaining to autohemolysis.

autohemopsonin (aw''to-hem''op-so'nin) an opsonin that renders the red cells susceptible to destruction by the other cells of the patient's body.

autohemotherapy (aw''to-he'mo-ther'ah-pe) [*auto* + Gr. *haima* blood + *therapeia* treatment] treatment by reinjection of the individual's own blood.

autohemotransfusion (aw''to-he'mo-trans-fu'zhun) the withdrawal of a small amount of venous blood and reinjection directly into the same individual.

autohistoradiograph (aw''to-his''to-ra'de-o-graf) autoradiograph.

autohormonoclasia (aw''to-hor''mōn-ok'lah-sis) [*auto* + *hormone* + Gr. *klasis* destruction] the inactivation of the hormone of a given gland in the presence of activity of the gland.

autohypnosis (aw''to-hip-no'sis) the act or process of hypnotizing oneself.

autohypnotic (aw''to-hip-not'ik) (obs.) 1. pertaining to self-induced hypnotism. 2. one who can put himself into a hypnotic state.

autoimmune (aw''to-im-mūn') directed against the body's own tissue; see under *disease* and *response*.

autoimmunity (aw''to-im-mu'ni-te) a condition characterized by a specific humoral or cell-mediated immune response against the constituents of the body's own tissues (autoantigens); it may result in hypersensitivity reactions or, if severe, in autoimmune disease. Called also *autoallergy*.

autoimmunization (aw''to-im''u-ni-za'shun) the induction in an individual of an immune response to its own tissue constituents, which may lead to pathological sequelae, i.e., to autoimmune disease. Called also *autosensitization*. See also *autoantibody*.

autoinfection (aw''to-in-fek'shun) [*auto* + *infection*] infection by an agent already present in the body or transferred from one part of the body to another.

autoinfusion (aw''to-in-fu'zhun) [*auto* + *infusion*] the forcing of the blood toward the heart by bandaging the extremities, compression of the abdominal aorta, etc.

autoinoculable (aw''to-in-ok'u-lah-bl) [*auto* + *inoculable*] susceptible of being inoculated with microorganisms from one's own body.

autoinoculation (aw''to-in-ok'u-la'shun) [*auto* + *inoculation*] inoculation with microorganisms from one's own body.

autointerference (aw''to-in'ter-fer'ens) interference with the replication of a virus by an intact, attenuated, or inactivated virus of the same kind.

autointoxicant (aw''to-in-tok'si-kant) a poison generated within the system.

autointoxication (aw''to-in-tok'si-ka'shun) [*auto* + *intoxication*] intoxication by some poison generated within the body. **intestinal a.**, a disordered state due to the accumulation of intestinal poisons in the blood; called also *alimentary toxemia* and *intestinal intoxication*.

autoisolysin (aw''to-i-sol'i-sin) a lysin that destroys cells (e.g., blood cells) of the subject from which it was obtained, as well as those of other animals of the same species.

autokeratoplasty (aw''to-ker'ah-to-plas'te) [*auto* + *keratoplasty*] corneal grafting with tissue from the patient's other eye.

autokinesis (aw''to-ki-ne'sis) [*auto* + Gr. *kinēsis* motion] voluntary motion. **visible light a.**, see *autokinetic visible light phenomenon*, under *phenomenon*.

autokinetic (aw''to-ki-net'ik) having the power of voluntary motion.

autolaryngoscopy (aw''to-lar'in-gos'ko-pe) observation of one's own larynx.

autolavage (aw''to-lah-vahzh') [*auto* + *lavage*] lavage performed on one's self or on one's own stomach.

autolesion (aw'to-le'zhun) a self-inflicted injury.

autoleukoagglutinin (aw''to-lu''ko-ah-gloo'ti-nin) see *leukoagglutinin*.

autoleukocytotherapy (aw''to-lu''ko-si''to-ther'ah-pe) treatment by administration of the patient's own, previously withdrawn leukocytes.

autologous (aw-tol'o-gus) [*auto* + Gr. *logos* relation] 1. related to self; designating products or components of the same individual organism. 2. autogenous.

autology (aw-tol'o-je) the science of one's own self.

autolysate (aw-tol'i-sāt) a substance or substances produced by autolysis; autolysates of cancer tissue have been used subcutaneously in the treatment of cancer.

autolysin (aw-tol'i-sin) a lysin present in an organism and capable of destroying the cells or tissues of that organism; called also *autocytolysin*.

autolysis (aw-tol'i-sis) [*auto* + Gr. *lysis* dissolution] 1. the spontaneous disintegration of tissues or of cells by the action of their own autogenous enzymes, such as occurs after death and in some pathological conditions; called also *autodigestion*, *self-digestion*, and *autoproteolysis*. 2. the destruction of cells of the body by its own serum; called also *autocytolysis*. **postmortem a.**, enzymatic self-digestion of cells or tissues after death.

autolysosome (aw''to-li'so-sōm) a vacuolar element of the lysosome system of cells to which hydrolases have been added by fusion with lysosomes.

autolytic (aw-to-lit'ik) pertaining to or causing autolysis; autocytolytic.

autolyze (aw'to-liz) to undergo or to cause to undergo autolysis.

automatic (aw''to-mat'ik) [Gr. *automatos* self-acting] 1. spontaneous or involuntary; done by no act of the will. 2. self-moving; self-regulating.

automatin (aw-tom'ah-tin) an extract of bovine heart muscle formerly used in circulatory disorders.

automatism (aw-tom'ah-tizm) [Gr. *automatizmos* self-action] 1. the performance of nonreflex acts without conscious volition; called also *automatic behavior*. 2. the doctrine that the brain causes, manufactures, or calls into action mental processes and that all mental processes are dependent on brain activity. Cf. *parallelism*. **ambulatory a.**, a condition in which the pa-

tient walks about and performs acts mechanically and without consciousness of what he is doing. Cf. *poriomania*. **command a.**, an abnormal responsiveness to commands, the subject performing suggested acts without exercising any critical judgment, as observed in hypnosis and certain mental states.

automatograph (aw''to-mat'o-graf) [Gr. *automatismos* self-action + *graphein* to write] an instrument for recording involuntary movements.

Autom'eris i'o the io moth that produces dermatitis (io-moth dermatitis) by means of irritant hairs on its larva.

automixis (aw''to-mik'sis) [*auto-* + Gr. *mixis* mixture] autogamy, def. 1.

automnesia (aw''tom-ne'ze-ah) [*auto-* + Gr. *mnēsis* memory] spontaneous recall to memory of past conditions of one's life.

automyophobia (aw''to-mi''so-fō-be-ah) [*auto-* + *mysophobia*] (*obs.*) abnormally exaggerated dread of personal uncleanness.

autonarcosis (aw''to-nar-ko'sis) insensibility due to autosuggestion.

autonephrectomy (aw''to-nē-frek'to-me) [*auto-* + Gr. *nephros* kidney + Gr. *ektomē* excision] obliteration of a kidney as the result of disease.

autonephrotoxin (aw''to-nēf''ro-tok'sin) a substance toxic to the cells of the kidney of the body in which it is formed.

autonomic (aw''to-nom'ik) self-controlling; functionally independent. See *autonomic nervous system*, under *system*.

autonomotropic (aw''to-nom-o-trop'ik) [*autonomic* + Gr. *tropos* a turning] having an affinity for the autonomic nervous system.

autonomous (aw-ton'o-mus) pertaining to or characterized by autonomy.

autonomy (aw-ton'o-me) [*auto-* + Gr. *nomos* law] the state of functioning independently, without extraneous influence.

auto-ophthalmoscope (aw''to-of-thal'mo-skōp) [*auto-* + *ophthalmoskope*] an ophthalmoscope for examining one's own eyes.

auto-ophthalmoscopy (aw''to-of-thal-mos'ko-pe) the use of the auto-ophthalmoscope.

auto-oxidation (aw''to-ok''si-da'shun) the phenomenon of combining directly with oxygen at ordinary temperatures, without catalysis.

autopath (aw'to-path) a person who has allergic symptoms because of a sensitive autonomic nervous system.

autopathography (aw''to-pah-thog'rah-fe) [*auto-* + Gr. *pathos* disease + *graphein* to write] a written description of one's own disease.

autopathy (aw-top'ah-the) [*auto-* + Gr. *pathos* disease] a disease without apparent external causation; idiopathic disease.

autopepsia (aw''to-pep'se-ah) [*auto-* + Gr. *peptein* to digest] (*obs.*) autolysis, def. 1.

autophagia (aw''to-fa'je-ah) [*auto-* + Gr. *phagein* to eat + *-ia*] 1. the eating of one's own flesh. 2. nutrition of the body by the consumption of its own tissues. 3. autophagy.

autophagosome (aw''to-fag'o-sōm) [*auto-* + *phagosome*] an intracytoplasmic vacuole containing elements of the cell's own cytoplasm; it fuses with a lysosome, subjecting its contents to enzymatic digestion. Called also *autophagic vesicle*, *autosome*, and *cytolysosome*.

autophagy (aw-tof'ah-je) 1. the segregation of part of the cell's own cytoplasmic material within a membrane and its digestion after fusion of the segregated vacuole with a lysosome. Cf. *heterophagy*. 2. autophagia.

autopharmacologic (aw''to-fahr'mah-ko-loj'ik) pertaining to substances (e.g., hormones) produced in the body that have pharmacologic activities.

autopharmacology (aw''to-far'mah-ko'l'o-je) the chemical regulation of bodily function by the natural constituents of the body tissues.

autophil (aw'to-fil) a person with a tendency to allergic manifestations because of a sensitive autonomic nervous system.

autophilia (aw''to-fil'e-ah) [*auto-* + Gr. *philein* to love] pathological self-esteem; narcissism.

autophobia (aw''to-fō-be-ah) [*auto-* + Gr. *phobos* fear] (*obs.*) abnormal dread of being alone.

autophonomania (aw''to-fō'no-ma'ne-ah) [*auto-* + Gr. *phonos* murder + *mania* madness] (*obs.*) suicidal mania.

autophonometry (aw''to-fō-nom'ē-tre) [*auto-* + Gr. *phōne* voice + *metron* measure] the application of a vibrating tuning fork to the body of a patient for the purpose of having him describe the sensations that it produces.

autoophthalmoscope (aw''tof-thal'mo-skōp) auto-ophthalmoscope.

autophyte (aw'to-fit) [*auto-* + Gr. *phyton* plant] a plant that does not depend on organized food material, but derives its nourishment directly from inorganic matter. Cf. *saprophyte*.

autoplasmotherapy (aw''to-plaz'mo-ther'ah-pe) [*auto-* + L. *plasma* + Gr. *therapeia* treatment] treatment of disease by injections of the patient's own blood plasma.

autoplast (aw'to-plast) an autograft.

autoplastic (aw''to-plas'tik) pertaining to autoplasty.

autoplasty (aw'to-plas'te) [*auto-* + Gr. *plassein* to form] 1. the replacement or reconstruction of diseased or injured parts by tissue taken from another part of the patient's own body. 2. in psychoanalysis, instinctive modification within the psychic systems in adaptation to reality. **peritoneal a.**, peritonization.

autoploid (aw'to-ploid) [*auto-* + *-ploid*] autopolyploid.

autoploidy (aw''to-ploi'de) autopolyploidy.

autopodium (aw''to-po'de-um) see *limb* (def. 1).

autopoisonous (aw''to-poi'zun-us) poisonous to the organism by which it is formed.

autopolymer (aw''to-pol'i-mer) a material that polymerizes without the use of heat, but on the addition of an activator and a catalyst.

autopolymerization (aw''to-pol'i-mer'i-za'shun) polymerization occurring without the use of heat but as a chemical reaction following the addition of an activator and a catalyst.

autopolyploid (aw''to-pol'i-ploid) [*auto-* + *polyploid*] 1. having more than two chromosome sets as a result of redoubling of the chromosomes of a haploid individual or cell. 2. an individual or cell having more than two chromosome sets as a result of redoubling of the haploid set.

autopolyploidy (aw''to-pol'i-ploi'de) the state of having more than two chromosome sets as a result of redoubling of the haploid set.

autoprecipitin (aw''to-pre-sip'i-tin) an autoantibody with the characteristics of a precipitin.

autoprotection (aw''to-pro-tek'shun) self-protection, e.g., the protection of the body from disease by the formation of autoantitoxins.

autoproteolysis (aw''to-pro-te-ol'i-sis) autolysis, def. 1.

autoprothrombin (aw''to-pro-throm'bin) Seegers' term for an activation product of prothrombin. **a. I**, Factor VII; see *coagulation factors*, under *factor*. **a. II**, Factor IX; see *coagulation factors*, under *factor*. **a. C**, Factor X; see under *coagulation factors*, under *factor*.

autoprotolysis (aw''to-pro-tol'i-sis) self-ionization involving proton transfer.

autopsia (aw-top'se-ah) autopsy.

autopsy (aw-top'se) [*auto-* + Gr. *opsis* view] the postmortem examination of a body, including the internal organs and structures after dissection, so as to determine the cause of death or the nature of pathological changes. Called also *necropsy*.

autopsychic (aw''to-si'kik) [*auto-* + Gr. *psychē* soul] pertaining to self-consciousness.

autopsychorhythmia (aw''to-si-ko-rith'me-ah) [*auto-* + Gr. *psychē* soul + Gr. *rhythmos* rhythm] pathological rhythmic activity of the brain.

autopsychosis (aw''to-si-ko'sis) (*obs.*) a psychosis or mental disease marked by derangement of ideas relating to the patient's self.

autopsychotherapy (aw''to-si'ko-ther'ah-pe) psychotherapy administered by a patient on himself, such as by the exercise of self-control and will power.

autoradiogram (aw''to-ra'de-o-gram) an autoradiograph.

autoradiograph (aw''to-ra'de-o-graf) a radiograph of an object or tissue made by recording the radiation emitted by radioactive material within it, especially after the purposeful introduction of radioactive material.

autoradiography (aw''to-ra'de-og'rah-fe) the making of a radiograph of an object or tissue by recording on a photographic plate the radiation emitted by weakly emitting radioactive material within the object; the technique has been used widely for studying DNA synthesis and location within cells, with tritium-labeled precursors (like thymidine) as the radioactive marker.

autoreactive (aw''to-re-ak'tiv) directed against the body's own tissues, as an autoreactive immune response.

autoregulation (aw''to-reg'u-la'shun) the control of certain phenomena by factors inherent in a situation, usually restricted to circulatory physiology; specifically (1) the intrinsic tendency of an organ or tissue to maintain constant blood flow despite changes in arterial pressure, (2) the adjustment of blood flow through an organ in order to provide for its metabolic needs, and (3) (*obs.*) the factors tending to maintain a constant blood pressure. **heterometric a.**, those intrinsic mechanisms controlling the strength of ventricular contractions that depend on the length of myocardial fibers at the end of diastole. **homeometric a.**, those intrinsic mechanisms controlling the strength of ventricular contractions that are independent of the length of myocardial fibers at the end of diastole.

autoreinfusion (aw''to-re'in-fu'zhun) intravenous infusion of a patient's own blood or serum which has escaped into the pleural or peritoneal cavities, usually because of trauma or spontaneous rupture of a major vessel.

autorrhaphy (aw-tor'ah-fe) [*auto-* + Gr. *rhaphe* suture] (*obs.*)

closure of a wound by the use of strands of tissue taken from the flaps of the wound.

autosensitization (aw''to-sen''sī-ti-za'shun) sensitization toward one's own tissues; see *autoimmunization*. **erythrocyte a.**, autoerythrocyte sensitization; see under *syndrome*.

autosensitized (aw''to-sen''sī-tīzd) rendered hypersensitive to one's own serum or tissues; see *autoimmunization*.

autosepticemia (aw''to-sep''tī-se'me-ah) septicemia due to poisons developed within the body.

autoserodiagnosis (aw''to-se''ro-di-ag-no'sis) diagnostic use of a serum from the patient's own blood.

autoserosalvarsan (aw''to-se-ro-sal'var-san) Swift-Ellis treatment; see under *treatment*.

autoserous (aw''to-se'rus) accomplished by means of one's own serum.

autoserum (aw''to-se'rum) [*auto-* + *serum*] a serum administered to the patient from whom it was derived.

autosexing (aw''to-seks'ing) in avian genetics, the deliberate breeding of an early-appearing sex-linked phenotype to distinguish male from female chicks.

autosite (aw''to-sīt) [*auto-* + Gr. *sitos* food] the larger, more nearly normal component of asymmetrical conjoined twins, to which the parasite is attached as a dependent growth.

autositic (aw''to-sit'ik) pertaining to or of the nature of an autosite.

autosmia (aw-tos'me-ah) [*auto-* + Gr. *osmē* smell] the smelling of one's own bodily odor.

autosomal (aw''to-so'mal) pertaining to an autosome.

autosomatognosis (aw''to-so'mah-tog-no'sis) [*auto-* + Gr. *sōma* body + *gnosis* recognition] the feeling that a part of the body that has been removed, as by amputation, is still present. See *phantom limb*, under *limb*.

autosomatognostic (aw''to-so'mah-tog-nos'tik) pertaining to autosomatognosis.

autosome (aw''to-sōm) [*auto-* + Gr. *sōma* body] 1. any ordinary paired chromosome as distinguished from a sex chromosome; in man there are 22 pairs of autosomes. 2. autophagosome.

autospermotoxin (aw''to-sper'mo-tok'sin) a substance capable of agglutinating the spermatozoa of the animal in which they are formed.

autosplenectomy (aw''to-sple-nek'to-me) the almost complete disappearance of the spleen through progressive fibrosis and shrinkage, such as may occur in sickle cell anemia.

autospray (aw''to-spra) an apparatus for spraying, to be used by the patient himself.

autosterilization (aw''to-ster'i-lī-za'shun) a supposed tendency of certain viruses (e.g., poliovirus) to disappear from the tissues after a short time; a concept found to be erroneous.

autostimulation (aw''to-stim'u-lā'shun) stimulation of an animal with antigenic material originating from its own tissues.

autosuggestibility (aw''to-sug-jes'tī-bil'i-te) a peculiar mental state with loss of will, in which suggestion becomes easy.

autosuggestion (aw''to-sug-jes'chun) [*auto-* + *suggestion*] the spontaneous occurrence to the mind of ideas produced in the individual himself. Also the peculiar mental state often occurring after accidents, in which suggestions are easily received, so that the slightest injury to a part induces an hysterical paralysis or other disability. Cf. *ectosuggestion*.

autosynnoia (aw''to-sin-noi'ah) [*auto-* + Gr. *synnoia* meditation] (*obs.*) a mental condition in which the patient is so concentrated in his thoughts and hallucinations that he loses all interest in the outside world.

autosynthesis (aw''to-sin'thē-sis) self-reproduction.

autotemnous (aw''to-tem'nus) [*auto-* + Gr. *temnein* to cut] capable of spontaneous division.

autotherapy (aw''to-ther'ah-pe) [*auto-* + Gr. *therapeia* treatment] 1. the spontaneous cure of disease. 2. self-cure. 3. treatment of disease by filtrates from the patient's own secretions.

autotomographic (aw''to-tom'o-graf'ik) pertaining to autotomography.

autotomography (aw''to-to-mog'rah-fe) a method of body-section roentgenography involving movement of the patient instead of the x-ray tube.

autotomy (aw-tot'o-me) [*auto-* + Gr. *tomē* cut] 1. self-division; fission. 2. the spontaneous shedding of an appendage, as in some invertebrates.

autotopagnosia (aw''to-top'ag-no'se-ah) [*auto-* + Gr. *topos* place + a neg. + *gnōsis* knowledge] inability to localize or orient correctly different parts of the body; body-image agnosia.

autotoxemia (aw''to-tok-se'me-ah) autotoxicosis.

autotoxic (aw''to-tok'sik) [*auto-* + Gr. *toxikon* poison] pertaining to autointoxication.

autotoxicosis (aw''to-tok'si-ko'sis) [*auto-* + Gr. *toxikon* poison + *-osis*] poisoning by material generated within the body; called also *autotoxemia*.

autotoxin (aw''to-tok'sin) any pathogenic principle developed within the body from tissue metamorphosis.

autotoxis (aw''to-tok'sis) autotoxicosis.

autotransfusion (aw''to-trans-fu'zhun) reinfusion of the patient's own blood.

autotransplant (aw''to-trans'plant) autograft.

autotransplantation (aw''to-trans'plan-ta'shun) the operation of taking a piece of tissue from one part of a subject and inserting it in another part of the same individual; called also *autografting*.

autotrepantation (aw''to-trep'ah-na'shun) erosion of the skull by a brain tumor.

autotroph (aw''to-trōf) an autotrophic organism. **facultative a.**, a microorganism which can live as a chemoautotroph or as a chemoheterotroph; an organism with a flexible requirement for oxidizable substrate. **obligate a.**, a microorganism that can exist only by autotrophic means.

autotrophic (aw''to-trōf'ik) [*auto-* + Gr. *trophē* nutrition] self-nourishing; said of organisms that can build their organic constituents from carbon dioxide and inorganic salts. Cf. *heterotrophic*.

autotrophy (aw-tot'ro-fe) the state of being autotrophic; autotrophic nutrition.

autotuberculin (aw''to-tu-ber'ku-lin) tuberculin made from cultures obtained from a patient's own sputum.

autotuberculinization (aw''to-tu-ber'ku-lin-i-za'shun) absorption of tuberculin or similar products from a patient's own foci of disease.

autovaccination (aw''to-vak'si-na'shun) 1. treatment of a patient with autovaccine. 2. treatment of a patient by causing liberation of antigenic products from some invading microorganism or diseased tissue and thus bringing about the formation of antibodies.

autovaccine (aw''to-vak'sēn) a bacterial vaccine prepared from cultures of organisms isolated from the patient's own secretions or tissues.

autovaccinotherapy (aw''to-vak'si-no-ther'ah-pe) autovaccination.

autoxemia (aw''tok-se'me-ah) autotoxicosis.

autoxidation (aw''tok-sī-da'shun) spontaneous oxidation of a substance that is in direct contact with oxygen.

autoxidizable (aw-tok'sī-dīz'ah-bl) spontaneously oxidizable.

autozygous (aw''to-zī'gus) homozygous by virtue of parental descent from a common ancestor.

auxanogram (awks-an'o-gram) the plate culture in auxanography.

auxanographic (awks'an-o-graf'ik) pertaining to auxanography.

auxanography (awks'an-og'rah-fe) [Gr. *auxanein* to increase + *graphein* to write] determination of the most suitable medium for a microbe by placing drops of various solutions on a plate containing a poor medium; the microbe will develop the strongest colonies on the spot that contains the best medium.

auxanology (awks'an-ol'o-je) [Gr. *auxanein* to increase + *-logy*] (*obs.*) the science of growth; applied especially to the study or science of the growth of microorganisms.

auxesis (awk-se'sis) [Gr. *auxēsis*] increase in the size of an organism; often used specifically to designate increase in volume of an organism as a result of growth of its individual cells, without increase in their number.

auxetic (awk-set'ik) [Gr. *auxētikos* growing] 1. pertaining to auxesis. 2. a substance that stimulates auxesis.

auxiliary (awk-sil'e-a're) [L. *auxiliaris*] 1. affording aid. 2. that which affords aid. **torquing a.**, an accessory arch wire used to apply torsion on a tooth in any of the three planes of space.

auxiliomotor (awk-sil'e-o-mo'tor) aiding or stimulating motion.

auxilytic (awk-sī-lit'ik) [Gr. *auxein* to increase + *lysis*] increasing the lytic or destructive power.

auximone (awk'sī-mōn) [Gr. *auxein* to increase + *hormone*] a hypothetical substance, akin to vitamin, that favors growth in plants.

auxin (awk'sin) [Gr. *auxē* increase] a phytohormone (plant hormone) from sprouts of plants and from human urine that promotes growth in plant cells and tissues by elongation rather than by multiplication of cells; there are two forms, *auxin A*, a cyclopentenone derivative of trihydroxy valeric acid, C₁₅H₂₂O₅, and *auxin B*, which is heteroauxin.

auximeter (awk'se-om'ē-ter) [Gr. *auxein* to increase + *metron* measure] 1. an apparatus for measuring the magnifying powers of lenses; called also *auxometer*. 2. a dynamometer.

auxo- [Gr. *auxē* increase] a combining form denoting relationship to growth, or to stimulation or to acceleration.

auxoaction (awk''so-ak'shun) the accelerating or stimulating action of a substance.

auxoamylase (awk/'so-am/'i-lās) a substance that accelerates the action of amylase.

auxocardia (awk/'so-kar/'de-ah) [*auxo-* + Gr. *kardia* heart] (*obs.*) 1. diastole. 2. enlargement of the heart.

auxochrome (awk/'so-krōm) [*auxo-* + Gr. *chrōma* color] a chemical group which, if introduced into a chromogen, will convert the latter into a dye.

auxochromous (awk/'so-kro/'mus) pertaining to an auxochrome.

auxocyte (awk/'so-sīt) [*auxo-* + Gr. *kytos* hollow vessel] an oocyte, spermatocyte, or sporocyte in the early stages of its development; called also *gonotokont*.

auxodrome (awk/'so-drōm) [Gr. *auxē* growth + *dromos* a course] the course of growth as plotted on a Wetzel grid.

auxoflore (awk/'so-flōr) a substance that increases the intensity of fluorescence of a compound. Cf. *bathoflore*.

auxoflur (awk/'so-floor) auxoflore.

auxogluc (awk/'so-glook) [*auxo-* + Gr. *glykys* sweet] a tasteless atom with which a glucophore combines to form a compound that has a sweet taste.

auxohormone (awk/'so-hor/'mōn) [*auxo-* + *hormone*] a vitamin.

auxology (awk-sol/'o-je) (*obs.*) auxanology.

auxometer (awks-om/'ē-ter) auxiometer, def. 1.

auxometric (awks/'o-met/'rik) pertaining or relating to auxometry.

auxometry (awks-om/'ē-tre) [Gr. *auxein* to increase + to measure *metron*] measurement of rate of growth.

auxoneurotropic (awk/'so-nu/'ro-trop/'ik) [*auxo-* + *neurotropic*] increasing or strengthening the neurotropic properties of any substance.

auxospireme (awk/'so-spi/'rēm) the spireme of an auxocyte during the growth cycle.

auxospore (awk/'so-spōr) a rejuvenescent cell of certain diatoms formed in response to a diminution in the size of the organism as a result of repeated cell divisions; it sheds the cell walls, enlarges, and then forms new, larger walls.

auxotherapy (awk/'so-ther/'ah-pe) [*auxo-* + *therapy*] substitution therapy, as by hormone therapy or organotherapy.

auxotonic (awk/'so-ton/'ik) [*auxo-* + Gr. *tonos* tension] contracting against increasing resistance.

auxotox (awk/'so-toks) a chemical group that causes a compound to be toxic.

auxotroph (awk/'so-trōf) an auxotrophic organism.

auxotrophic (awk/'so-trōf/'ik) [*auxo-* + Gr. *trophē* nutrition] 1. requiring a growth factor that is not required by the parental or prototype strain; said of microbial mutants. 2. requiring specific organic growth factors in addition to the carbon source present in a minimal medium.

AV, A-V, atrioventricular; arteriovenous.

Av. average; avoirdupois.

avalvular (ah-val/'vu-lar) having no valves.

avantin (av/'an-tin) isopropyl alcohol.

avascular (ah-vas/'ku-lar) [*a neg.* + *vascular*] not supplied with blood vessels.

avascularization (ah-vas/'ku-lar-i-za/'shun) the diversion of blood from tissues; it may be accomplished by ligating vessels or by applying tight elastic bandages.

Aveling's reposit (av/'el-ingz) [James Hobson *Aveling*, British obstetrician, 1828–1892] see under *reposit*.

Avellis's syndrome (paralysis) (av-el/'ēz) [Georg *Avellis*, German laryngologist, 1864–1916] see under *syndrome*.

Avena (ah-ve/'nah) [L.] a genus of grasses. The grains of *A. sativa* constitute the oats of commerce, a nutritive and edible cereal.

avenin (ah-ve/'nin) an albuminoid obtained from *Avena sativa*, or oats, said to be identical with gluten casein; called also *plant casein* and *legumin*.

avenolith (ah-ve/'no-lith) [L. *avena* oats + Gr. *lithos* stone] an intestinal calculus or enterolith formed around a grain of oats.

Aventyl (ah-ven/'til) trademark for a preparation of nortriptyline hydrochloride.

Avenzoar (av-'en-'zo-'ar) (1113–1162) a renowned Islamic physician, born in Seville, Spain, whose principal writing was a compendium of practice, *al-Teisir*, which contains many interesting clinical reports. Also in his writings he described the itch-mite (*Acarus scabiei*), and did not hesitate to criticize Galen. He is also known as *Ibn Zuhr*.

Averroes (av-er/'ro-'ēz) (1126–1198) a distinguished Spanish-Islamic philosopher and physician, born at Cordova. Better known as a philosopher, his chief philosophical work is his commentary on Aristotle; his chief medical work is the *Colliget*, a predominantly philosophical approach to a system of medicine. Known also as *Ibn Rushd*.

aversive (ah-ver/'siv) characterized by or giving rise to avoidance; noxious. Cf. *appetitive*.

Avertin (ah-ver/'tin) trademark for a preparation of tribromoethanol.

avian (a've-'an) [L. *avis* bird] of or pertaining to birds.

Avicenna (av/'i-sen/'nah) (980–1037) a celebrated Persian physician and philosopher, surnamed the "Prince of Physicians." His great encyclopedia, the *Canon*, written in Arabic, influenced medical thought and teaching for hundreds of years, its dogmatic, pontifical style having particular appeal for the medieval physician. Known also as *Ibn Sīnā*.

avidin (av/'i-din) a specific protein in egg albumin that interacts with biotin to render it unavailable to an animal, thus producing the syndrome known as biotin deficiency. See also *biotin*.

avidity (ah-vid/'i-te) 1. the strength of an acid or base. 2. in immunology, a measure of the quantity of antigen-antibody complexes formed with respect to time (kinetically derived quantity). It differs from *affinity*, a thermodynamically derived quantity measuring the strength of binding. By contrast, avidity is a relatively imprecise term.

avifauna (av/'vi-faw/'nah) the bird life present in or characteristic of a given region or locality.

avirulence (a-vir/'u-lens) lack of virulence; lack of competence of an infectious agent to produce pathologic effects.

avirulent (a-vir/'u-lent) not virulent.

avitaminosis (a-vi/'tah-mī-'no-'sis) hypovitaminosis.

avitaminotic (a-vi/'tah-mī-'not/'ik) pertaining to or characterized by avitaminosis.

avivement (ah-vēv-'mon') [Fr.] the refreshing of the edges of a wound by surgical procedure.

Avlosulfon (av-lo-sul/'fon) trademark for a preparation of dapson.

Avogadro's law, number (constant) (av-o-gad/'rōz) [Amedeo *Avogadro*, Italian physicist, 1776–1856] see under *law* and *number*.

avogram (av/'o-gram) one septillionth (10^{-24}) of a gram, or one picopicrogram (ppg); so named from Avogadro's number, 6.03×10^{23} . The mass of a molecule in avograms is therefore 1.66 times its conventional molecular weight.

avoidance (ah-void/'ans) a conscious or unconscious defensive reaction intended to escape anxiety, conflict, danger, fear, or pain.

avoirdupois (av/'er-dü-'poiz') see under *weight*, and see *Table of Weights and Measures*.

avoparcin (av-o-par/'sin) a glycopeptide antibiotic derived from *Streptomyces candidus*; an antibacterial.

avulsion (ah-vul/'shun) [L. *avulsio*, from *a-* away + *vellere* to pull] the tearing away of a part of structure. **nerve a.**, the operation of tearing a nerve by traction. **phrenic a.**, extraction of a piece of the phrenic nerve through an incision at the base of the neck; done in pulmonary tuberculosis to paralyze the corresponding side of the diaphragm in order to secure rest of the lung.

Avulsion of a phrenic nerve.

awu atomic weight unit; see *atomic mass unit*, under *unit*.

ax. axis.

axanthopsia (ak/'san-thop/'se-ah) [*a neg.* + Gr. *xanthos* yellow + *opsis* vision + *-ia*] yellow blindness.

Axenfeld's syndrome (anomaly) (ak/'sen-feltz') [Theodor *Axenfeld*, German ophthalmologist, 1867–1930] see under *syndrome*.

Axenfeld's test (ak/'sen-feltz) [David *Axenfeld*, German physiologist, 1848–1912] see under *tests*.

Axenfeld-Morax see *Morax-Axenfeld*.

axenic (a-zen/'ik) [*a neg.* + Gr. *xenos* a guestfriend, stranger] not contaminated by or associated with any foreign organisms; used in reference to pure cultures of microorganisms or to germ-free animals. Cf. *gnotobiotic*.

axes (ak/'sēz) [L.] plural of *axis*.

axial (ak/'se-al) of or pertaining to the axis of a structure or part. In dentistry, pertaining to the long axis of a tooth.

axiation (ak/'se-a/'shun) the establishment of an axis, or the development of polarity, in an ovum, embryo, organ, or other body structure.

axifugal (ak-sif/'u-gal) [L. *axis* axis + *fugere* to flee] directed away from an axon or axis.

axilemma (ak/'si-lem/'ah) [*axis* + Gr. *lemma* husk] axolemma.

axilla (ak-sil'ah), pl. *axil'ae* [L.] [NA] a small pyramidal space between the upper lateral part of the chest and the medial side of the arm, and including, in addition to the armpit, axillary vessels, the brachial plexus of nerves, a large number of lymph nodes, and fat and loose areolar tissue; called also *armpit*, *fossa axillaris*, and *axillary space*.

axillae (ak-sil'e) [L.] plural of *axilla*.

axillary (ak'si-lar'e) pertaining to the axilla.

axio- (ak'se-o) [L. *axis*; Gr. *axōn* axle] a combining form denoting relationship to an axis. In dentistry, it is used in special reference to the long axis of a tooth, as in the names of cavity angles. See specific terms.

axiobuccal (ak'se-o-buk'kal) pertaining to or formed by the axial and buccal walls of a tooth cavity.

axiobuccocervical (ak'se-o-buk'ko-ser'vi-kal) pertaining to or formed by the axial, buccal, and cervical walls of a tooth cavity.

axiobuccogingival (ak'se-o-buk'ko-jin'ji-val) pertaining to or formed by the axial, buccal, and gingival walls of a tooth cavity.

axiobuccolingual (ak'se-o-buk'ko-ling'gwal) pertaining to the long axis and the buccal and lingual surfaces of a posterior tooth.

axiocervical (ak'se-o-ser'vi-kal) pertaining to or formed by the axial and cervical walls of a tooth cavity.

axiodistal (ak'se-o-dis'tal) pertaining to or formed by the axial and distal walls of a tooth cavity.

axiodistocervical (ak'se-o-dis'to-ser'vi-kal) pertaining to or formed by the axial, distal, and cervical walls of a tooth cavity.

axiodistogingival (ak'se-o-dis'to-jin'ji-val) pertaining to or formed by the axial, distal, and gingival walls of a tooth cavity.

axiodistoincisor (ak'se-o-dis'to-in-si'zal) pertaining to or formed by the axial, distal, and incisal walls of a tooth cavity.

axiodisto-occlusal (ak'se-o-dis'to-ō-kloo'zal) pertaining to or formed by the axial, distal, and occlusal walls of a tooth cavity.

axiogingival (ak'se-o-jin'ji-val) pertaining to or formed by the axial and gingival walls of a tooth cavity.

axiobuccal (ak'se-o-in-si'zal) pertaining to or formed by the axial and incisal walls of a tooth cavity.

axiolabial (ak'se-o-la'be-al) pertaining to or formed by the axial and labial walls of a tooth cavity.

axiolabiogingival (ak'se-o-la'be-o-jin'ji-val) pertaining to or formed by the axial, labial, and gingival walls of a tooth cavity.

axiolabiolingual (ak'se-o-la'be-o-ling'gwal) pertaining to the long axis and the labial and lingual surfaces of an anterior tooth.

axiolingual (ak'se-o-ling'gwal) pertaining to or formed by the axial and lingual walls of a tooth cavity.

axiolinguocervical (ak'se-o-ling'gwo-ser'vi-kal) pertaining to or formed by the axial, lingual, and cervical walls of a tooth cavity.

axiolinguogingival (ak'se-o-ling'gwo-jin'ji-val) pertaining to or formed by the axial, lingual, and gingival walls of a tooth cavity.

axiolinguo-occlusal (ak'se-o-ling'gwo-ō-kloo'zal) pertaining to or formed by the axial, lingual, and occlusal walls of a tooth cavity.

axiomésial (ak'se-o-me'ze-al) pertaining to or formed by the axial and mesial walls of a tooth cavity.

axiomésiocervical (ak'se-o-me'ze-o-ser'vi-kal) pertaining to or formed by the axial, mesial, and cervical walls of a tooth cavity.

axiomésiodistal (ak'se-o-me'ze-o-dis'tal) pertaining to the long axis and the mesial and distal surfaces of a tooth.

axiomésiogingival (ak'se-o-me'ze-o-jin'ji-val) pertaining to or formed by the axial, mesial, and gingival walls of a tooth cavity.

axiomésiincisor (ak'se-o-me'ze-o-in-si'zal) pertaining to or formed by the axial, mesial, and incisal walls of a tooth cavity.

axiomésio-occlusal (ak'se-o-me'ze-o-ō-kloo'zal) pertaining to or formed by the axial, mesial, and occlusal walls of a tooth cavity.

axion (ak-se'on) (obs.) the brain and spinal cord.

axio-occlusal (ak'se-o-ō-kloo'zal) pertaining to or formed by the axial and occlusal walls of a tooth cavity.

axiopodium (ak'se-o-po'de-um) axopodium.

axiopulpal (ak'se-o-pul'pal) pertaining to or formed by the axial and pulp walls of a tooth cavity.

axipetal (ak-sip'ē-tal) [L. *axis* axis + *petere* to seek] directed toward an axon or axis.

axis (ak'sis), pl. *axes* [L.; Gr. *axōn* axle] 1. a line about which a revolving body turns or about which a structure would turn if it did revolve; a line around which specified parts of the body are arranged. Used as a general term in NA terminology. 2. [NA] the second cervical vertebra; called also *epistropheus*, *odontoid vertebra*, and *vertebra dentata*. **arterial a.**, **costocervical**, **truncus costocervicalis**. **basibregmatic a.**, a vertical line from the basion to the bregma; the maximum height of the cranium. **basicranial a.**, a line from the basion to the gonion. **basifacial a.**, a line joining the gonion and the subnasal point; called also *facial a.* **binauricular a.**, a line joining the two auricular points. **brain a.** (obs.), brain stem; see under B. **a. bul'bi exter'nus** [NA], an imaginary line that

passes from the anterior to the posterior pole of the eyeball; called also *external axis of eye* and *axis oculi externa*. **a. bul'bi inter'nus** [NA], an imaginary line in the eyeball, passing from the anterior pole to a point on the anterior surface of the retina just deep to the posterior pole; called also *internal axis of eye* and *axis oculi interna*. **celiac a.**, **truncus celiacus**. **cell a.**, a line connecting the proximal and distal sides of a cell or passing through the centrosome and nucleus of a cell. **cephalocaudal a.**, the long axis of the body. **cerebrospinal a.** (obs.), the central nervous system. **condylar a.**, a line through the two mandibular condyles around which the mandible may rotate during a part of the opening movement of the jaw; called also *condyle chord*. **conjugate a.** (obs.), the conjugate diameter of the pelvis; see under *diameter*. **craniofacial a.**, the axis of the bones at the base of the skull, including the mesethmoid, presphenoid, basisphenoid, and basioccipital. **dorsoventral a.**, any line in the median plane at right angles to the long axis of the body. **electrical a. of heart**, the resultant of the electromotive forces within the heart at any instant. **embryonic a.**, an imaginary line from the head end to the tail end of an embryo or, before that, the line of elongation of the primitive streak and groove. **encephalomyelonic a.**, **encephalo-spinal a.** (obs.), the central nervous system. **external a. of eye**, **a. bulbi externus**. **facial a.**, **basifacial a.** **frontal a.**, an imaginary line running from right to left through the center of the eyeball. **a. of heart**, a line passing through the center of the base of the heart and the apex. **hinge a.**, the imaginary line connecting the mandibular condyles around which the mandible can rotate without translatory movement; called also *mandibular a.* **internal a. of eye**, **a. bulbi internus**. **a. of lens**, **a. len'tis** [NA], an imaginary line joining the anterior and posterior poles of the lens of the eye. **long a. of body**, the imaginary straight line through the neck, thorax, abdomen, and pelvis about which the weights of the torso are most symmetrically distributed. **mandibular a.**, **hinge a.** **neural a.**, the central nervous system. **a. oc'uli exter'na**, **a. bulbi externus**. **a. oc'uli inter'na**, **a. bulbi internus**. **opening a.**, an imaginary line around which the condyles may rotate during opening and closing movements of the mandible. **optic a.**, 1. axis opticus. 2. optical axis. 3. the hypothetical straight line that passes through the centers of curvature of the front and back surfaces of a simple lens; a light ray coinciding with this line will pass through the lens undeviated. **a. opt'ica**, **a. opticus**. **optical a.**, the line formed by the coinciding principal axes of elements composing an optical system, being the continuous line passing through the centers of curvature of the optical surfaces of those elements; called also *principal a.* **a. opt'icus** [NA], optic axis: an imaginary line passing from the midpoint of the visual field to the fovea centralis of the macula; called also *a. optica*, *sagittal a. of eye*, and *visual a.* **a. pel'vis** [NA], **a. of pelvis**, an imaginary curved line drawn through the minor pelvis at right angles to the planes of the superior aperture, of the cavity, and of the inferior aperture at their central points. **a. of preparation**, the path taken by a dental restoration as it slides on or off the preparation. **principal a.**, optical a. **pupillary a.**, the line perpendicular to the cornea that passes through the center of the pupil of entrance. **renal a.**, an imaginary straight line extending through the upper and lower poles of the kidney or, radiographically, through the most inferior and superior calices of the kidney; when projected superiorly, it intersects the thoracic spine. **sagittal a. of eye**, **a. opticus**. **secondary a.**, an imaginary line passing through the optical center of a lens. **thoracic a.**, **arteria thoracoacromialis**. **thyroid a.**, **truncus thyrocervicalis**. **vertical a. of eye**, an imaginary line connecting the extreme upper and lower points of the eyeball. **visual a.**, **a. opticus**. **Y a.**, the angle of a line connecting the sella turcica and the gnathion related to a horizontal plane; it is an indicator of downward and forward growth of the mandible.

axis cylinder (ak'sis-sil'in-der) [*axis* + *cylinder*] axon, def. 2.

axite (ak'sit) (obs.) terminal filaments of an axon.

axoaxonic (ak'so-ak-son'ik) referring to a synapse between the axon of one neuron and the axon of another.

axodendritic (ak'so-den-drit'ik) [*axo-* + Gr. *dendron* tree] referring to a synapse between the axon of one neuron and dendrites of another; see *synapse*.

axofugal (ak-sof'u-gal) axifugal.

axograph (ak'so-graf) an apparatus for recording axes in kymographic tracings.

axoid (ak'soid) pertaining to the axis or second cervical vertebra.

axoidean (ak-soi'de-an) axoid.

axolemma (ak'so-lem'ah) [*axon* + Gr. *eilēma* sheath] the surface membrane of an axon; called also *Mauthner's membrane* or *sheath*.

axolotl (ak'so-lot'l) a larval salamander of the genus *Ambystoma*; used in experiments with thyroid feeding.

axolysis (ak-sol'i-sis) [*axon* + Gr. *lysis* dissolution] degeneration and breaking up of the axon of a nerve cell.

axometer (ak-som'ē-ter) [*axis* + Gr. *metron* measure] an instrument for measuring an axis, especially an instrument for

adjusting a pair of spectacles with respect to the optic axes of the eyes.

axon (ak'son) [Gr. *axōn* axle, axis] 1. the axis of the body; the vertebral column (columna vertebralis [NA]). 2. that process of a neuron by which impulses travel away from the cell body; at the terminal arborization of the axon, the impulses are transmitted to other nerve cells or to effector organs. In the peripheral nervous system, the larger (myelinated) axons are surrounded by a myelin sheath, formed by concentric layers of plasma membrane of the Schwann cell, individual Schwann cells being separated by gaps called nodes of Ranvier. In the central nervous system, the function of the Schwann cell is supplied by oligodendrocytes. Called also *axis cylinder*. **giant a.**, an axon of certain invertebrates, e.g., the squid, whose size (500 to 700 microns) has facilitated physiological studies of cell membrane excitation. **naked a.**, an axon which has no myelin sheath. **unmyelinated a.**, naked a.

axonal (ak'so-nal) pertaining to or affecting an axon.

axonapraxia (ak'son-ah-prak'se-ah) neurapraxia.

axone (ak'sōn) axon.

axosome (ak'so-nēm) [axon + Gr. *nēma* thread] 1. the axial thread of the chromosome in which is located the axial combination of genes. 2. the central core of a cilium or flagellum, consisting of a central pair of filaments surrounded by nine other pairs; called also *axial filament*.

axon neuron (ak'so-nu'ron) [axis + Gr. *neuron* nerve] (obs.) a neuron of the central nervous system.

axonometer (ak'so-nom'ē-ter) [axon + Gr. *metron* measure] an apparatus for the rapid determination of the cylindrical axis of a lens.

axonotmesis (ak'son-ot-me'sis) [axon + Gr. *tmēsis* a cutting apart] nerve injury characterized by disruption of the axon and myelin sheath but with preservation of the connective tissue fragments, resulting in degeneration of the axon distal to the injury site; regeneration of the axon is spontaneous and of good quality. Cf. *neurapraxia* and *neurotmesis*.

axopetal (ak-sop'ē-tal) axipetal.

axophage (ak'so-fāj) a neuroglial cell occurring in excavations in the myelin in myelitis.

axoplasm (ak'so-plazm) [axon + Gr. *plasma* plasma] the cytoplasm of an axon.

axoplastic (ak'so-plas'mik) pertaining to the axoplasm.

axopodium (ak-so-po'de-um) [axon + Gr. *pous* foot] a more or less permanent type of pseudopodium, long and needle-like, characterized by an axial rod, composed of a bundle of fibrils inserted near the center of the body of the cell. Cf. *filopodium*, *lobopodium*, and *rhizopodium*.

axosomatic (ak'so-so-mat'ik) [axo- + Gr. *sōma* body] referring to a synapse between the axon of one neuron and the cell body of another.

axospongium (ak'so-spun'je-um) [axon + Gr. *spongos* sponge] the meshwork structure making up the substance of the axon of a nerve cell.

axostyle (ak'so-stil) 1. the central supporting structure of an axiopodium. 2. a supporting rod running through the body of a trichomonad and protruding posteriorly.

Ayala's quotient (equation, index) [A. G. Ayala, Italian neurologist, 1878–1943] see under *quotient*.

ayapana (ah'yah-pah'nah) the leaves of *Eupatorium triplinerve*, a plant growing in many tropical countries; used as an aromatic, stomachic, diaphoretic, and stimulant, and as a household remedy for many conditions in various hot regions.

Ayer's test (ārz) [James Bourne Ayer, Boston neurologist, born 1882] see under *test*.

Ayer-Tobey test (a'er-to'be) [James Bourne Ayer, Boston neurologist, born 1882; George L. Tobey, Jr., Boston otolaryngologist, 1881–1947] Tobey-Ayer test.

Ayerza's disease, syndrome (ah-ye'r'thaz) [Abel Ayerza, Buenos Aires physician, 1861–1918] see under *disease* and *syndrome*.

ayurvedism (ah'yoor-va'dism) Asiatic Indian treatment by means of plants and drugs indigenous to India.

Az. azote, French for nitrogen.

azabon (a'zah-bon) chemical name: 4-(3-azobicyclo[3.2.2]non-3-ylsulfonyl)benzenamine; a central nervous system stimulant, $C_{14}H_{20}N_2O_2S$.

azaclozine hydrochloride (a'zah-klor'zēn) chemical name: 2-chloro-10-[3-(hexahydropyrazolo[1,2-a]pyrazin-2-(1H)-yl)-1-oxo-propyl]-10H-phenothiazine dihydrochloride; a coronary vasodilator, $C_{22}H_{24}ClN_3OS \cdot 2HCl$.

azacosterol hydrochloride (ah'zah-kos'ter-ōl) chemical name: 17β-[3-(diamethylamino)-propyl]methylamino]androst-5-en-3β-ol dihydrochloride; a hypocholesterolemic agent and avian chemosterilant, $C_{28}H_{44}N_2O \cdot 2HCl$.

azacyclonol (a'zah-si'klo-nol) chemical name: α,α-diphenyl-4-piperidinemethanol. The gamma isomer of pipradol, $C_{18}H_{20}NO$, occurring as small white odorless crystals; used in the hydrochlo-

ride form as a tranquilizer in the treatment of schizophrenia. Called also *gamma-pipradol*.

azacytidine (ah'zah-si'ti-dēn) chemical name: 5-azacytidine-4-amino-1-ribofuranosyl-1,3,5-triazin-2(1H)-one. An antineoplastic, $C_8H_{12}N_4O_5$, which has been used in the treatment of acute myelogenous and lymphocytic leukemia.

azaguanine (az'ah-gwan'in) a mitotic poison, which resembles the purine guanine, but is actually incorporated into nucleic acids and acts to block nucleic acid synthesis by competitive inhibition.

azamethonium bromide (a'zah-mē-tho'ne-um) chemical name: 2,2'-(methylimino)bis[*N*-ethyl-*N,N*-dimethylethanaminium]dibromide. A ganglionic blocking agent, $C_{13}H_{23}Br_2N_3$, which has been used as an antihypertensive agent.

azanarol maleate (a'zah-na'tor) chemical name: 5-(1-methyl-4-piperidinylidene)-5*H*-[1]benzopyrano[2,3-*b*]pyridine (Z)-2-butenedioate(1:1); a bronchodilator, $C_{18}H_{18}N_2O \cdot C_4H_4O_4$.

azanidazole (a'zah-nid'ah-zōl) chemical name: (E)-4-[2-(1-methyl-5-nitro-1*H*-imidazol-2-yl)ethenyl]-2-pyrimidinamine; an antiprotazoal, $C_{10}H_{10}N_6O_2$.

azapetine phosphate (a'zah-pet'ēn) chemical name: 6,7-dihydro-6,7-dihydro-6-(2-propenyl)-5*H*-dibenz[*c,e*]azepine phosphate. An α-adrenergic blocking agent, $C_{17}H_{26}NO_4P$, occurring as white crystalline powder; used as a vasodilator in peripheral vascular disease in which vasospasm is prominent, administered orally.

azapropazone (ah'zah-pro'pah-zōn) apazone.

azaserine (a'zah-ser'ēn) chemical name: L-serine diazoacetate (ester). An antifungal antibiotic, $C_8H_7N_3O_4$, produced by *Streptomyces* species or by synthesis; it is a glutamine antagonist, inhibiting the synthesis of purine, and has been used as an antineoplastic agent.

azastene (a'zah-stēn) chemical name: 4,4,17-trimethyldrosta-2,5-dieno[2,3-*d*]isoxazol-17β-ol; a contraceptive, $C_{23}H_{33}NO_2$.

azatadine maleate (ah-zat'ah-dēn) chemical name: 6,11-dihydro-11-(1-methyl-4-piperidinylidene)-5*H*-benzo[5,6]cyclohepta-[1,2-*b*]pyridine maleate (1:2); an antihistaminic, $C_{20}H_{22}N_2 \cdot 2C_4H_4O_4$, used in the treatment of perennial and seasonal allergic rhinitis and chronic urticaria, administered orally.

azathioprine (a'zah-thi'o-prēn) [USP] chemical name: 6-[(1-methyl-4-nitro-1*H*-imidazol-5-yl)thio]-1*H*-purine. A purine antagonist that interferes with DNA synthesis, it is an imidazole derivative of mercaptopurine, $C_8H_7N_3O_2S$, occurring as a pale yellow powder; used as an immunosuppressive agent in tissue transplantation and in autoimmune diseases, administered orally.

a. sodium, the sodium salt of azathioprine, suitable for injection; used for the same purposes as the base.

6-azauridine (a'zah-u'rī-dēn) chemical name: 2-β-D-ribofuranoxyl-1,2,4-triazine-3,5(2*H*,4*H*)-dione; an antimetabolite, the triazine analogue of uridine, $C_8H_{11}N_3O_6$, which particularly affects neoplastic cells; it has been used in the treatment of acute leukemias.

azedarach (ah-zed'ā-rak'') a common name for *Melia azedarach* L. (Meliaceae) (the chinaberry tree; umbrella tree; pride of China). Its seeds are used for beads and rosaries, and the bark of roots for its anthelmintic properties. Leaf juice is used as a diuretic and emmenagogue. In the United States, it is considered a poisonous plant for humans and animals, the toxicity being felt to reside in the resinous fraction of fruit pulp. Its pharmacological actions include severe local irritation, nervous symptoms, cardioactivity, and dyspnea.

azeotropic (a'ze-o-trop'ik) pertaining to or characterized by azeotropy.

azeotropy (a'ze-ot'ro-pe) [a neg. + Gr. *zein* to boil + *tropē* a turn, or turning] the absence of any change in the composition of a mixture of substances when it is boiled under a given pressure.

azepindole (a'zē-pin'dōl) chemical name: 2,3,4,5-tetrahydro-1*H*-[1,4]diazepino[1,2-*a*]indole; an antidepressant, $C_{12}H_{14}N_2$.

azerin (az'er-in) an enzyme from *Drosera*, *Nepenthes*, and various other insectivorous plants.

azid, azide (az'id) a compound that contains the group N_3 .

azipramine (ah-zip'rah-mēn) chemical name: 6,7-dihydro-*N*-methyl-*N*-(phenylmethyl)-indolo[1,7-*ab*][1]benzazepine-1-ethanamine monohydrochloride; an antidepressant, $C_{26}H_{28}N_2 \cdot HCl$.

azlocillin (az'lo-sil'in) an antibiotic derivative of penicillin, $C_{20}H_{23}N_3O_6S$.

azo- a prefix indicating the presence of the group $-N:N-$, as in azobenzene.

azoamyly (a-zo-am'i-le) [a neg. + Gr. *zōon* animal + *amylon* starch] inability of the hepatic cells to store up a normal amount of glycogen.

Azobacter (a-zo-bak'ter) (obs.) azotobacter.

azobenzene (az'o-ben'zēn) [azote + benzene] an orange-red crystalline product, $C_6H_5N:N \cdot C_6H_5$, of the reduction of nitrobenzene, soluble in alcohol and ether, but only sparingly so in water; it is the parent substance of azo dyes and some pH indicators.

azocarmine (az''o-kar'min) either azocarmine G or azocarmine B, red basic dyes used in certain staining procedures.

azoic (ah-zo'ik) [a neg. + Gr. *zōē* life] destitute of living organisms.

azoimide (az''o-im'fid) 1. the group:

2. a protoplasmic poison, hydrazoic acid, N_3H , resembling hydrocyanic acid in its action, made by heating hydrogen chloride with sodium nitrate. It is highly explosive. Called also *triazic acid* and *hydronitric acid*.

azole (az'öl) 1. a derivative of a five-membered ring containing nitrogen and either oxygen, sulfur, or an additional nitrogen atom, as well as carbon atoms. 2. pyrrole.

Azolid (az'o-lid) trademark for preparations of phenylbutazone.

azolimine (ah-zo'li-mēn) chemical name: 2-imino-3-methyl-1-phenyl-4-imidazolidinone; a potassium-sparing diuretic, $\text{C}_{10}\text{H}_{11}\text{N}_3\text{O}$.

azolitmin (az''o-lit'min) a coloring principle, $\text{C}_7\text{H}_7\text{NO}_4$, from litmus; it is used as a pH indicator, being red at a pH of 4.5 and blue at 8.3.

azomycin (a'zo-mi'sin) chemical name: 2-nitroimidazole. An antibiotic, $\text{C}_5\text{H}_3\text{N}_3\text{O}_2$, produced by a species of *Streptomyces*.

azoospermatism (a-zo''o-sper'mah-tizm) azoospermia.

azoospermia (a-zo''o-sper'me-ah) [a neg. + *zoosperm*] absence of spermatozoa in the semen, or failure of formation of spermatozoa.

azopigment (a'zo-pig'ment) a purple derivative of bile pigment containing an azo (—N=N—) linkage; formed by reacting bile pigments with diazotizing agents.

azoprotein (az''o-pro'te-in) a protein some constituents of which have been diazotized.

azosulfamide (az''o-sul'fah-mid) chemical name: 6-(acetyl-amino)-3-[[4-(aminosulfonyl)phenyl]azo]-4-hydroxy-2,7-naphthalenedisulfonic acid. An antibacterial compound, $\text{C}_{18}\text{H}_{14}\text{N}_4\text{Na}_2\text{O}_6\text{S}$, occurring as a reddish-brown powder; it was one of the forerunners of the sulfonamide drugs.

azote (az'öt) [a neg. + Gr. *zōē* life] nitrogen.

azotemia (az''o-te'me-ah) [azote + Gr. *haima* blood + *-ia*] an excess of urea or other nitrogenous bodies in the blood. **chloropenic a.**, hypochloremic a. **extrarenal a.**, excess of non-protein nitrogen in the blood in the absence of renal disease sufficient to account for it; called also *prerenal a.* **hypochloremic a.**, a condition characterized by deficiency of sodium chloride, fixation of chlorine in the tissues, and azoturia; called also *chloropenic a.* **prerenal a.**, extrarenal a.

azotemic (az''o-te'mik) pertaining to or characterized by azotemia.

azotenesia (az''o-tē-ne'sis) any disease due to an excess of nitrogenous substances in the system.

azothermia (az''o-ther'me-ah) [azote + Gr. *thermē* heat] temperature increase produced by nitrogenous matter in the blood.

azotification (az-o'ti-fi-ka'shun) the fixation of atmospheric nitrogen.

azotize (az'o-tiz) to combine or charge with nitrogen.

Azotobacter (ah-zo'to-bak'ter) a genus of microorganisms of the family Azotobacteraceae, order Eubacteriales; it includes three species, *A. a'gilis*, *A. chroococ'cum*, and *A. in'dicus*. Sometimes called *Azobacter*.

Azotobacteraceae (ah-zo'to-bak'tē-ra'se-e) a family of Schizomycetes, order Eubacteriales, occurring as relatively large rods and even cocci. They are free-living nitrogen-fixing bacteria widely distributed in soil, which are capable of fixing atmospheric nitrogen in the presence of carbohydrate or other source of energy, and grow best on media deficient in nitrogen. The family includes a single genus, *Azotobacter*.

azotometer (az''o-tom'ē-ter) [azote + Gr. *metron* measure] an instrument for measuring the proportion of nitrogen compounds in a solution.

Azotomonas (ah-zo'to-mo'nas) a genus of microorganisms of the family Pseudomonadaceae, suborder Pseudomonadineae, order Pseudomonadales, occurring as rod-shaped to coccoid cells

found in the soil and active in fixation of atmospheric nitrogen. It includes two species, *A. fluores'cens* and *A. inso'rita*.

azotomycin (ah-zo'to-mi'sin) an antibiotic substance with antineoplastic properties produced by *Streptomyces ambofaciens*; formerly called *duazomycin B*.

azotorrhea (az''o-to-re'ah) [azote + Gr. *rhoia* flow] excessive loss of nitrogen in the feces.

azoturia (az''o-tu're-ah) [azote + Gr. *ouron* urine] 1. an excess of urea or other nitrogen compounds in the urine. 2. a disease of horses marked by a sudden attack of perspiration and paralysis of the hind quarters and by the passing of light red to dark brown urine. It occurs in horses that, after being engaged in continuous work, are rested and well fed for a few days and then returned to work.

azoturic (az''o-tu'rik) pertaining to azoturia or the urinary excretion of nitrogen.

azoxybenzene (az''ok-se-ben-zēn') a pale yellow product, $\text{C}_6\text{H}_5\cdot\text{N}\cdot(\text{O})\text{N}\cdot\text{C}_6\text{H}_5$, of the reduction of nitrobenzene.

azoxy compound (az-ok'se) a compound which contains the group

AZT Aschheim-Zondek test.

Aztec idiocy, type (az'tek) [*Aztec*, a tribe of aboriginal Mexicans] microcephalic idiocy.

azul (az'ool) pinta.

azulene (az'u-lēn) a blue crystalline hydrocarbon, C_{10}H_8 , with an odor similar to that of naphthalene, obtained from certain volatile oils, such as oil of cubebs.

Azulfidine (a-zul'fi-dēn) trademark for a preparation of sulfasalazine.

azure (azh'ūr) any of the partially methylated homologues of the series of basic dyes extending from thionine to methylene blue, or to certain mixtures of members of this series. They are metachromatic, and are used in many important staining procedures. **a. A.**, asymmetrical dimethylthionine, $(\text{CH}_3)_2\text{N}\cdot\text{C}_6\text{H}_3(\text{SN})\text{C}_6\text{H}_3\cdot\text{NH}_2\cdot\text{Cl}$. **a. B.**, trimethylthionine, $(\text{CH}_3)_3\text{N}\cdot\text{C}_6\text{H}_3(\text{SN})\text{C}_6\text{H}_3\cdot\text{N}(\text{CH}_3)\cdot\text{Cl}$. **a. C.**, monomethylthionine chloride, $(\text{CH}_3)\cdot\text{N}\cdot\text{C}_6\text{H}_3(\text{SN})\text{C}_6\text{H}_3\cdot\text{NH}_2\cdot\text{Cl}$. **a. I.**, azure B. **a. II.**, a mixture of equal parts of azure I and methylene blue. **methylene a.**, azure B.

azuresin (azh'u-rez'in) a complex combination of azure A dye and carbacrylic cationic exchange resin, used as a diagnostic aid in detection of gastric secretion.

azuophil (azh-u'ro-fil) [azure + Gr. *philein* to love] an element or cell that stains well with blue aniline dyes.

azuophile (azh'u-ro-fil) 1. azuophil. 2. azuophilic.

azuophilia (azh'u-ro-fil'e-ah) a condition in which the blood contains cells having azuophil granulations.

azuophilic (azh'u-ro-fil'ik) staining well with blue aniline dyes; pertaining to or characterized by azuophilia.

azygogram (az'i-go-gram) the roentgenographic record obtained by azygography.

azygography (az'i-gog'rah-fe) roentgenography of the azygous venous system following its opacification with radiographic contrast material; usually employed for evaluation of abnormal tumor masses in the mediastinum, as evidenced by extrinsic pressure upon, or complete obstruction of, the visualized azygous vein.

azygos (az'i-gos) [a neg. + Gr. *zygon* yoke or pair] 1. unpaired. 2. any unpaired part, such as the azygos vein.

azygosperm (ah-zi'go-sperm') [a neg. + Gr. *zygon* yoke or pair + *sperma* seed] azygosperm.

azygospore (ah-zi'go-spōr'') [a neg. + Gr. *zygon* yoke or pair + *sporos* seed] a spore developed directly from a gamete without conjugation; called also *azygosperm*.

azygous (az'i-gus) having no fellow; unpaired.

zymia (ah-zim'e-ah) [a neg. + Gr. *zymē* ferment] absence of an enzyme.

azymic (ah-zim'ik) (*obs.*) not causing fermentation; not arising from fermentation.

azymous (ah-zi'mus) (*obs.*) azymic.

B

B chemical symbol for *boron*; in physics the symbol for magnetic flux density measured in *gauss*.

B. bacillus; [L.] *bal'neum* (bath); Baumé scale; Benoist scale; boils at; buccal. See also *point B*, under *point*.

β the second letter of the Greek alphabet; see *beta*.

Ba chemical symbol for *barium*.

B.A. abbreviation for *L. bal'neum are'nae* (sand bath); Bachelor of Arts.

Babbitt metal (bab'it) [Isaac Babbitt, American inventor, 1799–1862] see under *metal*.

Babcock's operation (bab'koks) [William Wayne Babcock, Philadelphia surgeon, 1872–1963] see under *operation*.

Babcock's test (bab'koks) [Stephen Moulton Babcock, American agricultural chemist, 1843–1931] see under *tests*.

Babès' treatment, tubercles (bah'bāz) [Victor Babès, Roumanian bacteriologist, 1854–1926] see under *treatment and tubercle*.

Babès-Ernst granules (bodies) (bah'bāz-ernst) [Victor Babès; Paul Ernst, German pathologist, 1859–1937] metachromatic granules.

Babesia (bah-be'ze-ah) [Victor Babès] a genus of the sporozoa of the family Babesiidae, order Haemosporidia, found in red blood cells of various animals, including cattle, dogs, sheep, goats, swine, and horses, and transmitted by ticks; formerly called *Babesiella* and *Piroplasma*. **B. bigem'ina**, the causative organism of Texas fever; transmitted by ticks of the genus *Boophilus*, primarily by *B. annulatus*. **B. bo'vis**, the cause of hemoglobinuria, fever, and anemia in cattle in Europe; transmitted by *Ixodes ricinus*. **B. cabal'li**, a species causing biliary fever of horses in Africa, Siberia, and Russia, transmitted by ticks of the genera *Anocentor*, *Dermacentor*, *Hyalomma*, and *Rhipicephalus*. **B. ca'nis**, the cause of malignant jaundice in dogs; transmitted by *Haemaphysalis leachi*, *Rhipicephalus sanguineus*, *Ixodes ricinus*, and *Dermacentor reticulatus*. **B. e'qui**, a species causing biliary fever of horses in the eastern part of the Soviet Union, Italy, Africa, India, and Brazil, transmitted by ticks of the genera *Dermacentor*, *Rhipicephalus*, and *Hyalomma*; called also *Nuttallia equi*. **B. gibso'ni**, a species found in dogs; called also *Nuttallia gibsoni*. **B. mota'si**, a species infecting sheep and goats in Europe and Africa. **B. o'vis**, the etiologic agent of carceag and icterohematuria of sheep.

babesiasis, babesiosis (bah-bē-si'ah-sis, bah-be'ze-o'sis) infection with *Babesia*; called also *piroplasmosis*.

Babesiella (bah-be'ze-el'ah) *Babesia*.

Babesiidae (bah-be-ze'i-de) a family of protozoa of the order Haemosporidia, subphylum Sporozoa, comprising intraerythrocytic parasites of various vertebrates, usually mammals, reptiles, and amphibians. It includes the genera *Aegyptianella*, *Babesia*, and *Theileria*.

Babinski's law, etc. (bah-bin'skēz) [Joseph François Felix Babinski, physician in Paris, 1857–1932] see under *law, phenomenon, reflex, sign, and syndrome*.

Babinski-Fröhlich syndrome (bah-bin'ske-fra'lik) [J.F.F. Babinski; Alfred Fröhlich, Vienna neurologist, 1871–1953] adiposogenital dystrophy.

Babinski-Nageotte syndrome (bah-bin'ske-nazh-yot') [J.F.F. Babinski; Jean Nageotte, Paris pathologist, 1866–1948] see under *syndrome*.

Babinski-Vaquez syndrome (bah-bin'ske-vak-a') [J.F.F. Babinski; Louis Henri Vaquez, French physician, 1860–1936] Babinski syndrome.

baby (ba'be) an infant; a child not yet able to walk. **blue b.**, an infant born with cyanosis due to a congenital heart lesion or to congenital atelectasis. **collodion b.**, an infant born completely covered by a collodion- or parchment-like membrane; see *lamellar exfoliation of the newborn*, under *exfoliation*.

bacampicillin hydrochloride (bah-kam'pī-sil'in) chemical name: 6-[(aminophenylacetyl)amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid 1-[(ethoxycarbonyl)oxy]ethyl ester monohydrochloride; an antibacterial, C₂₁H₂₇N₃O₇·S·HCl.

bacca (bak'ah), pl. *bac'cae* [L.] a berry.

baccate (bak'āt) resembling a berry.

Bacelli's mixture, sign (bak-chel'ēz) [Guido Bacelli, Italian physician, 1832–1916] see under *mixture*, and see *aphonic pectoriloquy*, under *pectoriloquy*.

bacciform (bak'si-form) [L. *bacca* berry + *forma* shape] berry-shaped.

Bachman test (reaction) [George William Bachman, American parasitologist, born 1890] see under *tests*.

Bachmann's bundle [Jean George Bachmann, American physiologist, born 1877] see under *bundle*.

Baciguent (bas'i-gwent) trademark for preparations of bacitracin.

Bacillaceae (bas'il-la'se-e) a family of Schizomycetes, order Eubacteriales, made up of rod-shaped cells capable of producing cylindrical, ellipsoidal, or spherical endospores which are located terminally, subterminally, or centrally. They are mostly saprophytic, commonly found in the soil, but a few are parasitic on insects or animals, and may produce disease. It includes two genera, *Bacillus* and *Clostridium*, the former aerobic, and the latter obligate anaerobes.

bacillary (bas'i-la're) pertaining to bacilli or to rodlike forms.

bacillemia (bas'i-le'me-ah) [*bacillus* + Gr. *haima* blood] the presence of bacilli in the blood.

bacilli (bah-sil'i) [L.] plural of *bacillus*.

bacillus culture (bah-sil'i-kul-chur) the artificial propagation of bacilli.

bacilliferous (bah'sil-lif'er-us) bearing or carrying bacilli.

bacilliform (bah-sil'i-form) [*bacillus* + L. *forma* form] having the appearance of a bacillus.

bacilligenic (bah-sil'i-jen'ik) bacillogenic.

bacillin (bah-sil'in) an antibiotic substance isolated from strains of *Bacillus subtilis*, highly active on both gram-positive and gram-negative bacteria.

bacilliparous (bas'i-lip'ah-rus) [*bacillus* + L. *parere* to produce] producing bacilli.

bacillogenic (bah-sil'o-jen'ik) 1. caused by bacilli. 2. producing bacilli.

bacillogenous (bas'i-loj'ē-nus) caused by bacilli.

bacilluria (bas'i-lu're-ah) [*bacillus* + Gr. *ouron* urine + *-ia*] the presence of bacilli in the urine.

Bacillus (bah-sil'lus) [L. "little rod"] a genus of microorganisms of the family Bacillaceae, order Eubacteriales, including large gram-positive, aerobic, spore-forming bacteria separated into 33 species, of which three are pathogenic, or potentially pathogenic, and the remainder are saprophytic soil forms. Many organisms historically called *Bacillus* are now classified in other genera. **B. abor'tus**, the microorganism responsible for contagious abortion in cattle (Bang's disease). **B. aerog'enes capsula'tus**, *Clostridium perfringens*. **B. al'vei**, the etiologic agent of European foulbrood of honeybees. **B. an'thracis**, the causative agent of anthrax in lower animals and man. **B. botuli'nus**,

Bacillus anthracis.

Clostridium botulinum. **B. bre'vis**, an organism that is the source of the antibiotics gramicidin and tyrocidine. **B. bronchisept'icus**, *Brucella bronchiseptica*. **B. cer'eus**, a saprophytic, usually motile, aerobic, spore-forming bacillus that has been implicated in several outbreaks of food poisoning. **B. co'li**, *Escherichia coli*. **B. cras'sus**, a normally nonpathogenic species sometimes found in vaginal cultures; it has been implicated as the cause of ulcer vulvae acutum. **B. dysente'riae**, *Shigella dysenteriae*. **B. enterit'idis**, *Salmonella enteritidis*. **B. faeca'lis alcalig'enes**, *Alcaligenes faecalis*. **B. frag'ilis**, *Bacterioides fragilis*. **B. fusifor'mis**, *Fusobacterium plauti-vincenti*. **B. lar'vae**, the specific etiologic agent of American foulbrood of honeybees, not pathogenic for man. **B. lep'rae**, *Mycobacterium leprae*. **B. mal'lei**, *Pseudomonas mallei*. **B. megathe'rium**, a widely distributed saprophytic soil form, commonly occurring as a laboratory contaminant. **B. necroph'orus**, *Fusobacterium necrophorum*. **B. oedemat'iens**, *Clostridium novyi*. **B. oedem'atis malig'ni No. II**, *Clostridium novyi*. **B. paraboluli'nus**, *Clostridium botulinum* type Cβ. **B. pneumo'niae**, *Klebsiella pneumoniae*. **B. polymyx'a**, a saprophytic soil and water microorganism that produces the antibiotic polymyxin. **B. pseudomallei**, *Pseudomonas pseudomallei*. **B. pyocya'neus**, *Pseudomonas aeruginosa*. **B. sub'tilis**, a common saprophytic soil and water form, often occurring as a laboratory contaminant, and in rare instances found in apparently causal relation to pathologic processes, such as conjunctivitis. **B. tet'ani**, *Clostridium tetani*. **B. trop'icus**, an aerobic sporulating bacillus found in Australia as a natural parasite of the rat and bandicoot. **B. ty'phi**, *B. typho'sus*, *Salmonella ty-*

*Bacillus subtilis.*

phosa. **B. welchii**, *Clostridium perfringens*. **B. whitmori**, *Pseudomonas pseudomallei*.

bacillus (bah-sil'us), pl. *bacilli* [L.] 1. an organism of the genus *Bacillus*. 2. in general, any rod-shaped bacterium; any spore-forming, rod-shaped microorganism of the order Eubacteriales. **b. aborti/vus equinus**, *Salmonella abortus equi*. **Bang's b.**, *Brucella abortus*. **Battey bacilli**, unclassified mycobacteria of Group III (nonphotochromogens), which may produce tuberculosis-like disease in man. **Boas-Oppler b.**, an organism first found in the gastric juice of patients with stomach carcinoma, similar to if not identical with *Lactobacillus bulgaricus*; called also *lactobacillus* of Boas-Oppler. **Bordet-Gengou b.**, *Bordetella pertussis*. **butter b.**, *Mycobacterium butyricum*. **Calmette-Guerin b.**, an organism of the strain *Mycobacterium bovis*, rendered completely avirulent by cultivation for many years on bile-glycero-potato medium. **Chauveau's b.**, *Clostridium chauvoei*. **colon b.**, *Escherichia coli*. **diphtheria b.**, *Corynebacterium diphtheriae*. **Döderlein's b.**, a large gram-positive microorganism commonly found in the vagina, said to be identical with *Lactobacillus acidophilus*. **Ducrey's b.**, *Hemophilus ducreyi*. **dysentery bacilli**, gram-negative, non-spore-forming rods related to other enteric bacteria, and causing dysentery in man; see *Shigella*. **Escherich's b.**, *Escherichia coli*. **Fick's b.**, *Proteus vulgaris*. **Flexner's b.**, *Shigella flexneri*. **Friedländer's b.**, *Klebsiella pneumoniae*. **fusi-form b.**, a rod-shaped bacterium in which the cell is thicker in the center and tapers towards the ends. **Gärtner's b.**, *Salmonella enteritidis*. **Ghon-Sachs b.**, *Clostridium septicum*. **glanders b.**, *Pseudomonas mallei*. **Hansen's b.**, *Mycobacterium leprae*. **hay b.**, *Bacillus subtilis*. **Hofmann's b.**, *Corynebacterium pseudodiphtheriticum*. **hog cholera b.**, *Salmonella choleraesuis*. **Johne's b.**, *Mycobacterium paratuberculosis*. **Klebs-Löffler b.**, *Corynebacterium diphtheriae*. **Koch-Weeks b.**, *Hemophilus aegyptius*. **lepra b.**, leprosy b., *Mycobacterium leprae*. **Morax-Axenfeld b.**, *Hemophilus duplex*. **Morgan's b.**, *Proteus morgani*. **Newcastle-Manchester b.**, *Shigella flexneri* type 6, Boyd 88. **Nocard's b.**, *Salmonella typhimurium*. **paracolon bacilli**, microorganisms commonly found in the intestinal flora, distinguished by delayed (5–21 days) fermentation of lactose. See *Paracolonabactrum*. **Pfeiffer's b.**, *Hemophilus influenzae*. **Preisz-Nocard b.**, *Corynebacterium pseudotuberculosis*. **rhinoscleroma b.**, a microorganism closely resembling *Klebsiella pneumoniae*, isolated from granulomatous lesions in rhinoscleroma. **Schmitz's b.**, *Shigella dysenteriae* type 2. **Schmorl's b.**, *Fusobacterium necrophorum*. **Shiga b.**, *Shigella dysenteriae* type 1. **smegma b.**, *Mycobacterium smegmatis*. **Sonne-Duval b.**, *Shigella sonnei*. **Stanley b.**, a serotype of *Salmonella* isolated from patients with food poisoning in Stanley, England. **Strong's b.**, *Shigella flexneri*. **swine rotlauf b.**, *Erysipelothrix rhusiopathiae*. **tetanus b.**, *Clostridium tetani*. **timothy b.**, *Mycobacterium phlei*. **tubercle b.**, *Mycobacterium tuberculosis*. **typhoid b.**, *Salmonella typhosa*. **vole b.**, *Mycobacterium mageritense*. **Weeks' b.**, *Hemophilus aegyptius*. **Welch's b.**, *Clostridium perfringens*. **Whitmore's b.**, *Pseudomonas pseudomallei*.

bacitracin (bas'i-tra'sin) [USP] an antibacterial polypeptide produced by the growth of a gram-positive, spore-forming organism belonging to the *licheniformis* group of *Bacillus subtilis*, occurring as a white to pale buff powder. It is effective against many gram-positive bacteria, such as staphylococci, streptococci, and pneumococci, and some gram-negative bacteria, such as gonococci and meningococci. It is applied topically to the skin or conjunctiva or administered by intramuscular injection in the treatment of infections caused by susceptible organisms. **b. zinc** [USP], the zinc salt of bacitracin, occurring as a white to a pale tan powder; used for topical application to the skin.

back (bak) the posterior part of the trunk from the neck to the pelvis; called also *dorsum* [NA]. **flat b.**, a back that appears flat as a result of a decrease of normal lumbar lordosis and normal thoracic kyphosis. **functional b.**, a condition of fatigue and defective balance marked by more or less continuous lumbar or dorsal pain. **hollow b.**, see *lordosis*. **hump b.**, **hunch b.**, **kyphosis**. **poker b.**, rheumatoid spondylitis. **saddle b.**, see *lordosis*.

backalgia (bak-al'je-ah) back pain not explained on the basis of structural abnormality or disease process.

backbone (back'bōn) the vertebral column, forming a continuous, comparatively rigid structure in the midline of the back; see *columna vertebralis* [NA].

back-cross (bak'kros) in experimental genetics, a mating between a heterozygote and a homozygote (as between an F₁ hybrid and an individual of a genotype identical to one of the two parental strains [P₁]). **double b.**, the mating between a double heterozygote and a homozygote; it is the mating most informative for analysis of the linkage of various genes.

backflow (bak'flo) the flowing of a current in a direction the reverse of that normally taken; regurgitation. **pyelovenous b.**, the drainage of fluid from the pelvis of the kidney into the venous system under certain conditions of back pressure.

backing (bak'ing) in dentistry, the piece of metal that supports the porcelain facing, and to which the pins of the artificial tooth are soldered. **alloy b.**, one made of an alloy instead of pure platinum or gold.

backknee (bak'ne) genu recurvatum.

back-raking (bak-rak'ing) extraction of impacted feces from the rectum of an animal.

backscatter (bak'skat'er) in radiology, radiation deflected by scattering processes at angles greater than 90 degrees to the original direction of the beam of radiation; see also *scatter radiation*, under *radiation*.

BaCl₂, barium chloride.

baclofen (bak'lo-fen) chemical name: 4-amino-3-(4-chlorophenyl)butanoic acid. A muscle relaxant, C₁₀H₁₂ClNO₂, which is an analogue of gamma-aminobutyric acid; administered orally in the treatment of spasticity in multiple sclerosis and other disorders of the spinal cord.

Bacon's anoscope (ba'kunz) [Harry Ellicott Bacon, Philadelphia proctologist, born 1900] see under *anoscope*.

Bact. *Bacterium*.

bacteremia (bak'ter-e'me-ah) [Gr. *baktērion* little rod + *haima* blood] the presence of bacteria in the blood.

Bacteria (bak-te're-ah) in some systems of classification, a division of the kingdom Procaryotae, including all prokaryotic organisms that are not blue-green algae (see *Cyanophyceae*). In other systems, prokaryotic organisms without a true cell wall are considered to be unrelated to the Bacteria and are placed in a separate class—the Mollicutes.

bacteria (bak-te're-ah) [L.] plural of *bacterium*.

Bacteriaceae (bak'te-re-a'se-e) a name formerly given a family of Schizomycetes.

bacterial (bak-te're-al) pertaining to or caused by bacteria.

bactericidal (bak-tēr'i-si'dal) [*bacterium* + L. *caedere* to kill] destructive to bacteria.

bactericide (bak-tēr'i-sid) an agent that destroys bacteria. **specific b.**, bacteriolysin.

bactericidin (bak'ter-ri-si'din) a substance that leads to the death of bacteria; such substances include both antibody and nonantibody components in the blood.

bacterid (bak'ter-id) a skin eruption caused by a bacterial infection elsewhere in the body; usually pustular bacterid (q.v.). **pustular b.**, a grouped eruption of sterile intraepidermal pustules on the palms or soles, believed by some to be due to bacterial infection elsewhere in the body; called also *pustular b. of Andrews*.

bacteride (bak'ter-id) (obs.) bacterid.

bacteridium (bak'ter-id'e-um), pl. *bacteridia*. A former generic name for certain bacilli.

Bacterieae (bak-te're-e-e) a name formerly given a tribe of Schizomycetes.

bacteriemia (bak-tēr'e-e'me-ah) bacteremia.

bacteriform (bak-tēr'ē-form) resembling a bacterium in form.

bacterin (bak'ter-in) a bacterial vaccine; a suspension of bacteria for stimulating the production of antibodies in humans and animals for prophylactic or therapeutic purposes, or for the production of antisera. Cf. *vaccine*.

bacterinia (bak-tēr-in'e-ah) the condition of unfavorable action which sometimes follows inoculation with bacterial vaccines.

bacterioagglutinin (bak-te're-o-ah-gloo'ti-nin) an agglutinin that causes the clumping of bacteria.

bacteriochlorophyll (bak-te're-o-klo-ro-fil) a form of chlorophyll occurring in certain bacteria and capable of carrying out photosynthesis. It is designated bacteriochlorophyll a, b, c, or d, according to its absorption spectrum.

bacteriocidin (bak-te're-o-si'din) an antibacterial antibody that causes death of bacteria. Originally used to define a specific antibody though actually referring to only one of several activities, such as agglutination and precipitation.

bacteriocin (bak-te'ri-o-sin) any of a group of substances, e.g., colicin, released by certain bacteria that kill but do not lyse other strains of bacteria. Specific bacteriocins attach to specific receptors on cell walls and induce specific metabolic block, e.g., cessation of nucleic acid or protein synthesis or of oxidative phosphorylation.

bacteriocinogenic (bak-te're-o-sin'o-jen'ik) giving rise to bacteriocin; denoting bacterial plasmids that synthesize bacteriocin.

bacterioclasis (bak-te're-ok'lah-sis) [*bacteria* + Gr. *klasis* break-ing] bacteriolysis.

bacterioerythrin (bak-te're-o-er'i-thrin) a red pigment obtained from bacteriopurpurin.

bacteriofluorescein (bak-te're-o-floo-o-res'e-in) a fluorescent coloring matter produced by bacteria.

bacteriogenic (bak-te're-o-jen'ik) 1. bacterial in origin. 2. producing bacteria.

bacteriogenous (bak-te're-o-j'ē-nus) bacteriogenic.

bacteriohemagglutinin (bak-te're-o-hem'ah-gloo'ti-nin) a hemagglutinin formed by body tissues in response to bacterial antigens.

bacteriohemolysin (bak-te're-o-he-mol'i-sin) a hemolysin formed in the body in response to bacterial antigens.

bacterioid (bak-te're-oid) [Fr. *baktēron* little rod + *eidos* form] 1. resembling the bacteria. 2. a structure resembling a bacterium.

bacteriologic, bacteriological (bak-te're-o-loj'ik, bak-te're-o-loj'i-k'l) pertaining to bacteriology.

bacteriologist (bak-te're-o-loj'ist) an expert in bacteriology.

bacteriology (bak-te're-o-loj'e) [*bacteria* + *-logy*] the science that treats of bacteria. Cf. *microbiology*. **hygienic b.**, sanitary b. **medical b.**, that branch of bacteriology which treats of the microorganisms that cause disease in the animal body. **pathological b.**, that branch of bacteriology which treats chiefly of the effects produced upon the animal body by the presence of bacteria and their toxins. **sanitary b.**, bacteriology which deals chiefly with methods of disease prevention based upon the knowledge of the organisms causing disease and the manner in which they spread; called also *hygienic b.* **systematic b.**, that branch of bacteriology which studies the classification and relationship of bacteria.

bacteriolysant (bak-te're-o-l'i-sant) an agent that causes bacteriolysis.

bacteriolysin (bak-te're-o-l'i-sin) an antibacterial antibody that produces lysis of bacterial cells.

bacteriolysis (bak-te're-o-l'i-sis) [*bacteria* + Gr. *lysis* dissolution] disruption of the structural integrity of a bacterial cell resulting in release of the cell contents.

bacteriolytic (bak-te're-o-lit'ik) pertaining to, characterized by, or promoting the dissolution or destruction of bacteria.

bacteriolylze (bak-te're-o-liz'') to produce or cause bacteriolysis.

bacterio-opsonin (bak-te're-o-op-so'nin) an opsonin that acts on bacteria.

bacteriopexia (bak-te're-o-pek'se-ah) bacteriopepy.

bacteriopepy (bak-te're-o-pek'se) [*bacteria* + Gr. *pēxis* fixation] the fixing of bacteria by histiocytes.

bacteriophage (bak-te're-o-faj'') [*bacteria* + Gr. *phagein* to eat] a virus that lyses bacteria; see *bacterial virus*, under *virus*. **temperate b.**, a bacteriophage whose genetic material (prophage) becomes an intimate part of the bacterial cell, persisting through many cell division cycles. The affected bacterial cell is known as a *lysogenic bacterium* (q.v.).

bacteriophagia (bak-te're-o-faj'e-ah) the destruction of bacteria by a lytic agent; bacteriolysis.

bacteriophagic (bak-te're-o-faj'ik) [*bacteria* + Gr. *phagein* to eat] pertaining to, characterized by, or producing bacteriophagia.

bacteriophagology (bak-te're-o-fah-gol'o-je) the study of bacteriophage.

bacteriophagum intestinale (bak-te're-of'ah-gum in-tes'ti-na'le) (obs.) bacteriophage.

bacteriophagy (bak-te're-of'ah-je) bacteriophagia.

bacteriophytoma (bak-te're-o-fi-to'mah) a tumor-like, reactive lesion caused by bacteria.

bacterioplasm (bak-te're-o-plaz'min) any one of a class of unchanged albuminous poisons existing in the expressed juice of certain bacteria.

bacterioprecipitin (bak-te're-o-pre-sip'i-tin) a precipitin formed in the body in response to bacterial antigens.

bacterioproduct (bak-te're-o-pro'te-in) any one of a class of poisonous albuminous (protein) bodies, unaltered by heat, derivable from certain bacteria; the bacterioproducts produce fever, inflammation, and suppuration, but are not thought to be specific.

bacteriopsonic (bak-te're-op-son'ik) exerting an opsonic effect on bacteria.

bacteriopsonin (bak-te're-op-so'nin) an antibody that interacts with bacteria to render them more susceptible to ingestion by phagocytic cells than they otherwise would be.

bacteriopurpurin (bak-te're-o-pur'pu-rin) [*bacteria* + L. *purpur* purple] a light purple pigment produced by certain bacteria.

bacteriorhodopsin (bak-te're-o-ro-dop'sin) [*bacteria* + Gr. *rhodon* rose + *opsis* vision] a purple pigment, similar to rhodopsin, occurring in the cell membrane of bacteria of the genus

Halobacterium, which converts sunlight directly into electrochemical energy.

bacteriosis (bak-te're-o'sis) any bacterial disease.

bacteriospermia (bak-te're-o-sper'me-ah) the presence of bacteria in the semen.

bacteriostasis (bak-te're-os'tah-sis) [*bacteria* + Gr. *stasis* stop-page] the inhibition of growth, but not the killing, of bacteria by chemicals or biologic materials.

bacteriostat (bak-te're-o-stat'') an agent that inhibits the growth of bacteria.

bacteriostatic (bak-te're-o-stat'ik) 1. inhibiting the growth or multiplication of bacteria. 2. an agent that inhibits the growth or multiplication of bacteria.

bacteriotherapy (bak-te're-o-ther'ah-pe) [*bacteria* + *therapy*] treatment of disease by the introduction of bacteria into the system.

bacteriotoxemia (bak-te're-o-tok-se'me-ah) the presence of bacterial toxins in the blood.

bacteriotoxic (bak-te're-o-tok'sik) 1. toxic to bacteria. 2. caused by bacterial toxins.

bacteriotoxin (bak-te're-o-tok'sin) [*bacteria* + *toxin*] any toxin produced by or toxic to bacteria.

bacteriotropic (bak-te're-o-trop'ik) [*bacteria* + Gr. *tropos* a turning] turning toward or changing bacteria; opsonic.

bacteriotropin (bak-te're-o-tro-pin) immune opsonin.

bacteriotrypsin (bak-te're-o-trip'sin) a proteolytic.

bacteritic (bak'ter-it'ik) caused by or characterized by bacteria.

Bacterium (bak-te're-um) [L.; Gr. *baktēron* little rod] a name formerly given a genus of bacteria, order Eubacteriales, made up of non-spore-forming, rod-shaped bacteria, not necessarily closely related, that were not fitted into other formally defined genera. **B. aci'di propion'ici**, a species formerly including all the propionic acid bacteria; it is now divided into a number of species under the generic name *Propionibacterium*. **B. aerog'enes**, *Aerobacter aerogenes*. **B. aeruginos'um**, *Pseudomonas aeruginosa*. **B. chol'erae su'is**, *Salmonella choleraesuis*. **B. cloa'cae**, *Aerobacter cloacae*. **B. coli**, *B. coli commu'ne*, *Escherichia coli*. **B. dysente'riae**, *Shigella dysenteriae*. **B. faeca'lis alcalig'enes**, *Alcaligenes faecalis*. **B. pes'tis bubon'icae**, *Pasteurella pestis*. **B. son'nei**, *Shigella sonnei*. **B. tularen'se**, *Francisella tularensis*. **B. typho'sum**, *Salmonella typhosa*.

bacterium (bak-te're-um), pl. *bacte'ria* [L.; Gr. *baktēron* little rod] in general, any of the unicellular prokaryotic microorganisms that commonly multiply by cell division (fission) and whose cell is typically contained within a cell wall. They may be aerobic or anaerobic, motile or nonmotile, and may be free-living, saprophytic, parasitic, or even pathogenic, the last causing disease in plants or animals. See also *Bacteria*. **acid-fast b.**, one that retains aniline stains so tenaciously that it is not decolorized by 5 per cent mineral acids. **autotrophic b.**, one that has no organic nutritional requirements; none are pathogenic. **beaded b.**, one having deeply staining granules equally spaced along the rod. **bifid b.**, *Lactobacillus bifidus*. **blue-green b.**, see *Cyanophyceae*. **Chauveau's b.**, *Clostridium chauvoei*. **chemoautotrophic b.**, an autotrophic microorganism that obtains energy by the oxidation of inorganic compounds of iron, nitrogen, sulfur, or hydrogen; none are pathogenic. **chemoheterotrophic b.**, a heterotrophic microorganism that obtains energy through the oxidation of organic compounds by mechanisms closely similar to those existing in higher animals. **chromo b.**, **chromogenic b.**, a microorganism that produces pigment. **coliform bacteria**, see *Escherichia*, *Aerobacter*, and *Paracolobactrum*. **Dar es Salaam b.**, a microorganism identified as a *Salmonella* serotype. **denitrifying b.**, a microorganism that is able to reduce nitrates to nitrites and even to ammonia and nitrogen gas. **gram-negative b.**, see under *G.* **gram-positive b.**, see under *G.* **hemophilic bacteria**, microorganisms of the genera *Hemophilus* and *Bordetella*, which have a nutritional affinity for constituents of fresh blood or whose growth is significantly stimulated on blood-containing media. **heterotrophic b.**, a microorganism that requires organic compounds of carbon and nitrogen as sources of energy or as essential parts of the cell. **higher bacteria**, microorganisms, mostly filamentous in form, which seem to be intermediate between Schizomycetes and the fungi (Hyphomycetes). **hydrogen b.**, a facultative autotrophic microorganism that respire by the oxidation of hydrogen to end-products such as H₂O, H₂S, and CH₄ (*Hydrogenomonas*, *Sporovibrio*, *Methanobacterium*). **iron b.**, an autotrophic microorganism that oxidizes iron from the ferrous to the ferric state (*Gallionella*, *Leptothrix*). **lysogenic b.**, a bacterial cell that harbors in its genome the genetic material (prophage) of a temperate bacteriophage and thus reproduces the bacteriophage in cell division; occasionally the prophage develops into the mature form, replicates, lyses the bacterial cell, and is free to infect other cells. **mantle b.**, see *Chlamydia*. **mesophilic b.**, a microorganism whose optimum temperature for growth is about the same as the temperature of the human body.

Escherichia coli. (Hedén and Wyckoff, S.A.B. LS-290.)

Streptococcus pneumoniae, type 2.
(Williams, S.A.B. LS-162.)

Borrelia vincentii. (Hampp, Scott, and Wyckoff, S.A.B. LS-248.)

Proteus vulgaris. (Robinow and van Iterson, S.A.B. LS-260.)

**ELECTRON MICROGRAPHS OF VARIOUS MICROORGANISMS,
AND DIAGRAM SHOWING VARIOUS STRUCTURES OF
TYPICAL BACTERIAL CELL**

nitrifying b., a microorganism in the soil that oxidizes ammonia to nitrite (*Nitrosomonas*, *Nitrosococcus*), and nitrite to nitrate (*Nitrobacter*). **nodule bacteria**, bacteria which by their growth in specific nodules on the roots of plants (legumes) tend to bring about fixation of atmospheric nitrogen. **parasitic b.**, a microorganism that is dependent on a living host for its nutrition. **pathogenic b.**, a microorganism capable of causing disease. **photoautotrophic b.**, an autotrophic microorganism capable of deriving energy from light. **photoheterotrophic b.**, a heterotrophic microorganism capable of deriving energy from light. **photosynthetic b.**, any of the anaerobic bacteria that contain bacteriochlorophyll and carotenoid pigments and that carry out photosynthesis and assimilate carbon dioxide without the production of oxygen; the process depends on the presence of oxidizable electron donors other than water, such as reduced sulfur compounds. **psychrophilic b.**, a microorganism whose optimum temperature for growth is 15° to 20° C. **pyogenic b.**, a microorganism, infection with which produces suppuration. **pyrogenetic b.**, a microorganism, infection with which produces fever. **rough b.**, a variant form of a bacterium that grows in rough colonies in solid media. **saprophytic b.**, a microorganism that lives in decaying organic matter. **sulfur b.**, an obligate and facultative chemoautotrophic microorganism that respire by the oxidation of sulfur and its compounds, belonging predominantly to the genera *Beggiatoa* and *Thiobacillus*. **sulfur b., purple**, a photosynthetic anaerobic microorganism whose photoreduction of CO₂ and oxidation of H₂S is catalyzed by the pigment bacteriochlorin (*Thiorhodaceae*). **thermophilic b.**, a microorganism that grows best at high temperatures. **toxigenic b., toxinogenic b.**, a microorganism that produces a toxin.

bacteriuria (bak-te're-u're-ah) [*bacteria* + Gr. *ouron* urine + *-ia*] the presence of bacteria in the urine.

bacteriuric (bak-te're-u'rik) pertaining to bacteriuria.

bacteroid (bak'tē-roid) [*bacteria* + Gr. *eidos* form] 1. resembling a bacterium. 2. a structurally modified bacterium.

Bacteroidaceae (bak'tē-roi-da'se-e) [Gr. *baktērion* rod + *eidos* form] a family of Schizomycetes, order Eubacteriales, occurring as nonsporulating obligate anaerobic rods with rounded or pointed ends, and varying in size from minute filtrable forms to long, branching, filamentous forms; it includes five genera.

Bacterioideae (bak'tē-roi'de-e) a name formerly given a tribe of Schizomycetes.

Bacteroides (bak'tē-roi'dēz) a genus of nonsporulating obligate anaerobic filamentous bacteria occurring as normal flora in the mouth and large bowel; often found in necrotic tissue, probably as secondary invaders. Thirty species have been described. **B. frag'ilis**, a species found in appendicitis, in septicemia with metastatic abscesses, in urinary tract infections, and in abscesses of the liver, pelvis, and lungs; called also *Bacillus fragilis*. **B. fundulifor'mis**, *Fusobacterium necrophorum*. **B. fusifor'mis**, *Fusobacterium plautiuvincti*. **B. melaninogen'icus**, a species found in sepsis occurring after childbirth, in wounds of the abdomen that have become infected, in kidney infections, in the feces of patients affected with chronic amebic dysentery, and in the mouth and tonsils. Called also *Ristella melaninogenica*. **B. nodo'sus**, the causative agent of foot rot in sheep. **B. ochra'ceus**, a species isolated from the gingival crevices, closely resembling *Capnocytophaga* (q.v.). **B. pneumosin'tes**, *Dialister pneumosintes*. **B. ramo'sus**, a gram-positive species found in the pus of appendicitis and in gangrene of the lungs, and which causes abscesses in rabbits and guinea pigs on subcutaneous injection and fatal infections when inoculated intravenously. Called also *Ramibacterium ramosum*.

bacteroides (bak'tē-roi'dēz) 1. a general term for highly pleomorphic rod-shaped bacteria. 2. a microorganism of the genus *Bacteroides*.

bacteroidosis (bak'te-roi-do'sis) infection with organisms of the genus *Bacteroides*.

bacteruria (bak'te-ru're-ah) bacteriuria.

Bactocill (bak'to-sil) trademark for a preparation of oxacillin sodium.

Bactoscilla (bak'tos-sil'ah) a genus of schizomycetes of the family Vitreoscillaceae.

baculovirus (bak'u-lo-vi'rus) any of a group of morphologically similar, ether- and heat-labile DNA viruses, which infect various insects, producing granular inclusion capsules in the cells; called also *granulosis virus*.

baculum (bak'u-lum) [L. "a stick, staff"] a heterotopic bone developed in the fibrous septum between the corpora cavernosa and above the urethra, forming the skeleton of the penis in all insectivores, bats, rodents, carnivores, and pinnipeds, and in primates except man; called also *os penis* and *os priapi*.

Badal's operation (bah-dahlz') [Antoine Jules Badal, French ophthalmologist, 1840-1929] see under *operation*.

badge (baj) see *film badge*.

Baelz's disease (bältz'es) [Erwin von Baelz, German physician, 1849-1913] see *cheilitis glandularis*.

Baer's cavity, law, vesicle (bärz) [Karl Ernst von Baer (Ber),

Russian anatomist, 1792-1876] see under *cavity, law, and vesicle*.

Baer's method (bärz) [William Stevenson Baer, American orthopedic surgeon, 1872-1931] see under *method*.

Baerensprung's erythrasma (bär'en-sprongs) [Friedrich Wilhelm Felix von Baerensprung, German physician, 1822-1864] see under *erythrasma*.

Baeyer's test (ba'erz) [Adolf von Baeyer, German chemist, 1835-1917] see under *test*.

bag (bag) a sac or pouch. **Barnes' b.**, a water-filled rubber bag for dilating the cervix uteri; called also *Barnes' dilator*. **Bunyan b.**, a bag of light waterproof material for covering wet dressings. **Champetier de Ribes' b.**, a conic water-filled bag of silk or rubber for dilating the cervix uteri. **colostomy b.**, a receptacle worn over the stoma to receive the fecal discharge from a colostomy. **Douglas b.**, a receptacle for the collection of expired air, permitting measurement of respiratory gases. **Hagner b.**, an inflatable rubber bag to be used by traction through the urethra to prevent hemorrhage following prostatectomy. **ice-b.**, a bag filled with ice, for applying cold to the body. **ileostomy b.**, any of various plastic or latex bags for the collection of urine or fecal material following ileostomy or the establishment of an ileal bladder; a flange or similar device fits closely about the ileal stoma and the bag is cemented to the skin or strapped to the body. **Lyster b.**, a rubber-lined bag with faucets and with straps for slinging; used for the water supply in temporary camps. **micturition b.**, a receptacle for urine used by ambulatory patients with urinary incontinence. **nuclear b.**, the central portion of the central or equatorial segment of intrafusal fibers of muscle; it is usually devoid of obvious cross striations and contains an accumulation of 40 to 50 spherical nuclei, which completely fill and often slightly distend the fiber. **Perry b.**, an ileostomy bag with a small latex cuff reinforced by a plastic disk which fits snugly around a protruding stoma; the cuff is held down by a large plastic ring to which a belt is attached. **Petersen's b.**, an inflatable rubber bag inserted into the rectum so as to elevate the bladder in the operation of suprapubic cystostomy. **Pilcher b.**, a modification of the Hagner bag which provides urethral drainage as well as hemostasis. **Poltitzer's b.**, a soft bag of rubber for inflating the middle ear. **testicular b., scrotum.** **Voorhees' b.**, a rubber bag that can be inflated with water; used for dilating the cervix uteri. **b. of waters**, the membranes that enclose the amniotic fluid of the fetus. **Whitmore b.**, an ileostomy bag with a malleable flange and a valvular device for urine drainage at the lower end of the bag.

bagasscosis (bag'as-ko'sis) bagassosis.

bagassosis (bag'ah-so'sis) a respiratory disorder due to the inhalation of the dust of bagasse, the waste of sugar cane after the sugar has been extracted.

Baillarger's lines (bands, layer, striae, striation, stripes), **sign** (bi-yar-zhāz') [Jules Gabriel François Baillarger, French psychiatrist, 1809-1890] see under *line* and *sign*.

Bainbridge reflex (bān'brij) [Francis Arthur Bainbridge, English physiologist, 1874-1921] see under *reflex*.

bake (bāk) to expose to high temperature at low humidity, as in the hardening of porcelain.

Baker's cyst (ba'kerz) [William Marrant Baker, British surgeon, 1839-1896] see under *cyst*.

Baker's velum (ba'kerz) [Henry A. Baker, Boston surgeon] see under *velum*.

bakkola (bak'o-lah) a fungus obtained from birch trees in Finland, used in folk medicine in the form of a decoction containing a chrysarobin-like principle or chrysophanic acid, in the treatment of cancer.

BAL [*British anti-lewisite*] dimercaprol.

balance (bal'ans) [L. *bilanz*] 1. an instrument for weighing. 2. the harmonious adjustment of parts; the harmonious performance of functions. **acid-base b.**, a condition in which the net rate of acid or alkali production by the body is balanced by the net rate of acid or alkali excretion from the body, resulting in a stable concentration of H⁺ (hydrogen ions) in the body fluids. **analytical b.**, a laboratory balance sensitive to variations of the order of 0.05 to 0.1 mg. **calcium b.**, the balance between the calcium intake and its output through the body excretions. **enzyme b.** (in bacteria), a once-postulated steady state in relative enzyme and substrate concentrations in a bacterial culture that is altered in a different environment, thus accounting for bacterial adaptation. **fluid b.**, the state of the body in relation to ingestion and excretion of water and electrolytes; called also *water b.* **genic b.**, the ratio of male- to female-sex producers in the chromosome assortment as the determiner of sex. **inhibition-action b.**, the balance maintained in every person between emotional feelings and response to them. **microchemical b.**, a laboratory balance sensitive to variations of the order of 0.001 mg. **nitrogen b.**, the state of the body in regard to ingestion and excretion of nitrogen. In *negative nitrogen balance* the amount of nitrogen excreted is greater than the quantity ingested; in *positive nitrogen balance* the amount excreted is smaller than the amount ingested. **occlusal b.**, see *balanced occlusion*, under *occlu-*

sion. **semimicro b.**, a balance sensitive to variations of 0.01 mg. **torsion b.**, 1. a weighing balance in which the scale beam is supported by metallic ribbons that act by torsion. 2. an electrometer that acts by the twisting of a single fiber of the web of a silkworm. **water b.**, fluid b.

balanic (bah-lan'ik) pertaining to the glans penis or glans clitoridis.

balanism (bal'ah-nizm) [L. *balanismus*] (obs.) treatment with pessaries or suppositories.

balanitis (bal'ah-ni'tis) [*balano-* + *-itis*] inflammation of the glans penis; it is usually associated with phimosi. **amebic b.**, a variety caused by *Entamoeba histolytica*. **b. circinata**, a variety attributed to the presence of spirochetes. **b. diabetica**, a variety caused by the irritation of the urine in diabetics. **Follmann's b.**, a serous balanitis and posthitis without induration. **b. gangraenosa**, **gangrenous b.**, a rapidly destructive infection producing erosion of the glans penis and often destruction of the entire external genitals; the infection is believed to be due to a spirochete. Called also *balanoposthomycosis* and *Corbus' disease*. **phagedenic b.**, gangrenous b. **plasma cell b.**, Zoon's erythroplasia. **b. plasmocellula're**, Zoon's erythroplasia. **b. xerotica obliterans**, atrophy of the glans penis resulting in stricture of the urethral meatus, usually representing lichen sclerosus et atrophicus of the male genitalia, but sometimes resulting from chronic irritation or benign mucosal pemphigoid.

balano- (bal'ah-no) [Gr. *balanos* an acorn] a combining form indicating relationship to the glans penis or to the glans clitoridis.

balanoblenorrhoea (bal'ah-no-blen'o-re'ah) [*balano-* + Gr. *blennos* mucus + *rhoia* flow] gonorrheal inflammation of the glans penis.

balanocoele (bal'ah-no-sel') [*balano-* + Gr. *kēlē* hernia] protrusion of the glans penis through a rupture of the prepuce.

balanochlamyditis (bal'ah-no-klam'e-di'tis) [*balano-* + Gr. *chlamys* hood + *-itis*] (obs.) inflammation of the glans clitoridis and hood.

balanoplasty (bal'ah-no-plas'te) [*balano-* + Gr. *plassein* to form] plastic surgery of the glans penis.

balanoposthitis (bal'ah-no-pos-thi'tis) [*balano-* + Gr. *posthē* prepuce + *-itis*] inflammation of the glans penis and prepuce. **enzootic b.**, disease of uncertain etiology, affecting sheep in Australia and New Zealand, marked by spreading ulceration of the glans penis and prepuce and severe swelling and distention of the sheath; called also *pizzle rot* and *sheath rot*. **specific gangrenous and ulcerative b.**, an acute inflammatory disease of the glans penis and opposed surface of the prepuce, marked by ulcerations and sometimes by gangrene, with a flow of odorous pus, and caused by a spirochete; called also *fourth venereal disease*.

balanoposthomycosis (bal'ah-no-pos'tho-mi-ko'sis) gangrenous balanitis.

balanopreputial (bal'ah-no-pre-pu'she-al) pertaining to the glans penis and the prepuce.

balanorrhagia (bal'ah-no-ra'je-ah) [*balano-* + Gr. *rhēgnynai* to break] balanitis with free discharge of pus.

balantidiasis (bal'an-ti-dī'ah-sis) infection by protozoan parasites of the genus *Balantidium*; in man, *B. coli* may cause diarrhea and dysentery, with ulceration of the colon mucosa.

balantidicidal (bal-an'ti-dī-si'dal) [*Balantidium* + L. *caedere* to kill] destructive to *Balantidium*.

balantidiosis (bal'an-tid-e-o'sis) balantidiasis.

Balantidium (bal'an-tid'e-um) [Gr. *balantidion* little bag] a genus of ciliated protozoa of the subclass Euciliatia, including many species found in the intestine of vertebrates and invertebrates. **B. coli** (Malmsten, 1857), the largest protozoan parasite of man, being 50 to 100μ in length and 40 to 70μ in width. It is commonly found in the intestines of swine, has been found in orangutans and monkeys, and is rarely found in man (see *balantidiasis*). It is oval in form, actively motile, and may be found free in the contents of the cecum if they are fluid, or may form ulcers in the walls. It has been called *Holophrya coli*, *Leukophrya coli*, and *Paramecium coli*. **B. suis**, a species occurring in pigs, often considered identical to *B. coli*.

balantidosis (bal'an-ti-dō'sis) balantidiasis.

balanus (bal'ah-nus) the glans penis.

balata (bal'ah-tah) the inspissated juice or latex of *Mimusops globosa*, a tree of tropical America; used much like gutta-percha.

Balbani's body, nucleus (bahl-be-ah'nēz) [Edouard Gérard Balbani, French embryologist, 1823-1899] yolk nucleus.

balbuties (bal-bu'she-ēz) [L.] (obs.) stuttering.

baldness (bawld'nes) alopecia, especially absence of hair from the scalp. **common male b.**, male pattern alopecia; thinning or absence of hair from around the vertex of the scalp, and recession of the frontal scalp margin on each side of the forehead, forming the so-called "professor angles."

Baldwin's operation (bawld'winz) [James Fairchild Baldwin, American gynecologist, 1850-1936] see under *operation*.

Baldy's operation (bawl'dēz) [John Montgomery Baldy, American gynecologist, 1860-1934] Webster's operation.

Baldy-Webster operation (bawl'de-web'ster) [John Montgomery Baldy; John Clarence Webster, American gynecologist, 1863-1950] Webster's operation.

baleri (bah-le'ri) a local name for nagana in the French Sudan.

Balfour's infective granule (bal'forz) [Sir Andrew Balfour, physician in Khartoum, 1873-1931] see under *granule*.

Balkan frame, splint (bawl'kan) see under *frame* and *splint*.

ball (bawl) a more or less spherical mass. **chondrin b.**, one of the ball-like masses in hyaline cartilage, consisting of cells surrounded by a capsule of basophilic matrix. **fatty b. of Bichat**, sucking pad (corpus adiposum buccae [NA]). **food b.**, phytobezoar. **fungus b.**, aspergilloma. **hair b.**, trichobezoar. **Marchi b's**, ellipsoid or ovoid segments of myelin produced by degeneration, staining brown by Marchi methods. **oat hair b.**, a trichobezoar formed in the stomach of the horse from the fine hairs within the outer husk of the oat grain and other materials. **pleural fibrin b's**, fibrin bodies in the pleural space. **wool b.**, a trichobezoar containing wool fibers and other substances.

Ball's valve (bawlz) [Sir Charles Bent Ball, Irish surgeon, 1851-1916] see *valvula anales*.

Ballance's sign (bal'an-siz) [Sir Charles Alfred Ballance, British surgeon, 1856-1936] see under *sign*.

Ballet's sign (bal-āz') [Gilbert Ballet, French neurologist, 1853-1916] see under *sign*.

Ballingall's disease (bal'ing-gawlz) [Sir George Ballingall, British surgeon, 1780-1855] maduromycosis.

ballism (bal'izm) ballismus.

ballismus (bah-liz'mus) [Gr. *ballismos* a jumping about, dancing] violent flinging movements caused by contractions of the proximal limb muscles as a result of destruction of the subthalamic nucleus of Luysii or its fiber connections, sometimes affecting only one side of the body (hemiballismus). Called also *ballism*.

ballistic (bah-lis'tik) 1. jerking or twitching; pertaining to or characterized by ballismus. 2. pertaining to or caused by projectiles.

ballistics (bah-lis'tiks) [Gr. *ballein* to throw] the scientific study of the motion of projectiles in flight. **wound b.**, the scientific study of the speed and direction of missiles (bullets and other projectiles) in relation to the injuries they produce.

ballistocardiogram (bah-lis'to-kar'de-o-gram") the tracing made by a ballistocardiograph; abbreviated BCG.

ballistocardiograph (bah-lis'to-kar'de-o-graf") an apparatus for recording the movements of the body caused by the heartbeat, used to determine the degree of elasticity or atheroma of the aorta, and, more rarely, to calculate cardiac output.

ballistocardiography (bah-lis'to-kar'de-og'rah-fe) the graphic recording, by means of a ballistocardiograph, of the recoil movements of an animal body which result from motion of its heart and blood.

balloon (bah-lōon') 1. a sac that can be inserted into a body cavity or tube and distended with air or gas. 2. to distend with air or gas; to inflate. **Shea-Anthony antral b.**, sinus b. **sinus b.**, a hollow rubber structure, expandable with either liquid or air, used to support depressed fractures of the walls of the maxillary sinus; called also *Shea-Anthony antral balloon*. The balloon of a Foley catheter is frequently used for this purpose.

ballooning (bah-lōon'ing) distending any cavity of the body with air or gas for therapeutic purposes.

ballotable (bah-lot'ah-bl) capable of showing ballottement.

ballottement (bah-lot'ment) [Fr. "a tossing about"] a palpatory maneuver to test for a floating object. The term is applied especially to a maneuver for detecting the existence of pregnancy by pushing up the head or breech of a fetus by fingers inserted into the vagina, so as to cause the fetus to rise and fall again like a heavy body in water. **abdominal b.**, **indirect b.**, that

Ballottement (Jewett).

which is effected by the finger applied to the abdominal wall. **renal b.**, palpation of the kidney by pressing one hand into the abdominal wall while the other hand makes quick thrusts forward from behind so as to throw the kidney against the anterior hand.

balm (bahm) [Fr. *baume*] 1. a healing or soothing medicine. 2. a plant of the genus *Melis'sa*, especially *M. officinalis*; it is carminative and aromatic. 3. b. of Gilead. 4. balsam. **blue b.**, *Melissa*. **b. of Gilead**, 1. a liquid oleoresin from *Abies balsamea* (L.) Mill., the balsam fir of North America, which was once used in the treatment of diseases of the urinary tract. 2.

the buds of the poplar tree *Populus candicans* Aiton (Salicaceae), which contain volatile oils and resins; used as a stimulating expectorant in cough syrups. 3. Mecca balsam. Called also *balsam of Gilead*. **lemon b.**, *Melissa*. **mountain b.**, *Eriodictyon*. **sweet b.**, *Melissa*.

Balme's cough (bahlmz) [Paul Jean Balme, French physician, born 1857] see under *cough*.

balneology (bal'ne-ol'o-je) [L. *balneum* bath + -logy] the science of baths and their therapeutic uses.

balneotherapeutics (bal'ne-o-ther-ah-pu'tiks) balneotherapy.

balneotherapy (bal'ne-o-ther'ah-pe) [L. *balneum* bath + Gr. *therapeia* treatment] the treatment of disease by baths.

balneum (bal'ne-um), pl. *bal'nea* [L.] a bath, def. 1. **b. are'nae**, a sand bath; also *ammotherapy*. **b. lac'teum**, milk bath. **b. pneumat'icum**, air bath.

Balopticon (bal-op'te-kon) [Gr. *ballein* to throw + *optikos* pertaining to sight] trademark for a projection apparatus for throwing an enlarged image on a screen.

balsam (bawl'sam) [L. *balsamum*; Gr. *balsamon*] 1. a semifluid, resinous, and fragrant liquid of vegetable origin, usually trees, which is often composed chiefly of resins, volatile oils, and various esters. 2. balm. **Canada b.**, a liquid oleoresin from *Abies balsamea* (L.) Mill. (Pinaceae), the balsam fir of North America, containing volatile oils, chiefly *l*-pinene, and over 70 per cent resins; a microscopic medium. **b. of copaiba**, copaiba. **friars' b.**, compound benzoin tincture. **b. of Gilead**, see under *balm*. **gurjun b.**, an oleoresin from *Dipterocarpus alatus* Roxb. (Dipterocarpaceae) and other species of *Dipterocarpus* growing in East India; an adulterant of copaiba. **Holland b.**, juniper tar. **Mecca b.**, a light-colored, mobile to viscid liquid with an aromatic odor; it is the resinous juice of *Commiphora opobalsamum*, a small evergreen of the Red Sea region. It is still used as a medicine and cosmetic in eastern countries. **b. of Peru**, peruvian b. **peruvian b.** [NF], a dark brown viscid liquid obtained from *Myroxylon pereirae* Klotzsch (Leguminosae) used as a local protectant and as a rubefacient, applied topically to the skin in ointment or alcohol solution. Called also *b. of Peru*. **St. Thomas' b.**, a resinous juice obtained from the tree, *Santiropsis balsamifera*, grown on the island of St. Thomas. **silver b.**, juniper tar. **b. of sulfur**, a preparation made by boiling sulfur in linseed or olive oil. **tolu b.** [USP], a balsam obtained from *Myroxylon balsamum*, used as an ingredient of compound benzoin tincture and as an expectorant. **Turlington's b.**, **Wade's b.**, compound benzoin tincture.

balsamo (bal'sah-mo) [Sp.] balsam. **b. de tolu'**, tolu balsam. **b. del Peru'**, peruvian balsam.

Balsamodendron (bal'sah-mo-den'dron) [L.; Gr. *balsamon* balsam + *dendron* tree] a genus of old world amyridaceous trees of many species, producing bdellium and other balsamic drugs.

balsamum (bal'sah-mum) [L.] balsam. **b. peruvia'num**, peruvian balsam.

Balser's fatty necrosis (bah'l'zerz) [W. Balser, German physician] see under *necrosis*.

balteum (bal'te-um) [L.] belt or girdle. **b. vene'reum**, Venus' girdle.

Baltimore (bal'ti-mor) David. American biologist, born 1938; co-winner, with Renato Dulbecco and Howard Temin, of the Nobel prize in medicine and physiology for 1975, for discoveries concerning the interaction between tumor viruses and the genetic material of host cells and the role of reverse transcriptase.

Bamberger's albuminuria, etc. (bahm'ber-gerz) [Heinrich von Bamberger, Austrian physician, 1822-1888] see under *albuminuria*, *disease*, and *sign*.

Bamberger-Marie disease [Eugen Bamberger, Austrian physician, 1858-1921; Pierre Marie, French physician, 1853-1940] hypertrophic pulmonary osteoarthropathy.

bambergmycins (bam'ber-mi'sinz) an antibacterial antibiotic complex containing mainly moenomycin A and C, produced by *Streptomyces bambergiensis*, *S. edensis*, *S. geysiriensis*, and *S. ghansensis*, and related strains, or the same substance produced by other means; used as a feed additive in foodstuffs for pigs, poultry, and calves and in veterinary supplements.

bamboo brier (bam-boo' bri'er) the root of species of *Smilax*, of the United States, used as a food by Indians.

bamnidazole (bam-nid'ah-zöl) chemical name: 2-methyl-5-nitro-1H-imidazol-1-ethanol carbamate (ester); an antiprotozoal effective against *Trichomonas*, C₇H₁₀N₄O₄.

Bancroft's filariasis (ban'krofts) [Joseph Bancroft, English physician in Australia, 1836-1894] see under *filariasis*.

bancroftosis (ban'krof-to'sis) infection with *Wuchereria bancrofti*.

band (band) 1. a part, structure, or appliance that binds. 2. in dentistry, a thin strip of metal formed to encircle horizontally the crown of a natural tooth or its root. 3. in cytogenetics, a part of a chromosome which, after staining, is clearly distinguishable from its adjacent segment by appearing darker or lighter, brighter or duller; bands are named, according to the procedure used,

C-bands, F-bands, G-bands, etc. 4. see *band cells*, under *cell*. **A b.**, the dark-staining zone of a sarcomere, whose center is traversed by the paler H band, which in turn contains the darker M band; called also *A disk*, *Q disk*, *anisotropic disk*, and *transverse disk*. **absorption b's**, dark bands in the spectrum due to absorption of light by the medium (a solid, a liquid, or a gas) through which the light has passed. Cf. *absorption lines*, under *line*. **amniotic b.**, a fibrous band passing from fetus to amnion. **anchor b.**, a band applied to a tooth to secure anchorage in order to influence the movement of other teeth in the mouth. **Angle b.**, a clamp band tightened by a threaded screw on the lingual side; once used in orthodontics. **anogenital b.**, a fetal fillet that is the rudiment of the perineum. **anterior b. of colon**, *tenia libera*. **atrioventricular b.**, bundle of His. **auriculoventricular b.**, atrioventricular b. **axis b.**, the primitive streak. **Baillarger's b's**, see under *line*. **belly b.**, a strip of flannel worn around the abdomen, usually by infants or young children. **b. of Broca**, a part of the primordial rhinencephalon close to the anterior perforated substance. **Büngner's b's**, bands of syncytium formed by the union of sheath cells during the regeneration of peripheral nerves; called also *Ledbänder*. **C-b.**, a band produced on a chromosome by the centric heterochromatin method; see *Table of Stains and Staining Methods*, under *stain*. **Clado's b.**, the suspensory ligament of the ovary covered with peritoneum. **clamp b.**, an anchor band held in place with a screw nut. **coagulation b.**, the band formed in Weltmann's coagulation test. **b's of colon**, **longitudinal**, *teniae coli*. **contoured b.**, a dental band shaped to the contour of the tooth. **coronary b.**, a band of vascular tissue at the upper edge of the wall of the hoof which is concerned in the secretion of the wall; called also *coronary cushion*, *coronary ring*, *cutidure*, or *cutiduris*. **dentate b.**, gyrus dentatus, def. 1. **F-b.**, a band produced on a chromosome by the F-staining method; see *Table of Stains and Staining Methods*, under *stain*. **free b. of colon**, *tenia libera*. **G-b.**, a band produced on a chromosome by the Giemsa method; see *Table of Stains and Staining Methods*, under *stain*. **Gennari's b.**, see *Baillarger's lines*, under *line*. **Giacomini's b.**, the grayish band constituting the anterior extension of the gyrus dentatus of the hippocampus over the inferior surface of the uncus. **H b.**, a relatively pale zone sometimes seen traversing the center of the A band of fibrils of striated muscle; called also *Hensen's* or *Engelmann's disk*. **Hall b.**, an intrauterine contraceptive device of surgical stainless steel, measuring $\frac{13}{16}$ inch in diameter and consisting of three flat circular members $\frac{1}{16}$ inch wide and $\frac{1}{1600}$ inch thick, located within the lumen of an open coiled spring. **Harris' b.**, anomalous peritoneal folds which extend from the gallbladder to the inferior surface of the liver to the proximal duodenum, sometimes traversing the mesocolon near the hepatic flexure. **Henle's b.**, fibers from the anterior aponeurosis of the transversus abdominis muscle extending behind the rectus below the arcuate line. **His' b.**, see under *bundle*. **horny b.** (obs.), the anterior part of the stria terminalis; called also *b. of Tarinus*. **b's of Hunter-Schreger**, a series of bands visible by reflected light in the enamel of longitudinal sections of human teeth. **I b.**, the band or disk within a striated muscle fibril that appears as a light region under the light microscope and as a dark region under polarized light; it contains the proteins actin, troponin, and tropomyosin. Called also *isotropic disk* and *J disk*. **iliotibial b.**, tractus iliotibialis. **Lane's b's**, adhesions between tight loops of the terminal ileum which may extend as ligamentous bands to the right iliac fossa. See also *Lane's kink*, under *kink*. **Leonardo's b.**, a term proposed by Sudhoff for the band of Reil, first delineated by Leonardo da Vinci. **limbic b's**, a superior and an inferior muscular band developed in the right atrium of the fetal heart that become the basis of Lower's tubercle and the sinus septum. **M b.**, the narrow dark band in the center of the H band of the sarcomere; called also *M disk*, *Hensen's line*, and *mesophragma*. Cf. *Z band*. **Maissiat's b.**, tractus iliotibialis. **Matas' b.**, an aluminum band for temporarily occluding large blood vessels in order to test the condition of the collateral circulation. **matrix b.**, a thin piece of metal that is fitted around a tooth to supply a missing wall of a multisurface cavity in order to allow adequate condensation of amalgam into the cavity. **Meckel's b.**, a part of the anterior ligament fastening the malleus to the wall of the tympanum. **mesocolic b.**, *tenia mesocolica*. **moderator b.**, trabecula septomarginalis. **molar b.**, a plain anchor band used in orthodontics. **N-b.**, a band produced on a chromosome by the N-staining method; see *Table of Stains and Staining Methods*, under *stain*. **omental b.**, *tenia omentalis*. **orthodontic b.**, a thin strip of metal closely encircling the crown of a tooth mesiodistally and buccolabiolingually; an integral part of a fixed orthodontic appliance. **Parham b.**, a metallic ribbon used to fix a fractured long bone by encircling the bone at the site of the fracture. **perioplic b.**, the band of secretor cells at the upper border of the hoof of animals; it secretes the periople. **periosteal b.**, see under *collar*. **phonatory b's**, the vocal cords, or an artificial substitute for them. **Q b.**, A b. **Q-b.**, any of the light and dark transverse bands on chromosomes visible on fluorescence microscopy after staining by quinacrine mustard (or related substance). **R-b.**, a band produced on a chromosome by the reverse Giemsa method; see *Table of Stains and*

Staining Methods, under *stain*. **b. of Reil**, 1. a muscular fillet extending across the right ventricle of the heart, now regarded as forming one of the terminal parts of the moderator band; see *bundle of His*. 2. (obs.) see under *ribbon*. **b. of Remak**, axon. **retention b.**, musculus suspensorius duodeni. **b's of Schreger**, b's of Hunter-Schreger. **Sebileau's b's** (obs.), three thickenings in the membrana suprapleuralis. **Simonart's b's**, Simonart's threads; see under *thread*. **Soret's b.**, a band in the violet end of the spectrum of hemoglobin. **T-b.**, a band produced on a chromosome by the T-staining method; see *Table of Stains and Staining Methods*, under *stain*. **b. of Tarinus**, horny b. **Vicq d'Azyr's b.**, a thin stripe of fine myelinated fibers in Brodmann's external granular layer; sometimes called stripe of Kaes, and often incorrectly defined as the outer line of Baillarger. **Z b.**, a thin membrane seen on longitudinal section as a dark line in the center of the I band; the distance between successive Z bands serves to delimit the sarcomeres of striated muscle. Called also *Z disk* or *line*, *Amici's disk*, *Dobie's line* or *layer*, *intermediate disk*, *Krause's membrane*, *telophragma*, and *thin disk*. See *inophragma* and cf. *M b.* **zinc b.**, *Z b.* **zonular b.**, zona orbicularis articulationis coxae.

bandage (ban'dij) 1. a strip or roll of gauze or other material for wrapping or binding any part of the body. 2. to cover by wrapping with a strip of gauze or other material. See also *dressing* and *strapping*. **abdominal b.**, a wide support worn around the abdomen after an abdominal operation, often during pregnancy, and for obesity. **Ace b.**, trademark for a bandage of woven elastic material. **A-S-E b.**, the third roller of Desault's bandage, which forms a triangle, the angles of which are located at the axilla, shoulder, and elbow. **Barton's b.**, a figure-of-8 bandage supporting the lower jaw below and in front. **Baynton's b.**, a binding of adhesive plaster applied to the leg in the treatment of indolent ulcer. **binocle b.**, a bandage covering both eyes. **Borsch's b.**, an eye bandage covering both the diseased and the healthy eye. **Buller's b.**, see under *shield*. **capeline b.**, a bandage applied like a cap or hood to the head or shoulder or to an amputation stump; called also *Hippocrates' b.* **circular b.**, a bandage applied in circular turns, usually about a limb. **compression b.**, a bandage by which pressure is applied to a limb to prevent edema. **crucial b.**, T bandage. **demigauntlet b.**, a bandage that covers the hand but leaves the fingers exposed. **Desault's b.**, a bandage binding the elbow to the side, with a pad in the axilla, for fractured clavicle; called also *Desault's apparatus*. **elastic b.**, a bandage of India rubber applied to an area to exert continuous pressure upon it. **Esmarch's b.**, an India rubber bandage applied upward around (from the distal part to the proximal) a part in order to expel blood from it; the limb is often elevated as the elastic pressure is applied. **figure-of-8 b.**, a bandage in which the turns cross each other like the figure eight (8). **Fricke's b.**, strapping of the scrotum for orchitis and epididymitis. **Galen's b.**, a bandage with each end split into three pieces: the middle section is placed on the crown of the head; the two anterior strips are fastened at the back of the neck; the two posterior ones, on the forehead; and the two middle ones are tied under the chin. **Garretson's b.**, a bandage for the lower jaw, running above the forehead and back again, crossing under the occiput, and ending under the chin. **gauntlet b.**, a bandage that covers the hand and fingers like a glove. **gauze b.**, a continuous strip of tightly rolled absorbent gauze in various widths and lengths. **Genga's b.**, Theden's b. **Gibney b.**, strips of $\frac{1}{2}$ -inch adhesive overlapped along the sides and back of the foot and leg to hold the foot in slight varus position and leave the dorsum of the foot and anterior aspect of the leg exposed; called also *Gibney's strapping*. **Hamilton's b.**, a compound bandage for the lower jaw, composed of a leather string with straps of linen webbing. **hammock b.**, a bandage for retaining dressings on the head; it consists of a broad strip placed over the dressing, brought down over the ears, and held in place by a circular bandage around the head. **Heliodorus' b.**, a T bandage. **Hippocrates' b.**, capeline b. **Hueter's b.**, a perineal bandage applied as a spica bandage. **immobilizing b.**, a bandage for partially immobilizing a part. **Kiwisch's b.**, a modified figure-of-8 bandage applied to both breasts to support and firmly compress them. **Maisonneuve's b.**, a plaster-of-Paris bandage made of folded cloth held in place by other bandages. **many-tailed b.**, a wide bandage with each end cut into several strips of equal width which may be overlapped as the bandage is applied, usually to the abdomen or chest. See *scultetus b.* **Martin's b.**, a roller bandage of thin elastic rubber. **oblique b.**, a bandage applied obliquely up a limb without reverses. Cf. *reversed b.* **plaster b.**, a bandage stiffened with a paste of plaster of Paris, which sets and becomes very hard. **pressure b.**, a bandage for applying pressure. **protective b.**, a bandage for covering underlying injured tissue or dressings. **reversed b.**, one applied to a limb in such a way that the roll is inverted or half-turned at each revolution, so as to make it fit smoothly the varying dimensions of the limb. **Ribble's b.**, a spica bandage applied to the instep. **Richet's b.**, a bandage of plaster of Paris to which a little gelatin has been added. **roller b.**, a tightly rolled, circular bandage of varying widths and materials, often commercially prepared. **Sayre's b.**, an adhesive plaster bandage used in cases of fracture of the clavicle.

scultetus b., a many-tailed bandage applied with the tails overlapping each other and held in position by safety pins; see illustration. **Seutin's b.**, a starch and plaster bandage. **spica b.**, a figure-of-8 bandage with turns that cross one another regularly like the letter V, usually applied to anatomical areas of quite different dimensions, as the pelvis and thigh or the thorax and arm. See illustration. **spiral b.**, a roller bandage applied spirally around a limb. **spiral reverse b.**, a spiral bandage applied with reverse turns in order to fit more snugly the varying contours and dimensions of a limb. **starch b.**, a bandage that has been impregnated with a solution of starch which hardens after the bandage is applied. **suspensory b.**, a bandage for supporting the scrotum. **T b.**, a bandage shaped like the letter T; called also *crucial b.* and *Heliodorus' b.* **Theden's b.**, a roller bandage applied from below upward over a graduated compress to control hemorrhage; called also *Genga's b.* **triangular b.**, a triangle of cloth used as a sling. **Velpeau's b.**, a bandage to support the arm and provide immobilization of the elbow and shoulder; it is useful in supporting the upper extremity in severe injuries involving the shoulder girdle and upper end of humerus. **Y b.**, a bandage shaped like the letter Y.

bandicoot (ban'de-kōōt) an Indian rodent, *Nesokia bengalensis*, which is a reservoir of *Spirillum minus*, the causative organism of rat-bite fever; it also harbors *Coxiella burneti*, which may be transmitted by the bandicoot tick, *Haemaphysalis humerosa*.

banding (band'ing) 1. the act of encircling and binding with a thin strip of material. 2. in genetics, any of several techniques of staining chromosomes so that a characteristic pattern of transverse dark and light bands becomes visible, permitting identification of individual chromosome pairs. **chromosome b.**, any staining procedure resulting in a banding pattern of light and dark or bright and dull regions on a chromosome; known as C-banding, G-banding, etc., according to the staining technique used. **pulmonary artery (PA) b.**, an operation performed to control pulmonary blood flow in children with certain congenital cardiac defects.

Bandl's ring (ban'dl) [Ludwig Bandl, German obstetrician, 1842-1892] *pathologic retraction ring*; see *retraction ring*, under *ring*.

bane (bān) a poison. **leopard's b.**, **wolf's b.**, see *arnica*.

banewort (bān'wort) belladonna leaf.

bang (bang) bhang.

Bang's bacillus, disease, test (bangz) [Bernhard Laurits Frederik Bang, Danish physician, 1848-1932] see *Brucella abortus*, and under *disease* and *tests*.

Bang's method (bangz) [Ivar Christian Bang, Swedish physiological chemist, 1869-1918] see under *method*.

banian (ban'yan) the *Ficus bengalensis* (L.), an East Indian fig tree; its seeds and bark are tonic, antifebrile, and diuretic.

banisterine (ban-is'ter-in) an alkaloid from *Banisteria caapi*, a woody vine of South America; it has hallucinogenic properties.

bank (bangk) a stored supply of human material or tissues for future use by other individuals, as *blood b.*, *bone b.*, *eye b.*, *human-milk b.*, *skin b.*, etc.

Bannister's disease (ban'nis-terz) [Henry Martyn Bannister, Chicago physician, 1844-1920] *angioneurotic edema*.

Banthine (ban'thin) trademark for preparations of methantheline bromide.

Banti's disease, syndrome (ban'tēz) [Guido Banti, Italian pathologist, 1852-1925] see under *disease*, and see *congestive splenomegaly*, under *splenomegaly*.

Banting (ban'ting), Sir Frederick Grant. A Canadian physician, 1891-1941; co-discoverer of insulin, in 1922, with Charles Herbert Best and John James Rickard Macleod; co-winner, with Macleod, of the Nobel prize for medicine in 1923.

Banting's treatment (cure, diet) (ban'tingz) [William Banting, English coffin-maker, 1787-1878] see under *treatment*.

bantingism (ban'ting-izm) [William Banting, English coffin-maker, 1797-1878, who devised the method in 1863] Banting treatment.

Baptisia (bap-tiz'e-ah) [L.; Gr. *baptizein* to dip in or under water] a genus of leguminous plants. **B. leucan'tha** Torr. and Gray, a species, known as wild indigo, which contains quinolizidine alkaloids and has caused poisoning in horses and cows. **B. tinctoria** R. Br., a species of herbs of North America, which contains cytidine; used as a dye. The dried root has been used as a cathartic and emetic.

baptisin (bap'ti-zin) a glycoside from *Baptisia tinctoria*, a brownish powder, soluble in alcohol.

baptitoxine (bap-ti-tok'sin) cytidine.

bar (bahr) 1. the upper part of the gums of a horse, between the grinders and the tusks, which bears no teeth. 2. that portion of the wall of a horse's hoof which is reflected posteriorly at an acute angle. 3. a unit of pressure, being a pressure by one megadyne per square centimeter; called also *barye*. 4. in orthodontics, a connector which may consist of a heavy wire or a wrought or cast metal segment, longer than it is wide, which connects different parts of a removable partial denture. **arch b.**, a heavy wire

Four-tailed and many-tailed

Barton

Spiral reverse of leg

H. Goodwin

Spica of shoulder

Spica of groin

shaped to the outer circumference of the dental arch and extending from one side to the other so that intervening teeth may be attached to it; usually used for fixation in jaw fractures. **b. of bladder**, interureteric ridge (plica interureterica [NA]). **chromatoidal b.**, chromatoid body, def. 1. **connector b.**, a minor connector; see under *connector*. **Erich arch b.**, an arch bar made of soft, readily contoured metal, used for intermaxillary fixation. **hyoid b's**, a pair of cartilaginous plates forming the second visceral arch, from which a part of the hyoid bone is developed. **Kazanjan T b.**, an appliance useful in reconstruction of the lip and jaw; it is fixed with an acrylic prosthesis to provide soft tissue support during reconstruction. **Kennedy b.**, a secondary lingual bar, usually placed on the cingula of incisor teeth, used as an indirect retainer and may be used to stabilize poorly supported anterior teeth; called also *continuous bar retainer*. **labial b.**, a major connector located labial to the dental arch, and joining two or more bilateral parts of a mandibular removable partial denture. **lingual b.**, 1. a heavy wrought or cast structure, usually of gold, cobalt-chromium alloy, or stainless steel, placed along the gums on the lingual surface of the teeth of the lower jaw. 2. a major connector located lingual to the dental arch, and joining two or more bilateral parts of a mandibular removable partial denture. **median b.**, a fibrotic formation across the neck of the prostate gland, causing obstruction of the urethra. **Mercier's b.**, interureteric ridge (plica interureterica [NA]). **occlusal rest b.**, a minor connector used to attach an occlusal rest to a major part of a removable partial denture. **palatal b.**, a major connector that extends across the palate and joins two or more parts of a maxillary removable partial denture. **Passavant's b.**, a horizontal ridge that appears on the posterior wall of the pharynx during swallowing, produced by contraction of the palatopharyngeal sphincter; it also occurs during speech in persons with cleft palate. Called also *pharyngeal ridge* and *Passavant's cushion*, *pad*, or *ridge*. **sternal b.**, one of the paired cartilaginous bars in the embryo that unite to form the sternum. **terminal b's**, zones where epithelial cells contact one another, once thought to represent an accumulation of dense cementing substance, but with the electron microscope shown to be a junctional complex (see under *complex*).

Bar's incision (bahrz) [Paul Bar, French obstetrician, 1853–1945] see under *incision*.

Barach's index (bar'aks) [Alvan Leroy Barach, New York physician, born 1895] see under *index*.

baragnosis (bar'-ag-no'sis) [Gr. *baros* weight + *a neg.* + *gnōsis* knowledge] absence of the power to recognize weight.

Bárány's symptom (sign, test), pointing test (bah'rah-nēz) [Robert Bárány, Austrian otologist, 1876–1936; winner of the Nobel prize for medicine in 1914] see under *symptom* and *tests*.

barba (bar'bah) [L. "the beard"] [NA] the beard.

barbaloin (bar'bah-loin) an anthraquinone pentoside that occurs in various species of *Aloe* and is mainly responsible for their purgative properties.

barbaralalia (bar'bar-ah-la'le-ah) a form of dyslalia that is shown when speaking a foreign language.

barbasco (bar-bas'ko) tropical plants, *Jacquinia paramensis* and *Paullinia pinnata*; used as fish poisons.

barbeiro (bar-ba'ro) [Port.] Brazilian name for *Panstrongylus megistus*.

barberry (bar'ber-e) the shrub *Berberis vulgaris* and its fruit, which is the source of a yellow dye. The chief constituents are resins and the alkaloid berberine. Its berries are used as preservatives, and the bark of the stems and roots is used as a bitter tonic.

barbital (bar'bī-tal) chemical name: 5,5-diethyl-2,4,6(1H,3H,5H)-pyrimidinetrione. A long-acting barbiturate, $C_8H_{12}N_2O_3$, the first of the barbiturate series; used as a hypnotic and sedative, administered orally. **b. sodium**, **b. soluble**, the soluble monosodium salt of barbital, $C_8H_{11}N_2NaO_3$, having the same actions and uses as the base.

barbitalism (bar'bī-tal-izm) (*obs.*) Barbituism.

barbitone (bar'bī-tōn) a British name for barbital.

barbituism (bar-bit'u-izm) (*obs.*) a condition caused by the use of barbital or its derivatives and marked by chill, headache, fever, and cutaneous eruptions.

barbiturate (bar-bit'u-rāt) a salt or derivative of barbituric acid.

barbiturism (bar-bit'u-rizm) (*obs.*) barbituism.

barbotage (bar'bo-tahzh') [Fr. *barboter* to dabble] repeated injection and withdrawal of fluid, as in gastric lavage, or the administration of an anesthetic into the subarachnoid space by alternate injection of a small amount of the anesthetic and withdrawal of a small quantity of cerebrospinal fluid into the syringe, until the anesthetic is completely administered.

barbula (bar'bu-lah) [L.] a little beard. **b. hir'ci**, 1. axillary hair (hirci [NA]). 2. tufts of hair in the ears.

Barcoo disease, rot (bar-koo') [Barcoo, a river in South Australia] see *desert sore*, under *sore*.

Barcroft's apparatus (bar'krofts) [Sir Joseph Barcroft, British physiologist, 1872–1947] see under *apparatus*.

Bard's sign (bardz') [Louis Bard, French physician, 1857–1930] see under *sign*.

Bard-Pic syndrome [Louis Bard; Adrien Pic, French physician, 1862–1944] see under *syndrome*.

Bardach's test (bar'dakz) [Bruno Bardach, Vienna chemist] see under *tests*.

Bardenheuer's extension (bar'den-hoi-erz) [Bernhard Bardenheuer, Cologne surgeon, 1839–1913] see under *extension*.

Bardet-Biedl syndrome (bar-da' be'del) [Georges Bardet, French physician, born 1885] Laurence-Biedl syndrome.

baresthesia (bar'es-the'ze-ah) [Gr. *baros* weight + *aisthēsis* perception + *-ia*] sensibility for weight or pressure; pressure sense.

baresthesiometer (bar'es-the'ze-om'ē-ter) [Gr. *baros* weight + *aisthēsis* perception + *metron* measure] an instrument for determining sensitiveness as to weight or pressure.

Baréty's method (bar'a-tēz') [Jean Paul Baréty, French surgeon, 1887–1912] see under *method*.

Barfoed's reagent, test (bahrf'edz) [Christen Thomsen Barfoed, Swedish physician, 1815–1899] see under *tests*.

Bargen's serum, streptococcus, (bar'genz) [J. Arnold Bargen, California physician, born 1894] see under *serum* and see *Streptococcus bovis*.

bariatrics (bar'e-at'riks) [Gr. *baros* weight + *iatrikē* medicine, surgery] a field of medicine encompassing the study of overweight, its causes, prevention, and treatment.

baritosis (bar-i-to'sis) pneumoconiosis due to inhalation of barite or barium dust.

barium (ba're-um), gen. *ba'rii* [L.; Gr. *baros* weight] a pale yellowish, metallic element belonging to the alkaline earths, whose acid-soluble salts are poisonous; its atomic number is 56; atomic weight 137.34; symbol, Ba. **b. arsenate**, a salt, $Ba_3(AsO_4)_2$, formerly used in tuberculosis and in skin diseases. **b. bromide**, a compound, $BaBr_2 + 2H_2O$, formerly used as a heart tonic and in aneurysm and scrofula. **b. carbonate**, a poisonous salt, $BaCO_3$, formerly used in medicine; now employed in preparing the chloride, etc. **b. chloride**, a compound, $BaCl_2 + 2H_2O$, a cardiac stimulant; formerly used in sclerosis of the nervous tissues and in heart block and aneurysm. **b. cyanoplatinate**, a substance, $BaPt(CN)_4 \cdot 4H_2O$, used for coating the screen of the fluoroscope; called also *b. platinocyanide*. **b. hydrate**, **b. hydroxide**, $Ba(OH)_2$, a crystalline soluble base employed as a test for sulfates. **b. oxide**, white to yellowish white powder, BaO , used for drying gases; called also *baryta*. **b. platinocyanide**, *b. cyanoplatinate*. **b. sulfate**, a bulky, fine, white powder without odor or taste, and free from grittiness, $BaSO_4$; used as a contrast medium in roentgenography of the digestive tract. Called also *synthetic baryta*. **b. sulfide**, a heavy, grayish white or pale yellow, poisonous powder, BaS , sometimes used in veterinary medicine as a depilatory for preoperative preparation.

bariumize (bā're-um-iz) (*obs.*) to treat with barium.

bark (bark) [L. *cortex*] the rind or outer cortical cover of the woody parts of a plant, tree, or shrub; called also *cascara*. **bearberry b.**, *cascara sagrada*. **bitter b.**, the dried bark of *Alstonia constricta*, a tree of New South Wales and Queensland. **buck-thorn b.**, the dried bark of *Rhamnus frangula*. **butternut b.**, the dried inner bark of the root of *Juglans cinerea*. **calisaya b.**, *cinchona*. **casca b.**, the bark of *Erythrophloeum guineense*; called also *Mancona b.* **chittem b.**, *cascara sagrada*. **cinchona b.**, *cinchona*. **cotton root b.**, the air dried bark of roots of various species of *Gossypium*; formerly used as an oxytocic. Called also *gossypii radialis cortex*. **cramp b.**, the dried bark of *Viburnum opulus*. **cuprea b.**, the bark of *Remijia purdieana* or *R. pedunculata*. **dita b.**, the dried bark of *Alstonia scholaris*, a tree of India and the Philippines. **dogwood b.**, 1. *cascara sagrada*. 2. see *Cornus*. **elm b.**, the dried inner bark of *Ulmus fulva*. **Jesuits' b.**, *cinchona*. **Mancona b.**, *casca b.* **Persian b.**, *cascara sagrada*. **Purshiana b.**, *cinchona*. **Purshiana b.**, *cascara sagrada*. **quebracho b.**, bark derived from a large evergreen tree of the genus *Aspidosperma*, indigenous to various parts of South America. **quillay b.**, *quillaja*. **sacred b.**, *cascara sagrada*. **seven b's**, *Hydrangea*. **soap b.**, *soap tree b.*, *quillaja*. **white oak b.**, the dried inner bark of *Quercus alba*. **wild black cherry b.**, wild cherry; see under *cherry*.

Barkan's operation (bar'kanz) [Otto Barkan, San Francisco ophthalmologist, born 1887] goniotomy.

barley (bar'le) the annual grasses, *Hordeum vulgare*, *H. distichon*, etc.; also their seed, a cereal grain. Used for malting and distillation and to some extent as a food substance. Boiled barley water has demulcent properties and has been used as a home remedy in the management of infant diarrhea. **pearl b.**, decorticated polished barley grain.

Barlow's disease (bar'lōz) [Sir Thomas Barlow, physician in London, 1845–1945] infantile scurvy.

barn (barn) a unit of nuclear cross-section, being 10^{-24} square centimeter.

Barnes's bag (dilator), curve (barn'zes) [Robert Barnes, English obstetrician, 1817-1907] see under *bag* and *curve*.

baro- [Gr. *baros* weight] a combining form denoting relationship to weight or pressure.

baroagnosis (bar'o-ag-no'sis) baragnosis.

baroreceptor (bar'o-sep'tor) baroreceptor.

barodontalgia (bar'o-don-tal'je-ah) aerodontalgia.

baroelectroesthesiometer (bar'o-e-lek'tro-es-the'ze-om'ē-ter) [baro- + *electric* + Gr. *aisthēsis* perception + *metron* measure] an instrument to measure the amount of pressure at the time electric sensibility to tingling or pain is felt.

barognosis (bar'og-no'sis) [baro- + Gr. *gnōsis* knowledge] conscious perception of weight; the faculty by which weight is recognized; weight knowledge.

baromacrometer (bar'o-mah-krom'ē-ter) [baro- + Gr. *makros* long + *metron* measure] an instrument for measuring and weighing newborn infants.

baro-otitis (bar'o-o-ti'tis) barotitis. **b. me'dia**, barotitis media.

baropacer (bar'o-pās'er) an electronic unit implanted in the necks of dogs for continuous stimulation of the carotid sinuses.

barophilic (bar'o-fil'ik) [baro- + Gr. *philein* to love] growing best under high atmospheric pressure; said of bacterial cells.

baroreceptor (bar'o-re-sep'tor) a sensory nerve ending that is stimulated by changes in pressure, as those in the walls of blood vessels; called also *baroreceptor*.

baroscope (bar'ō-skōp) [baro- + Gr. *skopein* to examine] an instrument used in the quantitative determination of urea.

barosinusitis (bar'o-si'nu-si'tis) inflammation of one or more paranasal sinuses (usually the frontal sinus) due to difference in pressure between the surrounding atmosphere and the air within the sinus cavity; severe localized pain is the predominant symptom. It occurs on ascent or descent in an aircraft to or from high altitude, in the absence of free communication between the sinus and the atmosphere. Called also *aerosinusitis* and *sinus barotrauma*.

barospirator (bar'o-spi'ra-tor) [baro- + L. *spirare* to breathe] a machine for producing artificial respiration by means of variations in the air pressure in a closed chamber.

barotaxis (bar'o-tak'sis) [baro- + Gr. *taxis* arrangement] stimulation of living matter by change of the pressure relations under which it exists; see also *barotropism*.

barotitis (bar'o-ti'tis) a morbid condition of the ear produced by exposure to differing atmospheric pressures. **b. me'dia**, traumatic inflammation of the middle ear caused by a difference in pressure between the surrounding atmosphere and air in the middle ear space, marked by otalgia, tinnitus, hearing loss, and, occasionally, vertigo. It occurs in descent of aircraft from high altitude. Called also *aerotitis media* and *otitic barotrauma*.

barotrauma (bar'o-trau'mah) [baro- + Gr. *trauma* wound] injury caused by pressure: specifically injury of the cartilaginous walls of the eustachian tube and the ear drum due to the difference between atmospheric and intratympanic pressures. **odontalgia b.**, aerodontalgia. **otitic b.**, barotitis media. **sinus b.**, barosinusitis.

barotropism (bar-ot'ro-prizm) [baro- + Gr. *tropos* a turning] a relatively stereotyped response, often a movement, in response to pressure stimuli.

Barr body (bahr) [Murray Llewellyn Barr, Canadian anatomist, born 1908] sex chromatin.

Barraquer's disease (bar-rak-erz') [Roviralta José Antonio Barraquer, Spanish physician] lipodystrophia progressiva.

Barraquer's method, operation (bar-rak-erz') [Ignacio Barraquer, Spanish ophthalmologist, 1884-1965] phacoerysis.

Barré-Guillain syndrome (bar-ra' ge-yan') acute febrile polyneuritis.

barren (bar'en) sterile; unfruitful.

barrier (bār'er) an obstruction. **blood-air b.**, **blood-gas b.**, alveolocapillary membrane. **blood-aqueous b.**, the physiologic mechanism that prevents exchange of materials between the chambers of the eye and the blood. **blood-brain b.**, **blood-cerebral b.**, the barrier separating the blood from the parenchyma of the central nervous system. Presumably it consists of the walls of the capillaries of the central nervous system and the surrounding glial membranes (glial end-feet). Abbreviated *BBB*. **blood-cerebrospinal fluid b.**, **blood-brain b.** **blood-testis b.**, a barrier separating the blood from the seminiferous tubules, consisting of special junctional complexes between adjacent Sertoli cells near the base of the seminiferous epithelium. **blood-thymus b.**, a barrier in the thymus which excludes certain substances, possibly constituted by the interposition of a sheet of epithelial cell processes around the periphery of the lobules and between the lymphocytes and the perivascular connective tissue. **filtration b.**, the structures separating the blood in the glomerular capillaries and capsular space of the renal corpuscle, consisting

of the fenestrated epithelium, the basal lamina, and the slit pores between the pedicels of the podocytes. **gastric mucosal b.**, a physiological property of the gastric mucosa rendering the epithelium relatively impermeable to ions. Its function is impaired by aspirin, organic acids, and bile salts, and in patients subjected to severe trauma or shock. Back diffusion of acid from the gastric lumen may cause mucosal erosion or ulceration. **hematoencephalic b.**, **blood-brain b.** **histohematic connective tissue b.**, the barrier between the blood and the dependent parenchymal tissue through which diffusion of nutrients and gases takes place. **placental b.**, the placental separation of fetal from maternal blood and bloodborne materials of greater than molecular size. **protective b.**, an intervening shield of radiation-absorbing material such as lead, concrete, or plastic whose atomic number and thickness are specifically sufficient to give adequate body protection against ionizing radiation of various types. **protective b's, primary**, barriers sufficient to reduce a primary beam of radiation to a permissible exposure rate. **protective b's, secondary**, barriers sufficient to reduce stray or scattered radiation to a permissible exposure rate. **radiation b.**, protective b. **stimulus b.**, the mechanisms, consisting of a combination of neurophysiological properties of the nervous system and mental processes, by which the organism is protected from overwhelming and destructive stimulation, both from internal and external sources.

barsati (bar-sat-e') cutaneous habronemiasis.

Barth's hernia (barths) [Jean Baptiste Philippe Barth, German physician, 1806-1877] see under *hernia*.

Barthélemy's disease (bar-tāl'mez) [P. Toussaint Barthélemy, French dermatologist, 1850-1906] tuberculosis papulonecrotica.

Bartholin's anus (bar'to-linz) [Thomas Bartholin, Danish anatomist, 1616-1680] see under *anus*.

Bartholin's duct, gland (bar'to-linz) [Caspar Thomæson Bartholin, Jr., Danish anatomist, 1655-1738] see *ductus sublingualis major* and *glandula vestibularis major*.

bartholinitis (bar'to-lin-i'tis) inflammation of Bartholin's ducts.

Barton's bandage, fracture, operation (bar'tunz) [John Rhea Barton, Philadelphia surgeon, 1794-1871] see under *bandage, fracture*, and *operation*.

Bartonella (bar'to-nel'lah) [A. L. Barton, Peruvian physician, who described the organisms in 1909] a genus of the family Bartonellaceae, order Rickettsiales, occurring as a single species. **B. bacilliformis**, the etiologic agent of Carrion's disease (bartonellosis); called also *Bartonella bodies*.

Bartonellaceae (bar'to-nel-la'se-e) a family of the order Rickettsiales, made up of small rod-shaped, coccoid, or ring- or disk-shaped, filamentous and beaded organisms, usually measuring less than 3μ , occurring as pathogenic parasites in the erythrocytes of man and other animals. It includes four genera, *Bartonella*, *Eperythrozoon*, *Grahamella*, and *Haemobartonella*.

bartonellemia (bar'to-nel-e'me-ah) presence in the blood of organisms of the genus *Bartonella*.

bartonelliasis (bar'to-nel-li'ah-sis) Carrion's disease.

bartonellosis (bar'to-nel-lo'sis) Carrion's disease.

Baruch's law, sign (bar'ooks) [Simon Baruch, physician in New York, 1840-1921] see under *law* and *sign*.

baruria (bah-roo're-ah) [Gr. *baros* weight + *ouron* urine + *-ia*] the passage of urine of a high specific gravity.

Barwell's operation (bar'welz) [Richard Barwell, London surgeon, 1826-1916] see under *operation*.

bary- [Gr. *barys* heavy] a combining form meaning heavy or difficult.

barye (bar'e) bar, def. 3.

baryencephalia (bar'ī-en-se-fa'le-ah) [bary- + Gr. *enkephalos* brain] dullness of the intellect.

baryesthesia (bar'ī-esthe'ze-ah) baresthesia.

baryglossia (bar'ī-glos'e-ah) [bary- + Gr. *glōssa* tongue + *-ia*] thick, slow utterance of speech.

barylalia (bar'ī-la'le-ah) [bary- + Gr. *lalia* speech] thick, indistinct speech due to imperfect articulation.

baryphonia (bar'ī-fo'ne-ah) [bary- + Gr. *phōnē* voice + *-ia*] a thick, heavy quality of voice.

baryta (bah-rī'tah) any of several compounds of barium, including calcinated baryta (barium oxide) and caustic baryta (barium hydroxide). **synthetic b.**, barium sulfate.

barytosis (bar'ī-to'sis) baritosis.

barytron (bar'ī-tron) [bary- + *electron*] an electrical particle lighter than a proton but heavier than an electron, and charged both positively and negatively; called also *yukon*.

basad (ba'sad) toward a base or basal aspect.

basal (ba'sal) pertaining to or situated near a base.

Basaljel (ba'sal-jel) trademark for basic aluminum carbonate gel.

basaloid (ba'sah-loid) resembling basal cells of the skin; see under *carcinoma*.

basaloma (ba'sah-lo'mah) basal cell carcinoma.

basculation (bas'ku-la'shun) [Fr. *bascular* to swing] (*obs.*) replacement of a retroverted uterus by simultaneously elevating the corpus and depressing the cervix.

base (bās) [L., Gr., *basis*] 1. the lowest part or foundation of anything; see also *basis*. 2. the main ingredient of a compound. 3. in chemistry, the nonacid part of a salt; a substance that combines with acids to form salts; a substance that dissociates to give hydroxide ions in aqueous solutions; a substance whose molecule or ion can combine with a proton (hydrogen ion); a substance capable of donating a pair of electrons (to an acid) for the formation of a coordinate covalent bond. **acidifiable b.**, a chemical substance that will unite with water to form an acid. **acrylic resin b.**, a denture base made of an acrylic resin. **alloxur b's**, **alloxuric b's**, purine b's. **animal b.**, a ptomaine or leukomaine. **apical b.**, that portion of the jaws giving support to the teeth; called also *basal arch*. **cement b.**, a layer of insulated, sometimes medicated dental cement placed in the deep portions of a cavity preparation to protect the pulp, reduce the bulk of the metallic restoration, or eliminate undercuts in tapered preparation. **cheoplastic b.**, a denture base produced by casting molten metal in a mold. **cranial b.**, the endochondral bony support for the brain, separating the cranial from the facial region. **denture b.**, the material in which the teeth of a denture are set and which rests on the supporting tissues when the denture is in place in the mouth. **extension b.**, a unit of a removable prosthesis that extends anteriorly or posteriorly, terminating in a free end. **film b.**, a thin, flexible, transparent sheet of cellulose acetate or similar material which carries the radiation- and light-sensitive emulsion of x-ray or photographic films. **b. of heart**, basis cordis. **hexone b's**, diaminomono-carboxylic acids formed by the hydrolysis of proteins, and containing six atoms of carbon; they include arginine, lysine, and histidine. Called also *histone b's* and *diaminoacids*. **histone b's**, hexone b's. **Lewis b.**, an electron-pair donor, e.g., ammonia and halide ion. **b. of lung**, basis pulmonis. **metal b.**, a metallic portion of a denture base forming a part or all of the basal surface of the denture, which serves as the attachment for the plastic (resin) part of the denture. **nitrogenous b.**, an aromatic, nitrogen-containing molecule that serves as a proton acceptor, e.g., purine or pyrimidine. **nuclein b's**, **nucleinic b's**, purine b's. **ointment b.**, a vehicle for medicinal substances intended for external application to the body. **plastic b.**, a denture or baseplate, made of a plastic material. **b. of prostate**, basis prostatae. **purine b's**, a group of chemical compounds of which purine is the base, including 6-oxypurine (hypoxanthine); 2,6-dioxypurine (xanthine); 6-aminopurine (adenine); 2-amino-6-oxypurine (guanine); 2,6,8-trioxypurine (uric acid); 3,7-dimethyl xanthine (theobromine). Called also *nuclein* or *nucleinic b's*, and *xanthine b's*. **pyrimidine b's**, a group of chemical compounds of which pyrimidine is the base, including 2,4-dioxy-pyrimidine (uracil), 2,4-dioxy-5-methylpyrimidine (thymine), and 2-oxy-4-aminopyrimidine (cytosine), which are common constituents of nucleic acids. **record b.**, baseplate. **Schreiner's b.**, spermine. **shellac b's**, resinous materials adapted to maxillary or mandibular casts to form baseplates. **b. of stapes**, footplate. **temporary b.**, baseplate. **tinted denture b.**, a denture base which simulates the coloring and shading of natural oral tissues. **tooth-borne b.**, the base of a partial denture which is supported by the abutment teeth and not by the tissues beneath it. **trial b.**, baseplate. **xanthine b's**, purine b's.

basedoid (bas'ē-doid) a condition resembling Basedow's (Graves') disease, but without thyrotoxicosis.

Basedow's disease, triad (bas'e-dōz) [Carl Adolph von Basedow, German physician, 1799-1854] see *Graves' disease*, under *disease*, and *Merseburg triad*, under *triad*.

basedowian (bas'e-do'e-an) a person affected with Basedow's (Graves') disease.

basedowiform (bas'e-do'i-form) resembling Basedow's (Graves') disease.

baseline (bās'lin) a known value or quantity used to measure or assess an unknown, as a baseline urine sample.

baseplate (bās'plāt) 1. a sheet of wax, gutta-percha, or other plastic material used as a temporary base in the construction and fitting of artificial dentures; called also *record base*, *temporary base*, and *trial base*. 2. Hutch's term for the tissue circumferential to and somewhat eccentric to the urethral orifice which, it is postulated, may act as a floor during the filling of the bladder and assume a cone-shape during micturition to allow the proximal urethra to fill. **stabilized b.**, a baseplate lined with a plastic material to improve its fit and stability in the mouth.

bases (ba'sēz) [L.] plural of *basis*.

bas-fond (bah-fon') [Fr.] a fundus, especially that of the urinary bladder.

Basham's mixture (Bash'amz) [William Richard Basham, English physician, 1804-1877] iron and ammonium acetate solution; see under *solution*.

basi-, basio- (ba'se, ba'se-o) [L., Gr. *basis*] a combining form denoting relationship to a base or foundation.

basial (ba'se-al) pertaining to the basion.

basialis (ba'se-a'lis) [L.] basial; used in the NA terminology as denoting relationship to a base or to the basion.

basialveolar (ba'se-al-ve'o-lar) extending from the basion to the alveolar point.

basiarachnitis (ba'se-ar'ak-ni'tis) inflammation of the basal part of the arachnoid; called also *basiarachnoiditis*.

basiarachnoiditis (ba'se-ah-rak'noi-di'tis) basiarachnitis.

basic (ba'sik) 1. pertaining to or having the properties of a base. 2. capable of neutralizing acids.

basicaryoplastin (ba'se-kar'e-o-plas'tin) [*basi-* + Gr. *karyon* kernel + *plassein* to form] the basophil paraplastin of the cell nucleus.

basichromatin (ba'se-kro'mah-tin) the basophil portion of the chromatin of the cell nucleus.

basichromiole (ba'se-kro'me-ōl) [*basophil* + *chromiole*] one of the basophil particles forming the chromatin of the cell nucleus.

basicity (bah-sis'i-te) 1. the quality of being a base, or basic. 2. the combining power of an acid; it is measured by the number of hydrogen atoms replaceable by a base.

basicranial (ba'se-kra'ne-al) [*basi-* + Gr. *kranion* cranium] pertaining to the base of the skull.

basicytoparaplastin (ba'se-si'to-par'ah-plas'tin) the basophil paraplastin of the cytoplasm.

basidia (bah-sid'e-ah) plural of *basidium*.

Basidiobolus (bah-sid'i-ob'o-lus) a genus of phycomycetous fungi of the family Entomophthoraceae, order Entomophthorales.

B. haptospo'rus, the etiologic agent of subcutaneous phycomycosis; called also *B. meristosporus*. **B. meristospo'rus**, *B. haptosporus*.

basidiocarp (bah-sid'ē-o-karp') the basidium-producing large fruiting body, the mushroom, composed of masses of intertwined hyphal elements, which is characteristic of the majority of the Basidiomycetes.

Basidiomycetes (bah-sid'e-o-mi-se'tēz) a class of perfect fungi of the division Eumycetes, the club fungi, in which the spores are borne on club-shaped organs (basidia); it includes the subclasses Heterobasidiomycetidae and Homobasidiomycetidae.

basidiomycetous (ba'sid-i-o-mi-se'tus) of or pertaining to fungi of the class Basidiomycetes.

basidiospore (bah-sid'e-o-spōr) a spore formed on a basidium. See *Basidiomycetes* and *spore*.

basidium (bah-sid'e-um), pl. *basid'ia* [Gr. *basis* base] the club-like organ of the fungal class Basidiomycetes which, following karyogamy and meiosis, bears the basidiospore. See *spore*.

basifacial (ba-se-fa'shal) [L. *basis* base + *facies* face] pertaining to the lower part of the face.

basigenous (bah-sij'ē-nus) capable of forming a chemical base.

basihyal (ba'se-hi'al) basihyoid.

basihyoid (ba'se-hi'oid) the body of the hyoid bone; in certain of the lower animals, either of the two lateral bones that are its homologues; called also *basihyal*, and *corpus ossis hyoidei*.

basil (ba'sil) any aromatic plant of the genus *Osimum*, especially *O. basilicum*; a condiment with carminative properties. Called also *sweet b.*

basilad (bas'i-lad) toward the basilar aspect.

basilar (bas'i-lar) [L. *basilaris*, from *basis* base] pertaining to a base or basal part.

basilaris (bas'i-la'ris) [L.] situated at the base. **b. cra'nii**, a composite of the numerous bones which serve the brain as a supportive floor and form the axis of the whole skull.

basilateral (ba'se-lat'er-al) both basilar and lateral.

basilemma (ba'se-lem'ah) [*basi-* + Gr. *lemma* husk] basement membrane.

basilic (bah-sil'ik) [L. *basilicus*; Gr. *basilikos* royal] important or prominent.

basilicon (bah-sil'i-kon) [Gr. *basilikos* royal] a once popular name for various ointments, and especially for resin cerate.

basiloma (bas-ē-lo'mah) basal cell carcinoma. **b. tere-brans**, an invasive basal-cell epithelioma.

basilysis (bah-sil'i-sis) [*basi-* + Gr. *lysis* dissolution] (*obs.*) craniotomy, def. 2.

basilyst (bas'i-list) (*obs.*) cranioclast.

basin (ba'sn) the pelvis.

basinial (ba'se-na'ze-al) pertaining to the basion and the nasion.

basio- see *basi-*.

basiooccipital (ba'se-ok-sip'i-tal) pertaining to the basilar process of the occipital bone.

basioglossus (ba'se-o-glos'us) [*basio-* + Gr. *glōssa* tongue] the part of the hyoglossus muscle that is attached to the base of the hyoid bone.

basion (ba'se-on) [Gr. *basis* base] the midpoint of the anterior border of the foramen magnum.

basiotic (ba'se-ot'ik) [*basi-* + Gr. *ous* ear] see under *bone*.

basiotribe (ba'se-o-trib'') [*basio-* + Gr. *tribein* to crush] (*obs.*) cranioclast.

basiotripsy (ba'se-o-trip'se) (*obs.*) craniotomy, def. 2.

basiotriptor (ba'se-o-trip'ter) (*obs.*) cranioclast.

basiparachromatin (ba'se-par'ah-kro'mah-tin) basicytoplastin.

basiparaplastin (ba'se-par'ah-plas'tin) the basophil portion of the paraplastin.

basipetal (ba-sip'ē-tal) [*basi-* + L. *petere* to seek] descending toward the base; developing in the direction of the base, as a spore.

basiphilic (ba'se-fil'ik) basophilic.

basirhinal (ba'se-rin'al) [*basi-* + Gr. *rhis* nose] pertaining to the base of the brain and to the nose.

basis (ba'sis), pl. *bases* [L.; Gr.] the lower, basic, or fundamental part of an object; [NA] a general term designating the base of a structure or organ, or the part opposite to or distinguished from the apex. **b. cartilag'inis arytenoi'deae** [NA], base of arytenoid cartilage: the triangular inferior part of the arytenoid cartilage, which bears the articular surface. **b. cer'ebri**, facies inferior cerebri. **b. coch'leae** [NA], base of cochlea: the posterior of the cochlea, which rests upon the internal acoustic meatus. **b. cor'dis** [NA], base of heart: a poorly delimited region of the heart, formed, in general, by the atria and the area occupied by the roots of the great vessels. It lies opposite the middle thoracic vertebrae, its exact position varying with heart action, and is directed superiorly, posteriorly, and to the right. **b. cra'nii exter'na** [NA], external base of cranium: the outer surface of the inferior region of the skull. **b. cra'nii inter'na** [NA], internal base of cranium: the inner surface of the inferior region of the skull, constituting the floor of the cranial cavity. **b. enceph'ali**, facies inferior cerebri. **b. glandulae suprarena'lis**, facies renalis glandulae suprarenalis. **b. mandib'ulae** [NA], base of mandible: the lower margin of the body of the mandible; called also *inferior border of mandible*. **b. modi'oli** [NA], base of modiolus: the broad part of the modiolus situated near the lateral part of the internal acoustic meatus. **b. na'si**, the portion of the nose opposite to the apex. **b. os'sis metacarpa'lis** [NA], base of metacarpal bone: the proximal end of a metacarpal bone, that articulates with bone(s) of the carpus and with adjacent metacarpal bones. **b. os'sis metatarsa'lis** [NA], base of metatarsal bone: the wedge-shaped proximal end of a metatarsal bone, which articulates with bone(s) of the tarsus and with adjacent metatarsal bones. **b. os'sis sa'cri** [NA], base of the sacral bone: the cranial surface of the sacrum; its lateral portions consist of the alae of the sacrum, and its middle portion is the upper surface of the body of the first sacral vertebra that articulates with the fifth lumbar vertebra. Called also *base of the sacrum*. **b. patel'lae** [NA], base of patella: the superior border of the patella, to which the tendon of the quadriceps femoris muscle is attached; called also *superior border of patella*. **b. pedun'culi cer'ebri**, crus cerebri. **b. phalan'gis digito'rum ma'nus** [NA], base of phalanx of fingers: the proximal end of each phalanx of the fingers; called also *proximal extremity of phalanx of finger*. **b. phalan'gis digito'rum pe'dis** [NA], base of phalanx of toes: the proximal end of each phalanx of the toes; called also *proximal extremity of phalanx of toe*. **b. prosta'tae** [NA], base of prostate: the broad upper part of the prostate, in contact with the lower surface of the urinary bladder. **b. pulmo'nis** [NA], base of lung: the portion of each lung that is directed toward the diaphragm. **b. pyram'idis rena'lis** [NA], base of renal pyramid: the part of a renal pyramid that is directed away from the renal sinus. **b. scap'ulae**, a name applied to both the vertebral and the axillary borders of the scapula (margo medialis and margo lateralis). **b. sta'pedis** [NA], base of stapes: the oval plate of bone on the stapes that fits into the fenestra vestibuli.

basisphenoid (ba'se-sfe'noid) an embryonic bone that becomes the back part of the body of the sphenoid.

basisylvian (ba'se-sil've-an) [*basi-* + *sylvian*] (*obs.*) pertaining to the basilar part of the sylvian fissure (sulcus lateralis).

basitemporal (ba'se-tem'po-ral) [*basi-* + *temporal*] pertaining to the lower part of the temporal bone.

basivertebral (ba'se-ver'te-bral) [*basi-* + L. *vertebra* joint] pertaining to the body of a vertebra.

basket (bas'ket) 1. basket cell, the inferior stellate cell of the cerebellar cortex. 2. one of the condensations of intracellular neurofibrils in senile dementia; called also *Alzheimer's neurofibrillary degeneration* and, less commonly, *Alzheimer's b. fiber* b's, fine fibers extending from the external limiting membrane of the retina to surround the adjacent portions of the rods and cones.

Basle Nomina Anatomica (bah'zl no'mī-nah an-ah-tom'i-kah) the official body of anatomical nomenclature prepared by a group of German anatomists with some help from anatomists in other countries, and presented for final criticism at the annual meeting of the German Anatomic Society held in Basle, Switzerland in 1895. Abbreviated BNA. It has been superseded by *Nomina Anatomica*.

BaSO₄ barium sulfate.

basocyte (ba'so-sīt) (*obs.*) a basophilic cell or leukocyte.

basocytopenia (ba'so-si'to-pe'ne-ah) [*basocyte* + Gr. *penia* poverty] (*obs.*) basophilic leukopenia.

basocytosis (ba'so-si-to'sis) (*obs.*) 1. basophilic leukocytosis. 2. basophilia, def. 1.

basoerythrocyte (ba'so-ē-rith'ro-sīt) (*obs.*) an erythrocyte containing basophilic granules.

basoerythrocytosis (ba'so-ē-rith'ro-si-to'sis) (*obs.*) basophilia, def. 1.

basograph (ba'so-graf) [Gr. *basis* a walking + *graphein* to write] an instrument for recording abnormalities of gait.

basometachromophil (ba'so-met'ah-kro'mo-fil) [*basic* + Gr. *meta* beyond + *chrōma* color + *philein* to love] staining with basic dyes to a color different from that of surrounding substances.

Basommatophora (ba-som'mah-tof'o-rah) a suborder of mostly freshwater snails (order Pulmonata, subclass Euthyneura, class Gastropoda); two families of medical importance are Planorbidae and Lymnaeidae.

basopenia (ba'so-pe'ne-ah) (*obs.*) basophilic leukopenia.

basophil (ba'so-fil) [Gr. *basis* basē + *philein* to love] 1. a structure, cell, or other histologic element staining readily with basic dyes. 2. a granular leukocyte with an irregularly shaped, relatively pale-staining nucleus that is partially constricted into two lobes, and with cytoplasm that contains coarse bluish black granules of variable size. Basophils contain vasoactive amines, e.g., histamine and serotonin, which are released on appropriate stimulation. Called also *basophilic leukocytes*. 3. a beta cell of the adenohipophysis; see also *gonadotrope* (def. 3) and *thyrotrope* (def. 2). 4. basophilic. **beta b.**, thyrotrope, def. 2. **Crooke-Russell b's**, the basophils in Crooke's hyaline degeneration; see under *degeneration*. **delta b.**, gonadotrope, def. 3.

basophile (ba'so-fil) basophilic.

basophilia (ba'so-fil'e-ah) 1. the reaction of relatively immature erythrocytes to basic dyes whereby the stained cells appear blue, gray, or grayish-blue (diffuse basophilia), or bluish granules appear (punctate basophilia or stippling). 2. an abnormal increase in the blood of basophilic erythrocytes; called also *basocytosis* and *basoerythrocytosis*. 3. basophilic leukocytosis.

basophilic (ba-so-fil'ik) staining readily with basic dyes.

basophilism (ba-sof'i-lizm) abnormal increase of basophil cells.

Cushing's b., **pituitary b.**, Cushing's syndrome (def. 1); see under *syndrome*.

basophilous (ba-sof'i-lus) basophilic.

basoplasm (ba'so-plazm'') cytoplasm that stains with basic dyes.

Bass-Watkins test (bas-wot'kinz) [Charles Cassedy Bass, American physician, born 1875; J. A. Watkins] see under *tests*.

Basset's operation (bas-sāz') [Antoine Basset, French surgeon, 1882-1951] see under *operation*.

Bassini's operation (bah-se'nēz) [Edoardo Bassini, surgeon in Padua, 1844-1924] see under *operation*.

bassorin (bas'o-rin) a principal constituent of tragacanth gum, made up of a complex of polymethoxylated acids (bassoric acid) which swell in water to form an irreversible gel; used as pharmaceutical adjuvant.

basswood (bas'wood) the wood of the Linden tree, *Tilia americana* L. (Tiliaceae). Long used in American folk medicine as a decoction of the wood, bark, or flowers for bile and liver disorders.

bast (bast) a strong woody fiber obtained chiefly from the phloem of higher plants; used to a very limited extent in surgery.

bastard (bas'tard) [Old Fr.] 1. an illegitimate person; one born out of wedlock. 2. illegitimate. 3. of inferior quality; not genuine.

Bastedo's rule (bas-te'dōz) [Walter Arthur Bastedo, physician in New York, 1873-1952] see under *rule*.

Bastian-Bruns law (sign) (bas'chan-broonz') [Henry Charlton Bastian, British neurologist, 1837-1915; Ludwig Bruns, neurologist in Hanover, 1856-1916] see under *law*.

basyulous (bas'i-lus) acting as a base in chemical composition.

Bateman's disease (bāt'manz') [Thomas Bateman, English physician, 1778-1821] molluscum contagiosum.

Bates' operation (bätz') [William Horatio Bates, American surgeon] see under *operation*.

bath (bath) 1. a conductive or convective medium, as water, vapor, sand, or mud, with which the body is laved or in which the body is wholly or partly immersed for therapeutic or cleansing purposes; called also *balneum*. 2. the application of a conductive or convective medium to the body for therapeutic or cleansing purposes. 3. a piece of equipment or scientific apparatus in which a body or object may be immersed. **acid b.**, one of water medicated with a mineral acid. **air b.**, the therapeutic exposure of the body to air, which is usually warm; called also *balneum pneumaticum*. **alcohol b.**, the laving of the body with dilute alcohol; it is defervescent and stimulant. **alkaline b.**, the washing of a patient in a weak solution of an alkaline carbonate; useful in skin diseases. **alum b.**, the use of alum water as a bathing medium. **antipyretic b.**, a bath given to

reduce fever. **antiseptic b.**, a bath containing an antiseptic. **aromatic b.**, a medicated bath in which the water is scented with a decoction of aromatic plants or volatile oils. **astringent b.**, a bath in a liquid containing tannic acid, alum, or other astringent. **borax b.**, one in water medicated with glycerin and borax. **bran b.**, an emollient bath of water in which bran has been boiled. **Brand b.** (1861), a cold bath of short duration in which the water is at 68° F., and during which the patient is gently massaged. **bubble b.**, a bath in which the water has been filled with bubbles produced by mechanical or chemical means. **cabinet b.**, a hot-air bath or a radiant heat bath in which the patient is inclosed in a special cabinet. **camphor b.**, a bath given in an atmosphere containing the vapor of camphor. **carbon dioxide b.**, a water bath impregnated with carbon dioxide, such as the Nauheim bath. **Charcot's b.** (obs.), a bath taken by standing in ankle-deep hot water and sponging the body locally with cold water. **cold b.**, one in which cold water is used at a temperature of less than 65° F. **colloid b.**, a bath containing gelatin, bran, starch, or similar substances. **continuous b.**, a bath of flowing water. **contrast b.**, immersion of a part of the body alternately in hot and in cold water. **cool b.**, one in water from 65° to 75° F. **creosote b.**, a bath containing creosote and glycerin; used in scaly skin diseases. **douche b.**, the application of water to the body from a jet spray. **drip-sheet b.**, see *drip sheet*, under *sheet*. **earth b.**, the placing of a patient in a mass of earth or of sand, usually warmed. **emollient b.**, a bath in an emollient liquid, like a decoction of bran. **Finnish b.**, a sweat bath given in an enclosed, steamy room. Hyperemia of the skin is increased by beating with twigs, and the bath is followed by a cold plunge. **Finsen b.**, a general irradiation of the patient's body with ultraviolet rays. **foam b.**, a bath of foam produced by blowing air or oxygen through the water to which a foam-forming substance (saponin) has been added. **full b.**, one in which the patient's body is fully immersed in the water. **gas-bubble b.**, a bath of water containing gases in such quantities that gas bubbles are set free and ascend to the surface of the water, as in carbon dioxide and oxygen baths. **gelatin b.**, an emollient bath in a thin warm solution of gelatin. **glycerin b.**, a warm emollient bath in water containing glycerin and gum acacia. **graduated b.**, one in which the temperature of the water is gradually modified. **grease b.**, a scrubbing of the body with some greasy preparation (petrolatum, lanolin). **Greville b.** (obs.), an electric hot-air bath. **half b.**, a bath of the hips and lower part of the body. **herb b.**, one which contains a decoction of aromatic herbs. **hip b.**, *sitz b.* **hot b.**, one in water from 98° to 104° F. **hot-air b.**, one in air or vapor from 100° to 130° F. **hyperthermal b.**, a hot bath in which the water is above 104° F. **immersion b.**, one in which the body of the patient is immersed. **iron b.**, one in water which contains iron sulfate. **kineto-therapeutic b.**, a bath providing facilities for underwater exercise. **light b.**, exposure of all or part of the body to light rays, either of the sun or from an apparatus. **linseed b.**, a bath to which has been added the mucilage extracted from linseed. **lukewarm b.**, a neutral bath in which the water is between 92° and 97° F. **medicated b.**, a bath variously charged with medicinal substances. **milk b.**, one taken in milk; called also *balneum lacteum*. **moor b.**, a mud bath containing earth from a moor or waste land. **mud b.**, application of wet sticky earth to the body, or immersion of the body in such material. **Nauheim b.**, a bath in which the patient is immersed in warm carbonated water. **needle b.**, a shower bath in which the water is projected in a fine, needle-like spray. **oil b.**, one taken in warm olive oil, sometimes variously medicated. **oxygen b.**, a bath impregnated with oxygen. See *gas-bubble b.* **pack b.**, see *pack*. **paraffin b.**, wax b. **peat b.**, a mud bath utilizing partially carbonized vegetable matter. **sand b.**, 1. the immersion of the body in dry, heated sand. 2. the covering of the body with the damp sand of the seashore. Called also *balneum arenae*. **sauna b.**, a sweat bath given in an enclosed, steamy room, usually followed by a cold shower. See *Finnish b.* **Schott b.**, see *Schott's treatment*, under *treatment*. **sea b.**, **sea-water b.**, a bath in water from the sea; usually warm. **sedative b.**, a warm bath in which the patient's body is immersed, usually for several hours, to reduce agitated behavior. **sheet b.**, the applications of wet sheets to the body. **sitz b.**, a bath in which the patient sits in the tub, the hips and buttocks being immersed; called also *hip b.* **sponge b.**, one in which the patient's body is not immersed in water but is rubbed with a wet cloth or sponge. **stimulating b.**, a bath containing tonic, astringent, or aromatic substances. **sweat b.**, any bath given to promote sweating. **tepid b.**, one in water from 75° to 92° F. **vapor b.**, exposure of the body to steam. **warm b.**, one taken in water from 92° to 97° F. **water b.**, a vessel containing water for immersing bodies or for immersing liquid-containing vessels that are to be heated or cooled, or are to be held at a given temperature. **wax b.**, the application of heated liquid wax to a part of the body, the wax being permitted to solidify; also the immersion of a part of the body in heated liquid wax maintained at a constant temperature. Called also *paraffin b.* **whirlpool b.**, a variously sized tank in which the body or an extremity can be submerged as the heated water is mechanically agitated.

bathesthesia (bath/'es-the/'ze-ah) bathyesthesia.

bathmotropic (bath/'mō-trop/'ik) [Gr. *bathmos* threshold + *tropos* a turning] influencing the response of tissue to stimuli. **negatively b.**, lessening response to stimuli. **positively b.**, increasing response to stimuli.

bathmotropism (bath-'mot/'ro-pizm) influence on the excitability of muscular tissue.

batho- see *bathy-*.

bathochrome (bath/'o-krōm) an atom or group whose introduction into a compound shifts the compound's absorption peak to a longer wavelength; cf. *hypsochrome*.

bathochromy (bath/'o-kro/'me) a shift of the absorption band toward lower frequencies (longer wavelengths) with deepening of color from yellow to red to black.

bathoflore (bath/'o-flōr) [batho- + *fluorescence*] a substance that decreases the intensity of fluorescence of a parent compound; cf. *auxoflore*.

bathomorphic (bath/'o-mor/'fik) [batho- + Gr. *morphē* form] having a deep or myopic eye.

bathrocephaly (bath/'ro-sef/'ah-le) [Gr. *bathron* a step + *kephalē* head] a developmental anomaly characterized by a steplike posterior projection of the skull, caused by excessive bone formation at the lambdoid suture.

bathy-, batho- (bath/'e, bath/'o) [Gr. *bathys* deep, *bathos* depth] a combining form meaning deep, or denoting relationship to depth.

bathyanesthesia (bath/'e-an/'es-the/'ze-ah) [bathy- + *anesthesia*] loss of deep sensibility.

bathycardia (bath/'e-kar/'de-ah) [bathy- + Gr. *kardia* heart] a low position of the heart due to anatomical conditions and not to disease.

bathyesthesia (bath/'e-es-the/'ze-ah) [bathy- + Gr. *aisthēsis* perception] deep sensibility; the sensibility in the parts of the body beneath the surface, such as muscle sensibility and joint sensibility.

bathyperesthesia (bath/'e-hi/'per-es-the/'ze-ah) [bathy- + *hyperesthesia*] increased sensitiveness of deep structures of the body.

bathyhypesthesia (bath/'e-hip/'es-the/'za-ah) [bathy- + *hypesthesia*] decreased sensitiveness of the deep structures of the body.

bathypnea (bath/'e-ne/'ah) [bathy- + Gr. *pnoia* breath] deep breathing.

batonet (ba-to-net') pseudochromosome.

batrachoplasty (bat/'rah-ko-plas/'te) [Gr. *batrachos* frog + *plastēin* to form] a surgical operation for the cure of ranula.

battarism (bat/'ah-rizm) stuttering.

battarismus (bat/'ah-riz-mus) [Gr. *battarizein* to stammer] stuttering.

battery (bat/'er-e) 1. a set or series of cells which afford an electric current. 2. any set, series, or grouping of similar things, as a battery of tests.

Batley bacilli (bat/'e) [Batley, a tuberculosis hospital in Rome, Georgia, where many strains of these mycobacteria were first recognized] see under *bacillus*.

battleyin (bat/'e-in) [Batley bacillus] a product prepared from Batley bacilli (Group III of the unclassified mycobacteria), comparable to tuberculin, used in a cutaneous test of hypersensitivity.

Battle's operation, sign (bat/'t'lz) [William Henry Battle, London Surgeon, 1855-1936] see under *operation* and *sign*.

Battley's sedative (bat/'lēz) [Richard Battley, English chemist, 1770-1856] see under *sedative*.

Baudelocque's diameter (line) (bo-dloks') [Jean Louis Baudelocque, French obstetrician, 1746-1810] see under *diameter*.

Bauhin's gland, valve (bo/'anz) [Gaspard (Caspar) Bauhin, Swiss anatomist, 1560-1624] see *glandulae linguales anteriores* and *valva ileocecalis*.

Baumé's scale (bo-māz') [Antoine Baumé, French chemist, 1728-1804] see under *scale*.

Baumès' law (bo-mez') [Pierre Prosper François Baumès, French physician, 1791-1871] see *Colles' law*, under *law*.

Baumès' symptom (bo-mez') [Jean Baptiste Timothée Baumès, French physician, 1756-1828] see under *sign*.

baunscheidtism (bown/'shid-tizm) [from Karl Baunscheidt, the inventor] (obs.) treatment of chronic rheumatism, etc., by acupuncture with the révulseur, an instrument furnished with many fine needle points, which are dipped into an irritant liquid, as oil of mustard.

bay (ba) a recess or inlet. **lacrimal b.**, the depression at the inner canthus of the eye in which the lacrimal canaliculi lie.

bayberry (ba/'ber-e) 1. the fruit of *Laurus nobilis*, the European laurel. 2. the wax myrtle, *Myrica cerifera*, and its berry. 3. the tree, *Pimenta officinalis*, and its fruit.

Bayer 205 (ba/'er) suramin sodium.

Bayle's disease (bälz) [Antoine Laurent Jesse Bayle, French physician, 1799-1858] see under *disease*.

Bayle's granulations (bälz) [Gaspard Laurent Bayle, French physician, 1774-1816] see under *granulation*.

Baynton's bandage (bän'tonz) [Thomas Baynton, English surgeon, 1761-1820] see under *bandage*.

Bayrac's test (bi-rakz') [Henri Pierre Bayrac, French physician] see under *tests*.

Bazillenemulsion [Ger.] bacillary emulsion.

Bazin's disease (bah-zaz') [Antoine Pierre Ernest Bazin, French dermatologist, 1807-1878] erythema induratum.

B.B.B. blood-brain barrier; see under *barrier*.

BBT basal body temperature.

BCG bacille Calmette Guérin (see *BCG vaccine*, under *vaccine*); bicolor guaiac test (see under *tests*); ballistocardiogram.

BCNU carmustine.

b.d. abbreviation for *L. bis di'e*, twice a day.

B.D.A. British Dental Association.

Bdella (del'ah) [Gr. "leech"] a genus of mites. **B. cardina'lis**, a species that is parasitic on other insects.

bdellepithecium (del'ë-pi-the'se-um) [Gr. *bdella* leech + *epithesis* application] a kind of artificial leech, as a tube used in leeching.

bdellium (del'le-um) [L.; Gr. *bdellion*] the fragrant gum-resin of several species of *Commiphora* trees; used as an adulterant of myrrh because of its similar appearance and aromatic properties.

bdellometer (del-lom'ë-ter) a mechanical substitute for a leech.

bdellotomy (del-lot'ë-me) [Gr. *bdella* leech + *tomë* cutting] incision into a sucking leech to increase the amount of blood it will take.

Bdellovibrio (del'o-vib're-o) a genus of small, rod-shaped or curved, actively motile bacteria that are obligate parasites on certain gram-negative bacteria, including *Pseudomonas*, *Salmonella*, and coliform bacteria; they replicate between the cell wall and plasma membrane of the host bacterium and are considered to be related to the vibrios.

bdellovibrio (del'o-vib're-o) any microorganism of the genus *Bdellovibrio*.

B.D.S. Bachelor of Dental Surgery.

B.D.Sc. Bachelor of Dental Science.

B.E. Bacillen emulsion; see under *tuberculin*.

Be chemical symbol for *beryllium*.

bead (bēd) a small spherical structure or mass. **rachitic b's**, a series of palpable or visible prominences at the points where the ribs join their cartilages; seen in certain cases of rickets.

beaded (bēd'ed) having the appearance of a string of beads.

Beadle (be'dl), George Wells. United States biochemist, born 1903; co-winner, with Edward Lawrie Tatum and Joshua Lederberg, of the Nobel prize in medicine and physiology for 1958, for the discovery that genes act by regulating specific chemical processes.

beaker (bēk'er) a form of glass cup, usually with a lip for pouring, used by chemists and pharmacists.

Beale's ganglion cells (bēlz) [Lionel Smith Beale, British physician, 1828-1906] see under *cell*.

beam (bēm) 1. a unidirectional or approximately unidirectional emission of electromagnetic radiation or particles. 2. a dental bar whose curvature changes under load. **cantilever b.**, a beam that is supported by one fixed support at only one of its ends. **continuous b.**, a beam that continues over three or more supports; those supports not at the beam ends being equally free supports. **restrained b.**, one that has two or more supports; at least one of which permits some freedom of rotation to the point of support. **simple b.**, a straight beam that has two supports, one at either end. **useful b.**, in radiology, that part of the primary radiation which is permitted to emerge from the tubehead assembly of an x-ray machine, as limited by the tubehead aperture or port and accessory collimating devices.

beamtherapy (bēm-ther'ah-pe) see *beam therapy*, under *therapy*, and *chromotherapy*, def. 2.

bean (bēn) any of the seeds contained in pods of various leguminous plants. **broad b.**, *Vicia faba*. **Calabar b.**, the poisonous seed of the tropical West African leguminous plant *Physostigma venenosum*; it is the source of physostigmine and has been used by natives in ordeal trials. Called also *ordeal b.* **castor b.**, the seed of the castor oil plant, *Ricinus communis*, which affords castor oil. **ordeal b.**, Calabar b. **St. Ignatius' b.**, the poisonous seed of the tropical tree *Strychnos ignatii*; it contains strychnine and brucine.

beard (bērd) the heavy hair growing on the lower part of a man's face, normally appearing after puberty as a secondary sex characteristic; called also *barba* [NA].

Beard's disease (bērdz) [George Miller Beard, American psychiatrist, 1839-1883] neurasthenia.

bearing (bār'ing) a supporting surface or point. **central b.**, application of forces between the maxillae and mandible at a single point as near as possible to the center of the supporting

areas of the upper and lower jaws, for the purpose of distributing closing forces evenly throughout the areas of the supporting structures during the registration and recording of maxillomandibular (jaw) relations and during the correction of occlusal errors.

bearing down (bār'ing down) 1. a feeling of weight in the pelvis occurring in certain diseases. 2. the expulsive effort of a woman in labor.

bearwood (bār'wood) cascara sagrada.

beat (bēt) a throb or pulsation, as of the heart or of an artery; see also *pulse*. **apex b.**, the pulsation of the heart felt over its apex normally in the fifth left intercostal space, 8 or 9 cm. from the midline. **capture b's**, occasional ventricular responses to a sinus impulse that reaches the atrioventricular node in a nonrefractory phase. **ciliary b.**, the rhythmic, coordinated contraction of cilia of cells in a two-step process involving intraciliary excitation followed by interciliary conduction. **dropped b.**, absence of a single ventricular contraction. **ectopic b.**, a heart beat originating at some point other than the sinus node. **escaped b's**, heart beats that follow an abnormally long pause. **forced b.**, an extrasystole produced by artificial stimulation of the heart. **fusion b.**, in electrocardiography, the complex resulting when an ectopic ventricular beat coincides with normal conduction to the ventricle; the complex has features of both the normal and the ectopic beat. **premature b.**, extrasystole. **reciprocal b's**, an additional ventricular contraction induced when the ventricle is activated significantly before the sinus impulse reaches the atria, so that the impulse, after effecting an atrial contraction, may retrace its path to induce another ventricular contraction.

Beatson's operation (bēt'sonz) [George Thomas Beatson, Glasgow surgeon, 1848-1933] see under *operation*.

Beau's disease, lines, syndrome (bōz) [Joseph Honoré Simon Beau, French physician, 1806-1865] see *cardiac insufficiency*, under *insufficiency*; see under *line*, and see *asystole*.

Beauvaria (bo-var'e-ah) a genus of imperfect fungi of the family Moniliaceae, order Moniliales. *B. bassia'na* causes muscardine in silkworms, and *B. tenel'la* causes a disease of the larvae of beetles; formerly called *Botrytis bassiana* and *Botrytis tenella*, respectively.

bebeerine (be-be'rēn) an alkaloid, C₃₈H₃₈N₂O₈, obtained from the bark of *Nectandra rodioei* Hook (Lauraceae), the root of *Chondodendron microphyllum* (Eichl.) Moldenke (menispermaceae), and related species; it has been used as a tonic in malaria. Called also *chondodendrine* and *pelosine*.

bebeeru (be-be'roo) the greenheart tree, *Nectandra rodioei* Hook (Lauraceae), of tropical America; its bark, which contains bebeerine, has been used as a tonic in malaria.

becanthone hydrochloride (bē-kan'thōn) chemical name: 1-[[2-[ethyl(2-hydroxy-2-methylpropyl)amino]ethyl]amino]-4-methylthioxanthene-9-one monohydrochloride; an antischistosomal agent, C₂₂H₂₈N₂O₂S·HCl.

Beccari process (bē-kah're) [Giuseppe Beccari, physician in Florence] see under *process*.

bechic (bek'ik) [L. *bechicus*, from Gr. *bēx* cough] pertaining to cough.

Bechterew see *Bekhterev*.

Beck's gastrostomy (beks) [Carl Beck, American surgeon, 1856-1911] see under *gastrostomy*.

Beck's triad (beks) [Claude Schaeffer Beck, Cleveland surgeon, born 1894] see under *triad*.

Becker's phenomenon (sign), test (bek'erz) [Otto Heinrich Enoch Becker, German oculist, 1828-1890] see under *phenomenon* and *tests*.

Beckmann's apparatus (bek'manz) [Ernst Otto Beckmann, Berlin chemist, 1853-1923] see under *apparatus*.

Béclard's amputation, etc. (ba-klahrz') [Pierre Augustin Béc-lard, French anatomist, 1785-1825] see under *amputation*, *hernia*, *nucleus*, and *triangle*.

beclo-methasone dipropionate (bek'lo-meth'ah-sōn) [USP] chemical name: 9-chloro-11β-hydroxy-16β-methylpregna-1,4-diene-3,20-dione. A glucocorticoid, C₂₈H₃₇ClO₅, administered by aerosol inhalation to patients who require chronic treatment with corticosteroids for control of bronchial asthma symptoms. It has also been used topically in the treatment of glucocorticoid-responsive skin diseases.

Becquerel's rays (bek-relz') [Antoine Henri Becquerel, French physicist, 1852-1908; co-winner, with M. S. Curie and P. Curie, of the Nobel prize in physics for 1903, for studies on spontaneous radioactivity] see under *ray*, and see *becquerel*.

becquerel (bek-rel') [Antoine Henri Becquerel] a proposed unit of radioactivity, defined as that of quantity of a radioactive nuclide whose rate of spontaneous nuclear transformation in one second to the minus one power (s⁻¹) is 2.703 × 10¹¹; it is the reciprocal of the curie. Abbreviated Bq.

bed (bed) 1. a supporting structure or tissue. 2. a couch or support for the body during sleep. **air b.**, an airtight, inflatable mattress. **Arnott's b.**, water bed. **Bandeloux's b.**, an air bed with a vessel beneath for the collection of urine, the whole

being surmounted by a cradle covered with gauze. **capillary b.**, the total combined mass of capillaries forming a large reservoir which may be more or less completely filled with blood. **Circoelectric b.**, trademark for a revolving circular bed which induces constant pressure alteration. **ether b.**, a bed made up to facilitate the transfer of an unconscious patient from an operating table or stretcher to the bed. **fracture b.**, a bed for the use of patients with broken bones. **Gatch b.**, a bed fitted with joints beneath the hips and knees of the patient, allowing him to be raised to a half-sitting position and be so maintained by elevating his knees to prevent his sliding toward the footboard. **hydrostatic b.**, a water bed. **Klondike b.**, a bed arranged for outdoor sleeping so that the patient is protected from draughts. **metabolic b.**, a bed so arranged that all the feces and urine of the patient are saved; the amount of excreta compared with the intake gives an indication of the metabolism in the body. **nail b.**, the modified area of epidermis beneath the nail, over which the nail plate slides forward as it grows; called also *matrix unguis* [NA]. **Sanders b.**, a powered, rocking bed, used in the treatment of chronic occlusive arterial disease to improve circulation. **sawdust b.**, a bed made from sawdust which is used to prevent bed sores. **Vickers hyperbaric b.**, a small portable unit for administering hyperbaric oxygen therapy, particularly in myocardial infarction; its maximum pressure is 2 atmospheres. **water b.**, a rubber mattress filled with water; used to prevent bed sores by evenly distributing the patient's weight; called also *Arnott's b.*

bedbug (bed'bug) a bug of the family Cimicidae, genus *Cimex*. *C. lectularius*, of temperate regions, and *C. rotundatus* (*hemipterus*), of the tropics, are flattened, oval, reddish insects which inhabit houses, furniture and neglected beds and feed on man, usually at night.

bedfast (bed'fast) unable to leave the bed.

bedlam (bed'lam) [*Bedlam*, the Bethlehem Royal Hospital, London, a mental hospital established in 1402] 1. an institution for patients with mental illness. 2. bedlamism.

bedlamism (bed'lam-izm) a state of wild tumult; bedlam.

Bednar's aphtha (bed'narz) [Alois *Bednar*, physician in Vienna, 1816-1888] see under *aphtha*.

bedpan (bed'pan) a vessel for receiving the urinary and fecal discharges of a patient unable to leave his bed.

Bedsonia (bed-so'ne-ah) *Chlamydia*.

bedsore (bed-sor) decubitus ulcer.

beef (bēf) the meat of an adult bull, steer, ox, or cow. **b., iron, and wine**, a preparation of beef extract, ferric ammonium citrate, and other ingredients in sherry wine; formerly used as a hematinic agent.

beer (bēr) the fermented infusion of malted barley and hops.

Beer's collyrium, knife, operation (ba'erz) [Georg Joseph *Beer*, German ophthalmologist, 1763-1821] see under *collyrium*, *knife*, and *operation*.

beerwort (bēr'wert) an infusion of malt in water intended to be converted into beer; it is sometimes used for the cultivation of yeasts and molds.

beeswax (bēz'waks) wax derived from the honeycomb of *Apis mellifera*; see *yellow wax*, under *wax*. **bleached b.**, see *white wax*, under *wax*. **unbleached b.**, see *yellow wax*, under *wax*.

Beevor's sign (be'vorz) [Charles Edward *Beevor*, British neurologist, 1854-1908] see under *sign*.

Begbie's disease (beg'bēz) [James *Begbie*, Scottish physician, 1798-1869] Graves' disease.

Beggiatoa (bej'je-ah-to'ah) [named for F. S. *Beggiato*] a genus of microorganisms, order Beggiatoales, family Beggiatoaceae.

Beggiatoaceae (bej'je-ah-to-a'se-e) a family of Schizomycetes (order Beggiatoales), made up of cells which are generally not visible without staining, arranged in chains within trichomes which show flexing motion and also show gliding movements when in contact with a substrate. It includes four genera, *Beggiatoa*, *Thioploca*, *Thiospirillopsis*, and *Thiothrix*. These are free-living sulfur bacteria, often found in association with blue-green algae.

Beggiatoales (bej'je-ah-to-a'lēz) a taxonomic order of class Schizomycetes, made up of cells which occur singly, or in motile or nonmotile trichomes, and which multiply by transverse fission. They are found in fresh or salt water, and in soil and decomposing organic material, especially algae. It includes four families, Achromatiaceae, Beggiatoaceae, Leukotrichaceae, and Vitreoscillaceae.

begma (beg'mah) [Gr. *bēgma* phlegm] 1. a cough. 2. the material evacuated from the lungs by coughing (sputum).

behavior (be-hāv'yor) deportment or conduct; any or all of a person's total activity, especially that which can be externally observed. **automatic b.**, automatism, def. 1. **invariable b.**, activity whose character is determined by innate structure, such as reflex action. **operant b.**, see under *conditioning*. **protean b.**, an irregular, unpredictable sequence of movements by prey when pursued by predators. **respondent b.**, see *conditioning*. **variable b.**, behavior that is modifiable by individual experience.

behaviorism (be-hāv'yor-izm) a school of psychology based upon a purely objective observation and analysis of human and animal behavior without reference to the testimony of consciousness.

behaviorist (be-hāv'yor-ist) a psychologist who is a disciple of behaviorism.

Behçet's syndrome (disease) (ba'sets) [Hulusi *Behçet*, dermatologist, Istanbul, Turkey, 1889-1948] see under *syndrome*.

Béhier-Hardy sign (symptom) (ba'he-a har'de) [Louis Jules *Béhier*, French physician, 1813-1876; Louis Phillipe Alfred *Hardy*, French physician, 1811-1893] see under *sign*.

Behla's bodies (ba'lahs) [Robert Franz *Behla*, German physician, 1850-1921] Plimmer's bodies.

Behring's law, tuberculin (ba'ringz) [Emil Adolph von *Behring*, German bacteriologist, 1854-1917; winner of the Nobel prize for medicine in 1901] see under *law*, and see *tuberculo* and *tulose*.

BEI butanol-extractable iodine.

Beigel's disease (bi'gelz) [Hermann *Beigel*, German physician, 1830-1879] piedra.

beikost (bi'kōst) [Ger.] solid and semisolid baby foods, i.e., those other than milk or formula feedings.

bejel (bej'el) nonvenereal syphilis (q.v.) occurring in Africa, the Middle East, the Balkans, Central Asia, and Africa.

Békésy (bek'ē-se), Georg von. Hungarian-born physicist, born 1899; winner of the Nobel prize in medicine and physiology for 1961, for his discoveries concerning the physical mechanisms of stimulation within the cochlea.

Bekhterev's (Bechterew's) arthritis, etc. (bek-ter'yevs) [Vladimir Mikhailovich *Bekhterev*, Russian neurologist, 1857-1927] see under *arthritis*, *disease*, *layer*, *nucleus*, *reaction*, *reflex*, *symp-*
tom, and *tests*.

Bekhterev-Mendel reflex (bek-ter'yev-men'del) [V. M. *Bekhterev*; Kurt *Mendel*, German neurologist, 1857-1927] Mendel-Bekhterev reflex.

bel (bel) the common logarithm of the ratio of two powers, usually electric or acoustic powers; such ratios are usually expressed in decibels (q.v.). An increase of one bel in intensity approximately doubles the loudness of most sounds.

Belascaris (bē-las'kah-ris) *Toxocara*. **B. ca'ti**, *Toxocara cati*. **B. margina'ta**, *Toxocara canis*. **B. mys'tax**, *Toxocara cati*.

belching (belch'ing) eructation; the noisy voiding of gas from the stomach through the mouth.

belemnoid (be-lem'noid) [Gr. *belemnōn* dart + *eidos* form] 1. dart-shaped. 2. the styloid process of the ulna or of the temporal bone.

Belfield's operation (bel'fēldz) [William Thomas *Belfield*, surgeon in Chicago, 1856-1929] vasotomy.

Bell's law, nerve, palsy (paralysis), phenomenon [Sir Charles *Bell*, Scottish physiologist in London, 1774-1842] see *nervus thoracicus longus*, and see under *law*, *palsy*, and *phenomenon*.

Bell's mania (disease) [Luther Vose *Bell*, American physician, 1806-1862] see under *mania*.

Bell's muscle [John *Bell*, Scottish surgeon and anatomist, 1763-1820] see under *muscle*.

Bell's treatment [William Blair *Bell*, British gynecologist, 1871-1936] see under *treatment*.

Bell-Magendie law (bel'ma-jen'de) [Sir Charles *Bell*; François *Magendie*, French physiologist, 1783-1855] Bell's law.

belladonna (bel'ah-don'ah) [Ital. "fair lady"] the *Atropa belladonna* L. (Solanaceae), or deadly nightshade, a perennial plant indigenous to central and southern Europe and cultivated in North America, containing various anticholinergic alkaloids (e.g., atropine, hyoscyamine, belladonnine, scopolamine, etc.), some of which are produced during the extraction process. Called also *bane*, *death's herb*, and *dwale*. *Belladonna leaf* [USP], consisting of the dried leaves and fruiting tops of *A. belladonna* or *A. belladonna* var. *acuminata*, is used in the preparation of standardized dosage forms; see under *extract* and *tincture*. The root has also been used.

belladonnine (bel'ah-don'nēn) chemical name: 1,2,3,4-tetrahydro-1-phenyl-1,4-naphthalenedicarboxylic acid bis(8-methyl-8-azobicyclo[3.2.1]oct-3-yl)ester. An alkaloid, C₃₄H₄₂N₂O₄, derived from belladonna and related solanaceous plants, produced during the process of extraction.

bellaradine (bel-ar'ah-din) cuscohygrine.

bell-crowned (bel-krownd') having a crown somewhat bell-shaped; said of a tooth that is larger than usual at the occlusal measurement and that tapers toward the neck, or cervix.

Bellini's ducts (tubules), ligament (bel-e'nēz) [Lorenzo *Bellini*, Italian anatomist, 1643-1704] see *tubuli renales recti*, and see under *ligament*.

Bellocq's cannula (sound, tube) (bel-oks') [Jean Jacques *Bellocq*, French surgeon, 1732-1807] see under *cannula*.

belly (bel'e) 1. the abdomen. 2. the fleshy, contractile part of a muscle; called also *venter musculi* [NA]. **anterior b. of di-**

gastric muscle, venter anterior muscoli digastrici. **delhi b.**, a dysenteric infection occurring in tropical countries, manifested as an acute diarrheal disease. **drum b.**, tympanic abdomen. **frontal b. of occipitofrontal muscle**, venter occipitalis muscoli occipitofrontalis. **occipital b. of occipitofrontal muscle**, venter occipitalis muscoli occipitofrontalis. **posterior b. of digastric muscle**, venter posterior muscoli digastrici. **prune b.**, see under *syndrome*. **swollen b.**, tympanites in animals. **wooden b.**, abdominal rigidity.

belonoid (bel'o-noid) [Gr. *belonē* needle + *eidos* form] needle-shaped; styloid.

belonoskiacopy (bel'o-no-ski-as'ko-pe) [Gr. *belonē* needle + *skia* shadow + *skopein* to examine] a method of retinoscopy.

beloxamide (bel-oks'ah-mid) chemical name: *N*-(benzyloxy)-*N*-(3-phenylpropyl)acetamide; an anticholesteremic agent, $C_{18}H_{21}NO_2$.

belt (belt) an encircling band worn about the waist or abdomen; called also *balteum*. Cf. *girdle*.

bemegride (bem'ē-grid) chemical name: 4-ethyl-4-methyl-2,6-piperidinedione. An analeptic drug, $C_8H_{13}NO_2$, which has been used in the treatment of barbiturate poisoning.

bemidone (bem'fī-dōn) chemical name: ethyl 4-(*m*-hydroxyphenyl)-1-methylisonipicotatate. A crystal compound, $C_{15}H_{21}NO_3$, soluble in water; formerly used as a narcotic and analgesic.

benactyzine hydrochloride (ben-ak'tī-zēn) chemical name: α -hydroxy- α -phenylbenzeneacetic acid 2-(diethylamino)ethyl ester hydrochloride. An anticholinergic, $C_{20}H_{28}ClNO_3$, occurring as a white, crystalline powder, which has the ability to increase the emotional threshold of outside influences and to block the thought processes; used as a tranquilizer, administered orally.

Benadryl (ben'ah-dril) trademark for preparations of diphenhydramine hydrochloride.

benapryzine hydrochloride (ben-ah-pri'zēn) chemical name: 2-(ethylpropylamino)ethyl benzilate hydrochloride; an anticholinergic, $C_{21}H_{27}NO_3 \cdot HCl$.

Bence Jones protein, etc. [Henry Bence Jones, English physician, 1814–1873] see under *cylinder*, *protein*, *proteinuria*, and *reaction*.

bend (bend) a flexure or curve; a flexed or curved part. **first order b's**, adjustments made in a labial arch wire, incorporating offsets in the horizontal plane, which are usually made in the areas of the cuspids and premolar and molar teeth, accommodating differences in thickness in the labiolingual or buccolingual diameters of the teeth. **head b.**, cephalic flexure. **neck b.**, cervical flexure. **second order b's**, bends in the vertical plane of an arch wire. **third order b's**, bends in an arch wire to maintain or produce torsion of a tooth. **V b's**, V-shaped bends incorporated in an arch wire, usually placed mesial or distal to the cuspids to improve the axial relationship of teeth. **varolian b.**, the third cerebral flexure in the developing fetus.

bindazac (ben'dah-zak) chemical name: [(1-benzyl-1*H*-indazol-3-yl)oxy]acetic acid; an anti-inflammatory agent, $C_{16}H_{14}N_2O_3$.

Bendectin (ben-dek'tin) trademark for tablets containing a combination of dicyclomine hydrochloride, doxylamine succinate, and pyridoxine hydrochloride; used in management of nausea and vomiting during pregnancy.

bendrofluazide (ben'dro-floo'ah-zid) bendroflumethiazide.

bendroflumethiazide (ben'dro-floo'mē-thi'ah-zid) [USP] chemical name: 3,4-dihydro-3-(phenylmethyl)-6-(trifluoromethyl)-2*H*-1,2,4-benzothiadiazine-7-sulfonamide 1,1-dioxide. A white to cream-colored crystalline powder, $C_{15}H_{14}F_3N_3O_4S_2$, used as an oral diuretic and antihypertensive.

bends (bendz) pain in the limbs and abdomen occurring as a result of rapid reduction of air pressure; see *decompression sickness*, under *sickness*.

Bendylate (ben'dī-lāt) trademark for preparations of diphenhydramine hydrochloride.

bene (be'ne) [L.] well.

beneceptor (ben'e-sep-tor) [L. *bene* well + *ceptor*] a rarely used term for a receptor that transmits stimuli of a beneficial character. Cf. *nociceptor* and *ceptor*, def. 2.

Beneckea (be-nek'e-ah) a genus of microorganisms of the family Achromobacteraceae, order Eubacteriales, made up of small to medium-sized rods, found in salt and fresh water and soil, which may or may not be chromogenic. It includes six species, *B. chitino'vora*, *B. hypero'ptica*, *B. indolhe'tica*, *B. la'bra*, *B. lipo'phaga*, and *B. ureaso'phora*.

Benedict's test (ben'e-dikts) [Stanley Rossiter Benedict, American physiological chemist, 1884–1936] see under *tests*.

Benedict-Hopkins-Cole reagent (ben'ē-dikt-hop'kinz-kōl) [Stanley Rossiter Benedict; Sir Frederick Gowland Hopkins, English biologist, 1861–1947; Sidney William Cole, English physiologist, born 1877] see under *reagent*.

Benedikt's syndrome (ben'e-dikts) [Moritz Benedikt, Austrian physician, 1835–1920] see under *syndrome*.

Benemid (ben'ē-mid) trademark for probenecid.

benign (be-nin') [L. *benignus*] not malignant; not recurrent; favorable for recovery.

benignant (be-nig'nant) benign.

Béniqué's sound (ba-ne-kāz') [Pierre Jules Béniqué, French physician, 1806–1851] see under *sound*.

Benisone (ben'fī-sōn) trademark for preparations of betamethasone benzoate.

benjamin (ben'jah-min) benzoin, def. 1.

Bennet's corpuscles (ben'ets) [James Henry Bennet, English obstetrician, 1816–1891] see *Nunn's gorged corpuscles* and *Drysdale's corpuscles*, under *corpuscle*.

Bennett's disease (ben'ets) [John Hughes Bennett, English physician, 1812–1875] leukemia.

Bennett's fracture, operation (ben'ets) [Edward Hallaran Bennett, Irish surgeon, 1837–1907] see under *fracture* and *operation*.

Benzoquin (ben'o-kwin) trademark for preparations of monobenzone.

benorterone (bē-nor'ter-ōn) chemical name: 17 β -17-hydroxy-17-methyl-*B*-norandrost-4-en-3-one; an antiandrogen, $C_{18}H_{28}O_2$.

benoxaprofen (ben-oks'ah-pro'fen) chemical name: 2-(4-chlorophenyl)- α -methyl-5-benzoxazoleacetic acid; an anti-inflammatory and analgesic, $C_{18}H_{12}ClNO_3$.

benoxinate hydrochloride (ben-ok'sī-nāt) [USP] chemical name: 4-amino-3-butoxybenzoic acid 2-(diethylamino)ethyl ester monohydrochloride. A local anesthetic, $C_{17}H_{28}N_2O_2 \cdot HCl$, occurring as white crystals or as a white, crystalline powder; used in ophthalmology, applied topically to the conjunctiva.

Benoxyl (ben-ok'sil) trademark for preparations of benzoyl peroxide.

benserazide (ben-ser'ah-zid) chemical name: 2-[(2,3,4-trihydroxyphenyl)-methyl]hydrazide DL serine; a decarboxylase inhibitor, $C_{10}H_{15}N_3O_5$.

Benson's disease (ben'sunz) [Alfred Hugh Benson, Irish ophthalmologist, 1852–1912] asteroid hyalosis.

bentazepam (ben-taz'ē-pam) chemical name: 1,3,6,7,8,9-hexahydro-5-phenyl-2*H*-[1]benzothieno[2,3-*e*]-1,4-diazepin-2-one; a tranquilizer, $C_{17}H_{16}N_2O$.

benthos (ben'thos) [Gr. *benthos* bottom of the sea] the flora and fauna of the bottom of oceans.

bentonite (ben'ton-it) [NF] a native, colloidal, hydrated aluminum silicate, which on the addition of water swells to produce a slippery paste; its chief pharmaceutical use is as a suspending agent, and it has also been used as a bulk laxative.

Bentyl (ben'til) trademark for preparations of dicyclomine hydrochloride.

benzaldehyde (ben-zal'dē-hid) [NF] artificial essential oil of almond; used as a flavoring agent in orally administered medications.

benzalin (ben'zah-lin) nigrosin.

benzalkonium chloride (ben'zal-ko'ne-um) [NF] a mixture of alkylbenzyl dimethylammonium chlorides of the general formula, $[C_8H_7CH_2N(CH_3)_2R]Cl$. A rapidly acting surface disinfectant and detergent, occurring as a white or yellowish white, thick gel or gelatinous pieces, which is active against both gram-negative and gram-positive bacteria and certain viruses, fungi, yeasts, and protozoa; applied topically to the skin and mucous membranes. It is also used as an antimicrobial preservative in ophthalmic solution.

benzamidase (ben-zam'i-dās) an enzyme that catalyzes the change of benzoic acid into benzamide.

benzamine (ben'zah-mēn) eucaine.

benzanthrane (ben-zan'thrāh-sēn) one of a group of hydrocarbons some of which have carcinogenic properties.

benzazoline hydrochloride (benz-az'o-lēn) tolazoline hydrochloride.

benzbromarone (benz-bro'mah-rōn) chemical name: (3,5-dibromo-4-hydroxyphenyl)-(2-ethyl-3-benzofuranyl)methanone; a uricosuric drug, $C_{17}H_{12}Br_2O_3$.

benzcurine iodide (benz'ku-rēn) gallamine triethiodide.

Benzedrex (ben'zē-dreks) trademark for a propylhexedrine inhaler.

Benzedrine (ben'zē-drēn) trademark for preparations of amphetamine sulfate.

benzene (ben'zēn) a colorless volatile liquid hydrocarbon, C_6H_6 , obtained mainly as a by-product in the destructive distillation of coal, along with coal tar, etc. It has an aromatic odor, and burns with a light-giving flame. It dissolves sulfur, phosphorus, iodine, and organic compounds. The fumes may cause fatal poisoning. It was formerly used as a pulmonary antiseptic in influenza, etc., as a tenicide, externally as a parasiticide, and has been suggested in leukemias. Called also *benzol*. **dimethyl b.**, xylene. **b. hexachloride**, chemical name: 1,2,3,4,5,6-hexachlorocyclohexane. A compound, $C_6H_6Cl_6$, prepared by chlorination of benzene in actinic light, consisting of five isomers, the gamma isomer being

a powerful insecticide; see also *gamma benzene hexachloride*. Called also *hexachlorocyclohexane*. **methyl b.**, toluene.

benzenoid (ben/'zē-noid) a compound having a structure related to benzene or other compounds of aromatic character.

benzestrol (ben-'zes/'tro-fōl) estradiol benzoate.

benzestrol (ben-'zes/'trol) [USP] chemical name: 4,4'-(1,2-diethyl-3-methyl-1,3-propanediyl)bisphenol. A synthetic estrogen, $C_{20}H_{24}O_2$, occurring as a white, crystalline powder; administered orally. Called also *octoxollin*.

benzethonium chloride (ben/'zē-'tho-'ne-um) [USP] chemical name: *N,N*-dimethyl-*N*-[2-[2-(4-(1,1,3,3-tetra-methylbutyl)phenoxy)ethoxy]ethyl]benzene-methanaminium chloride. A synthetic quaternary ammonium compound, $C_{27}H_{42}ClNO_2$, occurring as white crystals; used as a local anti-infective applied topically as a solution, and as a preservative in pharmaceutical preparations. It is also used in various concentrations for cleaning eating and cooking utensils, as a disinfectant in laundering, to control algal growth in swimming pools, and as an environmental deodorant.

benzhexol hydrochloride (benz-'hek/'sol) trihexyphenidyl hydrochloride.

benzhydramine hydrochloride (benz-'hi/'drah-mēn) diphenhydramine hydrochloride.

benzidine (ben/'zī-'din) a colorless, crystalline compound, para-diaminodiphenyl, $(NH_2 \cdot C_6H_4 \cdot C_6H_4 \cdot NH_2)$, formed by the action of acids on hydrazobenzene; used as a test for blood.

benzilium bromide (benz/'il-'o-'ne-um) chemical name: 1,1-diethyl-3-[(hydroxydiphenylacetyl)oxy]pyrrolidinium bromide; an anticholinergic, $C_{22}H_{28}BrNO_3$, used in the treatment of peptic ulcer and functional gastrointestinal disorders.

benzimidazole (ben/'zim-'i-'da-'zōl) a compound, $C_7H_8N_2$, which is toxic to yeast and animals in the absence of its homologous compounds, adenine and guanine. It is also a naturally occurring analog of vitamin B_{12} .

benzin, benzine (ben/'zin) [L. *benzinum*] petroleum benzin. **petroleum b., purified b.**, a purified distillate from petroleum consisting of hydrocarbons chiefly of the methane series (mainly pentanes and hexanes), which occurs as a clear, colorless, volatile liquid with a strong ethereal odor; it is highly flammable and may be explosive if the vapors mix with air and are ignited. It is used as a solvent for organic compounds. Called also *benzin* or *benzine*, *petroleum ether*, and *naphtha*.

benzoate (ben/'zo-'āt) a salt of benzoic acid.

benzoated (ben/'zo-'āt-'ed) containing or combined with benzoic acid.

benzocaine (ben/'zo-'kān) [USP] chemical name: 4-aminobenzoic acid ethyl ester. A local anesthetic, $C_9H_{11}NO_2$, occurring as small, white crystals or as a white crystalline powder; applied topically to the skin and mucous membranes.

benzodepa (ben/'zo-'dep/'ah) chemical name: [bis(1-aziridinyl)phosphoryl]carbamic acid phenylmethyl ester. An antineoplastic, $C_{12}H_{16}N_6O_3P$.

benzodiazepine (ben/'zo-'di-'az/'ē-'pēn) any of a group of minor tranquilizers, including chlorthalidazepoxide, clorazepate, diazepam, flurazepam, oxazepam, etc., having a common molecular structure and similar pharmacological activities, such as antianxiety, muscle relaxing, and sedative and hypnotic effects.

benzodioxan (ben/'zo-'di-'oks/'an) a class of α -adrenergic blocking agents, the most important member of which is piperoxan.

benzogynestryl (ben/'zo-'gi-'nes/'tril) estradiol benzoate.

benzoin (ben/'zoin) 1. [USP] a balsamic resin with an aromatic odor and taste, which is obtained from *Styrax benzoin* or *S. paralleloneurus* (known as *Sumatra b.*), or from *S. tonkinensis* or other species of *Styrax* (known as *Siam b.*); the former is composed of reddish brown, reddish gray, or grayish brown masses, and the latter of yellowish brown to rusty brown masses. It is used as a topical protectant, and as a topical antiseptic, irritant expectorant, and as an inhalant in respiratory tract inflammation. Called also *benjamin*, *gum benjamin*, and *gum b.* 2. chemical name: α -hydroxy- α -phenylacetophenone. A white crystalline compound, $C_{14}H_{12}O_2$, prepared by condensation of benzaldehyde in potassium cyanide solution; called also *benzoylphenylcarbinol*.

benzol (ben/'zol) benzene.

benzolism (ben/'zo-'lizm) poisoning by benzene or its vapor.

benzomethamine (ben/'zo-'meth/'ah-mēn) chemical name: *N*-diethylaminoethyl-*N*-methylbenzylamide; formerly used to produce parasympathetic blockade and to reduce the secretion of hydrochloric acid in the stomach.

benzonate (ben-'zo-'nah-'tāt) [USP] chemical name: 2,5-, 8,11,14,17,20,23,26-nonaooctacos-28-yl ester benzoic acid. An antitussive, $C_{30}H_{53}NO_{11}$, occurring as a clear, pale yellow, viscous liquid, administered orally.

benzononate (ben-'zo-'no-'na-'tin) benzonate.

Benzopropyl (ben/'zo-'pro/'pil) trademark for a preparation of amygdaline.

benzopurpurine (ben/'zo-'pur/'pu-'rin) any one of a series of azo-dyes of a scarlet color, used especially as a contrast stain with

hematoxylin and other blue stains. **b. B.**, an indicator with a pH range of 2.0 to 4.0.

1,2-benzopyran (ben/'zo-'pir/'an) 1,2-chromene.

benzopyrronium bromide (ben/'zo-'pēr-'o-'ne-um) chemical name: 3-hydroxy-1,1-dimethylpyrrolidinium bromide benzilate; an anticholinergic, $C_{20}H_{24}BrNO_3$.

benzotherapy (ben/'zo-'ther/'ah-'pe) treatment with benzoates, especially the treatment of pulmonary abscess by intravenous injection of sodium benzoate.

benzothiadiazide, benzothiadiazine (ben/'zo-'thi/'ah-'di/'ah-'zīd; ben/'zo-'thi/'ah-'di/'ah-'zēn) thiazide.

benzoxiquine (ben-'zoks/'i-'kwīn') chemical name: 8-quinolinol benzoate (ester); a disinfectant, $C_{16}H_{11}NO_2$.

benzoyl (ben/'zo-'il) the radical, $C_6H_5 \cdot CO \cdot$, of benzoic acid and of an extensive series of compounds. **b. peroxide, b. peroxide, hydrous** [USP], a crystalline substance formed by the action of sodium peroxide on benzoyl chloride, used to initiate free radical reactions and to induce skin peeling so as to promote evacuation of comedones in acne vulgaris.

benzoylglycine (ben/'zol-'gli/'sin) hippuric acid.

benzoylcalcium (ben/'zo-'il/'paz) [USP] chemical name: 4-(benzoylamino)-2-hydroxybenzoic acid calcium salt (2:1) pentahydrate. An antibacterial, $C_{28}H_{20}CaN_2O_8 \cdot 5H_2O$, occurring as a white to cream-colored powder; used as an oral tuberculostatic.

benzoylphenylcarbinol (ben/'zol-'fen/'il-'kar/'bī-'nol) benzoin, def. 2.

benzphetamine hydrochloride (benz-'fet/'ah-mēn) chemical name: *N*, α -dimethyl-*N*-(phenylmethyl)benzeneethanamine hydrochloride. A sympathomimetic amine, $C_{17}H_{21}N \cdot HCl$, related to amphetamine, occurring as an odorless, white to off-white, crystalline powder; used as an oral anorexiant in the control of exogenous obesity.

benzpiperylon (benz/'pī-'per/'i-'lōn) chemical name: 4-benzyl-1-(1-methyl-4-piperidyl)-3-phenyl-3-pyrazolin-5-one. A substance, $C_{22}H_{25}N_3O$, used in the treatment of connective tissue disorders.

benzpyrene (benz-'pi/'rēn) a carcinogenic polycyclic hydrocarbon, $C_{20}H_{12}$.

benzpyrinium bromide (benz/'pi-'rin/'e-um) chemical name: 3-[[dimethylamino]carbonyl]oxy-1-(phenylmethyl) pyridinium bromide. A cholinergic, $C_{15}H_{17}BrN_2O_3$, having anticholinesterase actions similar to those of neostigmine.

benzpyrrole (benz-'pir/'ol) indole.

benzquinamide (benz-'kwīn/'ah-'mīd) chemical name: 2-(acetyloxy)-*N,N*-diethyl-1,3,4,6,7,11b-hexahydro-9,10-dimethoxy-2*H*-benzo[*d*]quinolizine-3-carboxamide. A compound, $C_{22}H_{32}N_2O_5$, used intramuscularly or intravenously as an antiemetic; it also has antihistaminic and mild anticholinergic and sedative action.

benzthiazide (benz-'thi/'ah-'zīd) [USP] chemical name: 6-chloro-3-[(phenylmethyl)thio]methyl-2*H*-1,2,4-benzothiadiazine-7-sulfonamide 1,1-dioxide. An orally effective diuretic and antihypertensive agent, $C_{15}H_{14}ClN_2O_4S_2$, occurring as a white, crystalline powder.

benztropine mesylate (benz/'tro-'pēn) [USP] chemical name: *endo*-3-(diphenylmethoxy)-8-azabicyclo[3.2.1]octane methanesulfonate. A drug, $C_{21}H_{25}NO \cdot CH_3O_3S$, occurring as a white, crystalline powder, having anticholinergic, antihistaminic, and local anesthetic actions; used as an antiparkinsonian agent, administered intramuscularly, intravenously, and orally.

benzurestat (ben-'zur/'ē-'stat) chemical name: 4-chloro-*N*-[2-(hydroxyamino)-2-oxoethyl]benzamide; an enzyme (urease) inhibitor, $C_8H_9ClN_2O_3$.

benzhydroflumethiazide (ben-'zīd/'ro-'floo-'mē-'thi/'ah-'zīd) benzdroflumethiazide.

benzyl (ben/'zil) the hydrocarbon radical, C_7H_7 , or $C_6H_5 \cdot CH_2$, of benzyl alcohol and various other bodies. **b. benzoate** [USP], a clear, colorless oily liquid, $C_{14}H_{12}O_2$; used as a pharmaceutical necessity in the preparation of dimercaprol for injection and applied topically to the skin as a scabicide. **b. bromide**, a war gas, $C_6H_5CH_2Br$, causing laceration and irritation of the skin; called also *cylite*. **b. carbinol**, phenyl ethyl alcohol, a constituent of oil of rose, possessing anesthetic properties. **b. fumarate**, a white crystalline substance, $C_8H_8CH_2 \cdot OOC \cdot CH:CH:COO \cdot CH_2C_6H_5$, containing 63.6 per cent of benzyl. **b. mandelate**, the benzyl ester of mandelic acid; formerly used as an antispasmodic on smooth muscle fiber, as in high blood pressure. **b. succinate**, the dibenzyl ester of succinic acid, $(C_6H_5 \cdot CH_2 \cdot O \cdot CO \cdot CH_2)_2$; formerly used as an antispasmodic on nonstriated muscle.

benzylidene (ben-'zīl/'ī-'dēn) a hydrocarbon radical, C_8H_7CH .

p-benzyl oxyphenol (ben/'zil-'ok/'se-'fe/'nol) monobenzene.

benzylpenicillin (ben/'zil-'pen-'i-'sil/'in) penicillin G; see under *penicillin*. **b. potassium**, penicillin G potassium; see under *penicillin*. **b. procaine**, penicillin G procaine; see under *penicillin*. **b. sodium**, penicillin G sodium; see under *penicillin*.

bephenium (bē-'fen/'i-'um) a substance whose salts, e.g., *b. embonate* and *b. hydroxynaphthoate*, are used in veterinary medicine as anthelmintic agents.

Béraneck's tuberculin (ba-ran-eks') [Edmund Béraneck, Swiss bacteriologist, 1859–1920] see under *tuberculin*.

Bérard's aneurysm, ligament (ba-rarz') [Auguste Bérard, French surgeon, 1802–1846] see under *aneurysm* and *ligament*.

Béraud's valve (ba-rôz') [Bruno Jean Jacques Béraud, French surgeon, 1825–1865] see under *valve*.

berberine (ber'ber-ën) an alkaloid obtained from *Hydrastis canadensis* L. (Berberidaceae), *Berberis* species, and other members of this family; used variously as an antimalarial, carminative, and febrifuge, and externally in dressings for indolent ulcers.

Berberis (ber'ber-is) [L.] a genus of berberidaceous shrubs, the barberries, which contain berberine.

bergamot (ber'gah-mot) [L. *bergamium*] 1. the tree, *Citrus bergamia*; also its orange-like fruit, whose rind affords the fragrant oil of bergamot. 2. a popular name for various fragrant labiate plants, such as *Mentha citrata* and *Monarda fistulosa*.

Bergenheim's operation (ber'gen-hemz) [Bengt Bergenheim, Swedish surgeon, born 1898] see under *operation*.

Berger's method, operation (bär-zhāz') [Paul Berger, French surgeon, 1845–1908] see under *method* and *operation*.

Berger's paresthesia (ber'gerz) [Oskar Berger, neurologist in Breslau, 1845–1908] see under *paresthesia*.

Berger rhythm (ber'ger) [Hans Berger, Jena neurologist, 1873–1941] alpha rhythm; see under *rhythm*.

Berger's sign (symptom) (ber'gerz) [Émile Berger, Austrian ophthalmologist, 1855–1926] see under *sign*.

Bergeron's chorea (disease) (berzh'ronz) [Étienne Jules Bergeron, French physician, 1817–1900] see under *chorea*.

Bergmann's cells, cords, fibers (berg'manz) [Gottlieb Heinrich Bergmann, German physician, died 1861] see *striae acusticae*, and see under *cell* and *fiber*.

Bergmann's incision (berg'manz) [Ernst von Bergmann, German surgeon, 1836–1907] see under *incision*.

Bergonié treatment (method) (bär-go-nyā') [Jean Alban Bergonié, French physician, 1857–1925] see under *treatment*.

Bergonié-Tribondeau law (bär-go-nyā'tre-bon-do') [J. A. Bergonié, Louis Tribondeau, French naval physician, 1872–1918] see under *law*.

beriberi (ber'e-ber'e) [Singhalese, "I cannot," signifying that the person is too ill to do anything] a disease caused by a deficiency of thiamine (vitamin B₁) and characterized by polyneuritis, cardiac pathology, and edema. The epidemic form is found primarily in areas in which white (polished) rice is the staple food, as in Japan, China, the Philippines, India, and other countries of Southeast Asia. **atrophic b.**, dry b. **dry b.**, a form of beriberi in which flaccid paralysis, muscular atrophy, and reflexia are the prominent signs; cardiac enlargement and tachycardia may be present. Called also *atrophic b.* and *paralytic b.* **infantile b.**, a disease of breast-fed infants whose mothers have thiamine deficiency; it is characterized by diminished urine secretion, progressive edema, and often by acute cardiac failure, which may terminate in sudden death. Vomiting, aphonia, opisthotonos, and convulsions may occur. **paralytic b.**, dry b. **ship b.**, a disease resembling tropical beriberi, seen on Norwegian ships, but with edema a more prominent symptom than neuritis. **wet b.**, a form marked by cardiac failure and edema, but without extensive nervous system involvement.

beriberic (ber'e-ber'ik) pertaining to or of the nature of beriberi.

Berkefeld filter (ber'ke-feld) [Wilhelm Berkefeld, manufacturer, 1836–1897] see under *filter*.

berkelium (berk'le-um) [named for Berkeley, California, where it was produced] an element of atomic number 97, atomic weight 247, symbol Bk, produced by bombardment of the isotope of americium of atomic weight 241 by helium ions; half-life 4½ hours.

Berlin's disease, edema (ber'linz) [Rudolf Berlin, German oculist, 1833–1897] commotio retinae.

berlock, berloque (ber-lok') [Fr. *breloque*, Ger. *Berlocke* a charm (especially on a chain)] see under *dermatitis*.

Bernard's canal, etc. (ber-narz') [Claude Bernard, French physiologist, 1813–1878] see under *canal*, *duct*, *layer*, *puncture*, and *syndrome*.

Bernard-Horner syndrome (ber-nar'hor'ner) [Claude Bernard; Johann Friedrich Horner, Swiss ophthalmologist, 1831–1886] Horner's syndrome.

Bernays' sponge (ber'nāz) [Augustus Charles Bernays, American surgeon, 1854–1907] see under *sponge*.

Bernhardt's disease, paresthesia (bern'harts) [Martin Bernhardt, German neurologist, 1844–1915] meralgia paresthetica.

Bernhardt-Rot disease, syndrome [Martin Bernhardt; Vladimir K. Rot, Russian neurologist, 1848–1916] meralgia paresthetica.

Bernheimer's fibers (bern'hi-merz) [Stefan Bernheimer, Austrian ophthalmologist, 1861–1918] see under *fiber*.

berry (ber'e) a small fruit with a succulent pericarp. **bear b.**, *Uva ursi*. **buckthorn b.**, *Rhamnus cathartica*. **elder b.**, *Sambucus*. **fish b.**, *coccullus indicus*. **horse nettle b.**, *Sola-*

num. **Indian b.**, *coccullus indicus*. **juniper b.**, juniper. **saw palmetto b.**, *Serenoa*. **spice b.**, *aralia*.

Berry's ligament (ber'ez) [Sir James Berry, Canadian surgeon, 1860–1946] ligamentum thyroideum.

Bertiella (ber'te-el'lah) a genus of tapeworms of the family Anoplocephalidae. **B. sat'yri**, **B. stu'deri**, a tapeworm found occasionally in man and in the higher apes in Mauritius, India, Africa, Borneo, the West Indies, and the Philippines.

bertielliasis (ber'te-el-li'ah-sis) infection with *Bertiella*.

Bertin's bones (ossicles), column, ligament (ber'tinz) [Expupère Joseph Bertin, French anatomist, 1712–1781] see *concha sphenoidalis*, *columnnae renales*, and *ligamentum iliofemorale*.

Bertrand's method, reagent, test (bär-trahnz') [Gabriel Bertrand, Paris biological chemist, born 1867] see under *method*, *reagent*, and *tests*.

Berubigen (be-roo'bī-jen) trademark for preparations of cyanocobalamin.

berylliosis (ber'il-le-o'sis) beryllium poisoning, a morbid condition, usually of the lungs, more rarely of the skin, subcutaneous tissue, lymph nodes, liver, and other structures, characterized by formation of granulomas. Fumes of beryllium salts or finely divided dust may be inhaled or the substance may be accidentally implanted in the skin or subcutaneous tissue by laceration or puncture.

beryllium (ber'il-le-um) [Gr. *beryllos* beryl] a metallic element of atomic number 4, atomic weight 9.012, symbol Be.

berythromycin (bē-rith'ro-mi'sin) chemical name: 12-deoxyerythromycin; an antiamebic and antibacterial, C₃₇H₆₇NO₁₂. Called also *erythromycin B*.

Berzelius' test (bär-za'le-us) [Jöns Jacob Berzelius, Swedish chemist, 1779–1848] see under *tests*.

besicrometer (bes'ī-klom'ē-ter) an instrument for measuring the forehead to ascertain the proper width of spectacle frames.

Besnier's prurigo [Ernest Besnier, Paris dermatologist, 1831–1909] see under *prurigo*.

Besnier-Boeck disease [Ernest Besnier; Caesar P. M. Boeck, Norwegian dermatologist and syphilologist in Christiania, 1845–1917] sarcoidosis.

Besnoitia (bes-noi'te-ah) a genus of sporozoa; formerly called *Globidium*. **B. bennet'ti**, a species causing besnoitiosis in horses. **B. besnoi'ti**, a species causing besnoitiosis in cattle; viscerotropic strains have been found in the impala and blue wildebeest. **B. darlin'gi**, a species found in lizards. **B. jelliso'ni**, a species found in rodents and opossums. **B. taran'di**, a species found in reindeer.

besnoitiosis (bes-noi'te-o'sis) a disease of cattle, horses, sheep, goats, and other herbivorous animals, due to sporozoan parasites of the genus *Besnoitia*, transmitted mechanically by certain biting flies. The organisms localize in the skin, blood vessels, mucous membranes of the upper respiratory tract, and subcutaneous and other tissues, where they eventually form characteristic thick-walled cysts. Other symptoms include fever, anasarca, loss of appetite, photophobia, rhinitis, sclerodermatitis, and alopecia of varying severity. Formerly called *globidiosis*.

Besredka's antiviral, reaction (bes-red'kahz) [Alexandre Besredka, Russian pathologist at Pasteur Institute, Paris, 1870–1940] see under *antiviral* and *reaction*.

Best (best), Charles Herbert. A Canadian physiologist, born in Maine 1899; discovered histaminase and was associated with Sir Frederick Banting and John James Macleod in the discovery of insulin in 1922.

bestiality (bes-te-al'i-te) [L. *bestia* beast] sexual connection with an animal.

besylate (bes'ī-lāt) USAN contraction for benzenesulfonate.

Beta (be'tah) [L.] a genus of plants to which the beet belongs. *B. vulgaris* L. is the sugar beet, a commercial source of sugar (sucrose).

beta (ba'tah) the second letter of the Greek alphabet, β; used as part of a chemical name to distinguish one of two or more isomers or to indicate the position of substituting atoms or groups in certain compounds. Cf. *alpha*.

Betabacterium (ba'tah-bak-te're-um) a subgenus of *Lactobacillus*.

Beta-Chlor (ba'tah-klör) trademark for a preparation of chloral betaine.

beta-cholestanol (ba'tah-ko-les'tah-nol) see under *cholestanol*.

betacism (ba'tah-sizm) [Gr. *bēta* the second letter of the Greek alphabet] the excessive use of the *b* sound in speaking.

Betadine (ba'tah-dīn) trademark for preparations of povidone-iodine.

beta-estradiol (ba'tah-es'trah-di'ol) see *estradiol*.

betaglobulin (ba'tah-glob'u-lin) see under *globulin*. **pregnancy-specific b.**, a beta globulin secreted by the placenta; its function is unknown.

betahistine hydrochloride (ba'tah-his'tēn) chemical name: N-methyl-2-pyridineethanamine dihydrochloride. A compound,

$C_6H_{12}N_2 \cdot 2HCl$, occurring as a white or creamy white, crystalline powder, which has histamine-like action; used orally as a vasodilator to reduce the frequency of the episodes of vertigo in some patients with Meniere's disease, especially those having a high frequency of such episodes.

beta-hypophamine (ba'tah-hi-pof'ah-min) vasopressin.

betaine (be'tah-in, be'tah-ën, bêt'än) chemical name: 1-carboxy-*N,N,N*-trimethylmethanaminium hydroxide inner salt. An oxidation product of choline, $C_5H_{11}NO_2$, which is a transmethylating intermediate in metabolism, and has been shown to have lipotropic activity. Betaine was first found in the sugar beet and was later shown to be present in many other plants and in animals. It is produced synthetically, and has been used in the treatment of muscular weakness and degeneration. The term has also been used to designate any of a class of trimethyl derivatives of amino acids, e.g., carnitine, or, more generally, the internal salts of quarternary ammonium bases. Called also *lycine* and *oxyneurine*. **b. hydrochloride**, the hydrochloride salt of betaine, $C_5H_{12}ClNO$, which on hydrolysis yields hydrochloric acid; used as a gastric acidifier. It has been used as a lipotropic agent in the treatment of fatty infiltration of the liver.

beta-lactose (ba'tah-lak'tōs) a disaccharide isomeric with lactose, obtained by allowing a solution of lactose to crystallize above 93° C.; it is more soluble and sweeter than lactose.

Betalin (ba'tah-lin) trademark for preparations containing components of the vitamin B complex. *Betalin Complex* is a sterile solution of synthetic B complex factors in sterile distilled water. *Betalin Complex F.C.* consists of synthetic vitamin B factors and synthetic ascorbic acid in sterile distilled water. *Betalin S* is a synthetic preparation of thiamine hydrochloride. *Betalin 12 crystalline* is a sterile isotonic solution of crystalline cyanocobalamin.

betalysin (ba-tal'i-sin) a relatively thermostable lysin for gram-positive bacteria (Patterson).

betamethasone (ba'tah-meth'ah-sōn) [NF] chemical name: 9-fluoro-11 β ,17,21-trihydroxy-16 β -methylpregna-1,4-diene-3,20-dione. A synthetic glucocorticoid, occurring as a white to creamy white, crystalline powder, which is the most active of the anti-inflammatory steroids; administered orally or applied to the skin. **b. acetate** [USP], an ester of betamethasone, $C_{24}H_{31}FO_6$, occurring as a white to creamy white powder, having the same actions as the base; used in combination with betamethasone sodium phosphate for intramuscular, intra-articular, intrasynovial, or intralesional injection. **b. benzoate** [USP], the 17-benzoate ester of betamethasone, $C_{29}H_{33}FO_6$, having the same actions as the base; applied topically to the skin. **b. dipropionate** [USP], the 17,21-dipropionate ester of betamethasone, $C_{28}H_{37}FO_7$, having the same uses as the base; applied topically to the skin. **b. sodium phosphate** [USP], the disodium salt of the 21-phosphate ester of betamethasone, $C_{22}H_{28}FNa_2O_8P$, occurring as a white to almost white powder, having the same actions as the base; used in combination with betamethasone acetate for intramuscular, intra-articular, intrasynovial, or intralesional injection. **b. valerate** [USP], the 17-valerate ester of betamethasone, $C_{27}H_{37}FO_6$, occurring as a white or almost white powder, having the same actions as the base; applied topically to the skin.

betamycin sulfate (ba'tah-mi'sin) chemical name: *O*-6-amino-6-deoxy- α -D-glucopyranosyl-(1 $\rightarrow$ 4)-*O*-[3-deoxy-4-C-methyl-3-(methylamino)- β -L-arabinopyranosyl-(1 $\rightarrow$ 6)]-2-deoxy-D-streptomine sulfate; an antibacterial, $C_{10}H_{38}N_4O_{10} \cdot xH_2SO_4$.

betanaphthol (ba'tah-naf'thol) a form of naphthol, $C_{10}H_8O$, occurring as a colorless or pale-buff crystalline compound having the odor of carbolic acid. Formerly used locally as a counterirritant in alopecia and as an anthelmintic; now used as a topical antiseptic, especially in fungal infections. Called also *isonaphthol*.

betanaphthyl (ba'tah-naf'thil) the combining group, $C_{10}H_8$, of betanaphthol. **b. benzoate**, betanaphthol benzoate. **b. salicylate**, betanaphthol salicylate.

betanin (be'tah-nin) the red pigment of the root of the beet.

beta-oxybutyria (ba'tah-ok'se-bu-ti're-ah) the presence of beta-oxybutyric acid in the urine. Cf. *ketonuria*.

Betapar (ba'tah par) trademark for a preparation of meprednisone.

Betapen-VK (ba'tah-pen) trademark for a preparation of penicillin V potassium.

Betaprone (ba'tah-prōn) trademark for a preparation of propiolactone.

betapropiolactone (ba'tah-pro'pe-o-lak'tōn) propiolactone.

betaquinine (ba'tah-kwin'in) quinidine.

betatron (ba'tah-tron) an apparatus for accelerating electrons to millions of electron volts by means of magnetic induction.

Betaxin (be-tak'sin) trademark for preparations of thiamine hydrochloride.

betazole hydrochloride (ba'tah-zōl) [USP] chemical name: 1*H*-pyrazole-3-ethanamine dihydrochloride. A histamine analogue, $C_6H_8N_4 \cdot 2HCl$, occurring as a white, crystalline powder, which stimulates gastric secretion of hydrochloric acid; used in diagnostic tests of gastric secretion, administered intramuscularly or subcutaneously. Called also *gastramine hydrochloride*.

bête (bet) [Fr.] beast. **b. rouge** (bet-rōōzh') [Fr. "red beast"], chigger.

betel (be'tl) [Tamil *vettile*] an East Indian masticatory, consisting of a piece of betel nut rolled up with lime in a betel leaf; it is tonic, astringent, and stimulant. **b. leaf**, the leaf of *Piper betle*; formerly used as a masticatory and topically as a counterirritant. The oil was used internally for cough and for diphtheria. **b. nut**, the dried ripe seed of *Areca catechu*, a palm tree of South Asia; formerly used as an anthelmintic in veterinary medicine. Called also *areca*.

bethanechol chloride (bē-tha'nē-kol) [USP] chemical name: 2-[(aminocarbonyloxy)-*N,N,N*-trimethyl-1-propanaminium chloride. A cholinergic, $C_7H_{17}ClN_2O_2$, occurring as colorless or white crystals or as a white crystalline powder; used in the treatment of gastric retention following vagotomy, postoperative urinary retention, postoperative abdominal distention, and in other conditions in which stimulation of the parasympathetic nervous system is desirable; it is administered orally or subcutaneously.

bethanidine sulfate (be-than'i-dēn) chemical name: *N,N*-dimethyl-*N*-(phenylmethyl)guanidine sulfate (2:1). An adrenergic neuron-blocking agent, $C_{10}H_{15}N_3 \cdot \frac{1}{2}H_2SO_4$, used in the treatment of essential hypertension, particularly in the malignant phase.

Bethea's sign (method) (bē-tha'ez) [Oscar Walter Bethea, New Orleans physician, 1878-1963] see under *sign*.

Betonica (be-ton'i-kah) [L.] a genus of labiate plants. *B. officinalis*, wood betony, was formerly used in medicine: the tops are astringent and aromatic; the root, emetic and cathartic.

Bettendorff's test (bet'en-dorfz) [Anton Joseph Hubert Maria Bettendorff, German chemist, 1839-1902] see under *tests*.

Betula (be'tu-lah) [L.] a genus of trees: the birches. **B. al/ba** (white birch), the source of a bark from which rectified birch tar oil is derived; used as an expectorant in various cough syrup formulations, and formerly in certain skin diseases. **B. len'ta** (black birch), a tree whose bark is an important commercial source of methyl salicylate. Now used mainly as a flavoring oil for confections and soda beverages.

betweenbrain (be-twēn'brān) diencephalon (interbrain).

Betz's cells, cell area (bet'zes) [Vladimir Aleksandrovich Betz, Russian anatomist, 1834-1894] see under *cell*, and see *psychomotor area*, under *area*.

Bev Abbreviation for *billion electron volts*; the equivalent of 3.82×10^{-11} gram calorie, or 1.6×10^{-8} erg.

Bevan's incision, operation (bev'anz) [Arthur Dean Bevan, American surgeon, 1861-1943] see under *incision* and *operation*.

Bevan Lewis cells (bev'an loo'is) [William Bevan Lewis, English physiologist, 1847-1929] see under *cell*.

bevel (bev'el) 1. a slanting edge. 2. to produce a slanting of the enamel margins of a tooth cavity.

Bevidox (bev'i-doks) trademark for a solution of vitamin B₁₂; see *cyanocobalamin*.

beziehungswahn (ba-ze'hoongz-vahn') [Ger.] a form of guilt psychosis marked by morbid ideas of reference.

bezoar (be'zōr) [Persian] a concretion of various character sometimes found in the stomach or intestines of man or other animals. They may belong to one of three types: trichobezoar (hair), phytobezoar (fruit and vegetable fibers), or trichophytobezoar (a mixture of hair, and fruit and vegetable fibers).

Bezold's abscess, etc. (ba'zoltz) [Friedrich Bezold, otologist in Munich, 1842-1908] see under *abscess*, *mastoiditis*, *perforation*, *sign*, and *triad*.

Bezold's ganglion (ba'zoltz) [Albert von Bezold, German physiologist, 1836-1868] see under *ganglion*.

BF blastogenic factor; see *lymphocyte transforming factor*, under *factor*.

BFP abbreviation for *biologically false positivity* (biologic false positive reaction), the presence of positive findings in serologic tests for syphilis when syphilis is known not to exist.

BFU-E burst-forming unit-erythroid, the earliest red cell precursor presently detectable in *in-vitro* culture, where it has a high requirement for erythropoietin; so named because its growth is composed of subcolonies which give the appearance of a burst.

bhang (bang) [Hindi] the Asian Indian name for a mixture of the dried leaves and young stems of uncultivated *Cannabis sativa* L. (Cannabaceae), usually ingested as a decoction with milk, sugar, and water, or sometimes smoked or chewed. See *cannabis*.

bi chemical symbol for *bismuth*.

bi [L. *bi* two] 1. a prefix meaning two or twice. 2. see *bio*.

Bial's reagent, test (be'alz) [Manfred Bial, German physician, 1869-1908] see under *reagent* and *tests*.

bialamilic hydrochloride (bi'ah-lam'i-kōl) chemical name: 3,3'-bis[(diethylamino)methyl]-5,5'-di-2-propenyl-1,1'-biphenyl]-4,4'-diol dihydrochloride. An antiamebic agent, $C_{28}H_{40}N_4O_2 \cdot 2HCl$, administered orally. Formerly called *biallylamicol*.

biallylamicol (bi-al'il-am'i-kol) former name for bialamilic hydrochloride.

Bianchi's nodules, valve (be-ang'kēz) [Giovanni Battista Bian-

chi, Italian anatomist, 1681–1761] see *noduli valvularum aortae*, and under *valve*.

Bianchi's syndrome (be-ang'kēz) [Leonardo Bianchi, Italian psychiatrist, 1848–1927] see under *syndrome*.

biarticular (bi'ar-tik'u-lar) pertaining to two joints.

biarticulate (bi'ar-tik'u-lāt) having two joints.

biasteric (bi'as-ter'ik) pertaining to the two asteria, especially to the shortest distance between them (biasteric width).

biauricular (bi'aw-rik'u-lar) pertaining to the two auricles of the ears.

Bib. abbreviation for *L. bi'be*, drink.

bib (bib) the remaining fragment of an erythrocyte in which the crescentic gametocyte of *Plasmodium falciparum* is developing in malaria.

bibasic (bi-ba'sik) doubly basic; having two hydrogen atoms that may react with bases; Cf. *dibasic*.

bibeveled (bi'bev-eld) having a slanting surface on two sides, as some dental instruments; hatchet-edged.

Bibiofilm (bib'le-o-film) a negative microfilm of material for a library. It is a trademark registered by Science Service with the idea that it would be applied only to the product of Bibiofilm Services, Incorporated, under the proposed Documentation Institute.

bibliomania (bib'le-o-ma'ne-ah) [Gr. *biblion* book + *mania* madness] abnormally intense desire to collect books.

bibliotherapy (bib'le-o-ther'ah-pe) [Gr. *biblion* book + *therapeia* treatment] the employment of books and the reading of them in the treatment of nervous disorders.

Bibron's antidote (bib'ronz) [Gabriel Bibron, French naturalist, 1806–1848] see under *antidote*.

bibulous (bi'b'u-lus) [*L. bibulus*, from *bibere* to drink] 1. absorbent or spongy. 2. having the property of absorbing moisture. Cf. *hygroscopic*.

bicameral (bi-kam'er-al) [*bi-* + *L. camera* chamber] having two chambers.

bicapsular (bi-kap'su-lar) [*bi-* two + *L. capsula* a capsule] having two capsules, as an articular capsule.

bicarbonate (bi-kar'bo-nāt) any salt containing the HCO_3^- anion. **blood b.**, the bicarbonate of the blood, an index of the alkali reserve. **plasma b.**, blood b. **b. of soda**, sodium bicarbonate.

bicarbonatemia (bi-kar'bo-nāt-e' me-ah) hyperbicarbonatemia.

bicardiogram (bi-kar'de-o-gram') (obs.) a curve in an electrocardiogram indicating the composite effect of the right and left atria.

bicaudal (bi-kaw'dal) [*bi-* + *L. cauda* tail] having two tails.

bicaudate (bi-kaw'dāt) bicaudal.

bicellular (bi-sel'u-lar) made up of two cells, or having two cells.

bicephalus (bi-sef'ah-lus) dicephalus.

biceps (bi'seps) [*bi-* + *L. caput* head] a muscle having two heads. **b. bra'chii**, **b. fem'oris**, see *Table of Musculi*.

Bichat's canal, etc. (be-shaz') [Marie François Xavier Bichat, an eminent French anatomist and physiologist, 1771–1802, founder of scientific histology and pathological anatomy] see under *canal*, *fissure*, *foramen*, *ligament*, *membrane*, and *tunic*.

bichloride (bi-klo'rid) any chloride that contains two equivalents of chlorine.

bichromate (bi-kro'māt) dichromate.

Bicillin (bi'sī-lin) trademark for a preparation of penicillin G benzathine.

bicipital (bi-sip'i-tal) 1. having two heads. 2. pertaining to a biceps muscle.

biconcave (bi-kon'kāv) [*bi-* + *L. concavus* hollow] having two concave surfaces, as the opposite sides of a structure.

biconvex (bi-kon'veks) having two convex surfaces, as the opposite sides of a structure.

bicornate (bi-kor'nāt) bicornuate.

bicornuate (bi-kor'nu-āt) [*bi-* + *L. cornutus* horned] having two horns or having horn-shaped branches, as the uterus of most mammals.

bicoronal (bi'ko-ro'ne-al) pertaining to the two coronas, one radiating from each internal capsule of the brain.

bicorporate (bi-kor'pō-rāt) [*bi-* + *L. corpus* body] having two bodies.

bicuspid (bi-kus'pid) [*bi-* + *L. cuspis* point] 1. having two cusps or points. 2. a bicuspid valve. 3. a term used mainly in the United States for a premolar tooth.

bicuspidal (bi-kus'pī-dal) 1. pertaining to a bicuspid tooth. 2. having two cusps.

bicuspidate (bi-kus'pī-dāt) having two cusps.

bicuspoid (bi-kus'poid) a figure in space resembling a bicuspid tooth and representing the space traversed in all its movements by a point in one jaw in relation to the other jaw.

b.i.d. abbreviation for *L. bis in di'e*, twice a day.

Bidder's ganglia, organ [Heinrich Friedrich Bidder, German anatomist, 1810–1894] see under *ganglion* and *organ*.

bidental (bi-den'tal) [*bi-* + *L. dens* tooth] having, pertaining to, or affecting two teeth.

bidentate (bi-den'tāt) having two teeth.

bidermoma (bi'der-mo'mah) [*bi-* + Gr. *derma* skin + *-oma*] a variety of teratoma composed of cells and tissues derived from two germ layers.

biduotertian (bid'u-o-ter'shun) denoting malaria caused by *Plasmodium vivax*, in which two broods of parasites are segmenting on alternate days, so that febrile paroxysms occur daily.

biduous (bid'u-us) lasting for two days, as a fever.

Biederman's sign (be'der-manz) [Joseph Bear Biederman, Cincinnati physician, born 1907] see under *sign*.

Biedert's cream mixture (be'derts) [Philipp Biedert, pediatrician in Strasburg, 1847–1916] see under *mixture*.

Biedl's disease, syndrome (be'dlz) [Artur Biedl, Austrian physician, 1869–1933] Laurence-Moon-Biedl syndrome.

Bielschowsky's method (be'el-show'skēz) [Max Bielschowsky, German neuropathologist, 1869–1940] see *Table of Stains and Staining Methods*.

Bielschowsky-Jansky disease (be'el-show'ske-yan'ske) late infantile form of amaurotic family idiocy; see under *idiocy*.

Bier's amputation, etc. (bērz) [August Karl Gustav Bier, surgeon in Berlin, 1861–1949] see under *amputation*, *anesthesia*, *hyperemia*, and *treatment*.

Biermer's anemia (disease), sign (bēr'merz) [Anton Biermer, German physician, 1827–1892] see *pernicious anemia*, under *anemia*, and see under *sign*.

Biernacki's sign (byēr-naht'skēz) [Edmund Biernacki, Polish physician, 1866–1911] see under *sign*.

Biesiadecki's fossa (bya-syah-det'skēz) [Alfred von Biesiadecki, Polish physician, 1839–1888] iliacosubfascial fossa.

Biett's disease (be-ets') [Laurent Théodore Biett, Parisian dermatologist, 1781–1840] discoid lupus erythematosus.

bifid, bifidus (bi'fid, bif'i-dus) [*L.*] cleft into two parts or branches.

Bifidobacterium (bi'fid-o-bak-te're-um) a genus of obligate anaerobic lactobacilli commonly occurring in the feces.

bifocal (bi-fō'kal) 1. having two foci. 2. pertaining to the compound spectacle, which contains a smaller lens for near vision placed below the center of the larger lens, which is for distant vision. 3. (pl.) bifocal glasses.

biforate (bi-fō'rāt) [*bi-* + *L. fora* opening] having two foramina or openings.

biformyl (bi-for'mil) glyoxal.

bifurcate (bi-fur'kāt) [*L. bifurcatus*, from *bi-* + *furca* fork] forked; divided into two branches.

bifurcatio (bi'fur-ka'she-o), pl. *bifurcatio'nes* [*L.*] the site of division of a single structure into two. **b. tra'cheae** [NA], bifurcation of trachea: the site of division of the trachea into the right and left main bronchi.

bifurcation (bi'fur-ka'shun) [*L. bifurcatio*, from *bi-* + *furca* fork] 1. division into two branches. 2. the site where a single structure divides into two. **b. of trachea**, bifurcatio tracheae.

bifurcationes (bi'fur-ka'she-o'nēz) [*L.*] plural of *bifurcatio*.

Bigelow's ligament, litholapaxy, operation, septum (big'ē-lōz) [Henry Jacob Bigelow, Boston surgeon, 1818–1890] see *ligamenta iliofemorale*, and see under *litholapaxy*, *operation*, and *septum*.

bigemina (bi-jem'i-nah) 1. plural of *begeminum*. 2. a bigeminal pulse.

bigeminal (bi-jem'i-nal) occurring in twos; twin.

bigeminum (bi-jem'i-num), pl. *bigem'ina* [*L.* "twin"] either one of the corpora bigemina of the fetus or of a bird; the fetal bigemina become the corpora quadrigemina (colliculi).

bigeminy (bi-jem'i-ne) the condition of occurring in pairs; especially the occurrence of two beats of the pulse in rapid succession; see *bigeminal pulse*, under *pulse*. **nodal b.**, a form of arrhythmia consisting of nodal extrasystoles followed by nodal automatic beats.

bigerminal (bi-je'r'mī-nal) pertaining to two germs or ova.

bighead (big'hed) 1. bulging of the skull bones of an animal, due to osteomalacia. 2. an acute infectious disease of young rams due to *Clostridium novyi*, which enters the tissues through head wounds acquired in fighting; it is characterized by intense edematous swelling of the head, face, and neck; called also *swelled head*. 3. photosensitivity in white-faced sheep, occurring after the ingestion of certain plants, characterized by thickening and pendulous swelling of the face and ears. 4. hydrocephalus in mink.

bigjaw (big'jaw) actinomycosis in cattle.

bigleg (big'leg) lymphangitis of a horse's leg.

bigonial (bi-go'ne-al) connecting the two gonions.

bilabe (bi'lāb) [*bi-* + *L. labium* lip] an instrument for taking small calculi from the bladder through the urethra.

bilaminar (bi-lam'ī-nar) [*bi-* + *L. lamina* layer] having or pertaining to two layers, as the basement membrane that comprises the basal lamina and the reticular lamina.

bilateral (bi-lat'er-al) [*bi-* + *L. latus* side] having two sides, or pertaining to both sides.

bilateralism (bi-lat'er-al-izm) bilateral symmetry.

bile (bil) [*L. bilis*] a fluid secreted by the liver and poured into the small intestine via the bile ducts. Important constituents are conjugated bile salts, cholesterol, phospholipid, bilirubin diglucuronide, and electrolytes. Bile is alkaline due to its bicarbonate content, golden brown to greenish yellow in color, and has a bitter taste. Hepatic bile (see *A b*) secreted by the liver, is concentrated in the gallbladder. Its formation depends on active secretion by liver cells into the bile canaliculi. Excretion of bile salts by liver cells and secretion of bicarbonate rich fluid by ductular cells in response to secretin are the major factors which normally determine the volume of secretion. Conjugated bile salts and phospholipid normally dissolve cholesterol in a mixed micellar solution. In the upper small intestine, bile is in part responsible for alkalizing the intestinal content, and conjugated bile salts play an essential role in fat absorption by dissolving the products of fat digestion (fatty acids and monoglyceride) in water soluble micelles. Called also *gall*. **A b.**, bile from the common bile duct; samples are obtained by use of a duodenal tube before gallbladder stimulation. It usually contains 20–200 mg. of bilirubin per 100 ml. **B b.**, bile from the gallbladder; samples are obtained by use of a duodenal tube after gallbladder contraction stimulation, usually with magnesium sulfate. It may occur despite absence of the gallbladder and contains up to 1 gram of bilirubin per 100 ml. **C b.**, hepatic bile; it is obtained from a duodenal drainage tube after the gallbladder has been emptied. **cystic b.**, **gallbladder b.**, the bile that is held for some time in the gallbladder before moving into the intestine. **limy b.**, bile containing an increased amount of calcium, usually as the carbonate but sometimes as the phosphate or bilirubinate. It varies in consistency from a thick, milky fluid to a putty, gel, or solid. It is usually suspended in a thin, more watery bile. Called also *milk of calcium b.* **milk of calcium b.**, **limy b.** **ox b.**, the fresh bile of the ox, a brownish green to dark green viscous fluid; the extract is used as a choleric. Called also *fel bovis* and *oxgall*. **Platner's crystallized b.**, a crystalline substance obtained by the action of ether in an alcoholic extract of bile. **white b.**, the colorless liquid containing mucoproteins and calcium salts sometimes found in the gallbladder in obstructions above the entrance of the cystic duct. Its accumulation in the distended biliary tract is called *hydrops*.

Bilharzia (bil-har'ze-ah) [Theodor Maximilian Bilharz, German physician, 1825–1862] *Schistosoma*.

bilharzial (bil-har'ze-al) pertaining to or caused by *Schistosoma* (*Bilharzia*).

bilharziasis (bil'har-zi'ah-sis) schistosomiasis.

bilharzic (bil-har'zik) bilharzial.

bilharzioma (bil-har'ze-o'mah) a tumor in the skin or mucous membrane caused by a schistosome.

bilharziosis (bil-har'ze-o'sis) schistosomiasis.

bili- [*L. bilis* bile] a combining form denoting relationship to the bile.

biliary (bil'e-a-re) pertaining to the bile, to the bile ducts, or to the gallbladder.

biliation (bil'e-a'shun) the secretion of bile.

bilicyanin (bil'i-si'ah-nin) [*bili-* + *L. cyaneus* blue] a blue pigment derivable from biliverdin by oxidation; called also *cholecyanin* and *cholocyanin*.

bilidigestive (bil'i-e-di-jes'tiv) pertaining to the gallbladder and digestive tract.

biliflavin (bil'i-fla'vin) [*bili-* + *L. flavus* yellow] a yellow pigment obtainable from biliverdin.

bilifulvin (bil'i-ful'vin) [*bili-* + *L. fulvus* tawny] an impure bilirubin of a tawny color; also a tawny pigment from extract of ox bile; not normally found in healthy human bile.

bilifuscin (bil'i-fus'in) [*bili-* + *L. fuscus* brown] a pigment from human bile and gallstones.

biligenesis (bil'i-jen'ē-sis) the production or formation of bile.

biligenetic (bil'i-jē-net'ik) 1. pertaining to biligenesis. 2. biligenic.

biligenic (bil'i-jen'ik) [*bili-* + *Gr. gennan* to produce] producing bile.

biligulate (bi-lig'u-lāt) [*bi-* + *L. ligula* little tongue] having two tongue-like structures.

bilihumin (bil'i-hu'min) [*bili-* + *L. humus* earth] an insoluble ingredient of gallstones.

bilin (bi'lin) [*L. bilis* bile] collective name for yellow bile pigments including i-urobilin, stercobilin, and d-urobilin, formed by spontaneous oxidation of the central methylene group of corresponding bilinogen; they are generated in the final steps of bilirubin catabolism.

bilious (bil'yus) [*L. biliosus*] characterized by bile, by excess of bile, or by biliousness.

biliousness (bil'yus-nes) a symptom complex comprising nausea, abdominal discomfort, headache, and constipation, formerly attributed to excessive secretion of bile.

biliprasin (bil'i-pra'sin) [*bili-* + *Gr. prasinos* green] a green pigment from gallstones.

bilipurpurin (bil'i-pur'pu-rin) [*bili-* + *L. purpur* purple] a purple pigment, $C_{34}H_{36}O_6N_4$, occurring in the bile of ruminants; derived from chlorophyll.

bilirachia (bil'i-ra'ke-ah) the presence of bile pigments in the spinal fluid.

bilirhachia (bil'i-ra'ke-ah) [*bili-* + *Gr. rhachis* spine + *-ia*] the presence of bile pigments in the spinal fluid.

bilirubin (bil'i-roo'bin) [*bili-* + *L. ruber* red] a bile pigment; it is a breakdown product of heme mainly formed from the degradation of erythrocyte hemoglobin in reticuloendothelial cells, but also formed by breakdown of other heme pigments, e.g., cytochromes. Bilirubin normally circulates in plasma as a complex with albumin, and is taken up by the liver cells and conjugated to form bilirubin diglucuronide, which is the water-soluble pigment excreted in bile. In patients with cholestasis conjugated bilirubin (bilirubin diglucuronide) accumulates in the blood and tissues and is excreted in the urine; unconjugated bilirubin is not excreted in the urine. High concentrations of bilirubin may result in jaundice. **direct b.**, **conjugated b.**, bilirubin that has been taken up by the liver cells and conjugated to form the water-soluble bilirubin diglucuronide. **indirect b.**, unconjugated bilirubin. **unconjugated b.**, the lipid-soluble form of bilirubin that circulates in loose association with the plasma proteins; called also *indirect b.*

bilirubinate (bil'i-roo'bi-nāt) a salt of bilirubin.

bilirubinemia (bil'i-roo-bi-ne'me-ah) [*bilirubin* + *Gr. haima* blood + *-ia*] the presence of bilirubin in the blood; see *hyperbilirubinemia*.

bilirubinic (bil'i-roo-bin'ik) pertaining to bilirubin.

bilirubinuria (bil'i-roo-bi-nu're-ah) presence of bilirubin in the urine.

bilis (bi'lis) [*L.*] bile. **b. bovi'na**, **b. buba'ta**, ox bile extract; see under *extract*.

bilitherapy (bil'i-ther'ah-pe) (*obs.*) treatment with bile or bile salts.

biliuria (bil'i-u're-ah) [*bili-* + *Gr. ouron* urine + *-ia*] the presence of bile pigments in the urine.

biliverdin (bil'i-ver'din) [*bili-* + *L. viridis* green] a green pigment, $C_{33}H_{34}O_6N_4$, the initial bile pigment from catabolism of hemoglobin, converted to bilirubin by reduction of a methene bridge; it may arise from air oxidation of bilirubin. Called also *biliverdinic acid* and *dehydrobilirubin*.

biliverdinate (bil'i-ver'di-nāt) a salt of biliverdin.

bilixanthin, **bilixanthine** (bil'i-zan'thin) [*bili-* + *Gr. xanthos* yellow] cholestin.

Billroth's cords, disease, etc. (bil'rōts) [Christian Albert Theodor Billroth, surgeon in Vienna, 1829–1894] see under *cord*, *disease*, *operation*, and *strand*.

bilobate (bi-lo'bāt) [*bi-* + *L. lobus* lobe] having two lobes.

bilobular (bi-lob'u-lar) having two lobules.

bilobulate (bi-lob'u-lāt) bilobular.

bilocular (bi-lok'u-lar) [*bi-* + *L. locus* cell] having two compartments.

biloculate (bi-lok'u-lāt) bilocular.

biloma (bi'lo-mah) an encapsulated collection of bile in the peritoneal cavity.

Bilopaque (bil'o-pāk) trademark for a preparation of tyropanoate sodium.

bilophodont (bi-lof'ō-dont) [*bi-* + *Gr. lophos* ridge + *odont* tooth] having molariform teeth with two ridges on them; applied to certain mammals, e.g., the kangaroo.

Bimana (bim'ah-nah) [*bi-* + *L. manus* hand] a name sometimes applied to a category of mammals distinguished by possessing hands of character differing from that of the feet, and made up of man alone.

bimanual (bi-man'u-al) [*bi-* + *L. manualis* of the hand] with both hands; performed by both hands.

bimastoid (bi-mas'toid) pertaining to both mastoid processes.

bimaxillary (bi-mak'si-ler'e) pertaining to or affecting both jaws.

bimeter (bim'ē-ter) see under *gnathodynamometer*.

bimethoxycaine lactate (bi'mē-thoks'i-kān) lactic acid compound with 2,2'-dimethoxy- α - α' -dimethyldiphenethylamine (1:1); a local anesthetic.

bimodal (bi-mo'dal) having two modes or peaks; said of a graphic curve.

bimolecular (bi'mo-lek'u-lar) relating to or formed from two molecules.

binangle (bin'ang-g'l) having two angles; Black's term for a dental instrument having two angulations in the shank connect-

ing the handle, or shaft, with the working portion of the instrument, known as the blade, or nib.

binary (bi'na-re) [L. *binarius* of two] made up of two elements or of two equal parts; denoting a number system with a base of two.

binaural (bi-naw'ral, bin-aw'ral) [L. *bini* two + *auris* ear] pertaining to both ears.

binauricular (bin'aw-rik'u-lar) [L. *bini* two + *auricula* little ear] pertaining to both auricles of the ears.

binder (bind'er) an abdominal girdle or bandage, chiefly for women in labor who have pendulous abdomens (obstetric b.).

abdominal b., a binder applied to the abdomen after childbirth to support the relaxed abdominal walls.

binegative (bi-neg'ah-tiv) having two negative charges, especially in ions such as SO_4^{--} .

Binet's test (be-nāz') [Alfred Binet, French physiologist, 1857–1911] see under *tests*.

Binet-Simon test (be-na' se-mon') [Alfred Binet; Theodore Simon, French physician, born 1873] Binet's test.

Bing's test (bingz) [Albert Bing, German otologist, 1844–1922] see under *tests*.

biniramycin (bin-ēr-ah-mi'sin) an antibacterial substance produced by a variant of *Streptomyces bikiniensis*.

binocular (bin-ok'u-lar) [L. *bini* two + *oculus* eye] 1. pertaining to both eyes. 2. having two eyepieces, as in a microscope.

binocular (bin-ok'u-lus) the two eyes considered as one organ.

binomial (bi-no'me-al) [*bi* + L. *nomen* name] composed of two terms, as the names of organisms formed by the combination of genus and species names.

binophthalmoscope (bin'of-thal'mo-skōp) an ophthalmoscope for examining both fundi of the patient at one time.

binoscope (bin'o-skōp) [L. *bini* two + Gr. *skopein* to examine] an instrument for inducing binocular vision in squint by presenting one object in the central part of the field of vision, the peripheral parts of the field being screened out.

binotic (bin-ot'ik) [L. *bini* two + Gr. *ous* ear] pertaining to both ears.

binovular (bin-ov'u-lar) [L. *bini* two + *ovum* an egg] pertaining to or derived from two distinct ova.

Binswanger's dementia (encephalitis) (bins'wang-er) [Otto Binswanger, German neurologist, 1852–1929] see under *dementia*.

binuclear (bi-nu'kle-ar) [*bi* + L. *nucleus* nut] having two nuclei.

binucleate (bi-nu'kle-āt) binuclear.

binucleation (bi'nu-kle-a'shun) the formation of two nuclei within a cell through division of the nucleus without division of the cytoplasm.

binucleolate (bi-nu-kle'o-lāt) [*bi* + L. *nucleolus*] having two nucleoli.

Binz's test (bints'ez) [Karl Binz, German pharmacologist, 1832–1913] see under *tests*.

bio-, bi- [Gr. *bios* life] combining form denoting relationship to life.

bioacoustics (bi'o-ah-koo'stiks) the science dealing with the communicating sounds made by animals.

bioactive (bi'o-ak'tiv) having an effect on or eliciting a response from living tissue.

bioaeration (bi'o-a'er-a'shun) a modification of the activated sludge method of purifying sewage.

bioamine (bi'o-am'en) biogenic amine.

bioaminergic (bi'o-am'in-er'jik) of or pertaining to neurons that secrete biogenic amines.

bioassay (bi'o-as-sa') [*bio* + *assay*] determination of the active power of a sample of a drug by noting its effect on a live animal or an isolated organ preparation, as compared with the effect of a standard preparation; called also *biological assay*.

bioastronautics (bi'o-as'tro-naw-tiks) the science concerned with study of the effects of space and interplanetary travel on living organisms.

bioavailability (bi'o-ah-vāl'ah-bil'i-te) the degree to which a drug or other substance becomes available to the target tissue after administration.

bioblast (bi'o-blast) [*bio* + Gr. *blastos* germ] 1. mitochondrion. 2. elementary unit of protoplasmic structure; Altmann's granule.

biocatalyst (bi'o-kat'ah-list) [*bio* + *catalyst*] a name once suggested by Bayliss for enzyme.

biocenosis (bi'o-se-no'sis) [*bio* + Gr. *koinos* common] the relation of diverse organisms that live in association.

biocenotic (bi'o-se-not'ik) characterized by biocenosis.

biochemistry (bi'o-kem'is-tre) [*bio* + *chemistry*] the chemistry of living organisms and of vital processes; physiological chemistry.

biochemomorphic (bi'o-ke-mor'fik) pertaining to biochemorphy.

biochemorphy (bi'o-ke-mor-fol'o-je) the study of the relationship between chemical constitution and biological action.

biocidal (bi'o-si'dal) pertaining to that which kills living organisms.

bioclimatics (bi'o-kli-mat'iks) bioclimatology.

bioclimatologist (bi'o-kli'mah-tol'ō-jist) an individual skilled in bioclimatology.

bioclimatology (bi'o-kli'mah-tol'ō-je) [*bio* + *climatology*] the science devoted to the study of effects on living organisms of conditions of the natural environment (rainfall, daylight, temperature, humidity, air movement) prevailing in specific regions of the earth. See also *biometeorology*.

(BiO)₂CO₃ subcarbonate of bismuth.

biocoenosis (bi'o-se-no'sis) biocenosis.

biocolloid (bi'o-kol'oid) [*bio* + *colloid*] a colloid from animal, plant, or microbial tissue.

biocompatible (bi'o-kom-pat'i-b'l) being harmonious with life; not having toxic or injurious effects on biological function.

biocompatibility (bi'o-kom-pat'i-bil'i-te) the quality of being biocompatible.

biocybernetics (bi'o-si'ber-net'iks) the science of communications and control in animals.

biocycle (bi'o-si'k'l) [*bio* + Gr. *kyklos* cycle] the rhythmic repetition of certain phenomena observed in living organisms.

biodegradable (bi'o-de-grād'ah-b'l) susceptible of degradation by biological processes, as by bacterial or other enzymatic action.

biodegradation (bi'o-deg'rah-da'shun) the series of processes by which living systems render chemicals less noxious to the environment.

Bio-des (bi'o-des) trademark for a preparation of diethylstilbestrol.

biodebitus (bi'o-de-tri'tus) detritus derived from the disintegration and decomposition of once-living organisms; further designated as phytodetritus or zoodebitus, depending on whether the original organism was vegetal or animal.

biodynamics (bi'o-di-nam'iks) [*bio* + Gr. *dynamis* might] the scientific study of the nature and determinants of all organismic (including human) behavior.

bioelectricity (bi'o-e'lek-tris'i-te) the electrical phenomena that appear in living tissues, as that generated by muscle and nerve tissue.

bioelectronics (bi'o-e'lek-tron'iks) the study of the role of intermolecular transfer of electrons in biological regulation and defense.

bioelement (bi'o-el'e-ment) any chemical element that is a component of living tissue.

bioenergetics (bi'o-en'er-jet'iks) the study of the energy transformations in living organisms.

bioequivalence (bi'o-e-kwiv'ah-lens) the quality of being bioequivalent.

bioequivalent (bi'o-e-kwiv'ah-lent) having the same strength and similar bioavailability in the same dosage form as another specimen of a given drug substance.

biofeedback (bi'o-fed'bak) the process of furnishing an individual information, usually in an auditory or visual mode, on the state of one or more physiological variables such as heart rate, blood pressure, or skin temperature; such a procedure often enables the individual to gain some voluntary control over the physiologic variable being sampled. **alpha b.**, a procedure in which a person is presented with continuous information, usually auditory, on the state of his brain-wave pattern, with the intent of increasing the percentage of alpha activity; this is done with the expectation that it will be associated with a state of relaxation and peaceful wakefulness. Called also *alpha feedback*.

bioflavonoid (bi'o-fla'vo-noid) a generic term for a group of compounds that are widely distributed in plants and that are concerned with maintenance of a normal state of walls of small blood vessels. See *flavonoid*.

biogen (bi'o-jen) [*bio* + Gr. *gennan* to produce] one of several labile proteins supposedly representing the ultimate molecular basis of life.

biogenesis (bi'o-jen'ē-sis) [*bio* + Gr. *genesis* origin] 1. the origin of life, or of living organisms. 2. the theory that living organisms can originate only from other organisms already living. Cf. *abiogenesis*.

biogenetic (bi'o-jē-net'ik) pertaining to biogenesis.

biogenic (bi'o-jen'ik) having origins in biological processes, as a biogenic amine.

biogenous (bi-oi'jē-nus) originating from life or producing life.

biogeochemistry (bi'o-je'o-kem'is-tre) [*bio* + Gr. *gē* earth + *chemistry*] the study of interactions between the biosphere and its mineral environment, e.g., the study of the effect of living organisms on the weathering of rocks, of the concentration of elements by living systems, etc.

biogeography (bi'o-je-og'rah-fe) the scientific study of geographic distribution of living organisms.

biograph (bi'o-graf) 1. an instrument for analyzing and rendering visible the movements of animals; used in diagnosis of certain nervous diseases. 2. spirograph.

biohydraulic (bi'o-hi-draw'lik) [*bio-* + Gr. *hydōr* water] pertaining to the action of water and solutions in living tissue.

bioimplant (bi'o-im'plant) denoting a prosthesis made of biosynthetic material.

biokinetics (bi'o-ki-net'iks) [*bio-* + Gr. *kinētikos* of or for putting in motion] the science of the movements within developing organisms.

biologic, biological (bi-o-loj'ik; bi-o-loj'ē-kal) pertaining to biology.

biologicals (bi-o-loj'ē-kalz) medicinal preparations made from living organisms and their products, including serums, vaccines, antigens, antitoxins, etc.

biologist (bi-ol'ō-jist) an expert in biology.

biologos (bi-ol'ō-gos) [*bio-* + Gr. *logos* reason] the intelligent power displayed in organic activities.

biology (bi-ol'ō-je) [*bio-* + *-logy*] the science that deals with the phenomena of life and living organisms in general. **molecular b.**, the study of molecular structures and events underlying biological processes, including the relation between genes and the functional characteristics they determine. **radiation b.**, the scientific study of effects of ionizing radiation on living organisms.

bioluminescence (bi'o-loo'mī-nēs'ens) chemoluminescence occurring in living cells, especially the emission of light as a result of cellular oxidation of a heat-stable substrate (luciferin) in the presence of a heat-sensitive enzyme (luciferase).

biolysis (bi-ol'ī-sis) chemical decomposition of organic matter by the action of living organisms.

biolytic (bi-o-lit'ik) [*bio-* + Gr. *lytikos* loosening] 1. pertaining to or characterized by biolysis. 2. destructive to life.

biomass (bi'o-mass) the entire assemblage of living organisms, both animal and vegetable, of a particular region, considered collectively.

biomaterial (bi'o-mah-te're-al) a synthetic dressing with selective barrier properties, used in treatment of burns; it consists of a liquid solvent (polyethylene glycol-400) and a powdered polymer.

biomathematics (bi'o-math'ē-mat'iks) [*bio-* + *mathematics*] mathematics as applied to the phenomena of living things.

biome (bi'ōm) [Gr. *bios* life + *-ome* (-oma) mass] the recognizable community unit of a given region, produced by interaction of climatic factors, biota, and substrate, usually designated according to the characteristic adult or climax vegetation, as tundra, coniferous forest or taiga, deciduous forest, grassland, and the like.

biomechanics (bi'o-mē-kan'iks) [*bio-* + *mechanics*] the application of mechanical laws to living structures, specifically to the locomotor system of the human body. **dental b.**, the relationship between the biologic behavior of oral structures and the physical influence of a dental restoration.

biomedical (bi'o-med'ī-kal) biological and medical; pertaining to the application of the natural sciences (biology, biochemistry, biophysics, etc.) to the study of medicine.

biomedicine (bi'o-med'ī-sin) clinical medicine based on the principles of the natural sciences (biology, biochemistry, biophysics, etc.).

biomembrane (bi'o-mem'brān) any membrane, e.g., cell membrane, of an organism.

biomembranous (bi'o-mem'brah-nus) of or pertaining to a biomembrane.

biometeorologist (bi'o-me'te-or-ol'ō-jist) an individual skilled in biometeorology.

biometeorology (bi'o-me'te-or-ol'ō-je) [*bio-* + Gr. *meteōros* raised from off the ground + *logos* treatise] that branch of ecology which deals with the effects on living organisms of the extraorganic aspects of the physical environment (such as temperature, humidity, barometric pressure, rate of air flow, and air ionization). It considers not only the natural atmosphere but also artificially created atmospheres such as those to be found in buildings and shelters, and in closed ecological systems, such as satellites and submarines.

biometer (bi-om'ē-ter) [*bio-* + Gr. *metron* measure] an apparatus by which extremely minute quantities of carbon dioxide can be measured; used in measuring the carbon dioxide given off from functioning tissue.

biometrician (bi'o-mē-trish'an) an individual skilled in biometry.

biometrics (bi-o-met'riks) biometry.

biometry (bi-om'ē-tre) [*bio-* + Gr. *metron* measure] 1. the science of the application of statistical methods to biological facts; mathematical analysis of biological data. 2. in life insurance, the calculation of the expectation of life.

biomicroscope (bi'o-mi'krō-skōp) a microscope for examining living tissue in the body. **slit-lamp b.**, Gullstrand's slit lamp.

biomicroscopy (bi'o-mi-kros'ko-pe) 1. microscopic examination of living tissue in the body. 2. examination of the cornea or the lens by a combination of slit lamp and corneal microscope.

biomolecule (bi'o-mol'ē-kūl) a molecule produced by a living cell, as a protein, carbohydrate, or lipid.

biomotor (bi'o-mō'tor) an apparatus for producing artificial respiration.

Biomphalaria (bi-om'fah-la're-ah) a genus of planorbid snails, species of which are intermediate hosts of *Schistosoma mansoni*; called also *Australorbis*.

bion (bi'on) [Gr. *bioun* a living being] an individual living organism.

bionecrosis (bi'o-ne-kro'sis) necrobiosis.

bionergy (bi-on'er-je) [*bion* + Gr. *ergon* work] life force; the force exercised in the living organism.

bionics (bi-on'iks) the science concerned with study of the functions, characteristics, and phenomena found in the living world and application of the knowledge gained to new devices and techniques in the world of machines.

bionomics (bi'o-nom'iks) [*bio-* + Gr. *nomos* law] the study of the relations of organisms to their environment; ecology.

bionomy (bi-on'ō-me) [*bio-* + Gr. *nomos* law] the sum of knowledge regarding the laws of life.

bionosis (bi-o-no'sis) [*bio-* + Gr. *nosos* disease] any disease caused by living agencies, as by bacteria or parasites.

bionucleonics (bi'o-nu'kle-on'iks) the study of the biological applications of radioactive and rare stable isotopes.

bio-osmotic (bi'o-oz-mot'ik) [*bio-* + *osmotic*] a term applied to osmotic pressure phenomena in living organisms.

biophagism (bi-of'ah-jizm) [*bio-* + Gr. *phagein* to eat] the eating or absorption of living matter.

biophagous (bi-of'ah-gus) feeding on living matter.

biophagy (bi-of'ah-je) biophagism.

biophore (bi'o-fōr) [*bio-* + Gr. *phoros* bearing] one of the hypothetical vital units which, according to Weismann, are aggregated into groups called *determinants*, these groups being gathered into larger ones called *ids*, which are the visible chromatin granules, and these in turn into larger groups called *idants*, which are the chromosomes. Called also *idioblast* and *plastidule*.

biophoric (bi-o-for'ik) relating to biophores.

biophotometer (bi'o-fo-tom'ē-ter) [*bio-* + Gr. *phōs* light + *metron* measure] an instrument for measuring the dark adaptation of the eye as an indication of vitamin A deficiency.

biophysical (bi-o-fiz'ī-kal) pertaining to biophysics.

biophysics (bi-o-fiz'iks) [*bio-* + *physics*] the science dealing with the application of physical methods and theories to biological problems. **dental b.**, the relationship between the biologic behavior of oral structures and the physical influence of a dental restoration.

biophysiology (bi'o-fiz-e-og'rah-fe) [*bio-* + *physiology*] structural or descriptive biology.

biophysiology (bi'o-fiz-e-ol'ō-je) [*bio-* + Gr. *physis* nature + *-logy*] that part of biology which includes organogeny, morphology, and physiology.

bioplasia (bi-o-pla'ze-ah) [*bio-* + Gr. *plassein* to form] the storing up of food energy in the form of growth.

bioplasm (bi'o-plazm) [*bio-* + Gr. *plasma* anything molded] 1. protoplasm. 2. the more essential or vital part of cytoplasm, contrasted with the *hyaloplasm*. Called also *plasmogen*.

bioplasmic (bi-o-plaz'mik) of or pertaining to bioplasm.

bioplast (bi'o-plast) 1. an independently existing mass of living matter. 2. an ameboid cell.

biopoiesis (bi'o-poi-e'sis) [*bio-* + Gr. *poiein* to make] the origin of life from inorganic matter.

biopolymer (bi'o-pol'ī-mer) a polymer formed in a living organism, as a polypeptide formed from amino acids (monomers).

biopsy (bi'ōp-se) [*bio-* + Gr. *opsis* vision] the removal and examination, usually microscopic, of tissue from the living body, performed to establish precise diagnosis. **aspiration b.**, biopsy in which the tissue is obtained by the application of suction through a needle attached to a syringe. **bite b.**, the instrumental removal of a fragment of tissue. **brush b.**, biopsy in which cells or tissue is obtained by manipulating tiny brushes against the tissue or lesion in question (e.g., through a bronchoscope) at the desired site. **cone b.**, biopsy in which an inverted cone of tissue is excised, as from the uterine cervix. **cytological b.**, a procedure in which cells are obtained by various methods for pathological examinations, as by irrigation of hollow viscera. **endoscopic b.**, removal of tissue by appropriate instruments introduced through an endoscope. **excisional b.**, biopsy of tissue removed by excision; biopsy of an entire lesion, including a significant margin of contiguous normal-appearing tissue. **exploratory b.**, exploration combined with biopsy to determine the type and extent of neoplasms, both deep and superficial. **incisional b.**, biopsy of a selected portion of a lesion and, if possible, of adjacent normal-appearing tissue. **needle b.**, biopsy in which tissue is obtained by the puncture of a

tumor, the tissue within the lumen of the needle being detached by rotation and withdrawal of the needle. See also *aspiration b.* **punch b.**, biopsy in which tissue is obtained by a punch. **sternal b.**, biopsy of bone marrow of the sternum; done by puncture or trephining. **surface b.**, biopsy of cells scraped from the surface of suspicious or obvious lesions, most commonly employed in examination for cancer of the cervix. **surgical b.**, biopsy of tissue obtained by surgical excision. **total b.**, biopsy of an entire growth, a procedure of both therapeutic and diagnostic value.

biopsychoic (bi'o-si'kik) pertaining to psychical phenomena in their relation to the living organism.

biopsychical (bi'o-si'ki-kal) biopsychic.

biopsychology (bi'o-si-kol'o-je) psychobiology.

biopterin (bi-op'ter-in) a naturally occurring pteridine, 2-amino-4-hydroxy-6-(1,2-dihydroxypropyl) pteridine.

bioptic (bi-op'tik) pertaining to or dependent on biopsy.

bioptome (bi-op-tōm') a cutting instrument for taking biopsy specimens.

biopyoculture (bi'o-pi'o-kul'tūr) [*bio-* + Gr. *pyon* pus + *cul-ture*] a culture made from pus whose cells are alive.

biorbital (bi-or'bī-tal) [*bi-* + L. *orbita* orbit] pertaining to both orbits.

bioreversible (bi'o-re-ver'si-b'l) capable of being changed back to the original biologically active chemical form by processes within the organism; said of drugs.

biorgan (bi'or-gan) a physiological organ, as distinguished from a morphological organ, or *idorgan*.

biorheology (bi'o-re-ol'o-je) the study of the deformation and flow of matter in living systems and in materials directly derived from them.

biorythm (bi'o-rithm) the cyclic occurrence of physiological events, as a circadian rhythm.

bio-roentgenography (bi'o-rent'gen-og'rah-fe) [*bio-* + *roentgen-ography*] the making of kinematographic x-ray pictures.

bios (bi'os) [Gr. "life"] any one of a group of growth factors for single-celled organisms such as yeast. Bios occurs in yeast, leaves of plants, bran, and the outer covering of seeds, and is probably a mixture of B vitamins and pantothenic acid. **b. I**, inositol. **b. II**, biotin.

bioscience (bi'o-si'ens) the study of biology wherein all the applicable sciences (physics, chemistry, etc.) are applied.

bioscopy (bi-os'ko-pe) [*bio-* + Gr. *skopein* to examine] the examination of the body to determine whether the patient is living or dead.

biose (bi'ös) a sugar containing two carbon atoms.

biosis (bi-o'sis) [Gr. *bios* life] vitality, or life.

biosmosis (bi'os-mo'sis) osmosis through a living membrane.

biospectrometry (bi'o-spek-trom'ē-tre) measurement by a spectroscope of the quantity of a substance in living tissue.

biospectroscopy (bi'o-spek-tros'ko-pe) examination of living tissue with the spectroscope.

biosphere (bi'ō-sfēr) 1. that part of the universe in which living organisms are known to exist, comprising the atmosphere, hydrosphere, and lithosphere. 2. the sphere of action between an organism and its environment.

biostatics (bi'ō-stat'iks) [*bio-* + Gr. *statikos* causing to stand] the science of the structure of organisms in relation to their function.

biostatistics (bi'o-stah-tis'tiks) vital statistics; see under *statistics*.

biostereometrics (bi'o-ste're-o-met'riks) analysis of the spatial and spatial-temporal characteristics of biological form and function by means of three-dimensional mapping of the body.

biosynthesis (bi'o-sin'thē-sis) the building up of a chemical compound in the physiologic processes of a living organism.

biosynthetic (bi'o-sin-thet'ik) pertaining to or characterized by biosynthesis.

Biot's respiration (breathing, sign) (be-ōz') [Camille Biot, French physician of 19th century] see under *respiration*.

biota (bi-o'tah) [Gr. *bios* life] all the living organisms of a particular area; the combined flora and fauna of a region.

biotaxis (bi'o-tak'sis) [*bio-* + Gr. *taxis* arrangement] the selecting and arranging powers of living cells.

biotaxy (bi'o-tak'se) 1. biotaxis. 2. taxonomy.

biotelemetry (bi'o-tel-em'ē-tre) the recording and measuring of certain vital phenomena of living organisms that are situated at a distance from the measuring device.

biothesiometer (bi'o-the'se-om'ē-ter) an instrument for measuring the vibratory-perception threshold.

biotic (bi-ot'ik) 1. pertaining to life or living matter. 2. pertaining to the biota.

biotics (bi-ot'iks) [Gr. *biōtikos* living] the functions and qualities peculiar to living organisms, or the sum of knowledge regarding these qualities.

biotin (bi'o-tin) a colorless crystalline compound, 2'-keto-3,4-imidazolido-2-tetrahydrothiophene-δ-n-valeric acid, $\text{CH}_2\text{--CH--NH--CO--NH--CH--(CH}_2\text{)}_4\text{--COOH}$, identical with vitamin H and coenzyme R; it is a ubiquitous member of the vitamin B complex required by or occurring in all forms of life tested. Deficiency of biotin has been produced in men and experimental animals fed uncooked egg white, such deficiency being due to the avidin present in the egg white, which renders the biotin of the diet unavailable. Manifestations of biotin deficiency in experimental animals include paralysis, usually of the hindquarters (cows, dogs, rats), dermatitis (rats, pigs, fowl), alopecia (mice, pigs, monkeys), and graying of brown and black fur (mice, monkeys). *Alpha b.* is the product isolated from egg yolk; *beta b.* is that isolated from liver. Called also *bios II*. Cf. *avidin*.

biotomy (bi-ot'ō-me) [*bio-* + Gr. *tomē* a cutting] 1. the study of animal and plant structure by dissection. 2. vivisection.

biotoxiation (bi'o-tok'si-ka'shun) an intoxication resulting from a plant or animal poison (biotoxin).

biotoxicology (bi'o-tok'si-kol'o-je) [*bio-* + Gr. *toxikon* poison + *-logy*] the science of poisons produced by living things, their cause, detection, and their effects, and of the treatment of conditions produced by them.

biotoxin (bi'o-tok'sin) any poisonous substance produced by and derived from a living organism, either plant or animal.

biotransformation (bi'o-trans'for-ma'shun) the series of chemical alterations of a compound (e.g., a drug) which occur within the body, as by enzymatic activity.

biotropy (bi-ot'rē-pe) the study of the body by means of its reactions to chemical substances.

biotype (bi'o-tip) 1. a group of individuals possessing the same genotype. 2. any one of a number of strains of a species of microorganisms that have differentiable physiologic characteristics.

biotypology (bi'o-ti-pol'o-je) the study of anthropological types with their constitutional variations, inadequacies, etc.

biovular (bi-ov'u-lar) binovular.

B.I.P. bismuth iodoform paraffin; see *Morison's method*, under *method*.

biparasitic (bi'par-ah-sit'ik) living parasitically upon a parasite; hyperparasitic.

biparental (bi'pah-ren'tal) derived from two parents, male and female.

biparietal (bi'pah-ri'ē-tal) pertaining to the two parietal eminences or bones.

biparous (bi'par-ah-rus) [*bi-* + L. *parere* to produce] producing two ova or offspring at one time.

bipartite (bi-par'tit) [L. *bipartitus*] having two parts or divisions, as the uterus of most mammals.

biped (bi'ped) [*bi-* + L. *pes* foot] 1. having two feet. 2. an animal with two feet.

bipedal (bi'pē-dal) [*bi-* + L. *pes* foot] having or pertaining to both feet.

bipenniform (bi-pen'fī-form) doubly feather-shaped; said of muscles whose fibers are arranged on each side of a tendon, like the barbs on the shaft of a feather.

biperforate (bi-per'fō-rāt) [*bi-* + L. *perforatus* bored through] having two perforations.

bipерiden (bi-per'fī-den) [USP] chemical name: α-bicyclo-[2.2.1]hept-5-en-2-yl-α-phenyl-1-piperidenepropanol. A synthetic anticholinergic, $\text{C}_{21}\text{H}_{29}\text{NO}$, occurring as a white, crystalline powder, having antisecretory, spasmolytic, and mydriatic actions. It is used, in the form of the hydrochloride or lactate salts, as an antiparkinsonian agent, and is also useful in the treatment of drug-induced extrapyramidal reactions. **b. hydrochloride** [USP], the hydrochloride of biperiden, $\text{C}_{21}\text{H}_{29}\text{NO} \cdot \text{HCl}$, administered orally. **b. lactate** [NF], the lactate of biperiden, $\text{C}_{21}\text{H}_{29}\text{NO} \cdot \text{C}_3\text{H}_5\text{O}_2$, administered intramuscularly and intravenously.

biphenamine hydrochloride (bi-fen'ah-mēn) chemical name: 2-(diethylamino)ethyl 2-hydroxy-3-biphenylcarboxylate hydrochloride; an antibacterial, antifungal, and topical anesthetic, $\text{C}_{19}\text{H}_{23}\text{NO}_3 \cdot \text{HCl}$.

biphenyl (bi-fe'nīl) diphenyl. **polychlorinated b. (PCB)**, any of a group of substances in which chlorine replaces hydrogen in biphenyl and which are toxic and accumulate in animal tissues; it is used as a heat-transfer agent and as an insulator in electrical equipment.

bipolar (bi-po'lar) 1. having two poles; having processes at both poles. 2. pertaining to both poles; denoting electrotherapeutic treatments in which two poles are used; also bacterial staining confined to the poles (ends) of the organism. 3. a two-poled nerve cell. **cone b.**, any one of those bipolar nerve cells of the inner nuclear layer of the retina that are related to the terminations of the cone visual cells. **giant b's**, those cone bipolars that lie beneath the external plexiform layer of the retina. **rod b.**, any one of those bipolar nerve cells that are related to the terminations of the rod visual cells.

bipositive (bi-poz'fī-tiv) having two positive charges, as in Ca^{++} .

bipotential (bi''po-ten'shal) pertaining to or characterized by bipotentiality.

bipotentiality (bi''po-ten'she-al'i-te) [*bi-* + *L. potentia* power] possession of the power of developing or acting in either of two possible ways. **b. of the gonad**, the capability of an undifferentiated gonad to develop into either an ovary or a testis.

bipp a vernacular term in the British Isles for bismuth iodoform paraffin paste; see *Morison's method*, under *method*.

biramous (bi-ra'mus) [*bi-* + *L. ramus* branch] consisting of or possessing two branches.

Bird's formula, treatment (birdz) [Golding Bird, English physician, 1814-1854] see under *formula* and *treatment*.

Bird's sign (birdz) [Samuel Dougan Bird, Australian physician, 1832-1904] see under *sign*.

bird-arm (bird'arm) a forearm that is greatly reduced in size as the result of atrophy of the muscles.

bird-face (bird'fas) a form of dyscephaly in which the skull is small and the facial bones are large, giving a birdlike appearance. The appearance of the face in microcephaly, the skull being small and the facial bones large.

bird-leg (bird'leg) a leg that is greatly reduced in size as the result of atrophy of the muscles.

bird-lime (bird'lim) [*bird* + *L. limus* slime] a viscous or gummy substance of various origin, used for catching small birds; some kinds were used formerly in dressing wounds and sores.

birefractive (bi're-frak'tiv) doubly refractive.

birefringence (bi're-frin'jens) the quality of transmitting light unequally in different directions; double refraction. In biological materials, it indicates an ordering of the molecules, e.g., they may be oriented to one another much as in a crystal. **crystalline b.**, birefringence occurring in systems in which the bonds between molecules or ions have a regular asymmetrical arrangement; it is independent of the refractive index of the medium. **flow b.**, that exhibited only when the substance is in solution and flowing; e.g., it is seen in solutions of long thin molecules, such as nucleoproteins. **form b.**, that produced by regular orientation of submicroscopic asymmetrical particles in a substance or object, differing in refractive index from the surrounding medium; it is the most common form occurring in organisms. **intrinsic b.**, crystalline b. **strain b.**, birefringence observed occasionally in isotropic structures when subjected to tension or pressure; it occurs in muscle and in embryonic tissues. **streaming b.**, flow b.

birefringent (bi're-frin'jent) [*bi-* + *L. refringere* to break up] doubly refractive.

Birkett's hernia (ber'kets) [John Birkett, English surgeon, 1815-1904] synovial hernia.

Birkhaug's test (birk'hawg) [Konrad Elias Birkhaug, Norwegian bacteriologist in America, born 1892] see under *tests*.

Birnberg bow (bern'berg) [Charles H. Birnberg, American obstetrician and gynecologist, born 1900] see under *bow*.

birth (birth) the act or process of being born. **complete b.**, the complete separation of the infant from the maternal body (after cutting of the umbilical cord). **cross b.**, labor with the fetus lying transversely in the uterus. **dead b.**, birth of a fetus which, during or before birth, has lost all signs of antenatal life, heart beat, pulsation, movement. **head b.**, a birth in which the head presents. **multiple b.**, the birth of two or more offspring produced in the same gestation period, the frequency of birth of viable offspring after such multiple pregnancy having been computed as follows: twins, 1 in 80; triplets, 1 in 6400 (80 × 80); quadruplets, 1 in 512,000 (80 × 80 × 80); etc. (Hellin's law). **post-term b.**, birth of a post-mature, or over-term, infant. **premature b.**, birth of a premature infant.

birthmark (birth'mark) nevus; a circumscribed new growth of congenital origin, as a vascular nevus (hemangioma) or a mole. **physiologic b.**, one so common as to be considered normal; a term once applied to nevus flammeus in the suboccipital region.

bis- a prefix signifying two or twice.

bisacodyl (bis-ak'o-dil; bis'ah-ko'dil) [USP] chemical name: 4,4'-(2-pyridinylmethylene)bisphenol diacetate (ester). A cathartic, $C_{22}H_{19}NO_4$, occurring as a white to off-white, crystalline powder; administered orally or by rectal suppository. **b. tannex**, a water-soluble complex of bisacodyl and tannic acid; a cathartic.

bisacromial (bis'ah-kro'me-al) pertaining to the two acromial processes.

bisalbuminemia (bis'al-bu'mi-ne'me-ah) a congenital abnormality characterized by the presence of two distinct serum albumins which differ in their electrophoretic mobility.

bisaxillary (bis-ak'si-lar'e) pertaining to both axillae.

Bischoff's test (bish'ofs) [Carl Adam Bischoff, German chemist, 1855-1908] see under *tests*.

biscuit (bis'ket) in dentistry, porcelain that has undergone the first baking, before it is subjected to the glazing or enameling; called also *bisque*. **hard b.**, biscuit after shrinking but before

vitrification has begun. **soft b.**, biscuit during the process of stiffening, before shrinkage has begun.

biscuiting (bis'ket-ing) the first baking of porcelain paste, by which biscuit is formed.

bisection (bi-sek'shun) [*bi-* + *L. sectio* a cut] a division into two parts by cutting; called also *hemisection*.

biseptate (bi-sep'tat) [*bi-* + *L. septum* partition] divided into two parts by a septum.

bisexual (bi-seks'u-al) [*bi-* + *L. sexus* sex] 1. having gonads of both sexes. Cf. *ambisexual*. 2. hermaphrodite. 3. having both active and passive sexual interests or characteristics. 4. capable of the function of both sexes; cf. *unisexual*. 5. both heterosexual and homosexual. 6. an individual who is both heterosexual and homosexual. 7. of, relating to, or involving both sexes, as bisexual reproduction; see *sexual reproduction*, under *reproduction*.

bisexuality (bi-seks'u-al'i-te) 1. the condition of being bisexual or of being a bisexual. 2. hermaphroditism.

bisferious (bis-fe're-us) [*L. bis* twice + *ferire* to beat] having two beats; usually refers to a widely notched arterial pulse, sometimes palpable.

Bishop's sphygmoscope (bish'ups) [Louis Faugères Bishop, American physician, 1864-1941] see under *sphygmoscope*.

bishydroxycoumarin (bis'hi-drok'se-ko'o'mah-rin) [USP] dicumarol.

bisiliac (bi-sil'e-ak) [*L. bis* twice + *iliac*] pertaining to both iliac bones or to any two corresponding points on the two iliac bones.

bis in die (bis in de'a) [*L.*] twice a day; abbreviated b.d. or b.i.d.

bismuth (biz'muth) [*L. bismuthum*] a silver-white metal; atomic number 83; atomic weight 208.980; symbol Bi: its salts have been used in inflammatory diseases of the stomach and intestine, and in the treatment of syphilis. Since the introduction of antibiotics, treatment with bismuth has declined. **b. albuminate**, a white or grayish insoluble powder formerly used for intestinal and gastric cramps. **b. and ammonium citrate**, a white crystalline compound formerly used as an astringent in intestinal irritation. **b. arsaniolate**, a compound, $NH_2C_6H_4 \cdot AsO$, formerly used in the treatment of syphilis. **b. benzoate**, a whitish tasteless powder, $Bi(C_6H_5CO_2)_3 \cdot Bi(OH)_3$, formerly used as an external and internal antiseptic. **b. betanaphthol**, a light brown insoluble aromatic powder, $(C_{10}H_7 \cdot O)_3 \cdot Bi \cdot 3H_2O$, formerly used as an intestinal astringent and antiseptic. **b. borophenate**, a compound formerly used as an antiseptic dusting powder. **b. carbonate**, basic, b. subcarbonate. **b. cerium salicylate**, a bismuth salt in the form of a pinkish, insoluble powder, formerly used in enteritis, diarrhea, etc. **b. chrysophanate**, an amorphous yellow powder, $(C_{15}H_5O_4)_3 \cdot Bi_2O_3$, resulting from the mixture of chrysarobin and bismuth hydroxide; formerly used in skin diseases. **b. citrate**, an amorphous powder, $Bi_2C_6H_5O_7$, used in pharmacy and in the preparation of other bismuth remedies. **b. ethyl camphorate**, a bismuth preparation, $(C_{12}H_{11}O_4)_3 \cdot Bi$, containing 23.5 per cent of bismuth; formerly used as an antisyphilitic. **b. glycolylarsanilate**, glycolbiarsol. **b. magma**, milk of bismuth. **b. nitrate**, $Bi(NO_3)_3 \cdot 5H_2O$, formerly used in diarrhea. **b. oxybromide**, an impalpable yellowish powder, $BiOBr$, to be given in a tragacanth emulsion; formerly used in nervous dyspepsia. **b. oxychloride**, a white powder, sometimes known as pearl white, $BiOCl$, formerly used as a local antiseptic. **b. oxyiodide**, a brownish-red powder, $BiOI$, formerly used as a local antiseptic. **b. oxyiodopyrogallate**, a fine, yellowish-red powder, $C_6H_2(OH)_2 \cdot O \cdot Bi(OH)_3$, formerly used as a surgical antiseptic powder. **b. permanganate**, a black bulky powder, $Bi(MnO_4)_3$, formerly used as an antiseptic dusting powder. **b. phosphate**, a white odorless powder, $BiPO_4$, formerly used as an intestinal antiseptic. **b. and potassium tartrate**, a white odorless powder, $C_4H_2O_9 \cdot Bi_3K \cdot 4H_2O$, formerly used intramuscularly in syphilis. **b. pyrogallate**, a yellow powder, $C_6H_3 \cdot OH \cdot O \cdot O \cdot BiOH$, formerly used as an internal and external antiseptic. **b. salicylate**, a white, tasteless, and insoluble powder formerly used as an intestinal antiseptic. **b. sodium tartrate**, a compound, $BiNa(C_4H_4O_6)_2$, formerly used in the treatment of syphilis. **b. sodium triglycollamate**, double salt of sodium bismuthyl triglycollamate and disodium triglycollamate; formerly used for lupus erythematosus and chronic syphilis. **b. subcarbonate**, a white to yellowish white powder, $(BiO)_2CO_3 \cdot H_2O$, yielding at least 90 per cent Bi_2O_3 ; it is used as a topical protectant to relieve skin irritations, and it has been used internally as an antacid and astringent. Called also *basic bismuth carbonate*. **b. subgalate**, a basic salt, $Bi(OH)_2 \cdot C_7H_5O_6$, which on drying yields 52 to 57 per cent of bismuth trioxide; formerly used as an astringent and protective in the treatment of ulcerative colitis, dysentery, and diarrhea. **b. subnitrate** [USP], a basic salt, $BiO \cdot NO_3 \cdot H_2O$, which on ignition yields not less than 71 per cent of bismuth trioxide, occurring as a white, slightly hygroscopic powder; used as a pharmaceutical necessity, and formerly as an antacid, antiseptic, and radiopaque medium. Called also *b. white* and *Spanish water*. **b. subsalicylate**, a basic salt, $C_7H_5BiO_4$, which on ignition yields 62 to 66 per cent bismuth trioxide; it has been given orally in the treatment of enteritis and intramuscularly in the treatment

of syphilis, lupus erythematosus, and necrotizing ulcerative gingivitis. **b. tannate**, a compound formed by the action of tannic acid on bismuth hydroxide; formerly used as an astringent in diarrhea. **b. tribromphenate**, a yellow powder, $C_{12}H_5BiBr_3O_3$, formerly used as a topical antiseptic. **b. white**, b. subnitrate.

bismuthia (biz-mu'the-ah) blue discoloration of the skin and mucous membranes as the result of the administration of bismuth compounds.

bismuthism (biz'muth-izm) bismuthosis.

bismuthosis (biz'mu-tho'sis) chronic bismuth poisoning, characterized by anuria, stomatitis, dermatitis, and diarrhea.

bisobrin lactate (bis'o-brin) chemical name: meso-1,1'-tetramethylenebis[1,2,3,4-tetrahydro-6,7-dimethoxyisoquinoline] di-lactate; a fibrinolytic agent, $C_{26}H_{36}N_2O_4 \cdot 2C_3H_5O_3$.

2,3-bisphosphoglycerate (bis-fos'fo-glis'er-ät) a salt or ester of bisphosphoglyceric acid; it is contained in red blood cells, where it plays a role in liberating oxygen from hemoglobin in the peripheral circulation. It is also an intermediate in the conversion of 3-phosphoglycerate to 2-phosphoglycerate. Called also **2,3-diphosphoglycerate**.

bispore (bi'spör) one of two asexual spores produced by the red algae.

bisque (bisk) [Fr.] biscuit. **hard b.**, **soft b.**, see under *biscuit*.

bistephanic (bi'ste-fan'ik) pertaining to the two stephanions, especially to the shortest distance between them (bistephanic width).

Biston betularia (bis'ton be-tu-la're-ah) the peppered moth, used in the study of industrial melanism.

bistort (bis'tort) [L. *bis* twice + *tortus* twisted] the plant, *Polygonum bistorta*; its root [L. *bistortae radix*] contains tannins and has mild astringent and tonic properties.

bistoury (bis'too-re) [Fr. *bistouri*] a long narrow surgical knife, straight or curved, used for incising abscesses and enlarging sinuses, fistulas, etc.

bistratal (bi-strat'al) [*bi* + L. *stratum* layer] disposed in two layers.

bisulfate (bi-sul'fät) an acid sulfate (not to be confused with *disulfate*).

bisulfide (bi-sul'fid) disulfide.

bisulfite (bi-sul'fit) an acid sulfite.

bitartrate (bi-tar'trät) any salt containing the anion $C_4H_5O_6^-$ derived from the diacid tartaric acid ($C_4H_6O_6$).

bite (bit) 1. seizure with the teeth. 2. a wound or puncture made by the teeth or other mouth parts of a living organism. 3. an impression made by closure of the teeth upon a thin sheet of some malleable material, e.g., wax. 4. occlusion, def. 3. **balanced b.**, balanced occlusion. **check b.**, a thin sheet of wax or paraffin placed between the teeth in the mouth and used as a check upon the teeth in the dental articulator. **closed b.**, dental malocclusion in which the mandible protrudes; that is, the incisal edges of the mandibular anterior teeth extend lingually past the incisal edges of the maxillary, approaching the lingual gingival margin, when the jaws are in habitual occlusion. See also *retrusion*. **cross b.**, crossbite. **edge-to-edge b.**, **end-to-end b.**, occlusion in which the incisors of both jaws meet along the incisal edges when the jaws are in centric or habitual occlusion. **open b.**, a condition marked by failure of certain opposing teeth to establish occlusal contact when the jaws are closed, usually confined to the anterior teeth; called also *apertognathia*. **over b.**, overbite. **stork b's**, 1. capillary flames. 2. nevi flammeus. **underhung b.**, a characteristic of mandibular prognathism in which the incisal edges of the mandibular anterior teeth extend labially to the incisal edges of the maxillary anterior teeth when the jaws are in habitual occlusion. **wax b.**, an impression, made simultaneously, of both the upper and the lower jaw, by having the subject bite on a double layer of soft baseplate wax. **X-b.**, crossbite.

bite-block (bit'blok) occlusion rim; see under *rim*.

bitegage (bit'gāj) a device used in prosthetic dentistry as an aid in securing proper occlusion of the maxillary and mandibular teeth.

bitelock (bit'lok) a device used in dentistry for retaining the occlusion rims in the same relation outside of the mouth which they occupied in the mouth.

bitemporal (bi-tem'po-ral) pertaining to both temples or temporal bones.

biteplate (bit'plät) a tooth- and tissue-borne appliance, usually fabricated of plastic and wire and worn in the palate; used as a diagnostic or therapeutic adjunct in orthodontics or prosthodontics. Sometimes used for temporomandibular joint disorders, or as a diagnostic splint in full mouth restorations.

biterminal (bi-ter'min-al) performed by using two terminals of an alternating current.

bite-wing (bit'wing) a wing or fin attached along the center of the tooth side of a dental x-ray film and bitten on by the patient; used for making radiographic projections showing simultaneously

the corona of the teeth in both dental arches and their contiguous periodontal tissues.

bithionol (bithi'o-nol) chemical name: 2,2'-thiobis(4,6-dichlorophenol). A bacteriostatic agent, $C_{12}H_8Cl_4O_2S$, especially effective against gram-positive cocci; formerly used in the formulation of surgical soap compositions. Called also *TBP*.

Bithynia (bi-thin'ē-ah) a genus of snails, species of which are the intermediate hosts of *Opisthorchis*. **B. longicor'nus**, *Alcimna longicornis*.

Bitis (bi'tis) a genus of venomous, brightly colored, thick-bodied, viperine snakes, possessing heart-shaped heads; it includes the puff adder (*B. arientans*), Gaboon viper (*B. gabonica*), and rhinoceros viper (*B. nasicornis*). See table accompanying *snake*.

bitolterol (bi-töl'ter-öl) chemical name: 4-methylbenzoic acid 4-[2-[(1,1-dimethylethylamino)-1-hydroxyethyl]-1,2-phenylene ester; a bronchodilator, $C_{28}H_{31}NO_5$.

Bitot's spots (patches) (be'tōz) [Pierre A. Bitot, Bordeaux physician, 1822-1888] see under *spot*.

bitrochanteric (bi'tro-kan-ter'ik) pertaining to both trochanters on one femur or to both greater trochanters.

bitter (bi'ter) 1. having an austere and unpalatable taste, like that of quinine. 2. [pl.] a medicinal agent that has a bitter taste; used as a tonic, alternative, or appetizer. Called also *amara*. **aromatic b's**, bitter vegetable drugs that have an aromatic quality. **simple b's**, any drug with a bitter taste that has no general influence upon the system except through its action upon the stomach or intestine. **styptic b's**, bitter drugs with a markedly astringent quality. **Swedish b's**, compound tincture of aloes.

bitterling (bi'ter-ling) see *bitterling test*, under *tests*.

bitters (bi'terz) a popular name for various alcoholic medicines and drinks; see under *bitter*.

Bittorf's reaction (bit'orfs) [Alexander Bittorf, German physician, 1876-1949] see under *reaction*.

bitumen (bi-tu'men) [L.] any one of various natural and artificial dry petroleum products. **sulfonated b.**, ichthammol.

bituminosis (bi'tu-mi-no'sis) a form of pneumoconiosis due to the dust from soft coal.

biurate (bi'u-rät) an acid urate; a monobasic salt of uric acid.

biuret (bi'u-ret) [L. *bis* twice + *urea*] a derivative of urea, $H_2NCO \cdot NH \cdot CO \cdot NH_2$, equivalent to two molecules of urea less one of ammonia; called also *allophanamide*. See also under *tests*.

bivalence (biv'ah-lens) [*bi* + L. *valens* powerful] the property of an atom of certain chemical elements of forming chemical bonds with two other atoms or groups.

bivalent (bi-va'lent, biv'ah-lent) 1. having a valence of two; characterized by bivalence. 2. denoting homologous chromosomes associated in pairs, during the zygotene stage of the first meiotic prophase, each of which splits (pachytene stage) into two sister chromatids to form a tetrad. Called also *divalent*.

bivalve (bi'valv) [*bi* + L. *valva* valve] having two valves, as the shells of such mollusks as clams.

Bivalvia (bi-val've-ah) [*bi* + L. *valva* valve + *-ia*] Pelecypoda.

biventer (bi'ven-ter) [*bi* + L. *venter* belly] a part or organ (as a muscle) with two bellies. **b. cer'vici**, musculus spinalis capitis.

biventral (bi-ven'tral) 1. having two bellies. 2. musculus digastricus.

biventricular (bi'ven-trik'u-lar) pertaining to or affecting both ventricles of the heart.

bivitelline (bi'vi-tel'in) having two yolks.

bixin (bi'xin) [L. *Bixa* a plant genus] an orange-red color or stain, $C_{28}H_{36}O_4$, from annatto.

bizygomatic (bi'zi-go-mat'ik) [*bi* + Gr. *zygōma* zygoma] pertaining to the two most prominent points on the two zygomatic arches. See also *bizygomatic breadth*, under *breadth*.

Bizzozero's cells, corpuscles, platelets (bit-sof' ser-ōz) [Giulio Bizzozero, Italian physician, 1846-1901] platelets.

Bjerrum's scotoma (sign) (byer'oomz) [Jannik Petersen Bjerrum, Danish ophthalmologist, 1851-1920] see under *scotoma*.

Bjerrum's screen (byer'oomz) [J. Bjerrum, Danish ophthalmologist, 1827-1892] tangent screen.

Bk chemical symbol for *berkelium*.

black (blak) reflecting no light or true color; of the darkest hue. **animal b.**, **bone-b.**, animal charcoal. **indulin b.**, nigrosin. **ivory b.**, animal charcoal. **lamp b.**, finely divided carbon deposited from the smoky flame of burning oils, rosin, etc. **Paris b.**, animal charcoal.

Black's formula (blaks) [J. A. Black, English army surgeon] see under *formula*.

Black's test (blaks) [Otis Fischer Black, American chemist, 1867-1933] see under *tests*.

Blackberg and Wanger's test (blak'berg, wang'gerz) [Solon Nathaniel Blackberg, Chicago physician, 1897-1962; J. O. Wanger] see under *tests*.

black haw (blak haw) see *Viburnum prunifolium* L. (Caprifoliaceae), a North American medicinal plant.

blackhead (blak/hed) 1. a comedo. 2. a disease of turkeys; see *histomoniasis* of turkeys.

blackleg (blak'leg) an acute anaerobic bacterial disease of cattle and sheep producing crepitant swelling in the musculature, caused by *Clostridium chauvoei*. Called also *symptomatic anthrax*, *blackquarter*, and *quarter evil*.

blackout (blak'owt) a condition characterized by failure of vision and momentary unconsciousness, due to diminished circulation to the brain.

blackquarter (blak kwor'ter) blackleg.

blacksnake (blak'snāk) usually *Pseudechis porphyriacus*, a large, semiaquatic, venomous, elapid snake of Australia, whose body is black on top and red underneath. See table accompanying *snake*. Also, *Coluber constrictor*, the American blacksnake or black racer.

blacktongue (blak-tung') pellagra in dogs.

bladder (blad'der) [L. *vesica*, *cystis*; Gr. *kystis*] a membranous sac, such as one serving as receptacle for a secretion; often used alone to designate the urinary bladder. Called also *vesica*. **allantoic b.**, a membranous sac formed in amphibians as an outgrowth of the cloaca for the storage of urine. **atonic b.**, a condition marked by a dilated, poorly contracting urinary bladder without evidence of a lesion of the central nervous system. **atonic neurogenic b.**, neurogenic bladder due to destruction of the sensory nerve fibers from the bladder to the spinal cord, marked by the absence of control of bladder functions and of the desire to void, overdistention of the bladder, and an abnormal amount of residual urine; it is most frequently associated with *tabes dorsalis* (*tabetic b.*) and pernicious anemia, but may be seen in association with other diseases. Called also *paralytic b.* and *sensory paralytic b.* **automatic b.**, neurogenic bladder due to complete transection of the spinal cord above the sacral segments, marked by complete loss of micturition reflexes and bladder sensation, violent involuntary voiding, and an abnormal amount of residual urine. Called also *cord b.*, *reflex b.*, and *spastic b.* **autonomic b.**, autonomic b. **autonomous b.**, neurogenic bladder due to a lesion in the sacral portion of the spinal cord that interrupts the reflex arc which controls the bladder. The lesion may be in the cauda equina, conus medullaris, sacral roots, or pelvic nerve. It is marked by loss of normal bladder sensation and reflex activity, inability to initiate urination normally, and incontinence. Called also *denervated b.* and *nonreflex b.* **chyle b.**, cisterna chyli. **cord b.**, automatic b. **denervated b.**, autonomic b. **double b.**, reduplication of the bladder. **fasciculated b.**, a bladder which, from hypertrophy of the muscular coat, is ridged on its inner surface. **gall b.**, see *gallbladder*. **irritable b.**, a state of the bladder marked by increased frequency of contraction with associated desire to urinate. **motor paralytic b.**, neurogenic bladder due to impairment of the motor neurons or nerves controlling the bladder. The *acute* form is marked by painful distention and inability to initiate micturition, the *chronic* form by difficulty in initiating micturition, straining, decrease in size and force of stream, interrupted stream, and recurrent infection of the urinary tract. **nervous b.**, a colloquial term for a functional condition characterized by a constant desire to urinate without the power to do so completely. **neurogenic b.**, any condition of dysfunction of the urinary bladder caused by a lesion of the central or peripheral nervous system, as *atonic neurogenic b.*, *automatic b.*, *autonomous b.*, *motor paralytic b.*, and *uninhibited neurogenic b.* **nonreflex b.**, autonomic b. **paralytic b.**, atonic neurogenic b. **reflex b.**, automatic b. **sacculated b.**, a bladder with pouches between the hypertrophied muscular fibers. **sensory paralytic b.**, atonic neurogenic b. **spastic b.**, automatic b. **string b.**, a term sometimes erroneously used as a synonym for cord bladder; see *automatic b.* **tabetic b.**, see *atonic neurogenic b.* **uninhibited neurogenic b.**, neurogenic bladder due to a lesion in the region of the upper motor neurons with subtotal interruption of the corticospinal pathways, marked by urgency, frequent involuntary voiding, and small-volume threshold of activity. **urinary b.**, the musculomembranous sac, situated in the anterior part of the pelvic cavity, that serves as a reservoir for urine, which it receives through the ureters and discharges through the urethra. Called also *vesica urinaria* [NA].

Blainville's ear (blah'vel) [Henri Marie Ducrotay de Blainville, French zoologist, 1777-1850] see under *ear*.

Blake's disks (blākz) [Clarence John Blake, Boston otologist, 1843-1919] see under *disk*.

Blalock-Taussig operation (bla'lok taw'sig) [Alfred Blalock, American surgeon, 1899-1964; Helen Brooke Taussig, American pediatrician, born 1898] see under *operation*.

blanc (blaw) [Fr.] white. **b. fixe**, barium sulfate.

Blanchard's method, treatment (blanch'ardz) [Wallace Blanchard, American surgeon, 1848-1922] see under *treatment*.

Blancophor (blank'o-för) trademark for optical whitening agents (blankophores) chemically related to the sulfonamides, which produce brightness by absorbing invisible ultraviolet light and reflecting it as visible blue light. They are added to detergents,

paper, and textiles, and may produce phototoxic effects, e.g., phototoxic dermatitis; they may also produce allergic contact sensitization.

bland (bland) [L. *blandus*] mild or soothing.

Blandin's glands (blah-daz') [Philippe Frédéric Blandin, French surgeon, 1798-1849] see *glandulae linguales anteriores* and *ganglion submandibulares*.

Blandlube (bland'lüb) trademark for a preparation of mineral oil.

blankophore (blank'o-för) see *Blancophor*.

Blasius' duct (blah'se-ooz) [Gerhard Blasius (Blaes), Dutch anatomist of the 17th century] ductus parotideus.

blast (blast) [Gr. *blastos* germ] 1. an immature stage in cellular development before appearance of the definitive characteristics of the cell; used also as a word termination, as in adamantoblast, hematoblast, neuroblast, etc. See *blasto-*. 2. one of the small filamentous spindles formed by the splitting up of meres. See under *mere*. 3. [Anglo-Saxon *blast* a puff of wind] the wave of air pressure (*air concussion*) produced by the detonation of a high-explosive bomb, shell or other explosion. A wave of high-pressure velocity (shock wave) is created and this is followed by one of negative decreased velocity, exerting a suction-like action. Blast causes pulmonary concussion and hemorrhage (*lung blast*, *blast chest*), laceration of other thoracic and abdominal viscera, ruptured ear drums, and minor effects in the central nervous system. **immersion b.**, internal injury to seamen in the water caused by explosion of a depth bomb near them.

blastation (blas-ta'shun) any variation of the germ plasm that is inheritable.

blastema (blas-te'mah) [Gr. *blastēma* shoot] 1. the primitive substance from which cells are formed. 2. a group of cells that give rise to a new individual, in asexual reproduction, or to an organ or part, in either normal development or in regeneration.

blastemic (blas-tem'ik) pertaining to the blastema.

blastid (blas'tid) the site indicative of an organizing nucleus in a fertilized ovum.

blastide (blas'tid) blastid.

blastin (blas'tin) a substance that stimulates or increases cell proliferation; a substance providing alimentation for cells.

blasto- (blas'to) [Gr. *blastos* germ] a combining form denoting relationship to a bud or budding, particularly to an early embryonic stage, as to a primitive or formative element, cell, or layer.

Blastocaulis (blas'to-kaw'lis) a genus of microorganisms of the family Pasteuriaceae, order Hyphomicrobiales, made up of pear-shaped or globular cells with long slender stalks, attached to a firm substrate in fresh-water environments. The type species is *B. sphaerica*.

blastocoele (blas'to-sēl) blastocoele.

blastocelic (blas'to-se'lik) blastocoelec.

blastochyle (blas'to-kil) [*blasto-* + Gr. *chylos* juice] the fluid contained in the blastocoele.

blastocoele (blas'to-sēl) [*blasto-* + Gr. *koiolos* hollow] the fluid-filled cavity of the mass of cells (blastula) produced by cleavage of a fertilized ovum; see illustration under *blastula*. Sometimes spelled *blastocoele*. Called also *cleavage*, *segmentation*, or *subgerminal cavity*.

blastocoelec (blas'to-se'lik) pertaining to the blastocoele.

blastocyst (blas'to-sist) [*blasto-* + Gr. *kystis* bladder] the mammalian conceptus in the post-morula stage; it is like a blastula in having a fluid-filled cavity, unlike it in having the surface layer not exclusively embryoblast but mainly or entirely trophoblast, in having an eccentric embryoblast, and in not being limited to one germ layer.

Blastocystis (blas'to-sis'tis) a genus of yeasts of uncertain classification. **B. hom'inis**, microorganism appearing as a spherical cystic structure, 5 to 15μ in diameter, frequently found in human feces.

blastocyte (blas'to-sit) [*blasto-* + Gr. *kytos* hollow vessel] an embryonic cell that has not yet become differentiated.

blastocytoma (blas'to-si-to'mah) blastoma.

Blastodendrion (blas'to-den'dre-on) (obs.) *Candida*.

blastodendriosis (blas'to-den'dre-o'sis) candidiasis.

blastoderm (blas'to-derm) [*blasto-* + Gr. *derma* skin] collectively, the mass of cells produced by cleavage of a fertilized ovum, forming the hollow sphere of the blastula, or the cellular cap above a floor of segmented yolk in the discoblastula of teleostichal eggs; see illustration under *blastula*. Called also *germinal membrane*, or *membrana germinativa*. **bilaminar b.**, the stage of development in which the embryo is represented by two primary layers: the ectoderm and the endoderm. See *gastrula*. **embryonic b.**, the region of the blastoderm forming the embryo proper. **extraembryonic b.**, the region of the blastoderm forming membranes rather than the embryo proper. **trilaminar b.**, the stage of development in which the embryo is represented by the three primary layers: the ectoderm, the mesoderm, and the endoderm.

blastodermal (blas'to-der'mal) pertaining to or derived from the blastoderm.

blastodermic (blas'to-der'mik) blastodermal.

blastodisc (blas'to-disk) [*blasto-* + Gr. *diskos* disk] the convex structure formed by the blastomeres at the animal pole of an ovum undergoing incomplete cleavage.

blastogenesis (blas'to-jen'ē-sis) 1. the development of an individual from a blastema, that is, by asexual reproduction. 2. transmission of inherited characters by the germ plasm. 3. the morphological transformation of small lymphocytes into larger cells resembling blast cells, occurring on exposure to phytohemagglutinin or to antigens to which the donor is immunized.

blastogenetic (blas'to-jē-net'ik) blastogenic.

blastogenic (blas'to-jen'ik) originating in the germ or germ cell; pertaining to or characterized by blastogenesis.

blastogeny (blas-toj'ē-ne) [*blasto-* + Gr. *genesis* production] the germ history of an organism or species.

blastokinin (blas'to-ki'nin) a globulin found in the uterine lumen of some mammals near the time of blastocyst implantation; called also *uteroglobulin*.

blastolysis (blas-tol'i-sis) [*blasto-* + Gr. *lysis* dissolution] destruction or splitting up of germ substance.

blastolytic (blas'to-lit'ik) pertaining to, characterized by, or producing blastolysis.

blastoma (blas-to'mah), pl. *blastomas* or *blastomata* [*blasto-* + *-oma*] a neoplasm composed of embryonic cells derived from the blastema of an organ or tissue; called also *blastocytoma*. **pluricentric b.**, a blastoma that arises from a number of scattered cells or groups of cells. **unicentric b.**, a blastoma arising from one cell or from a single group of cells.

blastomatoid (blas-to'mah-toid) [*blastoma* + Gr. *eidos* form] resembling blastomas.

blastomatosis (blas'to-mah-to'sis) the formation of blastomas; tumor formation.

blastomatous (blas-to'mah-tus) pertaining to or of the nature of blastoma.

blastomere (blas'to-mēr) [*blasto-* + Gr. *meros* a part] one of the cells produced by cleavage of a fertilized ovum, forming the blastoderm; called also *segmentation sphere* and *cleavage cell*.

blastomerotomy (blas'to-mēr-ot'o-me) [*blastomere* + Gr. *tomē* a cut] destruction of a blastomere or of blastomeres; called also *blastotomy*.

blastomogenic (blas'to-mo-jen'ik) producing or tending to produce new growths or tumors.

blastomogenous (blas'to-moj'ē-nus) blastomogenic.

Blastomyces (blas'to-mi'sēz) [*blasto-* + Gr. *mykēs* fungus] a genus of thermal dimorphic imperfect fungi of the family Moniliaceae, order Moniliales, which grow as mycelial forms at room temperature and as yeastlike forms at body temperature. The term is applied to the yeasts pathogenic for man and animals. **B. brasiliensis**, *Paracoccidioides brasiliensis*. **B. coccidioides**, former name for *Coccidioides immitis*. **B. dermatitidis**, the etiologic agent of North American blastomycosis; its perfect, or sexual, stage is known as *Ajellomyces dermatitidis*. Formerly called *Cryptococcus gilchristi* and *Endomyces capsulatus*, *E. epidermatidis*, and *E. epidermidis*. **B. farciminosus**, former name for *Histoplasma farciminosus*.

blastomyces (blas'to-mi'sēz), pl. *blastomyces*'tes. A fungus of the genus *Blastomyces*.

blastomycete (blas'to-mi'sēt) any organism of the genus *Blastomyces*; also, any yeastlike organism.

blastomycetes (blas'to-mi-se'tēz) plural of *blastomyces* and *blastomycete*.

blastomycin (blas'to-mi'sin) a sterile broth filtrate of a culture of *Blastomyces dermatitidis*; it is injected intracutaneously as a test for blastomycosis.

Blastomycoides immitis (blas'to-mi-ko'i'dēz im-mi'tis) former name for *Coccidioides immitis*.

blastomycosis (blas'to-mi-ko'sis) 1. infection caused by organisms of the genus *Blastomyces*. 2. a general term for any infection caused by a yeastlike organism. **Brazilian b.**, paracoccidioidomycosis. **cutaneous b.**, see *North American b.* **European b.**, infection caused by *Cryptococcus neoformans*, especially the cutaneous form of cryptococcosis (q.v.). **keloidal b.**, an infection caused by *Lobo lobo*, characterized by the appearance of red, smooth, hard cutaneous nodules which, histologically, have the appearance of a keloid. Called also *Lobo's disease*. **North American b.**, an infection usually acquired through the pulmonary route, caused by *Blastomyces dermatitidis*, and marked by suppurating tumors in the skin (*cutaneous b.*) or by lesions in the lungs, bones, subcutaneous tissues, liver, spleen, and kidneys (*systemic b.*). Called also *Gilchrist's disease* and *Chicago disease*. **South American b.**, paracoccidioidomycosis. **systemic b.**, see *North American b.*

blastoneuropore (blas'to-nu'ro-pōr) [*blasto-* + Gr. *neuron* nerve + *poros* opening] in certain embryos, a temporary aperture formed by the coalescence of the blastopore and neuropore.

blastophthoria (blas'tof-tho're-ah) [*blasto-* + Gr. *phthora* corruption] degeneration of the germ cells.

blastophthoric (blas'tof-tho'rik) pertaining to, characterized by, or producing blastophthoria.

blastophyllum (blas'to-fil'um) [*blasto-* + Gr. *phyllon* leaf] a primitive germ layer.

blastophyly (blas-toff'i-le) [*blasto-* + Gr. *phylē* tribe] the tribal history, or arrangement, of organisms.

blastopore (blas'to-pōr) [*blasto-* + Gr. *poros* opening] the opening of the archenteron to the exterior of the embryo, at the gastrula stage; called also *archistome*, *protostoma*, and *anus* of *Rusconi*.

blastosphere (blas'to-sfēr) [*blasto-* + Gr. *sphaira* sphere] blastula.

blastospore (blas'to-spōr) [*blasto-* + *spore*] a spore formed by budding, as in yeast.

blastostroma (blas'to-stro'mah) that part of the egg which takes an active part in the formation of the blastoderm.

blastotomy (blas-tot'o-me) blastomerotomy.

blastozoid (blas'to-zo'oid) [*blasto-* + Gr. *zōo-eidēs* like an animal] an individual developed as a result of asexual reproduction. Cf. *oozoid*.

blastula (blas'tu-lah), pl. *blastulae* [L.] the usually spherical structure produced by cleavage of a fertilized ovum, consisting of a single layer of cells (blastoderm) surrounding a fluid-filled cavity (blastocoele); called also *blastosphere*. See also *discoblastula*.

Section of a blastula.

blastulae (blas'tu-le) [L.] plural of *blastula*.

blastular (blas'tu-lar) pertaining to the blastula.

blastulation (blas'tu-la'shun) conversion of morula to blastula by development of a central cavity (blastocoele or cleavage cavity).

Blatta (blat'ah) [L.] a genus of insects—the cockroaches. The dried insects exert diuretic action, but are no longer used in medicine. They may act as the intermediate host of *Raillietina madagascariensis* and *Gongylonema scutum*. **B. (Blatella) germanica**, the German roach, now widely distributed, is called the Croton bug. It is light brown in color and small in size. **B. orientalis**, the black beetle, a common European species.

Blaud's pills (blōz) [Pierre *Blaud*, French physician, 1774–1858] ferrous carbonate pills; see under *pill*.

blaze (blāz) an abnormal streak or spot of white in the hair of the scalp; called also *leucismus pilorum*.

bleaching (blēch'ing) the act or process of removing stains or color by chemical means. **coronal b.**, the use of a chemical agent, usually but not necessarily in combination with heat, to remove discolorations from the crown of a pulpless tooth.

bleb (bleb) a large flaccid vesicle, usually at least 1 cm. in diameter.

bleeder (blēd'er) 1. one who bleeds freely or is subject to hemorrhagic diathesis. 2. any large blood vessel cut during a surgical procedure. 3. one who lets blood; a phlebotomist.

bleeding (blēd'ing) 1. the escape of blood from an injured vessel. 2. the letting of blood, phlebotomy. **functional b.**, bleeding from the uterus when no organic lesions are present.

implantation b., bleeding occurring at the time of implantation of the fertilized ovum in the decidua, being due to leakage of blood into the uterine lumen from disrupted blood vessels about the implantation site. Cf. *placental b.* **occult b.**, escape of such a small amount of blood that it can be detected only by chemical test or by examination with the microscope or spectroscope. **placental b.**, bleeding occurring from the uterus during the early weeks of pregnancy, when the maternal blood vessels are being eroded. Cf. *implantation b.* **summer b.**, dermatorrhagia parasitica.

blenn- see *blenno-*.

blennadenitis (blen-'ad-ē-ni'tis) [blenn- + Gr. *adēngland* + -itis] inflammation of mucous glands.

blennaphrosin (blen-af-'ro-sin) a preparation of a double salt of potassium nitrate and methenamine with extract of kava-kava; formerly used in gonorrhea and cystitis.

blennemesis (blen-em-'ē-sis) [blenn- + Gr. *emesis* vomiting] the vomiting of mucus.

blenno-, blenn- (blen-'no, blen') [Gr. *blennos* mucus] a combining form denoting relationship to mucus.

blennogenic (blen-'no-jen'ik) [blenno- + Gr. *gennan* to produce] producing mucus.

blennogenous (blen-noj-'ē-nus) blennogenic.

blennoid (blen-'noid) [blenn- + Gr. *eidōs* form] resembling mucus.

blennorrhagia (blen-'no-ra'je-ah) [blenno- + Gr. *rhēgnynai* to break forth] 1. any excessive discharge of mucus; blennorrhea. 2. gonorrhea.

blennorrhagic (blen-'no-raj'ik) pertaining to or of the nature of blennorrhagia.

blennorrhea (blen-'no-re'ah) [blenno- + Gr. *rhoia* flow] a free discharge from the mucous surfaces, especially a gonorrheal discharge from the urethra or vagina; gonorrhea. **b. adulto-rum**, gonorrheal ophthalmia. **inclusion b.**, inclusion conjunctivitis. **b. neonato-rum**, ophthalmia neonatorum. **Stoerk's b.**, blennorrhea with profuse chronic suppurative producing hypertrophy of the mucosa of the nose, pharynx, and larynx.

blennorrheal (blen-'no-re'al) pertaining to or of the nature of blennorrhea.

blennostasis (blen-nos'tah-sis) [blenno- + Gr. *stasis* standing] the suppression of an abnormal mucous discharge, or the correction of an excessive one.

blennostatic (blen-'no-stat'ik) [blenno- + Gr. *histanai* to halt] correcting of excessive mucous secretion.

blennothorax (blen-'no-tho'raks) [blenno- + Gr. *thōrax* chest] an accumulation of mucus in the chest.

blennuria (blen-nu're-ah) [blenn- + Gr. *ouron* urine] the existence of mucus in the urine.

Blenoxane (blen-oks'ān) trademark for a preparation of bleomycin sulfate.

bleomycin (bleo-mi'sin) a polypeptide antibiotic mixture having antineoplastic properties, obtained from cultures of *Streptomyces verticellus*, or the same substance obtained by other means; it is separable into 13 fractions, including bleomycins A and B and their components. Evidence indicates that bleomycin inhibits cell division, thymidine incorporation into DNA, and DNA synthesis. **b. sulfate**, a mixture of the sulfate salts of the components of bleomycin, especially that of bleomycin A₂. *Sterile bleomycin sulfate* [USP] is used alone or in conjunction with other chemotherapeutic agents in the palliative treatment of squamous cell carcinoma of the head and neck, Hodgkin's disease and other lymphomas, and testicular tumors; administered intravenously, intramuscularly, intra-arterially, or subcutaneously.

Bleph (blef) trademark for preparations of sulfacetamide sodium.

blephar- see *blepharo-*.

blepharadenitis (blef'ar-ad'ē-ni'tis) [blephar- + Gr. *adēngland* + -itis] inflammation of the meibomian glands; called also *blepharoadenitis*.

blepharal (blef'ah-ral) pertaining to the eyelids.

blepharectomy (blef'ah-rek'to-me) [blephar- + Gr. *ektomē* excision] excision of a lesion of the eyelids.

blepharolosis (blef'ah-rel-o'sis) [blephar- + Gr. *eilein* to roll] entropion.

blepharism (blef'ah-rizm) [L. *blepharismus*; Gr. *blepharizein* to wink] spasm of the eyelids; continuous blinking.

blepharitis (blef'ah-ri'tis) [blephar- + -itis] inflammation of the eyelids. **b. angula'ris**, blepharitis ulcerosa affecting the medial commissure (angle) and blocking the punctum lacrimale. **b. cilia'ris**, **b. margina'lis**, a chronic inflammation of the hair follicles and sebaceous gland openings of the margins of the eyelids; called also *blear eye*, *lippa*, and *lippitude*. **nonulcerative b.**, blepharitis often associated with seborrhea of the scalp, brows, and skin behind the ears, marked by greasy scaling of the margins of the lids, scales around the lashes, hyperemia, and thickening; called also *seborrheic b.* and *squamous seborrheic b.* **seborrheic b.**, nonulcerative **b.** **b. squamo'sa**, a marginal blepharitis in which the edges of the lids are covered with scales. **squamous seborrheic b.**, nonulcerative **b.** **b. ulcero'sa**, an ulcerous form of marginal blepharitis.

blepharo-, blephar- (blef'ah-ro, blef'ahr) [Gr. *blepharon* eyelid] a combining form denoting relationship to an eyelid or eyelash.

blepharoadenitis (blef'ah-ro-ad'ē-ni'tis) blepharadenitis.

blepharoadenoma (blef'ah-ro-ad'ē-no'mah) adenoma of the eyelid.

blepharoatheroma (blef'ah-ro-ath'er-o'mah) an encysted tumor or sebaceous cyst of an eyelid.

blepharochalasis (blef'ah-ro-kal'ah-sis) [blepharo- + Gr. *chala-sis* relaxation] relaxation of the skin of the eyelid, due to atrophy of the intercellular tissue; called also *dermatolysis palpebrarum*.

blepharochromidrosis (blef'ah-ro-kro-mi-dro'sis) [blepharo- + Gr. *chrōma* color + Gr. *hidrōs* sweat + -osis] excretion of a sweat containing pigment from the eyelids, usually of a bluish shade.

blepharoclonus (blef'ah-rok'lo-nus) [blepharo- + *clonus*] clonic spasm of the orbicularis oculi muscle, appearing as an increased winking of the eye.

blepharoconjunctivitis (blef'ah-ro-kon-junk'ti-vi'tis) inflammation of the eyelids and conjunctiva.

blepharodiastasis (blef'ah-ro-di-as'tah-sis) [blepharo- + Gr. *diastasis* separation] excessive separation of the eyelids, causing the fissure to be very wide.

blepharuncus (blef'ah-rong'kus) [blepharo- + Gr. *onkos* bulk, mass] a tumor on the eyelid.

blepharopachynsis (blef'ah-ro-pak-in'sis) [blepharo- + Gr. *pachynsis* thickening] abnormal thickening of an eyelid.

blepharophimosis (blef'ah-ro-fi-mo'sis) [blepharo- + Gr. *phimō-sis* a muzzling] abnormal narrowness of the palpebral fissures in the horizontal direction, caused by lateral displacement of the inner canthi.

blepharoplast (blef'ah-ro-plast') [blepharo- + Gr. *plassein* to form] basal body.

blepharoplasty (blef'ah-ro-plas'te) plastic surgery of the eyelids.

blepharoplegia (blef'ah-ro-ple'je-ah) [blepharo- + Gr. *plēgē* stroke] paralysis of an eyelid (Desmarres); paralysis of both muscles of the eyelid (Graefe-Saemisch).

blepharoptosis (blef'ah-ro-to'sis) [blepharo- + Gr. *ptōsis* a fall] drooping of an upper eyelid due to paralysis; ptosis.

Blepharoptosis.

blepharopyorrhea (blef'ah-ro-pi-ō-re'ah) [blepharo- + Gr. *pyon* pus + *rhoia* flow] purulent ophthalmia.

blepharorrhaphy (blef'ah-ror'ah-fe) [blepharo- + Gr. *rhaphe* suture] the operation of suturing the eyelids together; tarsorrhaphy.

blepharospasm (blef'ah-ro-spaz'm) [blepharo- + Gr. *spasmos* spasm] tonic spasm of the orbicularis oculi muscle, producing more or less complete closure of the eyelids. **essential b.**, blepharospasm that is present when there is no abnormality of the eye, or trigeminal (fifth cranial) nerve. **symptomatic b.**, blepharospasm occurring in association with a lesion of the eye or of the trigeminal (fifth cranial) nerve.

blepharosphincterectomy (blef'ah-ro-sfingkt'er-ek'to-me) [blepharo- + Gr. *sphinkter* sphincter + *ektomē* excision] excision of some of the fibers of the orbicularis muscle, together with overlying skin, to relieve pressure of the eyelid on the cornea in blepharospasm.

blepharostat (blef'ah-ro-stat') [blepharo- + Gr. *histanai* to cause to stand] an instrument for holding the eyelids and keeping them apart during surgical operations on the eye.

blepharostenosis (blef'ah-ro-stē-no'sis) [blepharo- + Gr. *stenōsis* a narrowing] an abnormal narrowing of the palpebral slit.

blepharosynechia (blef'ah-ro-si-ne'ke-ah) [blepharo- + Gr. *synechia* a holding together] the growing together or adhesion of the eyelids.

blepharotomy (blef'ah-rot'o-me) [blepharo- + Gr. *tomē* a cut] surgical incision of an eyelid; tarsotomy.

blepharoxysis (blef'ah-ro-zi'sis) [blepharo- + Gr. *xysis* a polishing] Hippocrates' treatment for trachoma, consisting of rubbing the inner surface of the lid with wool wound round a core of wood, followed by cauterization and instillation of copper peroxide.

Blessig's cysts (spaces), (lacunae), groove (bles'sigz) [Robert Blessig, German physician, 1830-1878] see under *cyst* and *groove*.

blight (blīt) any fungal disease of plants.

blind (blind) not having the sense of sight; see *blindness*.

blindgut (blind'gut) the cecum, def. 1.

blindness (blind'nes) lack or loss of ability to see; lack of per-

ception of visual stimuli, due to disorder of the organs of sight or to lesions in certain areas of the brain; see also *amaurosis*. **amnesic color b.**, inability to recognize or to name a hue, although it is correctly perceived. **blue b.**, imperfect perception of the blue spectrum; see *tritanopia*. **blue-yellow b.**, imperfect perception of blue and yellow tints; see *tetartanopia*, def. 2. **Bright's b.**, former term for dimness or complete loss of sight occurring in uremia, without lesion of the retina or optic disk. **color b.**, a term colloquially and incorrectly applied to any deviation from normal perception of hues; see *deutanopia*, *protanopia*, etc. **concussion b.**, functional blindness due to violent explosions, as by high explosive shells, bombs, etc. **cortical b.**, blindness due to a lesion of the cortical visual center. **cortical psychic b.**, loss of optic memory image and of spatial orientation due to lesion of the optic lobe. **day b.**, hemeralopia. **epidemic b.**, a form of avian leukosis with blindness and misshapen pupil or irregular depigmentation of the iris in one or both eyes. **flight b.**, amaurosis fugax caused by high centrifugal forces encountered in aviation. **functional b.**, inability to see, occurring without disorder of the organs of sight. **green b.**, imperfect perception of green tints; see *deutanopia*. **legal b.**, blindness as defined by law; in most states of the United States, maximal visual acuity of the better eye, after correction, of 20/200 or less, with a total diameter of the visual field in that eye of 20 degrees or less. **letter b.**, inability to recognize individual letters. **mind b.**, psychic b. **moon b.**, periodic ophthalmia. **night b.**, nyctanopia, def. 1. **note b.**, inability to read musical notes, due to a lesion of the central nervous system. **object b.**, inability to recognize the nature and purpose of objects seen. **psychic b.**, inability to recognize the nature of the source of visual stimuli, because of some lesion of the brain; called also *mind b.* and *soul b.* **red b.**, imperfect perception of red tints; see *protanopia*. **red-green b.**, imperfect perception of red and green tints. **river b.**, onchocerciasis caused by *Onchocerca volvulus* (q.v.). **snow b.**, dimness of vision, usually temporary, due to the glare of the sun upon snow. **soul b.**, psychic b. **syllabic b.**, inability to recognize syllables. **taste b.**, inability to perceive certain gustatory stimuli, some substances producing no sensation of taste. **text b.**, alexia. **total b.**, complete absence of light perception. **twilight b.**, aknephscopia. **word b.**, alexia.

blister (blis'ter) [L. *vesicula*] a vesicle, especially a bulla. **blood b.**, a vesicle having bloody contents; it may be caused by a pinch or bruise, but is often due to persistent friction. **fever b.**, herpes simplex, usually of the face. **Marochetti's b's**, small blisters seen under the tongue in rabies. **water b.**, one with clear watery contents.

bloat (blōt) 1. tympany of the stomach or cecum. 2. enteritis in young rabbits, accompanied by gaseous distention of the abdomen.

Bloch (blok), Konrad. German biochemist in the United States, born 1912; co-winner, with Feodor Lynen, of the Nobel prize for medicine and physiology in 1964, for investigations in biosynthesis of cholesterol and fatty acids.

Bloch's scale (bloks) [Marcel Bloch, French pathologist, 1885-1925] see under *scale*.

Bloch-Sulzberger syndrome (blok-sulz-berg'er) [Bruno Bloch, Swiss dermatologist, 1878-1933; Marion Baldur Sulzberger, American dermatologist, born 1895] incontinentia pigmenti.

block (blok) 1. an obstruction or stoppage. 2. a term introduced by Romanes to express the obstruction of the passage of muscular or nervous impulses. 3. regional anesthesia; see under *anesthesia*. **adrenergic b.**, see under *blockade*. **air b.**, interference with the normal inflation and deflation of the lungs and with the pulmonary blood flow, produced by the leakage of air from the pulmonary alveoli into the interstitial tissue of the lung (interstitial emphysema) and into the mediastinum (mediastinal emphysema). **alveolar-capillary b.**, interference in the normal diffusion of gases across the membrane between the alveolar spaces and the pulmonary capillaries. **arborization b.**, a gross intraventricular conduction defect in the distal ramifications of the bundle branches. **bundle-branch b.**, see under *heart block*. **caudal b.**, anesthesia produced by injection of a local anesthetic into the caudal or sacral canal. **comparator b.**, see *comparator*. **cryogenic b.**, local cooling of tissue. **dynamic b.**, spinal subarachnoid b. **ear b.**, trauma of the middle ear and the resulting inflammation and pain in compressed-air workers in which the eustachian tube is not patulous; called also *tubal b.* **epidural b.**, anesthesia produced by injection of the anesthetic agent between the vertebral spines and beneath the ligamentum flavum into the extradural space. **field b.**, regional anesthesia obtained by blocking conduction in nerves with chemical or physical agents. **heart b.**, see *heart block*, under *H*. **intercostal b.**, **intercostal nerve b.**, anesthesia produced by blocking intercostal nerves with a local anesthetic. **intranasal b.**, local anesthesia produced by insertion into the nasal fossae of pledgets soaked in a solution of an anesthetic agent that is effective after topical application, or by insufflation of a mixture of anesthetic gases or vapors through a tube introduced into the nose. **intraspinal b.**, subarachnoid b. **mental b.**, obstruction to thought or memory, particularly that produced by emotional factors. **methadone b.**, see *nar-*

cotic blockade, under *blockade*. **Mobitz b.**, dropped beat. **nerve b.**, regional anesthesia secured by making extraneural or paraneural injections of anesthetics in close proximity to the nerve whose conductivity is to be cut off. **paracervical b.**, anesthesia of the inferior hypogastric plexus and ganglia produced by injection of the local anesthetic into the lateral fornices of the vagina; called also *uterosacral b.* **paraneural b.**, anesthesia produced by injection of the anesthetic agent around a nerve. **parasacral b.**, regional anesthesia produced by injection of a local anesthetic around the sacral nerves as they emerge from the sacral foramina. **paravertebral b.**, infiltration of the cervicothoracic (stellate) ganglion with procaine hydrochloride; done for stroke, tachycardia, etc. **peri-infarction b.**, the association of myocardial infarction with surrounding intraventricular conduction disturbance other than left or right bundle-branch block. **perineural b.**, regional anesthesia produced by injection of the anesthetic agent close to the nerve. **presacral b.**, anesthesia produced by injection of the local anesthetic into the sacral nerves on the anterior aspect of the sacrum. **pudendal b.**, anesthesia produced by blocking the pudendal nerves, accomplished by injection of the local anesthetic into the tuberosity of the ischium. **sacral b.**, anesthesia produced by injection of a local anesthetic into the extradural space of the spinal canal. **saddle b.**, the production of anesthesia in a region corresponding roughly with the areas of the buttocks, perineum, and inner aspects of the thighs which impinge on the saddle in riding, by introducing the anesthetic agent low in the dural sac. **sinoatrial b.**, **sinoauricular b.**, a disturbance in which the atrial response is delayed or omitted because of partial or complete interference with the propagation of impulses from the sinoatrial node to the atria. **sinus b.**, 1. pain in the paranasal sinuses due to air being trapped in them in decompression sickness. 2. sinoatrial b. **spinal b.**, subarachnoid b. **spinal subarachnoid b.**, a condition in which the flow of cerebrospinal fluid is interfered with by an obstruction in the spinal canal; called also *dynamic b.* **splanchnic b.**, anesthesia produced by blocking the splanchnic nerves and the celiac ganglia; it is accomplished by injection of the anesthetic agent into the retroperitoneal tissues in the immediate vicinity of the celiac or solar plexuses. **stellate b.**, the analgesic blocking of the stellate (cervicothoracic) ganglion. **subarachnoid b.**, anesthesia produced by the injection of a local anesthetic into the subarachnoid space around the spinal cord; called also *intraspinal b.* and *spinal b.* **sympathetic b.**, blocking of the sympathetic trunk by paravertebral infiltration with an anesthetic agent. **trans-sacral b.**, anesthesia produced by injection of the anesthetic agent into the sacral canal and about the sacral nerves through each of the posterior sacral foramina. **tubal b.**, ear b. **uterosacral b.**, paracervical b. **vagal b.**, **vagus nerve b.**, blocking of vagal impulses obtained by injection of a solution of local anesthetic into the vagus nerve at its exit from the skull. **ventricular b.**, obstruction to the flow of cerebrospinal fluid within the ventricular system or through the exit foramina (foramina of Magendie and Luschka) by which the ventricles communicate with the subarachnoid space; it results in obstructive hydrocephalus. **Wenckebach b.**, partial heart block in which the ventricular rhythm is irregular, partly because of the changing P-R interval and partly because of dropped beats.

blockade (blok-ād') 1. the rendering of the reticuloendothelial cells of the body less capable of phagocytosis by the intravenous injection of harmless material, such as carmine, lampblack, etc. 2. the prevention by drugs of certain physiologic or enzymatic actions. 3. the prevention of the effects of certain drugs by an agent, as the effect of nalorphine on heroin action. **adrenergic b.**, selective inhibition of the response to sympathetic impulses and to catecholamines and other adrenergic amines at either the alpha or beta receptor sites of the effector organ or at the postganglionic adrenergic neuron. **adrenergic neuron b.**, see *adrenergic b.* **alpha-adrenergic b.**, **alpha-b.**, see *adrenergic b.* **beta-adrenergic b.**, **beta-b.**, see *adrenergic b.* **cholinergic b.**, selective inhibition of cholinergic nerve impulses at autonomic ganglionic synapses, at postganglionic parasympathetic effectors, or the neuromuscular junction. **narcotic b.**, inhibition of the euphoric effects of narcotic drugs by the use of other drugs, such as methadone, in the treatment of addiction. **renal b.**, obstructive uropathy with involvement of the genitourinary system distal to the collecting tubules; blockade of individual nephrons or nephron groups and the resultant anuria. **virus b.**, interference by a virus with the action of another virus; attenuated virus of a disease has been used to inhibit the multiplication of an active virus. Called also *virus interference* and *cell blockade*.

blockage (blok'ij) the process of blocking or obstructing; the condition of being blocked or obstructed. **tendon b.**, fixation of tendon by a Kirschner wire to bone or tendon sheath to relieve tension and prevent retraction.

Blockain (blok'ān) trademark for a preparation of propoxycaine hydrochloride.

blocker (blok'er) something that blocks or obstructs passage, activity, etc. **α-b.**, a drug that induces adrenergic blockade at α-adrenergic receptors. **β-b.**, a drug that induces adrenergic blockade at either β₁- or β₂-adrenergic receptors or at both.

blocking (blok'ing) 1. the cutting off of an afferent nerve path, as by the injection of cocaine (*cocaine b.*). 2. the inhibition of an intracellular biosynthetic process, as by the injection of dactinomycin (actinomycin D). 3. the freudian term for a sudden stop in an association produced when a complex is touched. 4. the fastening of a histological specimen impregnated with celloidin to a block of wood or other suitable material which may be clamped in the microtome. **adrenergic b.**, see under *blockade*. **b. of thought**, a mental condition in which the patient expresses himself with difficulty, because, as he claims, "the avenues of thought are obstructed"; seen in schizophrenia.

Blocq's disease (bloks) [Paul Oscar *Blocq*, French physician, 1860-1896] *astasia-abasia*.

Blondlot rays (blond-lo') [Prosper René *Blondlot*, French physicist, 1849-1930] *n* rays.

blood (blud) [*L. sanguis, cruor*; Gr. *haima*] the fluid that circulates through the heart, arteries, capillaries, and veins, carrying nutriment and oxygen to the body cells; called also *sanguis* [NA]. It consists of a pale yellow liquid, the *plasma*, containing the microscopically visible formed elements of the blood: the erythrocytes, or red blood corpuscles; the leukocytes, or white blood corpuscles; and the thrombocytes, or blood platelets. **aerated b.**, that which carries oxygen to the tissues through the systemic arteries. **anticoagulated b.**, blood that remains fluid due to presence of an anticoagulant. **arterial b.**, aerated b. **central b.**, blood obtained from the pulmonary venous system; some-

times used to designate splanchnic blood, or blood obtained from chambers of the heart or from bone marrow. **cord b.**, blood contained within the umbilical vessels at the time of delivery of the infant. **defibrinated b.**, whole blood from which fibrin was separated during the clotting process. **laky b.**, blood containing at least some lysed erythrocytes. **occult b.**, blood present in such small quantities that it can be detected only by chemical tests of suspected material, or by microscopic or spectroscopic examination. **peripheral b.**, blood obtained from acral areas, or from the circulation remote from the heart, as from earlobe, fingertip, or heel pad (in a child), or from the antecubital vein; the blood in the systemic circulation. **sludged b.**, blood in which the red cells have become aggregated into masses; it occurs particularly in the smaller blood vessels, where the velocity of blood flow is diminished. **splanchnic b.**, a general term applied to blood in the thoracic, abdominal, and pelvic viscera; further distinguished, in the case of blood from a specific organ, by the appropriate modifier, e.g., pulmonary, hepatic, or splenic blood. **venous b.**, blood that has given up its oxygen to the tissues and carries carbon dioxide back through the systemic veins for gas-exchange in the lungs. **whole b.**, blood from which none of the elements have been removed. *Whole blood* [USP] or *whole human blood* is blood that has been drawn from a selected donor under strict aseptic conditions, containing citrate ion or heparin as an anticoagulant, and used as a blood replenisher.

blood bank (blud bangk) see *bank*.

HUMAN BLOOD GROUP SYSTEMS AND ERYTHROCYTIC ANTIGENIC DETERMINANTS

Antigenic determinants are systematized according to observed and assumed independent assortment of their responsible genes. Within many systems, alleles are responsible for differing combinations of antigenic determinants.

BLOOD GROUP SYSTEM	ANTIGENIC DETERMINANTS*
ABO	A, A ₁ , B
H	H
I	I, i, I ^a , I ^b , I ^F
MN	M, N, S, s, U, Cl ^a , Far, He, Hill, Hu, M ^a , M ^b , M ^c , M ^d , M ^e , M ^f , M ^g , M ^h , M ⁱ , M ^j , M ^k , M ^l , M ^m , M ⁿ , M ^o , M ^p , M ^q , M ^r , M ^s , M ^t , M ^u , M ^v , M ^w , M ^x , M ^y , M ^z , M ^{aa} , M ^{ab} , M ^{ac} , M ^{ad} , M ^{ae} , M ^{af} , M ^{ag} , M ^{ah} , M ^{ai} , M ^{aj} , M ^{ak} , M ^{al} , M ^{am} , M ^{an} , M ^{ao} , M ^{ap} , M ^{aq} , M ^{ar} , M ^{as} , M ^{at} , M ^{au} , M ^{av} , M ^{aw} , M ^{ax} , M ^{ay} , M ^{az} , M ^{ba} , M ^{bb} , M ^{bc} , M ^{bd} , M ^{be} , M ^{bf} , M ^{bg} , M ^{bh} , M ^{bi} , M ^{bj} , M ^{bk} , M ^{bl} , M ^{bm} , M ^{bn} , M ^{bo} , M ^{bp} , M ^{bq} , M ^{br} , M ^{bs} , M ^{bt} , M ^{bu} , M ^{bv} , M ^{bw} , M ^{bx} , M ^{by} , M ^{bz} , M ^{ca} , M ^{cb} , M ^{cc} , M ^{cd} , M ^{ce} , M ^{cf} , M ^{cg} , M ^{ch} , M ^{ci} , M ^{cj} , M ^{ck} , M ^{cl} , M ^{cm} , M ^{cn} , M ^{co} , M ^{cp} , M ^{cq} , M ^{cr} , M ^{cs} , M ^{ct} , M ^c
P	P ₁ , P ₂ (Tj ^a), P ₃ (P ^K)
Rh	Rh1 (D, Rh ^a), Rh2 (C, rh ^a), Rh3 (E, rh ^a), Rh4 (c, hr ^a), Rh5 (e, hr ^a), Rh6 (f, ce, hr), Rh7 (Ce, rh ^a), Rh8 (C ^a , rh ^a), Rh9 (C ^a , rh ^a), Rh10 (V, ce, hr ^a), Rh11 (E ^a , rh ^a), Rh12 (G, rh ^a), Rh13 (Rh ^a), Rh14 (Rh ^a), Rh15 (Rh ^a), Rh16 (Rh ^a), Rh17 (Hr ^a), Rh18 (Hr), Rh19 (hr ^a), Rh20 (VS, e ^a), Rh21 (C ^a), Rh22 (CE), Rh23 (D ^a), Rh24 (E ^a), Rh26, Rh27 (ce), Rh28 (hr ^a), Rh29 (RH), Rh30 (Go ^a), Rh31 (hr ^a), Rh32, Rh33
Lutheran	Lu ^a (Lu1), Lu ^b (Lu2), Lu ^{ab} (Lu3), Lu4, Lu5, Lu6, Lu7, Lu8, Lu9, Lu10, Lu11, Lu12, Lu13, Lu14 (Sw ^a)
Kell	K1 (K), K2 (k), K3 (Kp ^a), K4 (Kp ^b), K5 (Ku), K6 (Js ^a), K7 (Js ^b), K8 (kw), K9 (KL), K10 (U1 ^a), K11, K12, K13, K14, K15, K16
Lewis	Le ^a (Le1), Le ^b (Le2), Le ^{ab} (Le ^{ab} , Le3), Mag (Le4), Le ^c (Le5), Le ^d
Duffy	Fy ^a (Fy1), Fy ^b (Fy2), Fy ^{ab} (Fy3), Fy4
Kidd	Jk ^a (Jk1), Jk ^b (Jk2), Jk ^{ab} (Jk3)
Cartwright	Yt ^a , Yt ^b
Xg	Xg ^a
Dombrock	Do ^a , Do ^b
Auberger	Au ^a
Cost-Sterling	Cs ^a , Yk ^a
Wright	Wr ^a , Wr ^b
Diego	Di ^a , Di ^b
Vel	Vel 1, Vel 2
Sciana	Sm, Bu ^a
Bg	Bg ^a , Bg ^b , Bg ^c , Ho, Ho-like, Ot, Sto, DBG (similar to HL-A7 of lymphocytes)
Gerbich	Ge1, Ge2, Ge3 (anti-Gel = M.Y.; anti-Gel1,2 = Ge; anti-Gel1,2,3 = Yus)
Coltan	Co ^a , Co ^b
Stoltzfus	Sf ^a

Low-incidence antigenic determinants not thus far associated with a blood group system:

Be^a, Bec, Bi, Big Charles, Bp^a, Bx^a, By, Cad, Chr^a, Coates, Craig, Dahl, Donaviesky, Driver, Duch, Evans, Evelyn, Fin, Fuerhart, Gf^a, Gilbraith, Good, Green, Hands, Heibel, Hil, Ht^a, Je^a, Jn^a, Job, Kam, Ken, Kosis, Lev, Lw^a, McCall, Man, Mar, Mo^a, Nij, Orr, Pt^a, Rd^a, Reid, Rm, Skjelbred, Th^a, To^a, Tr^a, Ven, Wb, Weeks, Wu, Yh^a, Za, 754

High-incidence antigenic determinants not thus far associated with a blood group system:

An^a, At^a, Bou, Bra, Car, Chido (Gursha), Cip, Dp, El, En^a, Fuj, Gn^a Go^b, Gy^a, Hen, Hy, Jo^a, Jr, Kelly, Knops, Lan, MZ443, Ola, Pea-Savior, Sch, Sd^a, Simon, Ters, Todd, Vennera, Wil, Winbourne

Antigenic determinants that depend on gene interactions:

ABO/I	IH, IA, IB, iH
P/I	IP1, IP2 (IT ^a), I ^F P1, iP1
Lewis/I	ILe ^{ab}
Lewis/ABO	A, Le ^b
P/ABO	Luke
Xor/Duffy	Fy5
Rh/LW	Rh25 (LW)

*Symbols within parentheses are those of alternative nomenclatures.
(Compiled by Dr. Fred H. Allen, Jr.)

Bloodgood's disease (blud'goodz) [Joseph Colt Bloodgood, Baltimore surgeon, 1866–1935] cystic disease of the breast; see under *disease*.

blood group (blud' grōp) 1. an erythrocytic allotype (or phenotype) defined by one or more cellular antigenic structural groupings under the control of allelic genes. Erythrocytic antigenic determinants irregularly incite allotypic and sometimes xenotypic immune responses. Blood groups, especially for man, are identified by agglutination supported by specific human or animal antisera and by lectins extracted from certain plants. Bovine blood group reactions, however, are usually lytic. An abbreviated classification of human blood groups is given in the accompanying table. 2. any characteristic, function, or trait of a cellular or fluid component of blood, considered as the expression (phenotype or allotype) of the actions and interactions of dominant genes, and useful in medicolegal and other studies of human inheritance. Such characteristics include the antigenic groupings of erythrocytes, leukocytes, platelets, and plasma proteins. Called also *blood type*. **ABO b. g.**, the major human blood type system, which depends on the presence or absence of two antigenic structures, A and B. The gene for A is responsible for synthesis N-acetyl- α -D-galactosaminyl transferase, whereas that for B is responsible for α -D-galactosyl transferase. Either A or B is created when one of these hexasaccharides is positioned by a specific transferase in 1–3 linkage to the β -D-galactose of an H-active oligosaccharide. Type O occurs when neither transferase is present or, very rarely (Bombay type), when H does not exist. When both transferases are present, type AB results. Differences in degree of transferase activity are determined at the same locus: weak transferase gives rise to weak antigens (A_2 , A_3 , A_x , B_3 , B_x). Similar oligosaccharides, especially in bacterial cell walls, immunize persons lacking A or B so that their serum contains anti-A or anti-B activity. A and B antigens are on the mucopolysaccharides of secretors; persons with dominant genes have H-active mucoids. A and B are largely glycolipids in the red cell membrane. **Auberger b. g.**, Au^a , related to the Lutheran blood group. **Cartwright b. g.**, erythrocytic antigens Yt^a and Yt^b . **Diego b. g.**, the blood group antigens Di^a and Di^b , determined by allelic genes. Di^a is most frequent in South American Indians, Japanese, and Chinese. **Dombrock b. g.**, an erythrocytic antigen commonest in whites (65 per cent) but not rare elsewhere. **Duffy b. g.**, a blood group consisting principally of the antigens Fy^a and Fy^b , determined by allelic genes. Amorphic genes are common in Negroes. **high frequency b. g.**, erythrocytic antigens found over 99 per cent of individuals; hence, also known as *public antigens*. **I b. g.**, that involving receptors of most cold reactive hemagglutinins; it is best expressed on cells of almost all normal adults, but is strongest on cord blood cells. **Kell b. g.**, multiple red cell antigens, especially three pairs of alternates, determined by complex genes at one locus, including an amorph; also regulated by the X chromosome, it is associated with sex-linked chronic granulomatous disease. One antigen, $K6$, is more frequent in Negroes. **Kidd b. g.**, a group consisting principally of Jk^a and Jk^b antigens, determined by allelic genes; amorphic genes are commonest in Orientals. **Lewis b. g.**, a blood group determined by plasma glycolipids which adhere to erythrocytic surfaces. It is based on dominant independent Le genes, but interacts with the H precursor oligosaccharides of A and B. Whereas le/le provides the "double negative" blood type Le ($a-b-$), Le without H gives rise to Le^b , i.e., blood type Le ($a+b-$) and with H gives rise to Le^H , i.e., blood type Le ($a-b+$). **low frequency b. g.**, erythrocytic antigens found in fewer than 1 per cent of individuals; also known as *private antigens*. **Lutheran b. g.**, a complex system somewhat resembling the Kell group in having pairs of alternative antigens and amorphic genes, but also subject to a dominant independently segregating repressor. **MN b. g.**, a complex system (MNSs) consisting principally of two pairs of antigens determined by closely linked genes (crossovers have been observed, but rarely). M and N, determined by allelic genes, depend on sialic (neuraminic) acid residues. S and s are also determined by allelic genes, and an amorphic gene is common in Negroes when another antigen (U) is missing. The system also includes numerous low frequency antigens. **P b. g.**, a system originally consisting of only P (now P_1) but found to include P_2 (Tj^a), a very high frequency antigen, and P_3 (P^K), a very low frequency antigen. P_1 is most common in Negroes (90 per cent), less common in Caucasians (75 per cent) and least common in Orientals (30 per cent). **Rh b. g.**, the most complex of all human blood groups because the genes differ by determining a different number of the 33 antigens thus far described, and do so with remarkably different quality. Negroes show the greatest degree of diversity, Orientals the least. The major antigen, Rh1 (Rh_o , D), is highly immunogenic and, before the development of passive immunization prophylaxis, was responsible for serious hemolytic disease of the newborn. Two other pairs of alternative antigens are inherited with or without Rh1; these are Rh21 (rh^G , C^G) and Rh4 (hr^r , c), and Rh3 (rh'' , E) and Rh5 (hr'' , e). The commonest groups of antigens are R^{1-3-21} (in Caucasians), R^{1-3-21} (in Negroes), R^{1-3-21} (in Orientals and Caucasians), and R^{1-3-21} (in Orientals and Caucasians). Another antigen Rh10 (hr^v , V) is common in Negroes.

bloodless (blud'les) 1. deprived of blood; anemic or exsanguinate. 2. performed with little or no loss of blood.

blood plasma (blud plaz'mah) the liquid portion of the blood in which the particulate components are suspended; see *blood*.

blood pressure (blud presh'ur) see under *pressure*.

bloodroot (blud'rōōt) sanguinaria.

blood serum (blud se'rum) the clear liquid that separates from the blood when it is allowed to clot completely. It is therefore blood plasma from which fibrinogen has been removed in the process of clotting. **alkaline b. s.**, blood serum to which sodium hydroxide has been added, consisting mostly of alkali albuminate. **coagulated b. s.**, plain blood serum from the horse, cow, sheep, dog, or other animal, coagulated and sterilized at a temperature not above 80° C. **Councilman and Mallory's b. s.**, blood serum coagulated in a hot-air sterilizer and sterilized with steam. **glycerin b. s.**, blood serum containing glycerin; called also *glycerin culture medium*. **inspissated b. s.**, blood serum heated to coagulation, usually in test tubes and in an inclined position. **Löffler's b. s.**, nutrient bouillon containing dextrose and blood serum, mixed, and heat-coagulated in an inclined position; called also *Löffler's serum* or *culture medium*. **Lorrain Smith's b. s.**, blood serum containing sodium hydroxide.

blood type (blud' tip) see *blood group*.

Bloor's method test [Walter Ray Bloor, American biochemist, born 1877] see under *method* and *test*.

blotch (bloch) a blemish or spot.

blowpipe (blo'pip) a tube through which a current of air or other gas is forced upon a flame to concentrate and intensify the heat.

B.L.R.O.A. British Laryngological, Rhinological, and Otolological Association.

blue (bloo) 1. one of the principal colors of the spectrum, the color of the sky. 2. having the color of the clear sky. 3. a dye that is blue in color. **alcian b.**, a copper-containing dye for staining acid mucopolysaccharides; it may be combined with periodic acid-Schiff reagent. **alizarin b.**, a blue dyestuff derived from anthracene. **alkali b.**, a dye, sodium triphenylrosaniline monosulfate; called also *isamine b.* **aniline b.**, a mixture of the trisulfonates of triphenyl rosaniline and of diphenyl rosaniline; also known variously as *anthracene b.*, *China b.*, *marine b.*, *soluble b.* (3M or 2R), and *water b.* **aniline b., W. S.**, a mixture of the sulfonation products of mixtures of phenylated rosaniline and pararosaniline, soluble in water. **anthracene b.**, alizarin b. **azidine b.**, 3 B., trypan b. **benzamine b.**, 3 B., trypan b. **benzo b.**, trypan b. **Berlin b.**, Prussian b. **Borrel's b.**, a silver oxide stain for spirochetes. **brilliant b.**, C., brilliant cresyl b. **brilliant cresyl b.**, an oxazin dye, usually $C_{15}H_{11}N_3OCl$, used in staining blood; called also *C. brilliant b.* and *cresyl b.* 2R. N or B. B. S. **bromchlorophenol b.**, an indicator, dibrom-dichlor-phenol-sulfonphthalein, $(C_6H_4ClBrOH)_2C \cdot C_6H_4 \cdot SO_3Na$. **bromophenol b.**, a dye, tetrabromophenolsulfonphthalein, used as an indicator in determining hydrogen ion concentration, being yellow at pH 3 and blue at pH 4.6. **bromothymol b.**, a dye, dibromothymolsulfonphthalein, used as an indicator in determining hydrogen ion concentration; it has a pH range of 6.0 to 7.6, being yellow at 6.0 and blue at 7.6. **china b.**, aniline b. **chlorazol b.**, 3 B., trypan b. **Congo b.**, 3 B., trypan b. **cresyl b.**, 2 R. N. or B. B. S., brilliant cresyl b. **cyanol b.**, a bright blue acid coal tar color related to triphenylmethane. **diamine b.**, trypan b. **dianil b.**, H. 3 G., trypan b. **Evans b.**, a green, bluish green, or brown odorless powder, $C_3H_2N_4Na_4O_4S_4$, injected intravenously in determining blood volume; called also *T-1824*. **Helvetia b.**, methyl b. **indigo b.**, indigotin. **indigo b.**, soluble, indigotin disulfonate sodium. **indophenol b.**, the blue pigment produced in the Nadi reaction and in the indophenol test; it is $(CH_3)_2N \cdot C_6H_4 \cdot N \cdot C_6H_4 \cdot O$. **isamine b.**, alkali b. **Kühne's methylene b.**, a mixture of methylene blue and dehydrated alcohol in phenol solution. **Löffler's methylene b.**, a mixture of methylene blue and alcohol in aqueous solution of potassium hydroxide. **marine b.**, aniline b. **methyl b.**, a dark blue powder, sodium triphenyl-para-rosaniline sulfonate, formerly used as an antiseptic. Called also *Helvetia b.* **methylene b.** [USP], 3,7-bis(dimethylamino)phenazothionium chloride. Dark green crystals or crystalline powder having a bronze-like luster, $C_{16}H_{18}ClN_3S \cdot 3H_2O$, used as a stain and as an indicator; also used as an antidote in cyanide poisoning, and in treatment of methemoglobinemia. Called also *Swiss b.* and *methylthionine chloride*. **methylene b.**, N. N., new methylene blue, N. N. **methylene b.**, O., toluidine blue, O. **naphthamine b.**, 3 B. X., trypan b. **new methylene b.**, N., $C_2H_5 \cdot NH(CH_2)_6 \cdot H_2(SN)C_6H_4(CH_3)_2N(C_2H_5)HCl$. Called also *methylene blue*, N. N. **Niagara b.**, 3 B., trypan b. **Nile b.**, A., Nile b. sulfate, an oxazin dye which stains fatty acids blue; it is $(C_2H_5)_2N \cdot C_6H_3 \cdot (ON)C_{10}H_5 \cdot NH_2 \cdot (SO_4)_2$. **polychrome methylene b.**, a mixture of methylene green, methylene azure, methylene violet, and methylene blue. **Prussian b.**, an amorphous blue powder, $Fe_3[Fe(CN)_6]_2$; called also *Berlin b.* **pyrrole b.**, $C_4H_5N \cdot C \cdot [C_6H_4 \cdot N(CH_3)_2]_2$. **quinaldine b.**, chemical name: 1-ethyl-2-[3-(1-ethyl-2(1H)quinolylidene)propenyl]quinolinium chloride. A bright blue-green stain, $C_{28}H_{25}ClN_2$, used in the cytodiagnosis of ruptured fetal membranes. **soluble b.**, 3 M. or 2 R., aniline

b. **spirit b.**, a mixture of diphenylrosaniline, $C_6H_5 \cdot NHCl \cdot C_6H_4 \cdot C[C_6H_3(CH_3)NH_2]C_6H_4 \cdot NH \cdot C_6H_5$, and triphenylrosaniline, $C_6H_5 \cdot NHCl \cdot C_6H_4 \cdot C[C_6H_4(CH_3)NH \cdot C_6H_5]C_6H_4 \cdot NH \cdot C_6H_5$. **Swiss b.**, methylene b. **thymol b.**, an indicator, thymolsulfonphthalein, with an acid pH range of 1.2 to 2.8, being red at 1.2 and yellow at 2.8, and an alkaline pH range of 8.0 to 9.6, being yellow at 8.0 and blue at 9.6. **toluidine b.**, **toluidine b., O.**, the chloride salt or zinc chloride double salt of aminodimethylaminotoluphenazthionium chloride; useful as a stain for demonstrating basophilic and metachromatic substances. Called also *methylene blue*, *O.* **trypan b.**, an acid, azo dye that has been used in vital staining and as a remedy in protozoan infections; it is the sodium salt of toluidin-diazo-diamino-naphthol-disulfonic acid, $[CH_3 \cdot C_6H_3 \cdot N:N \cdot C_{10}H_7(NH_2)(SO_2 \cdot ONa)_2 \cdot OH]_2$. Various known as *azidine b.*, 3 B; *benzamine b.*, 3 B; *benzo b.*, chlorazol b.; *Congo b.*, 3 B; *diamine b.*; *dianil b.*, H. 3G; *naphthamine b.*, 3 B. X.; and *Niagara b.*, 3 B. X. **Victoria b.**, a triphenylmethane dye with bacteriostatic properties; it is a phenyltetramethyltriarylamino triphenylmethane chloride, $C_6H_5 \cdot NH(Cl)C_6H_4 \cdot C[C_6H_4 \cdot N(CH_3)_2]_2Cl$. **b. vitriol**, cupric sulfate. **water b.**, aniline b.

bluensomycin (blu'en-so-mi'sin) an antibiotic substance obtained from cultures of *Streptomyces blensis*, or the same substance produced by other means.

bluestone (blu'stōn) cupric sulfate.

Blum's reagent, test (bloomz) [Léon Blum, German physician, 1878-1930] see under *tests*.

Blum's syndrome (bloomz) [Paul Blum, Strasbourg physician, 1878-1933] hypochloremic azotemia.

Blumberg's sign (blum'bergz) [Jacob Moritz Blumberg, surgeon and gynecologist in Berlin, and later in London, 1873-1955] see under *sign*.

Blumenau's nucleus (bloo'men-owz) [Leonid Wassiljewitsch Blumenau, Russian neurologist, 1862-1931] see under *nucleus*.

Blumenbach's clivus, plane, process (bloo'men-bahks) [Johann Friederich Blumenbach, German physiologist, 1752-1840] see *clivus* and *processus uncinatus ossis ethmoidalis*, and see under *plane*.

Blumenthal's disease (bloo'men-tahlz) [Ferdinand Blumenthal, German physician, born 1870] erythroleukemia.

blunthook (blunt'hook) an instrument used mainly in embryotomy.

blush (blush) sudden, brief erythema of the face and neck, resulting from vascular dilatation due to emotion or heat.

Blutene (bloo'tēn) trademark for a preparation of telenium.

Blyth's test [Alexander Wynter Blyth, English physician, 1844-1921] see under *tests*.

B.M. abbreviation for *L. bal'neum ma'ris* (seawater bath); Bachelor of Medicine.

B.M.A. British Medical Association.

B.M.R. basal metabolic rate.

B.M.S. Bachelor of Medical Science.

BNA abbreviation for *Basle Nomina Anatomica*, the anatomical terminology accepted at Basel, Switzerland, in 1895; superseded by *Nomina Anatomica*.

B.O.A. British Orthopaedic Association.

board (bord) 1. a long flat piece of wood or other material. 2. a group of administrators or experts serving a special function.

angle b., in dental radiology, a device used to facilitate the establishment of reproducible angular relationships between a patient's head and the plane of an x-ray film.

Boas' algometer, etc. (bo'az) [Ismar Isidor Boas, physician in Berlin, 1858-1938] see under *algometer*, *point*, *test*, and *test meal*.

Boas-Oppler bacillus (lactobacillus) (bo'az op'ler) [Ismar Isidor Boas; Bruno Oppler, German physician] see under *bacillus*.

Bobroff's operation (bob'rofs) [V. F. Bobroff, Russian surgeon, born 1858] see under *operation*.

Bochdalek's foramen (gap, sinus), ganglion (pseudo-ganglion), hernia, valve (bok'dal-eks) [Vincent Alexander Bochdalek, anatomist in Prague, 1801-1883] see *hiatus pleuroperitonealis* and *plexus dentalis superior*, and see under *hernia* and *valve*.

Bock's ganglion, nerve (boks) [August Carl Bock, German anatomist, 1782-1833] see *carotid ganglion*, under *ganglion*, and see *rami pharyngei nervi vagi*, under *ramus*.

Bockhart's impetigo (bok'harts) [Max Bockhart, German physician of the nineteenth century] see under *impetigo*.

Bodansky unit (bo-dan'ske) [Aaron Bodansky, American biochemist, 1887-1961] see under *unit*.

bodenplatte (bo'den-plaht'tē) [Ger.] floor plate.

Bodo (bo'do) a genus of small, ovoid, plastic, biflagellate protozoa of the family Bodoonidae, order Protomastigida; called also *Cystomonas* and *Prowazekia*. **B. cauda'tus**, a common coprozoic flagellate with a highly flattened body that usually tapers at the posterior end; found in stagnant water and in human feces.

B. sal'tans, the "springing monad" that has been found in ulcers. **B. urina'ria**, a species found in urine.

Bodonidae (bo-don'i-de) a family of probably nonpathogenic flagellate protozoa of the order Protomastigida, class Zoomastigophora, characterized by the presence of two flagella, one projecting forward and the other trailing backward, and by the absence of an undulating membrane; it is commonly found in stagnant water, as well as in both fresh and salt water, in sewage, and in the digestive tract and feces of various animals, including man. It includes the genera *Bodo*, *Pleuromonas*, *Proteromonas*, and *Retortamonas*.

body (bod'e) 1. the trunk, or animal frame, with its organs. 2. a cadaver or corpse. 3. the largest and most important part of any organ; see also *corpus* and *soma*. 4. any mass or collection of material. **acetone b's**, ketone b's. **adipose b. of cheek**, corpus adiposum buccae. **adipose b. of ischiorectal fossa**, corpus adiposum fossae ischiorectalis. **adipose b. of orbit**, corpus adiposum orbitae. **adrenal b.**, adrenal gland. **alkapton b's**, a class of substances with an affinity for alkali, found in the urine and causing the condition known as alkaptonuria; the compound commonly found, and most commonly referred to by the term, is homogentisic acid. **Amato b's**, irregular, pale-staining, blue cytoplasmic clumps, occurring in neutrophils of patients with various infectious diseases, such as diphtheria, scarlet fever, and pneumonia, and probably identical with Döhle bodies. **amygdaloid b.**, corpus amygdaloideum. **amylaceous b's**, amygdal b's, corpora amylacea. **anaphylactic reaction b.**, anaphylactin. **anococcygeal b.**, ligamentum anococcygeum. **anti-immune b.**, anti-intermediary b., antiantibody. **aortic b's**, small neurovascular structures on either side of the aorta in the region of the aortic arch; they contain chemoreceptors that play a role in reflex regulation of respiration by responding to changes in oxygen, carbon dioxide, and hydrogen ion concentration in the blood. Called also *glomera aortica*. **apical b.**, acrosome. **b's of Arantius**, nodules of aortic valve; see *noduli valvularum semilunarium*. **Arnold's b's** (obs.), small pieces of erythrocytes in the blood, or red cell shadows. **asbestos b's**, **asbestosis b's**, golden yellow bodies of various shapes formed by the deposition of calcium and iron salts and proteins on a spicule of asbestos, occurring in the sputum, lung secretion, and feces of patients with asbestosis. Cf. *ferruginous b's*. **Aschoff b's**, submiliary collections of cells and leukocytes in the interstitial tissues of the heart in rheumatic myocarditis; called also *Aschoff's nodules*. **asteroid b.**, an irregularly star-shaped inclusion body found in the giant cells in sarcoidosis and also found in numerous other diseases. **Auer b's**, finely granular, lamellar bodies having acid-phosphatase activity, found in the cytoplasm of myeloblasts, myelocytes, monoblasts, and granular histiocytes, rarely in plasma cells, absent in lymphoblasts or lymphocytes, and virtually pathognomonic of leukemia. **Babès-Ernst b's**, metachromatic granules. **Balbani's b.**, yolk nucleus. **Balfour b's**, *Aegyptianella pullorum*. **bamboo b's**, asbestos b's. **Barr b.**, sex chromatin. **Bartonella b's**, *Bartonella bacilliformis*. **basal b.**, a small cylindrical thickening at the base of each cilium and flagellum, consisting of nine triplets of microtubules around the edge of the cylinder from which extend the cilium and flagellum; basal bodies originate from centrioles which replicate and migrate to the plasma membrane. Called also *basal corpuscle*, *basal granule*, and *blepharoplast*. **Behla's b's**, Plimmer's b's. **Bence Jones b's**, Bence Jones protein; see under *protein*. **bigeminal b's** (obs.), superior and inferior colliculi. **Bollinger's b's**, inclusion bodies found in all tissue cells in fowlpox; called also *Bollinger's granules*. Cf. *Borrel b's*. **Borrel b's**, minute granules composing the Bollinger bodies of fowlpox. **Bracht-Wächter b's**, nonspecific inflammatory foci of lymphocytic and mononuclear cells in the myocardium, observed in bacterial endocarditis. **brassy b.**, a dark, shrunken blood corpuscle seen in malaria. **Buchner's b's**, defensive proteins. **Cabot's ring b's**, lines in the form of loops or figures of eight, seen in stained erythrocytes in severe anemias; they are stained red with the Wright-Leishman stain and blue with eosinate of methylthionine chlorides. **Call-Exner b's**, the accumulations of densely staining material that appear among granulosa cells in maturing ovarian follicles and that may be intracellular precursors of follicular fluid. **cancer b's**, see *Plimmer's b's*, and *Russell b's*. **carotid b.**, a small neurovascular structure lying in the bifurcation of the right and left carotid arteries; it contains chemoreceptors that monitor the oxygen content of the blood and help to regulate respiration. Called also *glomus caroticum*. **cavernous b. of clitoris**, corpus cavernosum clitoridis. **cavernous b. of penis**, corpus cavernosum penis. **cell b.**, that portion of a cell which contains the nucleus independent of any such projections as an axon or dendrites which the cell may have. **central b.**, the structures at the center of the aster during mitosis. **chromaffin b.**, paraganglion. **chromatin b's**, chromatinic b's. **chromatinic b's**, aggregates of deoxyribonucleic acid found in bacterial cells, and demonstrable by staining with Giemsa following hydrolysis of cytoplasmic ribonucleic acid and osmic acid fixation. They are tentatively regarded as representing a morphologically discrete bacterial nucleus. **chromatoid b.**, 1. one of

the deeply staining rodlike bodies with rounded extremities found in the cysts of certain amebas; called also *chromatoidal bar*. 2. a dense chromatoid mass near the distal centriole of a spermatozoon, from which the so-called ring centriole seemingly arises. **chromophilous b's**, Nissl b's. **ciliary b.**, corpus ciliare. **coccoid x b's**, minute bodies found in the blood in psittacosis. **coccygeal b.**, glomus coccygeum. **colostrum b's**, colostrum corpuscles. **Councilman b's**, acidophilic round bodies of hepatocellular origin seen in viral hepatitis, yellow fever, and other hepatic diseases; called also *Councilman's lesions*. **cryotalloid b.**, a body seen near the nuclei of the cells of the seminiferous tubules. **cytoid b's**, globular, shiny white structures resembling cell nuclei in size and shape, appearing in degenerated retinal nerve fibers; seen histologically in cotton-wool spots. **Deetjen's b's**, blood platelets. **demilune b.**, achromocyte. **dense b's**, small regions of increased density in the sarcoplasm of skeletal muscles to which myofibrils seem to attach; cf. *attachment plaques*, under *plaque*. **dentate b. of cerebellum (obs.)**, nucleus dentatus. **dentate b. of medulla oblongata (obs.)**, nucleus olivaris. **denticulate b. (obs.)**, gyrus dentatus. **Döhle's b's**, **Döhle's inclusion b's**, discrete, round or oval, blue-staining inclusions seen in the periphery of the cytoplasm of neutrophils, consisting mainly of RNA derived from rough endoplasmic reticulum, found in association with many infections, burns, aplastic anemia, uncomplicated pregnancy, and after administration of toxic agents. Similar structures, which are often larger and more prominent, are present in granulocytes other than neutrophils in the May-Hegglin anomaly. Called also *leukocyte inclusions*. **Donné's b's**, colostrum corpuscles. **Donovan's b's**, *Calymmatobacterium granulomatis*. **Ehrlich's hemoglobinemic b's (obs.)**, dark bodies, occurring in the center of degenerated red cells but which do not represent true red cell inclusions. **elementary b.**, 1. a blood platelet. 2. an inclusion body. **Elschnig b's**, clear grapelike clusters formed by proliferation of epithelial cells after extracapsular extraction of a cataractous lens; called also *Elschnig's pearls*. **Elzholz's b's**, bodies described by Elzholz in degenerated medullated nerve fibers. **end b.**, see *complement*. **epithelial b.**, parathyroid gland. **falciform b.**, sporozoite. **ferruginous b's**, structures similar to asbestos bodies, composed of a central mineral filament coated with a protein-iron complex. **fibrin b's of pleura**, movable or adherent, round, homogeneous, sharply demarcated opacities near the base of the pleural cavity, which may occur secondary to pleural effusion, pneumothorax, or hemopneumothorax; called also *pleural fibrin balls*. **filling b's**, fullkörper. **flagellated b.**, the male gametocyte of the malarial parasite, *Plasmodium*. **foreign b.**, a mass or particle of material that is not normal to the place where it is found. **b. of fornix**, corpus fornicis. **fruiting b.**, a specialized structure, as an apothecium, which produces spores; see *Plate* accompanying *mold*. **fuchsin b's**, Russell's b's. **gamma-Favre b's**, small intracytoplasmic inclusion bodies found in lymphogranuloma venereum. **geniculate b.**, see *corpus geniculatum laterale* and *corpus geniculatum mediale*. **Giannuzzi's b's**, crescents of Giannuzzi. **glomus b's**, glandulae glomiformes. **Golgi b.**, see under *complex*. **Gordon's elementary b.**, a particle originally thought to be the viral cause of Hodgkin's disease, but later shown to be obtainable from any tissue containing eosinophils or involved with this neoplasm; called also *Gordon's encephalopathic agent*. **Guarnieri's b's**, inclusion bodies in the cells of the affected tissues in smallpox and vaccinia, regarded as caused by the reaction of the cell to the virus of the disease; called also *Guarnieri's corpuscles*. **habenular b.**, habenula, def. 2. **Halberstaedter-Prowazek b's**, trachoma b's. **Harting b's**, deposits of calcium (calcospherites) in the cerebral capillaries. **Hassall's b's**, Hassall's corpuscles. **Hassall-Henle b's**, see under *wart*. **Heinz b's**, **Heinz-Ehrlich b's**, coccoid inclusion bodies resulting from oxidative injury to and precipitation of hemoglobin, seen in the presence of certain abnormal hemoglobins (HHb H, Köln, etc.) and erythrocytes with enzyme deficiencies. Refractile in fresh blood smears, they are not visible when stained with Romanowsky dyes but may be stained supravitaly. Called also *Heinz granules*. See also *Heinz-body anemia*. **Hensen's b.**, a rounded modified Golgi net under the cuticle of an outer hair cell of the organum spirale. **Herring b's**, hyaline or colloid masses scattered throughout the pars nervosa of the pituitary gland. **b. of Highmore**, mediastinum testis. **Howell's b's**, Howell-Jolly b's. **Howell-Jolly b's**, smooth, round remnants of nuclear chromatin seen in erythrocytes in megaloblastic anemia, hemolytic anemia, and after splenectomy. Called also *Howell's b's* and *Jolly's b's*. **hyaline b's**, drusen. **hyaloid b.**, vitreous body (corpus vitreum [NA]). **immune b.**, antibody. **inclusion b's**, round, oval, or irregular shaped bodies occurring in the cytoplasm and nuclei of cells of the body, as in disease caused by filtrable virus infection such as rabies, smallpox, herpes, etc.; called also *elementary b's* and *intranuclear inclusions*. **infrapatellar fatty b.**, corpus adiposum infrapatellare. **infundibular b.**, posterior lobe of the pituitary gland (lobus posterior hypophyseos [NA]). **inner b's**, round bodies seen in erythrocytes after certain stainings, such as Ehrlich's hemoglobinemic bodies, Heinz-Ehrlich bodies, and Schmauch's bodies. **intercarotid b.**, glomus caroticum. **in-**

termediary b., see *amboceptor*. **intermediate b. of Flemming**, a small bridge of acidophil material connecting the two daughter cells for a time at the end of mitosis. **interrenal b.**, an elongated organ that lies between the kidneys in elasmobranch fishes and that corresponds to the adrenal medulla in mammals. **intravertebral b.**, corpus vertebrae. **Jaworski b's**, see under *corpuscle*. **Joest's b's**, intranuclear inclusion bodies found in the brain of animals with Borna disease. **Jolly's b's**, Howell-Jolly b's. **juxtaestiform b.**, a structure connecting the lateral vestibular nucleus with the nucleus fastigii and conveying vestibular impulses. **ketone b's**, the substances acetone, acetoacetic acid, and β -hydroxybutyric acid. Except for acetone (which may arise spontaneously from acetoacetic acid), they are normal metabolic products of lipid (and pyruvate) metabolism via acetyl-CoA within the liver, and are oxidized by the muscles. Acetoacetic acid is convertible to fatty acids and to steroids. Excessive production leads to urinary excretion of these bodies, as in diabetes mellitus. Called also *acetone b's*. **Kurloff's b's**, bodies seen in the large mononuclear leukocytes of guinea pigs and related rodents. Observations with the electron microscope indicate that they probably result from intracellular secretion or from a sequestering and concentration of a serum molecular component. **L b's**, amorphous bodies of various size formed from granules of bacteria. **Lafora's b's**, intracytoplasmic inclusions consisting of a complex of glycoprotein and acid mucopolysaccharide; widespread deposits of these bodies are found in myoclonus epilepsies. **Lallemant's b's**, **Lallemant-Trousseau b's**, Bence Jones cylinders. **Landolt's b's**, small elongate bodies between the rods and cones on the outer nuclear layer of the retina. **Lave-ran's b's**, former name for the malarial parasite; see *Plasmodium*. **L.C.L. b's**, minute coccoid bodies found in tissue infected with psittacosis; called also *Levinthal-Coles-Lillie b's*. **Leishman-Donovan b's**, small round or oval bodies found in the reticuloendothelial cells, especially those of the spleen and liver, of patients suffering with kala-azar; they are the nonflagellate intracellular forms of the protozoan *Leishmania donovani*, the parasite causing the disease. Also used to designate similar forms of *L. tropica* found in macrophages in the lesions of cutaneous leishmaniasis. **lenticular b. (obs.)**, nucleus lentiformis. **Levinthal-Coles-Lillie b's**, L.C.L. b's. **Lewy b's**, concentrically laminated, round bodies found in vacuoles in the cytoplasm of some of the neurons of the midbrain in paralysis agitans. **Lieutaud's b.**, trigonum vesicae. **Lindner's initial b's**, bodies resembling inclusion bodies found in epithelial cells in trachoma. **Lipschütz b's**, intranuclear inclusion bodies found in the lesions of herpes simplex, both in the epithelial cells of the primary skin lesion (skin or cornea) and in the affected nerve cells. **Lostorfer's b's**, Lostorfer's corpuscles. **Luschka's b.**, glomus coccygeum. **Luy's b.**, nucleus subthalamicus. **lyssa b's**, red staining masses somewhat resembling Negri bodies but less sharply defined and with less internal structure. **Mallory's b's**, 1. hyaline endoplasmic reticulum within hepatocytes in nutritional cirrhosis. 2. bodies in the lymph spaces and epidermal cells in scarlet fever. **malpighian b's of kidney**, corpuscula renis. **malpighian b's of spleen**, folliculi lymphatici lienales. **mamillary b.**, **mammillary b.**, corpus mamillare. **Marchal b's**, cell inclusion bodies observed in ectromelia. **Masson b's**, the cellular components that fill the pulmonary alveoli and alveolar ducts in rheumatic pneumonia; they are possibly the equivalent of modified Aschoff bodies. **medullary b. of cerebellum**, corpus medullare cerebelli. **medullary b. of vermis**, arbor vitae cerebelli. **melon-seed b.**, any of a class of small fibrous masses sometimes occurring in the joints and in cysts of the tendon sheaths. **metachromatic b's**, metachromatic granules. **Michaelis-Gutmann b's**, bodies found in the lesion of malacoplakia of the bladder. **mitochondrial b.**, a fused colony of mitochondria found in the spermatids of insects. **molluscous b's (obs.)**, molluscum b's. **molluscum b's**, peculiar round or oval eosinophilic bodies occupying the central crater of the papular lesions of molluscum contagiosum; formerly called *Patterson's corpuscles* or *nodules*. **Mooser b's**, bodies resembling rickettsiae, seen in the epithelial cells of the tunica vaginalis exudate in some forms of typhus. **Mörner's b.**, nuclealbumin. **Mott b's**, clear globules present in the cytoplasm of plasma cells in multiple myeloma. **multilamellar b.**, any of the osmiophilic, lipid-rich, layered bodies found in the type II alveolar cells of the lung; called also *cytosome*. **multivesicular b.**, a secondary lysosome manifested as a spherical, membrane-bound vacuole, containing numerous small vesicles in a matrix that exhibits acid phosphatase activity. **Negri b's**, oval or round inclusion bodies, seen in the cytoplasm and sometimes in the processes of nerve cells of rabid animals after death; their presence is considered conclusive proof of rabies. Called also *Neurorhynchus hydrophobiae* and *Encephalocytotoxoon rabiei*. **Neill-Mooser b's**, large mononuclear cells filled with rickettsiae, seen in the inflammatory exudate of the scrotal swelling of laboratory animals infected with murine typhus. See also under *reaction*. **nigroid b.**, granula iridica of the equine or bovine iris. **Nissl b's**, large granular basophilic bodies found in the cytoplasm of neurons, composed of rough endoplasmic

reticulum and free polyribosomes; called also *chromophilous b's*, *trigoid b's*, *chromophil corpuscles* or *substance*, and *chromatic granules*. **Nothnagel's b's**, oval or round bodies, plain or striated, from 15 to 60 μ in diameter, sometimes found in the stools of persons who eat meat. **no-threshold b's**, no-threshold substances. **Oken's b.**, mesonephros. **olivary b.**, oliv. **onion b's**, epithelial pearls. **oryzoid b's**, rice **b's**. **pachionian b's**, granulationes arachnoideales. **pampiniform b.**, epophoron. **Pappenheimer b's**, basophilic iron-containing granules observed in various types of erythrocytes. **para-aortic b's**, corpora paraaortica; see also *paraganglion*. **parabasal b.**, an oval or rodlike body in the kinetoplast, larger than the blepharoplast, and connected therewith by a delicate fibril. **paranuclear b.**, centrosome. **paraphyseal b.**, paraphysis (def. 1). **paraterminal b.**, gyrus paraterminalis. **parathyroid b.**, a parathyroid gland. **parietal b.**, epiphysal eye. **parolivary b's**, accessory olivary nuclei; see *nucleus olivaris accessorius dorsalis* and *medialis*. **Paschen b's**, inclusion bodies in the cells of the tissues in variola and vaccinia; they are infective but whether they are the infective agents or mechanical carriers of the invisible virus is not known. Called also *Paschen's corpuscles* or *granules*. **pearly b's**, epithelial pearls. **perineal b.**, centrum tendineum perinei. **pheochrome b.**, paraganglion. **pineal b.**, 1. a small, somewhat flattened, cone-shaped body in the epithalamus, lying above the superior colliculi and below the splenium of the corpus callosum. Arising embryologically from the ependyma of the third ventricle of the brain and consisting of cords of pinealocytes supported by interstitial cells, it is the site of synthesis of melatonin, which inhibits gonad development and influences estrus in mammals and produces marked lightening of the dermal pigmentation in amphibians by stimulating the aggregation of melanosomes into melanophores. Melatonin secretion is diminished during exposure to environmental light; the pineal body synthesizes and releases melatonin in response to norepinephrine, whose rate of release, in turn, declines when light activates retinal photoreceptors. Called also *corpus pineale* [NA], *conarium*, *epiphysis cerebri*, and *pineal gland*. 2. the posterior eyelike structure arising from the median of the dorsal wall of the thalamus in some lower vertebrates. See also *epiphysal eye*, under *eye*. **pituitary b.**, pituitary gland. **Plimmer's b's**, small round capsulated bodies found in cancer, and thought by the discoverer to be the parasite causing the disease; called also *Behla's b's* and *cancer b's*. **polar b's**, 1. the small abortive cells with a haploid chromosome complement, consisting of a tiny piece of cytoplasm and a nucleus, resulting from unequal division of the primary oocyte (*first polar b.*) and, if fertilization occurs, of the secondary oocyte (*second polar b.*); the polar body appears as a speck at the animal pole of the egg. 2. metachromatic granules located at the ends of bacteria. **postbranchial b's**, ultimobranchial b's. **presegmenting b's**, malarial parasites (*Plasmodium*) before they undergo segmentation. **Prowazek's b's**, 1. trachoma bodies. 2. extremely small inclusion bodies found in the material from smallpox pustules and in cowpox vaccine and regarded by Prowazek as the cause of the disease. **Prowazek-Greeff b's**, trachoma b's. **psammoma b.**, a spherical, concentrically laminated mass of calcareous material, usually of microscopic size; such bodies occur in both benign and malignant epithelial and connective-tissue tumors, and are sometimes associated with chronic inflammation. **pseudolutein b.**, corpus atretica. **purine b's**, purine bases. **pyknotic b's**, bodies in the mucus of stools in amebiasis; they are the nuclear remains of tissue cells and leukocytes. **quadrigenal b's**, corpora quadrigena. **Reilly b's**, large, coarse granulations found in the leukocytes in Hurler's syndrome. **Renaut's b's**, pale granules in the degenerating nerve fibers in muscular dystrophy. **residual b.**, 1. a secondary lysosome that has completed its digestive processes but retains indigestible or very slowly digestible material. 2. the mass of protoplasm left after the completion of schizogony, as in *Plasmodium*; called also *sporal residuum* and *sporenrest*. **residual b. of Regnaud**, an anucleate mass consisting of fine granules, lipid droplets, and degenerating organelles, cast off after the completion of regional differentiation of the tail during spermiogenesis. **restiform b.**, see *pedunculus cerebellaris inferior*. **restiform b. of Clark** (*obs.*), fasciculus cuneatus medullae oblongatae. **b. of Retzius**, a protoplasmic mass containing pigment granules at the lower end of a hair cell of the organum spirale. **rice b's**, small bodies resembling grains of rice which form in the tendons of joints and in the fluid of hygroma; called also *oryzoid b's*, and *corpora oryzoidea*. **Rosenmüller's b.**, epophoron. **Ross's b's**, spherical copper-colored bodies showing dark granulations and sometimes having ameboid movements; seen in the blood and tissue fluids in syphilis. **Russell b's**, globular plasma cell inclusions, mucoprotein in nature, containing surface gamma globulin, and representing aggregates of immunoglobulins synthesized by the cell; called also *cancer b's* and *fuchsin b's*. **sand b's**, acervulus. **Sandström's b's**, parathyroid glands. **Schaumann's b's**, the red or brown, nodular, shell-like lesions of sarcoidosis. **Schmorl b.**, a portion of the nucleus pulposus that has protruded into an adjoining vertebra. **Seidelin b's**, a name once applied to structures observed in the red cells in yellow fever,

believed by the discoverer to be the cause of the disease. **semi-lunar b's**, crescents of Giannuzzi. **Spengler's immune b's**, a preparation extracted from the blood cells of animals immunized against both human and bovine tubercle bacilli, based on the concept that the immunizing substances in tuberculosis are in the blood cells and not in the serum; used at one time in the management of tuberculosis. Called also *I.K. (Immunkörper)*. **spherical b.** (*obs.*), the first stage of the sexual cycle of the malarial parasite (*Plasmodium*), developing later into the gametocyte. **spongy b. of male urethra**, corpus spongiosum penis. **spongy b. of penis**, corpus cavernosum penis. **striate b.**, corpus striatum. **supracardial b's**, aortic paraganglia. **suprarenal b.**, adrenal gland. **Symington's b.**, ligamentum anococcygeum. **telobranchial b's**, ultimobranchial b's. **thermostabile b.**, in immunology, the term usually refers to antibodies that remain stable in serum heated to 56° C., which inactivates complement. **threshold b's**, threshold substances. **thyroid b.**, thyroid gland (glandula thyroidea [NA]). **tigroid b's**, Nissl b's. **Todd b's**, eosinophilic structures formed in the cytoplasm of the red cells of certain amphibians. **Torres-Teixeira b's**, inclusion bodies found in the cells in variola minor. **trachoma b's**, inclusion bodies found in clusters in the cytoplasm of the epithelial cells from the conjunctiva of trachomatous eye; called also *Halberstaedter-Prowazek b's*, *Prowazek's b's*, and *Prowazek-Greeff b's*. **trapezoid b.**, corpus trapezoideum. **Trousseau-Lallemand b's**, Bence Jones cylinders. **ultimobranchial b's**, embryonic derivatives of the fifth pharyngeal pouches, which migrate along with the parathyroid glands and are incorporated in the thyroid gland; in submammalian vertebrates they remain as discrete masses in the neck or mediastinum throughout adult life. The parafollicular cells of these bodies produce calcitonin. Called also *postbranchial b's* and *telobranchial b's*. **vermiform b's**, peculiar sinuous invaginations of the plasma membrane of Kupffer cells of the liver, having a central linear density between parallel membranes and a faint transverse striation; similar structures are seen in macrophages of certain organs and in the Langerhans cells of the epidermis. **Verocay b's**, small groups of fibrils surrounded by rows of palisaded nuclei, seen in schwannomas. **vitelline b.**, yolk nucleus. **vitreous b.**, the transparent gel that fills the inner portion of the eyeball between the lens and the retina; called also *corpus vitreum* [NA], *hyaloid b.*, *humor crystallinus*, and *crystalline or vitreous humor*. **Winkler's b.**, spherical bodies seen in the lesions of syphilis. **wolfian b.**, mesonephros. **xanthine b's**, purine bases. **yellow b. of ovary**, corpus luteum. **zebra b.**, concentric, laminated, figure-like, cytoplasmic inclusions of Schwann cells, occurring singly or in clusters as a result of degeneration phenomena. **Zuckerkind's b's**, paraganglia found along the course of the aorta near its bifurcation.

body rocking (*bod'e rok'ing*) a rhythmic backward and forward motion in a sitting position.

body snatching (*bod'e snach'ing*) the illegal procurement of dead bodies, especially the robbing of a grave of a recently buried corpse.

Boeck's disease, sarcoid (*beks*) [Caesar P. M. Boeck, Norwegian dermatologist and syphilologist, 1845–1913] sarcoidosis.

Boedeker's test (*ba'dek-erz*) [Carl Heinrich Detlef Boedeker, German chemist, 1815–1895] see under *tests*.

Boerhaave's glands, syndrome (*boor'hahv-ēz*) [Hermann Boerhaave, Dutch physician, 1668–1738] the sweat glands (glandulae sudoriferae); see under *syndrome*.

Boettcher (*bet'sher*) see *Böttcher*.

Boettger see *Böttger*.

Bogomolets' serum [Aleksandr Alexandrovich Bogomolets, Russian physiopathologist, 1881–1946] antireticular cytotoxic serum.

Bogros' space (*bög-röz'*) [Annet Jean Bogros, French anatomist, 1786–1823] see under *space*.

Böhler splint (*bäl'er*) [Lorenz Böhler, Vienna surgeon, born 1885] see under *splint*.

Bohr effect (*bor*) [Christian Bohr, Scandinavian physiologist, 1855–1911] see under *effect*.

Bohun upas (*bo'hun u'pas*) the poison tree of Java, *Antiaris toxicaria*.

boil (*boil*) furuncle. **Aleppo b.**, Bagdad b., Biskra b., cutaneous leishmaniasis. **blind b.**, a boil that does not develop a white or yellow "head" at its apex through which pus may be discharged; an abscess. **Bulama b.** [from *Bulama*, an island of West Africa], a chronic sore of West Africa, said to be due to a burrowing insect larva. **Delhi b.**, cutaneous leishmaniasis. **Gafsa b.** [from *Gafsa*, in Tunisia], a variety of cutaneous leishmaniasis. **godovnik b.**, cutaneous leishmaniasis. **gum b.**, parulis. **Jerico b.**, cutaneous leishmaniasis. **Natal b.**, oriental b., Penjdeh b., cutaneous leishmaniasis. **shoe b.**, capped elbow in the horse. **tropical b.**, cutaneous leishmaniasis.

Bol. abbreviation for *L. bo'lus*, pill.

bolasterone (bōl-ah'ster-ōn) chemical name: 17 β -hydroxy-7 α ,17-dimethylandrosta-4-en-3-one; an anabolic agent, C₂₁H₃₂O₂.

boldenone undecylenate (bōl'dē-nōn) chemical name: 17 β -hydroxyandrosta-1,4-dien-3-one 10-undecenoate; an anabolic agent, C₃₀H₄₄O₃.

boldine (bōl'dēn') an alkaloid from *Peumus (Boldu) boldus* Molina (Monimiaceae), which possesses diuretic properties.

boldo (bōl'do) [L. *boldus*, *boldoa*] the leaves and stems of *Peumus (Boldu) boldus* Molina (Monimiaceae), a Chilean evergreen shrub. Once official in the U.S. National Formulary (1936) and still common in numerous over-the-counter remedies in Canada and other countries, it contains over 15 alkaloids and is used variously as a choleric, diuretic, stomachic, sedative, and anthelmintic.

boldoa (bōl'do-ah) [L.] *boldo*.

boldoin (bōl'do-in) a glycoside obtainable from boldo.

bolenol (bōl'ē-nōl) chemical name: 19-nor-17 α -pregn-5-en-17-ol; an anabolic agent, C₂₀H₃₂O.

Boletus (bo-le'tus) [L.; Gr. *bōlites*] a genus of basidiomycetous Hymenomycetes, some of which are edible and others poisonous.

B. sata'nas, a species that causes mycetismus gastrointestinalis.

Bolk's retardation theory [Louis Bolk, Dutch anatomist, 1866-1930] see under *theory*.

Bollinger's bodies, granules (bōl'in-gerz) [Otto von Bollinger, German pathologist, 1843-1909] see under *body* and *granule*.

bolometer (bo-lom'ē-ter) [Gr. *bolē* a throw, a ray + *metron* measure] 1. an instrument for measuring the force of the heart beat. 2. an instrument for measuring minute changes in heat radiated by an object, such as a portion of the human body.

boloscope (bōl'ō-skōp) [Gr. *bolē* a ray + *skochein* to examine] an apparatus for detecting and locating metallic foreign bodies in tissues.

Boltz test (reaction) [Oswald Hermann Boltz, American neurologist, born 1895] see under *tests*.

bolus (bō'lus) [L.; Gr. *bolos* lump] 1. a rounded mass of food or a pharmaceutical preparation ready to swallow, or such a mass passing through the gastrointestinal tract. 2. a concentrated mass of pharmaceutical preparation given intravenously for diagnostic purposes, e.g., an opaque contrast medium or radioactive isotope. 3. a mass of scattering material, such as wax, paraffin, bags of water, or a rice-flour mixture, placed between the radiation source and the skin so as to achieve precalculated isodose pattern in the tissue irradiated. **b. al'ba**, kaolin. **alimentary b.**, the mass of food in the oropharynx or the esophagus, comprising one swallow.

bomb (bom) a heavy metal-shielded apparatus containing a quantity of radium or other radioactive element for use in clinical telerradiation therapy.

bombard (bom-bard') to expose the whole body or a specific tissue target to the action of ionizing radiation.

bombesin (bom'bē-sin) a tetradecapeptide first isolated from the skin of certain frogs; on infusion into dogs, it stimulates gastric acid secretion, gallbladder contraction, pancreatic secretion, and relaxation of the choledochoduodenal junction; a pressor substance, it is present in the brain tissue and gut of man and is classified as a neuropeptide.

bombicestrol (bom'be-ses'ter-ol) a sterol obtained from the chrysalis of the silkworm and from sponges.

bombykol (bom'bī-kol) a pheromone secreted by silkworms that serves as a sex attractant; it is a 16-carbon alcohol with two double bonds.

Bombyx mori (bom'bīks mor'i) the commercial silkworm, used extensively in experimental genetics.

bond (bond) 1. the linkage between two atoms or radicals of a chemical compound. 2. a mark used to indicate the number and attachment of the valencies of an atom in constitutional formulas; it is represented by a pair of dots or a line between the atoms, e.g., H—O—H, H—C $\equiv$ C—H or H:O:H, H:C::C:H. **coordinate covalent b.**, a covalent bond in which one of the bonded atoms furnishes both of the shared electrons. **covalent b.**, a chemical bond between two atoms or radicals formed by the sharing of a pair (single bond), 2 pairs (double bond), or 3 pairs of electrons (triple bond). **disulfide b.**, a strong covalent bond, —S—S—, important in linking polypeptide chains in proteins, the linkage arising as a result of the oxidation of the sulfhydryl (SH) groups of two molecules of cysteine; called also *disulfide bridge*. **energy-rich b.**, high-energy b. **glycosidic b's**, the bonds between the monosaccharide components of a polysaccharide. **high-energy b.**, a chemical bond the hydrolysis of which yields high levels of free energy; such bonds involve phosphate (high-energy phosphate b.) or sulfur (high-energy sulfur b.) or other mixed anhydride types of chemical structure. **high-energy phosphate b.**, an energy-rich phosphate linkage present in adenosine triphosphate, phosphocreatine, and certain other intermediates of carbohydrate metabolism. On hydrolysis at pH 7 it yields about 8000 calories per mole, in contrast to the 3000 calories of the ester phosphate bond. This energy can be transferred, stored, or used in metabolic processes, such as the synthesis of glycogen from

glucose, or in the supply of energy for muscle activity. **high-energy sulfur b.**, an energy-rich sulfur linkage, the most important of which occurs in the acetyl-CoA molecule, the main source of energy for fatty acid biosynthesis. **hydrogen b.**, a weak, primarily electrostatic, bond between a hydrogen atom bound to a highly electronegative element (such as oxygen or nitrogen) in a given molecule, or part of a molecule, and a second highly electronegative atom in another molecule or in a different part of the same molecule. The hydrogen bond is generally represented by three dots, e.g., X—H...Y, where X and Y are electronegative atoms. **hydrophobic b.**, a linkage resulting from the tendency of nonpolar molecules (or their side chains) to aggregate in an aqueous environment because of their mutual repulsion of solvent. **ionic b.**, a chemical bond in which electrons are transferred from one atom (e.g., sodium) to another (e.g., chlorine) so that one bears a positive and the other a negative charge, the attraction between these opposite charges forming the bond. **pair b.**, in ethology, the more or less permanent relationship between a male and a female for the purposes of mating and rearing the young. **peptide b.**, the —CO·NH— bond formed between the carboxyl group of one amino acid and the amino group of another; it is an amide linkage joining amino acids to form peptides. **Van der Waals b.**, a weak chemical bond arising from a nonspecific attractive force originating when two atoms are close to one another; this weak binding is only effective when several atoms of one molecule are bound to several atoms in another molecule.

Bond's splint [Thomas Bond, Philadelphia physician and surgeon, 1712-1784] see under *splint*.

bone (bōn) [L. os; Gr. *osteon*] 1. the hard form of connective tissue that constitutes the majority of the skeleton of most vertebrates; it consists of an organic component (the cells and matrix) and an inorganic, or mineral, component; the matrix contains a framework of collagenous fibers and is impregnated with the mineral component, chiefly calcium phosphate (85 per cent) and calcium carbonate (10 per cent), which imparts the quality of rigidity to bone. Called also *osseous tissue*. 2. any distinct piece of the osseous framework, or skeleton, of the body; called also *os*. See Plate accompanying *skeleton*. **accessory b.**, an occasionally occurring bone or ossicle adjoining one of the bones of the carpus or of the tarsus; recognized in the roentgenogram. **acetabular b.**, acetabulum. **acromial b.**, acromion. **alar b.**, os sphenoidale. **Albers-Schönberg marble b's**, osteopetrosis. **Albrecht's b.**, basiotic b. **alispheoid b.**, ala major ossis sphenoidalis. **alveolar b.**, the thin layer of bone making up the bony processes of the maxilla and mandible, and surrounding and containing the teeth; it is pierced by many small openings through which blood vessels, lymphatics, and nerve fibers pass. **ankle b.**, talus, def. 1. **astragaloid b.**, talus, def. 1. **astragaloscaphoid b.**, Pirie's b. **back b.**, see *backbone*. **basal b.**, the relatively fixed and unchangeable framework of the mandible and maxilla, which limits the extent to which teeth can be moved in the alveolar or supporting bone if the occlusion is to remain stable. **basihyal b.**, the body of the hyoid bone. **basilar b.**, basioccipital b. **basioccipital b.**, a bone developing from a separate ossification center in the fetus, which becomes the basilar part of the occipital bone; called also *basilar b.* **basiotic b.**, a small bone of the fetus between the basisphenoid and the basioccipital bones; called also *Albrecht's b.* **basisphenoid b.**, an embryonic bone that becomes the back part of the body of the sphenoid. **Bertin's b.**, concha sphenoidalis. **breast b.**, sternum. **brigmatic b.**, parietal b. **brittle b's**, osteogenesis imperfecta. **bundle b.**, one of the two types of bone comprising the alveolar bone, so called because of the continuation into it of the principal fibers of the periodontal membrane. Cf. *lamellated b.* **calcaneal b.**, calcaneus. **calf b.**, fibula. **cancellated b.**, cancellous b., substantia spongiosa ossium. **cannon b.**, a bone in the limb of hoofed animals, extending from the fetlock to the knee or hock joint. **capitate b.**, os capitatum. **carpal b's**, the eight bones of the wrist; see *ossa carpi*. [NA]. **carpal b.**, central, os centrale. **carpal b., first**, os trapezium. **carpal b., fourth**, os hamatum. **carpal b., great**, os capitatum. **carpal b., intermediate**, os lunatum. **carpal b., radial**, os scaphoideum. **carpal b., second**, os trapezoidium. **carpal b., third**, os capitatum. **carpal b., ulnar**, os triquetrum. **cartilage b.**, any bone that develops within cartilage, in contrast to membrane bone, ossification taking place within a cartilage model; called also *endochondral b.*, *replacement b.*, and *substitution b.* **cavalry b.**, rider's b. **central b.**, os centrale. **chalky b's**, osteopetrosis. **cheek b.**, os zygomaticum. **chevron b.**, the V-shaped hemal arches of the third, fourth, and fifth coccygeal vertebrae of a dog. **coccygeal b.**, coccyx (os coccygis [NA]). **coffin b.**, the third or distal phalanx of the foot of a horse; called also *pedal b.* and *os pedis*. **collar b.**, clavicle. **compact b.**, substantia compacta ossium. **coronary b.**, the small pastern bone of the horse. **cortical b.**, the compact bone of the shaft of a bone that surrounds the medullary cavity. **costal b.**, os costale. **cranial b's**, b's of cranium, the bones that constitute the cranial part of the skull, including the occipital, sphenoid, temporal, parietal, frontal, ethmoid, lacrimal and nasal bones, the inferior nasal

concha, and vomer; called also *ossa cranii* [NA]. See also *facial b's*. **cribriform b.**, os ethmoidale. **cuboid b.**, os cuboideum. **cuckoo b.**, os coccygis. **cuneiform b. of carpus**, os triquetrum. **cuneiform b., external**, os cuneiforme laterale. **cuneiform b., first**, os cuneiforme mediale. **cuneiform b., intermediate**, os cuneiforme intermedium. **cuneiform b., internal**, os cuneiforme mediale. **cuneiform b., lateral**, os cuneiforme laterale. **cuneiform b., medial**, os cuneiforme mediale. **cuneiform b., middle**, **cuneiform b., second**, os cuneiforme intermedium. **cuneiform b., third**, os cuneiforme laterale. **dermal b.**, a bone developed by ossification in the skin. **ear b's**, auditory ossicles. **ectethmoid b's**, the lateral masses of the ethmoid bone. **ectocuneiform b.**, os cuneiforme laterale. **endochondral b.**, cartilage b. **entocuneiform b.**, os cuneiforme mediale. **epactal b's**, *ossa suturarum*. **epactal b., proper**, os interparietale. **ethmoid b.**, os ethmoidale. **exercise b.**, a bone developed in a muscle, tendon, or fascia, as a result of excessive exercise. **exoccipital b.**, one of the two lateral portions of the occipital bone, developing from separate centers of ossification, into the portions that bear the condyles. **b's of face, facial b's**, the bones that constitute the facial part of the skull, including the hyoid, palatine, and zygomatic bones, the mandible, and the maxilla; called also *ossa faciei* [NA]. The facial bones are considered by many to include the lacrimal and nasal bones, the inferior nasal concha, and the vomer, but not the hyoid bone. **femoral b.**, femur, def. 1. **fibular b.**, fibula. **b's of fingers**, *ossa digitorum manus*. **flank b.**, ilium (os ilium [NA]). **flat b.**, one whose thickness is slight, sometimes consisting of only a thin layer of compact bone, or of two layers with intervening spongy bone and marrow; usually bent or curved, rather than flat. Called also *os planum* [NA]. **frontal b.**, os frontale. **funny b.**, the region of the median condyle of the humerus where it is crossed by the ulnar nerve. **hamate b.**, os hamatum. **haunch b.**, os coxae. **heel b.**, calcaneus. **hip b.**, os coxae. **humeral b.**, humerus. **hyoid b.**, a horseshoe-shaped bone situated at the base of the tongue, just above the thyroid cartilage; called also *os hyoideum* [NA], *lingual b.*, and *tongue b.* **iliac b.**, ilium (os ilium [NA]). **incarnial b.**, os interparietale. **incisive b.**, os incisivum. **innominate b.**, os coxae. **intermediate b.**, os lunatum. **interparietal b.**, os interparietale. **intracondrial b.**, osseous tissue occurring in cartilage matrix which has undergone calcification; consistently found in patches within the middle layer of the otic capsule. **ischial b.**, ischium (os ischii [NA]). **ivory b's**, osteopetrosis. **jaw b., lower**, mandibula. **jaw b., upper**, maxilla. **jugal b.**, os zygomaticum. **lacrimal b.**, a thin scalelike bone at the anterior part of the medial wall of the orbit, articulating with the frontal and ethmoidal bones and the maxilla and inferior nasal concha; called also *os lacrimale* [NA] and *os unguis*. **lamellated b.**, one of the two types of bone comprising the alveolar bone, with some lamellae roughly parallel with the marrow spaces and others forming haversian systems. Cf. *bundle b.* **lenticular b. of hand**, **lentiform b.**, os pisiforme. **lingual b.**, hyoid b. (os hyoideum [NA]). **long b.**, a bone that has a longitudinal axis of considerable length, consisting of a shaft (the diaphysis) and an expanded portion (the epiphysis) at each end that is usually articular; any of the long bones of the limbs. Called also *os longum* [NA]. **lunate b.**, os lunatum. **malar b.**, os zygomaticum. **marble b's**, osteopetrosis. **mastoid b.**, pars mastoidea ossis temporalis. **maxillary b.**, maxilla. **maxillary b., inferior**, mandibula. **maxillary b., superior**, maxilla. **maxilloturbinal b.**, concha nasalis inferior. **membrane b.**, any bone that develops within a connective tissue membrane, in contrast to cartilage bone. **mesocuneiform b.**, os cuneiforme intermedium. **metacarpal b's**, the five cylindrical bones of the hand; see *ossa metacarpalia I-V*. **metatarsal b's**, the five bones extending from the tarsus to the phalanges of the toes, forming the skeleton of the metatarsus; called also *ossa metatarsalia I-V* [NA]. **multangular b., accessory**, os centrale. **multangular b., larger**, os trapezium. **multangular b., smaller**, os trapezoideum. **nasal b.**, either of the two small oblong bones that together form the bridge of the nose; called also *os nasale* [NA]. **navicular b. of foot**, os naviculare. **navicular b. of hand**, os scaphoideum. **nonlamellated b.**, woven b. **occipital b.**, a single trapezoidal-shaped bone situated at the posterior and inferior part of the cranium; see *os occipitale* [NA]. **odontoid b.**, dens axis. **orbital b.**, os zygomaticum. **orbitosphenoidal b.**, ala minor ossis sphenoidalis. **palate b.**, palatine b. **palatine b.**, one of the two irregularly shaped bones forming the posterior part of the hard palate, the lateral wall of the nasal fossa between the medial pterygoid plate and the maxilla, and the posterior part of the floor of the orbit. Called also *os palatinum* [NA] and *palate b.* **parietal b.**, one of the two quadrilateral bones forming part of the superior and lateral surfaces of the skull, and joining each other in the midline at the sagittal suture; called also *os parietale* [NA] and *bregmatic b.* **pastern b.**, either of two bones of the horse's foot: *large pastern b.*, the first phalanx of a horse's foot; *small pastern b.*, the second phalanx of a horse's foot. **pedal b.**, coffin b. **pelvic b.**, os coxae. **periosteal b.**, bone that is developed directly from and beneath the periosteum. **petro-**

sal b., petrous b., pars petrosa ossis temporalis. **phalangeal b's of foot**, *ossa digitorum pedis*. **phalangeal b's of hand**, *ossa digitorum manus*. **Pirrie's b.**, an occasionally occurring ossicle found above the head of the talus; called also *astragaloscapoid b.* **pisiform b.**, os pisiforme. **pneumatic b.**, one that contains air-filled cavities or sinuses; called also *os pneumaticum* [NA]. **postsphenoidal b.**, the posterior portion of the sphenoid bone. **postulnar b.**, os pisiforme. **prefrontal b.**, pars nasalis ossis frontalis. **prefrontal b. of von Bardeleben**, processus frontalis maxillae. **preinterparietal b.**, a wormian bone sometimes observed, detached from the anterior part of the interparietal bone. **premaxillary b.**, premaxilla. **presphenoidal b.**, the anterior portion of the sphenoid bone that develops separately and unites with the posterior portion (postsphenoidal bone) between the seventh and eighth months of intrauterine life. **primitive b.**, woven b. **pterygoid b.**, processus pterygoideus ossis sphenoidalis. **pubic b.**, the anterior inferior part of the hip bone (os coxae) on either side; see *os pubis* [NA]. **pyramidal b.**, os triquetrum. **radial b.**, radius, def. 2. **replacement b.**, cartilage b. **resurrection b.**, sacrum (os sacrum [NA]). **rider's b.**, a localized ossification of the inner aspect of the lower end of the tendon of the adductor muscle of the thigh (adductor tubercle), sometimes seen in horseback riders; called also *cavalry b.* **Riolan's b's**, small bones resembling wormian bones, sometimes found in the suture between the occipital bone and the petrous portion of the temporal bone. **rudimentary b.**, a bone that has only partially developed. **sacral b.**, os sacrum. **scaphoid b.**, os scaphoideum. **scaphoid b. of foot**, os naviculare. **scaphoid b. of hand**, os scaphoideum. **scapular b.**, scapula. **semilunar b.**, os lunatum. **sesamoid b's**, a type of short bone occurring mainly in the hands and feet, and found embedded in tendons or joint capsules; called also *ossa sesamoidea* [NA]. **sesamoid b's of foot**, *ossa sesamoidea pedis*. **sesamoid b's of hand**, *ossa sesamoidea manus*. **shin b.**, tibia. **short b.**, one whose main dimensions are approximately equal, e.g., one of the bones of the carpus or tarsus; called also *os breve* [NA]. **b's of skull**, *ossa cranii*. **solid b.**, substantia compacta ossium. **sphenoid b.**, a single, irregular, wedge-shaped bone at the base of the skull, which forms a part of the floor of the anterior, middle, and posterior cranial fossae; called also *os sphenoidale* [NA] and *alar b.* **sphenoturbinal b.**, concha sphenoidalis. **splint b's**, the reduced second and fourth metacarpal and metatarsal bones of the Equidae. **spoke b.**, radius, def. 2. **spongy b.**, substantia spongiosa ossium. **spongy b., inferior**, concha nasalis inferior. **spongy b., superior**, concha nasalis superior. **squamo-occipital b.**, the squamous portion of the fetal occipital bone, including the supraoccipital and interparietal bones. **squamous b.**, pars squamosa ossis temporalis. **stifle b.**, the patella of the horse. **stirrup b.**, stapes. **substitution b.**, cartilage b. **supernumerary b.**, a bone occurring in addition to the normal one, as a vertebra or a rib (cervical rib). **suprainterparietal b.**, a wormian bone sometimes occurring at the posterior part of the sagittal suture. **supraoccipital b.**, a bone developing from a separate ossification center in the fetus, which becomes the squamous part of the occipital bone below the superior nuchal line. **suprapharyngeal b.**, os sphenoidale. **suprasternal b's**, *ossa suprasternalia*. **sutural b's**, *ossa suturarum*. **tarsal b's**, the seven bones of the ankle; see *ossa tarsi*. **tarsal b., first**, os cuneiforme mediale. **tarsal b., second**, os cuneiforme intermedium. **tarsal b., third**, os cuneiforme laterale. **temporal b.**, one of the two irregular bones forming part of the lateral surfaces and base of the skull, and containing the organs of hearing; called also *os temporale* [NA]. **thigh b.**, femur, def. 1. **b's of toes**, *ossa digitorum pedis*. **tongue b.**, os hyoideum. **trapezium b.**, os trapezium. **trapezium b., lesser**, os trapezoideum. **trapezium b. of Lyser**, os trapezoideum. **trapezoid b.**, os trapezoideum. **trapezoid b. of Henle**, processus pterygoideus ossis sphenoidalis. **trapezoid b. of Lyser**, os trapezium. **triangular b.**, os triquetrum. **triangular b. of tarsus**, os trigonum tarsi. **triquetral b.**, os triquetrum. **turbinate b., highest**, concha nasalis superior. **turbinate b., inferior**, concha nasalis inferior. **turbinate b., middle**, concha nasalis media. **turbinate b., superior**, concha nasalis superior. **turbinate b., supreme**, concha nasalis superior. **tympanic b.**, pars tympanica ossis temporalis. **ulnar b.**, ulna. **unciform b.**, uncinat b., os hamatum. **vesalian b.**, os vesalianum pedis. **vomer b.**, vomer. **whetle b's**, vertebrae thoracicae. **whirl b.**, 1. the patella. 2. the head of the femur. **wormian b's**, *ossa suturarum*. **woven b.**, bony tissue found in the embryo and young children and in various pathologic conditions in adults, in which the bone fails to show the oriented arrangement of collagen fibers characteristic of lamellated bone; called also *nonlamellated b.* and *primitive b.* **xiphoid b.**, sternum. **zygomatic b.**, the triangular bone of the cheek; see *os zygomaticum*.

bonelet (bōn'let) a small bone, or ossicle.

Bonhoeffer's symptom (bon'hēf-erz) [Karl Bonhoeffer, psychiatrist in Berlin, 1868–1948] see under *symptom*.

Bonine (bo'nēn) trademark for preparations of meclizine hydrochloride.

Bonnaire's method (bon-ärz') [Érasme Bonnaire, French obstetrician, 1858–1918] see under *method*.

Bonnet's capsule, sign (bo-nāz') [Amédée Bonnet, French surgeon, 1809–1858] the capsule enclosing the posterior part of the eyeball. See *vagina bulbi*, and under *sign*.

Bonnier's syndrome (bon-e-āz) [Pierre Bonnier, French physician, 1861–1918] see under *syndrome*.

Bonwill triangle (bon'wil) [William Gibson Arlington Bonwill, American dentist, 1833–1899] see under *triangle*.

boomslang (boom'slang) a venomous, colubrid, arboreal snake, *Dispholidus typus*, of South Africa. See table accompanying *snake*.

Boophilus (bo-off'i-lus) [Gr. *bous* ox + *philein* to love] a genus of cattle ticks. **B. annulatus**, **B. bo'vis**, the southern cattle tick, which transmits *Babesia bigemina*, the causative agent of Texas fever. Called also *Margaropus annulatus*. **B. decoloratus**, a tick of South Africa that serves as the means of transmitting *Anaplasma marginale*, the causative agent of gallsickness in cattle. **B. microplus**, the common cattle tick in Panama; it transmits *Texas fever*.

Booponus (bo-op'o-nus) [Gr. *bous* ox + *ponos* pain] a fly of the Philippines whose larvae (foot maggots) cause lameness in cattle and goats.

booster (bōöst'er) see under *dose*. **patch b.**, a permanent artificial heart pump composed of silicone rubber and Dacron attached to a helium-powered driving unit and compressed air tank worn on a belt about the waist.

boot (bōöt) an encasement for the foot; a protective casing or sheath. **Gibney's b.**, an adhesive tape support used in treatment of sprains and other painful conditions of the ankle, the tape being applied in a basketweave fashion with strips placed alternately under the sole of the foot and around the back of the leg. **Junod's b.**, an air-tight boot to which is fitted an air pump. A partial vacuum causes a flow of blood to the parts enclosed in the boot, producing the effect of bloodletting by causing a fainting spell. **Unna's paste b.**, a dressing for varicose ulcers, consisting of a paste made from gelatin, zinc oxide, and glycerin, which is applied to the entire leg, then covered with a spiral bandage, this in turn being given a coat of the paste; the process is repeated until satisfactory rigidity is attained.

borate (bo'rāt) any salt of boric acid.

borated (bo'rāt-ed) combined with or containing borax or boric acid.

borax (bo'raks), gen. *boracis* [L. from Arabic; Persian *būrah*] sodium borate.

borborygmus (bor''bo-rig'mus), pl. *borboryg'mi* [L.] a rumbling noise caused by the propulsion of gas through the intestines.

Borchardt's test (bor'chartz) [Leo Borchardt, German chemist, born 1879] see under *tests*.

border (bor'der) a bounding line, edge, or surface. For names of borders of various anatomical structures not included here, see entries under *margo*. **b. of acetabulum**, labrum acetabulare. **alveolar b. of mandible**, arcus alveolaris mandibulae. **alveolar b. of maxilla**, arcus alveolaris maxillae. **brush b.**, a specialization of the free surface of a cell, consisting of minute cylindrical processes (microvilli) that greatly increase the surface area; noted especially on the cells of the proximal convolution in a renal tubule and on the intestinal epithelium of vertebrates. Called also *striated b.* **denture b.**, 1. the limit, boundary, or circumferential margin of a denture base. 2. the margin of the denture base at the junction of the polished surface with the impression (tissue) surface. 3. the extreme edges of a denture base at the buccolabial, lingual, and posterior limits. 4. the extreme margins of a denture base. Called also *denture edge*. **external b. of tibia**, facies lateralis tibiae. **inferior b. of mandible**, basis mandibulae. **orbital b. of sphenoid bone**, facies orbitalis alae majoris. **b. of oval fossa**, limbus fossae ovalis. **posterior b. of petrous portion of temporal bone**, angulus posterior pyramidis ossis temporalis. **posterointernal b. of fibula**, crista medialis fibulae. **striated b.**, brush b. **superior b. of patella**, basis patellae. **superior b. of petrous portion of temporal bone**, angulus superior pyramidis ossis temporalis. **vermillion b.**, the exposed red portion of the upper or lower lip.

Bordet's phenomenon, test (bor-dāz') [Jules Jean Baptiste Vincent Bordet, Belgian bacteriologist, 1870–1961; winner of Nobel prize in medicine and physiology for 1919] see *serum test*, under *tests*.

Bordet-Gengou agar (culture medium), bacillus, phenomenon (reaction) (bor-da'-zhaw-goo') [Jules Jean Baptiste Vincent Bordet; Octave Gengou, French bacteriologist, 1875–1957] see *Table of Culture Media*, and see *Hemophilus pertussis* and *fixation of the complement*.

Bordetella (bor'dē-tel'lah) [Jules Jean Baptiste Vincent Bordet] in some systems of classifications, a genus of microorganisms of the family Brucellaceae, order Eubacteriales, made up of minute motile or nonmotile gram-negative coccobacilli that are parasitic and produce a dermonecrotic toxin. **B. bronchiseptica**, the

causative agent of bronchopneumonia in guinea pigs and other rodents, swine, dogs, and lower primates. Formerly called *Bacillus bronchisepticus*, *Brucella bronchiseptica*, and *Hemophilus bronchisepticus*. **B. paraptus/sis**, a species occasionally found in whooping cough in man; called also *Hemophilus paraptus/sis*. **B. pertus/sis**, the causative agent of whooping cough in man; called also *Hemophilus pertussis*.

borism (bo'rizm) poisoning by a boron compound.

borjom (bor'jom) a natural mineral water from Caucasia.

Borna disease [Borna, a district in Saxony where an epidemic occurred] see under *disease*.

borneol (bor'ne-ol) chemical name: *endo-1,7,7-trimethylbicyclo-[2.2.1]heptan-2-ol*. A terpene alcohol, $C_{10}H_{18}O$, found in the Borneo camphor tree (*Dryobalanops aromatica*) and many other plants, or prepared synthetically, and used, chiefly in the form of its esters, in the manufacture of perfume and incense. Called also *Borneo camphor*, *bornyl alcohol*, and *camphyl alcohol*. **b. acetate**, see under *bornyl*.

Bornholm disease (born'hōm) [named from the Danish island, Bornholm] epidemic pleurodynia.

bornyl (bor'nil) a univalent radical of borneol. **b. acetate**, an ester of borneol found in the oil of *Rosmarinus officinalis* and many other oils, and used as a flavoring agent and in the manufacture of perfume; called also *borneol acetate*. **b. alcohol**, borneol. **b. chloride**, chemical name: *endo-2-chlorol-7,7-trimethylbicyclo[2.2.1]heptane*. A compound, $C_{10}H_{17}Cl$, prepared from pinene, the chief constituent of turpentine oil, by the action of hydrochloric acid, in the process of producing synthetic camphor. Called also *artificial camphor*, *pinene hydrochloride*, and *turpentine camphor*.

boroglyceride (bo'ro-glis'er-id) boroglycerin.

boroglycerin (bo'ro-glis'er-in) a compound ($C_3H_5BO_3$) prepared by heating 2 parts of boric acid and 3 parts of glycerin; formerly used as an antiseptic. **b. glycerite**, a preparation of boric acid and glycerin, containing between 47.5 and 52.5 per cent of boroglycerin; formerly used as an antibacterial. Called also *glyceritum boroglycerini* and *glycerol boroglycerite*.

boroglycerol (bo'ro-glis'er-ol) boroglycerin.

boron (bo'ron) [L. *borium*] a nonmetallic element occurring in the form of crystals and as a powder. It is the base of borax and boric acid; symbol B, atomic number 5, specific gravity 2.54, atomic weight 10.811. **b. carbide**, a substance, B_4C , obtained by heating boron at an extremely high temperature to effect its union with carbon, used in dentistry as an abrasive agent.

Borrelia (bō-rel'e ah) [after Amédée Borrel, French bacteriologist in Strasbourg, 1867–1936] a genus of microorganisms of the family Treponemataceae, order Spirochaetales, made up of cells 8 to 16 μ long, with coarse, shallow, irregular spirals, generally tapering into fine filaments at the ends; parasitic in many animals, some of them causing relapsing fever in birds and in man and other mammals. Twenty-eight different species have been described. **B. aegyptica**, an etiologic agent of relapsing fever in the Sudan. **B. anserina**, the etiologic agent of fowl spirochetosis, transmitted by the tick *Argas persicus*, nonpathogenic for man. **B. berbera**, the causative agent of relapsing fever in North Africa, thought to be transmitted by the human body louse. **B. buccalis**, a parasite of the human oral cavity that has slight pathogenicity. **B. carteri**, the etiologic agent of Indian relapsing fever, transmitted by the human body louse. **B. caucasica**, an etiologic agent of relapsing fever in the Caucasus, transmitted by the tick *Ornithodoros verrucosus* from a reservoir of infection in field mice. **B. duttonii**, an etiologic agent of relapsing fever in central and south Africa, transmitted by the tick *Ornithodoros moubata*; called also *Dutton's spirochete*. **B. hermsi**, an etiologic agent of relapsing fever in western North America, transmitted by the tick *Ornithodoros hermsi* but not by other species of ticks. **B. hispanica**, the etiologic agent of relapsing fever in the Iberian peninsula and northwest Africa, transmitted by ticks of the genus *Ornithodoros*. **B. ko'chii**, an etiologic agent of African relapsing fever, considered to be identical with *B. duttonii*. **B. neotropica**, an etiologic agent of relapsing fever in South America. **B. no'vyi**, an etiologic agent of relapsing fever in North America. **B. parkeri**, an etiologic agent of relapsing fever in western United States, transmitted by the tick *Ornithodoros parkeri* but not by other species of *Ornithodoros*. **B. persica**, an etiologic agent of relapsing fever in Iran, transmitted by the tick *Ornithodoros tholozani*. **B. recurrens**, the causative agent of relapsing fever transmitted by the human body louse; considered by some to include all relapsing fever spirochetes, other named species being regarded as serotypes or serological variants of a single species of organisms. **B. theileri**, a microorganism associated with a benign affection of cattle of South Africa and regarded as the transmitter of tickborne relapsing fever; *Rhipicephalus decoloratus* is regarded as the vector. **B. turicata**, an etiologic agent of relapsing fever in southwestern United States, transmitted by the tick *Ornithodoros turicata* but not by other species of *Ornithodoros*. **B. venezuelensis**, an etiologic agent of relapsing fever in northern South America and Central America, transmitted by the tick *Ornithodoros rudis*. **B. vinctii**, a

parasite of the human oral cavity, occurring in large numbers with a fusiform bacillus (*Fusobacterium plauti-vincenti*) in necrotizing ulcerative gingivitis and in necrotizing ulcerative gingivostomatitis; called also *spirillum of Vincent*.

borreliosis (bō-rel'ē-o'sis) infection with *Borrelia*; see *relapsing fever*, under *fever*.

Borsieri's sign (line) (bor'se-er'ēz) [Giovanni Battista Borsieri de Kanilfeld, French physician, 1725–1785] see under *line*.

Borthen's operation (bor'tenz) [Johan Borthen, Norwegian ophthalmologist] iridotaxis.

Bose's hooks, operation (bo'sez) [Heinrich Bose, German surgeon, 1840–1900] see under *hook* and *operation*.

boss (bos) a rounded eminence, as on the surface of a bone or tumor. **parietal b's**, sharp prominences on each side of the parietal bones.

bosselated (bos'ē-lāt-ed) [Fr. *bosseler*] marked or covered with bosses.

bosselation (bos'ē-lā'shun) 1. a small eminence; one of a set of bosses. 2. the condition or fact of being bosselated; the process of becoming bosselated.

Bossi's dilator (bos'ēz) [Luigi Maria Bossi, gynecologist in Genoa, 1859–1919] see under *dilator*.

Bostock's catarrh (disease) (bos'toks) [John Bostock, English physician, 1773–1846] hay fever.

Boston's sign (bos'tonz) [L. Napoleon Boston, American physician, 1871–1931] see under *sign*.

bot (bot) the larva of botflies, which may be parasitic in the stomach of animals and sometimes in that of man. **sheep nose b.**, the larva of *Oestrus ovis*, which is frequently found in the nasal passages of sheep.

Botallo's duct, foramen, ligament [Leonardo Botallo, Italian surgeon in Paris, born 1530] see *ductus arteriosus*, *foramen ovale cordis*, and *ligamentum arteriosum*.

botanic (bo-tan'ik) 1. pertaining to or derived from plants; of the vegetable kingdom. 2. pertaining to botany.

botany (bot'ah-ne) [L. *botanica* from Gr. *botanē* herb] the science of plants or of the vegetable kingdom. **medical b.**, the botany of plants used in medicine.

Botelho's test (bo-tel'yōz) [Dr. Botelho, physician in Paris] see under *tests*.

botfly (bot'fli) an insect of the order Diptera, family Oestridae, whose larvae are parasitic in animals, especially horses and sheep. The genera include *Oestrus*, *Gasterophilus*, *Dermatobia*, and *Cuterebra*.

bothridium (both-rid'e-um) one of the four leaf-like suckers symmetrically placed around the anterior end of the scolex of a tetracanthid cestode; called also *phyllidea*.

bothriocephaliasis (both're-o-sef'ah-li'ah-sis) diphyllbothriasis.

Bothriocephalus (both're-o-sef'ah-lus) [Gr. *bothrion* pit + *kephalē* head] *diphyllbothrium*.

bothrium (both're-um) [Gr. *bothrion* pit] a sucker in the form of a groove such as is seen on either side of the head of *Diphyllbothrium latum*.

bothropik (both-rop'ik) pertaining to, characteristic of, or derived from snakes of the genus *Bothrops*.

Bothrops (both-rops) [Gr. *bothros* pit + *ōps* eye] a genus of South American serpents. *B. atrox* is the fer-de-lance and *B. jararaca* is the jararaca (q.v.). See table accompanying *snake*.

botogenin (bot-o-je'nin) a steroid sapogenin, C₂₇H₄₆O₄, derived from *Dioscorea mexicana*, which is a precursor in a patented process for the partial synthesis of steroid hormones.

botryoid (bot're-oid) [Gr. *botrys* bunch of grapes + *eidos* form] resembling a bunch of grapes.

botryomycoma (bot're-o-mi-ko'mah) one of the lesions of botryomycosis.

botryomycosis (bot're-o-mi-ko'sis) a purulent infection of domestic animals, such as horses and cattle, resembling maduromycosis and marked by the formation of granulomatous masses in the skin and sometimes the viscera. It is caused by *Staphylococcus aureus* and other bacteria and is associated especially with castration or other wounds or injuries. Formerly thought to be caused by a fungus. **b. hom'inis** (obs.), granuloma pyogenicum.

botryomycotic (bot're-o-mi-kot'ik) pertaining to or affected with botryomycosis.

botryotherapy (bot-re-o-ther'ah-pe) [Gr. *botrys* cluster of grapes + *therapeia* therapy] the grape cure.

botrytimycosis (bo-tri'te-mi-ko'sis) infection with fungi of the genus *Botrytis*.

Botrytis (bo-tri'tis) a genus of fungi of the family Moniliaceae, order Moniliales, including the common gray mold and some plant pathogens, which causes onion rot, peony blight, and turnip fire. **B. bassia'na**, *Beauveria bassiana*. **B. tenel'la**, *Beauveria tenella*.

bots (bots) a name given the diseased condition in horses and

other animals, attributed to the presence of larvae of botflies of various genera.

Böttcher's cells, crystals (bet'sherz) [Arthur Böttcher, German anatomist, 1831–1889] see under *cell* and *crystals*.

Böttger's test (bet'gerz) 1. [Rudolf Böttger, German chemist, 1806–1881] see under *tests* (def. 1). 2. [Wilhelm Carl Böttger, German chemist, 1871–1949] see under *tests* (def. 2).

Bottini's operation (bo-te'nēz) [Enrico Bottini, Italian surgeon, 1837–1903] see under *operation*.

bottle (bot'l) a hollow narrow-necked vessel of glass or other material, used in laboratory procedures or for other purposes.

Junker b., see under *inhaler*. **Spritz b.**, a wash bottle for laboratory use. **wash b.**, 1. a flexible squeeze-bottle with delivery tube, or a bottle having two tubes through the cork, so arranged that blowing into one will force a stream of liquid from the other; used in washing chemical materials. 2. a bottle containing some washing fluid, through which gases are passed for the purpose of freeing them from impurities. **Woulfe's b.**, a three-necked bottle used for washing gases or for saturating liquids with a gas.

botuliform (boh'oo-li-form) [L. *botulus* sausage + *forma* shape] sausage-shaped.

botulin (boh'oo-lin) [L. *botulus* sausage] a highly active neurotoxin sometimes found in imperfectly preserved or canned meats and vegetables; it is produced by *Clostridium botulinum* and is peculiar in that it resists the action of the gastric juice. The toxin occurs in six antigenically distinct forms, A, B, C, D, E, and F. Called also *botulinum toxin*. See *botulism*.

botulinal (boh'oo-li'nal) pertaining to *Clostridium botulinum* or to its toxin (botulin).

botulinogenic (boh'oo-lin'o-jen'ik) [botulin + Gr. *gennan* to produce] producing or containing botulin.

botulism (boh'oo-lizm) [L. *botulus* sausage] a type of food poisoning caused by a neurotoxin (botulin) produced by the growth of *Clostridium botulinum* in improperly canned or preserved foods. It is characterized by vomiting, abdominal pain, difficulty of vision, nervous symptoms of central origin, disturbances of secretion, motor disturbances, dryness of the mouth and pharynx, dyspepsia, a barking cough, mydriasis, ptosis, etc. *Botulism* is the broader term; *allantiasis* refers only to sausage poisoning. **infant b.**, that affecting infants, typically 4 to 26 weeks of age, marked by constipation, lethargy, hypotonia, and feeding difficulty; it may lead to respiratory insufficiency. It is thought to result from toxin produced in the gut by ingested organisms, rather than from preformed toxins. **wound b.**, botulism resulting from infection of a wound with *Clostridium botulinum*; it is marked by the same symptoms as the foodborne form except for the absence of gastrointestinal symptoms.

botulismotoxin (boh'oo-liz'mo-tok'sin) botulin.

bouba (boo'bah) yaws. **b. braziliana**, mucocutaneous leishmaniasis.

Bouchard's coefficient, disease, nodes (nodules), sign (boo-sharz') [Charles Jacques Bouchard, French physician, 1837–1915] see under *coefficient*, *disease*, *node*, and *sign*.

Bouchardat's test, treatment (boo-shar-dahz') [Apollinaire Bouchardat, French chemist, 1806–1886] see under *tests* and *treatment*.

bouche (boosh') [Fr.] mouth. **b. de tapir** (de tah-pēr'), tapir mouth.

Bouchut's respiration, tubes (boo-shooz') [Jean Antoine Eugène Bouchut, French physician, 1818–1891] see under *respiration* and *tube*.

Boudin's law (boo-dahz') [Jean Christian Marc François Joseph Boudin, French physician, 1806–1867] see under *law*.

bougie (boo-zhe') [Fr. "wax candle"] a slender, flexible, hollow or solid, cylindrical instrument for introduction into the urethra or other tubular organ, usually for the purpose of calibrating or dilating constricted areas. **b. à boule** (ah-bool') [Fr.], bulbous

Bougies: A, Otis bougie à boule; B, olive-tipped bougie; C, Garceau bougie; D, Braasch bulbous bougie; E, filiform bougie.

b. acorn-tipped b., a bulbous bougie with a tip shaped like an acorn. **bulbous b.**, one with a bulb-shaped tip; called also

- bougée à boufe**. **caustic b.**, one that has a piece of silver nitrate or other caustic agent attached to its end; used as a portacautic. **conic b.**, one with a cone-shaped tip. **cylindrical b.**, one with a round or circular section. **dilating b.**, a bougie whose diameter can be increased by turning a screw; commonly used for dilating a stricture of the urethra. **ear b.**, one for use in aural surgery. **elastic b.**, one made of India rubber or other elastic material. **elbowed b.**, one with an elbow or sharp, beaklike bend, near the tip. **filiform b.**, one of very slender caliber; often used for the gentle exploration of strictures or sinus tracts of small diameter with multiple false passages. **fusiform b.**, one with a belly or expansion in its shaft. **Gruber's b's** (obs.), bougies of medicated gelatin for insertion into the auditory meatus. **Hurst's b's**, a series of mercury-filled tubes of graded diameter for dilating the cardioesophageal region. **Maloney b's**, a series similar to Hurst's bougies but having cone-shaped tips. **medicated b.**, one that is charged with a medicinal substance. **olive-tipped b.**, a bulbous bougie with a tip shaped like an olive. **rosary b.**, a beaded bougie for use in a strictured urethra. **soluble b.**, one composed of a material that will melt or dissolve in situ. **wax b.**, one made of linen, gauze, or silk dipped in melted wax and then rolled. **wax-tipped b.**, a long, slender, flexible bougie with a wax tip for passage into the ureter through the cystoscope to confirm the diagnosis of ureteral calculus. **whip b.**, one with a filiform point and a stem of gradually increasing caliber.
- bougienage** (boo-zhe-nahzh') the passage of a bougie through a tubular structure or organ, to increase its caliber, as in the treatment of stricture of the esophagus.
- bouginage** (boo-zhe-nahzh') bougienage.
- Bouillaud's disease, sign, syndrome** (boo-e-yōz') [Jean Baptiste Bouillaud, French physician, 1796-1881] see *rheumatic endocarditis*, under *endocarditis*, and see under *sign* and *syndrome*.
- bouillon** (boo-e-yaw') [Fr.] a broth or soup prepared from the flesh of animals; used in food preparations and as a bacteriological culture medium. In the latter use, it is generally called *broth*; see *Table of Culture Media for specific broths*.
- Bouin's fluid (solution)** (bwahz') [Paul Bouin, French anatomist, 1870-1962] see under *fluid*.
- bulimia** (boo-lim'e-ah) bulimia.
- bound** (bownd) 1. restrained or confined; not free. 2. held in chemical combination.
- bouquet** (boo-ka') [Fr.] a structure suggesting resemblance to a bunch of flowers, as a cluster of vessels, nerves, or fibers, or the polarized stage of synapsis at the start of meiosis.
- bourdonnement** (boor-don-maw') [Fr.] (obs.) an abnormal humming or buzzing sound in the ears; tinnitus.
- Bourgery's ligament** (boor'jer-ēz) [Marc Jean Bourgery, French anatomist and surgeon, 1797-1849] ligamentum popliteum obliquum.
- Bourget's test** (boor-zhāz') [Louis Bourget, Swiss physician, 1856-1913] see under *tests*.
- Bourneville's disease** (boor'ne-vēz) [Désiré-Magloire Bourneville, French neurologist, 1840-1909] sclerosis tuberosa.
- bout** (bout) an attack or episode of illness.
- bouton** (boo-taw') [Fr.] button. **b. de Biskra**, **b. d'o'rient**, cutaneous leishmaniasis. **b's terminaux'**, synaptic end-feet.
- boutonneuse** (boo-ton-ēz') boutonneuse fever.
- boutonnière** (boo-ton-yāz') an incision made into the urethra in order to extract an impacted calculus.
- Bouveret's disease (syndrome), ulcer** (boo-ver-āz') [Léon Bouveret, French physician, 1850-1929] see *paroxysmal tachycardia*, under *tachycardia*, and see under *ulcer*.
- Boveri's test** (bo'va-rēz) [Piero Boveri, Italian neurologist, 1879-1932] see under *tests*.
- Bovet** (bo'vet), Daniel. Swiss pharmacologist in Italy, born 1907; winner of the Nobel prize in medicine and physiology for 1957, for work that led to development of antihistamines and muscle relaxants.
- Bovimycetes pleuropneumoniae** (bo'vē-mi'sēz ploor'o-nu-mo'ne-e) *Mycoplasma mycoides*.
- bovine** (bo'vin) [L. *bos*, *bovis* ox, bullock, cow] pertaining to, characteristic of, or derived from the ox (cattle).
- bovovaccination** (bo'vo-vak'si-na'shun) vaccination with bovovaccine.
- bovovaccine** (bo'vo-vak'sēn) an attenuated and ground human tubercle bacillus used by von Behring for protective inoculation against bovine tuberculosis.
- bow** (bo) a bow-shaped device. **Birnberg b.**, an intrauterine contraceptive device consisting of polyethylene molded in a rod and shaped in the outline of two isosceles triangles of equal size placed apex to apex, one containing a nylon tail to facilitate removal of the appliance. **Logan b.**, an appliance used to prevent tension on sutures after surgical repair of cleft lip.
- Bowditch's law** (bow'dich-ez) [Henry Pickering Bowditch, Boston physiologist, 1840-1911] see *all-or-none*, under *A*; see under *law*; and see *trappe*.
- bowel** (bow'el) [Fr. *boyau*] the intestine.
- bowenoid** (bo'en-oid) anaplastic; said of the neoplastic cells derived from the epidermis, which constitute lesions of intraepidermal squamous cell carcinoma (Bowen's disease).
- Bowen's disease (precancerous dermatosis)** (bo'enz) [John Templeton Bowen, American dermatologist, 1857-1941] see under *disease*.
- bowie** (bo'e) a disease resembling rickets, which affects unweaned lambs in New Zealand.
- bowleg** (bo'leg) an outward curvature of one or both legs near the knee; genu varum. **nonrachitic b.**, osteochondrosis deformans tibiae.
- Bowman's capsule**, etc. (bo'manz) [Sir William Bowman, an English physician, 1816-1892] see under *capsule*, *lamina*, *muscle*, *probe*, *theory*, and *tube*.
- box** (boks) a rectangular structure. **fracture b.**, a long box without cover or ends, to support a broken limb. **Skinner b.**, an experimental enclosure for testing animal conditioning, in which the subject animal performs (e.g., presses a bar or lever) to obtain a reward. **Yerkes discrimination b.**, a maze with a series of doors, used in the laboratory in studies of visual discrimination in animals; opening of the proper door produces a reward, but opening of the wrong door produces an electric stimulus.
- boxing** (boks'ing) in dentistry, the building up of vertical walls, usually in wax, around the impression to produce the desired size and form of the base of the cast, and to preserve certain landmarks of the impression.
- box-note** (boks'nōt) a hollow sound heard in percussing the chest in emphysema.
- Boyer's bursa, cyst** (bwah-yāz') [Alexis, Baron, de Boyer, French surgeon, 1757-1833] see under *bursa* and *cyst*.
- Boyle's law** (boilz) [Robert Boyle, British physicist, 1627-1691] see under *law*.
- Bozeman's catheter, operation, position speculum** (bōz'-manz) [Nathan Bozeman, American surgeon, 1825-1905] see under *catheter*, *position*, and *speculum*, and see *hysteroecytocleisis*.
- Bozeman-Fritsch catheter** (bōz'man-fritsh) [Nathan Bozeman; Heinrich Fritsch, German gynecologist, 1844-1915] Bozeman's catheter.
- Bozzolo's sign** (bot'tso-lōz) [Camillo Bozzolo, Italian physician, 1845-1920] see under *sign*.
- B.P.** 1. blood pressure. 2. British Pharmacopoeia, a publication of the General Medical Council, describing and establishing standards for medicines, preparations, materials, and articles used in the practice of medicine, surgery, or midwifery.
- b.p.** boiling point.
- B.P.A.** British Paediatric Association.
- B. Ph.** British Pharmacopoeia.
- Bq** abbreviation for *becquerel*.
- Br** chemical symbol for *bromine*.
- brace** (brās) an orthopedic appliance or apparatus (an orthosis) used to support, align, or hold parts of the body in correct position; also, usually in the plural, an orthodontic appliance for the correction of malaligned teeth.
- bracelet** (brās'let) a small encircling band, denoting, in the plural, transverse markings across the palmar surface of the skin of the wrists. **Nageotte's b's**, bands covered with circular spines on the axons at the level of the nodes of Ranvier.
- brachia** (bra'ke-ah) [L.] plural of *brachium*.
- brachial** (bra'ke-al) [L. *brachialis*, from *brachium* arm] pertaining to the arm.
- brachialgia** (bra'ke-al'je-ah) [Gr. *brachion* arm + *-algia*] pain in the arm or arms. **b. stat'ica paresthet'ica**, painful paresthesias in the arm and hand during sleep due to compression of the blood vessels; called also *Wartenberg's disease*.
- brachiation** (bra'ke-a'shun) [L. *brachium* + *-ation* suffix implying action] locomotion in a position of suspension by means of the hands and arms, as exhibited by monkeys when swinging from branch to branch.
- brachiocephalic** (brak'e-o-sē-fal'ik) [Gr. *brachion* arm + *kephalē* head] pertaining to the arm and head.
- brachiorural** (brak'e-o-kroo'ral) [L. *brachium* arm + *crus* leg] pertaining to the arm and leg.
- brachiocubital** (brak'e-o-ku'bi-tal) [L. *brachium* arm + *cubitus* elbow] pertaining to the arm and elbow or forearm.
- brachiocyllosis** (brak'e-o-si-lo'sis) [Gr. *brachion* arm + *kylōsis* a crooking] brachioecytosis.
- brachioecytosis** (brak'e-o-ser-to'sis) [Gr. *brachion* arm + *kyrtos* bent] crookedness of the arm.
- brachiofaciolingual** (brak'e-o-fa'she-o-ling'gwāl) pertaining to or affecting the arm, the face, and the tongue.
- brachigram** (brak'e-o-gram) (obs.) a tracing of the pulse beat at the brachial artery.

brachiotomy (bra'ke-ot/o-me) [Gr. *brachion* arm + *tomē* a cut] (*obs.*) the surgical or obstetrical cutting or removal of an arm.

brachium (bra'ke-um), pl. *bra'chia* [L.; Gr. *brachion*] [NA] 1. the arm; specifically the arm from shoulder to elbow. 2. a general term used to designate an armlike process or structure. **b. colliculi inferioris** [NA], fibers from the lateral lemniscus that pass deep to the inferior colliculus and run forward to terminate in the medial geniculate body; called also **b. quadrigenum inferius**, **b. conjunctivum posterius**, **b. of inferior colliculus**, **inferior b. of mesencephalon**, and **posterior conjunctival b.** **b. colliculi superioris** [NA], fibers from the optic tract that pass dorsal to the medial geniculate body to enter the superior colliculus; called also **b. quadrigenum superius**, **anterior conjunctival b.**, **b. conjunctivum anterius**, **b. of superior colliculus**, and **superior b. of mesencephalon**. **conjunctival b., anterior** (*obs.*), **b. colliculi superioris**. **conjunctival b., posterior** (*obs.*), **b. colliculi inferioris**. **b. conjunctivum anterius** (*obs.*), **b. colliculi superioris**. **b. conjunctivum** [cerebel/li], **pedunculus cerebellaris superior**. **b. conjunctivum posterius** (*obs.*), **b. colliculi inferioris**. **b. of inferior colliculus**, **b. colliculi inferioris**. **b. of mesencephalon**, **inferior** (*obs.*), **b. colliculi inferioris**. **b. of mesencephalon**, **superior** (*obs.*), **b. colliculi superioris**. **b. opticum**, one of the processes extending from the corpora quadrigemina to the optic thalamus. **b. pontis**, **pedunculus cerebellaris medius**. **b. quadrigenum inferius**, **b. colliculi inferioris**. **b. quadrigenum superius**, **b. colliculi superioris**. **b. of superior colliculus**, **b. colliculi superioris**.

brachy- (bra'ke) [Gr. *brachys* short] a combining form meaning short.

brachybasia (bra'ke-ba'se-ah) [brachy- + Gr. *basis* walking] a slow, shuffling, short-stepped gait, as seen in double hemiplegia.

brachycardia (bra'ke-ka'r'de-ah) bradycardia.

brachycephalia (bra'ke-se-fa'le-ah) brachycephaly.

brachycephalic (bra'ke-se-fal'ik) [brachy- + Gr. *kephalē* head] having a short wide head, with a cephalic index of 81.0 to 85.4.

brachycephalism (bra'ke-sef'ah-lizm) brachycephaly.

brachycephalous (bra'ke-sef'ah-lus) brachycephalic.

brachycephaly (bra'ke-sef'ah-le) the fact or quality of having a short head, with a cephalic index of 81.0 to 85.4.

brachycheilia (bra'ke-ki'le-ah) [brachy- + Gr. *cheilos* lip + *-ia*] shortness of the lip.

brachychily (bra'ke-ik'i-le) brachycheilia.

brachychronic (bra'ke-kron'ik) [Gr. *brachychronios* of short duration] acute; said of a disease (Rabagliati).

brachycranial (bra'ke-kra'nik) having a short head, with a cephalic index of 80.0 to 84.9.

brachydactyly (bra'ke-dak'ti-le) [brachy- + Gr. *daktylos* finger] abnormal shortness of the fingers and toes.

brachyesophagus (bra'ke-es'of'ah-gus) [brachy- + *esophagus*] abnormal shortness of the esophagus.

brachyfacial (bra'ke-fa'shal) having a low broad face, with a facial index of 90 or less.

brachygnathia (bra'ke-ig-na'the-ah) [brachy- + Gr. *gnathos* jaw + *-ia*] abnormal shortness of the lower jaw.

brachygnathous (bra'ke-gig'nah-thus) [brachy- + Gr. *gnathos* jaw] having an unusually short lower jaw.

brachykerkic (bra'ke-ker'kik) [brachy- + Gr. *kerkis* the radius of the arm] having a short radius, with a radiohumeral index less than 75.

brachyknemic (bra'ke-ne'mik) having a short leg, with a tibiofemoral index of 82 or less.

brachymetacarpalism (bra'ke-met'ah-ka'pal-izm) brachymetacarpia.

brachymetacarpia (bra'ke-met'ah-ka'pe-ah) abnormal shortness of the metacarpal bones.

brachymetapody (bra'ke-mē-tap'o-de) abnormal shortness of some of the metacarpal or metatarsal bones.

brachymetatarsia (bra'ke-met'ah-tar'se-ah) abnormal shortness of the metatarsal bones.

brachymetropia (bra'ke-mētro'pe-ah) [brachy- + Gr. *metron* measure + *opsis* sight] myopia, or nearsightedness.

brachymetropic (bra'ke-mē-trop'ik) nearsighted, or myopic.

brachymorphic (bra'ke-mor'fik) [brachy- + Gr. *morphē* form] built along lines that are shorter and broader than those of the normal figure; called also *brachytypical* and *brevilineal*.

brachyphalangia (bra'ke-fah-lan'je-ah) [brachy- + *phalanx*] abnormal shortness of one or more of the phalanges of a finger or toe.

brachyskelous (bra'ke-ske'lus) having short legs.

brachystaphyline (bra'ke-staf'i-lin) [brachy- + Gr. *staphylē* uvula] having a short palate, with palatal index of 85.0 or more.

brachystasis (bra'ke-kis'tah-sis) [brachy- + *stasis*] a state in which a muscle fiber is relatively decreased in length, and resists

stretch; it contracts and relaxes, manifesting the same tension after contraction as before.

brachytherapy (bra'ke-ther'ah-pe) in radiotherapy, treatment with ionizing radiation whose source is applied to the surface of the body or is located a short distance from the body area being treated; cf. *teletherapy*.

brachytypical (bra'ke-tip'e-k'l) brachymorphic.

brachyuranic (bra'ke-u-ran'ik) having a narrow maxilla, with a maxilloalveolar index of 115.0 or more.

bracing (bra'sing) resistance to the horizontal components of masticatory force.

bracken (bra'ken) a fern, *Pteridium aquilinum* (L.) Kuhn (Polypodiaceae), of worldwide distribution noted as a poisonous plant in veterinary medicine. In monogastric animals, the plant produces severe intoxication due to enzymatic destruction of thiamine by a thiaminase present in the plant. In ruminants, the poisoning is apparently due to a dialyzable, small molecule which causes bone-marrow hypoplasia, leading to death.

bract (bra'kt) a small modified leaf in a flower cluster.

Bradford frame (bra'd'ford) [Edward Hickling Bradford, Boston orthopedic surgeon, 1848-1926] see under *frame*.

bradshot (bra'd'shot) braxy.

bradsot (bra'd'sot) braxy.

brady- (bra'd'e) [Gr. *bradys* slow] a combining form meaning slow.

bradyacusia (bra'd'e-ah-ku'se-ah) [brady- + Gr. *akouein* to hear] dullness of hearing.

bradyarrhythmia (bra'd'e-ah-rith'me-ah) [brady- + *aneg.* + Gr. *rhythmos* rhythm] bradycardia associated with an irregularity in the heart rhythm.

bradyarthria (bra'd'e-ar'thre-ah) [brady- + Gr. *arthron* to utter distinctly] bradylalia.

bradyauxesis (bra'd'e-awk-se'sis) [brady- + Gr. *auxēsis* increase] a form of heterauxesis in which the part grows more slowly than the whole.

Bradybaena (bra'd'e-be'nah) a genus of snails that serve as hosts to *Dicrocoelium dentriticum*.

bradycardia (bra'd'e-ka'r'de-ah) [brady- + Gr. *kardia* heart] slowness of the heart beat, as evidenced by slowing of the pulse rate to less than 60. **Branham's b.**, see under *sign*. **cardi-omuscular b.** (*obs.*), that caused by disease of the muscle of the heart. **central b.**, bradycardia dependent on disease of the central nervous system. **essential b.**, bradycardia occurring without discoverable cause. **nodal b.**, bradycardia in which the stimulus of the heart's contraction arises in the atrioventricular node or main bundle. **postinfective b.**, bradycardia occurring after infectious disease. **sinoatrial b.**, sinus b. **sinus b.**, a slow sinus rhythm, with a heart rate less than 60. **vagal b.**, bradycardia due to increased vagal tone.

bradycardiac (bra'd'e-ka'r'de-ak) 1. pertaining to, characterized by, or causing bradycardia. 2. an agent that acts to slow the pulse.

bradycardic (bra'd'e-ka'r'dik) bradycardiac.

bradykinesia (bra'd'e-si-ne'ze-ah) bradykinesia.

bradycrotic (bra'd'e-krot'ik) [brady- + Gr. *krotos* pulsation] pertaining to, characterized by, or inducing slowness of pulse.

bradydiastalsis (bra'd'e-di'ah-stal'sis) (*obs.*) slow or delayed bowel movement.

bradydiastole (bra'd'e-di-as'to-le) [brady- + *diastole*] abnormal prolongation of the diastole.

bradycoelia (bra'd'e-e-koi'ah) [Gr. *bradyēkoos* slow of hearing] partial deafness.

bradyesthesia (bra'd'e-es-the'ze-ah) [brady- + Gr. *aisthēsis* perception] slowness or dullness of perception.

bradygenesis (bra'd'e-jen'ē-sis) [brady- + *genesis*] the lengthening of certain stages in embryonic development.

bradyglossia (bra'd'e-glos'e-ah) [Gr. *bradyglōssos* slow of speech] abnormal slowness of utterance.

bradykinesia (bra'd'e-kī-ne'se-ah) [brady- + Gr. *kinēsis* movement] abnormal slowness of movement; sluggishness of physical and mental responses.

bradykinetic (bra'd'e-kī-net'ik) [brady- + Gr. *kinēsis* motion] 1. characterized by or performed by slow movement. 2. denoting a method of showing the details of motor action by motion pictures taken very rapidly and shown very slowly.

bradykinin (bra'd'e-ki'nin) [brady- + Gr. *kinein* to move] a kinin composed of a chain of nine amino acids (arginine, proline, proline, glycine, phenylalanine, serine, proline, phenylalanine, and arginine), formed from kallidin II by the action of kallikrein; it is a very powerful vasodilator and causes increased capillary permeability. In addition, it constricts smooth muscle and stimulates pain receptors.

bradylalia (bra'd'e-la'le-ah) [brady- + Gr. *lalein* to talk] abnormally slow utterance of words due to a brain lesion; called also *bradyarthria* and *bradyphasia*.

bradylexia (bra'd'e-lek'se-ah) [brady- + Gr. *lexis* word] abnor-

- mal slowness in reading, due neither to defect of intelligence or of vision nor to ignorance of the alphabet.
- bradylogia** (brad'ē-lō'jē-ah) [Gr.] abnormal slowness of speech due to slowness of thinking, as in a mental disorder.
- bradymenorrhea** (brad'ē-men'ō-re'ah) [brady- + *menorrhea*] menstruation marked by long duration.
- bradyphagia** (brad'ē-fa'jē-ah) [brady- + Gr. *phagein* to eat] abnormal slowness in eating.
- bradyphasia** (brad'ē-fa'zē-ah) [brady- + Gr. *phasis* speech] bradylalia.
- bradyphemia** (brad'ē-fe'me-ah) [brady- + Gr. *phēmē* speech] slowness of speech.
- bradyphrasia** (brad'ē-fra'zē-ah) [brady- + Gr. *phrasis* utterance] slowness of speech due to mental disorder.
- bradyphrenia** (brad'ē-fre'ne-ah) [brady- + Gr. *phrēn* mind] a condition marked by extreme fatigability of initiative, interest, and psychomotor activity resulting from epidemic encephalitis.
- bradypnea** (brad'ē-ne'ah) [brady- + Gr. *pnōia* breath] abnormal slowness of breathing.
- bradypragia** (brad'ē-pra'jē-ah) [brady- + Gr. *prattein* to act] slowness of action.
- bradyrhythmia** (brad'ē-rith'me-ah) [brady- + Gr. *rhythmos* rhythm] bradycardia.
- bradyspermatism** (brad'ē-sper'mah-tizm) [brady- + Gr. *sperma* semen] abnormally slow ejaculation of semen.
- bradysphygmia** (brad'ē-sfig'me-ah) [brady- + Gr. *sphygmōs* pulse] bradycardia.
- bradystalsis** (brad'ē-stal'sis) [brady- + (*perī*-) *stalsis*] abnormal slowness of peristalsis.
- bradytachycardia** (brad'ē-tak'e-kar'de-ah) [brady- + Gr. *tachys* swift + *kardia* heart] alternating attacks of bradycardia and tachycardia, as may occur in sick sinus syndrome.
- bradyteleokinesia** (brad'ē-tel'e-o-si-ne'ze-ah) bradyteleokinesis.
- bradyteleokinesis** (brad'ē-tel'e-o-kī-ne'sis) [brady- + Gr. *telein* to complete + *kinēsis* movement] a defect of motor coordination in which a movement is slowed or stopped prior to reaching its goal.
- bradytocia** (brad'ē-to'se-ah) [brady- + Gr. *tokos* birth] lingering or slow parturition.
- bradytrophia** (brad'ē-tro'fe-ah) a condition characterized by slow-acting nutritive processes.
- bradytrophic** (brad'ē-trof'ik) [brady- + Gr. *trophē* nutrition] having slow-acting nutritive processes.
- bradyuria** (brad'ē-u're-ah) [brady- + Gr. *ouron* urine] abnormally slow passage of urine.
- bradism** (brād'izm) [after James Braid] hypnotism.
- Braid's strabismus** (brādz) [James Braid, English surgeon 1795-1860] see under *strabismus*.
- Brailey's operation** (bra'lēz) [William Arthur Brailey, English ophthalmologist, 1845-1915] see under *operation*.
- braille** (brāl) [Louis Braille, a French teacher of the blind, 1809-1852] a system of writing and printing for the blind by means of tangible points or dots.
- brain** (brān) [Anglo-Saxon *braegen*] that part of the central nervous system contained within the cranium, comprising the prosencephalon, mesencephalon, and rhombencephalon; it is derived (developed) from the anterior part of the embryonic neural tube. Called also *encephalon*. See also *cerebrum*. **new b.**, neencephalon (neencephalon). **old b.**, paleencephalon (paleoencephalon). **olfactory b.**, **smell b.**, rhinencephalon, def. 1. **respirator b.**, the brain after clinical brain death but while vital functions are being artificially maintained; it is characterized by marked autolysis and necrosis. **'tween b.**, diencephalon (interbrain). **water b.**, gid. **wet b.**, an edematous condition of the brain; see *brain edema*, under *edema*.
- Brain's reflex** (brānz) [Walter Russell Brain, British neurologist, 1895-1966] see under *reflex*.
- brain stem** (brān'stem) the stemlike portion of the brain connecting the cerebral hemispheres with the spinal cord and comprising the pons, medulla oblongata, and mesencephalon; the diencephalon is considered part of the brain stem by some.
- brainwashing** (brān'wash-ing) systematic emotional and mental conditioning of an individual or a group of individuals designed to instill attitudes and beliefs conformable to the wishes of those administering the conditioning, accomplished by means of propaganda, torture, drugs, conditioning procedures, or by other means. Called also *menticide*.
- brake** (brāk) a mechanism for arresting or inhibiting an activity. **duodenal b.**, a mechanism lodged largely in the duodenum that inhibits gastric secretion and motility.
- bran** (bran) the meal derived from the epidermis or outer covering of a cereal grain.
- branch** (branch) a division or offshoot from a main stem, especially of blood vessels, nerves, or lymphatics; for specific anatomical structures, see under *ramus*.
- branchia** (brang'ke-ah) [Gr. *branchia* gills] the gills of fishes and of others of the lower vertebrates; represented in the human fetus by the branchial arches, separated by clefts.
- branchial** (brang'ke-al) pertaining to or resembling the gills of a fish or the derivatives of homologous parts in higher forms.
- branchiogenic** (brang'ke-o-jen'ik) gill-forming; forming a branchial arch.
- branchiogenous** (brang'ke-oj'ē-nus) [*branchia* + Gr. *gennan* to produce] formed from a branchial cleft or arch.
- branchioma** (brang'ke-o'mah) a tumor derived from branchial epithelium or branchial rests.
- branchiomere** (brang'ke-o-mēr') a segment of the splanchnic mesoderm from which the branchial arches are developed.
- branchiomeris** (brang'ke-o-mer'ik) pertaining to the branchiomeres or visceral arches.
- branchiomerism** (brang'ke-om'er-izm) [*branchia*- + Gr. *meros* part] metamerism based on the serial repetition of the branchial arches.
- Branchiostoma** (brang'ke-o-sto'mah) [*branchia* + Gr. *stoma* mouth] *Amphioxus*.
- Brand bath** (brahnt) [Ernst Brand, German physician, 1827-1897] see under *bath*.
- Brande's test** (brands) [William Thomas Brande, English chemist, 1788-1866] see under *tests*.
- Brandt's method (treatment)** (brahnts) [Thure Brandt, Swedish physician, 1819-1895] see under *method*.
- brandy** (bran'de) the potable alcoholic distillate of fermented juices of various fruits, e.g., grapes, apples, cherries, peaches, etc., containing 48 to 54 per cent ethanol; used medically as a stomachic, tonic, peripheral vasodilator, and sedative.
- Branham's sign (bradycardia)** (bran'hamz) [H. H. Branham, American surgeon of 19th century] see under *sign*.
- Branhamella** (bran'hah-mel'ah) a genus of aerobic, nonmotile, non-spore-forming cocci. The type species, *B. catarrhalis*, is a normal inhabitant of the nasopharynx but occasionally causes disease; called also *Neisseria catarrhalis*.
- brash** (brash) heartburn. **water b.**, heartburn with regurgitation of sour fluid or almost tasteless saliva into the mouth.
- weaning b.**, diarrhea in an infant when put on food other than its mother's milk.
- Brassica** (bras'e-kah) [L.] a genus of cruciferous plants to which the cabbage, turnip, mustard, and related species belong. *B. alba* (L.) Rabenh. (*Sinapis alba* L.) is white mustard, and *B. nigra* (L.) Koch. is black mustard. When the seeds of these plants are crushed and moistened, volatile oils are liberated. See *mustard* and *oil of mustard*.
- Braun's anastomosis** (brawnz) [Heinrich Braun, German surgeon, 1847-1911] see under *anastomosis*.
- Braun's canal** (brawnz) [Carl von Braun, Viennese obstetrician, 1822-1891] neurenteric canal; see under *canal*.
- Braun's hook** (brawnz) [Gustav Braun, Austrian gynecologist, 1829-1911] see under *hook*.
- Braun's test** (brawnz) [Christopher Heinrich Braun, German physician, born 1847] see under *tests*.
- Braun-Husler test (reaction)** (brawn hoos'ler) [Ludwig Braun, German physician, born 1881] see under *tests*.
- Braune's canal** (brawn'ez) [Christian Wilhelm Braune, German anatomist, 1831-1892] see under *canal*.
- Braxton Hicks' sign** (braks'ton hiks) [John Braxton Hicks, English gynecologist, 1823-1897] see *Hicks sign*, under *sign*.
- braxy** (brak'se) a disease of sheep caused by *Clostridium septicum*, and marked by hemorrhagic abomasitis, with hemorrhage into the peritoneal cavity, by abdominal pain, and, usually, by diarrhea and high fever.
- brayera** (bra-ye'rah) the dried panicles of the pistillate flowers of *Hagenia abyssinica* J. F. Gmel., having medical and veterinary use as a vermifuge and tennicide, respectively.
- brazilin** (brah-zil'in) a yellow crystalline substance obtained from the bark of *Biancea sappan* and other redwood trees; it is very similar to hematoxylin and oxidizes to a bright red dye, brazilein.
- breadth** (bredth) the distance measured horizontally from side to side; see also under *diameter*. **b. of accommodation**, range of accommodation. **bizygomatic b.**, the distance between the most laterally situated points (zygia) on the zygomatic arches.
- break** (brāk) 1. to interrupt the continuity, or an interruption in the continuity of a structure, especially a bone. See *fracture*. 2. the interruption of an electric circuit, as distinguished from the make. **chromatid b.**, interruption of the continuity of a chromatid, the portions immediately proximal and distal to the site being out of alignment.
- breast** (brest) the anterior aspect of the chest, often applied especially to the modified cutaneous glandular structure it bears; see *mamma* [NA]. **caked b.**, stagnation mastitis. **chicken b.**, pigeon b. **Cooper's irritable b.**, neuralgia of the breast. **funnel b.**, funnel chest. **hysterical b.**, painful swelling of the breast due to hysteria. **irritable b.**, Cooper's irritable b.

VARIOUS ASPECTS AND SECTIONS OF BRAIN AND SPINAL CORD

**HEMISECTION OF HEAD AND NECK, SHOWING VARIOUS PARTS OF BRAIN
AND OTHER STRUCTURES**

(Anson)

pigeon b., a condition of the chest in which the sternum is prominent, due to obstruction to infantile respiration or to rickets; called also *chicken b.*, *keeled chest*, *pectus carinatum*, and *pectus gallinatum*. **proemial b.**, that condition of the female breast which is a prelude to pathologic changes. **shoe-makers' b.**, sinking in of the sternum in shoe-makers, produced by the pressure of tools against the lower part of the sternum and the xiphoid cartilage. **shotty b.**, cystic disease of the breast; see under *disease*. **thrush b.**, the speckled appearance of the myocardium under the endocardium in fatty degeneration of the heart.

breast-feeding (brest' fēd'ing) the nursing of an infant at the mother's breast.

breath (breth) [L. *spiritus halitus*] the air taken in and expelled by the expansion and contraction of the thorax. **lead b.**, the metallic odor of the breath in lead poisoning; called also *halitus saturninus*. **liver b.**, fetor hepaticus (hepatic fetor).

breathing (brēth'ing) the alternate inspiration and expiration of air into and out of the lungs; see *respiration*. **Biot's b.**, see under *respiration*. **bronchial b.**, vesicular breath sounds. **frog b.**, **glossopharyngeal b.**, respiration unaided by the primary or ordinary accessory muscles of respiration, the air being "swallowed" rapidly into the lungs by use of the tongue and muscles of the pharynx; used by patients with chronic muscle paralysis to augment their breathing. **intermittent positive pressure b.**, the active inflation of the lungs during inspiration under positive pressure from a cycling valve; abbreviated IPPB. **periodic b.**, Cheyne-Stokes respiration.

Breda's disease (bra'dahz) [Achille Breda, Italian dermatologist, 1850-1933] yaws.

bredouillement (bra-dwe-maw') a speech defect in which only part of the word is pronounced, due to extreme rapidity of utterance.

breech (brēch) buttocks (nates [NA]). **frank b.**, see under *presentation*.

bregma (breg'mah) [L.; Gr.] the point on the surface of the skull at the junction of the coronal and sagittal sutures.

bregmatic (breg-mat'ik) pertaining to the bregma.

bregmatodymia (breg'mah-to-dim'e-ah) [*bregma* + Gr. *didymos* twin + *-ia*] the state of conjoined twins fused at the bregmas.

Brehmer's treatment (method) (bra'merz) [Hermann Brehmer, German physician, 1826-1889] see under *treatment*.

brei (bri) [Ger. "pulp"] tissue that has been ground to a pulp; a homogenate.

Breisky's disease (bri'skēz) [August Breisky, German gynecologist, 1832-1889] kraurosis vulvae.

Bremer's test (brem'erz) [Ludwig Bremer, St. Louis physician, 1844-1914] see under *tests*.

bremsstrahlung (brem'strah-lung) [Ger. "braking radiation"] the electromagnetic radiation produced by the sudden deflection of a fast-charged particle (usually an electron) by another charged particle (usually a nucleus), the spectral distribution being continuous.

Brennemann's syndrome (bren'e-manz) [Joseph Brennemann, Chicago pediatrician, 1872-1944] see under *syndrome*.

Brenner's formula (test) (bren'erz) [Rudolf Brenner, German physician, 1821-1884] see under *formula*.

Brenner operation [Alexander Brenner, Austrian surgeon, 1859-1936] see under *operation*.

Brenner tumor [Fritz Brenner, German pathologist, born 1877] see under *tumor*.

brenz- (brents) a pure German prefix, meaning burnt; for words beginning thus, see those beginning *pyro-*.

brephic (bref'ik) [Gr. *brephos* embryo] pertaining to an early stage of development.

brepho- (bref'o) [Gr. *brephos* embryo or newborn infant] a combining form denoting relationship to the embryo or fetus, or to the newborn infant.

brephoplastic (bref'o-plas'tik) [*brepho-* + Gr. *plassein* to form] formed from embryonic tissue or during embryonic life.

brephopolysarcia (bref'o-pol'e-sar'se-ah) [*brepho-* + *polysarcia*] (*obs.*) excessive fleshiness in an infant.

brephotrophic (bref'o-trof'ik) [*brepho-* + Gr. *trophē* nutrition] pertaining to the nourishment of infants.

Breschet's canals, hiatus, sinus, veins (brē-shāz') [Gilbert Breschet, French anatomist, 1784-1845] see *canales diploici*, *helicotrema*, *sinus sphenoparietalis*, and *venae diploicae*.

Brethine (breth'en) trademark for preparations of terbutaline sulfate.

Bretonneau's diphtheria (angina, disease) (bret-o-nōz') [Pierre Fidèle Bretonneau, French physician, 1778-1862] diphtheria.

bretylum tosylate (brē-til'e-um) chemical name: 2-bromo-*N*-ethyl-*N,N*-dimethylbenzenemethanaminium 4-methylbenzenesulfonate. An adrenergic blocking agent, C₁₆H₂₄BrNO₃S, occurring as a white, crystalline powder; originally used as an antihy-

pertensive agent, it is now used as an antiarrhythmic in certain cases of ventricular tachycardia or fibrillation.

Breus mole (broys) [Carl Breus, Austrian obstetrician, 1852-1914] see under *mole*.

brevi- (brev'e) [L. *brevis* short] a combining form meaning short.

Brevibacteriaceae (brev'e-bak-te're-a'se-e) a family of Schizomycetes (order Eubacteriales), occurring as motile or nonmotile cells without endospores. It includes two genera, *Brevibacterium* and *Kurthia*.

Brevibacterium (brev'e-bak-te're-um) a genus of microorganisms of the family Brevibacteriaceae, order Eubacteriales, made up of generally nonmotile, short, unbranched rods. Found in soil, salt and fresh water, dairy products, and decomposing material of many types. It includes 23 species.

brevicollis (brev'ē-kol'is) [*brevi-* + L. *collum* neck] shortness of the neck; see *dystrophia brevicollis*.

breviductor (brev'ē-duk'tor) [*brevi-* + L. *ductor* leader] (*obs.*) musculus adductor brevis.

breviflexor (brev'ē-flek'sor) [*brevi-* + L. *flexor* bender] a short flexor muscle.

brevilineal (brev'ē-lin'e-al) brachymorphic.

breviradiata (brev'ē-ra'de-āt) having short processes; a term applied to one type of neuroglia cells.

Brevital (brev'i-tal) trademark for a preparation of methohexital sodium.

brevium (bre've-um) a name formerly given to a supposed isotope of tantalum now known to be the element protactinium.

Brewer's infarcts, point (broo'erz) [George Emerson Brewer, New York surgeon, 1861-1939] see under *infarct* and *point*.

Bricanyl (brik'ah-nil) trademark for preparations of terbutaline sulfate.

Brickner's sign (brik'nerz) [Richard Max Brickner, New York neurologist, born 1896] see under *sign*.

brickpox (brik'poks) a form of swine erysipelas (Ger. *Backsteinblattern*) caused by *Erysipelothrix insidiosa*.

bridge (brij) 1. a form of dental prosthesis that replaces one or more lost or missing teeth, being supported and held in position by attachments to adjacent teeth; see *partial denture*, under *denture*. 2. see *pons*. 3. a protoplasmic structure that unites adjacent elements of a cell, similar in plants and animals. **arterioloventricular b.**, the main and largest capillary connecting an arteriole and a venule; it retains some muscle elements and is rarely completely collapsed. **cantilever b.**, a fixed partial denture that is attached at one end to one or more natural teeth or roots, the other end not being rigidly attached. **cell b's**, see *intercellular b.* and *protoplasmic b.* **cytoplasmic b.**, 1. protoplasmic b. 2. intercellular b. **dentin b.**, a scarlike deposit of reparative dentin or other calcific substance which reseals exposed pulp or which forms across the excised surface of pulp after pulpotomy. **disulfide b.**, see under *bond*. **extension b.**, one having an artificial tooth attached beyond the point of anchorage of the tooth; sometimes called *cantilever b.* **fixed b.**, a fixed partial denture. **Gaskell's b.**, bundle of His. **intercellular b.**, a structure seen especially in the prickle cell layer of the epidermis, formed by the meeting of short cytoplasmic projections from the cell surface of adjacent cells. The structure was formerly thought to constitute a bridge for cytoplasmic continuity between cells, but it has been demonstrated that the processes make contact at a desmosome (q.v.); hence each cell is independent. Called also *cytoplasmic b.* **b. of the nose**, the upper portion of the external nose formed by the junction of the nasal bones. **protoplasmic b.**, a strand of protoplasm connecting two secondary spermatocytes, occurring as a result of incomplete cytokinesis; called also *cytoplasmic b.* **removable b.**, a removable partial denture. **salt b.**, 1. an inverted-U-shaped tube filled with a gel, usually composed of agar, water, and potassium chloride, used to separate two chemically incompatible solutions in an electrochemical cell. 2. a chemical bond between a nitrogen atom, carrying a positive charge, and an oxygen atom, carrying a negative charge. **stationary b.**, a fixed partial denture. **ureteric b.**, Bell's muscle. **b. of Varolius**, *pons*, def. 2.

bridgework (brij'werk) a partial denture retained by attachments other than clasps. **fixed b.**, a partial denture retained by crowns or inlays cemented to the natural teeth. **removable b.**, a partial denture retained by attachments which permit its removal.

bridle (bri'd'l) 1. a frenum. 2. a loop or filament that crosses the lumen of a passage or the surface of an ulcer.

bridou (bre-doo') perlèche.

Brieger's cachexia reaction, test (bre'gerz) [Ludwig Brieger, physician in Berlin, 1849-1919] see *cachexia reaction*, under *reaction*, and see under *tests*.

Bright's blindness, disease, eye (brits) [Richard Bright, English physician, 1789-1858] see under *blindness*, *disease*, and *eye*.

brightic (bri'tik) 1. affected with glomerulonephritis (Bright's disease). 2. a person with glomerulonephritis.

brightism (brit'izm) acute or chronic nephritis.

Brill's disease (brilz) [Nathan Edwin Brill, American physician, 1860-1925] see under *disease*.

Brill-Symmers disease [Nathan Edwin Brill; Douglas Symmers, American physician, 1879-1952] giant follicular lymphoma.

Brill-Zinsser disease (bril'zin'ser) [Nathan E. Brill; Hans Zinsser, American bacteriologist, 1878-1940] Brill's disease.

brim (brim) the edge of the superior strait of the true pelvis; apertura pelvis superior.

Brinell hardness number (brin-el') [Johann August Brinell, Swedish engineer, 1849-1925] see under *number*.

brinolase (bri'no-lās) a fibrinolytic enzyme produced by the fungus *Aspergillus oryzae*.

Brinton's disease (brin'tonz) [William Brinton, English physician, 1823-1867] linitis plastica.

Brion-Kayser disease (bre-on' ki'zer) [Albert Brion, physician in Strasburg; Heinrich Kayser, German physician] paratyphoid, def. 2.

Briquet's ataxia, syndrome (bre-kāz') [Paul Briquet, French physician, 1796-1881] see under *ataxia* and *syndrome*.

brisement (brēz-maw') [Fr. "crushing"] the breaking up or tearing of anything, as of an ankylosis. **b. forcé**, the forcible breaking up or tearing of a bony ankylosis.

brise-pierre (brēs-pe-ār') [Fr. "stone-breaker"] a form of lithotrite.

Brissaud's dwarf, infantilism, reflex, scoliosis (bre-sōz') [Edouard Brissaud, French physician, 1852-1909] see under *dwarf*; see *infantile myxedema*, under *myxedema*; see under *reflex*; and see *sciatic scoliosis*, under *scoliosis*.

Brissaud-Sicard syndrome (bre-so'se-kar') [Edouard Brissaud; Jean Athanase Sicard, Paris neurologist, 1872-1929] see under *syndrome*.

Bristacycline (bris'tah-si'klēn) trademark for a preparation of tetracycline hydrochloride.

Bristamin (bris'tah-min) trademark for a preparation of phenyltoloxamine.

broach (brōch) a fine instrument used by dentists for assisting in the instrumental cleansing of a root canal or for extirpating the pulp. **barbed b.**, one whose surface is covered with barbs. **root-canal b.**, a broach for use in removing the contents of a root canal of a tooth. **smooth b.**, one without barbs, used for exploring fine and tortuous root canals.

Broadbent's sign (brod'bentz) [Sir William Henry Broadbent, English physician, 1835-1907] see under *sign*.

Broca's amnesia, etc. (bro'kahz) [Pierre Paul Broca, celebrated French anatomist, anthropologist, and surgeon, 1824-1880] see under *amnesia*, *aphasia*, *area*, *ataxia*, *band*, *center*, *convolution*, *fissure*, *formula*, *gyrus*, *plane*, *point*, *pouch*, and *region*.

Brock's syndrome (brok) [Russell Claude Brock, British surgeon, born 1903] middle lobe syndrome.

Brödel's white line (brü'del) [Max Brödel, Baltimore physician, 1870-1941] see under *line*.

Broders' index (classification) (bro'derz) [Albert Compton Broders, American pathologist, 1885-1964] see under *index*.

Brodie's abscess, disease, knee (bro'dēz) [Sir Benjamin Collins Brodie, English surgeon, 1783-1862] see under *abscess*, *disease*, and *knee*.

Brodie's ligament (bro'dēz) [J. Gordon Brodie, Edinburgh anatomist, 1786-1818] transverse humeral ligament.

Brodmann's area [Korbinian Brodmann, German neurologist, 1868-1918] see under *area*.

Broesike's fossa (bre'ze-kēz) [Gustav Broesike, German anatomist, born 1853] see *parajejunal fossa*, under *fossa*.

brofloxine (bro-foks'en) chemical name: 6-bromo-1,4-dihydro-4,4-dimethyl-2H-3,1-benzoxazin-2-one; a tranquilizer, C₁₀H₁₀BrNO₂.

broken wind (bro'ken wind) heaves.

brom-, bromo- (brōm, bro'mo) [Gr. *brōmos* stink] a combining form indicating the presence of bromine.

bromated (bro'māt-ed) brominated.

bromatherapy (bro'mah-ther'ah-pe) bromatotherapy.

bromatology (bro'mah-tol'o-je) [Gr. *brōma* food + *-logy*] the science of foods and dietetics.

bromatotherapy (bro'mah-to-ther'ah-pe) [Gr. *brōma* food + *therapeia* treatment] the use of food in treating disease; called also *bromatherapy*.

bromatoxin, bromatotoxismus (bro'mah-to-tok'sin; bro'mah-to-tok-sis'mus) [Gr. *brōma* food + *toxin*] the poison formed in food by fermentation, etc.

bromatoxism (bro-mah-tok'sizm) [Gr. *brōma* food + *toxikon* poison] food poisoning.

bromazepam (bro-mah'zē-pam) chemical name: 7-bromo-1,3-dihydro-5-(2-pyridyl)-2H-1,4-benzodiazepin-2-one; a minor tranquilizer, C₁₄H₁₀BrN₂O.

bromelain (bro'mē-lān) a proteolytic and milk-clotting enzyme

derived from the pineapple plant, *Ananas sativus*; called also *bromelin*. In the plural, a concentrate of these enzymes, used as an anti-inflammatory agent. Also used in tenderizing meat, preparing protein hydrolysates, and chill-proofing beer.

bromelin (bro-mel'in) [L. *bromelia* pineapple] bromelain.

bromethol (bro-meth'ol) tribromoethanol solution.

bromhexine hydrochloride (brom-heks'en) chemical name: 2-amino-3,5-dibromo-N-cyclohexyl-N-methylbenzenemethanamine monohydrochloride; an expectorant and mucolytic, C₁₄H₂₀Br₂N₂·HCl.

bromhidrosis (bro'mī-dro'sis) [Gr. *brōmos* stench + *hidrōs* sweat] axillary (apocrine) sweat which has become foul-smelling as a result of its bacterial decomposition.

bromic (bro'mik) pertaining to or containing pentavalent bromine, as in bromic acid, HBrO₃.

bromide (bro'mīd) any binary compound of bromine in which the bromine carries a negative charge (Br⁻); specifically a salt (or organic ester) of hydrobromic acid (H⁺Br⁻). Bromides produce depression of the central nervous system, and were once widely used for their sedative effect. Because overdose causes serious mental disturbances they are now used seldomly, except occasionally in grand mal seizures. See also *brominism*.

bromidrosis (bro'mī-dro'sis) bromhidrosis.

brominated (bro'mī-nāt'ed) combined with or containing bromine; bromated; brominized.

bromine (bro'mēn; bro'min) [L. *bromium*, *brominium*, *bromum*; Gr. *brōmos* stench] a reddish-brown liquid element, symbol Br, giving off suffocating vapors. Its atomic number is 35; atomic weight, 79.909. See also *bromide* and *brominism*.

brominism (bro'min-izm) a condition of poisoning produced by the excessive use of bromine or a bromine compound; it is marked by such neurological symptoms as mental dullness, deficient memory, slurred speech, drowsiness, and unsteady gait, and by skin eruptions of various forms and fetor of breath. Called also *bromism*.

brominized (bro'min-īzd) brominated.

bromism (bro'mizm) brominism.

bromisovalum (brōm'i-so-val'um) chemical name: N-(amino-carbonyl)-2-bromo-3-methylbutanamide. A sedative and hypnotic, C₈H₁₁BrN₂O₂, occurring as white, needle-shaped or scale-like crystals; administered orally.

bromization (bro'mi-za'shun) impregnation with bromides or bromine; the administration of large doses of bromides.

bromized (bro'mīzd) under the influence of bromides.

bromobenzene (bro'mo-ben'zēn) a colorless liquid, C₆H₅Br, with a pleasant, characteristic odor, obtained by bromination of benzene in the presence of iron.

bromochlorotrifluoroethane (bro'mo-klo'ro-tri-floo-o'ro-eth'an) halothane.

bromocriptine (bro'mo-krip'tēn) 2-bromo-α-ergocryptine, a dopamine agonist, an ergot alkaloid used to suppress prolactin secretion and thereby to inhibit lactation and stimulate ovulation in galactorrhea-amenorrhea syndrome and hypogonadism. It raises serum growth hormone levels in normal persons, but lowers them in those with acromegaly.

5-bromodeoxyuridine (bro'mo-de-ok-se-u'ri-din) a thymidine analogue causing breakage in chromosomal regions rich in heterochromatin.

bromoderma (bro'mo-der'mah) [bromine + Gr. *derma* skin] a skin eruption due to the use of bromides.

bromodiphenhydramine hydrochloride (bro'mo-di'fen-hi'drah-mēn) [USP] chemical name: 2-[(4-bromophenyl)phenylmethoxy]-N,N-dimethylethanamine hydrochloride. An antihistaminic, C₁₇H₂₀BrNO·HCl, occurring as a white to pale buff, crystalline powder; administered orally.

bromoioidism (bro'mo-i'o-dizm) poisoning with bromine and iodine or their compounds.

bromomania (bro'mo-ma'ne-ah) [bromin + *mania*] mental disorder induced by the injudicious use of the bromine compounds.

bromomenorrhea (bro'mo-men-o-re'ah) [Gr. *brōmos* stench + *mēn* month + *rhoia* flow] the discharge of menses characterized by an offensive odor.

bromopnea (brōm'op-ne'ah) [Gr. *brōmos* stench + *pnoia* breath] halitosis.

5-bromouracil (bro'mo-u'rah-sil) a pyrimidine analogue with mutagenic properties.

bromoxanide (bro-moks'ah-nīd) chemical name: N-[4-bromo-2-(trifluoromethyl)phenyl]-3-(1,1-dimethylethyl)-2-hydroxy-6-methyl-5-nitrobenzamide; an anthelmintic, C₁₈H₁₈BrF₃N₂O₄.

bromperidol (brom-per'i-dōl) chemical name: 4-[4-(4-bromophenyl)-4-hydroxy-1-piperidinyl]-1-butanone; a tranquilizer, C₂₁H₂₂BrFNO₂.

brompheniramine (brōm'fen-ir'ah-mēn) chemical name: γ-(4-bromophenyl)-N,N-dimethyl-2-pyridinepropanamine. The bromine analogue of chlorpheniramine, C₁₈H₁₉BrN₂, an antihistaminic drug. **b. maleate** [USP], the maleate salt of brompheniramine, C₁₈H₁₉BrN₂·C₄H₄O₄, occurring as white crystalline

powder; administered orally or by intramuscular, subcutaneous, or intravenous injection for therapy and prophylaxis of conditions in which antihistamines may be effective.

bromphenol (brôm-fe'nol) one of a series of brominated phenols, sometimes found in the precipitates of tested urine.

bromphenylacetylcysteine (brôm-fen'il-as'e-til-sis'te-in) bromphenylmercapturic acid.

Bromsulphalein (brom-sul'fah-lin) trademark for a preparation of sulfobromophthalein sodium. Abbreviated BSP.

bromum (brô'mum) [L.] bromine.

Bromural (brôm-u'ral) trademark for preparations of bromisovalum.

bromurated (brôm'u-rât'ed) containing bromine or bromine salts; brominated.

bromuret (brôm'u-ret) a bromide.

bronchadenitis (brong'kad-ê-ni'tis) [Gr. *bronchia* bronchia + *adên* gland + *-itis*] inflammation of the bronchial glands.

bronchi (brong'ki) [L.] plural of *bronchus*.

bronchia (brong'ke-ah) [L.; Gr.] plural of *bronchium*.

bronchial (brong'ke-al) [L. *bronchialis*] pertaining to one or more bronchi.

bronchiarectia (brong'ke-ark'she-ah) [*bronchus* + L. *arctare* to constrict] bronchostenosis.

bronchiectasia (brong'ke-ek-ta'ze-ah) bronchiectasis.

bronchiectatic (brong'ke-ek-ta'zik) bronchiectatic.

bronchiectasis (brong'ke-ek'tah-sis) [*bronchus* + Gr. *ektasis* dilatation] chronic dilatation of the bronchi marked by fetid breath and paroxysmal coughing, with the expectoration of mucopurulent matter. It may affect the tube uniformly (*cylindric b.*), or occur in irregular pockets (*sacculated b.*), or the dilated tubes may have terminal bulbous enlargements (*fusiform b.*). **capillary b.**, dilatation of the bronchioles. **cystic b.**, bronchiectasis in which the dilations of the bronchi are spherical. **dry b.**, that in which the infection is episodic and may be attended by hemoptysis, the cough being nonproductive during quiescent periods. **follicular b.**, bronchiectasis in which the lymphoid tissue in the affected regions becomes greatly enlarged and, by projecting into the bronchial lumen, may seriously distort and partially obstruct the bronchus.

bronchiectatic (brong'ke-ek-tat'ik) pertaining to or characterized by bronchiectasis.

bronchiloquy (brong-kil'o-kwe) [*bronchus* + L. *loqui* to speak] a high-pitched pectoriloquy due to a consolidated lung.

bronchiocele (brong'ke-o-sêl) [*bronchiole* + Gr. *kêlē* tumor] a dilatation or swelling of a branch smaller than a bronchus.

bronchiocrisis (brong'ke-o-kri'sis) bronchial crisis; see under *crisis*.

bronchiogenic (brong'ke-o-jen'ik) bronchogenic.

bronchiole (brong'ke-ôl) [L. *bronchiolus*] one of the finer (1 mm. or less) subdivisions of the branched bronchial tree, differing from the bronchi in having no cartilage plates and having cuboidal epithelial cells. Called also *bronchiolus*. **alveolar b.**, respiratory b. **lobular b.**, terminal b. **respiratory b.**, the final branch of a bronchiole; a subdivision of a terminal bronchiole, it has alveolar outcroppings and itself divides into several alveolar ducts. Called also *alveolar b.* **terminal b.**, the last portion of a bronchiole whose sole function is gas conduction; it subdivides into respiratory bronchioles. Called also *lobular b.*

bronchiolectasis (brong'ke-o-lek'tah-sis) [*bronchiole* + Gr. *ektasis* dilatation] dilatation of the bronchioles.

bronchioli (brong-ki'o-li) [L.] plural of *bronchiolus*.

bronchiolitis (brong'ke-o-li'tis) bronchopneumonia. **acute obliterating b.**, cirrhosis of the lung due to induration of the walls of the bronchioles. **b. exudati'va** (Curschmann), inflammation of the bronchioles, with exudation of Curschmann's spirals and grayish, tenacious sputum; often associated with asthma. **b. fibro'sa oblit'erans**, bronchiolitis marked by ingrowth of connective tissue from the wall of the terminal bronchi with occlusion of their lumina. **vesicular b.**, bronchopneumonia.

bronchiolus (brong-ki'o-lus), pl. *bronchi'oli* [L.] [NA] bronchiole; one of the finer subdivisions of the branched bronchial tree; see *bronchiole*. **bronchi'oli respirato'rii** [NA], respiratory bronchioles: the final branches of the bronchioles, into which the alveolar ducts open; see *respiratory bronchiole*, under *bronchiole*.

bronchospasm (brong'ke-o-spaz'm') bronchospasm.

bronchiostenosis (brong'ke-o-stê-no'sis) bronchostenosis.

bronchisepticin (brong'ke-sep'ti-sin) an antigen prepared from *Brucella bronchiseptica*; used in the skin test for canine distemper.

bronchismus (brong-kis'mus) bronchospasm.

bronchitic (brong-kit'ik) [L. *bronchiticus*] pertaining to, affected with, or of the nature of bronchitis.

bronchitis (brong-ki'tis) [*bronchus* + *-itis*] inflammation of one or more bronchi. **acute b.**, a bronchitic attack with a short and more or less severe course. It is due to exposure to cold, to the

breathing of irritant substances, and to acute infection. It is marked by fever, pain in the chest, especially on coughing, dyspnea, and cough. **acute laryngotracheal b.**, a form of nonphthritic croup, clinically resembling diphtheria, except that there is no membrane; it mainly affects boys during the first year of life, usually in the winter. **arachidic b.**, bronchitis caused by the presence of a peanut kernel in a bronchus. **capillary b.**, bronchopneumonia. **Castellani's b.**, bronchospirochietosis. **catarrhal b.**, a form of acute bronchitis with a profuse mucopurulent discharge. **cheesy b.**, a form accompanying some cases of tuberculosis of the lung, in which the alveoli are filled with cells that undergo a cheesy degeneration (caseous necrosis). **chronic b.**, a long-continued form, often with a more or less marked tendency to recurrence after stages of quiescence. It is due to repeated attacks of acute bronchitis or to chronic general diseases; characterized by attacks of coughing, by expectoration, either scanty or profuse, and secondary changes in the lung tissue. **croupous b.**, bronchitis characterized by violent cough and paroxysms of dyspnea, in which casts of the bronchial tubes are expectorated with Charcot-Leyden crystals and eosinophil cells. Various known as *exudative*, *fibrinous*, *membranous*, *plastic*, and *pseudomembranous bronchitis*. **dry b.**, a form with a scanty secretion of tough sputum. **epidemic b.**, influenza. **epidemic capillary b.**, bronchiolitis due to measles virus, respiratory syncytial virus, or other respiratory pathogens. **ether b.**, that due to the irritation of ether. **exudative b.**, croupous b. **fibrinous b.**, croupous b. **hemorrhagic b.**, bronchospirochietosis. **infectious asthmatic b.**, a syndrome marked by the development of symptoms of bronchospasm following respiratory tract infections in persons with asthma; also, asthma of bacterial origin. **infectious avian b.**, an acute, highly contagious, respiratory viral disease of chickens characterized by tracheal rales, coughing, sneezing, nasal discharge, and a drop in egg production. **mechanic b.**, a variety caused by the inhalation of dust or of solid particles. **membranous b.**, croupous b. **b. obliterans**, a form in which the smaller bronchi become filled with nodules made up of fibrinous exudate. **parasitic b.**, hoose. **phthinoïd b.**, tuberculous bronchitis with purulent expectoration. **plastic b.**, croupous b. **productive b.**, bronchitis associated with a productive cough. **pseudomembranous b.**, croupous b. **putrid b.**, a form of chronic bronchitis in which the sputum is very offensive. **secondary b.**, that which occurs either as a complication of some acute disease, such as a local expression of some constitutional disorder. **staphylococcus b.**, bronchitis caused by staphylococci. **streptococcal b.**, bronchitis caused by streptococci. **suffocative b.**, suffocation produced by excessive secreting and exudates in acute bronchopneumonia. **verminous b.**, hoose. **vesicular b.**, that in which the inflammation extends into the alveoli, which are sometimes visible under the pleura as whitish-yellow granulations like millet seeds.

bronchium (brong'ke-um), pl. *bron'chia* [L.] one of the subdivisions of a bronchus, smaller than the bronchus and larger than the bronchioles.

bronchoadenitis (brong'ko-ad'e-ni'tis) bronchadenitis.

bronchoalveolar (brong'ko-al-ve'o-lar) pertaining to a bronchus and alveoli; called also *bronchovesicular*.

bronchoalveolitis (brong'ko-al've-o-li'tis) bronchopneumonia.

bronchoaspergillosis (brong'ko-as'per-jil-lo'sis) bronchial disease resulting from infection with *Aspergillus*.

bronchoblastomycosis (brong'ko-blas'to-mi-ko'sis) North American blastomycosis of the pulmonary type; see under *blastomycosis*.

bronchoblennorrhea (brong'ko-blen'o-re'ah) chronic bronchitis in which the sputum is copious, thin, and mucopurulent.

bronchocandidiasis (brong'ko-kan'di-di'ah-sis) candidiasis of the respiratory tract. It has been reported in two forms: an afebrile *mild form* manifested as chronic bronchitis with dyspnea and cough, and a usually fatal *severe form* that resembles tuberculosis. Called also *bronchomoniliasis* and *broncho-oidiosis*.

bronchocavernous (brong'ko-kav'er-nus) both bronchial and cavitory.

bronchocele (brong'ko-sêl) [*bronchus* + Gr. *kêlē* tumor] a localized dilatation of a bronchus.

bronchocephalitis (brong'ko-sef'ah-li'tis) (obs.) whooping cough.

bronchoconstriction (brong'ko-kon-strik'shun) the act or process of decreasing the caliber of a bronchus; bronchostenosis.

bronchoconstrictor (brong'ko-kon-strik'tor) 1. constricting or narrowing the lumina of the air passages of the lungs. 2. an agent that causes narrowing of the lumina of the air passages of the lungs.

bronchodilatation (brong'ko-dil-ah-ta'shun) a dilated state of a bronchus, or the site at which a bronchus is dilated.

bronchodilation (brong'ko-di-la'shun) the act or process of increasing the caliber of a bronchus.

bronchodilator (brong'ko-di-la'tor) 1. dilating or expanding

- the lumina of air passages of the lungs. 2. an agent that causes expansion of the lumina of the air passages of the lungs.
- bronchoegophony** (brong/'ko-e-gof'o-ne) egobronchophony.
- bronchoesophageal** (brong/'ko-ē-sof'ah-je'al) pertaining to or communicating with a bronchus and the esophagus, as a bronchoesophageal fistula.
- bronchoesophagology** (brong/'ko-ē-sof-ah-gol'o-je) that branch of medicine which deals with the tracheobronchial tree and the esophagus.
- bronchoesophagoscopy** (brong/'ko-ē-sof-ah-gos'ko-pe) the instrumental examination of the bronchi and esophagus.
- bronchofiberscope** (brong/'ko-fi'ber-skōp) a flexible bronchoscope utilizing fiberoptics.
- bronchofibroscopy** (brong/'ko-fi'bros'ko-pe) examination of the bronchi through a bronchofiberscope.
- bronchogenic** (brong-ko-jen'ik) originating in a bronchus.
- bronchogram** (brong'ko-gram) the roentgenogram obtained by bronchography.
- bronchographic** (brong/'ko-graf'ik) pertaining to or obtained by bronchography.
- bronchography** (brong-kog'rah-fe) [*bronchus* + Gr. *graphein* to write] roentgenography of the lung after the instillation of an opaque medium in a bronchus.
- broncholith** (brong/'ko-lith) [*bronchus* + Gr. *lithos* stone] lung calculus.
- broncholithiasis** (brong/'ko-li-thi'ah-sis) a condition in which calculi (broncholiths) are present within the lumen of the tracheobronchial tree.
- bronchologic** (brong/'ko-loj'ik) pertaining to bronchology.
- bronchology** (brong-kol'o-je) the study and treatment of diseases of the tracheobronchial tree.
- bronchomalacia** (brong/'ko-mah-la'she-ah) a deficiency in the cartilaginous wall of the trachea or a bronchus that may lead to atelectasis or obstructive emphysema; it may be congenital or acquired.
- bronchomoniliasis** (brong/'ko-mo-ni-li'ah-sis) bronchocandidiasis.
- bronchomotor** (brong/'ko-mo'tor) affecting the caliber of the bronchi.
- bronchomucotropic** (brong/'ko-mu'ko-trop'ik) augmenting secretion by the respiratory mucosa.
- bronchomycosis** (brong/'ko-mi-ko'sis) [*bronchus* + Gr. *mykēs* fungus] any bronchial disorder due to fungi, particularly infection of the lungs caused by *Candida albicans*.
- bronchonocardiosis** (brong/'ko-no-kar'de-o'sis) nocardial infection of the bronchi.
- broncho-oidiosis** (brong/'ko-o-id'e-o'sis) bronchocandidiasis.
- bronchopancreatic** (brong/'ko-pan'kre-at'ik) communicating with a bronchus and the pancreas, as a bronchopancreatic fistula.
- bronchopathy** (brong-kop'ah-the) [*bronchus* + Gr. *pathos* disease] any disease of the air passages of the lungs.
- bronchophony** (brong-kof'o-ne) [*bronchus* + Gr. *phōnē* voice] the sound of the voice as heard through the stethoscope applied over a healthy large bronchus. Heard elsewhere, it indicates solidification of the lung tissue. **pectoriloquous b.**, a bronchophony with an accompaniment of pectoriloquy. **sniffing b.**, that which is accompanied with a sniffing sound, as of air drawn through the nose. **whispered b.**, that which is heard while the patient is whispering.
- bronchoplasty** (brong/'ko-plas'te) [*bronchus* + Gr. *plassein* to mold] plastic surgery of the bronchus; surgical closure of a fistula in the bronchus.
- bronchoplegia** (brong/'ko-ple'je-ah) paralysis of the muscles of the walls of the bronchial tubes.
- bronchopleural** (brong/'ko-ploor'al) pertaining to a bronchus and the pleura, or communicating with a bronchus and the pleural cavity, as a bronchopleural fistula.
- bronchopleuropneumonia** (brong/'ko-plu'ro-nu-mo'ne-ah) pneumonia complicated by bronchitis and pleurisy.
- bronchopneumonia** (brong/'ko-nu-mo'ne-ah) [*bronchus* + *pneumonia*] a name given to an inflammation of the lungs which usually begins in the terminal bronchioles. These become clogged with a mucopurulent exudate forming consolidated patches in adjacent lobules. The disease is frequently secondary in character, following infections of the upper respiratory tract, specific infectious fevers, and debilitating diseases. In infants and debilitated persons of any age it may occur as a primary affection. Called also *bronchial pneumonia*, *bronchiolitis*, *bronchoalveolitis*, *bronchopneumonitis*, *catarrhal pneumonia*, *lobular pneumonia*, *capillary bronchitis* and *vesicular bronchiolitis*. **postoperative b.**, bronchopneumonia following surgical operations, particularly those on the abdomen. The cause is related to the inhalation of irritant vapors during anesthesia and the inhalation of infected material from the mouth or nose during the temporary depression of the cough reflex. **subacute b.**, bronchopneumonia that is more indolent than usual. **virus b.**, pneumonia caused by viral infection.
- bronchopneumonic** (brong/'ko-nu-mon'ik) pertaining to, affected with, or caused by bronchopneumonia.
- bronchopneumonitis** (brong/'ko-nu'mo-ni'tis) bronchopneumonia.
- bronchopneumopathy** (brong/'ko-nu-mop'ah-the) disease of the bronchi and lung tissue.
- bronchopulmonary** (brong/'ko-pul'mo-ner'e) pertaining to the lungs and their air passages; both bronchial and pulmonary.
- bronchoradiography** (brong/'ko-ra-de-og'rah-fe) radiographic visualization of the bronchial tree.
- bronchorrhagia** (brong/'ko-ra'je-ah) [*bronchus* + Gr. *rhēgnynai* to burst forth] hemorrhage from the bronchi.
- bronchorrhaphy** (brong-kor'ah-fe) [*bronchus* + Gr. *rhaphe* suture] the repair of an incised or wounded bronchus.
- bronchorrhea** (brong-ko-re'ah) [*bronchus* + Gr. *rhoia* flow] excessive discharge of mucus from the air passages of the lungs.
- bronchoscope** (brong/'ko-skōp) an instrument for inspecting the interior of the tracheobronchial tree and carrying out endobronchial diagnostic and therapeutic maneuvers, such as taking specimens for culture and biopsy and removing foreign bodies. **fiberoptic b.**, bronchofiberscope.
- bronchoscopic** (brong/'ko-skop'ik) pertaining to bronchoscopy or to the bronchoscope.
- bronchoscopy** (brong-kos'ko-pe) [*bronchus* + Gr. *skopein* to examine] examination of the bronchi through a bronchoscope. **fiberoptic b.**, bronchofibroscopy.
- bronchosisinusitis** (brong/'ko-si'nus-i'tis) coexisting infection of the paranasal sinuses and the lower respiratory passages.
- bronchospasm** (brong'ko-spazm) spasmodic contraction of the smooth muscle of the bronchi, as occurs in asthma.
- bronchospirochetosis** (brong/'ko-spi'ro-ke-to'sis) an infectious disease caused by the presence in the bronchi of the *Spirochaeta bronchialis* and marked by chronic bronchitis attended by the spitting of blood; called also *Castellani's bronchitis* or *disease*, and *hemorrhagic bronchitis*.
- bronchospirography** (brong/'ko-spi-rog'rah-fe) the recording of bronchspirometry results.
- bronchspirometer** (brong/'ko-spi-rom'ē-ter) an instrument used in bronchspirometry.
- bronchspirometry** (brong/'ko-spi-rom'ē-tre) determination of the vital capacity, oxygen intake, and carbon dioxide excretion of a single lung, or simultaneous measurements of the function of each lung separately. **differential b.**, measurement of the function of each lung separately.
- bronchostaxis** (brong/'ko-stak'sis) bleeding from the bronchial wall.
- bronchostenosis** (brong/'ko-ste-no'sis) [*bronchus* + Gr. *stenōsis* a narrowing] stricture or cicatricial diminution of the caliber of a bronchial tube; called also *bronchiartia* and *bronchoconstriction*.
- bronchostomy** (brong-kos'to-me) [*bronchus* + Gr. *stomoun* to provide with a mouth, or opening] the surgical creation of an opening into a bronchus.
- bronchotome** (brong/'ko-tōm) a cutting instrument used in performing bronchotomy.
- bronchotomy** (brong-kot'o-me) [*bronchus* + Gr. *tomē* a cutting] surgical incision of a bronchus.
- bronchotracheal** (brong/'ko-tra'ke-al) pertaining to the bronchi and trachea; tracheobronchial.
- bronchotyphoid** (brong/'ko-ti'foid) typhoid fever beginning with severe bronchitis.
- bronchotyphus** (brong/'ko-ti'fus) typhus complicated with acute bronchitis.
- bronchovesicular** (brong/'ko-ve-sik'u-lar) bronchoalveolar.
- bronchus** (brong'kus), pl. *bron'chi* [L.; Gr. *bronchos* windpipe] any of the larger air passages of the lungs, having an outer fibrous coat with irregularly placed plates of hyaline cartilage, an interlacing network of smooth muscle, and a mucous membrane of columnar ciliated epithelial cells. **apical b.**, b. segmentalis apicalis. **cardiac b.**, b. segmentalis basalis medialis. **eparterial b.**, ramus bronchialis eparterialis. **hyparterial bronchi**, rami bronchiales hyparteriales. **lingular b.**, inferior, b. lingularis inferior. **lingular b.**, superior, b. lingularis superior. **b. lingula'ris infe'rior** [NA], inferior lingular bronchus: the branch of the left upper lobar bronchus that supplies the inferior lingular bronchopulmonary segment. **b. lingula'ris supe'rior** [NA], superior lingular bronchus: the branch of the left upper lobar bronchus that supplies the superior lingular bronchopulmonary segment. **lobar bronchi**, *bron'chi loba'res* [NA], passages arising from the primary bronchi and passing to the lobes of the right and left lungs, being the *right upper*, *middle*, and *right lower*, and the *left upper* and *left lower lobar bronchi*. **primary b.**, **b. principa'lis** [NA], either of the two main branches, right (*dex'ter*) and left (*sinis'ter*) bronchi, into which the trachea divides, each passing to the respective lung. **secondary bronchi**, subdivisions of the primary bronchi, including the lobar and segmental bronchi.

segmental b., anterior, b. segmentalis anterior. **segmental b., anterior basal**, b. segmentalis basalis anterior. **segmental b., apical**, b. segmentalis apicalis. **segmental b., apicoposterior**, b. segmentalis apicoposterior. **segmental bronchi, bronchi segmenta/les** [NA], air passages arising from the lobar bronchi and passing to the different segments of the two lungs, where they further subdivide into smaller and smaller passages (bronchioles). **segmental b., cardiac**, b. segmentalis basalis medialis [cardiacus]. **segmental b., lateral**, b. segmentalis lateralis. **segmental b., lateral basal**, b. segmentalis basalis lateralis. **segmental b., medial**, b. segmentalis medialis. **segmental b., medial basal**, b. segmentalis basalis medialis [cardiacus]. **segmental b., posterior**, b. segmentalis posterior. **segmental b., posterior basal**, b. segmentalis basalis posterior. **segmental b., superior**, b. segmentalis superior. **b. segmenta/les anterior** [NA], anterior segmental bronchus: the branch of the right upper or of the left upper lobar bronchus that supplies the anterior bronchopulmonary segment. **b. segmenta/les apica/les** [NA], apical segmental bronchus: the branch of the upper right lobar bronchus that supplies the apical bronchopulmonary segment. The term is also used for corresponding branches in the right lower or left lower lobar bronchus; see *b. segmentalis superior*. **b. segmenta/les apicoposterior** [NA], apicoposterior segmental bronchus: the branch of the left upper lobar bronchus that supplies the apicoposterior bronchopulmonary segment. **b. segmenta/les basalis anterior** [NA], anterior basal segmental bronchus: the branch of the right lower or left lower lobar bronchus that supplies the anterior basal bronchopulmonary segment. **b. segmenta/les basalis latera/les** [NA], lateral basal segmental bronchus: the branch of the right lower or left lower lobar bronchus that supplies the lateral basal bronchopulmonary segment. **b. segmenta/les basalis media/les** [cardiacus] [NA], medial basal segmental bronchus: the branch of the lower right or of the lower left segmental bronchus that supplies the medial basal bronchopulmonary segment; called also *cardiac segmental b.* **b. segmenta/les basalis posterior** [NA], posterior basal segmental bronchus: the branch of the right lower or of the left lower lobar bronchus that supplies the posterior basal bronchopulmonary segment. **b. segmenta/les latera/les** [NA], lateral segmental bronchus: the branch of the right middle lobar bronchus that supplies the lateral bronchopulmonary segment. **b. segmenta/les media/les** [NA], medial segmental bronchus: the branch of the right middle lobar bronchus that supplies the medial bronchopulmonary segment. **b. segmenta/les posterior** [NA], posterior segmental bronchus: the branch of the upper right lobar bronchus that supplies the posterior bronchopulmonary segment. **b. segmenta/les superior** [NA], superior segmental bronchus: the branch of the right lower or left lower lobar bronchus that supplies the superior bronchopulmonary segment; called also *b. segmentalis apicalis* or *apical segmental b.* **stem b.**, the continuation of the primary bronchus of the embryo, from which branches are given off to the lobes of the lungs. **tracheal b.**, an ectopic or supernumerary bronchus, extending directly from the trachea to the apical segment of the upper lobe of the right lung, occurring normally in some animals but as a congenital anomaly in man.
